Source Data Used to Produce the Forest Plot Figures 361

Table B.2 shows the most-common methodological concerns we identified for analyses included in this report's forest plot figures. When we identified no such concerns for a study, the forest plots show that study's IRR values with green circles (see, for example, Figure 3.1). In Table B.2, we identify five categories of concerns:

- The *Parameter* column identifies with an *X* the analyses we believed to have been performed with fewer than ten observations per parameter estimate. In several cases, models with random effects were conducted, but no estimate of the effective number of parameters was reported. In these cases, we guessed that the effective number of random effect parameters was about half the total number of random effects. This resulted in none of the random effects models having fewer than ten observations per parameter estimate.
- The *Tx Units* column identifies the analyses that we believed identified a causal effect with three or fewer units (states, usually) exposed to the law.
- The *Cluster* column identifies the analyses that appeared to make no adjustments to the standard error to account for either serial correlation in the longitudinal data or heteroscedasticity. We were sparing in assigning this concern to analyses, giving credit for some type of standard error adjustment even when papers reported, for instance, having checked for the presence of serial correlation or performing adjustments of doubtful validity. Studies that made no reference to any type of adjustment or check are identified with this concern.
- The *Model* column identifies the analyses that reported results from models we believe may have been misspecified. We assigned this concern to just two types of models: those using ordinary least squares (OLS) to model dichotomous outcomes and those using OLS to model rates, many of which are close to zero. We did not assign this concern to OLS models of logged rate values, although this too is problematic.
- The *Other* column identifies studies with other methodological features that raised significant concerns for us. It was often the case that studies had multiple idiosyncratic methodological features that concerned us. However, we did not assign the *Other* concern to studies that had already been identified as having one of the other four common concerns. When a study is listed as having an *Other* concern, that concern is described in the text of the report whenever the study is discussed.

**Table B.2**  
**Methodological Concerns Identified for Analyses Included in the Report's Forest Plot Figures**

| Report Figure | Study                       | Specific Policy or Independent Variable | Specific Outcome                    | Population | Parameter | Tx Units | Cluster | Model | Other |
|---------------|-----------------------------|-----------------------------------------|-------------------------------------|------------|-----------|----------|---------|-------|-------|
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Firearm suicide rate                | Aged 21+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Firearm suicide rate                | Aged 55+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Nonfirearm suicide rate             | Aged 21+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Nonfirearm suicide rate             | Aged 55+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Proportion of suicides with firearm | Aged 21+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Proportion of suicides with firearm | Aged 55+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Total suicide rate                  | Aged 21+   | X         |          |         |       |       |
| 3.1           | Ludwig and Cook (2000)      | Brady Act                               | Total suicide rate                  | Aged 55+   | X         |          |         |       |       |
| 3.1           | Sen and Panjamapirom (2012) | Check on fugitive status                | Firearm suicide rate                | All ages   |           | X        |         |       |       |
| 3.1           | Sen and Panjamapirom (2012) | Check on fugitive status                | Total suicide rate                  | All ages   |           | X        |         |       |       |
| 3.1           | Sen and Panjamapirom (2012) | Check on mental illness                 | Firearm suicide rate                | All ages   |           |          |         |       |       |
| 3.1           | Sen and Panjamapirom (2012) | Check on mental illness                 | Total suicide rate                  | All ages   |           |          |         |       |       |

NOTE: CAP = child-access prevention; CC = concealed carry; IPH = intimate partner homicide; N/A = not applicable; NICS = National Instant Criminal Background Check System.

**T**he RAND Corporation's Gun Policy in America initiative is a unique attempt to systematically and transparently assess available scientific evidence on the real effects of firearm laws and policies. Good gun policies require consideration of many factors, including the law and constitutional rights, the interests of various stakeholder groups, and information about the likely effects of different laws or policies on a range of outcomes. This report seeks to provide the third—objective information about what the scientific literature examining gun policy can tell us about the likely effects of laws. The study synthesizes the available scientific data on the effects of various firearm policies on firearm deaths, violent crime, the gun industry, participation in hunting and sport shooting, and other outcomes. By highlighting where scientific evidence is accumulating, the authors hope to build consensus around a shared set of facts that have been established through a transparent, nonpartisan, and impartial review process. In so doing, they also illuminate areas where more and better information could make important contributions to establishing fair and effective gun policies.

## Abstract

There have been dozens of high-profile mass shootings in recent decades. This paper presents three main findings about the impact of mass shootings on gun policy. First, mass shootings evoke large policy responses. A single mass shooting leads to a 15% increase in the number of firearm bills introduced within a state in the year after a mass shooting. This effect increases with the extent of media coverage. Second, mass shootings account for a small portion of all gun deaths, but have an outsized influence relative to other homicides. Third, when looking at bills that were actually enacted into law, the impact of mass shootings depends on the party in power. The annual number of laws that loosen gun restrictions doubles in the year following a mass shooting in states with Republican-controlled legislatures. We find no significant effect of mass shootings on laws enacted when there is a Democrat-controlled legislature, nor do we find a significant effect of mass shootings on the enactment of laws that tighten gun restrictions.

---

We thank Joseph Hall and Jessica Li for excellent research assistance.

## 1. Introduction

Recent decades have witnessed a series of high-profile mass shootings throughout the United States. While most homicides receive little attention from the public, mass shooting incidents are extremely salient. Nonetheless, a common and frequently articulated view is that despite extensive discussion about mass shootings, they have little influence on policymaking.

Should we expect policymakers to propose new legislation in the wake of a mass shooting? Given that the vast majority of gun deaths do not result from mass shootings, it would be difficult to reconcile large responses to mass shootings with basic models of optimal policy aimed exclusively at reducing gun violence. However, mass shootings may have another effect—bringing attention to the issue of gun violence. Mass shootings could potentially lead to policy changes by focusing attention on gun violence, even if they do not provide new information regarding effective policy or change politicians’ preferences.

Political scientists have noted that issues tend to rise and fall in importance within a policy agenda, creating periods in which specific policies shift very rapidly and other periods in which they do not change at all (Baumgartner and Jones 1993, Kingdon 1984). In the context of gun violence, events like the Columbine High School shooting in Colorado have led to calls for new restrictions on guns as well as vehement responses from groups that oppose such changes and favor the loosening of gun laws (Goss 2006; Spitzer 2012). More generally, mass shootings may create “policy windows” during which legislatures become receptive to change—potentially due to shifts in the attention of the media and constituents. Nonetheless, the extent to which mass shootings affect policy and the nature of the resulting changes are empirical questions.

In this paper, we explore the impact of mass shootings on gun policy, constructing a dataset of all U.S. gun legislation and mass shootings over a period of twenty-five years (1989–2014)—combining data from a variety of media and government sources. We begin by looking at the extent of deaths resulting from mass shootings relative to other gun deaths. Overall, there are more than 30,000 gun related fatalities in the United States per year. Approximately 56% of these are suicides and 40% are homicides. The remaining 4% are accidents or incidents of undetermined intent. Mass shootings accounted for about 0.13% of all gun deaths and 0.34% of gun murders between 1989 and 2014.

Because mass shootings are salient and plausibly random occurrences, we are able to implement a difference-in-differences strategy around the timing of mass shootings to estimate their causal impact on gun regulation. Specifically, we compare gun laws before and after mass shootings, in states where mass shootings occur relative to all other states.

We then present three main findings about the impact of mass shootings on policy. First, mass shootings evoke large policy responses. A single mass shooting leads to an approximately 15% increase in the number of firearm bills introduced within a state in the year after a mass shooting. This effect is largest after shootings with the most fatalities and is greatest in the Republican-controlled legislatures.

Second, although mass shootings account for a small portion of all gun deaths, they have an outsized influence relative to other homicides. Our estimates suggest that the per-death impact of mass shootings on bills introduced is much larger than the impact of gun homicides in non-mass shooting incidents.

Third, when looking at enacted laws, the impact of mass shootings depends on the party in power. A mass shooting roughly doubles the number of laws enacted in a year that loosen gun

restrictions in states with Republican-controlled legislatures. We find no significant effect of mass shootings on laws enacted when there is a Democrat-controlled legislature. We also find no significant effect of mass shootings on the number of enacted laws that tighten gun restrictions.

These findings contribute to the political economy literatures on public attention, accountability, policymaking, and law. Empirical research on policymaking emphasizes that factors beyond social welfare—such as ideology, opportunism, and fiscal considerations— influence policy (Makowsky and Stratmann 2009; Bardhan and Mookherjee 2010). As we show, mass shootings cause intense legislative activity despite accounting for less than 1% of firearm deaths, suggesting factors beyond optimal deterrence affect debates concerning gun policy.

Additionally, our results contribute to the literature on issue selection and salience, which examines when and why politicians emphasize or downplay elements of their policy platform (Riker 1996; Petrocik 1996; Dragu and Fan 2016). Our finding that Republican-controlled states loosen restrictions on firearms following mass shootings is consistent with the literature’s prediction that politicians in the majority tend to focus policymaking on issues they “own”—i.e. those which they have a reputation for successfully handling in the interests of their constituents. Using this definition, and at least during our sample period, Republicans do appear to have “owned” the gun issue (Goss 2006).

Finally, our results relate to the literature on media and public attention (Eisensee and Strömberg 2007; Durante and Zhuravskaya 2018). We find that mass shootings receive considerable media attention and that this attention is correlated with the number of gun bills introduced following mass shootings, suggesting that increased attention is a plausible mechanism for the higher levels of legislative activity we observe following mass shootings. This sheds light

on the role of attention and salience in policymaking, and on the interaction between issue salience and political preferences in shaping the degree and direction of enacted policies.

## **2. Background and Data**

As described above, of the roughly 30,000 annual gun deaths in the United States, fewer than 100 occur in mass shootings. For the purpose of this paper, we define a “mass shooting” as an incident in which 4 or more people, other than the perpetrator(s), are unlawfully killed with a firearm in a single, continuous incident that is not related to gangs, drugs, or other criminal activity. This definition closely matches the one used by Krouse and Richardson (2015) and the FBI’s definition of “mass murder” as 4 or more murders “occurring during the same incident, with no distinctive time period between the murders... typically involv[ing] a single location” (Morton and Hilts 2008). We further restrict our analysis to cases where at least three of the fatalities were individuals unrelated to, and not romantically involved with, the shooter(s). We include spree murders—homicides at multiple locations without a significant pause between incidents—if they result in four or more deaths.

We assemble a list of mass shootings since 1989 from a variety of government and media sources because there is no single, comprehensive government database of mass murders. We first extract all gun-related mass murders (four or more dead) that are not felony related from the FBI supplementary homicide reports (SHR). We then verify each incident in the SHR using media accounts; the SHR may contain errors in which separate homicides in a month are reported as a single incident, which is why it is necessary to verify the incidents with media coverage. Participation in the SHR program is voluntary and many law enforcement agencies do not report detailed data to the FBI. We therefore supplement the FBI data with mass shootings gathered from

media accounts or compiled by other researchers and journalists interested in the topic. Specifically, we combine the SHR data with data on mass shootings collected by the Mass Shootings in America (MSA) project at Stanford University (Stanford Geospatial Center and Stanford Libraries 2015) and a list created by *USA Today* (2013). For each shooting, we determine the event location as well as the number of victim fatalities and injuries. We also classify shootings based on the relationship (if any) between the alleged shooter(s) and victims. Previous work on mass shootings (Duwe 2007; Krouse and Richardson 2015) distinguishes between public mass shootings that occur in places frequented by the public, felony-related murders, and familicide. We categorize shootings by whether they are public events or primarily related to domestic conflicts, and we focus on incidents in which at least three people not related or romantically involved with the shooter died. This restriction filters out family-killings in residences as well as family-related murders in public places.<sup>1</sup>

Figure 1 shows the number of incidents and fatalities in mass shootings by year. The data show a slight upward trend in the number of incidents and fatalities over time, but both incidents and fatalities vary substantially from year to year. Figure 2 shows a map of the locations of mass shootings in the United States between 1989 and 2014.

## 2.2. Gun Legislation

State governments are the primary regulators of firearms. Federal laws establish a minimum level of gun control, which is augmented to varying degrees by state and local policies. The federal government has put some restrictions on firearm commerce, the possession of guns by potentially dangerous individuals, and ownership of certain types of firearms and ammunition.

---

<sup>1</sup> A 2006 shooting at a church in Louisiana is one example. A man killed his wife and in-laws while abducting her and their children from a church. Only the wife's family was present at the church during the shooting.

States decide a variety of gun policies ranging from who can purchase and possess a gun to what types of guns are allowed in different situations to how guns should be stored and what types of training should be undertaken by gun owners. Local ordinances can also restrict firearm possession and use, but state statutes enacted in the past few decades have limited the importance of local government in this arena by pre-empting local regulations.

We create a comprehensive dataset of gun legislation in all fifty states using the bill tracking reports service from LexisNexis, which includes all bills introduced in state legislatures since at least 1990 with a synopsis and timeline of each bill's progress. This allows us to determine whether bills pass the legislature and become law. We identify firearm bills by searching for the firearm-related terms "firearm", "handgun", "pistol", "revolver", "rifle", "shotgun", "long-gun", and "assault weapon." We identify 20,409 firearm bills and 3,199 laws between 1990 and 2014. In other words, there were 20,409 *proposals* made and 3,199 laws passed in the twenty-five-year sample period across all fifty states. This includes laws that loosen or tighten gun restrictions, and many that do neither or both. We exclude resolutions, executive orders, and ballot initiatives from the analysis.<sup>2</sup> Figure 3 shows the total number of bills introduced and laws enacted by year.

To explore whether gun control is tightened or loosened after mass shootings, we hired eight people to manually code the summary of bills that became law. Coders were given instructions explaining how to code legislation, but were otherwise blind to the topic and design of the study. We presented bill summaries from LexisNexis to coders in randomly chosen groups

---

<sup>2</sup> Our data source—Lexis Advance—includes resolutions, but it's unclear whether it includes all executive orders or ballot initiatives. Including those we do have along with all resolutions does not meaningfully change the results—the correlation between our measure of legislation and a measure including these other actions is 0.99. In addition, legislators in some states first submit ideas for bills in the form of a "draft request" or similar document. We exclude these from our analyses because they result in double counting some legislation. We instead focus only on actual bills.

of 50. Two people coded each summary, and no coder saw the same summary multiple times. For each summary, coders decided whether the bill was tightening (stricter gun control), loosening (weaker gun control), uncertain (insufficient information), both tightening and loosening, or neither tightening nor loosening (neutral). There were therefore five possible labels for bills: tighten, loosen, both, neutral, or uncertain. Appendix A shows example bill summaries and their expected labels.

To cross-validate (and incentivize) the bill coding, we coded a small fraction of bills ourselves as a baseline comparison point. For this process, we blinded ourselves from any information about when or where the bill was proposed. We then used our scores to assess the quality of coders. Specifically, each group of 50 bills given to a coder contained five bills that we had also coded (they did not know which bills were and weren't coded by us, and did not have access to any of our assessments of whether a bill was looser or tighter). Coders were paid up to a 50% bonus based on the extent to which their coding matched ours (which we simply told them was a "gold standard" of known codes).

Across all five categories, the two coders for each bill agreed with each other 52% of the time (the agreement rate would be 20% by chance) and agreed with the gold standard 71% of the time. Coders performed worst on the neutral category, and best on the tighten-only and loosen-only categories; when a bill tightens gun control (according to the gold standard), the two coders agree on tightening 67% of the time, and when a bill loosens gun control, they agree on loosening 60% of the time. The fact coders were not able to agree on a category for 48% of laws reduces the sample available for analysis and is a limitation of our study. In principle, laws might be unclear for coders either because the law is relatively minor and intended to be window dressing, or because it was complicated for the coders to read (leading to coder errors or ambiguity). To

explore, we compared 100 random laws that coders disagreed about to 100 they agreed on. We then classified each as a minor (e.g. convening a committee to study an issue) or major (e.g. allowing guns in schools) policy change. We find a similar number of minor laws in both samples, suggesting that coder disagreement likely results from coder inattention rather than laws being especially likely to be minor policy changes. We do not see differences in the rate of disagreement among coders about laws enacted in the wake of a mass shooting, relative to laws enacted at other times. Appendix A includes a breakdown of the coding for all 3,199 laws, further discussion of coder agreement, and examples of bills that coders found difficult.

Most importantly for the purposes of our analysis, however, is that when the two coders of a bill agree with each other on tightening, they also agree with our coding 93% of the time; when the two coders agree on loosening, they are consistent with our scores 91% of the time. When analyzing the direction of policy change, we leverage this high degree of reliability by restricting our analysis to laws that coders agreed were designed to tighten or loosen gun control.<sup>3</sup> Because states can pass either, none, or both types of laws in a year, our dependent variable is the count of laws in each direction.

Figure 4 shows mean bills introduced, laws enacted, and tightening and loosening laws by political control of the state legislature. Republicans enact more laws loosening gun control, and fewer laws tightening gun control, than do Democrats. Republican, Democratic, and split legislatures enact a similar number of total gun laws. The coders who classified the legislation were only given summaries of each bill; they were not provided with the state, year, or any information on political affiliation.

---

<sup>3</sup> This is 37% of all enacted laws in our data. As mentioned, nearly half of laws cannot be categorized because coders disagreed on the classification. Another 13% are not used because coders agreed they were neutral or uncertain.

### **2.3. Control Variables**

Our main specification controls for state and year fixed effects, as well as an indicator for whether the legislature is in a regular session in the given year, and whether it is the first year of a legislative biennium (since bills are more likely to be enacted then). Specifically, we create two dummy variables. First, we create a dummy for legislatures that held a regular session in a given year because not all legislatures meet annually. Legislatures that are not in regular session would have to rely on special sessions, which can be difficult to call, in order to consider new gun legislation (though some do this). Second, we control for the first year of each legislative biennium (a two-year period of law making), which varies by whether states hold elections in odd or even years. Typically, more bills are introduced during the first year of the biennium, which leads to alternating years of high and low bill introductions (Figure 3). Building on this main specification, we then add time varying controls as a robustness check. These include economic and demographic factors such as unemployment, divorce rates, and rates of military service. We then layer on controls for the political party in power, since the direction of proposed changes often vary between Democrats (who generally favor more restrictive gun laws) and Republicans (who generally favor less restrictive gun laws). Table 1 contains summary statistics for all variables used in the analyses.

## **3. The Impact of Mass Shootings on Gun Policy**

### **3.1 Identification Strategy**

We implement a difference-in-differences strategy that compares gun laws before and after mass shootings, in states where mass shootings occur relative to all other states. Our dependent variables are counts of bills or enacted laws at the state-year level. We study the effect of mass shootings using Poisson regressions with conditional mean:

$$\mathbf{E}[y_{s,t} | \alpha_s, \lambda_t, Shoot_{s,t-1}, X_{s,t}] = \exp(\alpha_s + \lambda_t + \delta_s t + \beta Shoot_{s,t-1} + \gamma' X_{s,t})$$

where  $y_{s,t}$  is a count of bills introduced or laws enacted in state  $s$  and year  $t$ ;  $\alpha_s$  and  $\lambda_t$  are state and year fixed effects; the  $\delta_s t$  are state-specific time trends;  $Shoot_{s,t-1}$  is either an indicator for states with a mass shooting or the fatality count in mass shootings, and  $X_{s,t}$  is a vector of time-varying political, economic, and demographic factors. We estimate the parameters via maximum likelihood by conditioning on the sum of  $y_{s,t}$  within states and including year indicators.<sup>4</sup>

Our identification allows us to measure the impact of a mass shooting within that state, controlling for other changes that are happening at the national level. Because this identification strategy does not identify national responses to mass shootings (which would be absorbed by our year effect), our estimates of changes in gun policy may underestimate the total impact of a mass shooting. We can and do account for potential spillovers into neighboring states, but do not see significant spillover effects; these results are presented in Appendix B.

### 3.2 The Effect of Mass Shootings on Gun Bill Introductions

Table 2 shows that a mass shooting leads to a 15% increase in firearm bills introduced (column 4). For the average state, this amounts to an additional 2.4 firearm bills introduced in the year following a mass shooting. Mass shootings with more deaths lead to larger effects. On average, each additional death in a mass shooting leads to a 2.3% increase in the number of gun bills introduced (column 8). These results hold for both Republican-controlled and Democrat-controlled legislatures, for alternative victim thresholds used to define mass shootings, models that

---

<sup>4</sup> It is possible that the number of bills introduced in a given year within a state would depend on the number introduced in recent years in ways that we do not capture with the state fixed effects or time trends. To allow for this possibility, we also estimated an exponential feedback model in which past legislative activity can affect current activity. Our results suggest past legislation does not substantively affect current legislation; state fixed effects adequately capture time series persistence in legislation and the coefficient estimate for the impact of mass shootings is similar in the exponential feedback model.

examine the year of the shooting in addition to the previous year, and models that use the log of fatalities instead of the count.<sup>5</sup>

### 3.3 Comparing Mass Shootings and Non-Mass Shootings

Table 3 shows that fatalities resulting from mass shootings lead to much larger increases in gun bill introductions than gun homicides in non-mass shooting incidents. We estimate the models in this table using mass shooting fatalities and ordinary gun homicides per 100,000 people to facilitate comparison between the two types of murder. Our estimates are imprecise, but suggest it would take approximately *125 people dying in individual gun homicide incidents* to have as much impact on bills introduced as each person who dies in a mass shooting. There are, however, a number of caveats to this estimate. First, ordinary gun homicides are less random than mass shootings and therefore not exogenous in the model. Second, the victims of mass shootings and ordinary gun homicides have different attributes; the impact of mass shootings is not easily decomposed into the effect of victim count, media salience, and attributes of the victims. Any differences in response between ordinary and mass shootings could be driven in part by attributes of the victims. Our estimates, however, are still suggestive evidence that mass shootings tend to have a greater impact on legislative activity than changes in the ordinary gun homicide rate.

### 3.4 The Role of Political Party on Laws Enacted

As mentioned previously, the two major political parties in the United States differ dramatically in their stances on how restrictive gun policy should be, with the Republican Party favoring fewer gun restrictions.<sup>6</sup> To look at the impact of political parties on gun policy, we restrict

---

<sup>5</sup> Results by political affiliation are presented in Table 4 and discussed in section 3.4 below. Results using alternative victim thresholds for the definition of mass shooting (e.g. 5+, 7+, 10+ deaths) and alternative models are available from the authors upon request.

<sup>6</sup> See, for example, <https://www.gop.com/platform/> and <https://www.democrats.org/party-platform>.

our analysis to enacted laws, all of which were coded for whether they loosened or tightened gun restrictions (see data description for more details).

Tables 4 and 5 show the effect of mass shootings interacted with Democrat and Republican control of state legislatures. The results show that Democrats and Republicans respond differently to mass shootings. Table 4 shows that Republicans introduce 48% more bills and Democrats introduce 11% more bills following mass shootings than in other years, although the coefficient for Democrats is not statistically significant.<sup>7</sup> The results also indicate that Republican legislatures enact 32% more laws the year after a mass shooting than in other years, a statistically significant increase. Democratic legislatures enact 7% more laws the year after a mass shooting, but this estimate is imprecise and not statistically significant.<sup>8</sup>

When there is a Republican-controlled legislature, mass shootings lead to more firearm laws that loosen gun control (Table 5). Our point estimates indicate that a mass shooting in the previous year increases the number of enacted laws that loosen gun restrictions by 115% in states with Republican-controlled legislatures. When there is a Democrat-controlled legislature, mass shootings lead to a statistically insignificant reduction in laws that loosen gun control. This result is similar across models using the count of fatalities instead of a shooting indicator, across alternative victim thresholds, with or without year fixed effects, with or without control variables, and when we include only a limited set of controls.<sup>9</sup> We find no significant effects of mass shootings on laws that tighten gun restrictions, but the estimates are imprecise.

---

<sup>7</sup> The difference between Republicans and Democrats is statistically significant at the 0.05 level.

<sup>8</sup> The difference between Republicans and Democrats in terms of enacted laws is not statistically significant. Without interacting mass shooting with political party, there is a 9% increase in gun laws enacted (i.e. bills that become law) after a mass shooting relative to other years, but this estimate is imprecise (Appendix C).

<sup>9</sup> Available from authors upon request. The coefficients tend to be larger in magnitude for shootings resulting in more deaths (e.g. a dummy for shootings that causes 6–9 deaths has a larger coefficient than a dummy for shootings causing 4–5 deaths). The effect for tightening laws is statistically significant and positive—for both

The finding that Republicans—who typically favor fewer restrictions on gun owners—are more active in introducing and passing new legislation following mass shootings is consistent with hypotheses in the literature on how issue salience affects policy decisions (Riker 1996; Petrocik 1996; Dragu and Fan 2016). These models of issue selection suggest that Republican-controlled legislatures might respond to increased attention to gun policy by introducing new legislation because Republican voters: (a) tend to be in favor of expanding gun rights and access to guns (Parker et al. 2017), (b) often argue that such actions reduce gun crime (Parker et al. 2017), and (c) are more likely than Democratic voters (during our sample period) to mobilize for political action on this issue (Goss 2006).<sup>10</sup> Research suggests that supporters of gun rights are more likely to advocate for their positions by writing letters or donating money (Schuman and Presser 1981) and are better-organized than citizens favoring gun control; membership in pro-gun-control organizations, for example, is less than 10% of the National Rifle Association’s membership (Goss 2006).<sup>11</sup>

Anecdotally, there are several examples of Republican lawmakers proposing looser gun laws in response to mass shootings. In the year after the mass shooting at Marjory Stoneman Douglas High School, Florida passed legislation allowing teachers and volunteers to carry guns in schools. Republican Rep. Chuck Brannan explained the rationale: “It allows the good guys to stop the bad. The bad guys will never know when the good guys are there to shoot back.”<sup>12</sup> Similarly, Texas expanded its school marshal program, which trains teachers to carry weapons, the year after

---

Democrats and Republicans—only for shootings causing 10+ deaths. This result, however, is identified from only 11 state-year observations due to the rarity of mass shootings that kill 10 or more people.

<sup>10</sup> Republicans appear more likely than Democrats to enact new gun legislation in the absence of a mass shooting (see Table 4,  $p = 0.08$ ).

<sup>11</sup> Goss (2006) further analyzes the reasons why gun rights organizations have been better organized and more successful than gun control advocates.

<sup>12</sup> Anderson, Curt. “Florida lawmakers pass bill allowing more armed teachers.” *AP News*. 1 May 2019.

a shooting at Santa Fe High School. Republican Rep. Tony Tinderholt suggested that “what stops people with guns is other people with guns.”<sup>13</sup>

Overall, the observed effects of mass shootings in Republican-controlled states on bill introductions, laws enacted, and loosening laws suggest that there are relevant changes to gun policy following mass shootings. However, it is possible that mass shootings also lead to an uptick in minor proposals as well; legislators may want to signal that they are making changes even if the new laws have only unsubstantial effects on policy in practice. To further examine this possibility, we look at the impact of mass shootings on laws our coders agreed were neutral since these tend to be more minor proposals (e.g. changing the official responsible for storing certain records). As seen in Appendix D, we do not see statistically significant changes in the number of neutral law changes, although the point estimate is positive.

### **3.5 Media Coverage and Mass Shootings**

To explore the potential role of media in increasing the salience of mass shootings, we assemble a dataset of television news coverage related to guns. We measure the seconds of gun-related news coverage on the national, evening news programs of the three major television networks—NBC, ABC and CBS—using data from the Vanderbilt Television News Archive (VTNA).<sup>14</sup> This source has been used in prior research to measure media attention to natural disasters (Eisensee and Strömberg 2007) and the Israeli-Palestinian conflict (Durante and Zhuravskaya 2018). We exclude cable news networks because data on their news coverage is not available for our sample period. To calculate total gun-related news coverage, we take all news segments that mention gun-related words in either the segment title or summary provided by

---

<sup>13</sup> Vertuno, Jim. “Texas seeks more armed school personnel after mass shooting.” *AP News*. 7 May 2019.

<sup>14</sup> The Vanderbilt Television News Archive is accessible online at <https://tvnews.vanderbilt.edu>.

VTNA and exclude segments that include the names of foreign countries.<sup>15</sup> We then sum the duration of these news stories by day to create a measure of total gun-related news coverage.

To capture variation in news coverage across shootings, we aggregate news coverage in the ten days following each mass shooting (including the day of the shooting). The five most covered mass shootings between 1989 and 2014 are the shootings at Sandy Hook Elementary School, a Gabrielle Giffords constituent meeting, Virginia Tech, an Aurora movie theater, and Columbine High School.

Mass shootings increase gun-related media coverage, and shootings that kill more people result in more coverage. Figure 5 shows total seconds of evening news coverage devoted to gun-related stories around the time of mass shootings. Mass shootings resulting in 10 or more fatalities receive substantially more coverage than shootings resulting 6–9 fatalities, which in turn receive more coverage than shootings with 4–5 fatalities. Appendix E provides further support for this relationship in the form of regression results.

To examine whether the amount of gun-related news coverage following a mass shooting affects policy, we add the measure of media coverage to our model by totaling the amount of gun-related news coverage following each shooting within a state during the previous year. The results in Table 6 show that the coefficient on news coverage is positive and statistically significant, indicating that more media attention is associated with a greater policy response. One hour of gun-related news coverage following a mass shooting is associated with a 13 percent increase in the number of gun-related bills introduced in state legislatures (column 4). This suggests that increased salience of gun policy after mass shootings is a plausible mechanism for the relationship between shootings and gun legislation. Media coverage, however, is strongly related to the number of

---

<sup>15</sup> This filter removes news stories about foreign wars.

fatalities (see Figure 5), making it difficult to distinguish the impact of media coverage from other attributes of the shooting event.

Unlike other studies of the media's effect on public policy (Eisensee and Strömberg 2007; Durante and Zhuravskaya 2018), our ability to detect policy responses to gun-related news coverage is limited by the small number of events and by the delay between when a mass shooting occurs and when legislatures can act, which is usually not until the next legislative session. The natural disasters studied by Eisensee and Strömberg (2007) and military attacks studied by Durante and Zhuravskaya (2018) number in the thousands, whereas we observe 169 mass shootings. Furthermore, these authors focus on executive actions—whether to provide disaster relief (Eisensee and Strömberg 2007) or launch a military attack (Durante and Zhuravskaya 2018)—that can be taken within hours or days of an event and accompanying news story. Legislative action on the other hand must wait until a legislature is in session and rules allow for the introduction of new bills. Our results overall, however, show that attention shifts to gun violence following mass shootings, and shootings that kill more people receive more media attention. These shifts in attention are a plausible mechanism behind increased legislative activity related to guns in the year following mass shootings

### **3.6 Robustness Checks**

In this section, we present four sets of robustness checks. First, we collapse our data into two-year intervals (e.g. by legislative biennium) to ensure the saw-edge pattern in bill introductions (see Figure 3) does not drive our results. Second, we provide support for the exogeneity of mass shootings. Third, we perform a falsification exercise in which we use randomly generated placebo shootings instead of actual shootings; we show there are no effects using the placebo shootings, providing support for our identification strategy. Fourth, we individually drop each state from the

sample and re-estimate the models to ensure our effect is not driven by a single state or shooting event.

### **3.6.1 Analysis by Legislative Biennium**

Figure 3 shows that bill introductions vary substantially between odd- and even-numbered years. We believe this pattern is driven by most states starting their two-year legislative biennium in odd-numbered years, following elections in November of even-numbered years. Many states allow legislators to “carryover” bills that do not pass in the first year of the biennium for consideration in the second year. This means the agenda in the second year of each biennium includes both newly introduced bills and bills introduced the previous year that have been carried over.<sup>16</sup> Our models control for this pattern by including both year fixed effects and an indicator for the first year of each biennium. To ensure this pattern does not drive our results, however, we estimate models that collapse the data to two-year intervals and regress the total number of bills introduced on the mean of mass shootings (e.g. a variable equal to one if both years of the biennium follow a mass shooting and equal to 0.5 if only one year of the biennium follows a mass shooting). The results are shown in columns 3 and 7 in Table 2, and column 3 in Tables 3 and 6. The coefficient estimates are less precise, but remain statistically significant and suggest similar effect sizes. The estimate in column 3 of Table 2, for example, suggests mass shootings lead to the introduction of 3.5 more bills for an average state.

### **3.6.2 Determinants of Mass Shootings**

Our ability to identify the causal impact of mass shootings on policy rests on the assumption that they are plausibly exogenous to other factors that would drive gun control in a

---

<sup>16</sup> Our analyses count each bill once, including it only in the year it was introduced. We count enacted laws in the year of enactment.

given year. Given the erratic nature of mass shootings, this is a plausible assumption. Nonetheless, one might be concerned that both mass shootings and gun policy are being driven by a third variable. To provide support for our assumption and interpretation, we regress an indicator for whether a mass shooting occurs on economic, demographic, and policy variables.

Consistent with the assumption that mass shootings are exogenous with respect to potential confounds, the results in Appendix F show that, out of 32 variables we consider, only unemployment is significantly associated with a higher probability of mass shootings. Because higher unemployment is also associated with a reduction in gun bill introductions (Table 2), the potential bias of this would work in the opposite direction of our finding—making it unlikely that this is driving our results. To further support our interpretation, we control for unemployment in all models. Importantly, bills introduced, laws enacted, and major gun policies do not predict future mass shootings (Appendix F).

### **3.6.3 Placebo Tests**

We perform a falsification exercise based on the insights of Bertrand, Duflo, and Mullainathan (2004) and Donald and Lang (2007). Specifically, we randomly assign placebo mass shootings to state-years in which no actual shooting occurred with probability equal to each state's frequency of shootings, and randomly draw a fatality count from the empirical distribution of fatalities. Appendix G shows percentiles of the test statistic based on 1,000 repetitions of this procedure and our actual test statistics from Tables 2 and 5. The results suggest our tests do not over-reject the null hypothesis that mass shootings have no effect on gun policy.

### **3.6.4 Excluding Individual States**

To ensure our results are not driven by a single state or shooting, we separately remove each state from the sample and re-estimate the models. Appendix H presents graphs of the resulting

50 coefficients for the effect of mass shootings on bills and laws, and coefficients for the Republican and Democrat interaction terms in our analysis of laws that tightened or loosened gun policy. The results show that dropping individual states has little effect on our estimates.

## 4. Discussion

Mass shootings account for a small fraction of gun deaths in the United States, but have a significant impact on gun policy. More gun laws are proposed in the year following a mass shooting. Furthermore, mass shootings seem to have much larger effects on policy, per fatality, than do ordinary gun homicides. These results are broadly consistent with qualitative research that has hypothesized the possibility of mass shootings precipitating change. For example, Godwin and Schroedel (1998) argue that the Stockton schoolyard massacre in 1989 led to the enactment of California's assault weapons ban. We find large sample empirical evidence that sporadic events such as mass shootings can lead to major policy changes.

We also find that media coverage related to guns increases following mass shootings and that Democrat-controlled and Republican-controlled legislatures differ significantly when it comes to enacting gun laws. Republicans are *more* likely to loosen gun laws in the year after a mass shooting than in other years. The effect for Democrats, which tends toward a reduction in the loosening of gun restrictions after a mass shooting, is statistically insignificant. This result aligns with the prediction from the political economy literature on issue selection, that political parties emphasize issues that they have a reputation for successfully handling in the eyes of their constituents (Riker 1996; Petrocik 1996; Dragu and Fan 2016).

Our findings raise a number of additional questions, and suggest several directions for future research. First, future research might directly explore the preferences of politicians.

Republican legislatures could loosen gun restrictions because Republican politicians themselves prefer looser restrictions (as would be the case in a citizen-candidate model) or due to pressure from constituents or interest groups. Consistent with this latter possibility, and our findings, survey evidence suggests that those opposed to increased gun control are more likely than those in favor of additional restrictions to take actions like writing a letter or donating money to support their side (Schuman and Presser 1981). If constituent preferences are driving results, we might expect increased loosening of gun policies in areas with higher rates of gun ownership. To provide exploratory evidence, Appendix I shows the results from adding a proxy for gun ownership to the models. Following Cook and Ludwig (2006), we calculate the percentage of suicides that are firearm related as a proxy for gun ownership and interact this variable with the mass shooting indicator. The coefficient on this variable is not significant either in isolation or when added to the specification with all political interactions. This suggests that changes in support for guns (as proxied by gun ownership) is not the main driver of the policy changes.

Second, our estimates focus on the impact on policy within the state in which each shooting took place. Some mass shootings get national media attention and potentially affect policy nationwide, a result that would not be identified by our fixed effects model. One direction for future research is to develop strategies to identify national responses. With respect to our findings, this suggests that the total impact of mass shootings on gun policy may be even larger than our estimates.

Third, there is a large literature on the impact of gun policies on crime (Duggan 2001; Ludwig and Cook 2000; Ludwig and Cook 2003; Abrams 2012; Luca, Malhotra, and Poliquin 2017). While some gun policies have been extensively researched, many have been difficult to study, which complicates analysis of which policies would be most effective. The relationship we

find between mass shootings and gun policy raises the possibility of using mass shootings as an instrumental variable to further study the impact of gun laws on gun deaths. Unfortunately, in our sample, mass shootings are not a sufficiently strong instrument to estimate the effects of gun policy on gun deaths, due to their relative infrequency. (Appendix J presents results of this analysis.) This leaves open the possibility of using salient and plausibly random events to instrument for policy changes in future research.

Overall, our results show that even random and infrequent events that account for a relatively small portion of total societal harm (as measured by fatalities in the current study) might nonetheless be crucial levers for policy consideration and change. This does not imply that politicians and policy makers are over-reacting; it may be that on issues where there is usually political deadlock, salient events create opportunities for change that has been sought all along. Whether these changes reflect appropriate responses to the problem remains an open question.

*Note:* Sample includes 1,250 state-year observations from 1990 to 2014. *Bills introduced* is the number of bills introduced in the legislature; *Laws enacted* is the number of bills that became law. *Tightening* and *Loosening laws* are numbers of enacted laws that tightened and loosened gun control respectively. *Mass shooting* is an indicator for state-years with a mass shooting in which three or more people not romantically involved with or related to the shooter(s) were killed. *Fatalities* is the total number of deaths in mass shootings in a state-year. The *Gun homicide rate* is expressed as deaths per 100,000 residents. *News coverage* is the hours of nightly news coverage of mass shootings occurring in a state. *Democratic* and *Republican legislature* are indicators for party control of the state legislature. *Republican governor* is an indicator for Republican governors. *Regular session* indicates whether the legislature convened a regular (as opposed to special) session to consider bills; some state legislatures only meet every other year. *First year of biennium* is an indicator for the first year of the two-year legislative biennium (the calendar year immediately following elections). *Income per capita* is measured in thousands of 1987 U.S. dollars. Other demographic variables are percentages.

**Table 2: The Effect of Mass Shootings on Gun Bill Introductions**

*Dependent variable: number of firearm-related bills introduced in state legislature.*

| Republican Legislature        |                     | 0.080<br>(0.075)    | 0.035<br>(0.087)    | 0.030<br>(0.043)    |
| Republican Governor           |                     | -0.020<br>(0.066)   | -0.062<br>(0.076)   | -0.042<br>(0.056)   |
| Demographic Controls          | No                  | No                  | No                  | Yes                 |
| State Fixed Effects           | Yes                 | Yes                 | Yes                 | Yes                 |
| Year Fixed Effects            | Yes                 | Yes                 | Yes <sup>†</sup>    | Yes                 |
| State-Specific Trends         | No                  | No                  | No                  | Yes                 |
| Observations                  | 1,250               | 1,250               | 650                 | 1,250               |

*Note:* Robust standard errors clustered by state in parentheses. Stars following coefficients represent *p*-values less than .10 (\*), .05 (\*\*), and .01 (\*\*\*). *News Coverage* does not appear by itself in the model because we only have data from the national nightly news; the coefficient is therefore absorbed by the year fixed effects. See note to Table 1 for variable definitions.

<sup>†</sup> Sample collapsed to two-year intervals and year effects replaced with two-year interval fixed effects.

### Appendix A: Coding Gun Laws

This appendix provides examples of coding bills and further investigates coder agreement with our gold standard when deciding whether bills tighten or loosen gun control. As explained in the text, a law can be one of the following five types:

- Tightening (stricter gun control)
- Loosening (weaker gun control)
- Uncertain (insufficient information)
- Both tightening and loosening
- Neutral (neither tightening nor loosening)

Table A1 presents examples of each type and illustrates how coders assigned laws to each category. Table A2 shows the categorization of the gun laws in our sample based on the above coding scheme. Coders agree on the type of law about 52 percent of the time; about half of these laws tighten restrictions on guns and about 20 percent loosen restrictions on guns. The remainder are uncertain, neutral, or both tightened and loosened gun policy.

Table A3 shows the frequency of coder responses for bills we classified as tightening or loosening in the gold standard. The most common response is both coders agreeing with the gold standard. When coders do not agree with the gold standard, it is common for at least one coder to supply the right answer and the other coder to be either uncertain or think the bill both tightens and loosens gun control.

The following is an example of a law that tighten gun control, which coders got wrong:

*“Increases the penalties for carrying a concealed deadly weapon, when the weapon is a firearm, by reclassifying what is currently a class G felony as a class D violent felony; deletes a penalty provision that is unnecessary and duplicative, since any person previously convicted of a violation of section 1442 is also a person prohibited under section 1448 of Title 11.”*

Coders may have seen “deletes a penalty provision” and assumed the law also loosened gun control because they did not read that the provision was “unnecessary and duplicative.” The following is an example of a law loosening gun control, which coders got wrong:

*“Bars a county or municipality from filing a lawsuit against the manufacturer of firearms or ammunition under certain circumstances; reserves an exclusive right for the State to maintain such an action; repeals conflicting laws.”*

Some coders made the mistake of thinking this bill both loosened and tightened gun control, perhaps because “bars” sounds like it relates to tightening and “repeals” sounds like it relates to loosening. Both of these are fairly long synopses; however, the share of coder pairs that supply the right answer is not correlated with the length of the synopsis.

**Table A1: Example of Coding Gun Laws**

| id | summary                                                                                                                                                    | tighten | loosen | uncertain |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--------|-----------|
| 1  | Creates a new felony for firing a gun within 1,000 feet of an educational facility.                                                                        | 1       | 0      | 0         |
| 2  | Reduces the age limit for purchase of a handgun from 21 to 18.                                                                                             | 0       | 1      | 0         |
| 3  | Allows parole officers to carry a loaded firearm while commuting to and from work.                                                                         | 0       | 0      | 0         |
| 4  | Relates to the use of firearms in state parks and campgrounds.                                                                                             | 0       | 0      | 1         |
| 5  | Requires a license to operate a gun show. Eliminates the waiting period for firearm sales if the purchaser has a valid permit to carry a concealed weapon. | 1       | 1      | 0         |

*Note:* Table shows examples of coding gun laws based on bill summaries. Coders were given a full manual to explain the meaning of “tighten”, “loosen”, “neutral,” and “uncertain” along with the following examples. This table mimics the appearance of the Excel workbooks used by the coders. The first bill creates a new crime related to firearms. It tightens restrictions on firearms. The second bill makes it easier for people to acquire guns; it loosens restrictions on firearms. The third bill is exclusively about parole officers; it is neutral because it does not affect the general public. The fourth bill is uncertain because the summary is a generic description that does not specify whether the law tightens or loosens restrictions on firearms. The fifth bill both tightens and loosens; it regulates gun shows, but also eliminates a restriction on firearm purchasers.

**Table A2: Results of Coding Gun Laws**

| Category                  | Total Laws | Percent of Total |
|---------------------------|------------|------------------|
| <i>Coders agree</i>       |            |                  |
| Tightening                | 872        | 27.3             |
| Loosening                 | 312        | 9.8              |
| Uncertain                 | 245        | 7.7              |
| Both (Tighten and Loosen) | 79         | 2.5              |
| Neutral                   | 173        | 5.4              |
| <i>Coders disagree</i>    |            |                  |
|                           | 1,518      | 47.5             |
| Total                     | 3,199      | 100.0            |

**Table A3: Coder Agreement with Tightening/Loosening Gold Standard**

|                | Neutral | Tighten | Loosen | Both | Uncertain |
|----------------|---------|---------|--------|------|-----------|
| <b>Tighten</b> |         |         |        |      |           |
| Neutral        | 6       | 39      | 2      | 2    | 5         |
| Tighten        |         | 460     | 11     | 53   | 61        |
| Loosen         |         |         | 0      | 2    | 0         |
| Both           |         |         |        | 13   | 2         |
| Uncertain      |         |         |        |      | 30        |
| <b>Loosen</b>  |         |         |        |      |           |
| Neutral        | 0       | 3       | 15     | 2    | 5         |
| Tighten        |         | 12      | 45     | 7    | 15        |
| Loosen         |         |         | 337    | 72   | 29        |
| Both           |         |         |        | 10   | 2         |
| Uncertain      |         |         |        |      | 8         |

*Note:* Gold Standard—either tightening or loosening—in bold. Cell values represent the frequency of two coder responses across all unique pairs of coders who saw a given law.

**Appendix B: Effect of Shootings in Neighboring States**

**Table B1: Mass Shootings in Neighboring States, Bills and Laws**

*Dependent variable: number of firearm-related bills introduced or laws enacted in state.*

*Note:* Robust standard errors clustered by state in parentheses. Stars following coefficients represent *p*-values less than .10 (\*), .05 (\*\*), and .01 (\*\*\*). Variables are identical to those in Table 2, except for the dependent variable, which is the number of firearm-related laws enacted instead of the number of bills introduced. See note to Table 1 for variable definitions.

<sup>†</sup> Sample collapsed to two-year intervals and year effects replaced with two-year interval fixed effects.

**Appendix D: Mass Shootings and Neutral Laws****Table D1. Neutral Laws Enacted***Dependent variable: number of neutral firearm-related laws enacted.*

|                        | (1)              | (2)              |

| Year Fixed Effects     | Yes              | Yes              |
| Observations           | 1,050            | 1,050            |

*Note:* Sample size differs from other tables due to states with all zero observations (i.e. no years with neutral laws enacted).

### **Appendix E: Media Coverage and Mass Shootings**

This appendix presents regression results showing that mass shootings are associated with large increases in gun-related news coverage and that increased news coverage is associated with greater legislative activity in the form of firearm-related bills introduced in state legislatures.

Table E1 shows results from regressing the log of each day's total seconds of gun-related news coverage on an indicator for the occurrence of a mass shooting and 10 lags of that indicator. The results suggest that media attention to guns increases roughly 300 percent immediately following a mass shooting and that coverage remains elevated from pre-shooting levels for at least a week following the event. Table E2 presents similar results using the count of mass shooting fatalities as the independent variable instead of a mass shooting indicator variable.<sup>17</sup>

---

<sup>17</sup> Additionally, we estimated models with 10 leads of each indicator variable (not shown to conserve space) and none of the leads are statistically significant at conventional levels. This suggests that gun-related media coverage does not presage mass shootings (as would be the case if media reports about firearms caused shootings or reflected other contemporary events associated with mass shootings).

*Note: Handgun Waiting Period is the number of days purchasers must wait before accepting delivery of a handgun. Long-gun Waiting Period is similarly defined for long-guns (e.g. rifles and shotguns). Age 18+ Transaction is an indicator for laws that prevent vendors from selling handguns to minors or prevent minors from purchasing handguns. Age 21+ Transaction is defined the same way for persons under 21. Handgun Permit System is an indicator for states that require permits to purchase a handgun. Background Check, All Handgun Sales is an indicator for requiring a background check for all handgun transactions (including private sales). Background Check, All Firearm Sales is an indicator for requiring a background check for all firearm transactions (including private sales). Assault Weapons Ban is an indicator for states that ban some types of assault rifles or pistols. Shall Issue Concealed Carry is an indicator for states that require the permitting authority to grant a license to anyone meeting the minimum statutory qualifications (i.e. do not permit law enforcement discretion in issuing permits). No Permit Needed Concealed Carry is an indicator for states that allow concealed carry without a permit.*

| Split Leg. × Shooting                | 0.40   | -2.93                                 | -2.02           | -1.59            | 1.34             | 1.79             | 2.72             |

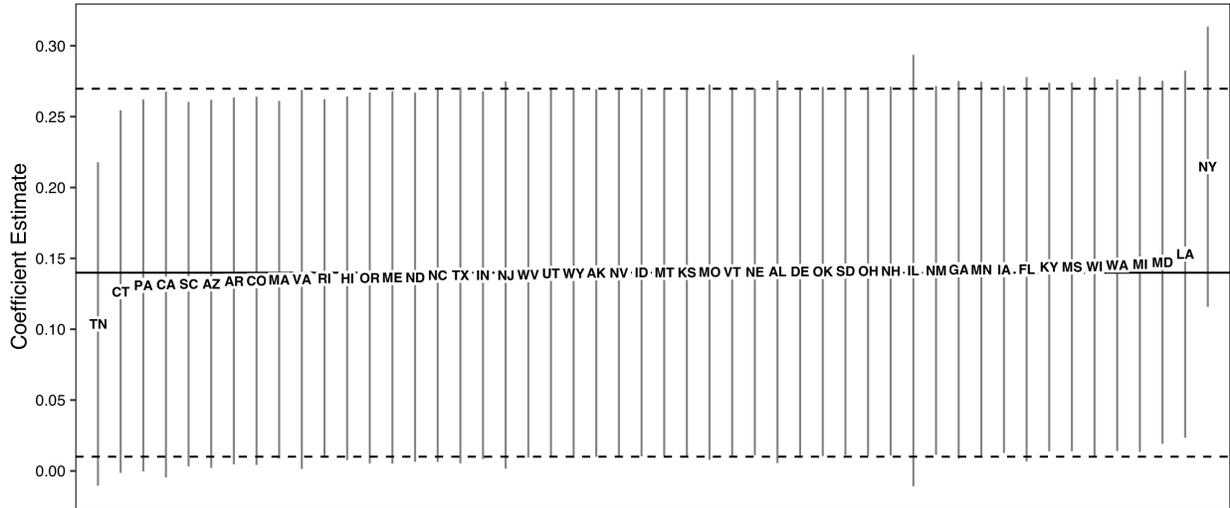

*Notes:* We randomly assign placebo mass shootings to state-years in which no actual shooting occurred with probability equal to each state's frequency of shootings, and randomly draw a fatality count from the empirical distribution of fatalities. We then re-run the models and calculate the test statistic for the placebo shooting and fatality coefficients. The above percentiles are based on 1,000 replications. The "Pooled" rows in Table G2 mirror models 2 and 6 of Table 5 (the models without interaction effects). The legislature effects mirror models 4 and 8 for tightening and loosening laws respectively.

### **Appendix H: Dropping Individual States**

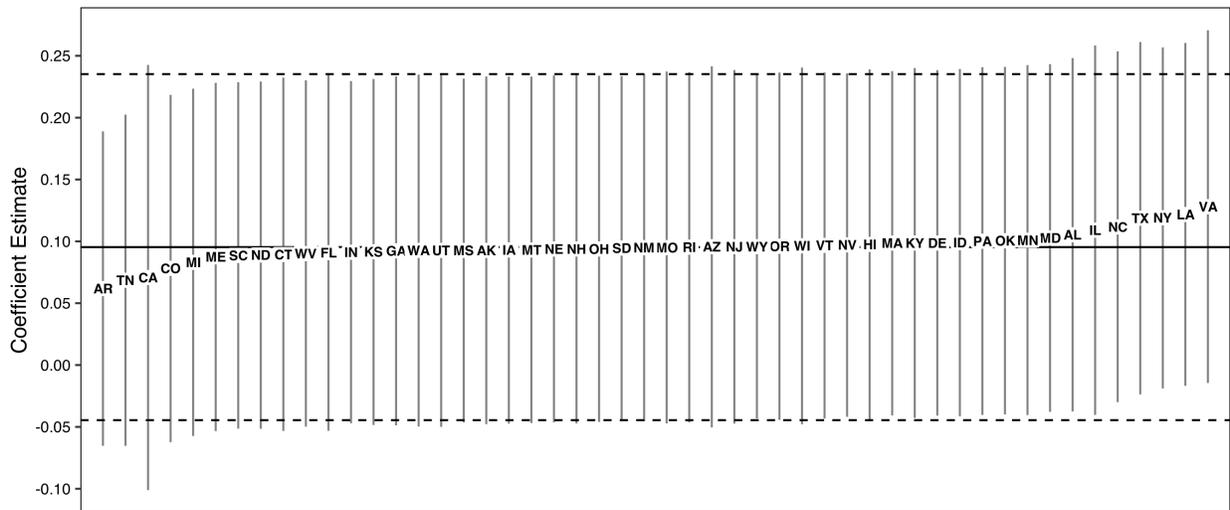

These analyses exclude each state, one at a time, from our sample. Each graph plots the resulting 50 regression coefficients (from smallest to largest) along with a 95% confidence interval and estimates using the full sample of all states. The state abbreviations in the figures indicate the state that was dropped from the sample and mark the resulting point estimate. The vertical bars represent 95% confidence intervals. The solid, horizontal line indicates the point estimate from the complete sample (presented in the text and tables). The dotted, horizontal lines represent the lower and upper bounds of the 95% confidence interval for the full sample coefficient estimate.

The results show that removing individual states has little effect on the coefficient estimates, supporting the claim that the effect of mass shootings on gun policy is not driven by an individual state or shooting.

| Year Fixed Effects          | Yes                                                                                             | Yes                 | Yes                 | Yes                   | Yes                  | Yes                  |
| Observations                | 1,250                                                                                           | 1,250               | 1,250               | 1,250                 | 1,175                | 1,175                |

*Note:* Robust standard errors clustered by state in parentheses. Stars following coefficients represent  $p$ -values less than .10 (\*), .05 (\*\*), and .01 (\*\*\*). *Gun Suicide Pct.* is the 5-year moving average of the percentage of suicides that are firearm-related and is used to proxy for gun ownership (Cook and Ludwig 2006). Models 1 and 4 show that the main results do not change when adding this control variable; the other models suggest that the response of Republican legislatures cannot be explained by rates of gun ownership. See note to Table 1 for other variable definitions.

### Appendix J: Mass Shootings as an Instrument for Gun Policy

In this appendix we use mass shootings as an instrumental variable to study the impact of gun laws on gun deaths. We start with the following model:

$$\ln(D_{st}) = \alpha_s + \theta_t + \beta \text{Gun Control}_{st} + \delta' Z_{st} + \epsilon_{st}$$

where  $D_{st}$  is non-mass shooting gun deaths per 100,000 people in state  $s$  and year  $t$ ,  $\alpha_s$  and  $\theta_t$  are state and year effects,  $\text{Gun Control}_{st}$  is an index representing the strictness of gun policy, and  $Z_{st}$  is a vector of controls—demographic, political, and economic factors—that potentially affect gun deaths. We use the same variables as Levitt (1996) as controls, but also include dummies for Republican and Democratic trifectas or legislatures, and a dummy for Republican governors.

We do not directly observe  $\text{Gun Control}_{st}$ ; instead, we observe the enactment of new laws that change gun policy. Therefore, we estimate the equation in first differences:

$$\Delta \ln(D_{st}) = \lambda_t + \beta \text{New Gun Laws}_{st} + \Delta Z_{st} \delta + \Delta \epsilon_{st}$$

where  $\text{New Gun Laws}_{st} = \Delta \text{Gun Control}_{st}$  is negative for laws that loosen gun control and positive for laws that increase gun control (according to our coders, see data description). Based on our main results, we instrument for gun laws using the first lags of mass shooting fatalities and the interaction of lagged mass shooting fatalities with Republican control of state government. The former should be positively correlated with new laws and the latter negatively correlated with new laws.

We estimate the model using Fuller's (1977) modified LIML with  $\alpha = 1$  (Baum, Schaffer, and Stillman 2007). First stage results suggest the instruments are weak despite being jointly significant ( $F = 5.98$ ) with the expected sign (Stock and Yogo 2005). The coefficients on the exogenous instruments in the reduced form equation for firearm deaths are not significant, but also have the expected signs (negative for lagged mass shooting fatalities and positive for the interaction of lagged fatalities with Republican control of government). Our estimate  $\hat{\beta}$  is  $-0.016$  with standard error 0.013.

A conditional likelihood ratio test (Moreira 2003; Andrews, Moreira, and Stock 2004; Finlay and Magnusson 2009) cannot reject the null hypothesis that  $\beta = 0$  ( $p = 0.24$ ). We also estimated models that include proxies for gun ownership. Including the percentage of suicides committed with a gun (Cook and Ludwig 2006) does not change our inference.

25 Plaintiffs,

26 v.

27 XAVIER BECERRA, in his official  
28 capacity as Attorney General of the  
State of California, et al.,

Defendants.

Case No.: 3:19-cv-01226-L-AHG

Hon. M. James Lorenz and Magistrate  
Judge Allison H. Goddard

**DECLARATION OF JOHN LOTT IN  
SUPPORT OF PLAINTIFFS'  
MOTION FOR PRELIMINARY  
INJUNCTION**

Complaint Filed: July 1, 2019  
Amended Complaint Filed: July 30, 2019

Date: Monday, November 18, 2019  
Time: 9:00 a.m.  
Courtroom: Dept. 5B

1 I, John R. Lott, Jr., declare as follows:

2 I am not a party to the captioned action, am over the age of 18, have personal  
3 knowledge of the facts stated herein, and am competent to testify as to the matters  
4 stated and the opinions rendered below.  
5

6 **Background/Qualifications**

7  
8 1. I reside in Burke, Virginia, and am an economist. I graduated with a  
9 bachelor's degree in economics from the University of California Los Angeles  
10 (UCLA) in 1980. I obtained my master's degree in economics from UCLA in 1982;  
11 and my PhD in economics from UCLA in 1984. I have held research and/or teaching  
12 positions at various higher education academic institutions, including the University  
13 of Chicago, Yale University, the Wharton School of the University of Pennsylvania,  
14 Stanford University, and Rice University; and was the chief economist at the United  
15 States Sentencing Commission during 1988-1989.  
16  
17

18 2. I have authored numerous academic and popular publications. For  
19 example, I have authored (a) nine books, including *More Guns, Less Crime*, *The Bias*  
20 *Against Guns*, and *Freedomnomics*; and (b) more than 100 articles in peer-reviewed  
21 academic journals.  
22  
23

24 3. I am also the founder and president of the Crime Prevention Research  
25 Center (CPRC). CPRC is a research and education organization dedicated to  
26 conducting academic quality research on the relationship between laws regulating the  
27 ownership or use of guns, crime, and public safety; educating the public on the results  
28

1 of such research; and supporting other organizations, projects, and initiatives that are  
2 organized and operated for similar purposes. CPRC has section 501(c)(3) status and  
3 does not accept donations from gun or ammunition makers or organizations such as  
4 the National Rifle Association (NRA) or any other organizations involved in the gun  
5 control debate on either side of the issue.  
6

7  
8 4. CPRC's goal is to provide an objective and accurate scientific evaluation  
9 of both the costs and benefits of gun ownership as well as policing activities.

10 CPRC's core activities include:

- 11
- 12 (a) Conducting and publishing academic quality research on the  
13 relationship between laws regulating the ownership or use of guns,  
14 crime, and public safety.
  - 15 (b) Supporting affiliated academics in conducting and publishing  
16 similar research by means such as providing direct financial  
17 support, sharing data, and providing technical assistance.
  - 18 (c) Educating the public, journalists, and policy makers on the results  
19 of research on these issues through books, public lectures,  
20 newspaper columns, academic seminars, information briefings, and  
21 other means.
  - 22 (d) Making research and data available to researchers, the public,  
23 policy makers, and journalists by maintaining a comprehensive  
24 website.
  - 25 (e) Engaging in other related activities consistent with the mission  
26 and goals of CPRC.

27 5. Attached hereto as **Exhibit 1** is a true and correct copy of my  
28 Curriculum Vitae. It describes my education, awards, fellowships, work experience,  
research, books and publications, presentations, and legislative and court testimony.

1 from retail sources, with just 0.4% from flea markets, 0.8% through gun shows, and  
2 slightly more, 1.6%, from pawn shops and 7.5% from gun shops/stores.<sup>1</sup> Attached  
3 hereto as **Exhibit 2** is a true and correct copy of Alper, et al. (2019).

4  
5 8. Interestingly, among the prisoners that obtained a firearm during their  
6 offense, more than half (56%) had either stolen it (6%), found it at the scene of a  
7 crime (7%), or obtained it off the street or from the underground market (43%). The  
8 remainder includes 1.6% obtained in theft from a family member or a friend, 1.5%  
9 from burglaries, 0.2% in theft from retail sources, and 3% in other unspecified thefts.  
10 (See **Exhibit 2**, Alper, et al. 2019 [Table 5].)  
11

### 12 **Criminals are Still Going to Obtain Guns**

13  
14 9. **Second**, even if all sources for obtaining firearms were closed off to  
15 people 18-to-20 years of age, it is unlikely that such laws would stop the vast  
16 majority of criminals in that age group from acquiring guns. Take Mexico where  
17 there has been only one-gun store in the country since 1972; where only about 1% of  
18 Mexican adults have licenses to legally own guns, with the most powerful legally  
19 owned firearms are .22-caliber rifles, hardly the type of weapon used by criminals.  
20 Despite that, in 2019, Mexico has a murder rate that is more than five (5) times the  
21  
22  
23

24  
25 <sup>1</sup> See Mariel Alper and Lauren Glaze, Special Report, “Source and Use of Firearms  
26 Involved in Crimes: Survey of Prison Inmates, 2016,” U.S. Department of Justice,  
27 Office of Justice Programs, Jan. 2019 [Alper, et al. 2016]; and for numbers in 2001,  
28 see Caroline Wolf Harlow, Special Report, “Firearm Use by Offenders,” U.S.  
Department of Justice, Office of Justice Programs, November 2001  
[<https://www.bjs.gov/content/pub/pdf/fuo.pdf>], last accessed Aug. 2019.)

1 U.S. rate.<sup>2</sup> The point is simple — criminals have guns and they get them illegally,  
2 primarily from drug dealers; and it is just as difficult to stop criminals from obtaining  
3 guns as it is to stop drug dealers from obtaining illegal drugs. The age of the criminal  
4 has nothing to do with illegally obtaining firearms. Attached hereto as **Exhibit 3** are  
5 a true and correct copies of the article from the Associated Press (2019) and the FBI’s  
6 crime report (2017) [see footnote 2, above].  
7  
8

### 9 **Age is not a Significant Factor in Mass Public Shootings**

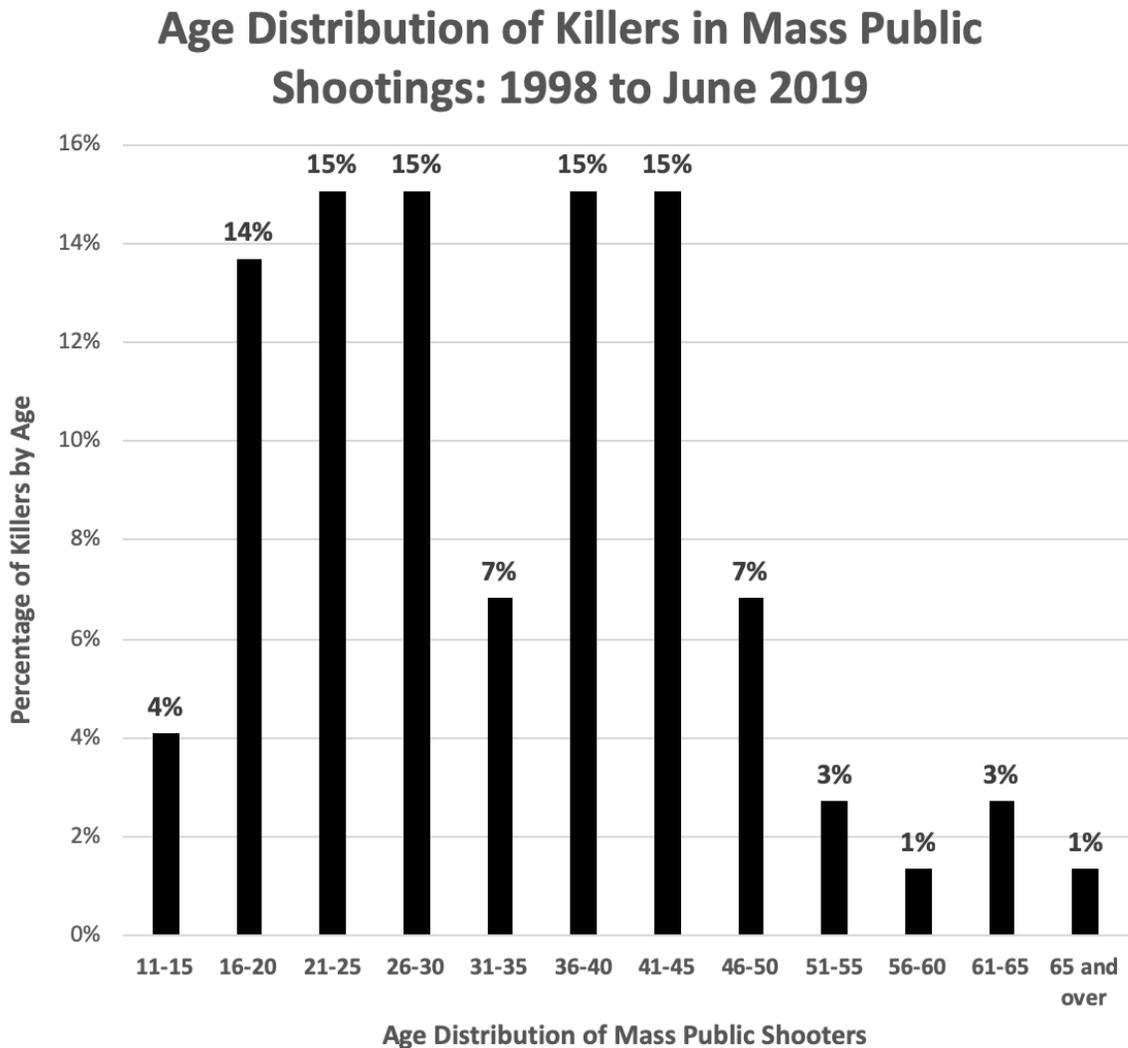

10 10. **Third**, of all the mass public shootings over that past 21 years, the  
11 average age of the shooters is approximately 33.5 years. Thirty-three (33) years of  
12 age is also the median age for shooters; therefore, more than half the shooters were  
13 over the age of 30 and 80% were at least 21 years of age.<sup>3</sup> So, age is not  
14 determinative. Our CPRC research is substantiated by the Rockefeller Institute of  
15 Government. It recently found that the average age of mass shooters in the past 50  
16  
17  
18

---

19 <sup>2</sup> Associated Press, “Mexico sets 1st half murder record, up 5.3%,” July 22, 2019  
20 (<https://www.apnews.com/c197a3ee34834ea69f745975fa632ea2>). Compare these  
21 numbers to the FBI Uniform Crime Report for 2017 (<https://ucr.fbi.gov/crime-in-the-u.s/2017/crime-in-the-u.s.-2017/topic-pages/tables/table-1>).

22  
23 <sup>3</sup> The Crime Prevention Research Center’s website contains the Excel file with  
24 our detailed information on mass public shootings  
25 (<https://crimeresearch.org/2019/07/breaking-down-mass-public-shooting-data-from-1998-though-june-2019-info-on-weapons-used-gun-free-zones-racial-age-and-gender-demographics/>). Mass public shootings are defined as those cases where four  
26 or more people are killed at one point in time in a public place and not involving  
27 some other type of crime such as a gang fight or a robbery. This definition follows  
28 the traditional FBI definition. Our Excel file is incorporated by this reference.

1 years is 33.4 years old,<sup>4</sup> confirming that age is not determinative. Attached hereto as  
2 **Exhibit 4** is a true and correct copy of Formica, et al. (2018). Our age distribution  
3 statistics are shown graphically below.  
4

25  
26 <sup>4</sup> Jaclyn Schildkraut, Margaret K. Formica, Jim Malatros. Rockefeller Institute of  
27 Government, Regional Gun Violence Research Consortium, “Can Mass Shootings be  
28 Stopped? To Address the Problem, We Must Better Understand the Phenomenon,”  
May 22, 2018 (Formica, et al. 2018) (<https://rockinst.org/wp-content/uploads/2018/05/5-22-18-Mass-Shootings-Brief.pdf>).

1 **Comparisons to Crime Statistics are Skewed**

2 11. **Fourth**, while persons 18-to-20 commit murders at a higher rate  
3 comparatively, the same can be said of persons 21-to-25, who commit murders at a  
4 higher rate than people in the 26-30 age range. Persons 36-45 commit crimes at a  
5 considerably higher rate than those 46-50. (This finding does *not* mean we ought to  
6 ban firearms purchased or acquired by people 36 through 45.) The same is true for  
7 persons 51-55, who commit crimes at a higher rate than do persons over 56. Same  
8 for persons 61-to-65 — they commit crimes at a higher rate than do persons over 65.  
9 Similar findings were made by other researchers.<sup>5</sup> Attached hereto as **Exhibit 5** is a  
10 true and correct copy of Lott and Whitley (2006) and FBI UCR (2018).<sup>6</sup>  
11  
12  
13

14 12. The same point also can be made based on race. For example, the claim  
15 that these shooters are overwhelmingly white is misleading. While white males  
16 (excluding those from Middle Eastern descent) make up the majority of mass public  
17 shootings, that is 6.4% below their share of the U.S. population. Hispanics are even  
18 much lower than their percentage of the U.S. population. By contrast, those of Middle  
19 Eastern descent, Asians, blacks, and American Indians are all above their shares of  
20 the population.  
21  
22  
23  
24

27 of-wedlock births," Economic Inquiry, 2006. FBI, Uniform Crime Report. Crime in the  
28 United States, 2017, Table 3 (<https://ucr.fbi.gov/crime-in-the-u.s/2017/crime-in-the-u.s.-2017/tables/expanded-homicide-data-table-3.xls>).

1           13. One thing is clear — mass public shooters are overwhelmingly male,  
2 with 96% of the shooters being male. See data from the Crime Prevention Research  
3 Center’s website ([https://crimeresearch.org/2019/07/breaking-down-mass-public-](https://crimeresearch.org/2019/07/breaking-down-mass-public-shooting-data-from-1998-though-june-2019-info-on-weapons-used-gun-free-zones-racial-age-and-gender-demographics/)  
4 [shooting-data-from-1998-though-june-2019-info-on-weapons-used-gun-free-zones-](https://crimeresearch.org/2019/07/breaking-down-mass-public-shooting-data-from-1998-though-june-2019-info-on-weapons-used-gun-free-zones-racial-age-and-gender-demographics/)  
5 [racial-age-and-gender-demographics/](https://crimeresearch.org/2019/07/breaking-down-mass-public-shooting-data-from-1998-though-june-2019-info-on-weapons-used-gun-free-zones-racial-age-and-gender-demographics/)).<sup>7</sup> However, the rights of such groups by age,  
6 race, and sex should not be forfeited because of the unlawful behavior by other  
7 persons of the same age, race, or sex. This is particularly the case when young  
8 adults’ use or possession of firearms is made criminal even where they have a  
9 legitimate purpose for their use or possession. Indeed, the State of California has not  
10 banned the purchase, sale, or transfer of a firearm based on race or sex; it should not  
11 do so on the basis of age. Below is the breakdown by race of mass public shooters  
12 from 1998 to November 2018. Also presented is our gender-based demographics.<sup>8</sup>

### Gender Demographics of Mass Public Shooters: 1998 to June 2019

### Unsupported Justifications for the Age-Based Gun Ban

14. California’s age-based gun ban is justified by reference to other legislation where law makers have limited the ability of persons under the age of 21 to engage in activities that are otherwise lawful such as the use of alcohol or marijuana; or renting a car. However, these laws do not cause a forfeiture of an enumerated right conferred to individuals under the Second Amendment. So, in my opinion, the legislative comparisons are unsupported.

1           15. Further, California’s age-based gun ban will not result in less crime. In  
2 fact, based on my research, every place that has banned guns (either all guns or all  
3 handguns) has seen murder rates go up. Examples include Chicago, Illinois,  
4 Washington D.C., and island nations such as England, Jamaica, Ireland, Venezuela,  
5 and obscure places like the Solomon Islands. Support for my opinion is found at  
6 [https://crimeresearch.org/2016/04/murder-and-homicide-rates-before-and-after-gun-](https://crimeresearch.org/2016/04/murder-and-homicide-rates-before-and-after-gun-bans/)  
7 [bans/](https://crimeresearch.org/2016/04/murder-and-homicide-rates-before-and-after-gun-bans/).  
8

9  
10           16. Supporters of California’s age-based gun ban have stated that mass  
11 public shootings carried out at schools are generally committed by people “under 21.”  
12 This is misleading and inaccurate. Of the 74 people who have committed mass  
13 public shootings since 1998, 10 were under the age of 21. Five were under 18,  
14 making them too young to purchase a gun under already existing law. Further, even  
15 in the five cases where raising the age limit could conceivably have made an impact,  
16 it is likely that the shooters would have illegally obtained the firearm like so many  
17 other attackers do (see results of research, above). Additionally, if one separates out  
18 school shootings, there were *eight K-12* mass public shootings where at least four  
19 people were killed, but only three of those involved killers between the ages of 18  
20 and 20 (Columbine, 1999; Newtown, 2012; and Parkland, 2018). There was one of  
21 these on average every 2.7 years, and before this period, they were much rarer. The  
22 *college* mass public shooters were 23 years-old (Virginia Tech, 2007); 27 (Northern  
23 Illinois University, 2008); 40 (near the University of Washington, 2012); and 43  
24  
25  
26  
27  
28

1 (Oikos University, 2012). As stated above, of all the mass public shooters, the  
2 average age is 33.5 years-old; and the median age 33.  
3

4 17. Another justification for California’s age-based gun ban is that 18 to 20-  
5 year old adults should not be allowed to purchase a firearm due to their “immaturity”  
6 and “impulsive or reckless behavior.” This justification is often cited in conjunction  
7 with the claim that young adults in California cannot buy alcohol or rent a car due to  
8 their “maturity” and “impulsive behavior.”<sup>9</sup> The above-referenced committee report  
9 cites no supporting evidence for the claim. Further, these same young adults are  
10 considered mature enough to vote and register to train and serve in the U.S. armed  
11 forces.  
12

13  
14 18. One way to look at this is the behavior of 18 to 20-year-old concealed  
15 handgun permit holders. Michigan and Texas grant to 18-to-20-year-olds and provide  
16 data by year of age of permit holders, though relatively few permits are granted (for  
17 2018, 322 permits).<sup>10</sup> For 18-to-20-year-olds in Texas who were granted such a  
18 permit in 2018, only 5 of 322 were revoked (0.015%) and zero were suspended. See  
19 **Exhibit 7**, which is a true and correct copy of the 2018 Texas Department of Public  
20  
21  
22  
23

---

26 <sup>9</sup> See **Exhibit 6**, which is a true and correct copy of a portion of SB 1100’s  
27 legislative history (Senate Committee on Public Safety, Bill No. 1100, Author:  
28 Portantino, Hearing Date: April 17, 2018, p. 7).

1 Safety, Regulatory Services Division, Handgun Licensing Program, Demographic  
2 Information by Age, Licenses: Issued, Revoked, and Suspended.<sup>11</sup>  
3

4 19. Nevada doesn't grant permits to 18 to 20-year-olds, but it is still possible  
5 to make a comparison between 21 and 22-year-olds and those who are older. To  
6 make things comparable with Michigan and Texas, the data for all three states are  
7 reported the same way. Unlike Michigan and Texas, the revocation rate for college  
8 age permit holders is higher than it is for those who are older than college students,  
9 but the difference is very small – just 0.025% and only about a fifth to the differences  
10 that go the other way for Michigan and Texas. Yet, even though the revocation rate  
11 for college age permit holders in Nevada is higher than for other states, it is still  
12 lower than the revocation rate for older adults in Michigan and Texas.

### Revocation rates for any reason for college age students versus older people

Michigan (2010-14), Nevada (2014, only data of 21 and older), and Texas (2009-13)

### Revocation rates for any reason for college age students versus older people

1           20. A further justification is that California’s age-based gun ban is needed  
2 because young adults “under 21” are disproportionally linked to crime. Above, I  
3 have already addressed why this data is skewed. Also, this comparison is grossly  
4 overbroad. Is the next step for the state of California to ban gun ownership for blacks  
5 based on blacks committing crime at relatively high rates?  
6

7  
8           21. While some young people commit crimes at relatively high rates, the  
9 victims of crime also tend to be relatively young and thus would benefit from the  
10 ability to defend themselves. See, attached hereto as **Exhibit 8**, which is a true and  
11 correct copy of the FBI, Uniform Crime Report. Crime in the United States, 2017,  
12 Table 2.  
13

14           22. The basic premise of our laws is that a democratic society prefers to  
15 punish the few that commit crimes *after* they violate the law, instead of punishing the  
16 few *and* all others beforehand. Those “others” also may indeed have good and lawful  
17 reasons for desiring to own or possess a firearm, but the ban’s net includes them  
18 as well.  
19  
20

21           I declare under penalty of perjury that the foregoing is true and correct.  
22 Executed within the United States on September 15, 2019.

Curriculum Vitae

**JOHN R. LOTT, JR.**

HOME ADDRESS: 212 Lafayette Ave, Swarthmore, PA 19081

TELEPHONE: Cell Telephone: (484) 802-5373

E-MAIL: [johnrlott@crimeresearch.org](mailto:johnrlott@crimeresearch.org)

BIRTH DATE: May 8, 1958 PLACE: Detroit, Michigan CITIZENSHIP: USA

DEGREES: Ph.D.: UCLA, September 1984, Economics  
MA: UCLA, 1982, Economics  
BA: UCLA, 1980, Economics, Magna cum laude

DISSERTATION: “Alternative Explanations for Public Provision of Education”  
CHAIRMAN: Harold Demsetz

RANKINGS: Number 27 among Economics, Law, and Business researchers in terms of  
lifetime downloads of papers at the Social Science Research Network  
Worldwide Rankings of Economists and Economics Departments: 1969-2000  
by Tom Coupe listed me 26th worldwide in terms of quality adjusted total  
academic journal output, 4th in terms of total research output, and 86th in  
terms of citations.  
Listed in various editions of “Who’s Who in Economics” by Mark Blaug and  
Howard Vane.

AWARDS AND FELLOWSHIPS:

Senior Research Scholar, School of Law, Yale University — Sept. 1999 to  
August 2001.

The John M. Olin Law and Economics Fellow, School of Law, University of  
Chicago — September 1995 to August 1999.

The John M. Olin Visiting Assistant Professor, The George J. Stigler Center for  
the Study of the Economy and the State, Graduate School of Business,  
University of Chicago — July 1994 to August 1995.

The John M. Olin Visiting Fellow, Cornell University Law School, March 1994.

Winner of the Duncan Black Award presented by the Public Choice Society for  
the best Public Choice paper of the year for 1992.

The John M. Olin National Fellow, Hoover Institution, Stanford University —  
September 1986 to August 1987.

Honorable Mention, Outstanding Doctoral Dissertation Contest in Government  
Finance and Taxation sponsored by the National Tax Association and  
the Tax Institute of America, 1984.

AWARDS AND FELLOWSHIPS (CONTINUED):

Weaver Fellowship, Intercollegiate Studies Institute, 1980-1981.

WORK EXPERIENCE:

President, Crime Prevention Research Center -- August 5, 2013 to Present.  
Columnist, Fox News -- March 3, 2008 to Present.  
Contributor, Fox News -- March 3, 2008 to November 11, 2013.  
Senior Editorial Writer for Economics, Washington Times -- February 2009 to December 1, 2010.  
Senior Research Scientist, University of Maryland Foundation, University of Maryland at College Park -- July 2007 to June 2009.  
The Dean's Visiting Professor, State University of New York at Binghamton -- August 2006 to July 2007.  
Resident Scholar, American Enterprise Institute -- September 2001 to July 2006.  
Senior Research Scholar, School of Law, Yale University -- September 1999 to August 2001.  
The John M. Olin Law and Economics Fellow, School of Law, University of Chicago -- September 1995 to August 1999.  
The John M. Olin Visiting Assistant Professor, The George J. Stigler Center for the Study of the Economy and the State, Graduate School of Business, University of Chicago -- July 1994 to August 1995.  
The John M. Olin Visiting Fellow, Cornell University Law School, March 1994.  
The Carl D. Covitz Term Assistant Professor, The Wharton School, University of Pennsylvania -- July 1991 to June 1995.  
Visiting Assistant Professor, John E. Anderson Graduate School of Management, University of California at Los Angeles -- July 1989 to June 1991.  
Chief Economist (GS-15, Step 6), United States Sentencing Commission, Washington, D.C. -- February 1988 to August 1989.  
Visiting Assistant Professor, Department of Economics, Rice University -- July 1987 to June 1988.  
The John M. Olin National Fellow, Hoover Institution, Stanford University -- September 1986 to August 1987.  
Visiting Assistant Professor, Department of Economics, Texas A&M University -- August 1984 to June 1986.  
Lecturer, Department of Economics, California State University, Northridge -- August 1983 to June 1984.

FIELDS OF INTEREST FOR RESEARCH:

Law and Economics, Public Choice, Industrial Organization, Labor, Public Finance, Microeconomic Theory, Environmental Regulation

COURSES TAUGHT (PARTIAL LIST):

Managerial Economics (MBA), Legal Environment of Business (MBA), Environmental Regulation (MBA), White Collar Crime and Corporate Criminal Penalties (MBA), Public Choice (Graduate), Microeconomics (Principles, Intermediate, and MBA), Macroeconomics (Principles, Intermediate, and MBA), Money and Banking (Undergraduate), Issues in Deterrence (Law), Empirical Law and Economics (Law), Cost-Benefit Analysis (Undergraduate, MBA, Graduate), Political Economy of the Public Sector (MBA), Economics of the Nonprofit Sector (MBA), Research Seminar for Law Students

OTHER AFFILIATIONS:

Adjunct Scholar, American Enterprise Institute, January 1995 to August 2001.  
Member, The Mont Pelerin Society, September 1990 to present.  
Associate, Political Economy Research Center, March 1987 to present.  
Member, National Policy Forum, Economic Growth and Workplace Opportunity, January 1994 to 1996.

EDITORIAL ACTIVITY AND OTHER PROFESSIONAL POSITIONS:

Coeditor, *Economic Inquiry*, November 1996 to August 1998.  
Editorial Board, *Regulation*, July 1989 to 2006.  
Editorial Board, *Public Choice*, March 1994 to December 2003.  
Editorial Board, *Managerial and Decision Economics*, January 1994 to July 1998.  
Co-editor, Special Issue of *Journal of Law and Economics* on Penalties: Public and Private, 1999.  
Co-editor, Special Issue of *Economic Inquiry* in Honor of Armen Alchian's 80th Birthday, July 1996.  
Special Editor, *Managerial and Decision Economics*, special issue on "The Economics of Corporate Crime," July-August 1996.  
Nominating Committee for Presidency and Board of Directors of Western Economic Association, Western Economic Association, 1996.

OTHER ACTIVITIES (UNPAID):

Board of Advisers, Business & Media Institute, May, 2008 to present.  
Wrote the Statistical Report for the Minority members of the U.S. Commission on Civil Rights on the "Probe of Election Practices in Florida During the 2000 Presidential Election."  
Served as a Statistical expert for *USA Today* in evaluating the precinct level data that they had put together after the Florida Presidential Election in 2000.  
Advisor to the Allied Pilots Association and the Airline Pilots Security Alliance on the issue of arming pilots in the cockpit: January 2002 to present.  
Served as the statistical expert for the challenge by Senator Mitch McConnell against McCain-Feingold campaign finance regulations.

OTHER ACTIVITIES (PAID):

Consultant, Federal Trade Commission, April 17, 2002 to July 1, 2003.

BOOKS:

Uncertainty and Economic Evolution: Essays in Honor of Armen Alchian, edited volume, Routledge Press: New York (1997).

More Guns, Less Crime: Analyzing Crime and Gun Control Laws, University of Chicago Press: Chicago, Illinois (1998), translated into Portuguese (1999), Russian (2004), and German (2017). Second edition published 2000, third edition published May, 2010.

Are Predatory Commitments Credible?: Who Should the Courts Believe?, University of Chicago Press: Chicago, Illinois (1999).

The Bias Against Guns: Why Almost Everything You've Heard About Gun Control Is Wrong, Regnery Press, Washington, DC (2003) translated into Portuguese (Brazil and Portugal).

Freedomnomics: Why the Free Market Works and Other Half-Baked Theories Don't, Regnery Press, Washington, DC (2007), translated into Portuguese (Brazil and Portugal), Chinese, and Korean.

Straight Shooting: Firearms, Economics and Public Policy, Merril Press: Seattle, Washington, (2010).

Debacle: Obama's War on Jobs and Growth and What We Can Do Now to Regain Our Future, co-authored with Grover Norquist, John Wiley & Sons: New York, NY (March, 2012).

At the Brink, Regnery Press, Washington, DC (February 9, 2013)

Dumbing Down the Courts: How Politics Keeps the Smartest Judges Off the Bench, Hillcrest Media: Minneapolis, MN (September 8, 2013).

The War on Guns, Regnery Press, Washington, DC (2016)

**SPECIAL REPORT**

JANUARY 2019

NCJ 251776

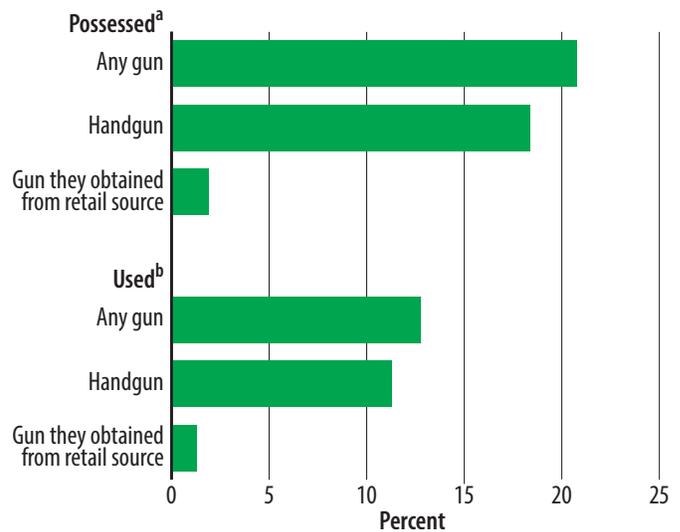

# Source and Use of Firearms Involved in Crimes: Survey of Prison Inmates, 2016

Mariel Alper, Ph.D., and Lauren Glaze, *BJS Statisticians*

**B**ased on the 2016 Survey of Prison Inmates (SPI), about 1 in 5 (21%) of all state and federal prisoners reported that they had possessed or carried a firearm when they committed the offense for which they were serving time in prison (**figure 1**). More than 1 in 8 (13%) of all prisoners had used a firearm by showing, pointing, or discharging it during the offense for which they were imprisoned. Fewer than 1 in 50 (less than 2%) of all prisoners had obtained a firearm from a retail source and possessed, carried, or used it during the offense for which they were imprisoned.

An estimated 287,400 prisoners had possessed a firearm during their offense. Among these, more than half (56%) had either stolen it (6%), found it at the scene of the crime (7%), or obtained it off the street or from the underground market (43%). Most of the remainder (25%) had obtained it from a family member or friend, or as a gift. Seven percent had purchased it under their own name from a licensed firearm dealer.

**FIGURE 1**  
Percent of all state and federal prisoners who had possessed or used a firearm during their offense, 2016

Note: See appendix table 1 for standard errors.

<sup>a</sup>Includes prisoners who carried or possessed a firearm during the offense.

<sup>b</sup>Includes prisoners who showed, pointed, or discharged a firearm during the offense.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016.

## HIGHLIGHTS

- About 21% of state and 20% of federal prisoners said they possessed a gun during their offense, while 79% of state and 80% of federal prisoners did not.
- About 29% of state and 36% of federal prisoners serving time for a violent offense possessed a gun during the offense.
- About 1.3% of prisoners obtained a gun from a retail source and used it during their offense.
- Handguns were the most common type of firearm possessed by state and federal prisoners (18% each); 11% of all prisoners used a handgun.
- Among prisoners who possessed a gun during their offense, 90% did not obtain it from a retail source.
- Among prisoners who possessed a firearm during their offense, 0.8% obtained it at a gun show.
- About 1 in 5 state and federal prisoners who possessed a firearm during their offense obtained it with the intent to use it during the crime.
- Among state prisoners who possessed a gun during their offense, 27% killed someone with it, another 12% injured someone, 7% fired the gun but did not injure anyone, and 54% did not fire it.
- State prisoners with no military service were more likely to possess a gun during their offense (21%) than prisoners who had served in the military (16%).

Statistics in this report are based on self-reported data collected through face-to-face interviews with a national sample of state and federal prisoners in the 2016 SPI. (See *Methodology*.)

The 2016 SPI data collection was conducted from January through October 2016. The SPI was formerly known as the Survey of Inmates in State and Federal Correctional Facilities (SISFCF). The Bureau of Justice Statistics (BJS) has periodically conducted the

survey since the 1970s, with the most recent iteration fielded in 2004. The survey collects information from prisoners on a variety of topics, including firearm possession during the crime for which a prisoner was serving time and how the firearm was used during the crime. It also collects information on the method, source, and process that prisoners used to obtain the firearm. (See appendix 1, *Questions related to firearms in the Survey of Prison Inmates, 2016*.)

## Terms and definitions

- **Firearm** – a weapon that uses gunpowder to shoot a bullet. Primary types are handguns, rifles, and shotguns:<sup>1</sup>
  - **Handgun** – a firearm which has a short stock and is designed to be held and fired by the use of a single hand.
  - **Rifle** – a firearm intended to be fired from the shoulder and designed to use the energy of an explosive to fire only a single projectile through a rifled bore for each single pull of the trigger.
  - **Shotgun** – a firearm intended to be fired from the shoulder and designed to use the energy of an explosive to fire through a smooth bore either a number of ball shot or a single projectile for each pull of the trigger.
- **Firearm possession** – carrying or possessing at least one firearm when the offense for which prisoners were serving a sentence was committed.
- **Firearm use** – showing a firearm to or pointing a firearm at anyone or discharging a firearm during the offense for which a prisoner was serving time.
- **Source of the firearm** – from where and how prisoners reported obtaining the firearm they possessed during the crime for which they were imprisoned—
  - **Purchased or traded from a retail source** – includes a gun shop or store, pawn shop, flea market, or gun show.
    - **Gun shop or store** – a business establishment that sells firearms in an open shopping format.
    - **Pawn shop** – a business that offers secured loans to customers, with personal property used as collateral. This personal property is sold to the public if the loan is not repaid.
    - **Flea market** – a market that rents space to individuals to sell or barter merchandise.
    - **Gun show** – a temporary market where licensed dealers and unlicensed sellers can rent tables or booths to sell firearms.
  - **Obtained from an individual** – includes purchasing, trading, renting, or borrowing from a family or friend. Also includes when the firearm was gifted to or purchased for the person.
  - **Off the street or underground market** – illegal sources of firearms that include markets for stolen goods, middlemen for stolen goods, criminals or criminal enterprises, or individuals or groups involved in sales of illegal drugs.
  - **Theft** – includes stealing the firearm during a burglary or from a retail source, family member, friend, or another source.
  - **Other sources** – includes a firearm that a prisoner obtained or found at the location of the crime, including one that belonged to a victim or that someone else brought to the location of the crime. This category also includes sources for which there were few responses, such as for guns bought online, and other sources that did not fit into one of the existing categories. This also includes instances where there was not enough information to categorize the source, such as when a firearm was purchased from an unknown source or obtained from another person by an unknown method.

<sup>1</sup>The definitions of types of firearms in this section were taken from 18 U.S.C. § 921 (2009). They have been edited for length.

**Controlling-offense characteristics**

About 29% of state and 36% of federal prisoners serving a sentence for a violent offense in 2016 possessed a firearm during the crime (table 1). About a quarter of state (23%) and federal (25%) prisoners serving time for a violent offense used a firearm during the crime. “Firearm use” is defined in this report as showing, pointing, or discharging a firearm during the offense for which a prisoner was serving a sentence.

Among prisoners serving time for homicide, more than 2 in 5 (44%) state prisoners and more than 1 in 3 (36%) federal prisoners had possessed a firearm during

the crime. About 37% of state and 28% of federal prisoners serving time for homicide used a firearm during the homicide.

Among those serving time for robbery, more than 2 in 5 state prisoners (43%) and federal prisoners (46%) possessed a firearm during the offense, and nearly a third of state (31%) and federal (32%) prisoners used a firearm during the robbery. Firearm possession was less common among state prisoners serving a sentence for rape or sexual assault (2%). Less than 1% of state prisoners serving time for rape or sexual assault used a firearm in the commission of their crime.

**TABLE 1**  
**Firearm possession and use among state and federal prisoners during the offense for which they were serving time, by type of controlling offense, 2016**

| Controlling offense <sup>a</sup> | Estimated number of state prisoners <sup>b</sup> | Percent of state prisoners who—  |                             | Estimated number of federal prisoners <sup>b</sup> | Percent of federal prisoners who— |                             |
|----------------------------------|--------------------------------------------------|----------------------------------|-----------------------------|----------------------------------------------------|-----------------------------------|-----------------------------|

\*Comparison group.

†Difference with comparison group is significant at the 95% confidence level across main categories, and no testing was done on subcategories (e.g., homicide).

: Not calculated. Too few cases to provide a reliable estimate, or coefficient of variation is greater than 50%.

<sup>a</sup>See *Methodology* for information on how controlling offense was measured.

<sup>b</sup>Excludes 3.0% of state prisoners and 1.7% of federal prisoners who were missing responses on firearm possession. Includes prisoners who were missing responses on firearm use.

<sup>c</sup>Excludes 3.0% of state prisoners and 1.7% of federal prisoners who were missing responses on firearm possession, and an additional 0.6% of state prisoners and 0.7% of federal prisoners who were missing responses on firearm use.

<sup>d</sup>Includes murder and both negligent and non-negligent manslaughter.

<sup>e</sup>Includes kidnapping, blackmail, extortion, hit-and-run driving with bodily injury, child abuse, and criminal endangerment.

<sup>f</sup>Includes larceny, theft, motor vehicle theft, arson, fraud, stolen property, destruction of property, vandalism, hit-and-run driving with no bodily injury, criminal tampering, trespassing, entering without breaking, and possession of burglary tools.

<sup>g</sup>Includes possession with intent to distribute.

<sup>h</sup>Includes being armed while committing a crime; possession of ammunition, concealed weapons, firearms and explosive devices; selling or trafficking weapons; and other weapons offenses. Among federal prisoners, weapons offense include violations of federal firearms and explosives.

<sup>i</sup>Includes commercialized vice, immigration crimes, DUI, violations of probation/parole, and other public-order offenses.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016.

State and federal prisoners serving time for a violent offense were much more likely to have possessed a firearm during the offense (29% state, 36% federal) than prisoners serving time for a property (5% state, 3% federal) or drug (8% state, 12% federal) offense. Among prisoners serving time for a public-order offense, about 1 in 5 (21%) state prisoners and nearly 1 in 3 (30%) federal prisoners reported that they possessed a firearm during the crime, and about 1 in 20 reported they had used it. About two-thirds of state and federal prisoners sentenced for a weapons offense said they possessed a firearm during the crime.<sup>2</sup>

<sup>2</sup>In addition to prisoners serving a sentence in state or federal prison in 2016 who possessed a firearm during the offense, weapons offenses include prisoners who were convicted of trafficking firearms but did not possess them at the time of the offense and prisoners who were convicted of a weapons offense that did not involve a firearm.

### Extent of firearm use among prisoners during the crime

State and federal prisoners in 2016 who had possessed a firearm during their offense were about equally likely to report that they had obtained the firearm with the intent to use it during the offense (19% state, 20% federal) (table 2). However, state prisoners (68%) who possessed a firearm were more than 2.5 times as likely as federal prisoners (26%) who possessed a firearm to have used it during the crime.

Nearly half of state prisoners (46%) serving a sentence for a crime during which they possessed a firearm discharged the firearm when they committed the crime, compared to 12% of federal prisoners. Among state prisoners who possessed a firearm during their offense, 27% killed a victim with the firearm and another 12% injured or shot a victim but did not kill him or her. Federal prisoners who possessed a firearm when they committed their offense were much less likely to have killed (4%) or injured (2%) a victim with the firearm than state prisoners.

**TABLE 2**

| Estimated number of prisoners who possessed a firearm (with valid data) <sup>e</sup> | 32.0%            | 74.1% †           | 19.0%            | 75.2% †                          | 27.5%             | 87.1% †                          |
|                                                                                      | 245,400          | 32,900            | 187,800          | 57,000                           | 7,200             | 25,600                           |

Note: Percentages are based on data reported on firearm possession, use, and controlling offense. Excludes 3.1% of state prisoners and 3.5% of federal prisoners who possessed a firearm during the offense and were missing responses on firearm use and 0.3% of state prisoners and 0.7% of federal prisoners who possessed a firearm and were missing a controlling offense. The sum of violent offense and non-violent offense does not equal the total number of state and federal prisoners who possessed a firearm in this table due to an estimated 600 state and 100 federal prisoners whose offense type was unknown. See appendix table 3 for standard errors.

\*Comparison group.

†Difference with comparison group is significant at the 95% confidence level.

: Not calculated. Too few cases to provide a reliable estimate, or coefficient of variation is greater than 50%.

<sup>a</sup>Includes property, drug, public order, and other non-violent offenses.

<sup>b</sup>Percentages are based on the 246,200 state and 32,600 federal prisoners who reported they carried or possessed a firearm and whether they obtained a firearm to use during the offense.

<sup>c</sup>Includes prisoners who showed a firearm to anyone, pointed a firearm at anyone, or discharged the firearm during the offense.

<sup>d</sup>Includes prisoners who showed or pointed a firearm at anyone during the offense but did not discharge it.

<sup>e</sup>Includes prisoners who reported they carried or possessed a firearm. Excludes prisoners who were missing responses on firearm possession or use. For violent offense and non-violent offense, also excludes prisoners who were missing a controlling offense.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016.

Among prisoners who possessed a firearm during a violent offense, a large majority of both state (81%) and federal (73%) prisoners used the firearm during the offense, far more than the percentages for non-violent offenders (25% state, 13% federal). More than half (56%) of state prisoners serving time for a violent offense who possessed a firearm during the crime discharged it, compared to fewer than a sixth (15%) of non-violent offenders in state prison who possessed a firearm. Violent offenders (27%) in federal prison who possessed a firearm during the crime were about 3.5 times as likely to discharge it as non-violent offenders (8%). Among state prisoners who had possessed a firearm during their offense, however, non-violent offenders (25%) were more likely than violent offenders (18%) to have planned to use the firearm during the offense.

**Type of firearm possessed by prisoners during offense**

Handguns were by far the most common type of firearm possessed or used by prisoners during the crime for which they were sentenced. About 18% of all state and federal prisoners in 2016 reported that they had possessed a handgun during the crime for which they were serving a sentence (table 3). Two percent or fewer possessed a rifle or a shotgun. Twelve percent of state and 5% of federal prisoners used a handgun during their offense. Most state (79%) and federal (80%) prisoners did not possess any type of firearm during the crime for which they were imprisoned.

Note: Details on type of firearm may not sum to totals because prisoners could report more than one type of firearm. Percentages exclude missing data. Excludes 3.0% of state prisoners and 1.7% of federal prisoners who were missing responses on firearm possession during the offense and an additional 0.3% of state prisoners and 0.2% of federal prisoners who were missing responses on type of firearm. See appendix table 4 for standard errors.

\*Comparison group.

†Difference with comparison group is significant at the 95% confidence level.

<sup>a</sup>Percentages exclude 0.6% of state prisoners and 0.7% of federal prisoners who were missing responses on firearm use.

<sup>b</sup>Includes prisoners who reported a type of firearm that did not fit into one of the existing categories and those who did not provide enough information to categorize the type of firearm. About 0.1% of state prisoners and 0.2% of federal prisoners reported another type of firearm or did not report enough information to specify the type of firearm.

<sup>c</sup>Excludes prisoners who were missing responses on firearm possession or type of firearm. Counts are weighted to totals from the 2015 National Prisoner Statistics Program; see *Methodology: Survey of Prison Inmates, 2016* (NCJ 252210, BJS web, July 2019).

### Demographic characteristics

Male prisoners were more likely than female prisoners to have possessed a firearm during their crime. About a fifth of male state and federal prisoners serving a sentence in 2016 possessed a firearm during the crime (table 4). Males in state prisons in 2016 were about 2.5 times as likely (22%) as females in state prisons (9%) to have possessed a firearm during the crime for which they were imprisoned. In federal prisons, males (21%) were about three times as likely as females (7%) to have possessed a firearm during their crime. Almost

3 in 10 (29%) black prisoners serving a sentence in state prison in 2016 possessed a firearm during their crime. White (12%) and Hispanic (21%) state prisoners were less likely to have possessed a firearm during their crime. Similarly, white (17%) and Hispanic (13%) federal prisoners serving a sentence in 2016 were less likely to have possessed a firearm during the crime than black (29%) federal prisoners. State prisoners who served in the military were less likely to have possessed a firearm during their crime (16%) than state prisoners who had not served in the military (21%).

**TABLE 4**  
**Firearm possession among state and federal prisoners during the offense for which they were serving time, by demographic characteristics, 2016**

Note: Percentages and counts exclude missing data. Excludes 3.0% of state prisoners and 1.7% of federal prisoners who were missing responses on firearm possession during the offense. Details for counts may not sum to totals due to missing data. See appendix table 5 for standard errors.

\*Comparison group.

†Difference with comparison group is significant at the 95% confidence level.

: Not calculated. Too few cases to provide a reliable estimate, or coefficient of variation is greater than 50%.

<sup>a</sup>Excludes persons of Hispanic/Latino origin, unless specified.

<sup>b</sup>Based on highest year of education completed.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016. Exhibit 2

In general, the likelihood of state and federal prisoners having possessed a firearm during their crime decreased with age. Firearm possession among state prisoners ages 18 to 24 (32%) in 2016 was more common than among older prisoners. Federal prisoners ages 18 to 24 (30%) were more likely to possess a firearm than those age 35 or older (16%, not shown in table).

The difference in firearm possession between U.S. citizens (21%) and non-citizens (18%) in state prisons in 2016 was not statistically significant. Among federal prisoners serving a sentence in 2016, firearm possession was more than three times as high among U.S. citizens (24%) as non-citizens (7%).

**Method, source, and process used to obtain the firearm**

Among prisoners who possessed a firearm when they committed the offense for which they were imprisoned and who reported the source from which they obtained it, the most common source (43%) was off-the-street or the underground market (table 5). Another 7% of state and 5% of federal prisoners stole the firearm, and 7% of state and 8% of federal prisoners reported that they obtained the firearm at the location of the crime.

| <b>Estimated number of prisoners who possessed a firearm, excluding prisoners who did not report source<sup>f</sup></b> | 256,400       | 227,100 | 29,300  |

Note: Prisoners were asked to report all sources and methods of obtaining any firearm they possessed during the offense, so details may not sum to totals. Each source is included in this table when multiple sources were reported. See *Methodology*. Percentages exclude missing data. Excludes 10.3% of state prisoners and 14.1% of federal prisoners who possessed a firearm during the offense and were missing responses on either source or method of obtaining the firearm. These prisoners were excluded either because they did not provide a valid response or they did not receive the questions due to providing an open-ended response to the previous question about type of weapon. See appendix table 6 for standard errors.

: Not calculated. Too few cases to provide a reliable estimate, or coefficient of variation is greater than 50%.

<sup>a</sup>Illegal sources of firearms that include markets for stolen goods, middlemen for stolen goods, criminals or criminal enterprises, or individuals or groups involved in sales of illegal drugs.

<sup>b</sup>Excludes theft from victim.

<sup>c</sup>Includes theft where the source could not be identified and theft other than from a burglary, retail location, family, or friend.

<sup>d</sup>Included if no source specified in the table was reported. Includes sources that did not fit into one of the existing categories, sources for which there were few responses such as bought online, or if there was not enough information to categorize the source. Examples of other sources include bought from an unknown source or obtained from a friend by an unknown method.

<sup>e</sup>Includes prisoners who reported multiple sources or methods that fit into more than one of the categories. Each reported source is included in the categories above.

<sup>f</sup>Includes prisoners who reported they carried or possessed a firearm and prisoners who reported a source or method.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016.

Among prisoners who possessed a firearm during the offense for which they were imprisoned, 7% of state and 10% of federal prisoners serving a sentence in 2016 bought or traded for the firearm from a gun shop or gun store. About 1% bought or traded for the firearm at a gun show. About a quarter (26%) of state prisoners and about a fifth (21%) of federal prisoners obtained a firearm that they possessed during their offense from an individual in a non-retail setting, such as a friend or family member.

Prisoners who reported that they had purchased or traded a firearm at a retail source were asked if they had obtained the firearm from a licensed dealer or private seller. Among prisoners who had possessed a firearm during the offense for which they were serving time, 8% of state and 11% of federal prisoners had purchased it from or traded with a licensed firearm dealer at a retail source (table 6).

Prisoners who reported that they had purchased a firearm from a licensed firearm dealer at a retail source were further asked whether they bought the firearm under their own name and whether they knew a background check was conducted. Among those who had possessed a firearm during the offense for which they were imprisoned, 7% of state and 8% of federal prisoners had purchased it under their own name from a licensed firearm dealer at a retail source, while approximately 1% of state and 2% of federal prisoners had purchased a firearm from a licensed dealer at a retail source but did not purchase it under their own name (not shown in table).

Among all prisoners who purchased or traded a firearm from a licensed firearm dealer at a retail source (8.2%), the majority reported that a background check was conducted (6.7%).

Note: Percentages exclude missing data. Excludes 10.3% of state prisoners and 14.1% of federal prisoners who possessed a firearm during the offense and were missing responses on source or method of obtaining the firearm. See appendix table 7 for standard errors.

: Not calculated. Too few cases to provide a reliable estimate, or coefficient of variation is greater than 50%.

<sup>a</sup>Includes prisoners who purchased or traded from a retail source, including a retail store, pawn shop, flea market, or gun show.

<sup>b</sup>Includes prisoners who purchased from a retail source, including a retail store, pawn shop, flea market, or gun show. Excludes prisoners who traded for a firearm from a retail source.

<sup>c</sup>Includes prisoners who purchased from a retail source, including a retail store, pawn shop, flea market, or gun show. Excludes prisoners who traded for a firearm from a retail source and prisoners who reported that a background check was not conducted or who were unaware as to whether one was conducted.

<sup>d</sup>Excludes private sellers other than at a retail source.

<sup>e</sup>Includes prisoners who purchased or traded a firearm from a retail source and were missing responses on whether a firearm was purchased or traded from a licensed firearm dealer or a private seller at a retail source.

<sup>f</sup>Includes prisoners who reported they carried or possessed a firearm and prisoners who reported a source or method.

Source: Bureau of Justice Statistics, Survey of Prison Inmates, 2016.

**Use and source of firearms among all state and federal prisoners**

About 1% of all state and federal prisoners used a firearm during the offense that they obtained from a retail source (table 7). About 2% of prisoners possessed a firearm that they obtained from a retail source, including a retail store, pawn shop, flea market, or gun show.

Thirteen percent of all state and federal prisoners used a firearm during the offense for which they were serving time in 2016.

**TABLE 7**  
**Firearm possession and use among all state and federal prisoners during the offense for which they were serving time, by type of controlling offense and source, 2016**

| Controlling offense <sup>a</sup> | Percent of state and federal prisoners who— |                                                                          | Percent of state and federal prisoners who— |                                                                     |

## Methodology

### Survey of Prison Inmates

The findings in this report are primarily based on data collected through the 2016 Survey of Prison Inmates (SPI). The SPI is a periodic, cross-sectional survey of the state and sentenced federal prison populations. Its primary objective is to produce national statistics of the state and sentenced federal prison populations across a variety of domains, including—but not limited to—demographic characteristics, current offense and sentence, incident characteristics, firearm possession and sources, criminal history, socioeconomic characteristics, family background, drug and alcohol use and treatment, mental and physical health and treatment, and facility programs and rule violations. RTI International served as BJS's data collection agent for the 2016 SPI under a cooperative agreement (award no. 2011-MU-MU-K070). From January through October 2016, data were collected through face-to-face interviews with prisoners using computer-assisted personal interviewing (CAPI).

Prior iterations of the SPI were known as the Survey of Inmates in State and Federal Correctional Facilities (SISFCF), which was renamed with the 2016 implementation. The first survey of state prisoners was fielded in 1974 and thereafter in 1979, 1986, 1991, 1997, and 2004. The first survey of federal prisoners was fielded in 1991, along with the survey of state prisoners, and since then both surveys have been conducted at the same time using the same questionnaire and administration.

The target population for the 2016 SPI was prisoners ages 18 and older who were held in a state prison or had a sentence to federal prison in the United States during 2016. Similar to prior iterations, the 2016 survey was a stratified two-stage sample design in which prisons were selected in the first stage and prisoners within sampled facilities were selected in the second stage. The SPI sample was selected from a universe of 2,001 unique prisons (1,808 state and 193 federal) that were either enumerated in the 2012 Census of State and Federal Adult Correctional Facilities or had opened between the completion of the census and July 2014 when the SPI sample of prisons was selected. A total of 364 prisons (306 state and 58 federal) participated in the 2016 survey out of the 385 selected (324 state and 61 federal) for interviewing. The first-stage response rate (i.e., the response rate among selected prisons) was 98.4% (98.1% among

state prisons and 100% among federal prisons).<sup>3</sup> A total of 24,848 prisoners participated (20,064 state and 4,784 federal) in the 2016 SPI based on a sample of 37,058 prisoners (30,348 state and 6,710 federal). The second-stage response rate (i.e., the response rate among selected prisoners) was 70.0% (69.3% among state prisoners and 72.8% among federal prisoners).<sup>4</sup>

Responses from interviewed prisoners in the 2016 SPI were weighted to provide national estimates. Each interviewed prisoner was assigned an initial weight corresponding to the inverse of the probability of selection within each sampled prison. A series of adjustment factors were applied to the initial weight to minimize potential bias due to non-response and to provide national estimates.

For more information on the 2016 SPI methodology, see *Methodology: Survey of Prison Inmates, 2016* (NCJ 252210, BJS web, July 2019).

### Standard errors and tests of significance

When national estimates are derived from a sample, as with the SPI, caution must be used when comparing one estimate to another or when comparing estimates between years. Although one estimate may be larger than another, estimates based on a sample rather than a complete enumeration of the population have some degree of sampling error. The sampling error of an estimate depends on several factors, including the size of the estimate, the number of completed interviews, and the intracluster correlation of the outcome within prisons. When the sampling error around an estimate is taken into account, estimates that appear different may not be statistically different. One measure of the sampling error associated with an estimate is the standard error. The standard error may vary from one estimate to the next. Standard errors in this report were estimated using Taylor Series Linearization to account for the complex design of the SPI in producing the variance estimates.

<sup>3</sup>A total of 15 prisons (12 state and 3 federal) that were sampled were deemed ineligible for the 2016 SPI. For more information, see *Methodology: Survey of Prison Inmates, 2016* (NCJ 252210, BJS web, July 2019).

<sup>4</sup>There were 10,661 sampled prisoners who were eligible for the survey but did not participate. Another 1,549 sampled prisoners were deemed ineligible for the survey. For more information, see *Methodology: Survey of Prison Inmates, 2016* (NCJ 252210, BJS web, July 2019).

Readers may use the estimates and standard errors of the estimates provided in this report to generate a 95% confidence interval around the estimates as a measure of the margin of error. Typically, multiplying the standard error by 1.96 and then adding or subtracting the result from the estimate produces the confidence interval. This interval expresses the range of values with which the true population parameter is expected to fall 95% of the time if the same method is used to select different samples.

For small samples and estimates close to 0%, the use of the standard error to construct the 95% confidence interval may not be reliable. Therefore, caution should be used when interpreting the estimates. Caution should also be used if constructing a 95% confidence interval, which would include zero in these cases, because the estimate may not be distinguishable from zero.

The standard errors have been used to compare estimates of firearm possession during the offense, firearm use during the crime, and type of firearm possessed. They have also been used to compare firearm possession among selected groups of prisoners that have been defined by demographic characteristics and controlling offense. To facilitate the analysis, rather than provide the detailed estimates for every standard error, differences in the estimates for subgroups in the relevant tables in this report have been tested and notated for significance at the 95% level of confidence. Readers should reference the tables for testing on specific findings. Unless otherwise noted, findings described in this report as higher, lower, or different passed a test at the 0.05 level of statistical significance (95% confidence level).

### Measurement of firearm possession and source

The 2016 SPI was restricted to prisoners age 18 or older at the time of the survey. Firearms analyses in this report were restricted to state and federal prisoners who were sentenced or state prisoners who were convicted but were awaiting sentencing. This report excludes prisoners who were awaiting trial (i.e., unconvicted) or a revocation hearing or who were held for other reasons. Unconvicted prisoners, such as those awaiting trial or being held for other reasons like safekeeping or a civil commitment, were excluded from this report because they were not asked questions about firearm possession to protect against self-incrimination. (See appendix 1, *Questions related to firearms in the Survey of Prison Inmates, 2016*.) Of

the estimated 1,421,700 state and federal prisoners in 2016, an estimated 287,400 were armed with a firearm, 1,094,200 were not armed with a firearm, 23,800 did not know or refused to answer the question, and 16,300 were not asked the question because they were not convicted or they stopped the interview before responding to the question.<sup>5</sup>

To determine whether prisoners possessed a firearm at the time of the offense for which they were serving time in prison, respondents were first asked whether they had carried, possessed, or used a weapon when the controlling offense occurred. Respondents could report that they carried, possessed, or used a firearm or another weapon such as a toy or BB gun, knife, other sharp object, or blunt object. Weapons other than firearms, including toy and BB guns, were excluded from this report. Multiple weapons and firearms could be reported by respondents.

Of the respondents who were asked about possessing a firearm during the offense for which they were imprisoned, about 3.0% of state and 1.7% of federal prisoners in 2016 were missing responses on firearm possession. These prisoners were excluded from the analyses in this report. All prisoners who reported they carried, possessed, or used a firearm during the offense were asked whether they had obtained the firearm because they were planning to carry, possess, or use it during the offense. They were also asked whether they showed, pointed, or fired the firearm during the offense. Respondents who reported that they fired the firearm were also asked whether they shot anyone and, if so, whether anyone they shot had died. Of the respondents who possessed a firearm during the offense, about 3.1% of state and 3.5% of federal prisoners in 2016 were missing responses on how they used the firearm. These prisoners were excluded from the analyses in figure 1, tables 1 through 3, and table 7.

To measure the type of firearm possessed by prisoners, respondents were asked whether they had carried, possessed, or used a handgun, rifle, shotgun, or some other type of firearm during the offense for which they were imprisoned. About 0.3% of state prisoners and 0.2% of federal prisoners in 2016 were missing responses on the type of firearm that they possessed. These prisoners, along with prisoners who were missing a response on firearm possession, were excluded from the analyses in table 3.

<sup>5</sup>The SPI sample was weighted to the state and federal prison populations that were eligible to be sampled in the survey. See *Methodology: Survey of Prison Inmates, 2016* (NCJ 252210, BJS web, July 2019).

To measure the source and method of obtaining the firearm possessed by prisoners during their crime, two separate questions were asked in the survey. The first question asked how the prisoners obtained the firearm, and multiple responses could be reported in the 2016 SPI. Possible responses included stole it, rented it, borrowed it from or were holding it for somebody, traded something for it, bought it, someone bought it for them, someone gave it as a gift, found it or it was at the location where the offense occurred, it was brought by someone else, or other. If respondents specified an “other” method of obtaining the firearm, then the field interviewers entered the respondents’ answers into a text field. These responses originally reported as “other” were coded to one of the existing response categories if possible.

The second question asked where prisoners obtained the firearm, and multiple responses could be reported in the 2016 SPI. Respondents received this question if they reported that they stole, rented, borrowed from or were holding for somebody, traded something for, or bought the firearm. Possible responses included gun shop or gun store; pawn shop; flea market; gun show; from a victim, family member, or friend; from a fence (a middleman for stolen goods) or underground market; off the street or from a drug dealer; in a burglary; online or the internet; or other. Fewer than 1% of state and federal prisoners reported obtaining a firearm online. These responses were included in table 5 in the “other” category due to the small number of sample cases. If respondents specified an “other” source of obtaining a firearm, then the field interviewers entered the respondents’ answers into a text field. Responses originally reported as “other” were coded to one of the existing response categories if possible.

The responses from these two questions were used to create the source and method categories in figure 1 and tables 5 through 7. Approximately 10.3% of state and 14.1% of federal prisoners in 2016 who possessed a firearm during the offense for which they were serving a sentence were missing responses on source or method of obtaining the firearm. These prisoners were excluded from figure 1 and tables 5 through 7.

Prisoners who reported purchasing or trading a firearm from a retail source (gun shop or gun store, pawn shop, flea market, or gun show) were asked if they purchased or traded it from a licensed firearm dealer or a private seller. Prisoners who reported they purchased a firearm from a retail source were further asked whether they bought the firearm under their own name and whether the seller did a firearm purchase background check before selling them the firearm. About 1% of the respondents who possessed a firearm during the offense purchased or traded it from a retail source and were missing responses on whether they bought the firearm from a licensed dealer or private seller. About 1% of respondents who possessed a firearm during the offense purchased it from a retail source and were missing responses on whether the firearm was purchased under their own name or whether a background check was conducted.

### Measurement of controlling offense

The way controlling offense was measured through the 2016 SPI, and reflected in this report, varies by sentence status and the number of offenses of prisoners:

- For sentenced prisoners and those awaiting sentencing with one offense, that offense is the controlling offense.
- For sentenced prisoners with multiple offenses and sentences, the controlling offense is the one with the longest sentence.
- For sentenced prisoners with multiple offenses and one sentence and those awaiting sentencing with multiple offenses, the controlling offense is the most serious offense. For this report, violent offenses are considered most serious, followed by property, drug, public-order, and all other offenses.

For prisoners who were convicted but awaiting sentencing, the controlling offense is the most serious offense.

## Appendix 1. Questions related to firearms in the Survey of Prison Inmates, 2016

This appendix includes the questions from the 2016 SPI that were used to measure the firearms' constructs in this report. Text that appears in capital letters in the questions was not read out loud to respondents. That text reflects programming instructions for the CAPI instrument, instructions to field interviewers who conducted the interviews, or response options that were not read out loud to respondents but were coded by the field interviewers during the interviews.

### Questions

**CJ39.** (ASK IF RESPONDENT REPORTED BEING SENTENCED IN CJ1 OR CJ3 OR IF RESPONDENT REPORTED HE/SHE WAS AWAITING SENTENCING IN CJH2A.) Did you carry, possess, or use a weapon when the (INSERT CONTROLLING OFFENSE) occurred?

- YES
- NO (SKIP TO NEXT SECTION)

**CJH1.** How many weapons did you carry, possess, or use when the (INSERT CONTROLLING OFFENSE) occurred?

- ONE
- TWO OR MORE

**CJH2.** What (INSERT "kind of weapon was it?" OR "kinds of weapons were they?") CHECK ALL THAT APPLY.

- FIREARM
- TOY OR BB GUN (INCLUDE FAKE OR REPLICA GUNS)
- KNIFE
- OTHER SHARP OBJECT (SCISSORS, ICE PICK, AX, ETC.)
- BLUNT OBJECT (ROCK, CLUB, BLACKJACK, ETC.)
- ANOTHER WEAPON
  - What kinds of weapons were they?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

**CJH3.** (ASK IF RESPONDENT REPORTED "FIREARM" IN CJH2.) How many firearms did you carry, possess, or use when the (INSERT CONTROLLING OFFENSE) occurred?

- ENTER NUMBER OF FIREARMS

**CJH4.** (ASK IF RESPONDENT REPORTED "FIREARM" IN CJH2.) What (INSERT "type of firearm was it?" OR "types of firearms were they?") CHECK ALL THAT APPLY.

- A HANDGUN
- A RIFLE
- A SHOTGUN
- SOME OTHER TYPE OF FIREARM
  - What type of firearm?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

**CJH5.** (ASK IF RESPONDENT REPORTED "FIREARM" IN CJH2.) How did you obtain the (INSERT "firearm" OR "firearms") that you carried, possessed, or used during the (INSERT CONTROLLING OFFENSE)? Any others? CHECK ALL THAT APPLY.

- STOLE IT (GO TO CJH6)
- RENTED IT (GO TO CJH6)
- BORROWED FROM OR WAS HOLDING FOR SOMEBODY (GO TO CJH6)
- TRADED SOMETHING FOR IT (GO TO CJH6)
- BOUGHT IT (GO TO CJH6)
- SOMEONE BOUGHT IT FOR ME (GO TO CJH7)
- SOMEONE GAVE IT TO ME AS A GIFT (GO TO CJH9)
- FOUND IT/WAS AT LOCATION WHERE OFFENSE OCCURRED (GO TO CJH9)
- WAS BROUGHT BY SOMEONE ELSE (GO TO CJH9)
- OTHER
  - How did you obtain the firearm that you carried, possessed, or used during the offense?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

**CJH6.** (ASK IF RESPONDENT REPORTED "FIREARM" IN CJH2 AND REPORTED IN CJH5 HE/SHE "STOLE IT", "RENTED IT", "BORROWED FROM OR WAS HOLDING FOR SOMEBODY", "TRADED SOMETHING FOR IT", OR "BOUGHT IT") Where did you obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4)? CHECK ALL THAT APPLY.

- GUN SHOP OR GUN STORE (GO TO CJH6A)
- PAWN SHOP (GO TO CJH6A)
- FLEA MARKET (GO TO CJH6A)
- GUN SHOW (GO TO CJH6A)
- FROM THE VICTIM(S) (GO TO CJH9)
- FROM A FAMILY MEMBER (GO TO CJH9)
- FROM A FRIEND (GO TO CJH9)
- FROM A FENCE/BLACK MARKET SOURCE (GO TO CJH9)
- OFF THE STREET/FROM A DRUG DEALER (GO TO CJH9)
- IN A BURGLARY (GO TO CJH9)
- ONLINE/THE INTERNET (GO TO CJH9)
- OTHER
  - Where did you obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4)?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

*Continued on next page*

## Appendix 1. Questions related to firearms in the Survey of Prison Inmates, 2016 (continued)

**CJH6a.** (ASK IF RESPONDENT REPORTED IN CJH6 THAT THE FIREARM WAS FROM A “GUN SHOP OR GUN STORE”, “PAWN SHOP”, “FLEA MARKET”, OR “GUN SHOW”.) When you obtained the (INSERT TYPE OF FIREARM REPORTED IN CJH4) was it from a licensed firearm dealer or a private seller?

- LICENSED FIREARM DEALER
- PRIVATE SELLER

**CJH6b.** (ASK IF RESPONDENT REPORTED IN CJH5 THAT HE/SHE “BOUGHT IT” AND IN CJH6 REPORTED THAT THE FIREARM WAS FROM A “GUN SHOP OR GUN STORE”, “PAWN SHOP”, “FLEA MARKET”, OR “GUN SHOW”.) Did you buy the (INSERT TYPE OF FIREARM REPORTED IN CJH4) under your own name?

- YES
- NO
- NO PAPERWORK WAS REQUIRED

**CJH6c.** (ASK IF RESPONDENT REPORTED IN CJH5 THAT HE/SHE “BOUGHT IT” AND REPORTED IN CJH6 THAT THE FIREARM WAS FROM A “GUN SHOP OR GUN STORE”, “PAWN SHOP”, “FLEA MARKET”, OR “GUN SHOW”.) Did the seller do a firearm purchase background check before selling you the gun?

- YES
- NO

**CJH6d.** (ASK IF RESPONDENT REPORTED IN CJH5 THAT HE/SHE “BOUGHT IT” AND REPORTED IN CJH6 THAT THE FIREARM WAS FROM A “GUN SHOP OR GUN STORE”, “PAWN SHOP”, “FLEA MARKET”, OR “GUN SHOW”.) Did you buy the (INSERT TYPE OF FIREARM REPORTED IN CJH4) directly or did someone else buy it for you?

- INMATE BOUGHT
- SOMEONE ELSE BOUGHT

**CJH7.** (ASK IF RESPONDENT REPORTED “SOMEONE ELSE BOUGHT IT FOR ME” IN CJH5.) Where did that person obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4)?

- GUN SHOP OR GUN STORE
- PAWN SHOP
- FLEA MARKET
- GUN SHOW
- FROM THE VICTIM(S)
- FROM A FAMILY MEMBER
- FROM A FRIEND
- FROM A FENCE/BLACK MARKET SOURCE

- OFF THE STREET/FROM A DRUG DEALER
- IN A BURGLARY
- ONLINE/THE INTERNET
- OTHER
  - Where did that person obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4)?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

**CJH8.** (ASK IF RESPONDENT REPORTED “SOMEONE ELSE BOUGHT IT FOR ME” IN CJH5.) Why did someone else obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4) for you? CHECK ALL THAT APPLY.

- COULD NOT TRAVEL TO WHERE THE SELLER WAS
- NOT ALLOWED BECAUSE TOO YOUNG
- NOT ALLOWED BECAUSE OF CRIMINAL RECORD
- THEY COULD GET IT MORE QUICKLY OR EASILY
- DID NOT WANT TO BE LINKED TO FIREARM PURCHASE
- OTHER
  - Why did someone else obtain the (INSERT TYPE OF FIREARM REPORTED IN CJH4) for you?
    - INTERVIEWER: RECORD RESPONSE VERBATIM.

**CJH9.** Did you get the (INSERT TYPE OF FIREARM REPORTED IN CJH4) because you were **planning** to carry, possess, or use it during the (INSERT CONTROLLING OFFENSE)?

- YES
- NO

**CJH10.** Did you show or point (INSERT “the firearm” OR “any of the firearms”) at anyone during the (INSERT CONTROLLING OFFENSE)?

- YES
- NO

**CJH11.** Did you fire (INSERT “the firearm” OR “any of the firearms”) during the (INSERT CONTROLLING OFFENSE)?

- YES
- NO (SKIP TO NEXT SECTION)

**CJH12.** Did you shoot anyone?

- YES
- NO (SKIP TO NEXT SECTION)

**CJH13.** Did anyone you shot die?

- YES
- NO

**APPENDIX TABLE 1**

**Standard errors for figure 1: Percent of all state and federal inmates who had possessed or used a firearm during their offense, 2016**

| Characteristic                       | Possessed | Used  |
|--------------------------------------|-----------|-------|
| Any gun                              | 0.64%     | 0.51% |
| Handgun                              | 0.59      | 0.46  |
| Gun they obtained from retail source | 0.13      | 0.12  |

The Bureau of Justice Statistics of the U.S. Department of Justice is the principal federal agency responsible for measuring crime, criminal victimization, criminal offenders, victims of crime, correlates of crime, and the operation of criminal and civil justice systems at the federal, state, tribal, and local levels. BJS collects, analyzes, and disseminates reliable statistics on crime and justice systems in the United States, supports improvements to state and local criminal justice information systems, and participates with national and international organizations to develop and recommend national standards for justice statistics. Jeffrey H. Anderson is the director.

This report was written by Mariel Alper and Lauren Glaze of BJS. Mariel Alper conducted statistical analyses. Marcus Berzofsky and John Bunker of RTI International provided statistical review. Danielle Kaeble, Laura Maruschak, Todd Minton, and Stephanie Mueller verified the report. Lauren Glaze was the BJS project manager for the 2016 Survey of Prison Inmates.

Eric Hendrixson and Jill Thomas edited the report. Tina Dorsey and Morgan Young produced the report.

# Mexico sets 1st half murder record, up 5.3%

July 22, 2019

MEXICO CITY (AP) — Mexico set a new record for homicides in the first half of the year as the number of murders grew by 5.3% compared to the same period of 2018, fueled partly by cartel and gang violence in several states.

Mexico saw 3,080 killings in June, an increase of over 8% from the same month a year ago, according to official figures. The country of almost 125

**Exhibit 3**  
**0147**

million now sees as many as 100 killings per day nationwide.

The 17,608 killings in the first half of 2019 is the most since comparable records began being kept in 1997, including the peak year of Mexico's drug war in 2011. Officials said 16,714 people were killed in the first half of 2018.

In particular, drug cartel turf wars have become increasingly bloody in the northern state of Sonora, where the number of homicides was up by 69% in the first half of the year. But in Sinaloa, where the cartel of convicted drug lord Joaquin "El Chapo" Guzman is based, homicides declined by 23% so far this year compared to last.

Given cutbacks and a widespread reorganization of security forces under President Andrés Manuel López Obrador, it is not clear who, if anyone, is doing the analysis and intelligence work to find out exactly which conflicts are causing the rise in homicides.

"I could give you 10 potential, plausible reasons, but the truth is we don't know, and that is perhaps the biggest problem," said security analyst Alejandro Hope. "There is very little systematic research that would allow us to conclude what is really happening."

And other types of crime, like extortion, have become increasingly frequent and violent.

As if to underscore that, officials said Monday the five men killed Sunday at a bar in the resort of Acapulco were allegedly part of a gang of extortionists who shook down business owners for protection payments.

Guerrero state prosecutor Jorge Zuriel "we now know that the members of this gang met daily at this bar to coordinate charging extortion payments and to collect the daily take."

One suspect has been arrested in the shootings, which left six people wounded. Zuriel said the killers were members of a rival gang.

<sup>1</sup> Populations are U.S. Census Bureau provisional estimates as of July 1 for each year except 2000 and 2010, which are decennial census counts.<sup>2</sup> The violent crime figures include the offenses of murder, rape (legacy definition), robbery, and aggravated assault.<sup>3</sup> The figures shown in this column for the offense of rape were estimated using the revised Uniform Crime Reporting Program's (UCR) definition of rape. See data declaration for further explanation.<sup>4</sup> The figures shown in this column for the offense of rape were estimated using the legacy UCR definition of rape. See data declaration for further explanation.<sup>5</sup> The murder and nonnegligent homicides that occurred as a result of the events of September 11, 2001, are not included in this table.<sup>6</sup> The crime figures have been adjusted.

NOTE: Although arson data are included in the trend and clearance tables, sufficient data are not available to estimate totals for this offense. Therefore, no arson data are published in this table.

<sup>1</sup> The violent crime figures include the offenses of murder, rape (legacy definition), robbery, and aggravated assault.<sup>2</sup> The figures shown in this column for the offense of rape were estimated using the revised Uniform Crime Reporting Program's (UCR) definition of rape. See data declaration for further explanation.<sup>3</sup> The figures shown in this column for the offense of rape were estimated using the legacy UCR definition of rape. See data declaration for further explanation.

\* Less than one-tenth of 1 percent.

## Overview

### **Table 1—Crime in the United States, by Volume and Rate per 100,000 Inhabitants, 1998–2017**

### **Table 1A—Crime in the United States, Percent Change in Volume and Rate per 100,000 Inhabitants for 2 years, 5 years, and 10 years**

- In 2017, the estimated number of violent crime offenses was 1,247,321, a decrease of 0.2 percent from the 2016 estimate.
- The violent crime of murder and nonnegligent manslaughter decreased 0.7 percent in 2017 when compared with the 2016 estimate. Rape offenses (legacy definition) increased 3.0 percent, and aggravated assault offenses increased 1.0 percent. The violent crime of robbery decreased by 4.0 percent when compared with the 2016 estimate.
- The 2017 violent crime rate was 382.9 per 100,000 inhabitants, down 0.9 percent when compared with the 2016 violent crime rate.
- The murder rate was 5.3 per 100,000 inhabitants in 2017, a 1.4 percent decrease when compared with the estimated rate for the previous year.
- The estimated number of property crimes in 2017 was 7,694,086, a 3.0 percent decrease from the 2016 estimate.
- Of the property crimes, the estimated number of burglary offenses decreased 7.6 percent, and larceny-theft offenses declined 2.2 percent. The estimated number of motor vehicle thefts increased 0.8 percent.
- The 2017 property crime rate was 2,362.2 per 100,000, a 3.6 percent decrease when compared with the 2016 rate.

*Columbine High School in Littleton, Colorado*

*March for Our Lives in Albany, New York, on March 24, 2018*

The mass shooting at Columbine High School in Littleton, Colorado, happened nearly two decades ago, yet it remains etched in the national consciousness. Columbine spurred a national debate — from personal safety to the security of schools, workplaces, and other locations and to broader considerations of guns and mental illness. To this day, communities still are grappling to find solutions to the complex and multifaceted nature of mass shootings.

Exacerbating this already complex issue is the prevalence of social media and never-ending wall-to-wall media coverage. Mass shootings, and those that are particularly lethal, are amplified by the news cycle, making them appear more commonplace when they are, in fact, statistically rare. Despite their episodic and highly sensational nature, however, not all mass shootings garner the same attention by the media.<sup>1</sup> Those shootings that are the most lethal may receive more coverage, while those events that are perceived as more “routine” by the media may not even be covered at all.

As a result of the intense and often unbalanced media coverage of mass shootings, members of the public may hold disproportional attitudes about the events themselves. Certain shootings, for example, may be perceived as indicators of a broader social problem, while others are considered to be isolated events.<sup>2</sup> Still, the collective phenomenon of mass shootings has been found to produce a host of outcomes for the public, including fear

## ABOUT THE AUTHORS

**Jaclyn Schildkraut** is an assistant professor of public justice at SUNY Oswego and a national expert on mass shootings.

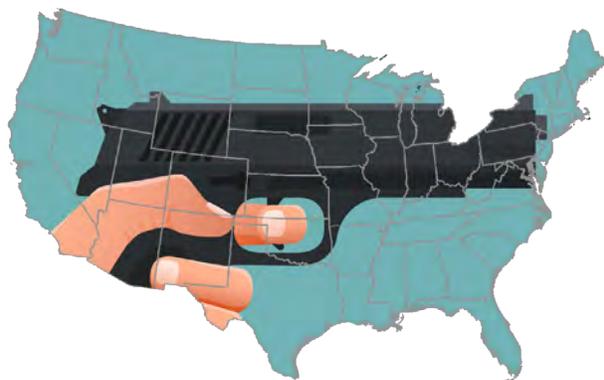

**Margaret K. Formica** is an assistant professor of public health and preventive medicine at SUNY Upstate Medical University.

**Jim Malatras** is president of the Rockefeller Institute of Government.

1 Jaclyn Schildkraut, H. Jaymi Elsass, and Kimberly Meredith, “Mass shootings and the media: why all events are not created equal,” online article, *Journal of Crime and Justice*, February 5, 2017, <https://www.tandfonline.com/doi/full/10.1080/0735648X.2017.1284689>.

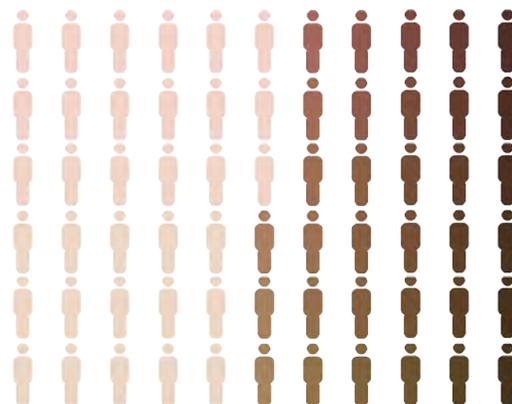

2 For example, the 2012 shooting at Sandy Hook Elementary School was identified as reflective of broader societal problems, while those events in Tucson, Arizona (2011), and Aurora, Colorado (2012), were perceived to be isolated events. See “Washington Post-ABC News Poll,” *WashingtonPost.com*, accessed March 29, 2018, [http://www.washingtonpost.com/wp-srv/politics/polls/postabcpoll\\_20121216.html](http://www.washingtonpost.com/wp-srv/politics/polls/postabcpoll_20121216.html).

# Mass Shooting Myths

**MYTH** Mass shootings only happen in the United States.

**REALITY** Mass shootings occur in countries worldwide, including on six of the seven continents.

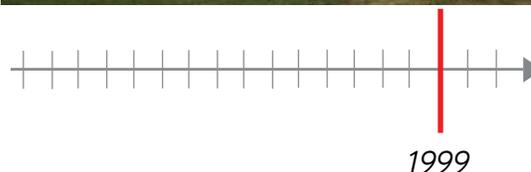

**MYTH** Mass shootings are only perpetrated by white men.

**REALITY** Though mass shooters are most commonly (but not exclusively) male, only about half are white.

**MYTH** Mass shootings are always carried out with assault rifles.

**REALITY** Handguns are nearly three times more likely to be used in mass shootings than rifles.

**MYTH** Columbine was the first (or one of the first) mass shooting in the United States.

**REALITY** Mass shootings have been traced back to the 1800s. Columbine, however, was a watershed moment that redefined how Americans think about the phenomenon of mass shootings.

of crime, a potential moral panic, and the general belief that these events are more prevalent than their actual occurrence.<sup>3</sup>

Like the public, policymakers also have struggled with how to respond to mass shootings. Most policies center on either further restricting or expanding rights related to gun ownership and carrying, with a lesser emphasis on mental health protocols, regulating violent media, or policies related to security practices. More often than not, in the immediate aftermath of a mass shooting, a flurry of bills are introduced, but few, if any, are ever enacted into legislation.<sup>4</sup> Further compounding the issue is that the new laws that are passed, or even those that have been on the books for decades, often are not enforced, leading them to be ineffective at preventing the next mass shooting.<sup>5</sup>

## Problems Defining Mass Shootings

A central challenge in developing public policy solutions to mass shootings in America is the absence of a precise and generally accepted definition. Without this, the result is a distorted understanding of the actual context of the problem of mass and school shootings. Put plainly, we cannot solve a problem we do not fully understand.

There is wide variation on how mass shootings are defined. Various government organizations (e.g., the Centers for Disease Control, U.S. Department of Education), advocacy organizations (e.g., Everytown for Gun Safety), and other entities (e.g., GunViolenceArchive.org's Mass Shootings Tracker) offer data that are based on their own descriptions that vary based on the number of victims (either killed or total shot), location, and the like. As a result, these definitions — several of which are discussed

---

3 See, for example, Robert J. Kaminski, Barbara A. Koons-Witt, Norma Stewart Thompson, and Douglas Weiss, "The impacts of the Virginia Tech and Northern Illinois University shootings on fear of crime on campus," *Journal of Criminal Justice* 38, 1 (2010): 88-98; Ronald Burns and Charles Crawford, "School shootings, the media, and public fear: Ingredients for a moral panic," *Crime, Law and Social Change* 32, 2 (1999): 147-68; and Jaclyn Schildkraut, H. Jaymi Elsass, and Mark C. Stafford, "Could it happen here? Moral panic, school shootings, and fear of crime among college students," *Crime, Law and Social Change* 63, 1-2 (2015): 91-110.

4 Jaclyn Schildkraut and Tiffany Cox Hernandez, "Laws That Bit The Bullet: A Review of Legislative Responses to School Shootings," *American Journal of Criminal Justice* 39, 2 (2014): 358-74. There are, however, exceptions to this. After the Columbine shooting, the state of Colorado was successful in passing several gun control measures, including a reinstatement of background checks and prohibitions on "straw purchase" (the buying of a gun on someone else's behalf). Similarly, after the Sandy Hook event, New York State enacted comprehensive antigun violence laws called the SAFE Act.

5 When the investigation subsequent to the 2007 shooting at Virginia Tech revealed a loophole that prevented the shooter's involuntary detention for mental health concerns from being reported into the National Instant Criminal Background Check System (NICS) — which, as required by the Gun Control Act of 1968, would have disqualified him from legally purchasing his firearms — new legislation was passed aimed at addressing the issue. By the time of the 2012 shooting at Sandy Hook Elementary School, it still was estimated that millions of records were missing from the system. In 2017, after a gunman killed twenty-six at a church in Sutherland Springs, Texas, it was revealed that his domestic violence conviction (another disqualifying factor) also had not been reported to the NICS by the U.S. Air Force. He too had legally purchased the gun used in the shooting. Similarly, in the aftermath of many high profile mass shootings, gun control proponents often call for a renewed assault weapons ban, even though one was in effect when the Columbine shooting happened and that one of the guns used in the attack (the Intratec TEC-DC) was on the list of prohibited weapons.

below — are inconsistent, overly broad, and ultimately lead to inflated statistics.

After the February 14, 2018, shooting at Marjory Stoneman Douglas High School in Parkland, Florida, for example, headlines around the country reported it to be the seventeenth school shooting of the year.<sup>6</sup> Many news outlets relied on data from a prominent gun control organization, Everytown for Gun Safety. Everytown defines school shootings as “any time a firearm discharges a live round inside or into a school building or on or onto a school campus or grounds, as documented by the press and, when necessary, confirmed through further inquiries with law enforcement or school officials.”<sup>7</sup> Based on this definition, and subsequently included in their compiled data, are attempted or completed suicides, accidental discharges, and purposeful discharges in which no one is injured or killed. When the seventeen events reported by Everytown for 2018 (through the Marjory Stoneman Douglas shooting) are separated based on their context, the number of school shootings in the more “traditional” sense (using Columbine as a template) is reduced to three. This, of course, creates issues developing appropriate policies and responses. Since these situations all required qualitatively different responses from school administrators, law enforcement officials, and other vested stakeholders, treating them all the same for the purpose of providing more compelling statistics is problematic.

More broadly, mass shootings also suffer from the same definitional issues. Often, whether an event qualifies as a mass shooting is contingent upon how many people are killed without consideration of the context surrounding the attack. Like school shootings, however, there are situational differences between multiple victim fatality situations such as familicides (the killing of one’s family), gang shootings, and even terrorism events in terms of prevention and response.

Further, events may not qualify as mass shootings when they do not meet a requisite number of fatalities (typically four, depending on the definition), despite that the intent and opportunity for the perpetrator was present. For example, a 2015 Congressional Research Service report defines a mass shooting as “a multiple homicide incident in which four or more victims are murdered with firearms, within one event, and in one or more locations in close proximity.”<sup>8</sup> Such a definition, however, can be limited in that it misses events — thereby creating false negatives in the accompanying data.<sup>9</sup> The May 21, 1998, shooting at Thurston High School in Springfield, Oregon, highlights

**When the seventeen events reported by Everytown for 2018 (through the Marjory Stoneman Douglas shooting) are separated based on their context, the number of school shootings in the more “traditional” sense (using Columbine as a template) is reduced to three.**

this issue. The fifteen-year-old shooter killed two students and wounded twenty-five others. Despite twenty-seven total victims, this case would have been excluded from this particular study for not having met the criteria for number of fatalities. Similarly, the twenty-two-year-old perpetrator in the December 11, 2012, shooting at the Clackamas Town Center in Clackamas, Oregon, killed two and wounded a third before his gun jammed. Despite that there were between 8,000 and 10,000 potential victims in the mall at the time of the event, this shooting too would have been excluded as a false negative.

## An Analysis of Mass Shootings

In one of the most comprehensive studies of mass shootings in the United States to date, researchers Jaclyn Schildkraut and H. Jaymi Elsass evaluated existing definitions of mass shootings from a number of sources, identifying the benefits and deficiencies of each.<sup>10</sup> In doing so, they crafted their own definition aimed at overcoming the limitations of these previous descriptors, which serves as the basis for this report:

A mass shooting is an incident of targeted violence carried out by one or more shooters at one or more public or populated locations. Multiple victims (both injuries and fatalities) are associated with the attack, and both the victims and location(s) are chosen either at random or for their symbolic value. The event occurs within a single 24-hour period, though most attacks typically last only a few minutes. The motivation of the shooting must not correlate with gang violence or targeted militant or terroristic activity.

In addition to definitional issues of school and mass shootings, the absence of a single national database of mass shooting events makes it difficult to properly understand and address the problem. Using the above criteria, Schildkraut and Elsass created a comprehensive dataset of mass shootings. Identifying potential events through media accounts, existing databases, and web searches, they cross-referenced each shooting through at least three sources to ensure that it aligned with the definition.

What they found was that over a fifty-year period stretching between 1966 and 2016, a total of 340 mass shootings occurred in the United States.<sup>11</sup> Collectively, these events resulted in 1,141 deaths and a total of 2,526 victims (both injured and killed). Across mass shooting events, the number of deaths ranged from zero to forty-nine, with the total number of victims (both injuries and fatalities) varying between two and 102. While the number of victims resulting from some events is high,

**In addition to definitional issues of school and mass shootings, the absence of a single national database of mass shooting events makes it difficult to properly understand and address the problem.**

<sup>10</sup> Jaclyn Schildkraut and H. Jaymi Elsass. *Mass Shootings: Media, Myths, and Realities* (Santa Barbara: Praeger, 2016).

<sup>11</sup> Due to the primary reliance on media accounts to identify incidents, it is possible that not every single mass shooting event has been captured. Still, it is believed that these data are among the most comprehensive of sources, as all will have an inherent margin of error for missing events.

the majority of shootings have far fewer victims, resulting in median number of deaths and total victims of two and five, respectively.

## Variation in Location Selection

Mass shootings occur in a variety of locations, including (but not limited to), schools; workplaces; places of worship (e.g., churches, temples); restaurants; nightlife establishments (e.g., bars, clubs); malls; movie theaters; airports; hospitals; and government buildings. In some instances, they may occur in residential areas or may span multiple locations, with shooters adopting a spree-like format by going mobile.<sup>12</sup> Mass shootings occurred most frequently at workplaces and schools, which combined were the settings for more than 57 percent of events (Table 2). This finding is not entirely unexpected as the shooters have relative ease of access to their victims in their roles as current or former employees or students.

TABLE 1. Mass Shooting by Location Type

| LOCATION TYPE          | EVENTS | % OF TOTAL |
|------------------------|--------|------------|
| Workplace              | 101    | 29.7%      |
| School                 | 94     | 27.6%      |
| Other                  | 35     | 10.3%      |
| Multiple Locations     | 30     | 8.8%       |
| Restaurant/Nightlife   | 24     | 7.1%       |
| Shopping/Entertainment | 19     | 5.6%       |
| Government/Military    | 16     | 4.7%       |
| Place of Worship       | 12     | 3.5%       |
| Residential            | 9      | 2.6%       |

## Weapons Selection across Mass Shootings

The majority of mass shooting events were carried out with a single firearm (67.1 percent), although multiple weapons were used in approximately one-third of events (Figure 2). Handguns were the most commonly used weapon, with at least one being used in 75.6 percent of events (Figure 3). When only a single weapon was involved, handguns were significantly more likely to be used than any other type of gun (68.9 percent of events).<sup>13</sup> In 28.5 percent of events, at least one rifle, which may include assault-style weapons, was used. To a lesser extent (0.9 percent), other types of guns, such as machine guns, were used by shooters.

FIGURE 1. Weapons Usage in Mass Shootings, 1966-2016

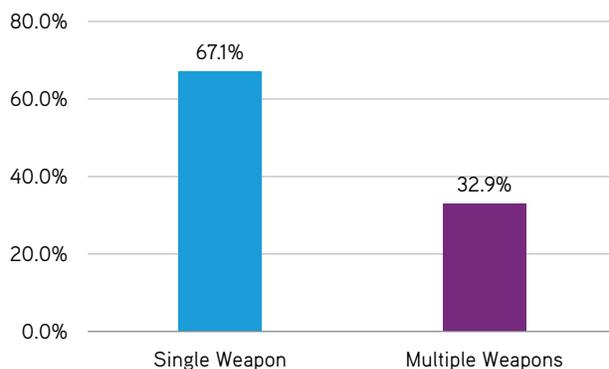

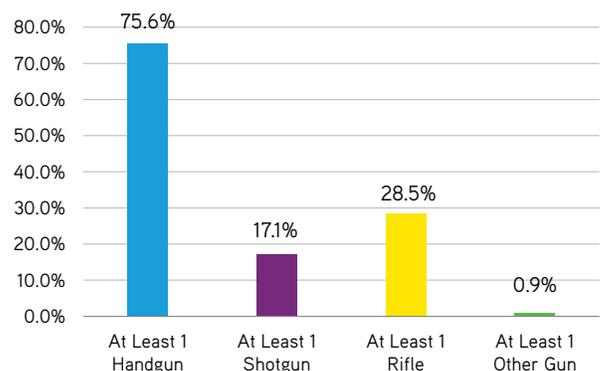

FIGURE 2. Types of Weapons Used in Mass Shootings

<sup>12</sup> One example of this is the 2014 shooting in the Isla Vista community of Santa Barbara, California.

<sup>13</sup> Based on author computations. This calculation is not included in the figures presented.

## Demographics of the Perpetrators

Across the 340 mass shootings identified between 1966 and 2016, there were 352 perpetrators. Just over 96 percent of the shooters were male, most of whom acted on their own (Figure 4). Conversely, there were just fourteen female offenders, twelve of whom acted alone. In just eight shootings (2.4 percent), multiple shooters were present. Mass shootings with co-offenders more commonly involved two or more males.

The distribution of age of the shooters is presented in Figure 5. The average age of a mass shooter is 33.4 years. The youngest shooter was eleven years of age, while the oldest was eighty-eight. Nearly half (46 percent) of the 352 shooters were under the age of thirty at the time of their crimes, with 16 percent of those perpetrators being juveniles (those individuals under the age of eighteen).

Race was reported for 304 (86 percent) of the shooters, the distribution of which is illustrated in Figure 6. Despite common misperceptions that all mass shooters are white, the findings indicate that while a majority are, this proportion is just over half of the perpetrators (53.9 percent). More than one in four shooters is black and nearly one in ten is of Hispanic descent. Fewer than 5 percent of mass shooters were classified as Asian, Native American, or of other racial or ethnic descent.

FIGURE 3. Sex of Mass Shooters by Event Circumstance

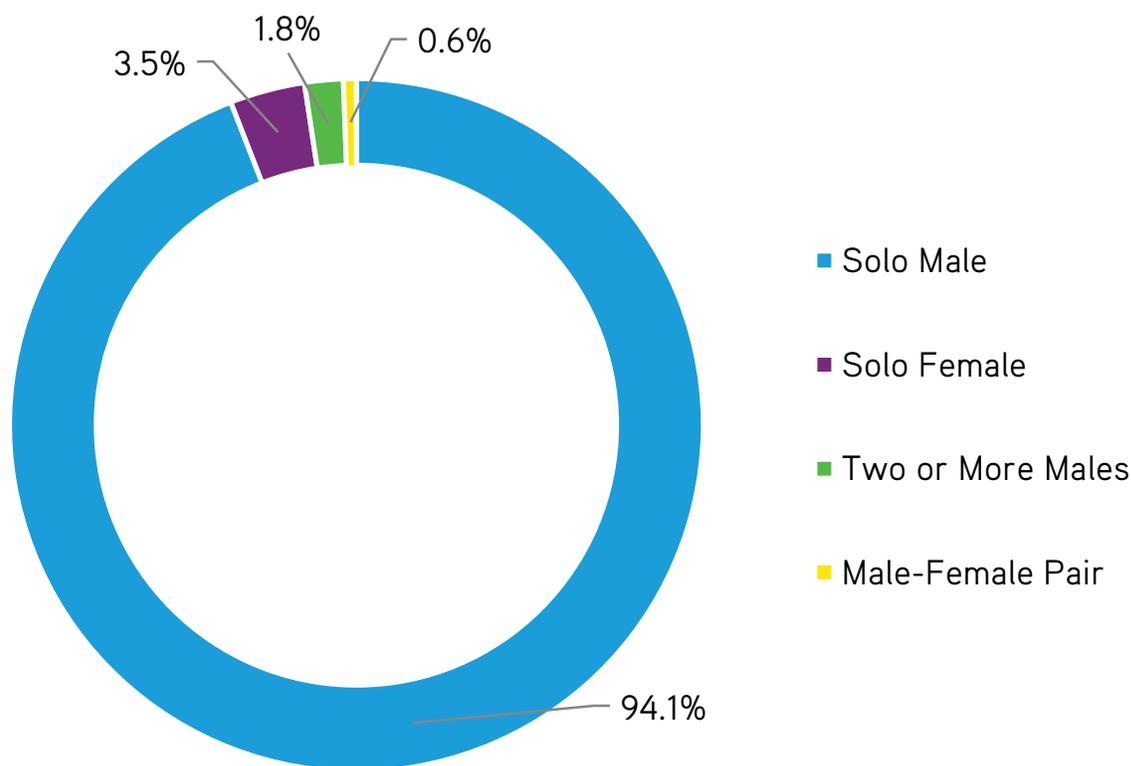

FIGURE 4. Distribution of Age across Mass Shooters

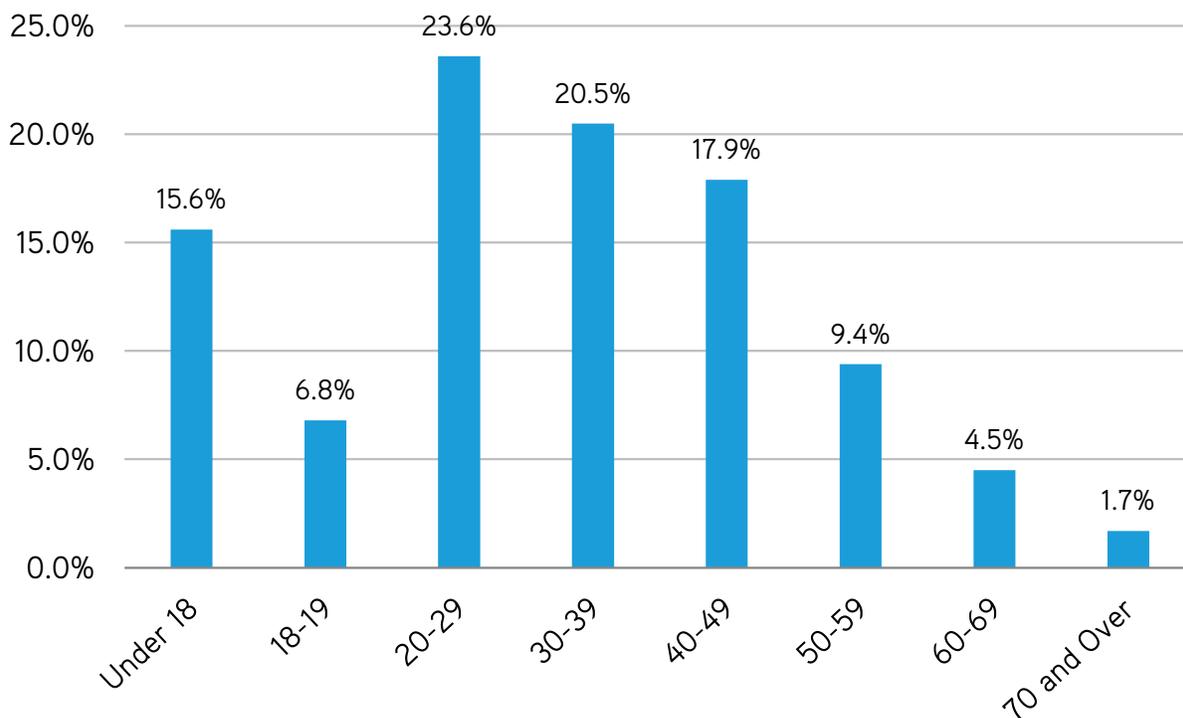

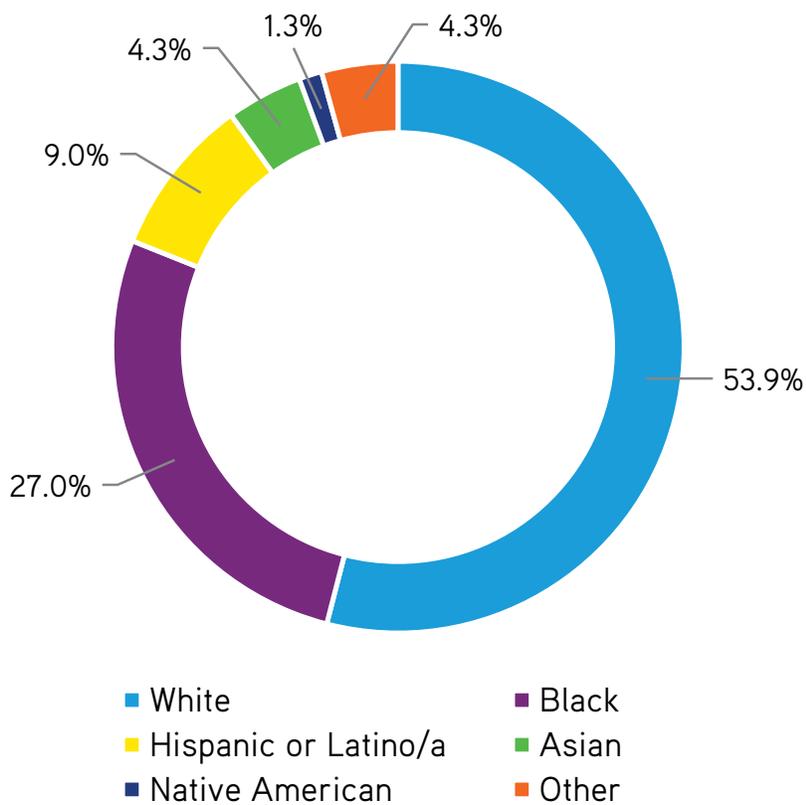

FIGURE 5. Distribution of Race/Ethnicity across Mass Shooters

## Mass Shooting Trends over Time

Over the fifty-year period examined (1966-2016), mass shootings have been steadily increasing each year (Figure 7). While several of the earlier years experienced no mass shootings (based on the definition used here), five years exceeded twenty events, all of which occurred within a six-year period (2009-14). The most shootings in one year (twenty-two) took place in 2009.

When examining the distribution of the number of events by decade, as illustrated in Figure 8, we again can observe the continual increase in mass shootings. While there were only twelve such events between 1966 and 1975, 183 mass shootings were identified during the period between 2006 and 2016. Additionally, there is a steady increase in the average number of events per year when examining mass shootings over the last five decades. Still, on average, there are fewer than twenty mass shootings annually.

Finally, while the risk of becoming the victim of a mass shooting is extremely low, there has been a similar increase in this rate over time (Figure 9). Using data from the U.S. Census to account for changes in population over time, the average incidence rate for total victimization (both injuries and fatalities) due to mass shootings between 2006 and 2016 was nearly 0.04 per 100,000 people in the population, almost seven times greater than the incidence rate between 1966 and 1975. Since 1986, individuals victimized in a mass shooting were more likely to be injured rather than killed. This is due, at least in part, to improvements in medical technology, advances in active shooter training and related protocols, and faster response times by law enforcement and other first responders.

There is a steady increase in the average number of events per year when examining mass shootings over the last five decades. **On average, under Schildkraut and Elsass's definition, there are between nineteen and twenty mass shootings annually.**

## A Roadmap for Policymakers

Knee-jerk reactions rooted in emotion will not solve the problem. The evidence produced to date shows that the problem requires solutions that are versatile and grounded in evidence in order to be effective. Although mass shootings occur considerably less frequently than portrayed by the media, the findings are that they have increased over time. While some of our most populous states have experienced a majority of the mass shootings over time, there are states that have never had one. Schools and workplaces are more likely to be the site of a mass shooting and policy efforts should focus more intensely in those areas. Further, although common public perceptions of mass shootings include use of assault rifles, more than three-quarters of mass shootings actually involve handguns. Therefore, it is incumbent to find evidence-based solutions to this growing problem. Given the regional, demographic, and type of gun used data, a one-size-fits-all approach may not work — tailored solutions may work better depending on the state and the community. Future works by the consortium will explore these issues.

# *States for Gun Safety* **Gun Violence Research Consortium**

## **ABOUT THE REGIONAL GUN VIOLENCE RESEARCH CONSORTIUM**

The Regional Gun Violence Research Consortium is dedicated to the reduction of gun violence involving firearms through interdisciplinary research and analysis.

With the combined expertise of public health, social welfare, public policy, and criminal justice experts, the consortium informs the public and provides evidence-based, data-driven policy recommendations to disrupt the cycle of firearm-involved mass shootings, homicides, suicides, and accidents.

The consortium is part of States for Gun Safety, a multistate coalition that aims to reduce gun violence by:

- + Creating a multistate database to supplement the federal National Instant Criminal Background Check System.
- + Tracking and intercepting guns that are used in crimes as well as guns transported across state borders.
- + Informing policymakers and the public through interdisciplinary research and analysis.

 @RockGunResearch

## ABOUT THE ROCKEFELLER INSTITUTE

Created in 1981, the Rockefeller Institute of Government is a public policy think tank providing cutting-edge, evidence-based policy. Our mission is to improve the capacities of communities, state and local governments, and the federal system to work toward genuine solutions to the nation's problems. Through rigorous, objective, and accessible analysis and outreach, the Institute gives citizens and governments facts and tools relevant to public decisions.

## ABORTION AND CRIME: UNWANTED CHILDREN AND OUT-OF-WEDLOCK BIRTHS

JOHN R. LOTT JR. and JOHN WHITLEY\*

*Legalizing abortion can either increase or decrease investments in children's human capital. This article finds that abortion increases the number of out-of-wedlock births. Using data that more directly links the criminal with age when the crime was committed, not age when arrested, and fixing the assumption in previous research that no abortions took place prior to the Roe v. Wade decision in the 45 states affected by that decision, we find consistent significant evidence that legalizing abortions increased murders by over 7%. Linear estimates indicate that legalization increased total annual victimization costs by at least \$3.2 billion. (JEL K42, K14, J24)*

### I. INTRODUCTION

With violent crime rates dropping by 31% from their peak in 1991 to 1999 and murder rates declining by 42%, many explanations have been offered. This drop is all the more interesting because it occurred while some academics had predicted the rise of super predators and an explosion of crime.<sup>1</sup> In the debate, many plausible explanations for this decline have been advanced, such as increased arrest and conviction rates, longer prison sentences, "broken windows" or "problem-oriented" police policies, the ending of the crack epidemic, a strong economy, right to carry concealed handgun laws, and legalizing abortion during the early 1970s.<sup>2</sup> Generally, all these explanations could be simultaneously true. Most

scholars agree that the crime reduction must be due to a range of factors, though they disagree on which ones are important.

Recently Donohue and Levitt (2001) suggested that "legalized abortion may account for as much as one-half of the overall crime reduction" during the 1990s, legalization accounted for even more of the drop in murder rates. One of their estimates implies legalizing abortion accounts for 25 percentage points of the 31-percentage-point drop in murder between 1991 and 1997 (2001, table IV, column 6). Two possible hypotheses were advanced. Abortion may have prevented "unwanted" children from being born. These unwanted children might, if born, have had smaller investments in human capital by their parents and thus been more prone to end up in trouble when they grew older (e.g., Bouza (1990) or Morgentaler (1998)).<sup>3</sup> Second, there is the less savory issue of whether abortion simply heavily culls out certain groups disproportionately involved in crime (e.g., poor black males).

\*We thank Mike McKee and an anonymous referee from *Economic Inquiry*, Alan Sykes, Richard Epstein, Ed Glaeser, Ted Joyce, Teb Marvell, David Murray, Sam Peltzman, Florenz Plassmann, Mark Ramseyer, and Bob Reed as well as participants at the American Law and Economics Association meetings, George Mason University, New York University, SUNY Binghamton, Virginia Polytechnic and State University, and a conference on abortion and crime at the American Enterprise Institute for helpful comments. The Yale Law School's Center for Law, Economics, and Public Policy provided funding for this research. Unfortunately, at the time that this article was originally written, Donohue and Levitt were unable to provide us with either all their data or their regressions.

*Whitley*: Received his Ph.D. from the University of Chicago, Taylor Run, Alexandria VA, 22314.

1. Lynette Clemetson, "The Gospel According to John," *Newsweek*, February 12, 2001, p. 25.

2. For evidence on all these explanations except for abortion see Lott (2000, chap. 9).

3. Henry Morgentaler, one of the leading proponents of abortion in Canada for several decades, notes (1998) that "it is well documented that unwanted children are more likely to be abandoned, neglected and abused. Such children inevitably develop an inner rage that in later years may result in violent behaviour against people and society.... I predicted a decline in crime and mental illness 30 years ago when I started my campaign to make abortion in Canada legal and safe. It took a long time for this prediction to come true. I expect that things will get better as more and more children are born into families that want and desire them, and receive them with joy and anticipation" (Morgentaler 1998). Similarly, Bouza, the Minneapolis police chief, wrote (1990) that abortion is "arguably the only effective crime-prevention device adopted in this nation since the late 1960s."

Given the possible racial implications, it is important to separate these two hypotheses. This concern has been particularly raised by those pointing out that blacks account for over 30% of the abortions since the early 1970s.<sup>4</sup> One simple test would have been to measure whether the drop in crime still occurred after directly accounting for the changing racial composition of the population.<sup>5</sup>

Although it is indeed quite plausible that abortion would result in fewer unwanted children who have smaller investments in human capital and higher probabilities of engaging in crime, the legalization of abortion may have increased the number of out-of-wedlock first births.<sup>6</sup> If true, the prediction for crime is the opposite of the Bouza-Morgentaler-Donohue-Levitt hypothesis. Others note that the legalizing of abortion might contribute to a coarsening of society and thus lead to more crime.<sup>7</sup>

This article directly links the number of abortions when a cohort was born to the crimes that cohort later commits using the Supplemental Homicide Report to more directly link murders to the age of the murderer and the Centers for Disease Control (CDC) estimates on the number of abortions. We find that legalizing abortion was associated with a statistically significant increase in murder rates.

## II. THE RELATIONSHIP BETWEEN LEGALIZING ABORTION AND CRIME

The central question is really how abortions alter human capital investments in marginal children. To Donohue and Levitt, the marginal

4. *Abortion Surveillance: Preliminary Analysis—United States, 1996*, CDC, December 4, 1998, 47(47); 1025–1028, 1035.

5. In a response to this article when it was presented at the American Law and Economic Association meetings in 2001, Donohue argued, “If abortion is changing a state’s demographics, then controlling for demographics is inappropriate when trying to measure the impact of legalized abortion.” We argue that is precisely what you want to account for if you want to see whether the impact of crime is due to the changing quality of people within groups as opposed to eugenics-type claim that the drop in crime results from culling out those portions of the population who are likely to engage in crime. However this article goes further and examines the results both with and without demographics.

6. Recent work by Klick and Stratmann (2003) indicates that sexual activity increased dramatically after legalized abortion. Grossman and Joyce (1990, pp. 1000–1) provide interesting results that the number of abortion providers in New York City is negatively related to birth weight.

7. George F. Will, “More Abortions, Fewer Crimes?” *Newsweek*, April 30, 2001, p. 84.

children are “unwanted” ones whose parents would not have taken good care of them.<sup>8</sup>

But the legalization of abortion might also cause women to have children out of wedlock. Akerlof et al. (1996) focus on the fate of the children who were born (not on what fate would have awaited each child had they not been aborted). From the 1960s through to the late 1980s (the last years in which births could have any effect on crime rates during the 1990s), there has been a tremendous increase in the rate of out-of-wedlock births. On average during 1965–69, only 4.8% of whites were born out of wedlock, rising to 16.1% 20 years later (1985 to 1989). For blacks, the numbers rose from 34.9% to 61.8%. As Akerlof et al. (1996) point out, unmarried women used to be much more likely to put up their children for adoption. In 1969 only about 28% of children born out of wedlock were being raised by mothers who were still unmarried within three years. By 1984, that same fraction doubled to 56%. Hence, before legalized abortion most of the children born out of wedlock ended up in families with a father.

To Akerlof et al., the legalization of abortion reduced women’s ability to withhold premarital sexual favors from men. Women who are willing to obtain an abortion are more likely to engage in premarital sexual activity without a promise of marriage should pregnancy occur. However, other women who are unwilling to obtain an abortion face competition from women who are willing to obtain an abortion as men “seek satisfaction elsewhere” (Akerlof et al. 1996, pp. 296–97). Furthermore, as premarital sex and out-of-wedlock births became more common, the stigma declined and social pressure for couples to marry also declined, hence reducing investment in the child.<sup>9</sup>

8. They cite evidence that aborted pregnancies would have resulted in children who “would have been 60 percent more likely to live in a single-parent household, 50 percent more likely to live in poverty, 45 percent more likely to be in a household collecting welfare, and 40 percent more likely to die during the first year of life” (Gruber et al. 1999, p. 265). They point to evidence that unwanted children and those raised in “an adverse family environment” are “strongly linked to future criminality” (p. 11). However, the discussion relating human investments in crime is more complicated than this because assumptions must be made about how the reduction reduces the return to legitimate relative to illegitimate activities (Lott 1987).

9. Contraceptives make abortion less of an issue, and it seems likely that the knowledge and correct use of contraceptives is much higher among intelligent women. For them the cost of premarital sex is lower, and they will face relatively few unwanted pregnancies.

Both effects are likely to be going on at the same time. “Unwanted” children may indeed become less common after abortion, with those potential children avoiding the problems of an adverse family environment and a higher likelihood of crime. At the same time, other women who want children and are unwilling to have abortions find that they are raising children on their own, which also entails a smaller investment in human capital compared to the situation that existed before abortion was legalized. It is unclear which effect will dominate, and thus whether the investment in children’s human capital will increase or decline.

Both effects are also consistent with an observed reduction in fertility rates. Women who do not want children obviously can terminate pregnancies. Women who do not want to avail themselves of abortions are now more willing to engage in risky premarital sex and more likely to end up with more out-of-wedlock births, but this is still a less attractive option than they faced before abortion was legal when they would have been able to wait until marriage for sex and have had children within a marriage. Women with children may also find marriage at a later date more difficult.

Finally, whereas Akerlof et al. don’t extend their discussion to crime, both theories relate abortion to crime rates through the level of investment in a child’s human capital. The percentage of children born out of wedlock and the rate at which those children are raised by their unwed birth mother are easily observable, yet it is more problematic to link such time-series evidence to the legalization of abortion. In contrast, the types of homes in which children had they not been aborted would have grown up in is even more hypothetical. By 1980, 665,747 children were born out of wedlock and almost 1.3 million were aborted; both numbers are large, but more information is needed to answer what happens to investment in human capital and thus crime.

### III. CHANGES IN MURDER RATES BY AGE RANGE

Five states are classified by Donohue and Levitt as legalizing abortion prior to the *Roe v. Wade* decision in January 1973. California’s Supreme Court legalized abortion in late 1969 and Alaska, Hawaii, New York, and Washington legalized abortions through legis-

lation the following year. The data used in their regressions assume that no abortions occur in any state other than these five prior to 1973.<sup>10</sup> However, there are doubts whether this simple classification accurately reflects the ease of obtaining abortions: abortion data from the CDC indicate that other states that allowed abortions only when the life or health of the mother was in danger actually had higher abortion rates than some states where it was legal (see Table 1).<sup>11</sup> For example, in 1972, Maryland, Oregon, New Mexico, Kansas, and the District of Columbia had abortion rates that were as high or higher than the states where abortion was legal. Still other states such as Wisconsin, Colorado, and Delaware were not very far behind.

Overall, 23 states in 1972, 20 in 1971, and 5 in 1970 are incorrectly listed in their data as not having abortions.<sup>12</sup> Other publications also use Donohue and Levitt’s abortion data (e.g., Joyce 2004; Garmaise and Moskowitz 2004; though Joyce 2006 now makes similar points to the ones raised here).

The assumption of zero legal abortions in the late adopting states prior to *Roe v. Wade* is not a random error and systematically lowers their abortion rates relative to the early adopting states during the years between when the early adopting states started allowing abortions and the *Roe v. Wade* decision.

10. The correlation between the CDC’s measure of abortions and those used by Donohue and Levitt is 0.91 for abortions from 1973 to 1985, but it falls to 0.84 from 1970 to 1985 because of the assumption that there are no abortions in the nonlegalizing states prior to 1973. Using data we provided them, Donohue and Levitt (2004, p. 34) do report three regressions with the CDC data up until 1981 (not 1985), but these are only for the regressions that create their aggregate measure of abortion and not the arrest rate data that they also use that roughly tries to link the criminal’s year of birth with the year of the murder. The estimates employed here will be more equivalent to their more disaggregated regressions that use the arrest rate data, not their estimates using the aggregate effective abortion rate. As will be discussed later, the Supplemental Homicide Report is the standard data set used for linking the characteristics of the murderer with the victim (not the Uniform Crime Report used by Donohue and Levitt), and that is the data set that we will use in this article. One comment should also be made: We were the ones who supplied Donohue and Levitt with the CDC data on abortion rates.

11. We originally discovered the abortion data from the CDC when the data that Donohue and Levitt used from the Alan Guttmacher Institute was not made available to us when we put this article together.

12. Donohue and Levitt do not include data on the number of abortions prior to 1970.

TABLE I

Comparing Abortion Rates for States Where Abortions were Legal (in bold) versus Those where Abortions Could be Done When the Life or Health of the Mother is in Danger

| 1969              |                                           | 1970              |                                           | 1971              |                                           | 1972              |                                           |

Donohue and Levitt have argued since the publication of their article that excluding abortions in the “nonlegal” states is justified because only relatively well-to-do mothers were able to “game the system” and obtain abortions and that the offspring of these mothers were not the type who would likely have engaged in criminal activity.<sup>13</sup> Although there is no direct data on the wealth of the women who have abortions, we can proxy their wealth by using information on a woman’s race. Two different racial categories are available from the CDC: blacks and others

or whites. The evidence indicates that if anything relatively poorer women made up a larger share of abortions in the nonlegal states. Blacks and other women make 24% of the female population between 10 and 49 years of age and the same percentage of live births, but they account for 30% of the abortions in nonlegal states prior to 1973. By contrast, they make up 32% of the female population and 33% of live births in the five legal states, but only 21% of the abortions.

Although we will rely on Donohue and Levitt’s classification in this section, including other states as early adopters, with abortion rates at least as high as those where it was legal, produces results that were more inconsistent

13. Based on comments made at the 2001 American Law and Economics Association meetings.

**FIGURE 1**  
Timing of Changes in Murder Rates for Different Age Cohorts

with their hypothesis.<sup>14</sup> We will graphically examine the changes in crime rates, first comparing murder rates across different age groups in United States over time and second by comparing crime rates in the states that first legalized abortion to other states.

Also important, we will use the Supplemental Homicide Reports instead of the arrest reports in the Uniform Crime Reports because they allow us to much more accurately disaggregate the number of murders committed by

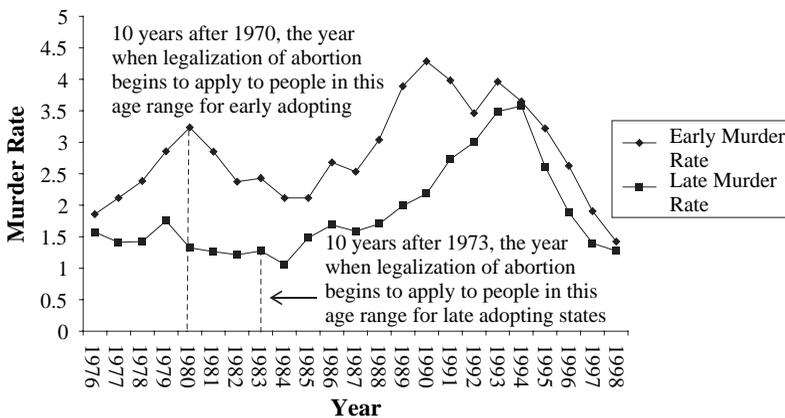

14. Joyce (2004) and Foote and Goetz (2006) argue that the District of Columbia should also be included as an early adopter, and making this change would strengthen our findings that legalization increases crime. Simply to be consistent with Donohue and Levitt, we primarily use the number of abortions reported in a state, though we also provide results that adjust for whether people are coming from other states to have their abortion. We measure the total number of abortions by state, though the results are extremely similar if we simply used the number of abortions for a state's residents. This is shown in Table 3, and doing so makes the affect of abortion more positive and statistically significant.

each age for each state.<sup>15</sup> Suppose the legalization of abortion can explain up to 80% of the drop in murder during the 1990s, as suggested by Donohue and Levitt. Such a huge drop in crime should be readily observed first in the youngest age categories and then gradually appear in progressively older age groups as they were born after abortion was legalized. To examine this, we broke down the number of murderers into five age categories: 10- to 15-year-olds, 16- to 20-year-olds, 21- to 25-year-olds, 26- to 30-year-olds, and over age 30. By far the highest murder rates (the number of murderers in an age category divided by the number

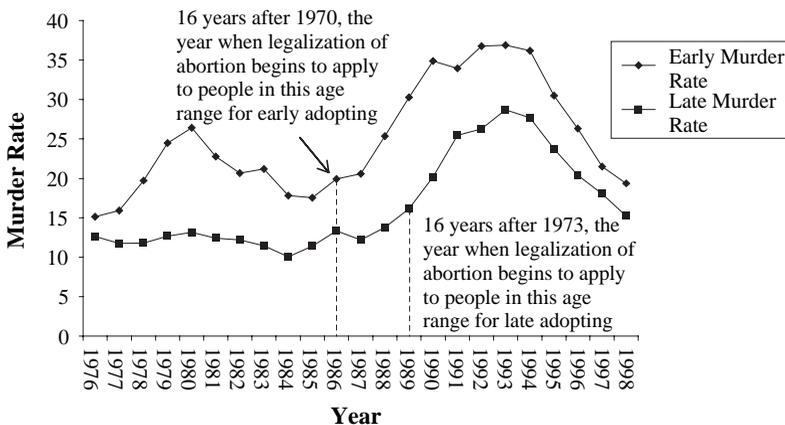

15. Arrests are a poor measure of crimes because arrests can frequently occur in different years from when the crime took place. The Supplemental Homicide Reports also do a much better and much more complete linking of the characteristics of the murderer with those of the victim. The simple arrest rate data from the Uniform Crime Report contains many missing observations for the age of the murder that are not found in the Supplemental Homicide Reports.

Continued

of people of that age) are concentrated in two age categories 16–20 and 21–25, with the murder rate for 26–30-year-olds ranking third.

Figure 1 shows how the murder rates varied by age for the period from 1976 to 1998. The murder rate changes appear to be more consistent with the theory that legalizing abortion increased (rather than reduced) murder rates. The murder rates for the two oldest age groups (26–30 and over 30 years of age) fall almost over the entire time period. The next two oldest age groups (16–20 and 21–25 years of age) both peak in 1993. Finally, the youngest age group peaks last in 1994.<sup>16</sup>

16. Foote and Goetz (2006) provide similar figures for violent and property crime rates. Although we are focusing on who is committing the crimes, it is also possible to produce a figure for the victimization rate, and it produces a similar pattern where the victimization rate for the oldest people begins to decline first. Another way of summarizing this information is to examine the average age of murderers. If murder rates first declined among the youngest, the average age of murderers should be rising. Yet, as Figure 1 implies, the average age of murderers fell almost continually from the mid-1970s to the 1994, declining from 30.9 years of age in 1977 to 27 in 1994. Only after 1994 has there been a slight rebound in the average age as the younger age groups began to reverse their increase in rates of committing murder which began in the mid-1980s. By 1998, the average age of murderers had risen back up to 28 years of age. This diagram also provides a caution for Donohue and Levitt's use of an aggregate abortion rate that creates an index that assumes the share of murders committed by different ages remains constant over time. Using a constant weighting over time causes the early drop in murder rates to be driven by the oldest cohort of criminals even though their theory depends on the drop occurring because of a change in the behavior of younger people.

The next set of figures contrasts the changes in crime over time for five early legalizing states with all the other late legalizing states. Figures 2A–2D make this comparison for 10–15-year-olds, 16–20-year-olds, 21–25-year-olds, and 26–30-year-olds. We also investigated murderers where the age of the murderer is not known where also examined, but not shown. Murders by those over age 30 are excluded because no one in that category was born after the legalization of abortion. Besides the murder rates for the early and late legalizers, the dotted vertical lines indicate the years when legalization begins to apply to people in the age range.<sup>17</sup> For example, the first people born after the legalization of abortion in the early legalizing states were born in 1970 and didn't start to enter the 10–15 age category until 1980. Because legalization is not assumed by Donohue and Levitt to have occurred for the late adopters until 1973, there should be no affect on crime by 10–15-year-olds in those states until 1983.

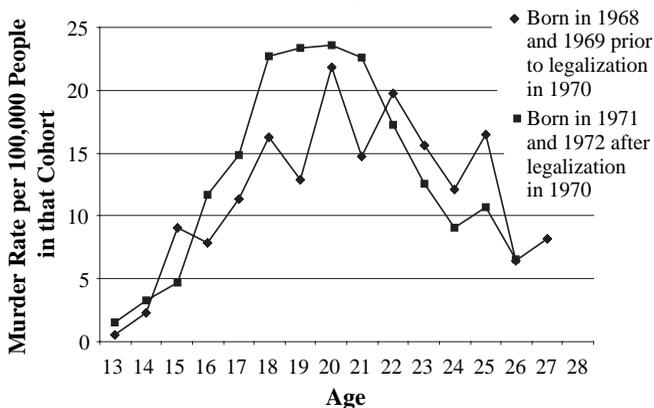

Figures 2A, 2B, and 2C show several striking similarities. The patterns are remarkably similar over time when one compares the “early” legalization patterns across age groups to each other. The 10 to 15 year olds in the

17. The numbers in Figure 2A prior to 1980 are calculated slightly differently than the other numbers because of the inability to precisely link the ages of population with crimes by this age group. To make this link we assumed that the population group for 5–13-year-olds was uniformly distributed.

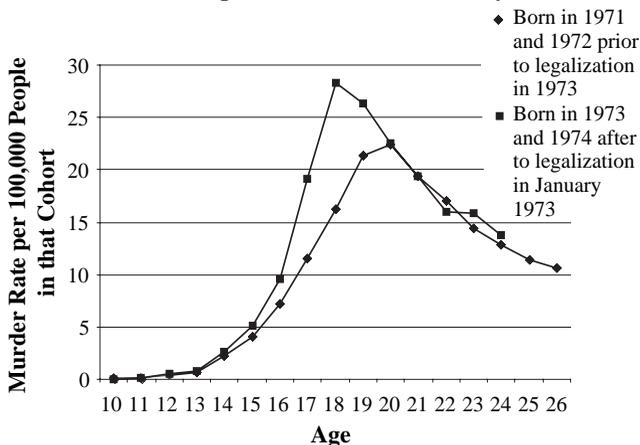

**FIGURE 3**

Tracing Cohorts over Time by Using a Two-Year Period on Either Side of the Legalization of Abortion

**A) Following Cohort Murder Rates for Those Born Immediately Before and After the Legalization of Abortion -- States that Legalized Abortion in 1970**

early adopters in Figure A can not be affected by abortions until 1980 and the early adopters in the older age groups in Figures B and C can not be affected until 1986 and 1991, respectively. Thus, if abortion is driving the murder rates for the early adopters in the first three figures, the patterns should be lagged by about six years for 16 to 20 year olds and then another five years for 21 to 25 year olds. Instead the three early adopter patterns are remarkably similar to each other. All three rise from 1976 to 1980, then fall from 1980 to 1984, then rise into the 1990s, and finally fall together

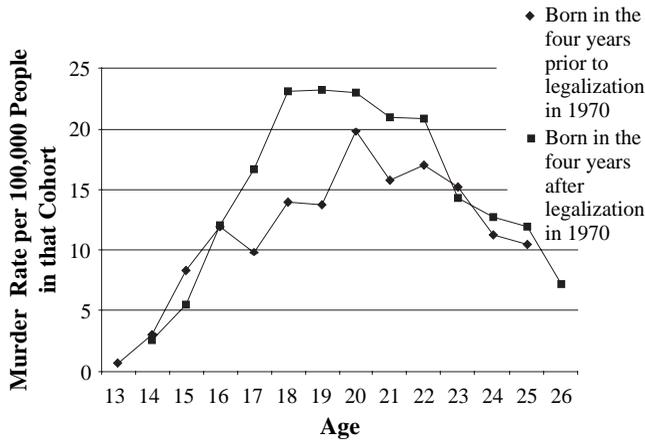

again over the last five years. The same similarity also holds true for the three late adopting patterns. All three decline from 1980 to 1984, then rise, and then fall together again.

Figures 2A to 2D further show a remarkably similar pattern across early and late adopting states despite abortion legalization affecting the late legalizers with a three-year lag. It is also clear that despite legalization beginning to affect people in the different age groups at different times there is little obvious relation to any changes in murder rates. Although murder rates declined when abortions were legalized for early

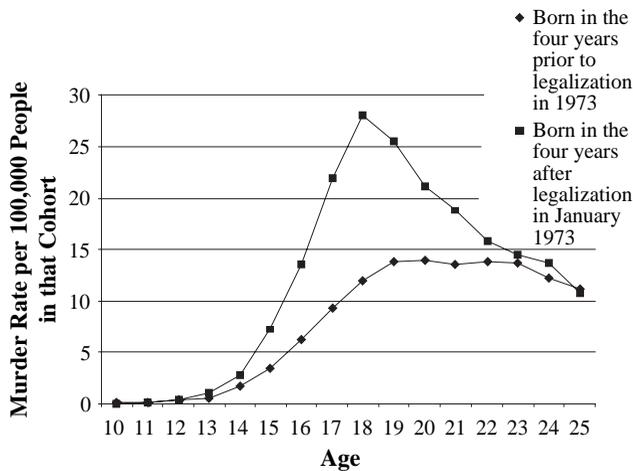

**FIGURE 4**

adopters for 10–15-year-olds and early and late adopters for 21–25-year-olds, murder rates rose after legalization for late adopters in the 10–15-year-old age range and early and late adopters for 16–20-year-olds. Examining both early and late adopters for the 26–30-year old age group, the legalization of abortion does not seem to speed up what had been a fairly continuous drop in murder rates over the whole period. If legalizing abortion is having any effect on murder rates, it is not obvious from this raw data.<sup>18</sup>

The murder rates for murderers of unknown age also show a similar pattern in murder rates for both sets of states. The murder rates peak in 1993 for the early adopters and 1994 for the late adopters. Again, the

18. The gap between early and late adopters also does not vary in ways that can be explained by the legalization of abortion. For example, in Figures 2A and 2B the gap between early and late adopters falls from 1980 to 1985 in both graphs even though legalization cannot possibly begin to impact the 16–20-year-olds in Figure 2B until 1986.

timing of these peaks do not seem consistent with legalized abortion: There is no difference in when the peaks in murder rates occurred and there is too long of a lag after legalization.

It is also possible to compare the murder rates by people born immediately before and after abortion legalization. The top panel in Figure 3 is for people born immediately two years before or two years after the legalization of abortion in the five early adopting states. The second panel does the same thing for those living in the 45 states and the District of Columbia that were affected by *Roe v. Wade*. The graphs track these cohorts crime rates from their teens through their twenties. There is some difference in murder rates as these cohorts age, particularly during the late teenage years. For example, in B, while the murder rate among those born after legalization rises faster up until age 18, this group also has a slightly faster decline in murder rates after that point. In A, those born prior to legalization have higher murder rates for nine ages, and the reverse is true for five ages. It is possible to include additional years before and after legalization, and this does show a somewhat higher murder rates during middle age years for those born after legalization (e.g., see Figure 4 for a period of four years before and after legalization), but allowing more years to elapse between cohorts makes comparisons more difficult because other factors may be changing.<sup>19</sup>

Finally, a breakdown according to the sex of the murderer is also possible. Some abortions are done to selectively choose the sex of infants, and this has become progressively easier over time. The presumption is usually that female offspring are less desired than males and thus aborted at relatively higher rates, possibly implying greater drops in violent crime by women.<sup>20</sup> Yet murders by women fell continually during the 1980s and 1990s. The entire difference between overall murder rates in-

creasing in the last half of the 1980s and the dropping during the 1990s is driven by males. Breaking down murders for women and men by the age of the killer (not shown here) again confirms what was reported in Figure 1: The drop in murder rates is first observed for the oldest age categories. The abortion argument does not seem to apply to abortions of females.

#### IV. HOW TO TEST THE RELATIONSHIP BETWEEN ABORTION AND CRIME

As just noted, the major benefit of the Supplemental Homicide Report is to move beyond these aggregate crime and abortion numbers and directly link the age of the murderer with the year in which the crime occurs.<sup>21</sup> To use this data in a regression

21. Donohue and Levitt create an “effective abortion rate” that weights the number of abortions in different past years by the percent of total arrests for a particular crime that occur for people who were born in that year. It is a creative approach, but as with most aggregation problems, there are risks. One of the dangers in using the aggregate crime rate across all ages is that they may incorrectly link changes in total crime rates to the wrong age groups. Donohue and Levitt also made other compromises in creating the effective abortion rate. They assume that the relative rates at which different age groups commit crime is not only the same across all states but is also constant over time. This assumption causes these results to miss that it is the drop in murders by older people that is responsible for the drop in murder rates to occur during the early 1990s (Figure 1). For example, while murders by 16–20-year-olds made up 12% of total identified murders in 1984, they made up 21% in 1994. Similarly, the assumption that crime is committed at the same rate by different age groups across states and over time is another oversimplification (see figure 5 at <http://ssrn.com/abstract=270126>). We redid the results reported in Donohue and Levitt’s table IV: (1) assuming that no abortions occurred when not defined as legal by Donohue and Levitt or using CDC abortion data for all years in calculating the effective abortion rate, (2) using national average weights for 1985 or state- and year-specific weights in calculating the effective abortion rate, and (3) using either the Uniform Crime Report murder rate or the murder offender rate from the Supplemental Homicide Report (more details are available in table 2 at <http://ssrn.com/abstract=270126>). Donohue and Levitt’s (2001) results in their table IV column 6 implied a 0.43% drop in murder for each 1% increase in abortions. This accounts for 25% of the 30% drop in murder between 1991 and 1997. By contrast, when we used all the abortion data available and used state and year weights in determining the share of crimes committed by each age group instead of assuming constant shares across states and years, the same specification implies that each 1% increase in abortion raises the murder rate by 0.08%. Everything else equal, abortion slightly increased murder rates by 1.3% between 1991 and 1997. Results are available that examine how the results found by Donohue and Levitt change even when the FBI’s Uniform Crime rate data are used. See the discussion in section IV here: <http://ssrn.com/abstract=270126>.

19. Graphs showing one and also three years before and after the legalization are also available.

20. The explicit systematic use of abortion to select male offspring appears most widespread in Asian countries and India, but discussions also arise in the U.S. press. See Michael Breen, “Daughters Unwanted: Asian’s Preference for Sons Makes Abortion Rate Soar,” *Washington Times*, February 13, 1993, p. A1; Sharon Rutenberg, “‘Custom-Made’ Families by Sex Selection,” *United Press International*, May 31, 1983; Owen D. Jones, “Made-to-Orders Babies,” *Connecticut Law Tribune*, September 6, 1993, p. 19.

analysis, we set up panel data to examine the number of murders committed by each year of age by state by year. We break down the individual ages by year from 10 to 30 years of age and then aggregate together all the murders committed by those over age 30. The age groupings are disaggregated by year born for those born when abortion may have been allowed. This panel allows us to track each cohort as they age and account for the number of legal abortions in their state in their year of birth. If abortion eliminates those in the population who are most likely to commit murder, we should observe a significantly lower murder rate among those who were born immediately after legalization. Furthermore, that difference should be traceable over time as each cohort ages.

In their estimates explaining arrests for violent crime (table VII), Donohue and Levitt drop observations where there are zero arrests for a given age. Yet excluding observations based on the realization of the dependent variable creates potential selection bias. This problem is particularly acute for murder, which is less frequently committed than either overall violent or property crime, and it is the reason they cite for not reporting these estimates for murder. The distribution is clearly not normal. In our sample, almost a third of the observations by age by state by year have zero murders (see Appendix Figure A2 at <http://ssrn.com/abstract=270126> for the entire distribution). Though the mean and variance of murders is consistent with a Poisson distribution, we deal with the count nature of the data by estimating both Poisson and negative binomial regressions (Plassman and Tideman 2001).

Obviously many factors affect the rate at which people commit murder. The most basic regressions include age, state, and year fixed effects. We also include the population in the state that are the same age as the murderers. Law enforcement efforts against murder are measured by arrest rates for murder, the execution rate in the year that the crime occurred, and the percent of the population in prison.<sup>22</sup> Both the last two variables are problematic because crime and enforcement rates in the past as opposed to current efforts are much more important in determining

their current values. This is probably less of a difficulty for execution rates because changes in who is governor or changes in the composition of the state supreme court can have a big impact on the number of executions that take place. Using the general prison population as a percent of the total population also has the problem that only about 1% or 2% of prisoners are incarcerated for murder and any changes in enforcement against murder are likely to have small changes in even this tiny fraction because prison sentences for murder are so long.<sup>23</sup>

The bottom line is that the variable we would like to measure—prison sentences as deterrence against murder—would likely be swamped by the changes in enforcement for other crimes. However, the results reported here are not much affected by the inclusion of any of these variables, and we include the percent of the population in prison simply to make our results consistent with those of Donohue and Levitt.

Other factors that we account for are the unemployment rate; the poverty rate; real per capita personal income; real per capita government payments for income maintenance; unemployment insurance and retirement payments; state population density in miles; a set of demographic variables that subdivide a state's population into 36 different race, sex, and age groups (see Appendix Table 1);<sup>24</sup> and the trends before and after the passage of right-to-carry laws. With the exceptions of demographics and broader measures of income, the variables are similar to those used by Donohue and Levitt. We have included these other variables because they have been used in our past work (e.g., Lott 2000) and because of the importance of demographics in accounting for whether changes in crime are simply due to groups that commit crime at high rates being culled out of the population. Still, as we will show shortly, the

23. There are other theoretical problems with using the prison population. For example, prison population is a stock while the crime rate is a flow. The difficulty that this creates is that the prison population is determined by enforcement over many years, but it is the current level of enforcement that is important for determining the crime rate.

24. Available online at <http://ssrn.com/abstract=270126>.

22. For discussions of these variables, see Lott (2000).

results we report are not dependent on any particular set of control variables.<sup>25</sup>

#### V. MEASURING THE IMPACT OF ABORTION ON CRIME

The panel data set covers murders committed by murderers in 22 age categories (by year of age from 10 to 30 and over 30), 50 states and the District of Columbia, and years from 1976 to 1998. In addition, 23% of the murders are in a twenty-third category covering murders committed by criminals of unknown age. Potentially there are 26,979 observations, though missing observations reduce it to 21,480, particularly the population by year of age, which is only available starting in 1980.

The first issue is what to do with the unknown age category. There are several possi-

cide Reports that distribute the unknown murderers based on the known distribution by age/race/sex of offenders by state and year. The first two approaches create problems by either censoring the endogenous variable or not being able to link the unknown murderer category to the abortion variable. The third approach is problematic because unknown murderers may be different from murderers who have been identified if only because they are more difficult cases.<sup>26</sup> The chief advantage of the second approach is that it does not discard any information. We primarily report the results using the second approach, but we tried all three, and the abortion variable estimate differed little across specifications.

For the second approach, we estimated the following regression:

$$\begin{aligned} (1) \text{ Murders}_{ijk} &= \beta_1 (\text{Abortions}/1,000 \text{ Females age } 15\text{--}44)_{ijk} + \beta_2 \text{Population of Age Cohort}_{ijk} \\ &+ \beta_3 \text{Control Variables}_{jk} + \beta_4 (\text{State Fixed Effects} \\ &\times \text{Time trend that is nonzero when the age of murderer is unknown}) \\ &+ \beta_5 \text{State Fixed Effects} + \beta_6 \text{Age Fixed Effects} + \beta_7 \text{Year Fixed Effects} + \alpha + \varepsilon_{ijk}. \end{aligned}$$

ble approaches: (1) exclude murders where the age of the criminal is unknown, (2) include all murders but use additional dummy and trend variables to proxy for the impact of abortion for those observations because abortions numbers are not available for murderers of unknown age, or (3) use estimates included in the Supplemental Homicide

“Murders” are the number of murders committed by a murderer of age  $i$  in state  $j$  and year  $k$ . “Abortions/1,000 Females age 15–44” are the abortions that took place in that state when that cohort was born divided by the number of women age 15–44 in that state and year (multiplied by 1,000),<sup>27</sup> and “population” is the number of residents of

25. Although it is difficult to directly measure the violence caused by cocaine/crack, limited cocaine price data is available for a portion of the sample from 1980 to 1992 (with the exceptions of 1988 and 1989) to proxy for the relative accessibility of cocaine in different markets. Using yearly state-level pricing data (as opposed to more short-run changes in prices) also has the advantage of picking up cost and not demand differences between counties, thus measuring the differences in availability across counties. The data was obtained from Grossman et al. (1996). The county level data is aggregated to the state level by weighting the prices by the population in the counties. The reduced number of observations provides an important reason that we do not include this variable in the regressions shown in the text. Including it leaves the coefficient on abortions virtually unchanged. Whereas simply using the price does not allow one to perfectly disentangle local differences in demand and supply, arbitrage basically ensures that except for short periods of time the differences in prices between these local markets will equal differences in selling costs. If the total cost of selling cocaine was the same in two different cities, any price differentials resulting from sudden shifts in demand would

result in distributors sending cocaine to the city with the higher price until the price had fallen enough so that the prices between the two cities were equal. Distributors could even remove cocaine from the low-price city and move it to where it could obtain a higher price. Sellers could also hold inventories and not sell their cocaine during periods with unusually low demand. To the extent that it is costly to instantly move drugs between different cities or to store drugs, any price differentials in the short run can be due to demand shifts, but because we are dealing with a period of a year, it seems difficult to believe that any noncost based price differentials will not be arbitrated away.

26. Joyce (2004) uses the imputation method provided by the Supplemental Homicide Report and he is aware of the problems that this creates, though he appears to be unaware that the data are available without this lumping of known and unknown data together.

27. If the number of murders is regressed on the number of abortions, there is a scaling problem. Estimates that do those types of regressions produce similar results to those reported here (see <http://ssrn.com/abstract=270126>).

age  $i$  in state  $j$  and year  $k$ . For murders where the age of the murderer is unknown, the abortion variable equals zero, but the vector of state specific time trends for just that category is nonzero (to account for the otherwise unmeasured impact of abortion for unknown age murderers). We also have vectors of control variables and state, age, and year fixed effects.

Table 2 examines the simplest specifications that include all the variables and observations and examines whether the results are affected by how the law enforcement variables are accounted for. The columns show different specifications with various sets of control variables, though all include state, year, and age fixed effects. Yet to account for clustering at the state level, STATA requires that a population-averaged estimator is included. Clustering is used at the state level, and we use robust standard errors.<sup>28</sup>

The first column in Table 2 shows the relationship between the number of murders and abortions, and the second specification includes all the other control variables. One concern with this simple specification is that the total arrest rate for all ages for murder affects the number of murders, and the reverse is also true. Simultaneity also exists for the overall prison population, but it is much less of a problem because murderers make up only 1% or so of the total prison population. The next two columns deal with this problem. The third specification uses lagged values for the arrest rate and prison population,<sup>29</sup> whereas the fourth specification replaces the arrest rate for murder with the arrest rate for overall violent crimes. The arrest rate for violent crimes will still proxy for the effectiveness of police but avoids being very closely tied to current changes in the number of murders.

The final two specifications use a dummy variable for the legalization of abortion as well as the natural log of all the abortion and population variables.<sup>30</sup> An advantage of using the simple dummy variable is that it is more clearly exogenous, especially because other so-

cial factors might be changing over time that influence both the abortion rate and how children are raised. On the other hand, although the dummy variable will give us a measure of the average impact of the law, the number of abortions allows us to measure the differential impact of legalization across different states. The log specification not only allows the interaction of the abortion and population variables, but it allows us to use nonlinear values for those variables and puts a smaller weight on the impact of abortion in the larger states.

The top row of Table 2 reports the percent change in murders by people of a certain age from 1,000 abortions for people of that age. These incident rate ratios are reported throughout the paper and indicate that murders are increasing when the coefficient is greater than one and declining when the values are less than one. Interestingly, all the estimates imply that more abortions produce significantly more murderers when children get older, and the coefficients for the first four specifications are remarkably consistent.

To interpret the coefficients, note that the average state had 25,443 abortions in 1980 and 1,039,797 females age 15–44. The average abortion rate (abortions per 1,000 females age 15–44) was thus 24.5 (the simple average across states was 23). One more abortion per 1,000 females age 15–44 (i.e., about 4% of the average) is associated with about a 0.9% increase in murders in any given year.<sup>31</sup>

The last two columns imply somewhat different impacts from abortion. The dummy variable reported in column 5 indicates that legalizing abortion was associated with, on average, a 7.2% increase in murder. Whether this increase is due to the legalization of abortion for the two sets of states in 1970 and 1973 and not other general cultural factors that are also changing at about this same time is hard to say simply because there is so little difference in the adoption dates. When evaluated at the mean, the sixth column, which examines the log of the number of abortions

28. The results without clustering are available on request, though the difference is that the estimates are much more statistically significant.

29. Lagged values are problematic because in theory the current arrest and punishment levels should matter most in deterring criminals. The benefit from lagging the prison population also seems extremely small because murderers make up such a small portion of prisoners.

30. For observations where the abortion variable equals zero we added .1 before taking the natural log.

31. One concern is whether the results are consistent across states or are being driven by a few unusual outliers. To test this, we interacted the abortion variable with a set of state dummy variables. With Alabama serving as the left out state, 41 states have higher crime rates as abortion increases, 39 of them statistically significant at least at the 10% level for a two-tailed  $t$ -test. For six states the effect was negative, but more abortions significantly reduced murder rates in only two states (Nebraska and Vermont).

**TABLE 2**  
**Do Abortions Affect Murders?: Using Poisson or Negative Binomials Regressions**

| Poisson Estimates                                                                                                                                                    | No. of Murderers by Age by State by Year |                     |                     |                      |                     |                     |

*Notes:* The coefficients are incident rate ratios, with absolute z-statistics reported in parentheses. Values of the coefficients greater than 1 show the percent increase in crime, and values less than 1 indicate the percent decline. The demographics and fixed age, state, and year effects are not reported. Robust SEs with clustering are reported and a population-averaged estimator is used. The last set of estimates using the number of abortions have a scaling problem, but are provided for comparison purposes.

per 1,000 females age 15–44, implies that one more abortion per female age 15–44 is associated with an increase in murders of 0.12%, about one-seventh the magnitude estimated by the linear specification.<sup>32</sup>

The specifications corresponding to those in Table 2 when we use the Supplemental Homicide Reports' method of distributing unknown murderers or exclude murders where the age of the criminal is unknown are reported in Appendix 2 (available from the authors). In all but one of these specifications the impact of abortion is statistically significant at well above the 0.01 level for a two-tailed *t*-test, and the effect ranges from between 33% smaller than what was reported in Table 2 to 48% larger.<sup>33</sup>

Most of the law enforcement variables have the expected effects, with more executions and more people in prison associated with reductions in murder, though the effect is not significant for the execution rate (the arrest rate effect appears positive, but statistically insignificant). Consistent with past research, murder rates fall at least 1% per year faster after the adoption of right-to-carry laws.<sup>34</sup> The population density coefficient estimates show a negative relationship but are not statistically significant. Surprising results include the negative relationship estimated for the unemployment rate and the positive relationship for income levels, but these results are generally not statistically significant. Estimates using weighted least squares instead of the Poisson and negative binomial regression examined here are reported in Appendix 3 found that five of the six results are similar in size to those shown in Table 2 (available from the authors).

The second section of Table 2 shows the impact of changes in abortions per 1,000 live

births on the murder rate. The results continue to show a strong consistent positive relationship between abortions and murder. The average abortion ratio (abortions per 1,000 live births) was thus 359 (the simple average across states was 294). The estimate for the specifications where abortions enter linearly (columns 1–4) imply that an increase of one abortion per live birth (about 0.3% of the total) is associated with a 0.06% increase in murders, about the same magnitude of the results using abortions per 1,000 females age 15–44. The log specification with abortions per 1,000 live births is similar to the log specification with abortions per 1,000 females age 15–44.

To put these results differently, if legalizing abortion meant that the abortions per female and per birth went from zero to those observed from 1973 to 1988, Table 2's estimates (specifications 2, 6, 8, and 11) imply that there will be between 854 and 1,916 more murders in 1998. The simply dummy estimate implies about 1,543 more murders.<sup>35</sup>

The results in Table 3 correspond with the sensitivity test provided in Donohue and Levitt's Table V, with two exceptions: an additional row limiting the sample to just those of known ages affected by the legalization of abortion and replacing all the nonage specific state-year level variables with state specific year fixed effects. For the linear and log specifications, a column with results using abortions per 1,000 females age 15–44 and a column with results using abortions per 1,000 live births are presented. The full set of control variables and sample is reported in the first row as the baseline. Each row represents a separate specification. Donohue and Levitt tested whether the results were sensitive to "large states," states with "very high or low abortion rates" as well as different types of trends and fixed effects. The large states excluded are California and New York, and the jurisdiction with the high abortion rate that is excluded is Washington, DC. Each is excluded separately, and then all three are excluded as a group. Individual state-specific trends and

32. Though not reported, we also ran the simple dummy variable and natural log specifications that correspond to specifications 1, 3, and 4 and the abortion results changed little from those reported in columns 5 and 6.

33. However, as we were concerned that would happen, excluding those cases for which the age of the offender was never known did alter other coefficients, such as the arrest and execution rates.

34. A data set with information on other gun control laws for a portion of the time period studied here from 1980 to 1997 was also used to estimate these regressions, but their inclusion had little impact on the size or significance of the abortion variable. The data are discussed in Lott (2000) and include information on waiting periods, background checks, penalties for using guns in the commission of crime, and so-called safe storage laws, which impose penalties on adults who do not lock up their guns if the guns are used improperly by a juvenile.

35. If legalizing abortion meant that one went from zero abortions to the mean abortions per female and per birth seen in 1980, specifications 2, 6, 8, and 11, respectively, imply 22%, 27.5%, 20%, and 52% increases in murder rates. If instead of going from zero murders to those that were actually allowed prior to legalization, specifications 2, 6, 8, and 11, respectively, imply 16%, 16%, 6%, and 9.3% increases in murder rates.

| Allowing for state-specific year fixed effects in addition to the<br>ln(number of abortions) and the ln(age specific population) | 1.1044                                                                                       | 3.45                 |

separate regional fixed effects by year are also tried. Because of our statistical package's (STATA) limit on the number of control variables using state-specific year fixed effects may more effectively control for year-to-year variations in factors that affect the overall level of crime, but it comes at a cost of having to restrict the number of years that can be examined. The last row in each of the three sections in Table 3 reports regressions that account for the number of abortions, the age specific population, a state-specific trend variable for unknown age murders, as well as state-specific year effects for the period from 1989 to 1998.

The results remain consistent across the various sensitivity tests. Excluding the California, the District of Columbia, and New York individually or together generally increases the effect of abortion. Controlling for fertility reduces the abortion coefficient and makes it statistically insignificant in the log specification.

Other sensitivity tests are available. We categorized the control variables used in Table 2 into 10 groups: the execution rate, prison population, arrest rate, the four measures of income, population density, unemployment rate, poverty rate, right-to-carry laws, population of the age group committing murder, and the 36 demographic variables. Running all combinations of these groups results in 1,024 regressions. The estimates all account for state, age, and year fixed effects. Doing this for all the linear, dummy variable, and the natural log specifications with abortions/1,000 females age 15–44 triples the number of regressions. Adding the linear and natural log specifications with abortions/1,000 live births adds an additional 2,048 regressions. Altogether, we ran 5,200 regressions.

The results from this specification search show a very consistent set of results. The range of coefficient estimates for the linear specification for the number of abortions by in-state residents (/1,000) ranges from a low of 1.3449 to a high of 1.4564, with a median of 1.4002. For the dummy variable the estimates range from 1.069 to 1.087 and for the natural logs from 1.022 to 1.0275.<sup>36</sup>

We finally examined whether abortion had a different effect on crime as people aged. It is

not obvious that the percentage increase in crime should be the same for all ages. To do this, the five measures that we have been using (abortions per 1,000 females age 15–44, abortions per 1,000 live births, the natural log of these two measures, and the dummy variable for legalization) were interacted with the age dummy variables. The results (available from the authors) imply a more complicated story than we have seen thus far. Although abortions imply more murders, the impact is not the same for all ages nor consistent across all the specifications. The different specifications only consistently imply higher crime rates for criminals between the ages of 13 and 17. (Comparing the rate regressions there are consistently higher murder rates from for abortions for ages 13–22 and ages 27–29.) Only the coefficients for one year of age—29-year-olds—show a consistent decline in murder rates from abortions. The four regressions on the number of abortions as well as the natural logs of those values show much more consistency both in terms of the ages associated with increases or decreases in crime.

There is a possible explanation for why the legalization dummy produces different results from the abortion rate measures. As noted earlier, abortion data from the CDC indicate that many states where abortions were illegal actually had higher abortion rates than some states where it was legal. The dummy variable for the law wrongly assumes that legalization always produces more abortions than when abortions were illegal (only allowed when the life or health of mother are endangered), and that is obviously not true. These results raise concerns with assuming that no abortions took place in states prior to legalization.

#### VI. DISAGGREGATING CRIME AND ABORTION RATES BY RACE AND SEX

Legalized abortion need not affect all population groups equally. Whites, blacks, and other groups obtain abortions and have out-of-wedlock births at different rates. The net effect of legalization is unclear because the groups that have a high levels of abortions also tend to have out-of-wedlock births more frequently. For example, whereas blacks account for 29% of abortions during our sample, they account for 40% of the out-of-wedlock births from 1980 to 1995. Fortunately, the Supplemental Homicide Report disaggregates

36. In an earlier version of the article, we ran these 6,144 specifications without the category of unknown murderers. The ranges of estimates were similar to those reported here.

murders by race and sex, as well as age. The CDC abortion data does list the number of abortions in each state by whether the mother is white or nonwhite, though this information is missing for 1969 and 1982–86. With the exception of replacing the earlier endogenous variable for the total number of murders with the number of murder broken down by race and sex, replacing the total number of abortions with the number of abortions by the birth mother's race, and examining only those murders for which the race and sex of the murder is available, the regressions correspond to those reported earlier in Table 2. Unfortunately, the abortion data does not disaggregate nonwhite abortions further by race.

The regressions imply that more abortions by white or nonwhite mothers are associated with more murders by people in their respective groups. White males consistently and statistically significantly are more adversely affected by higher abortion rates than white females, and the difference are always statistically significant at least at the 5% level for a two-tailed test. For nonwhites the difference between males and females is more mixed: In one case males face the significantly greater loss, in two cases, females did.

The different specifications do not imply that any one group is harmed consistently more than another. The linear and natural log estimates imply that on average additional abortions harm nonwhites the most, whereas the dummy variable indicates that this is true for whites.

The bottom line is that increasing the abortion rate consistently results in more murderers when the remaining offspring of that race come of age, and the effect is larger for white males than for white females. Generally the coefficients are similar in size to what was reported earlier, though some are as large as two or three times as much as the average effects reported earlier. Why white males exhibit a larger percentage increase than white females in becoming murderers from additional abortions is not clear, but the effect is consistent and large.<sup>37</sup>

37. There is also the question of who the victims are of this increased crime. We disaggregated murders by the race of the victim and criminal. Abortions seem to produce similar increases in murders by whites of both whites and nonwhites. The data are more mixed for nonwhites and others with the linear and natural log specifications implying much bigger percentage increases in murders of nonwhites and others than for whites, but the reverse is true for the dummy variable specification.

## VII. MEASURING THE IMPACT OF ABORTION ON ARREST RATES

Donohue and Levitt's publications directly link abortions to the arrests by year for 15–24-year-olds using data from 1985 to 1996, though as Foote and Goetz (2006) discovered, they did not run the regressions that they thought they had and correcting the estimates showed a positive and significant increase in violent crime.<sup>38</sup> Also as noted earlier, there are problems with using arrest rates as opposed to the Supplemental Homicide Report because arrest data do not directly link the criminal to the crime and arrests frequently do not occur in the year the crime was committed. Unfortunately, an equivalent of the Supplemental Homicide Report does not exist for violent and property crimes.

Although some control variables differ between our studies (e.g., the lack of any demographic variables in their regressions), the last two regressions reported at the end of the sections for violent and property crime and murder correspond to the odd numbered regressions in their table 4.<sup>39</sup> The big difference between their results and ours stems from them assuming that no abortions took place in the late adopting states from 1970 to 1973 and particularly that no observations were included for births that took place prior to 1970. Expanding the data set so that it covers arrests over the period 1980–96 also produces stronger evidence that abortion increases arrests for violent crime and murder. The other estimates are based on the Poisson and negative binomial regressions that we reported earlier. However, with few of the age groups examined experiencing zero violent crime arrests in any given state during a year and none of the age groups experiencing this for property crime, the benefit from using the Poisson regressions is limited to analyzing murder.

The results generally show either a positive relationship or no relationship between abortion and arrests for violent crime and murder

38. We limited our sample to that reported by Donohue and Levitt for consistency, but using a sample that for the ages and years reported earlier produces results, which are generally less consistent with their estimates.

39. Our inability to replicate their "state  $\times$  age interactions" turns out to be because they did not estimate the regressions they said that they had run (Foote and Goetz 2006). We were unable to determine this at the time we wrote this article because we were not provided with the regressions that Donohue and Levitt estimated.

**TABLE 4**  
The Impact of Abortions on Out-of-Wedlock Births: Explaining the Number of  
Out-of-Wedlock Births by State by Year

| Variable                                                                                | Coefficients and Absolute z-Statistics |                     |                     |
|-----------------------------------------------------------------------------------------|----------------------------------------|---------------------|---------------------|
|                                                                                         | 1                                      | 2                   | 3                   |
| Number of in-state abortions during the year in which people of that age were born/1000 | 1.006198<br>(3.27)                     | ...                 | ...                 |
| Dummy variable for whether abortions are legal in a state                               | ...                                    | 1.449155<br>(8.82)  | ...                 |
| ln(Number of abortions during the year in which people of that age were born/1000)      | ...                                    | ...                 | 1.035199<br>(7.45)  |
| Number of births                                                                        | 0.9999989<br>(0.35)                    | 1.000003<br>(1.85)  | 1.000004<br>(3.93)  |
| Population density in state                                                             | 0.9999487<br>(0.38)                    | 0.9998297<br>(1.28) | 0.8965998<br>(2.16) |
| Unemployment rate                                                                       | 1.015146<br>(2.66)                     | 1.005642<br>(1.17)  | 1.01354<br>(2.91)   |
| Poverty rate                                                                            | 1.000791<br>(0.0011821)                | 1.002454<br>(1.97)  | 0.9999112<br>(0.07) |
| Per capita income                                                                       | 1.000017<br>(1.05)                     | 1.000008<br>(0.62)  | 1.000027<br>(1.92)  |
| Per capita income maintenance                                                           | 1.000245<br>(0.83)                     | 0.9998943<br>(0.30) | 0.9997004<br>(0.80) |
| Per capita unemployment insurance payments                                              | 0.999859<br>(9.59)                     | 0.9994682<br>(1.72) | 0.9997257<br>(1.20) |
| Per capita retirement payments for those over age 65                                    | 1.000004<br>(9.19)                     | .9999284<br>(2.60)  | 1.00002<br>(9.57)   |
| Chi-square                                                                              | 2453649                                | 149e+07             | 6.90e+07            |
| No. of observations                                                                     | 7640                                   | 7640                | 7640                |

*Notes:* Again the coefficients are incident rate ratios. Demographics and fixed state and year effects are not reported. Robust SEs with clustering are reported and a population-averaged estimator is used.

while suggesting a weak negative relationship between abortion and property crime (available upon request). For the weighted ordinary least squares regressions that most closely correspond with their original estimates, only the regressions for property crimes imply that higher abortion rates reduce that type of crime. Overall only the arrest for murder regressions always imply the same relationship between abortion and crime, and indeed the effect is similar to what we found using the Supplemental Homicide Report, though this is really a result of the narrower age group being examined. It is unfortunate that Donohue and Levitt do not provide results for this crime category so that we can make a comparison. Although there are estimates for both violent and property crime that imply both increases and decreases from abortion, one conclusion is clear: The effects are always small and imply that going from zero abortions to the mean number in 1980 had only around a percentage point or so effect on crime.

There are difficulties with using arrests and not data such as that provided by the Supplemental Homicide Report, but neither the different data source nor the limited sample alone is sufficient to explain the different results. Part of the difference between our results and theirs goes away when we assume that abortions only occurred in the five states they define as early legalizers, but that still does not qualitatively change our results.

Combining our earlier results from Table 2 with these general estimates for violent and property crime allow some rough estimates of the victimization costs of crime. Donohue and Levitt suggest that abortion reduces annual victimization costs by \$30 billion, with most of this coming from reductions in murder (Miller et al. 1993). Using their same calculations for our results from Table 2 for 1998 imply that abortion raises victimization costs from these higher murder rates alone by between \$3.3 and \$7.4 billion per year in 2003 dollars. Even if we take our estimates on the

most optimistic reductions in property crime, the net effect of abortion is to increase victimization costs by \$3.2 to \$7.3 billion per year.

#### VIII. DOES ABORTION LEAD TO MORE OUT-OF-WEDLOCK BIRTHS?

Akerlof et al. raise the issue of whether abortions and contraceptives lead to more out-of-wedlock births. Yet their empirical work is based on purely time-series evidence.<sup>40</sup> ARMA regressions are used to examine whether there was a change in abortions, use of the Pill during first intercourse, and the percent of women before and after 1970 or 1971 who had sex by 16 years of age. They also examine whether there was a change in so-called first-birth shotgun marriages, where couples were pressured to marry, before and after 1968. All the variables change in the expected way. Abortions, use of the Pill, and early intercourse are all higher after the early 1970s, and shotgun marriages are lower, but only for whites.

Compared to panel data, it is rather difficult to disentangle different factors when using time-series data. Fortunately, state-level data are available by year on the rate of out-of-wedlock births, and as we have discussed there is a clear difference over time and across states in abortion rates. Alternatively, state-level measures of the availability and use of contraceptives are less obvious, though year fixed effects combined with demographics and income data should serve as a proxy.

With a few exceptions, we estimated Poisson regressions that account for the same factors that we used in the earlier regressions.<sup>41</sup> The three differences are: excluding the deterrence variables, including a variable for the number of births, and excluding the age fixed effects. Deterrence variables and age fixed effects are no longer relevant to explaining out-of-wedlock births.

The results in Table 4 provide support for the Akerlof et al. hypothesis, though the effect represents just a fraction of a percentage point. In column 1, each 1,000 more abortions is associated with a 0.6% increase

in out-of-wedlock births. With about 1.6 million abortions taking place a year from around 1980 on that implies about 9,600 more out-of-wedlock births annually. The linear estimates for abortion implied that legalization resulted in around 700 more murders annually in 1998, about 4% of a year's worth of out-of-wedlock births. Obviously the effective rate of murderers is much lower as these people may commit multiple murders over many different years. If the higher estimates of around 1,000 more murders per year arising from abortion are true, this figure represents around 11% of the annual number of out-of-wedlock births, and this number only appears plausible if a small number of these people are responsible for a large number of murders over multiple years.

The other estimates in the second and third columns indicate similarly small effects. They imply that it is not the legalization of abortion per se that is associated with more out-of-wedlock births but that those states that had the biggest increase in abortion are somehow different than other states. Higher unemployment, poverty, and income are associated with more out-of-wedlock births, though surprisingly more densely populated states have slightly fewer out-of-wedlock births.

Other possible explanations for why abortions increase crime (e.g., the legalization of abortion leading to a coarsening of society) are beyond the scope of this article, though this section raises questions about exactly how abortion increases crime.

#### IX. CONCLUSION

There are many factors that reduce murder rates, but the legalization of abortion is not one of them. Of the over 6,000 regressions that we estimated here, only one implied even a small reduction in murder rate. All the other estimates implied significant increases in murder rates: allowing abortions after 1973 implies at least 850 more murders in 1998. Donohue and Levitt suggest that abortion reduces annual victimization costs by \$30 billion, with most of this coming from reductions in murder. Our results indicate that total annual victimization costs rose by at least \$3.2 billion as a result of abortion.

Many times academics cannot avoid using aggregate crime data. Yet the linking of abortion and crime is not such a situation: Examining total crime rates and not directly linking

40. Recent work by Alesina and Giuliano (2006), done after our paper was accepted, also finds that the legalization of abortion increases out-of-wedlock births and reduces births in marriages, thus confirming our results here. Gruber et al. (1999) question Akerlof et al.'s findings.

41. Klick and Stratmann (2003) use weighted least squares to find that sexual activity greatly increased after legalized abortion.

abortions and the crimes committed by individual cohorts missed catching obvious patterns and incorrectly attributes the initial drop in murder rates to older cohorts. Even if Donohue and Levitt believe that the correct approach links crimes committed by all ages with their aggregate effective abortion rate, sensible minor adjustments such as allowing the share of crime committed by different ages to vary across states and years rather than assuming that the weights are constant reverses their estimates.

This is not to suggest that the hypothesis provided by Bouza-Morgentaler-Donohue-Levitt is not plausible, but at least that it is not the most important part of the story.<sup>42</sup> Abortion can eliminate unwanted children and can benefit many women, but it can also make other women who are unable to bring themselves to have an abortion worse off and more likely to have out-of-wedlock births. Like many laws there appear to be both winners and losers, but here the net effect appears to be a net reduction in human capital and an increase in crime.

42. Kahane et al. (2006) provide strong evidence using British data that abortion legalization did not reduce crime rates when abortion is treated as endogenous. They also note (p. 26) the surprising point that "total recorded crime in the U.K. began to decrease at about the same time as in the U.S., despite the fact that abortion legalization occurred about five years earlier." Though the international evidence that does exist has not allowed the panel analysis by age offered here, it still does not really suggest a relationship between abortion and crime (Foote and Goetz 2006). The Romanian data do not differentiate the increase in crime that occurred after the fall in communism from the increase recorded all across Eastern Europe and Russia (an increase at least partly related to more accurately reported statistics). Foote and Goetz's graphs of the Australian data make it very difficult to see any pattern. The Canadian data are mixed but are estimated differently than the Donohue and Levitt regressions.

# **EXHIBIT "6"**

---

**SENATE COMMITTEE ON PUBLIC SAFETY**

Senator Nancy Skinner, Chair

2017 - 2018 Regular

---

**Bill No:** SB 1100                      **Hearing Date:** April 17, 2018  
**Author:** Portantino  
**Version:** March 19, 2018  
**Urgency:** No                              **Fiscal:** Yes  
**Consultant:** GC

**Subject:** *Firearms: Transfers*

**HISTORY**

**Source:** Author

**Prior Legislation:** AB 1674 (Santiago), 2015, vetoed  
AB 202 (Knox), Ch. 128, Stats. of 1999

**Support:** California Chapters of the Brady Campaign; Giffords Law Center to Prevent Gun Violence

**Opposition:** Firearms Policy Coalition

**PURPOSE**

*The purpose of this bill is to extend the prohibition on purchasing more than one handgun a month to include all firearms and increases the age from 18 to 21 years for a person to purchase a firearm from a licensed dealer.*

*Existing law* prohibits a person from making more than one application to purchase a handgun within any 30-day period. (Pen. Code § 27535.)

*Existing law* prohibits a firearms dealer from delivering a handgun to a person whenever the dealer is notified by the Department of Justice that within the preceding 30-day period the purchaser has made another application to purchase a handgun that does not fall within an exception to the 30-day prohibition. A violation of that delivery prohibition by the dealer is a crime. (Pen. Code § 27540.)

*This bill* extends the prohibition on purchasing more than one handgun a month to all firearms, including long guns.

*Existing law* exempts the following from the one handgun a month prohibition: (Pen. Code, § 27535, subd. (b).)

- Any law enforcement agency.
- Any agency duly authorized to perform law enforcement duties.
- Any state or local correctional facility.

- Any private security company licensed to do business in California.
- Any person who is properly identified as a full-time paid peace officer and who is authorized to, and does carry a firearm during the course and scope of employment as a peace officer.
- Any motion picture, television, or video production company or entertainment or theatrical company whose production by its nature involves the use of a firearm.
- Any person who may make a valid claim an exemption from the waiting period set forth in Section 27540.
- Any transaction conducted through a licensed firearms dealer pursuant to Chapter 5 (commencing with Section 28050).
- Any person who is licensed as a collector and has a current certificate of eligibility issued by the Department of Justice.
- The exchange of a handgun where the dealer purchased that firearm from the person seeking the exchange within the 30-day period immediately preceding the date of exchange or replacement.
- The replacement of a handgun when the person's handgun was lost or stolen, and the person reported that firearm lost or stolen prior to the completion of the application to purchase to any local law enforcement agency of the city, county, or city and county in which the person resides.
- The return of any handgun to its owner.
- A community college that is certified by the Commission on Peace Officer Standards and Training to present the law enforcement academy basic course or other commission-certified law enforcement training.

*This bill* adds the following exceptions to the one gun a month prohibition:

- The purchase of a firearm, other than a handgun, by a person who possesses a valid, unexpired hunting license issued by the Department of Fish and Wildlife.
- The acquisition of a firearm, other than a handgun, at an auction or similar event conducted by a nonprofit public benefit or mutual benefit corporation to fund the activities of that corporation or local chapters of that corporation.

*Existing law* prohibits the sale or transfer of a handgun, except as specifically exempted, to any person below the age of 21 years. (Pen. Code § 27510.)

*Existing law* also prohibits the sale or transfer of a firearm, other than a handgun, except as specifically exempted, to any person below the age of 18 years. (Pen. Code § 27510.)

*This bill* prohibits the sale or transfer by a licensed dealer of a long gun to a person below the age of 21 years, increasing the age from 18 years to 21 years of age. The bill exempts long gun purchases or transfers when the purchaser or transferee has a valid, unexpired hunting permit.

## COMMENTS

### 1. Need for This Bill

According to the author:

While handguns are used in the majority of gun deaths, long guns have been used to perpetrate many of the largest mass shootings in U.S. history, including the tragic event that took place in San Bernardino, California.

California is home to the most stringent gun laws in the country. One example is requiring an individual to be 21 years of age in order to purchase a handgun. Another is the general limitation on a gun dealer delivery of only one handgun to an individual in a 30 day period.

Since these laws have taken effect, data shows that there has been a successful reduction in the incidence of gun trafficking while not burdening legitimate gun owners or persons who wish to acquire guns.

In order to be uniformly consistent, California should apply the 30 day delivery period and 21 year age limit to long guns.

Firearms will not be delivered whenever the dealer is notified by the DOJ that within the preceding 30-day period the purchaser has made another application to purchase a firearm. In addition, because of the interaction of state and federal law, receivers or frames (the gun minus the barrel) are also applicable to the 30-day purchase period. This bill will also define a frame or a receiver of a firearm.

Lastly, this bill would also prohibit the sale or transfer of any firearm by a licensed dealer, except as specially exempted, to any person below the age of 21 years.

### 2. One Gun a Month

According to the Senate Public Safety Analysis of Assembly Bill 202 (Knox, of 1999), which created the one-handgun-a-month law in California:

The State of Virginia enacted a "one-handgun-a-month" law in 1993 (before the Federal Brady Bill, which required at least a five day waiting period plus a background check for states without such requirements). That state had weak restrictions on handgun sales and it has been stated that gun traffickers from New York City routinely traveled to Virginia to purchase quantities of weapons to take back for illegal sale in other states. Purchases of more than one handgun per 30-day period in Virginia is allowed upon completion of an "enhanced" background check when the purchase is for lawful business or personal use, for purposes of collectors, bulk sales and purchases from estates, to replace a lost or stolen weapon, and similar situations.

Supporters of limits on purchases of handguns assume that the Virginia limits and the limits in this bill would only affect a very small proportion of legitimate handgun purchasers. A family of two adults could still purchase 24 handguns a year under the provisions of both this bill and the Virginia law.

Virginia repealed this law in 2012. But, according to the Law Center to Prevent Gun Violence:

Virginia's one-gun-a-month law – which was in effect from 1993 to 2012 and prohibited the purchase of more than one handgun per person in any 30-day period – significantly reduced the number of crime guns traced to Virginia dealers. Virginia initially adopted its law after the state became recognized as a primary source of crime guns recovered in states in the northeastern U.S. After the law's adoption, the odds of tracing a gun originally acquired in the Southeast to a Virginia gun dealer (as opposed to a dealer in a different southeastern state) dropped by:

- 71% for guns recovered in New York;
- 72% for guns recovered in Massachusetts; and
- 66% for guns recovered in New Jersey, New York, Connecticut, Rhode Island and Massachusetts combined.

(<http://smartgunlaws.org/multiple-purchases-sales-of-firearms-policy-summary/> [footnotes omitted].)

Other states that have limits on the number of firearms that can be sold in one month include:

- California: California law prohibits any person from purchasing more than one handgun within any 30-day period. In addition, a licensed firearms dealer may not deliver a handgun to any person following notification from the California Department of Justice that the purchaser has applied to acquire a handgun within the preceding 30-day period. Finally, firearms dealers must conspicuously post in their licensed premises a warning, in block letters at least one inch in height, notifying purchasers of these restrictions.
- District of Columbia: A person may not register more than one handgun in the District during any 30-day period. Since every handgun must be registered, this amounts to a purchase and sale limitation of one handgun per 30-day period. . .
- Maryland: Maryland prohibits any person from purchasing more than one handgun or assault weapon within a 30-day period. Under limited circumstances, a person may be approved by the Secretary of the Maryland State Police to purchase multiple handguns or assault weapons in a 30-day period. Maryland also penalizes any dealer or other seller who knowingly participates in an illegal purchase of a handgun or assault weapon. . .
- New Jersey: New Jersey prohibits licensed firearms dealers from knowingly delivering more than one handgun to any person within any 30-day period. With limited exceptions, no person may purchase more than one handgun within any 30-day period. New Jersey requires a handgun purchaser to obtain a separate permit for

each handgun purchased, and present the permit to the seller. The seller must keep a copy of each permit presented.

### ***Senate Bill 1674 (Santiago), of 2015: Veto Message***

The Governor stated in his veto message of Senate Bill 1674, which would have prohibited any person from making an application to purchase more than one firearm within any 30-day period:

This bill generally prohibits the purchase of more than one firearm within any 30-day period. It should be noted that California already bans the purchase of more than one handgun per month.

While well-intentioned, I believe this bill would have the effect of burdening lawful citizens who wish to sell certain firearms that they no longer need.

Given California's stringent laws restricting gun ownership, I do not believe this additional restriction is needed.

### **3. Increasing the Age for Purchase of Long Guns**

This bill would increase the minimum age from 18 to 21 years for a person to purchase all firearms in California. The age restriction would also impact the ability to transfer a weapon. Under current law a person must be 21 years of age to purchase a handgun, and this bill applies those same rules to the purchase and transfer of all firearms (including long guns). The bill creates an exception to this rule when the purchaser or transferee has a valid, unexpired hunting license issued by the Department of Fish and Wildlife.

On February 14, 2018 Nikolas Cruz shot and killed seventeen people and wounded an additional seventeen people at Marjory Stoneman Douglas High School in Parkland, Florida. The perpetrator was 19-years old at the time of the incident, and he used assault rifles. Following the incident Florida passed legislation to increase the minimum age for buying rifles to 21-years. The National Rifle Association challenged the law and filed a lawsuit in the United States District court for the Northern District of Florida alleging that the ban on gun sales to people under 21 years of age is unconstitutional because it violates their rights under the Second and Fourteenth Amendments to the U.S. Constitution because 18-year-olds are classified as adults.

On March 1, 2018 George Skelton wrote an editorial for the LA Times<sup>1</sup> on this bill. He stated the following regarding this provision:

In Sacramento, state Sen. Anthony Portantino (D-La Cañada Flintridge) proposes taking an even bigger step. He introduced legislation Wednesday to increase the legal age to 21 in California for buying any gun, including a shotgun or rifle with low ammo capacity. A shooter with a hunting license would be exempt because he'd taken a gun safety course.

<sup>1</sup> <http://www.latimes.com/politics/la-pol-ca-skelton-guns-schools-teachers-20180301-story.html>

What about a skeet shooter? Or someone who just likes to plink tin cans out by the barn?

Doesn't make sense that an 18-year-old can enlist in the Army and be armed with an automatic M-16 to fight terrorists, but can't buy a bolt-action plinker back home until he's 21.

In Florida, where the gun lobby usually prevails in the Legislature, a House committee bucked the NRA on Tuesday and approved a bill to raise the rifle-buying age from 18 to 21. This came after emotional testimony from parents of students killed in the school shooting.

The committee also voted to allow arming of teachers. But it rejected a ban on assault weapons.

Everyone needs to get their priorities straight: Let the teachers teach. Treat 18-year-olds like adults. Get rid of all assault weapons.

However, there are a number of instances when lawmakers have limited the ability of person's under the age of 21 to engage in activities which are otherwise lawful. Notably, persons under the age of 21 are not allowed to ingest alcohol or marijuana under California law.

#### **4. California Hunting Licenses**

This bill creates an exemption from the prohibition on persons under the age of 21 purchasing or receiving a long gun if the person under the age of 21 has a valid, unexpired hunting license. In order to obtain a hunting license in California a person must:

- Complete the California Hunter Education Certification requirements
- Choose the correct type of hunting license.
- Purchase a license through the California Department of Fish and Wildlife website or a California approved agent.

The Official California Hunter Safety Course is an online course that costs \$28.95. There is no minimum age for the course. The course requires a follow-up course that is a 4-hour review of the online course with a certified hunter education instructor. The course includes a student demonstration of safe firearm handling and a test. Following completion of the follow-up course the enrollee receives a Hunter Education Certificate.

#### **5. Argument in Support**

According to the California Chapters of the Brady Campaign:

The California Brady Campaign generally believes that handguns and long guns (rifles, shotguns and lower receivers) should be subject to the same laws. Modern sporting rifles are often high powered semi-automatic weapons with exchangeable magazines that can pose a greater threat than handguns. In the early 1990s, it was thought that handguns made up an overwhelming share of crime guns, but the data shows that is no longer the case. Of the 26,682 crime guns entered into the

Department of Justice Firearms Systems database in 2009, 11,500 were long guns.<sup>i</sup>

Existing law prohibits the sale or transfer of a handgun to a person below the age of 21 years. SB 1100 will similarly prohibit, with exceptions, the sale or transfer of a long gun by a licensed firearm dealer to a person under age 21. Additionally, the bill will require those who manufacture or assemble a long gun to be at least 21 years old in order to obtain a serial number for the firearm and register it with the California Department of Justice. These provisions makes sense as those under age 21 are disproportionately linked to crime. In 2015, 23.4 percent of those arrested for murder and non-negligent manslaughter in the U.S. were under 21<sup>ii</sup> and 26.5 percent of those arrested for “weapons carrying, possession, etc.” were under age 21.<sup>iii</sup> Individuals age 18 to 20 comprise only 4% of the population but commit 17% of gun homicides.<sup>iv</sup>

Maturity, impulsive or reckless behavior, and responsibility vary greatly among 18-20 year olds. This is recognized in other areas – those under age 21 cannot buy alcohol, rent a car, or purchase a handgun – and the same age restriction should apply to long guns.

Additionally, SB 1100 will limit purchases of long guns from licensed firearms dealers in California to no more than one gun per person per 30-day period, with appropriate exemptions. This is current law for handguns and is a recognized strategy for curbing the illegal flow of guns by taking the profit out of selling guns from bulk purchases on the black market. It stands to reason that a person buying large quantities of guns at one time may be acting as a straw purchaser or gun trafficker. Moreover, many of these bulk purchases are for lower receivers, which can be built up into military-style weapons and sold for a big profit. Firearms acquired in bulk are frequently used in crime. A University of Pennsylvania report found that a quarter of all guns used in crime were purchased as part of a multiple-gun sale and that guns purchased in bulk were up to 64% more likely to be used for illegal purposes than guns purchased individually.<sup>v</sup> Limiting multiple-gun sales within a short period of time for all firearm, including long guns, is clearly in the interest of public safety.

-- END --

23 SECOND AMENDMENT  
24 FOUNDATION,

25 Plaintiffs,

26 v.

27 XAVIER BECERRA, in his official  
28 capacity as Attorney General of the  
State of California, et al.,

Defendants.

Case No.: 3:19-cv-01226-L-AHG

Hon. M. James Lorenz and Magistrate  
Judge Allison H. Goddard

**DECLARATION OF DAVID BOGAN  
IN SUPPORT OF PLAINTIFFS'  
MOTION FOR PRELIMINARY  
INJUNCTION**

**(Part 1 of 2)**

Complaint Filed: July 1, 2019

Amended Complaint Filed: July 30, 2019

Date: Monday, November 18, 2019

Time: 9:00 a.m.

Courtroom: Dept. 5B

1 I, David Bogan, declare as follows:

2 I am not a party to the captioned action, am over the age of 18, have personal  
3 knowledge of the facts stated herein, and am competent to testify as to the matters  
4 stated and the opinions rendered below.  
5

6  
7 **Personal Information, Education, and Employment Background**

8 1. I reside in Temecula, California, and am currently employed by HP  
9 Communications Inc. in Corona, California, as a Fleet Administrator. I am also self-  
10 employed as a private investigator and California Hunter's Education instructor. The  
11 private investigation work is conducted under DMB Investigators. It is a private  
12 investigation firm specializing in insurance fraud. In addition to my work as a  
13 Hunter's Education instructor, I am also a firearms instructor, home safety instructor,  
14 and firearms range safety officer instructor.  
15  
16

17  
18 2. I graduated from metropolitan State College B.S. in Criminal Justice. I  
19 also obtained a certificates in Advanced Accident Reconstruction and Vehicle  
20 Dynamics from Northwestern University in 1993.  
21

22 3. I hold a California Department of Fish and Wildlife Hunter's Education  
23 Instructor Certificate (No. 004392). This certificate expires annually and will be  
24 renewed on December 31, 2020. I also hold National Rifle Association certifications  
25 as a Chief Range Safety Officer, Pistol Instructor, Rifle Instructor, Shotgun  
26 Instructor, and Defense in the Home Instructor (No. 209851445). I am a Board  
27  
28

1 Member of the Hunter Education Instructors Association and the Southern California  
2 Region Liaison to the Boy Scouts of America.

3  
4 4. I worked for the Corpus Christi Police Department as a Police  
5 Sergeant/Detective from 1981 to 1998. In this role, I held positions of Patrol Officer,  
6 Vice-Squad, Narcotics Street Interdiction Team, and Narcotics Major Offenders  
7 Team; and I directed the Enforcement Unit responsible for writing all probable cause  
8 statements for Narcotics and Vice-Squad Units and executed numerous search and  
9 arrest warrants.  
10  
11

12 5. I was also on the Narcotics-Major Offender's Task Force where I was  
13 responsible for large-volume Narcotics Interdiction investigations as Case Manager  
14 and Under Cover Operative. I was responsible for writing all probable cause  
15 statements for Narcotics and Vice-Squad Units; I was the liaison with the United  
16 States Drug Enforcement Administration and Customs; and I cross certified as U.S.  
17 Customs Officer and U.S. DEA Special Agent for joint investigations of narcotics  
18 smuggling and distribution.  
19  
20  
21

22 6. I am currently an Executive Board member of the Southern California  
23 Fraud Investigators Association where I hold the position of Secretary.

24  
25 7. I have also completed the application process to receive my California  
26 Department of Justice, Firearms Bureau, Firearms Safety Certificate Instructors  
27  
28

1 license and currently hold a California Department of Justice, Certificate of  
2 Eligibility.

3  
4 8. Attached hereto as **Exhibit 1** is a true and correct copy of my  
5 Curriculum Vitae. It describes my education, employment background, career  
6 experience.

7  
8 9. To date, I have provided instruction for 35 California Hunter's  
9 Education courses and instructed 638 Hunter's Education students.

10  
11 **Hunter's Education Application Process and Course Requirements**

12  
13 10. California requires on-line registration for the Hunter's Education  
14 course. A requirement for Online Registration is obtaining a CDFW "GO ID." To  
15 obtain a GO ID, the customer must provide the following: (i) date of birth; (ii) last  
16 name; and (iii) if the student is an adult it will prompt them to provide an  
17 identification number (e.g., State ID/DMV, Passport); or (iv) if the student is a youth,  
18 they will register using the Parent/Guardian's ID. If no matching customers are  
19 found, a "New Customer Record" is created. A new "GO ID" number will be  
20 provided in the Customer Profile Info webpage. The student must then return to the  
21 Hunter's Education Class Registration form and input their valid GO ID to start the  
22 Hunter's Education course process.

23  
24  
25  
26 11. There are two pathways to obtaining the Hunter's Education Certificate  
27 of Completion. The applicant may choose to take the traditional Hunter's Education  
28

1 course, or they may take the online course.

2  
3 12. The traditional Hunter’s Education course is a minimum 10-hour course  
4 of classroom study. Although there is no gun range/shooting proficiency requirement,  
5 students must satisfactorily complete a “Safe-Gun Handling” demonstration. The  
6 online course requires 4-hours of on-line study, followed by an in-person 3-hour  
7 review course and one-hour examination.  
8

9  
10 13. The Hunter’s Education course curriculum is separated into distinct  
11 categories. The areas of study include: (1) firearms safety and handling;  
12 (2) sportsmanship and ethics; (3) wildlife management and conservation; (4) archery  
13 hunting; (5) black powder firearms; (6) wildlife identification; (7) game care; (8) first  
14 aid; and (9) wilderness survival.  
15

16  
17 14. Based on my experience as a Hunter’s Education Instructor and my  
18 personal observations of the minimum time required to sign up and complete the  
19 Hunter’s Education course, the minimum amount of time needed to complete the  
20 course is either 10 hours (or 8 hours if taking the online course). However, in reality,  
21 completing the requirements to obtain a Hunter’s license can take much longer than  
22 8-or-10 hours. The main reason for this is the limited amount of Hunter’s Education  
23 courses available in any one County every month and the seating availability for each  
24 course.  
25  
26

27  
28 15. As of August 21, 2019, there is only one Hunter’s Education course

1 listed as available in San Diego County for the entire month of September (Escondido  
2 Fish and Game Range, Escondido, CA 92027 on September 14, 2019). However, this  
3 class is limited to 22 seats and completely filled.  
4

5 16. Additionally, there is only one course listed in San Diego County for the  
6 month of August (Las Flores Ranch House Barn, Camp Pendleton, CA 92055 on  
7 August 25, 2019). However the August class is limited to 25 seats and completely  
8 filled. Thus, in approximately a two-month period, only two Hunter's Education  
9 courses were offered and the courses were filled to capacity.  
10  
11

12 17. Considering the number of Hunter's Education courses available in San  
13 Diego County, it can take more than a month to complete the online course and then  
14 find and attend the follow-up course.  
15  
16

17 **Hunter's Education Test and Test Categories**

18 18. Upon completion of both the traditional Hunter's Education course and  
19 the online course, students are required to take and pass a 100-question test. The  
20 questions are divided into seven categories with the quantity of the question based on  
21 the time allocated to each section in the course. The following is a breakdown of the  
22 allocation of test questions for each topic:  
23  
24

- 25 • Firearm and Safe Gun Handling — 30% (30 questions)
- 26
- 27 • Sportsmanship, Hunters Ethics and Hunter Responsibilities — 20%
- 28

1 (20 questions)

2

• Principles of Wildlife Management —15% (15 questions)

3

4

• Survival and First Aid —10% (10 questions)

5

6

• Black Powder Firearms —10% (10 questions)

7

8

• Archery — 10% (10 questions)

9

• Game Care — 5% (5 questions)

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

26

27

28

19. The test is closed book and closed note. Hunter’s Education students must answer 80 or more questions correctly (e.g., scoring 80%) in order to pass the test and receive their Hunter’s Education completion certificate. If a student scores under an 80% (less than 80 correct answers), they may retake the test on another date. Course materials are provided to the student for home study.

20. Attached hereto as **Exhibit 2** is a true and correct copy of the Hunter’s Education course materials – Today’s Hunter in California: A Guide to Hunting Responsibly and Safely.

21. Based on my review of the Hunter’s Education certification test, due to the apportionment of questions, a student could miss 20 of 30 questions (or 66% of all questions) relating to firearms and safe gun handling and still pass the test. In other words, if the student scored a perfect score in all other areas, they could still pass the Hunter’s Education test and receive a Hunter’s Education certificate while

1 only correctly answering 33% of the questions related to firearms and safe gun  
2 handling.

3  
4 22. It is my opinion, although the California Hunter’s Education course  
5 contains firearm safety curriculum, the course, as a whole, is better described as a  
6 hunting course rather than a firearms safety course because 30% of the course is  
7 dedicated to firearms safety and handling, while 70% of the course is dedicated to  
8 topics specifically related to the act of hunting (e.g., sportsmanship, ethical hunting,  
9 conservation).  
10  
11

12 23. In my opinion, due to the possibility of being able to pass the Hunter’s  
13 Education test while still scoring a failing grade in the firearms safety and safe  
14 handling category, the Hunter’s Education course does not require a satisfactory  
15 minimum level of firearm safety and safe handling knowledge.  
16  
17

18 **Comparison of Firearms Safety Certificates and Hunter’s Education**

19  
20 24. In my review of the Hunter’s Education curriculum, specifically  
21 focusing on firearm safety and handling, I compared the Hunter’s Education  
22 curriculum to the curriculum for obtaining a Firearms Safety Certificate in California.  
23 There are significant differences in the course of study for each program.  
24

25 25. Pursuant to Penal Code section 26840, any person who acquires a  
26 firearm must have a Firearm Safety Certificate (FSC), unless they are statutorily  
27 exempt from the FSC requirement. Instructors are generally private-entity firearms  
28

1 instructors who are certified by California Department of Justice. Attached hereto as  
2 **Exhibit 3** is a true and correct copy of Penal Code section 26840.  
3

4 26. The FSC study guide and subsequent tests provide safety information  
5 and tests all potential firearm purchasers in California on firearm safety and safe  
6 handling of a firearm; however, in contrast, the Hunter's Education course does not  
7 provide detailed study of legal requirements of firearms safety. The Firearm Safety  
8 Certificate is valid for 5 years and must be renewed after the expiration date. In  
9 contrast, the Hunter's Education certificate is valid for life and does not require  
10 renewal.  
11  
12

13 27. Based on my direct comparison to the Hunter's Education and Firearms  
14 Safety Certificate curriculum, it is my opinion that the firearm safety curriculum in  
15 the Hunter's Education program is entirely duplicative of the curriculum covered in  
16 the Firearm Safety Certificate program. Moreover, the Hunter's Education  
17 curriculum does not cover as many topics in regard to firearm safety and safe  
18 handling of firearms as the Firearms Safety Certificate program. In other words,  
19 students who take the Hunter's Education course do not cover as many gun  
20 safety-related topics as is required by law through the Firearm Safety certificate  
21 program.  
22  
23  
24

25 28. According to the Firearms Safety certificate study guide, the course  
26 curriculum is separated into seven broad categories: (a) Introduction; (b) Gun Safety  
27  
28

1 Rules; (c) Firearms and Children; (d) Firearm Operation and Safe Handling;  
2 (e) Firearm Ownership; (f) Prohibited Firearms Transfers and Straw Purchases, and  
3 (g) Firearms Laws. Each of these broad categories contains a number of  
4 subcategories that discuss basic gun safety rules, firearm owner responsibility, rules  
5 for kids, safe-handling demonstration, firearm types, firearm parts and operation,  
6 safety and storage laws, and general California firearms laws. This list of  
7 subcategories is not exhaustive. For a complete description of the subjects covered,  
8 please refer to **Exhibit 4** hereto, which contains a true and correct copy of the  
9 California Firearm Safety Certificate Study Guide, Office of the Attorney General,  
10 Department of Justice Bureau of Firearms (January 2019).  
11  
12  
13

14  
15 29. In comparison, though the Hunter's Education program does cover some  
16 of the same firearms safety and handling topics covered by the Firearms Safety  
17 certificate program, there are numerous topics covered in the FSC program that are  
18 only minimally covered or not covered at all in the Hunter's Education program.  
19

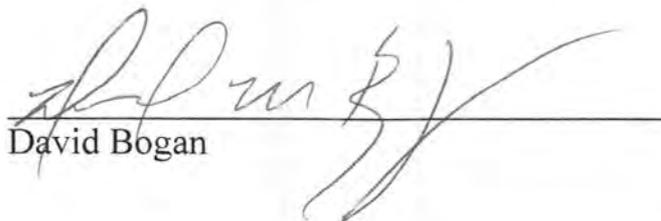

20 30. For example, the Hunter's education program does not cover: (a) "you  
21 cannot be too careful with children and guns;" (b) talking to children about guns;  
22 (c) instill a mindset of safety and responsibility; (d) how semiautomatic pistols work;  
23 (e) enrolling in a firearms training course; (f) methods of childproofing firearms;  
24 (g) prohibited firearms transfers and straw purchases; (h) sales and transfers of  
25 firearms; (i) new California resident requirements; (j) carrying a concealed weapon;  
26  
27  
28

1 (k) firearms aboard common carriers; (l) firearms in the home; business or at a  
2 campsite; (m) the use of lethal force in self-defense; (n) firearm storage during  
3 prohibition; and (o) persons ineligible to possess firearms.  
4

5 31. Additionally, the Hunter's Education program only minimally covers the  
6 following topics that are covered in the FSC program: (a) rules for kids;  
7 (b) double-action revolver safe handling; (c) single-action revolver safe handling; and  
8 (d) semiautomatic pistol safe handling.  
9

10  
11 32. Thus, the Firearms Safety Certificate program requires a more thorough  
12 understanding and knowledge of gun safety and safe handling based on the  
13 apportionment of study material and percentage of questions required to be answered  
14 correctly in relation to firearms and safe gun handling. In other words, the Hunter's  
15 Education program does not provide any additional instruction on firearms safety and  
16 safe handling than what is already required by the FSC program.  
17  
18

19 I declare under penalty of perjury that the foregoing is true and correct.  
20 Executed within the United States on September 24<sup>th</sup>, 2019.

**a guide to hunting responsibly and safely**

# THE TEN COMMANDMENTS OF FIREARM SAFETY

Courtesy of T.A. Blake

Courtesy of Texas Parks & Wildlife

Courtesy of Steve Farrel

1. **Watch that muzzle!** *Keep it pointed in a safe direction at all times.*
2. **Treat every firearm with the respect due a loaded gun.** *It might be, even if you think it isn't.*
3. **Be sure of the target and what is in front of it and beyond it.** *Know the identifying features of the game you hunt. Make sure you have an adequate backstop—don't shoot at a flat, hard surface or water.*
4. **Keep your finger outside the trigger guard until ready to shoot.** *This is the best way to prevent an accidental discharge.*
5. **Check your barrel and ammunition.** *Make sure the barrel and action are clear of obstructions, and carry only the proper ammunition for your firearm.*
6. **Unload firearms when not in use.** *Leave actions open, and carry firearms in cases and unloaded to and from the shooting area.*
7. **Point a firearm only at something you intend to shoot.** *Avoid all horseplay with a gun.*
8. **Don't run, jump, or climb with a loaded firearm.** *Unload a firearm before you climb a fence or tree, or jump a ditch. Pull a firearm toward you by the butt, not the muzzle.*
9. **Store firearms and ammunition separately and safely.** *Store each in secured locations beyond the reach of children and careless adults.*
10. **Avoid alcoholic beverages before and during shooting.** *Also avoid mind- or behavior-altering medicines or drugs.*

## Table of Contents

### Chapter One: Introduction to Hunter Education

How hunter education came about, goals and funding of hunter education today...

|                                                              |   |
|--------------------------------------------------------------|---|
| Chapter One Learning Objectives                              | 4 |
| Why Hunter Education?                                        | 4 |
| Responsibility, Safety Skills,<br>Knowledge, and Involvement | 5 |
| Hunter Education Funding Sources                             | 5 |

### Chapter Two: Know Your Firearm Equipment

Parts of firearms and ammunition, how they operate...

|                                                    |    |
|----------------------------------------------------|----|
| Chapter Two Learning Objectives                    | 6  |
| What Is a Firearm?                                 | 6  |
| Basic Parts of a Firearm                           | 6  |
| Parts of a Bolt-Action Rifle                       | 7  |
| Parts of a Pump-Action Shotgun                     | 8  |
| Parts of a Handgun                                 | 8  |
| What Is Ammunition?                                | 9  |
| Basic Components of Ammunition                     | 9  |
| Rifle and Handgun Cartridges                       | 9  |
| Shotshells                                         | 10 |
| How a Firearm Works                                | 11 |
| Common Features of Firearms                        | 12 |
| Firearm Actions                                    | 12 |
| Safety Mechanisms                                  | 14 |
| Magazines                                          | 14 |
| Sights                                             | 15 |
| Differences Between Rifles, Shotguns, and Handguns | 16 |
| Rifling in the Rifle or Handgun Bore               | 16 |
| A Rifle's or Handgun's Caliber                     | 17 |
| A Shotgun's Gauge                                  | 17 |
| Shotgun Choke and Shot String                      | 18 |
| Match Firearms and Ammunition...Correctly!         | 19 |
| Know Your Firearm's Range                          | 20 |
| Cleaning Your Firearm                              | 21 |
| Storing Your Firearm                               | 22 |

### Chapter Three: Basic Shooting Skills

How to hold, aim, and fire rifles, shotguns, and handguns...

|                                   |    |
|-----------------------------------|----|
| Chapter Three Learning Objectives | 23 |
| Good Marksmanship and Accuracy    | 23 |
| Know Your Accuracy Limits         | 23 |
| Rifle Firing                      | 24 |
| Sight Alignment                   | 24 |
| Dominant or Master Eye            | 24 |
| Sighting-In a Rifle               | 25 |
| Sighting-In Procedure             | 26 |
| Rifle-Firing Techniques           | 26 |
| Firing Positions                  | 27 |
| Shotgun Shooting                  | 28 |
| Matching Choke to Your Quarry     | 28 |
| Patterning Your Shotgun           | 29 |
| Shotgun-Shooting Techniques       | 29 |
| Leading the Target                | 30 |

|                      |    |
|----------------------|----|
| Handgun Shooting     | 31 |
| Loading and Handling | 31 |
| Position and Grip    | 31 |
| Sight Alignment      | 31 |
| Aiming               | 31 |
| Shooting             | 31 |

### Chapter Four: Basic Hunting Skills

How to locate, find, or attract your prey; where to aim for a clean kill; the basics of field care of game...

|                                  |    |
|----------------------------------|----|
| Chapter Four Learning Objectives | 32 |
| Planning and Preparation         | 32 |
| Know Your Quarry                 | 32 |
| Animal Characteristics           | 33 |
| Hunting Strategies               | 33 |
| Still Hunting                    | 33 |
| Stalking                         | 33 |
| Posting                          | 34 |
| Ground Blinds                    | 34 |
| Elevated Stands                  | 34 |
| Game Calling                     | 34 |
| Driving                          | 34 |
| Flushing                         | 35 |
| Dogs                             | 35 |
| Trapping                         | 35 |
| Vital Shots                      | 36 |
| Where to Shoot                   | 36 |
| Choosing the Proper Shot Angle   | 36 |
| Approaching Downed Game          | 37 |
| Field Care of Game               | 38 |
| Field Care Basics                | 38 |
| Transporting Game                | 39 |

### Chapter Five: Primitive Hunting Equipment and Techniques

Parts of muzzleloaders and bowhunting equipment; how to safely handle, hold, aim, and fire these primitive sporting arms...

|                                      |    |
|--------------------------------------|----|
| Chapter Five Learning Objectives     | 40 |
| Know Your Muzzleloader               | 40 |
| Basic Muzzleloader Safety and Skills | 41 |
| Cleaning a Muzzleloader              | 41 |
| Loading a Muzzleloader               | 42 |
| Unloading a Muzzleloader             | 43 |
| Firing a Muzzleloader                | 43 |
| Know Your Bow and Arrow              | 44 |
| Common Bow Types                     | 44 |
| Stringing a Bow                      | 45 |
| Parts of an Arrow                    | 45 |
| Common Types of Arrowheads           | 46 |

|                                     |    |
|-------------------------------------|----|
| Know Your Crossbow .....            | 46 |
| Bowhunting Safety and Skills .....  | 47 |
| Bow-Shooting Safety .....           | 47 |
| Bow-Shooting Position .....         | 47 |
| Nocking an Arrow .....              | 48 |
| Drawing and Anchoring the Bow ..... | 48 |
| Aiming the Bow .....                | 49 |
| Holding and Releasing the Bow ..... | 49 |

### Chapter Six: Be a Safe Hunter

How to safely load and unload, transport, and carry firearms; how to hunt safely...

|                                                          |    |
|----------------------------------------------------------|----|
| Chapter Six Learning Objectives .....                    | 50 |
| Why Firearm Safety Is Important .....                    | 50 |
| Firearm Safety in the Home .....                         | 50 |
| Hunting Incidents .....                                  | 51 |
| Four Main Causes of Hunting Incidents .....              | 51 |
| Safely Carrying Firearms in the Field .....              | 52 |
| Proper Field Carries .....                               | 53 |
| Selecting the Right Carry When Hunting With Others ..... | 54 |
| Crossing Obstacles .....                                 | 55 |
| Safely Loading and Unloading Firearms .....              | 56 |
| Safely Transporting Firearms .....                       | 57 |
| General Rules .....                                      | 57 |
| Safe Zone-of-Fire .....                                  | 58 |
| Other Safety Considerations .....                        | 59 |
| Self-Control and Target Identification .....             | 59 |
| Accuracy .....                                           | 59 |
| Alcohol and Drugs .....                                  | 59 |
| Hunting From Elevated Stands .....                       | 59 |
| Types of Elevated Stands .....                           | 60 |
| Fall-Arrest Systems (FASs) .....                         | 60 |
| Hauling Hunting Equipment Into a Stand .....             | 61 |
| Hunting With Boats .....                                 | 62 |
| Trip Preparation .....                                   | 62 |
| Transporting Firearms in a Boat .....                    | 62 |
| Zone-of-Fire in a Boat .....                             | 62 |
| Surviving Water Emergencies .....                        | 63 |
| Cold Water Immersion and Hypothermia .....               | 63 |
| Hunting With All-Terrain Vehicles .....                  | 64 |

### Chapter Seven: Be a Responsible and Ethical Hunter

Characteristics of responsible hunters, presenting a positive public image through legal and ethical practices and through behavior...

|                                             |    |
|---------------------------------------------|----|
| Chapter Seven Learning Objectives .....     | 65 |
| Why Do We Have Hunting Laws? .....          | 65 |
| Game Conservation .....                     | 65 |
| Safety, Opportunity, and Funding .....      | 65 |
| Fair Chase .....                            | 65 |
| The Hunter's Image Matters .....            | 66 |
| Hunter Ethics .....                         | 66 |
| The Hunter's Ethical Code .....             | 66 |
| Personal Choice .....                       | 67 |
| The Five Stages of Hunter Development ..... | 68 |

### Chapter Eight: Preparation and Survival Skills

How to prepare for a safe hunting trip and deal with emergencies that may arise while hunting...

|                                              |    |
|----------------------------------------------|----|
| Chapter Eight Learning Objectives .....      | 70 |
| Importance of Planning and Preparation ..... | 70 |
| Physical Conditioning .....                  | 71 |
| Clothing .....                               | 71 |
| Topographic Maps and Compasses .....         | 72 |
| Reading a Topographic Map .....              | 72 |
| Selecting a Compass .....                    | 72 |

| Regulations and Information Summary ..... | 110 |
| Glossary .....                            | 113 |

## Introduction to Hunter Education

### You should be able to...

- Give two reasons why hunter education is important.
- Name three hunting-related projects for which the Federal Aid in Wildlife Restoration Act (Pittman–Robertson Act) funds are used.
- Describe the behavior of a responsible hunter.
- Give an example of how you can be involved in making hunting a respected sport.
- Name five sources of hunter education funding.

### International Hunter Education Association-United States of America (IHEA-USA)

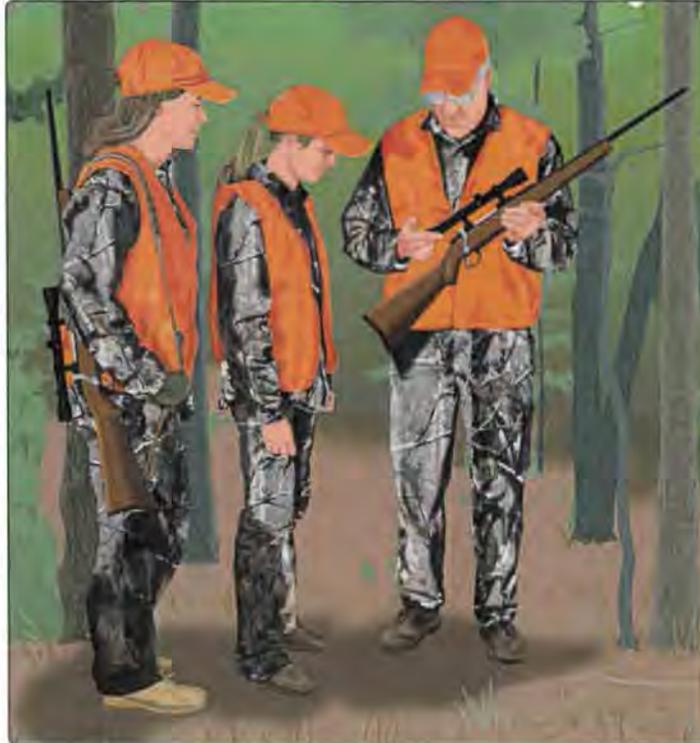

The organization's mission is to continue the heritage of hunting worldwide by developing safe, responsible, and knowledgeable hunters. Since its inception, IHEA-USA has endeavored to:

- Serve as the primary resource for information on hunter education.
- Promote hunter education by providing opportunities for the exchange of ideas, knowledge, and experiences.
- Promote hunter education by fostering cooperative efforts among government agencies, organized groups, and industry.
- Uphold the image of hunting as a legitimate tool of wildlife management and as a recreational activity throughout North America.
- Promote programs that prevent hunting incidents.
- Cultivate honesty, self-discipline, self-reliance, responsible behavior, and good citizenship among hunters.
- Strive for constant improvement in hunter education programs.
- Fully involve volunteers and other associate members in all affairs of the IHEA-USA.

### Why Hunter Education?

The first mandated hunter education program began in New York in 1949 to reduce hunting incidents. As hunter education programs spread across the country, safety coordinators formed what is now the International Hunter Education Association to create a core curriculum, which is the basis for this course.

- Hunter education programs have always taught young hunters the practice of firearm and hunting safety. Today, hunter education programs are about more than safety. They have been expanded to produce responsible, knowledgeable, and involved hunters—hunters who understand the importance of complying with hunting laws and behaving ethically. These programs give beginners a good foundation, and they provide a refresher for veteran hunters.
- Ultimately, the mission of hunter education programs is to develop safe, ethical, and responsible hunters and to ensure the continuation of the hunting tradition.

## Responsibility, Safety Skills, Knowledge, and Involvement

Hunter education strives to instill responsibility, improve skills and knowledge, and encourage the involvement of beginner and veteran hunters. Responsible, ethical behavior and personal involvement are both essential to the survival of hunting.

### ■ Responsibility

A knowledgeable and skillful student of hunting will never be a true hunter unless he or she also behaves responsibly. Responsible behavior includes courtesy, respect of others and of wildlife, and involvement. Responsible hunters do not poach or act carelessly. Responsible hunters obey hunting laws, hunt fairly, practice safety rules, and wait for a clean kill before shooting. How you behave and how other people see you will determine hunting's future.

### ■ Safety Skills

Hunting-related safety skills are gained through hands-on training and practice. It is most valuable to learn these skills from an experienced hunter.

### ■ Knowledge

Knowledge is learning and understanding the basics of safe gun handling and hunting. Before being trained in the skill of firearm shooting, you should know how the firearm operates and how to handle it safely.

### ■ Involvement

Part of the process of becoming a true, responsible sportsman is becoming involved in efforts to keep hunting a respected sport. That includes teaching others, working with landowners, and cooperating with game wardens. It also includes joining conservation organizations, which will help preserve habitat and promote wildlife management.

## Hunter Education Funding Sources

- The U.S. Fish & Wildlife Service provides federal aid to state wildlife agencies to support a variety of hunting-related projects, including hunter education, land acquisition, and improvement of wildlife habitat. The Federal Aid in Wildlife Restoration funding was established in 1937 by the Pittman-Robertson Act.
- State wildlife agencies sponsor the hunter education programs that are found in each state or province.
- Non-governmental organizations (Ducks Unlimited, National Rifle Association, IHEA-USA, etc.) offer hunter education and firearm safety education materials and training.
- Many firearm and archery manufacturers provide training materials to teach hunters how to use their products safely.
- Local hunting clubs, civic clubs, and businesses often provide the facilities and equipment for hunter education courses.

## Pittman-Robertson Act

- The Federal Aid in Wildlife Restoration Act, popularly known as the Pittman-Robertson Act, was approved by Congress in 1937. The act provides funding for the selection, restoration, and improvement of wildlife habitat and for wildlife management research. The act was amended in 1970 to include funding for hunter education programs and for the development and operation of public target ranges.
- Funds for the act come from an 11% federal excise tax on sporting arms, ammunition, and archery equipment, as well as a 10% tax on handguns. One-half of the excise tax on handguns and archery equipment is used for hunter education and target ranges. These funds are collected from the manufacturers and are distributed each year to the states and territorial areas by the Department of the Interior.
- Each state's proportion of the federal funds is based on the area of the state and the number of licensed hunters in the state. The state covers the full amount of an approved project and then applies for reimbursement through federal aid for up to 75% of the project's expenses; the state is responsible for the other 25% of the project's cost.

## Know Your Firearm Equipment

### You should be able to...

- Define "firearm."
- Identify the basic parts of a rifle, shotgun, and handgun.
- Identify the basic components of rifle and shotgun ammunition.
- Explain how ammunition is fired from a firearm.
- Identify six types of firearm actions.
- Demonstrate proper loading and unloading of firearms with two different types of actions.
- Identify the location(s) of safeties on firearms, and explain how they are used.
- Name five types of sights found on firearms.
- Describe how a rifle is different from other firearms.
- Identify and explain a rifle's caliber and a shotgun's gauge.
- Name the four common shotgun chokes, and explain how they differ.
- Explain the difference between lead shot and steel shot.
- Correctly match ammunition with firearms.
- Explain the danger of mixing different gauges of shotshells.
- Explain why it is important to know your firearm's range.
- Demonstrate cleaning procedures for a firearm.
- Demonstrate how to make a firearm safe for storage.

The first step to becoming a responsible hunter is knowing your equipment and how to use it safely.

### What Is a Firearm?

A firearm is a mechanical device that uses pressure from a burning powder to force a projectile through and out of a metal tube. To appreciate fully the importance of firearm safety, you first must understand how firearms work. This includes knowing the parts of the firearm, the types of ammunition, how ammunition is fired, and the ranges of the various firearms used for hunting.

### Basic Parts of a Firearm

Although firearms have changed a great deal since they were first invented, the terms used for their parts have changed very little. All modern firearms have three basic groups of parts.

- **Action:** The action is the heart of the firearm—the moving parts that load, fire, and eject the shells or cartridges. Several types of actions are used in modern firearms. Muzzleloaders have locks instead of actions.
- **Stock:** The stock serves as the handle of the firearm. It can be composed of one or two pieces and is usually made of wood or a synthetic material.
- **Barrel:** The barrel is the metal tube that the projectile travels through (bullets travel through the barrels of rifles and handguns; shot travels through the barrel of shotguns).

**Parts of a Bolt-Action Rifle**

Rifles, shotguns, and handguns have many similar parts. Shown here are the parts of a commonly used rifle—the bolt-action rifle.

**Other Firearm Parts**

- bore:** Inside of the firearm barrel through which the projectile travels when fired
- breech:** Rear end of the barrel
- firing pin:** A pin that strikes the primer of the cartridge, causing ignition
- receiver:** Metal housing for the working parts of the action

### Parts of a Pump-Action Shotgun

Shotguns are another long-barreled firearm used by hunters. Below are the parts of a commonly used shotgun—the pump-action shotgun.

### The Airgun

The airgun is often used by beginning hunters to learn shooting and safety skills. Modern airguns have designs, parts, and sights similar to sporting firearms.

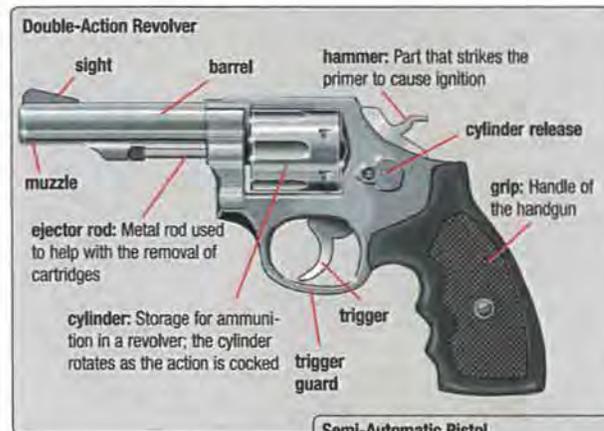

Airguns can be just as dangerous as larger firearms. Youngsters should always be supervised when using airguns.

There are three types of airguns.

- **Pneumatic airguns** use a pump system that forces air into an enclosed chamber. The air is retained in the chamber by a valve that allows air to enter but not escape. When the trigger is released, the compressed air drives the pellet or BB out of the barrel.
- **CO<sub>2</sub>-powered or gas-powered airguns** use compressed CO<sub>2</sub> contained in a cylinder. The cylinder attaches to a chamber inside the air rifle or pistol. When the trigger is squeezed, a valve releases a quantity of CO<sub>2</sub> that propels the pellet or BB out of the barrel.
- **Spring-piston airguns** use a spring that is compressed by a lever. When you squeeze the trigger, the spring is released and thrusts a plunger forward. The plunger pushes a compressed column of air through the barrel, driving out the pellet or BB.

### Parts of a Handgun

Handguns (revolvers and pistols) are short-barreled firearms sometimes used for hunting. Below are the parts of a double-action revolver and a semi-automatic pistol.

## What Is Ammunition?

Modern ammunition varies depending on the type of firearm. Rifles and handguns use a **cartridge** containing a single projectile (bullet). Shotguns use a **shotshell** containing either a single slug or a large number of small projectiles (shot or pellets). However, the basic components of cartridges and shotshells are similar.

### Basic Components of Ammunition

The basic components of ammunition are the case, primer, powder, and projectile(s). Shotshells have an additional component called wad.

- **Case:** The container that holds all the other ammunition components together. It's usually made of brass, steel, copper, paper, or plastic.
- **Primer:** An explosive chemical compound that ignites the gunpowder when struck by a firing pin. Primer may be placed either in the rim of the case (rimfire) or in the center of the base of the case (centerfire).
- **Gunpowder:** A chemical mixture that burns rapidly and converts to an expanding gas when ignited. Modern smokeless powder will burn slowly when ignited in the open (outside of the case). Black powder is less stable and can be explosive when impacted or ignited in the open.
- **Projectile:** The object(s) expelled from the barrel. A bullet is a projectile, usually containing lead, fired through a rifle or handgun barrel. A slug is a solid projectile, usually of lead, fired through a shotgun barrel. Shot is a group of lead, steel, tungsten alloy, or bismuth pellets fired through a shotgun barrel.
- **Wad:** A seal and/or shot container made of paper or plastic separating the powder from the slug or shot in a shotshell. The wad prevents gas from escaping through the shot and holds the shot together as it passes through the barrel.

### Rifle and Handgun Cartridges

- It's critical to select the correct cartridge for your rifle or handgun. Carefully compare the data stamp on the barrel of the firearm against the description on the ammunition box and the stamp on each cartridge.
- Bullets used in rifle and handgun cartridges come in various designs, sizes, and weights. The bullet usually is made of lead and may have a jacket made of copper, brass, or another metal. Bullets used for hunting game may have soft or hollow points designed to expand (mushroom) upon impact. Bullets used for target shooting usually have solid points that make smaller holes.
  - **Common Types of Rifle Bullets**
    - Pointed Soft Point: High-velocity, accurate bullets with a flat travel path (trajectory); excellent mushrooming
    - Rounded Soft Point: Popular for low-velocity calibers; recommended for tubular magazines
    - Protected Tip: Highly accurate with excellent expansion
    - Full Metal Jacket: Maximum penetration without mushrooming; these bullets are **illegal for big game hunting in most states**
  - **Common Types of Handgun Bullets**
    - Roundnose Lead: Good penetration, little expansion
    - Full Metal Jacket: High penetration, no expansion
    - Semi-Wad Cutter: Balances penetration and expansion
    - Hollowpoint: Designed for high expansion on impact
    - Wad Cutter: Flat-ended, used for target shooting; creates clean hole in paper

#### cartridge

Ammunition used in modern rifles and handguns; a case containing primer, gunpowder, and a bullet

#### shotshell

Ammunition used in modern shotguns; a case containing primer, gunpowder, wad, and a slug or shot

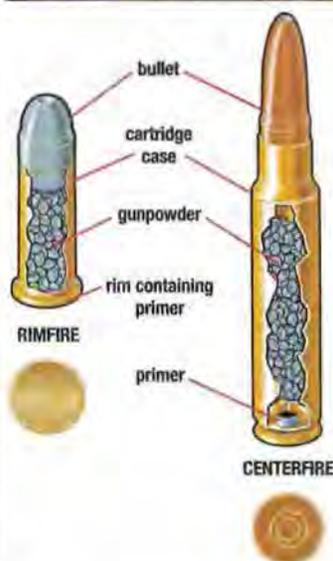

### Centerfire and Rimfire Ammunition

- Centerfire ammunition is used for rifles, shotguns, and handguns. In this type of ammunition, the primer is located in the center of the casing base. Most centerfire ammunition is reloadable.
- Rimfire ammunition has the primer contained in the rim of the ammunition casing. Rimfire ammunition is limited to low-pressure loads. Rimfire cartridges are not reloadable.

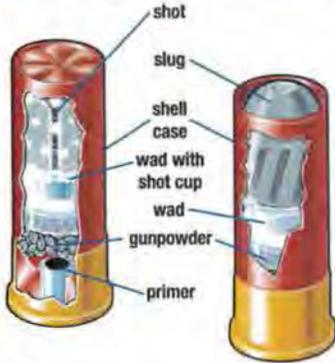

#### Safety Tip

In tubular magazines, the bullet tip of one cartridge rests directly on the primer of the cartridge immediately ahead. For this reason, use only rounded or blunt tips in tubular magazines.

### Rifle and Handgun Ammunition

**Shotgun Ammunition**

**gauge**  
Term used to designate bore diameter of a shotgun; gauge is the number of lead balls with diameters equal to the diameter of the bore that, when combined, weigh one pound

**Shotshells**

- Shotgun shells (shotshells) use a slug or shot as the projectile(s).
  - A slug is a solid projectile, usually of lead, used for hunting big game with a shotgun.
  - Shot are multiple pellets fired through a shotgun barrel. Shot size is adaptable to the game being hunted. This type of projectile is used typically to hunt game birds and small game animals.
- The shotshells must match exactly the **gauge** and shell length specified by the manufacturer. This information usually is found on the barrel of the shotgun. Shotguns may be chambered for 2½-inch, 2¾-inch, 3-inch, or 3½-inch shells. This refers to the length of the shell *after* it has been fired. Never load a shotshell that exceeds the approved shell length stamped on the barrel of your shotgun.
- You also must choose the correct type and size of shot for the shotshell. In general, as the size of your target decreases, you should decrease the diameter of the shot you use.
  - As pellet diameter decreases, more shot can be placed in a standard shotshell.
  - The smaller the shot “number,” the larger the pellet diameter.
  - Shotshell marked as magnum has more shot or more gunpowder than a regular shell. Magnum and regular shotshells are interchangeable *if the correct gauge and shell length are used*.

**Shot Sizes**

**U.S. STANDARD DESIGNATIONS**

**SHOT SIZES**

|                                   |       |     |     |      |     |     |     |     |     |     |     |     |     |     |     |
|-----------------------------------|-------|-----|-----|------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| Shot Number                       | 12    | 9   | 8   | 7½   | 7   | 6   | 5   | 4   | 3   | 2   | 1   | B   | BB  | BBB | T   |
| Diameter (in.)                    | .05   | .08 | .09 | .095 | .10 | .11 | .12 | .13 | .14 | .15 | .16 | .17 | .18 | .19 | .20 |
| Number of Lead Pellets per Ounce  | 2,385 | 585 | 410 | 350  | 300 | 225 | 170 | 135 | n/a | 90  | n/a | n/a | 50  | n/a | n/a |
| Number of Steel Pellets per Ounce | n/a   | n/a | 577 | 490  | 420 | 317 | 243 | 192 | 154 | 125 | 103 | 86  | 72  | 61  | 53  |

**BUCKSHOT SIZES**

|                |     |     |     |     |     |     |
|----------------|-----|-----|-----|-----|-----|-----|
| Shot Number    | 4   | 3   | 1   | 0   | 00  | 000 |
| Diameter (in.) | .24 | .25 | .30 | .32 | .33 | .36 |

Shot size can be adjusted for the game being hunted. As pellet diameter decreases, more shot can be placed in a standard shotshell load. The smaller the shot number, the larger the shot size.

**Non-Toxic Shot**

Non-toxic shot is required throughout the U.S. for waterfowl hunting. Studies showed that many waterfowl died each year because of lead poisoning. Lead pellets from traditional shotshells were picked up and digested by waterfowl. The toxic effect spread to other birds, such as the bald eagle, which consumed the poisoned waterfowl. To reduce this problem, conservationists worked with shotshell manufacturers to produce effective alternatives to lead shot—steel, tungsten alloy, or bismuth shot.

- Steel shot pellets react differently than lead when shot. Steel weighs one-third less than lead but is much harder. Steel does not deform and is not as unstable in flight. It will produce a tighter pattern than lead shot. If using steel shot for hunting, choose a steel shot size one to two sizes larger than the lead shot you would select, and choose a less constrictive choke.

## How a Firearm Works

The same physical process is used to shoot shotshells from shotguns or cartridges from rifles or handguns. Pulling the trigger causes the firing pin to strike and explode the primer in the base of the cartridge or shotshell. The spark from the primer ignites the gunpowder, which burns rapidly and converts to a gas. The gas rapidly expands and drives the projectile(s) through the barrel with great force.

### ■ How the rifle and handgun fire:

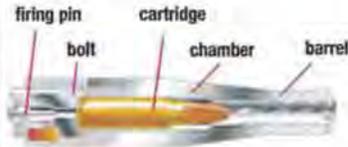

1. A cartridge is inserted into the chamber.
2. The action is closed, and the firing pin is pushed back and held back under spring tension.
3. The trigger is squeezed, releasing the firing pin, which moves forward with great force. The firing pin strikes the primer, causing it to explode.
4. The spark from the primer ignites the gunpowder. Gas converted from the burning powder rapidly expands in the cartridge.
5. The expanding gas forces the bullet out of the cartridge and down the barrel with great speed.
6. The rifling in the barrel causes the bullet to spin as it travels out of the barrel. The bullet's speed and escaping gases produce a "bang."

### ■ How the shotgun shoots:

1. A shotshell is inserted into the chamber.
2. Closing the action pushes the firing pin back and holds it under spring tension.
3. Pulling the trigger releases the firing pin. The firing pin strikes the primer, producing sparks.
4. Heat and sparks from the primer ignite the gunpowder. Gas converted from the burning powder expands in the shell.
5. The expanding gas forces the wad and shot out of the plastic body of the shell.
6. The escaping gases produce a "bang" as the wad and shot leave the barrel.
7. The wad quickly opens and falls away. The shot cluster spreads. This spread is called the shot string.

## How Ammunition Is Fired

The firing sequence for handguns and shotguns is very similar to this sequence shown for a bolt-action rifle.

- The bolt moves forward, compressing the firing pin spring and inserting a cartridge into the chamber.

- The firing pin is held back under spring tension.

- When the trigger is squeezed, the firing pin moves forward, crushing and igniting the primer in the cartridge base.

- The primer ignites the gunpowder, generating gas pressure, which forces the bullet forward and out of the barrel.

## Common Actions on Rifles

Single-shot rifles are usually break- or bolt-actions. Repeating rifles include the bolt-action, lever-action, pump-action, and semi-automatic types. Operating the lever, bolt, or forestock ejects the empty cartridge case, chambers a new round of ammunition, and cocks the gun.

Bolt Action

Lever Action

Pump Action

Semi-Automatic Action

Break (Hinge) Action

## Common Features of Firearms

All types of firearms have actions and sights, and they may have safeties or magazines. Features unique to rifles or shotguns are discussed in the following sections.

## Firearm Actions

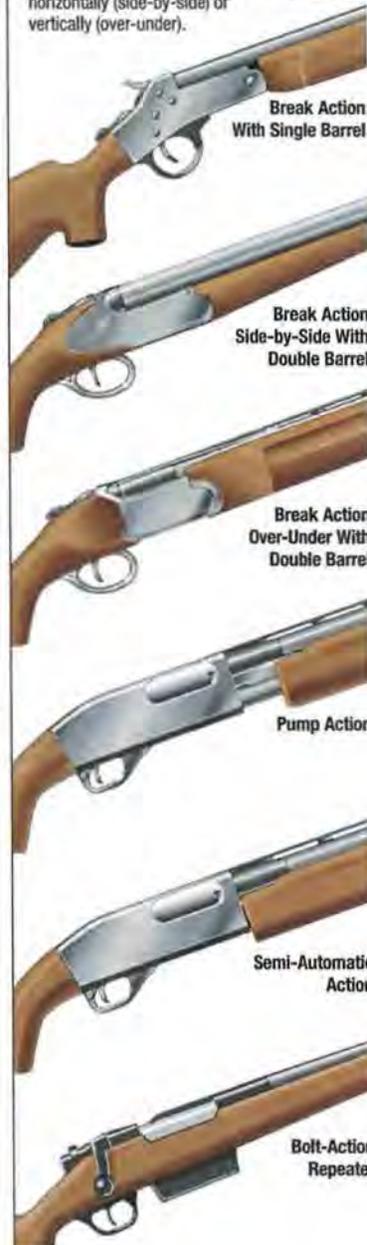

Firearms can be classified by their action type. The action of a firearm is made up of parts that load, unload, fire, and eject the shotshell or cartridge. Actions are either single-shot or repeating styles. Single-shot firearms must be reloaded each time the firearm is fired. Repeating firearms have extra cartridges or shotshells ready in a magazine, cylinder, or extra barrel.

- **Bolt Action:** A bolt-action firearm operates like opening and closing a door bolt. The bolt solidly locks into the breech, making it accurate and dependable.
  - To open the action, lift the handle up, and pull it to the rear.
  - If the firearm is loaded, the cartridge or shotshell will be ejected as you pull the bolt to the rear. To make sure it's unloaded, open the action, and check *both* the chamber *and* the magazine for cartridges or shotshells.
  - You can store a bolt-action firearm safely by storing the bolt separately from the firearm.
- **Lever Action:** The lever-action firearm has a large metal lever located behind the trigger. This handle usually forms the trigger guard as well.
  - To open the action, push the lever downward and forward, which extracts the cartridge case from the chamber and ejects it. If a magazine holds extra cartridges, another is immediately ready to be loaded into the chamber.
  - It's often difficult to tell whether a lever-action firearm is loaded. To unload, push the lever downward and forward repeatedly until no more cartridges are ejected. To make sure it's unloaded, open the action, and check *both* the chamber *and* the magazine for cartridges.
  - Most models also have an exposed hammer, which can be dangerous.
  - **Always use extra caution to keep your hands away from the trigger while working the lever action.**
- **Pump Action:** The pump-action firearm is fast and smooth. It allows the shooter to re-cock the firearm without taking his or her eye off the target. The pump action also is referred to as "slide action" or "trombone action."
  - To open the action, slide the forestock to the rear, which extracts the cartridge or shotshell from the chamber and ejects it. Sliding the forestock toward the muzzle closes the action and readies another cartridge or shell for loading. A pump-action firearm will open only after it's fired or if a release lever is pressed and the forestock is pulled to the rear.
  - To make sure it's unloaded, open the action, and check *both* the chamber *and* the magazine for cartridges or shotshells.
- **Semi-Automatic (or Autoloading) Action:** As each shot is fired manually, the case of the cartridge or shotshell is ejected automatically, and the chamber is reloaded automatically.
  - To open the action, you must pull back the bolt's operating handle (on a rifle or shotgun) or the slide (on a pistol). Most semi-automatics, when the bolt or slide is pulled back, will lock in the open position if the magazine is empty. If the firearm does not lock open, it means that a cartridge or shotshell from the magazine has gone into the chamber, making the firearm ready to fire. A few semi-automatics do not lock open and must be held open to check the chamber.

- To unload, *first remove the magazine*, and lock the action open. Then make sure it's unloaded—check *both* the chamber *and* the magazine for extra cartridges or shells.
  - When closing the action for loading, pull back to unlock the bolt or slide and then let go, allowing it to travel forward on its own. Do not guide it forward with your hand because it may not seat properly.
  - On a semi-automatic, the trigger must be pulled each time a shot is fired. This makes the semi-automatic different from the fully automatic firearm, which fires continuously as long as the trigger is held down. **The fully automatic firearm may not be used for hunting or sport shooting.**
- **Break (or Hinge) Action:** The break-action firearm operates on the same principle as a door hinge. Simple to load and unload, a hinge action is often chosen as a hunter's first firearm.
- To open the action, point the barrel(s) at the ground. A release is pressed, and the stock drops downward. This allows the cartridges or shotshells to eject or to be removed manually if the firearm is loaded.
  - Hinge-action firearms have a separate barrel for each shot rather than a magazine. Most models have one or two barrels, but some have up to four.
  - Some models also have an exposed hammer(s), which can be dangerous.
- **Revolving Action:** The revolving action takes its name from a revolving cylinder containing a number of cartridge chambers. One chamber at a time lines up with the barrel as the firearm is fired. Revolving cylinders may rotate either clockwise or counterclockwise, depending on the manufacturer. This type of action is usually found on handguns but may be found on some older rifles.
- Revolving actions are referred to as either "single action" or "double action."
- **Single Action:** Will fire only after the hammer has been cocked manually.
  - **Double Action:** Pulling the trigger both cocks and releases the hammer. A double-action revolver typically also can be hammer-cocked like a single-action revolver.

**Common Actions on Shotguns**

Shotguns use many of the same actions as rifles—the pump action, semi-automatic action, and bolt action. They also use a break action as either a single barrel or double barrels. The double barrels can be arranged horizontally (side-by-side) or vertically (over-under).

**Typical Handgun Actions**

### Typical Locations of Safeties

The red outlines indicate where safeties are typically located on rifles, shotguns, and handguns.

#### Safety Tip

You should never replace safe firearm handling with trusting the safety on a firearm. A safety is a mechanical device that could fail. Don't release the safety until just before you shoot.

Knowing where the safety is and how it works is not always as simple as it might seem. There are many types of safeties. Sometimes people alter or modify their guns to disable the safety. This is very dangerous, especially if the gun gets into the hands of an inexperienced shooter. Be sure you know how the safety works on your own gun or any others you handle. Never alter or modify your firearm yourself. Have an experienced gunsmith look at your gun if the safety does not work or if anything else is wrong with it.

### Safety Mechanisms

A safety is a device that blocks the action to prevent the firearm from shooting until the safety is released or pushed to the off position. The safety is intended to prevent the firearm from being fired accidentally. However, safeties should never be relied on totally to protect against accidental shooting. Safeties are mechanical devices subject to mechanical failure from wear and other factors, and they can fail when least expected. Also, safeties can be unknowingly bumped from the safe position as your firearm is being handled or as it catches on clothing or tree branches.

All safeties are located around the receiver of the firearm and are usually easy to spot. Common types of safeties are:

- **Cross-Bolt Safety**
  - Common on pump and semi-automatic firearms
  - A simple, push-button action that blocks the trigger or hammer
  - Usually located at the trigger guard or ahead of the hammer
- **Pivot Safety**
  - Common on handguns and bolt-action rifles
  - A pivoting lever or tab that blocks the trigger or firing pin
  - Located on the frame (blocks trigger) or on the bolt or slide (blocks firing pin)
- **Slide or Tang Safety**
  - Common on some rifles and break-action shotguns
  - A sliding bar or button that blocks the firing action
  - Located on the tang (a metal strip behind the receiver) of break-action firearms or on the side of the receiver on some rifles
- **Half-Cock or Hammer Safety**
  - Common on firearms with exposed hammers
  - Positions the trigger at half-cock, away from the firing pin
  - Engaged by placing the trigger at half-cock; some firearms automatically rebound to the half-cock position after the trigger is released
  - While not a true safety, it is sometimes described as a mechanical safety device by firearm manufacturers

### Magazines

In repeating firearms, the magazine is the place that stores the ammunition that has not been fired. When you work the action, a cartridge is picked up from the magazine and placed in the chamber ready to be fired.

- Magazines are designed with a spring and follower, which push against the cartridges to move them into the action. When checking a magazine to make sure it's empty, you must be able to either see or feel the follower; if you cannot see or feel the follower, there may be a cartridge jammed in the magazine, which can be dangerous. Tubular magazines require close attention to make sure a cartridge is not jammed in the magazine.
- Magazines may be detachable or fixed.
  - Detachable magazines allow you to remove extra ammunition from the firearm by simply removing the magazine.
  - Fixed magazines require the ammunition to be removed manually from the gun itself. These include tubular, hinged-floor-plate, and revolving magazines.

## Sights

A sight is a device used to line up the muzzle with the shooter's eye so that he or she can hit the target. Sights are more critical on a firearm that fires a single projectile (rifle and handgun) than on a firearm that shoots a pattern of shot (shotgun). Shotguns usually have a simple pointing bead. Rifles typically have an open, aperture (peep), or telescopic sight. Most handguns have an open sight, although some specialized handguns have a dot or a telescopic sight. Read more about using sights in Chapter Three.

- **Bead Sight:** Simple round bead set into the top of the barrel near the muzzle of a shotgun. Some shotguns have a second, smaller bead about halfway back on the barrel. The shooter uses the shotgun to "point" at and follow a moving object. The bead is used only for a reference as the shotgun is pointed and moved to follow flying or running targets.
- **Open Sight:** Combination of a bead or post front sight and a notched rear sight. These sights are simple and inexpensive. Open sights allow quick sighting. To aim, you center the top of the bead or post within the notch of the rear sight, and line up on the target. Open sights can be fixed or adjustable.
- **Aperture (Peep) Sight:** Combination of a bead or post front sight and a round hole set on the rifle's receiver close to the shooter's eye. To aim, you center the target in the rear peep or aperture sight, and then bring the front sight into the center of the hole. An aperture sight lets you aim more accurately and is adjusted more easily than an open sight.
- **Telescopic Sight (Scope):** Small telescope mounted on your firearm. A scope gathers light, brightening the image and magnifying the target, and does away with aligning rear and front sights. The aiming device inside the scope is called the "reticle." To aim, you simply look through the scope, and line up the crosshairs, post, or dot with your target. Telescopic sights provide the most accurate aiming, which makes them popular for hunting.
- **Dot Sight:** Small device mounted on your firearm. A dot sight uses electronics or optical fibers to project a glowing dot or other mark on a lens in front of the shooter's eye. Some dot sights also magnify like telescopic sights.

### Types of Rifle Sights

### *Remember...*

Never use the scope on your telescopic sight as a pair of binoculars!

**The Damascus Barrel**

Damascus or "Damascus twist" barrels are older shotgun barrels that were typically made before 1900. Iron and steel ribbons were twisted and welded together. Damascus barrels are weaker than modern barrels and are not designed for the high gas pressures created by modern ammunition. Damascus barrels have a distinctive, irregular pattern of short, streak-like marks around the barrel.

If you have a Damascus barrel gun, don't shoot it. The barrel may burst slightly ahead of the chamber, crippling the shooter's hand or forearm. If you have an older firearm and are not sure whether it has a Damascus barrel, go to a qualified gunsmith to identify its make before shooting it.

**Differences Between Rifles, Shotguns, and Handguns**

The main differences between rifles, shotguns, and handguns are their barrels and the type of ammunition used.

- The rifle barrel is long and has thick walls with spiraling grooves cut into the bore. The grooved pattern is called rifling.
- The shotgun barrel is long and made of fairly thin steel that is very smooth on the inside to allow the shot and wad to glide down the barrel without friction. It's thinner than a rifle barrel because it does not have to withstand as much pressure.
- The handgun barrel is much shorter than a rifle or shotgun barrel because the gun is designed to be shot while being held with one or two hands, rather than being placed against the shooter's shoulder. The bores of most handgun barrels also have a grooved pattern similar to rifles.

**Rifle, Handgun, and Shotgun Bores**

The bore of a rifle or handgun is grooved, which puts a spiral spin on the bullet for greater accuracy. The bore of the shotgun barrel is smooth because rifling would spread the shot pattern too soon.

*Remember...*

Reloaded shells may have wrong information or have been improperly reloaded. It's important to mark reloaded shells clearly. Use only shells or cartridges that you have reloaded yourself or that have been reloaded by a person whom you know is competent.

**Rifling in the Rifle or Handgun Bore**

A bullet fired from a rifle or handgun has a spiral spin that keeps it point-first in flight, increasing accuracy and distance. This is achieved by the rifling inside the barrel, from which the rifle got its name. The barrel is thick and has spiraling **grooves** cut or pressed into the bore. The ridges of metal between the grooves are called **lands**. Together, the grooves and lands make up the "rifling."

### A Rifle's or Handgun's Caliber

Caliber is used to describe the size of a rifle or handgun bore and the size of cartridges designed for different bores.

- Caliber usually is measured as the diameter of the bore from land to opposite land and is expressed in hundredths of an inch, thousandths of an inch, or millimeters. For example, a .270-caliber rifle bore measures 270/1000ths of an inch in diameter between the lands and has a larger bore diameter than a .223-caliber rifle. However, there is no standard established for designating caliber. In some cases, the caliber is given as the diameter of the bullet, which is the distance between the grooves.
- Caliber designations sometimes have a second number that has nothing to do with the diameter. For example, the popular .30-30 is a .30-caliber cartridge, but the second number is a holdover from the days when the cartridge took 30 grains of powder. The "06" in .30-06 refers to the year (1906) it became the official ammunition of the U.S. military.
- Every rifle or handgun is designed for a specific cartridge. The ammunition must match the data stamp on the firearm. For example, there are several .30-caliber firearms that use the same bullet size but are designed for different cartridges (the .30-30, .30-06, .308, and the .300 Savage). If you cannot find the caliber stamped on the firearm, take it to a qualified gunsmith.

### A Shotgun's Gauge

Shotguns are classified by gauge, which is a measure related to the diameter of the smooth shotgun bore and the size of the shotshell designed for that bore.

- Common shotgun gauges are 10-gauge, 12-gauge, 16-gauge, 20-gauge, and 28-gauge. The smaller the gauge number, the larger the shotgun bore. Gauge is determined by the number of lead balls of size equal to the approximate diameter of the bore that it takes to weigh one pound. For example, it would take 12 lead balls with the same diameter as a 12-gauge shotgun bore to weigh one pound. Today, however, gauge can be measured much the same way as caliber, by measuring the inside bore diameter.
- The .410-bore shotgun is the only exception to the gauge designation for shotguns. It has an actual bore diameter of 410/1000ths of an inch, which is approximately equivalent to a 67½ gauge.
- Each gauge of shotgun shoots only shells of the same gauge. For example, 12-gauge guns use only 12-gauge shells.
- The gauge of a shotgun is usually marked on the rear of the barrel, and the gauge of a shell is marked on the shell as well as on the factory box.

#### Rifle and Handgun Calibers

The circles show bore sizes of common calibers. Having the same bore size does not mean different cartridges are interchangeable.

#### Shotgun Gauge Sizes

Sizes shown are the minimum inside bore diameter with a tolerance of +0.020". Data is presented courtesy of SAAMI.

**shot string**

The three-dimensional spread of shot pellets after they leave the barrel

**choke**

The degree of narrowing at the muzzle end of the shotgun barrel

**shot pattern**

The spread of shot pellets after they hit a non-moving target

**Steel Shot**

Steel shot is slightly lighter than lead shot of the same size—reducing its velocity and distance (range). Also, steel shot is harder than lead, so the individual pellets stay round, keeping the pattern tighter.

Some hunters use steel shot one or two sizes larger to make up for the difference in weight from lead shot. Others use the same size steel shot, or even smaller steel shot, to get more shot into their patterns. You should pattern your shotgun with various loads of steel shot before hunting waterfowl with it.

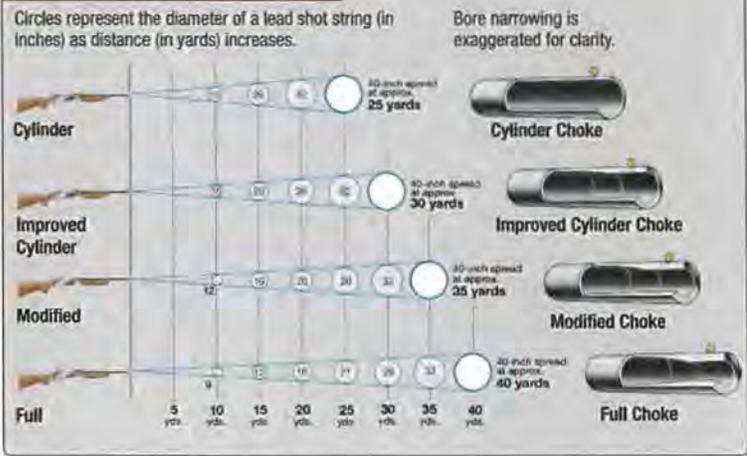

Effective pattern density is the key. Maximum pellet counts spread evenly across a 30-inch circle are best. Full chokes generally produce poor patterns with steel shot.

**Shotgun Choke and Shot String**

When a shotshell is fired from a shotgun, the pellets leave the barrel and begin to spread or scatter. The farther the pellets travel, the greater the spread of the group of pellets (shot) both in length and diameter. This spread is called the **shot string**. To control the shot string, shotgun barrels have a **choke** that will affect the **shot pattern** when the shot string hits the target. Read more about how to pattern a shotgun in Chapter Three.

- Your distance from the target determines the choke you need. The choke of a shotgun determines shot string only. It has no bearing on shot speed (velocity) or distance (range). That is, the choke does not alter the shotgun's power—it just controls how tight or spread out the pellets will be at a specific distance.
- The spread effect of the most common chokes is illustrated below, showing how many pellets will hit within a certain area at different ranges.
  - **Cylinder** choke is an unconstricted barrel. The shot string spreads quickly.
  - **Improved Cylinder** choke has a slight constriction. It allows the shot string to spread fairly quickly. This is a good choice for quail, rabbits, and other upland game at relatively close ranges.
  - **Modified** choke has moderate constriction. The pellets stay together longer, making the shot string denser and more useful at longer ranges. This choke is used often when dove hunting and when using steel shot to hunt for ducks or geese. There is also an Improved Modified choke that is slightly tighter than Modified.
  - **Full** choke has tight constriction. The shot string holds together even longer, making this choke good for squirrels, turkey, and other game shot at 40-yard and longer ranges. Turkey hunters sometimes use Extra Full or Turkey choke for even denser patterns at long range.

**Effect of Choke on Shot String at Various Distances**

### Match Firearms and Ammunition...Correctly!

With so many kinds of firearms and types of ammunition, it's not always easy to match the proper ammunition to your firearm correctly—but getting it right is critical. If you match the wrong ammunition to your gun, you can cause an explosion, injuring or possibly killing yourself and any bystanders.

- To match the proper ammunition to your rifle, shotgun, or handgun correctly:
  - Read the specific caliber or gauge designations on the side of the barrel. Match that designation *exactly*. For example, if it says “.270 Winchester,” you cannot use “.270 Weatherby.” Shotgun barrels will give the gauge and the length of the chamber (for example, “12-gauge for 2¾-inch shells” or “20-gauge magnum for 3-inch shells”).
  - Carefully read the information on the lid of the ammunition box. With shotgun ammunition, always check both the gauge and the shell length, and whether it's a magnum **load**, to ensure it matches the data on the barrel.
  - Finally, match the information on the barrel to the information on the cartridge or shotshell *before you shoot*. If in doubt, ask a more experienced shooter or a qualified gunsmith. Some store clerks, although they sell ammunition, may not know about the differences in sizes or the type of firearm you shoot.
- Safety practices that will help you avoid using the wrong ammunition are:
  - Purchase only the correct ammunition for your firearm. Buy the exact caliber or gauge and length of ammunition for which your rifle, handgun, or shotgun was designed. For example, shotshell must be the correct length for the shotgun. The data stamp on the barrel of the shotgun will identify what length shell can be used. Never use a shell that is longer than this length.
  - Carry only the correct ammunition for the firearm you're using. Never mix ammunition, such as carrying a caliber or gauge your companion uses. A common mistake involves putting a 20-gauge shotshell into a 12-gauge shotgun. The smaller gauge shell will slide through the 12-gauge chamber and partly down the barrel, causing an obstruction. The shooter, especially when excited by the presence of game, then might insert a 12-gauge shotgun shell behind the 20-gauge shell.

**WARNING!**

Smaller shotshells (such as 20-gauge shells), if mistakenly fed into a 12-gauge gun, will slip past the chamber and lodge in the barrel, causing serious personal injury or gun damage if a 12-gauge shell is loaded and fired. Some rifle and handgun ammunition also may fit into the wrong gun, creating a dangerous obstruction. The caliber or gauge stamped on the end of the shell must match that which is stamped on the gun barrel. Some barrels are not stamped. Be sure the right ammunition is used in your gun.

*Safety Tip*

Hang fires happen when the firing pin has struck the primer and there is a delay before the gun fires. This can occur for several reasons, such as a faulty firing pin or spring, defective primer, or other cartridge-related problems. A misfire is when the primer fails to ignite the powder. Hang fires and misfires can happen with any kind of firearm.

Always treat a “misfire” or a “hang fire” as if the firearm is going to discharge at any second, and keep the firearm pointed in a safe direction. Leave the action closed, and retain your shooting position. Most importantly, maintain safe muzzle control at all times. Failure to follow these safe handling practices could result in a tragedy.

**load**

The amount of gunpowder in the cartridge or shotshell together with the weight of the bullet or shot charge

The rear of a shotgun barrel should be marked with the gauge and the length of the chamber.

The data stamp of a rifle is usually stamped toward the rear of the barrel.

**History of Firearms**

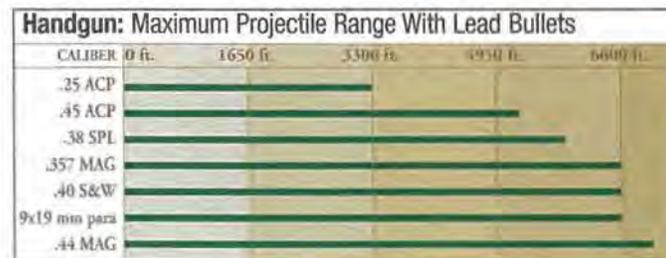

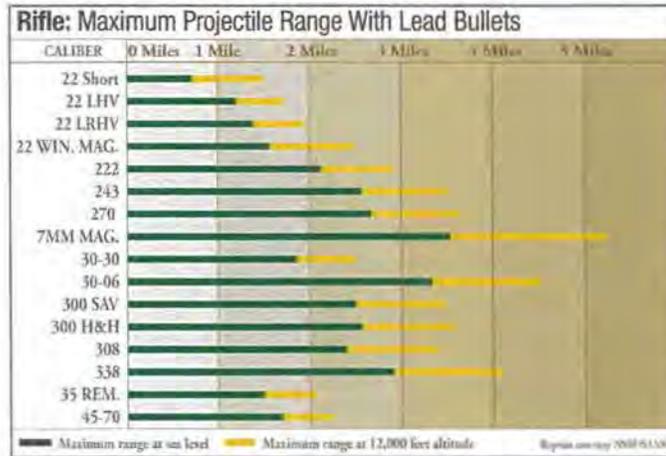

The Chinese are believed to have been the first to use gunpowder, now called "black powder." The first firearms were tubes closed at one end, usually made of brass or cast iron. Early firearms were loaded by pouring black powder and shoving a projectile into the tube from the muzzle end and then igniting the powder using a lighted wick or match. The powder burned, creating pressure that launched metal objects or arrows. These firearms are called "muzzleloaders" due to their loading process.

Advances in ignition systems were the major changes that brought about modern firearms.

- **Matchlock ignition** was developed in the early 1400s. When the trigger is pulled, a lighted wick is lowered into a priming pan located next to a vent hole drilled into the closed end of the barrel. When the priming powder ignites, it lights the main charge.
- **Wheel lock ignition** replaced the wick of the matchlock in the 1500s. When the trigger is pulled, a coiled spring forces the rough-edged steel wheel to spin against a piece of iron pyrite, creating sparks to ignite the powder in the priming pan.
- **Flintlock ignition** appeared in the late 1600s. When the trigger is pulled, the hammer holding a piece of flint falls against a steel cover (the frizzen) sitting over the priming pan. The hammer knocks the cover out of the way, and the collision of flint and steel causes sparks that ignite the powder in the priming pan.
- The **percussion lock** (also called a "caplock") replaced the flintlock in the early 1800s. Early percussion locks used priming compounds inside a metallic foil cap placed over the vent hole. When the hammer strikes the cap, the resulting spark ignites the main charge.
- The next advance, in 1835, was to arrange a series of percussion locks and barrels on a rotating wheel (cylinder) to allow a rapid succession of shots (Paterson revolver). With a single hammer and trigger, multiple shots can be fired without reloading—a **repeating firearm**. The percussion cap revolvers are the forerunners of modern revolvers.
- The **percussion cap** also paved the way to the self-contained ammunition we have today—cartridges and shotshells. In the mid 1800s, gunpowder, the projectile, and the primer were put together into a single housing that could be loaded quickly.
- **Actions** were developed to allow shooters to load cartridges and shotshells at the rear, rather than the muzzle, end of the barrel.

**Know Your Firearm's Range**

Knowing your firearm's "maximum projectile range" is critical to being a safe and responsible hunter. The maximum projectile range tells you at what distances your firearm's projectile could cause injury or damage to people, animals, or objects. When hunting, knowing the "effective killing range" lets you immediately assess when a shot will give a clean kill. The effective killing range will always be less than the maximum projectile range. Learning to estimate distances and knowing your firearm's projectile range and your effective killing range are important parts of hunting.

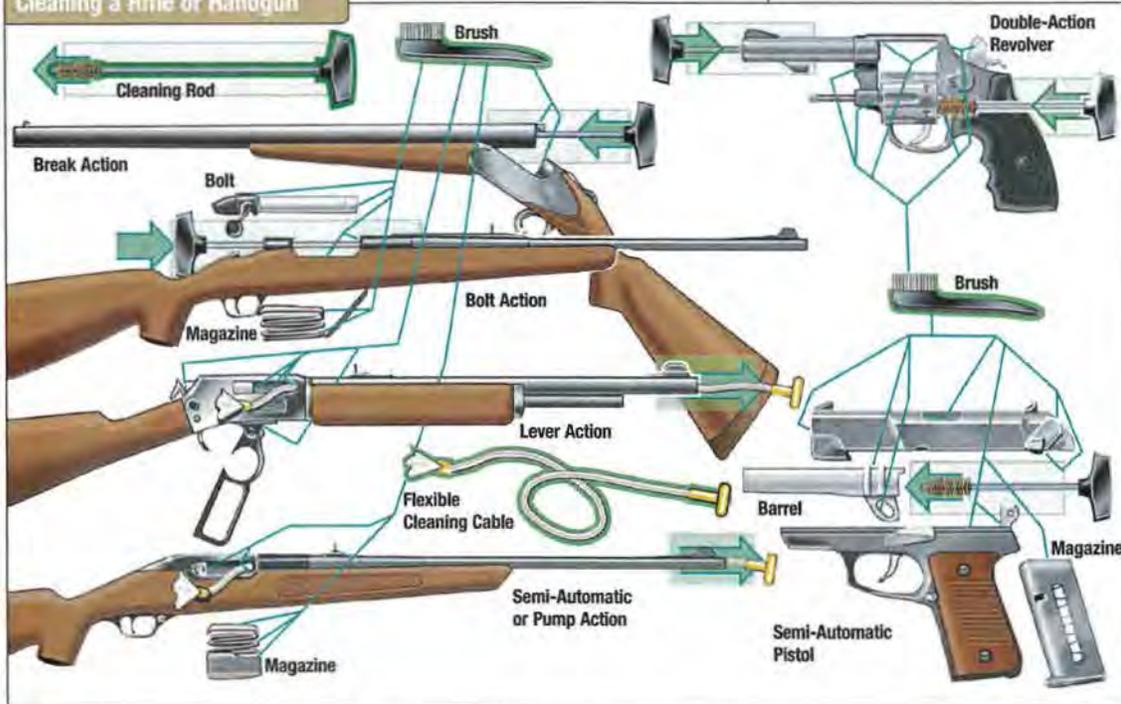

### Cleaning Your Firearm

- Clean your firearms after every use to keep them in top condition. Every hunter should own a complete cleaning kit.
- Work on a cleared table or bench. Always give cleaning your full attention. Never clean a firearm while doing something else.
- Follow these basic steps to clean your firearm.
  - Point the muzzle in a safe direction, and make sure the gun is unloaded.
  - Remove all ammunition from the cleaning bench.
  - For the most thorough cleaning, field strip the firearm as directed in the firearm owner's manual. Then clean each part separately.
  - Follow the instructions in your cleaning kit. If possible, clean the barrel from the breech end, using a bore guide and a cleaning rod holding a bore brush or patch wetted with solvent. Pass the brush/patch all the way through the barrel. Repeat several times with fresh patches. You may need a larger brush for the chamber. Use a hand brush to clean the crevices where powder residue accumulates. Follow with a dry patch, and finish with a lightly oiled patch for the barrel. Use cloth for other parts.
- Use a flexible "pull-through" cleaning cable when cleaning firearms with lever or semi-automatic actions to prevent dirt, grime, or debris from being pushed into the action area.
- Use cleaning solvents in a well-ventilated area and only as directed.
- If cleaning from the muzzle end, use a muzzle protector so that you don't damage the rifling near the muzzle.

### Cleaning Kit

- Assorted rod tips—brushes, mop tips, slotted tips, jag tips
- Bore light
- Clean cloths
- Cleaning rods
- Cotton swabs
- Dental mirror
- Gun grease
- Gun oil
- Gunsmith screwdrivers
- Patches appropriate for the caliber or gauge of the firearm
- Pipe cleaners
- Solvent
- Stand to hold the firearm securely in a horizontal position
- Toothbrush

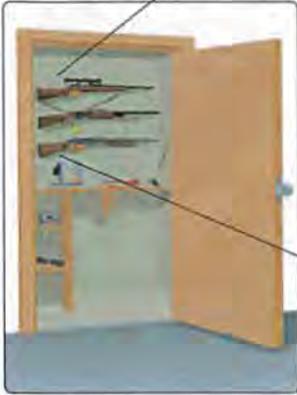

### Cleaning a Rifle or Handgun

### Storing Firearms

Store firearms with a locking device if stored in an accessible area, such as a closet.

### Storing Your Firearm

- Firearms must be stored *unloaded* and in a *locked* location, *separate from ammunition*. The storage area should be cool, clean, and dry. Storing firearms in closed gun cases or scabbards isn't recommended because moisture can accumulate.
- Store guns horizontally, or with the muzzle pointing down. When guns are stored upright, gravity pulls gun oil downward into the action, which forms a sticky film. Oil also can drain onto the stock, softening the wood.
- Displaying guns in glass cabinets or wall racks is an invitation to thieves and curious children. Ideally, guns should be hidden from view and locked. Storage devices with hidden compartments are available. For the best protection against theft and fire damage, purchase a safe.

### Storing Ammunition

- Store ammunition, reloading supplies, and firearms in separate locked compartments.
- Keep all ammunition away from flammables.
- Store ammunition in a cool, dry place to prevent corrosion. Corroded ammunition can cause jamming, misfires, and other safety problems.

## Basic Shooting Skills

Chapter Three / Page 23

### You should be able to...

- Define "good marksmanship" and explain why it is important.
- List the three fundamentals of good marksmanship.
- Define "sight alignment" and "sight picture."
- Demonstrate how to determine your master eye.
- Explain the basic steps to sight-in a rifle.
- Explain four rifle-firing techniques that will help improve accuracy.
- Demonstrate four proper positions for rifle firing.
- List the four common shotgun chokes, and give an example of when you would use each.
- Explain the basic steps for patterning a shotgun.
- Explain four shotgun-shooting techniques that will improve accuracy.
- Demonstrate proper shotgun-shooting stance.
- Explain the difference between swing-through and sustained lead when hunting with a shotgun.
- Demonstrate proper handgun-shooting stance and grip.

### Good Marksmanship and Accuracy

A fair amount of knowledge, skill, and experience is required to become a successful hunter. One of the essential skills is good marksmanship, which is accurately and consistently hitting the target where planned. When hunting, accuracy is critical for a clean kill. Good marksmanship is built on three fundamentals:

- Proper sight adjustment or patterning
- Proper shooting technique
- Practice

### Know Your Accuracy Limits

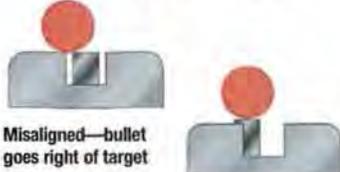

Ethical hunters know their personal accuracy and limit their shots accordingly.

- An 8-inch paper plate is the standard target for establishing deer hunting accuracy. An 8-inch target is about the same size as the vital area of a deer. You need to be able to hit the paper plate consistently at the same distance and from the same shooting position you will be using when hunting. The fact that you can hit an 8-inch target at 100 yards from a bench rest does not mean you will be able to do the same from a standing or kneeling position.
- Before hunting, practice until you are confident you can hit the required target at the distances and from the shooting positions you expect to use in the field. When hunting, limit your shots to your most accurate range.

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners, www.kalkomey.com

**Aligning an Open Sight**

**Safety Tip**  
 If you are color-blind, you should be especially cautious when hunting. You may not be able to distinguish the fluorescent orange clothing of other hunters, nor the color markings that help identify game.

**Remember...**  
 Good vision is the foundation for good shooting and hunting safety. Have your eyes examined on a regular basis.

**Rifle Firing**

**Sight Alignment**

Sight alignment is the process of lining up rear and front sights. The sight picture is the image you see when the sights are aligned correctly with the target. To ensure that the bullet will travel to the target in your sight, it's necessary to sight-in your rifle. Before you can do that, you need to determine your dominant or "master" eye.

|                                                                                                                          |                                                                                               |                                                                                                            |                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| With an open sight, you line up the target with the blade or bead of the front sight within the notch of the rear sight. | With an aperture sight, you line up the target with the front sight within the rear peephole. | With a telescopic sight with a crosshair reticle, you line up the target with the crosshairs of the sight. | With a telescopic sight with a dot reticle, you line up the target with the dot of the sight. The dot must be centered. |
|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|

**Dominant or Master Eye**

- Just as you have a dominant hand, you also have a dominant eye. You need to aim with the dominant—or master—eye for the most accurate shooting. Usually your dominant eye is the same as your dominant hand, but not always.
- To determine your dominant eye:
  1. Form a triangular opening with your thumbs and forefingers.
  2. Stretch your arms out in front of you.
  3. Focus on a distant object while looking through the triangular opening and keeping both eyes open.
  4. Bring your hands slowly to your face, keeping sight of the object through the opening; the opening will come to your dominant eye naturally.
- If you're not sure, close one eye at a time. The weak eye will see the back of your hand; the strong one will be focused on the object in the triangle.

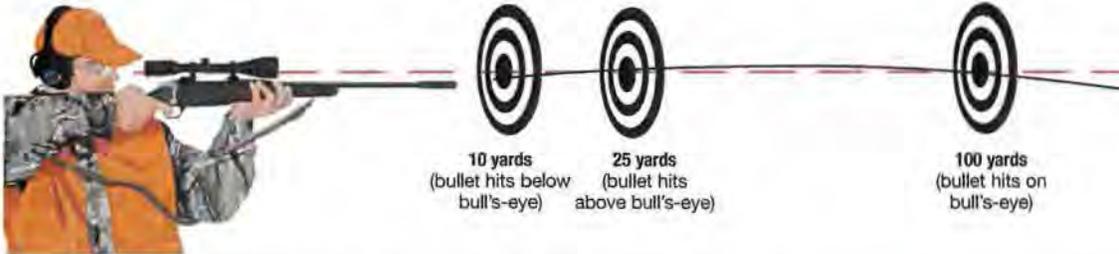

### Sighting-In a Rifle

- Rifle bullets don't travel in a straight line. They travel in an arc, formed by the pull of gravity. "Sighting-in" is a process of adjusting the sights to hit a target at a specific range. Deer hunters, for example, often sight-in their rifles to hit the bull's-eye at 100 yards.
- All rifles should be sighted-in before every hunt using the ammunition you plan to use, especially rifles with peep or telescopic sights. Guns you sighted-in prior to your last outing could have been knocked out of alignment by a single jolt. That misalignment could mean the difference between a successful hunt and a disappointing experience.

#### Remember...

You must sight-in your rifle with the ammunition you plan to use. Be sure you sight-in, and practice firing your rifle before you go hunting.

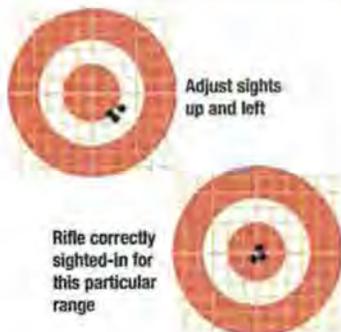

- Other than ensuring accurate shots, sighting-in a rifle has other advantages:
  - Forces you to practice
  - Makes accurate firing possible
  - Helps identify problems with your firing technique
  - Helps determine the farthest range at which you can hit your target
  - Improves safety by helping you know where your rifle will fire
  - Builds confidence in your firing ability

#### Optional Sighting-In Techniques

Use bore or collimator sighting-in initially to line up the rifle on the paper target. However, these techniques alone are not sufficient to sight-in a rifle. You must make final adjustments by firing the rifle with the same ammunition you plan to use in the field.

- **Bore sighting-in with bolt-action rifles:** Remove the bolt, brace the firearm on sandbags, and look directly through the bore. Correct the rifle's position until you see the bull's-eye in the center of the bore. Adjust the sights to give you a good sight picture.
- **Collimator sighting-in for rifles without bolt actions:** A collimator slips into the muzzle end of the barrel and allows you to adjust the sights, much like bore sighting-in.

Use a sight-in target to adjust your sights.

#### minutes-of-angle

The standard measurement unit of shooting accuracy; one minute-of-angle (MOA) is 1/60 of one degree, or approximately one inch, at 100 yards

#### Four Fundamentals for an Accurate Rifle Shot

1. Aim carefully, aligning your sights.
2. Take a deep breath, and then release about half of it.
3. Squeeze the trigger slowly.
4. Follow through.

#### parallax

Optical bending of telescopic crosshairs in relation to the target

### Sighting-In Procedure

- Fire your rifle from a solid bench rest with the forestock resting on a pad or a sandbag. Don't rest the gun on its barrel—it will shoot higher than normal. Ideally, use an adjustable shooting tripod with sandbags. A spotting scope is also useful.
- Sight-in instructions are printed on some targets available from retail outlets or manufacturers. The sighting-in process for most centerfire rifles begins at 25 yards and then should be repeated at 100 yards. The basic steps involve firing at least three shots carefully and consistently at a target. If the bullets form a relatively small group of holes on the target, but not where you were aiming, the sights will have to be adjusted.
- When adjusting peep or telescopic sights, the rear sights or dials are adjusted by a certain number of **minutes-of-angle**, or "clicks," in a certain direction. Read the sight's instruction manual to see how much each click changes the sight at 100 yards.
- The rear sight is moved in the same direction you want your shot to move on the target. Moving shots from side to side is "adjusting for windage." Moving shots up or down is "adjusting for elevation."
- Specific instructions about trajectory and what fractions or inches you should be above the bull's-eye at 25, 50, or 100 yards are usually included on sight-in targets. You also might consult a ballistics chart or get help from an experienced shooter.

### Rifle-Firing Techniques

Using correct firing techniques will help you steady the rifle for the most accurate shooting. Bear in mind that these are only the basics. Further study will help you understand other factors that can affect your accuracy, such as wind, heat, and **parallax**.

- **Shooting From a Rest:** When shooting in the field, the safest and most accurate shots are taken from a rest—a log, large rock, or any other stable object. Don't rest the barrel directly on a hard surface, or the rifle will fire higher than normal—put some padding, such as a hat or a jacket, under the rifle.
- **Breathing:** Your breathing can move the rifle just enough to throw off your shot.
  - When you're ready to fire, draw a deep breath, and exhale about half of it.
  - Then hold your breath as you squeeze the trigger.
  - Bear in mind that if you hold your breath too long, your heart beats faster, which increases your pulse and causes the rifle to move. If you notice this happening, take another breath and start over.
  - At times the excitement of spotting game will make it more difficult to control your breathing. Try to relax and follow the correct procedure.
- **Trigger Squeeze:** Jerking the trigger or abruptly clenching the trigger hand can move the gun enough to cause a miss.
  - To squeeze the trigger without jarring the gun, simply apply slow, steady pressure until the gun fires.
  - Practice makes breath control and proper trigger squeeze habitual.
- **Follow Through:** After the bullet fires, it's important to continue the squeeze or follow through. That prevents you from jerking the gun before the bullet has left the barrel.

### Firing Positions

There are four standard rifle-firing positions: prone, standing, sitting, and kneeling.

#### Prone

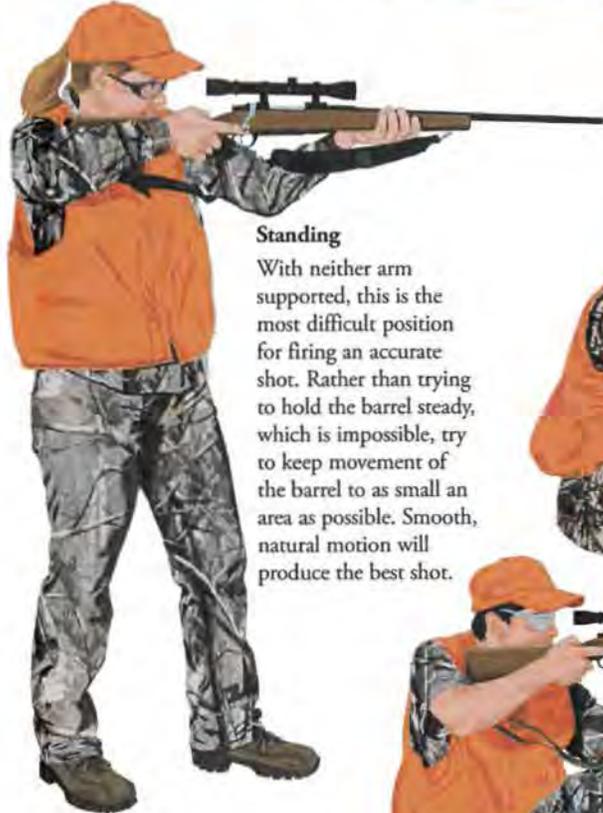

The prone position is the steadiest of the four positions. Because it's the easiest to hold, it's the best position for mastering the fundamentals of firing—aiming, breath control, trigger squeeze, and follow through.

#### Safety Tip

Shooting a firearm can cause immediate and permanent hearing loss and can damage your vision.

- When shooting any firearm, always wear properly fitting ear protection. For target practice, use an earplug or earmuff (or both) with a high Noise Reduction Rating (NRR).
- When hunting, use electronic or non-linear devices that allow normal or even enhanced hearing but block damaging levels of sound. For more information, visit the National Hearing Conservation Association website at [www.hearingconservation.org](http://www.hearingconservation.org).
- Also wear suitable eye protection, such as shooting glasses with high-impact lenses, to protect your vision when shooting.

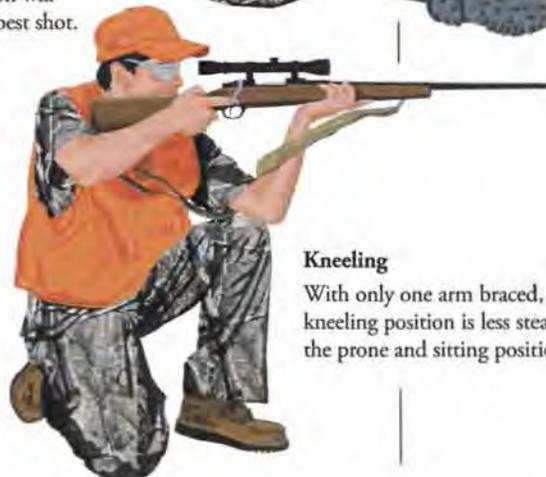

#### Standing

With neither arm supported, this is the most difficult position for firing an accurate shot. Rather than trying to hold the barrel steady, which is impossible, try to keep movement of the barrel to as small an area as possible. Smooth, natural motion will produce the best shot.

#### Sitting

Both arms are supported by your legs. Next to the prone position, this is the steadiest position.

#### Kneeling

With only one arm braced, the kneeling position is less steady than the prone and sitting positions.

Point a shotgun. Focus your eye on the target.

*Remember...*

Point a shotgun. Pull the trigger.  
Aim a rifle. Squeeze the trigger.

Aim a rifle. Focus your eye on the crosshairs or front sight.

### Shotgun Shooting

As with firing a rifle, good shotgun marksmanship begins with proper preparation, which includes adjusting your gun and ammunition for maximum performance and mastering shotgun techniques.

#### Matching Choke to Your Quarry

- A choke allows you to fine-tune your shotgun for the type of game you're hunting. Built-in or attached to the muzzle end of the barrel, the choke is a constriction that controls the shot string, thus affecting pellet density at various distances.
- The tighter the constriction, the greater the distance that the cluster of pellets stays together. The looser the constriction, the faster the shot pattern spreads. Recall from Chapter Two that the most common chokes, ranging from tightest to most open, are:
  - Full
  - Modified
  - Improved Cylinder
  - Cylinder (unchoked)
- For example, someone hunting small, fast, close birds would generally use an Improved Cylinder or Modified choke, which creates a broad shot pattern that spreads quickly at close ranges. Conversely, someone hunting a larger, less mobile bird that is usually farther away, such as a turkey, would select a Full choke, which concentrates the shot in a smaller area. Pellet size also varies based on the size of the game. The chart below suggests choke selections for a variety of game. It is intended only as a guide—choice of choke may vary depending on ammunition, target distance, and hunting conditions. Always pattern your shotgun for the quarry you are hunting and the ammunition you are using.

| Quarry                   | Commonly Used Choke<br>(based on typical distance from quarry) |
|--------------------------|----------------------------------------------------------------|
| Goose                    | Improved Cylinder or Modified                                  |
| Duck                     | Improved Cylinder or Modified                                  |
| Turkey                   | Full or Extra Full                                             |
| Pheasant                 | Improved Cylinder, Modified, or Full                           |
| Grouse                   | Improved Cylinder or Modified                                  |
| Woodcock, rail, or snipe | Improved Cylinder or Modified                                  |
| Dove                     | Improved Cylinder or Modified                                  |
| Quail                    | Improved Cylinder or Modified                                  |
| Rabbit                   | Improved Cylinder or Modified                                  |
| Squirrel                 | Modified or Full                                               |

## Patterning Your Shotgun

- No two shotguns will shoot identical pellet patterns. In some cases, the pattern will be off-center. In other instances, there may be gaps in the pattern. In addition to the firing characteristics of the gun, the gun's choke, the brand of shotshell, the shot size, and the type of shot also affect the pattern. In order to select ammunition that provides the best performance, it's necessary to "pattern" your shotgun.
- Patterning can be done with simple, homemade targets—sheets of blank paper about 4 x 4 feet in size. A commercial target with a bull's-eye also can be used, but the bull's-eye is used only to aim at—it is not used in steps 2–4 below. To pattern your shotgun, follow these steps:
  1. Fire one shot at the center of the target (or bull's-eye) from the distance that you expect to be from your quarry (for example, 35 yards if hunting game birds). Repeat this two more times, each time with a new sheet of target paper.
  2. On each of the three targets, draw a 30-inch circle around the densest part of the shot pattern. (This is not necessarily the center of the paper.)
  3. On each of the three targets, count the number of pellet holes that fall within the 30-inch circle, marking them with the marker as you count each one.
  4. Calculate the percentage of the load that is expected to land in a 30-inch circle at the distance that you expect to be from your quarry.
    - Average the pellet counts within the 30-inch circles (add the three counts from the previous step, and divide the sum by three).
    - Then divide the average pellet count by the number of pellets in the load for the ammunition you are using, and multiply this result by 100.
- The pattern of pellets within a 30-inch circle should be of a proper, even density to ensure a clean kill. The pattern should contain a sufficient percentage of the load, which should be at least 55% to 60%.
- Continue this process, trying different choke and load combinations, until you get an even pattern density with a sufficient percentage of the load within a 30-inch circle while shooting from the distance that you expect to be from your quarry.

## Shotgun-Shooting Techniques

Unlike rifle firing, quick reflexes and flexibility are essential for effective shotgun shooting. Proper shotgun techniques will help you develop the rapid, fluid response you need to hit your target.

- **Shooting Stance**
  - A shotgun is almost always shot at a moving target from a standing position. You must be able to swing freely over a wide arc and maintain control. That requires a relaxed, balanced stance.
  - Stand with your feet spread about shoulder-width apart and your knees bent slightly so that you are balanced perfectly. Bring your left foot slightly forward (if you're a right-handed shooter), and lean your body in the same direction. The position of the feet is important. The toes of your forward foot should point at about 45 degrees toward the target. Take the time to place your feet properly, even for a quick shot.
  - Keeping your knees slightly bent makes it easier to swing with a moving target. The bent leg to the rear supports the movements of your hips, allowing you to swing smoothly.

### Remember...

Shots at game birds in flight should be limited to your "maximum effective range." This is the distance at which you can hit the target consistently. Shooting beyond this distance leads to an increased number of birds wounded and lost. Also, firing at game too close may destroy the meat.

### Shot Patterns

Desirable Pattern

Undesirable Pattern

Use a relaxed, balanced stance with your feet shoulder-width apart and your weight slightly forward on your left foot (if you're a right-handed shooter), and lean your body in the same direction.

**Snap-Shooting**

Snap-shooting is a technique to use if you must make a quick shot and the target is straight ahead at close range. You simply raise the shotgun and point where you think the target will be when the shot arrives.

■ **Pointing**

- Because targets usually appear suddenly and move quickly, there's no time to "aim" a shotgun. It's designed to be pointed, with the eye sighting along the top of the barrel or rib.
- The sight is usually a bead on the front of the gun. Your eye must be in line with the barrel, so it's important to position your head properly on the stock.
- When you bring the gun to your face, the stock should fit snugly against your cheek with your eye on that side above the centerline of the gun. If you cannot assume that position comfortably, you may need to adjust the "gun fit."

■ **Shouldering the Shotgun**

- When you bring the shotgun to your shoulder, the stock should be brought to your cheek first and then back to your shoulder.
- A common error is lowering the head and cheek to the stock, instead of bringing the stock all the way up to the cheek. When done properly, with your head naturally erect, the gun butt always should come to the same spot on your shoulder.

■ **Pulling the Trigger**

- Unlike rifle firing, quick trigger action is important when hunting with a shotgun. Slap the trigger rather than squeezing it.
- Because the trigger is pulled quickly and the body and gun are typically in motion, breath control isn't necessary.
- Continue the shotgun's swing as you pull the trigger. Stopping the swing as you shoot will cause you to hit behind a moving target.

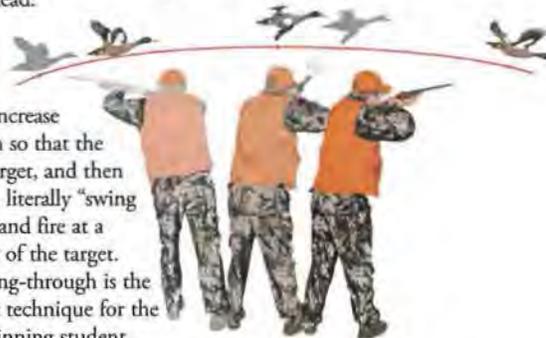

**Leading the Target**

The two most common methods of leading targets at long distances are swing-through and sustained lead.

■ **Swing-Through**

Point your shotgun at a moving target, and swing with it. Increase the speed of the gun so that the muzzle passes the target, and then fire. In other words, literally "swing through" the target and fire at a blank space in front of the target.

Swing-through is the best technique for the beginning student.

■ **Sustained Lead**

This method is a little more challenging because it requires more experience. You estimate the length of the lead necessary to hit the target, and maintain that lead as you swing with the target, fire, and continue the swing.

## Handgun Shooting

Hunting with handguns has grown in popularity in recent years. Many of the fundamentals of rifle firing also apply to handguns.

### Loading and Handling

- Single-action revolvers typically load through a gate on the right side of the frame. To rotate the cylinder, pull the hammer back to half-cock. For a safer carry in the holster or hand, leave an empty chamber in front of the hammer.
- Double-action revolvers have cylinders that fall downward, exposing all chambers for loading.
- Semi-automatics usually fire rounds stored in a magazine that is inserted in the grip or handle.

### Position and Grip

- Body position and grip are vital to hitting the target. The hand position on the grip of a pistol is especially critical. Although the grip configuration of the revolver and semi-automatic are different, the gripping procedure is the same.
- Hold the handgun high on the grip so that the recoil is directed back to the hand and arm in a straight line. This allows better repeat shots and more accurate shooting. Use a two-handed hold whenever possible, applying pressure from front to rear.
- When hunting, use a tree trunk, steady limb, or any other stable object as a rest. Placing some padding, such as a hat or a jacket, on top of a hard rest helps with your aim.

### Sight Alignment

- Sight alignment, which is important in rifle firing, is even more important in pistol shooting because of the shorter distance between the sights. Typically, handgun sights consist of a square rear notch sight and a heavy square front blade sight. This arrangement is easy to align.
- Most handguns are initially sighted-in at 50 feet.

### Aiming

- At the shooting range, many handgunners use a sight picture that places the bull's-eye on the top of the front sight, rather than placing it in the sights over the center of the target. However, hunters should hold the alignment directly over the vital area.
- Scopes with long eye relief have become popular with handgunners and offer exact sighting for hunters. Scopes may take longer to align on a target than open sights, but they're usually more accurate.

### Shooting

The pistol-shooting fundamentals of breath control, trigger squeeze, and follow through are almost identical to those in rifle firing. There are, however, some important differences to remember.

- The first joint of the finger should take up trigger pressure, not the tip, as is often done with rifles.
- When a revolver is fired, powder flashing at the front of the cylinder can cause burns. Be sure to keep your fingers away from the front of the trigger area.
- The slide and hammer of a semi-automatic gun can deliver a bruising blow when held too close to the body. All handguns should be fired at arm's length.

### Safety Tip

- Permanent hearing loss happens gradually with each handgun blast. Choose an ear protection device with a high Noise Reduction Rating (NRR).
- Eye protection is essential when shooting a handgun to prevent damage from a ruptured shell or firearm malfunction. Wear eye protection also whenever disassembling or cleaning a handgun.

Double-action revolver ready for loading

Semi-automatic with magazine

### Remember...

- Use a good holster with a safety strap.
- Draw a handgun only when you see game.
- Cock your gun only when ready to shoot.
- Keep your finger outside the trigger guard until ready to shoot.

Use eye and ear protection. Assume a stable position. Grip the handgun with both hands. Do not cross the thumb of the supporting hand behind the slide of a semi-automatic.

## Basic Hunting Skills

### You should be able to...

- Explain why it is important to know how to recognize your quarry.
- Name the four basic animal characteristics that can be used for identification.
- Describe five different hunting strategies.
- Explain why it is important to know where to place a vital shot for the game you are hunting.
- Identify the vital zones for various game when viewed from different angles.
- List four types of shots, and tell when they should be used and when they should be avoided.
- Explain what to do when approaching downed game.
- State the first thing you should do after you are sure your game is dead.
- List the three main causes of meat spoilage.
- List the basic steps for field dressing game.

### Planning and Preparation

- A successful hunt begins with careful planning and preparation. The process usually requires more time than the hunt itself.
- Here are some steps you should take to prepare for a hunt.
  - Educate yourself about the game you'll be hunting and its environment.
  - Obtain the most current state regulations.
  - Buy appropriate clothing and gear for the environment.
  - Secure lease arrangements and permits (dogs and horses may require a veterinarian's certificate or a current vaccination record).
  - Visit the site in the off-season to prepare blinds and cabin facilities.
  - Sight-in rifles, handguns, and bows; pattern shotguns.
  - Sharpen your skills at the shooting range.
  - Pack extra firearms, scopes, bowstrings, etc.

### Know Your Quarry

- Of all the steps of preparation, educating yourself about the game you're hunting is one of the most critical. Understanding your quarry will increase your success and add to the enjoyment of the experience as well.
- In many cases, knowing your quarry is also necessary to ensure that you're taking legal game. For example, you may need to determine the sex of game birds on sight or quickly recognize protected species as they move into firing range. If you hunt in a region where white-tailed and mule deer occupy the same area, you'll need to know how to identify both.
- There are many ways that wild animals are classified, but hunters are concerned with four basic categories.
  - **Large mammals:** Big game, such as deer, elk, and bear
  - **Small mammals:** Small game, such as rabbits, squirrels, and raccoons
  - **Upland birds:** Turkey, grouse, quail, and dove
  - **Waterfowl:** Ducks and geese

It is critical that you educate yourself about your quarry when preparing to hunt. Understanding game species will add to your enjoyment and increase your chances of success as well.

## Animal Characteristics

Whatever you're hunting, a basic understanding of an animal's characteristics will help you develop an effective strategy for identifying and tracking it.

- Animals can be identified by four basic characteristics.
  - **Distinctive Markings:** The black cheek patch on male pronghorns; the "flags" of the white-tailed deer; the face pattern on a gray fox; the green head on a mallard drake; the red, white, and blue on the head of a male turkey
  - **Sounds:** The wild call of the sandhill crane, the familiar honk of the goose, the gobble of a strutting "tom," the grunt of the deer, the howl of the coyote
  - **Movement:** The bounce of mule deer, the fast or slow wing beats of some waterfowl, the zigzag in-flight pattern of the common snipe when flushed
  - **Group Behavior:** Flock patterns, such as the familiar V shape of certain migratory birds; various types of herd behavior
- Further study will help you learn other ways to identify and understand your quarry, including signs the animal leaves, camouflage capability, and behavior.

## Hunting Strategies

Hunting techniques are skills honed through education and experience. Ideally, beginners should seek the guidance of experienced hunters on their initial hunts.

### Still Hunting

- As the name implies, still hunting is walking stealthily through an animal's habitat, stopping frequently—sometimes for long periods—to scan and listen for game. Typically, big-game hunters use this method in unfamiliar terrain or where stands are impractical or forbidden.
- As a general rule, spend at least 10 times longer being still and observing than walking. Keep a low profile; a human silhouette will spook many game species. Use a pair of binoculars in open terrain to identify movement properly.
- If you still hunt effectively, game will be unaware of your presence, but so will other sportsmen. To avoid being mistaken for game by other hunters, always wear fluorescent orange.

### Stalking

- The difference between still hunting and stalking is that when stalking, you follow signs leading to a particular type of game or group of animals, or close the distance to game already spotted.
- You may follow tracks on trails or a morning "dew" trail through leaves and brush. Or you may follow sounds or scents of animals, such as elk, sheep, or collared peccaries. Or you may simply need to sneak closer to an animal for a better shot.
- Stalking requires total focus because you must remember to keep downwind, stay quiet, stay alert, and remain patient.
- When turkey hunting, the sound you hear may be another hunter "calling." For safety, you should not stalk turkeys.

Still hunting often involves stopping for long periods to scan and listen for game.

Stalking often involves following tracks to lead you to the type of game you are hunting.

Ground blinds, often made of branches, conceal the hunter.

A skillful hunter uses sounds to attract the quarry close enough for an effective shot.

### *Remember...*

When hunting with a group, it is illegal in most states to use your license tag on another person's kill.

### Posting

- Posting involves sitting or standing in one spot. The location may offer a vantage point or a spot near the animal's trails.
- Posting is effective when you know where game is traveling each day, and you're not allowed to use a blind or stand.
- The key to setting up a posting site is finding a location that allows you to freely swing your firearm or draw your bow.

### Ground Blinds

- Ground blinds are makeshift or temporary structures located on the ground that conceal the hunter. They're made of everything from plywood to branches.
- You should situate ground blinds:
  - Downwind, based on the normal wind pattern during a given time of day, such as morning
  - Away from the sun
  - Where the foreground and background are safest

### Elevated Stands

- Elevated stands (tower stands or tree stands) offer a number of advantages to both firearm and bow hunters. Tower stands are above-ground seats or blinds that conceal the hunter above the level of the quarry. Tree stands are stands placed in or against trees.
- You should check the condition of elevated stands routinely. Also, inspect for insects, owls, and small mammals before entering the stand. Read more in the "Hunting From Elevated Stands" section in Chapter Six.

### Game Calling

- Calling is an effective technique for most animals. There are a variety of sounds that can be imitated to draw game to you.
  - **Territorial sounds:** A deer "rattle," elk "bugle," or a turkey "gobble"
  - **Feeding sounds:** A duck's feeding "chuckle"
  - **Distress sounds:** Inviting coyotes, bobcats, or foxes to feed
- There are hundreds of sounds that can attract all types of wildlife. A skillful hunter uses these sounds to attract animals close enough to him or her for an effective shot.

### Driving

- Driving involves a group of hunters, some acting as "drivers" and others as "posters."
  - Drivers spread out across a field or woods and push game out of cover.
  - Posters take positions at the end of the cover to intercept game pushed out by the drivers.
- The success of a drive depends on good organization and being familiar with the terrain.
- It is critical that everyone involved in the drive is aware of the position of other drivers and posters. Wear fluorescent orange, and never shoot in the direction of another hunter.

## Flushing

- Flushing involves using noise, movement, or dogs to cause game to become nervous and leave cover.
- Pause frequently when attempting to flush game. When you vary your pace, your quarry may think it has been detected and be more likely to leave cover.

## Dogs

- There are several breeds of dogs that can be used for hunting different game species. Some dogs can be used to hunt several types of game animals.
  - **Pointers** are used primarily for upland game birds.
  - **Retrievers** are large, hearty dogs used primarily to retrieve waterfowl; they also can be trained to hunt other game birds.
  - **Spaniels** are used mainly as flushers.
  - **Hunting hounds** are used to hunt raccoons and rabbits in the Southeast, mountain lions and bears in the West, and deer in some states.

## Trapping

- Trapping furbearing animals was once a full-time occupation. Today, regulated trapping is an important tool for managing our nation's natural resources.
  - Trapping helps control animal populations by minimizing starvation, reducing spread of disease, and controlling habitat damage or destruction.
  - Trapping helps protect personal property by preventing or decreasing:
    - Flooding caused by beaver dams
    - Damage to homes, trees, gardens, and agricultural crops
    - Killing of livestock or pets
  - Trapping protects certain endangered or threatened species from predatory furbearers.
- When used properly, trapping can be an alternative method to hunting for harvesting furbearers and an effective tool for wildlife management. Trappers should learn about the type of traps appropriate for the animal they're seeking, and follow the trapper's code of ethics:
  - Obtain the landowner's permission.
  - Avoid setting traps in areas where domestic animals may be caught.
  - Set traps to capture the target animal in the most humane way possible.
  - Check traps at least once every 24 hours, preferably in the early morning.
  - Record trap locations accurately.
  - Identify all traps with waterproof name and address tags.
  - Use as much of the animal as possible. Dispose of animal carcasses properly.
  - Make an effort to trap only the surplus animals from each habitat.
  - Assist landowners who are having damage problems with wildlife.
  - **Dispatch** trapped furbearers in a humane manner.
  - Obtain all required licenses, tags, and permits. Because trapping laws vary by state, check the state's regulations before you go trapping.
- Traps can be set either on land or in or near the water. Some types of traps are designed to kill the trapped animal, and others are designed to capture the animal alive and unharmed (live-restraining devices).
  - The most common type of killing devices are bodygrip traps.
  - Live-restraining devices include foothold traps, enclosed foothold devices, cage traps, and some types of cable devices. With these traps, you are able to release non-target animals.
  - Some furbearers are found more often in or near water. For these animals, trappers use submersion trapping systems, which hold the animal underwater until it dies.

A trained hunting dog can be an excellent hunting partner.

### dispatch

To put to death quickly

Bodygrip traps catch the animal's entire body.

Foothold traps catch the animal when it steps on the trap.

Snares or cable devices use a loop of cable to catch a furbearer by the neck, body, or leg.

*Remember...*

It's difficult to hit a vital area on an animal that is running or moving straight away from you. Rather than risk crippling the animal or ruining the meat, wait for a better shot.

The most effective firearm shot for a turkey is to the head and neck. The preferred shot angle for bowhunters is broadside, aiming for the heart or lungs.

The preferred shot for larger game animals, such as elk, deer, and bear, is broadside.

**Vital Shots**

Every hunter wants to bring home the game he or she is seeking; true sportsmen strive to do it by inflicting a minimal amount of suffering. To achieve these twin goals, it's essential that you understand the anatomy of the game you're after, and learn how to place a shot for a clean kill.

**Where to Shoot**

- The most effective shots are delivered to an animal's vital organs—heart and lungs. In large game animals, these organs lie in the chest cavity behind the front shoulder. A lung shot is the most effective shot for big game.
- The area of the vital organs also contains major blood vessels and arteries. A shot in this area causes considerable bleeding. If the animal doesn't die immediately and tries to flee, it will leave a blood trail that's easy to track.
- Aside from being a good marksman, the key to a clean kill is patience. Hunters should limit shots to the vital organs only. If you do not have a clear shot to the vital organs, wait until the animal presents the best possible shot.

**Choosing the Proper Shot Angle**

The shot angle is the angle at which the animal is standing in relation to the hunter. Knowing which angles offer the most effective—and least effective—shots is an essential part of being a responsible hunter.

- **Broadside**  
The broadside shot angle is the preferred shot angle for both firearm and bow hunters for larger game animals, such as elk, deer, and bear.
  - **Firearm:** The broadside position offers several excellent shots for a firearm hunter. The best target is the shoulder and chest area. A bullet of the correct weight that is fired from a firearm adequate for the game will break the shoulder bone and enter the lungs or heart.
  - **Bow:** The broadside angle offers the best shot for the largest big game animals, such as elk, deer, and bear. For most big game, the aiming spot is straight up from the back side of the front leg, one-third of the way up from the bottom of the chest. An arrow will penetrate the ribs but not the shoulder bone; wait until the near leg is forward, and aim behind the shoulder.
- **Quartering-Away**  
The quartering-away shot angle is when your target is facing away from you but at an angle. The animal is usually looking away from you.
  - **Firearm:** For firearm hunters, the quartering-away position offers several aiming spots on all big game. The area just behind the shoulder is the best aiming spot for direct penetration of the vital organs. Focus on hitting the chest area above the opposite front leg.

- **Bow:** The quartering-away shot angle offers a good opportunity for a clean kill on antelope, white-tailed deer, mule deer, black bear, and other big game of similar size or smaller. This is not a good shot for bowhunters on larger game because their massive stomachs and intestines will block a clean shot to the lungs or heart. The opposite front leg is a good reference point for aiming.

#### ■ Quartering-Toward

The quartering-toward shot angle is when the animal is facing toward you but at an angle. Because the animal is typically looking your way, it most likely will spot your movements.

- **Firearm:** The quartering-toward angle presents a clean shot to the vital organs. A shot can be taken at this angle if the gun is already trained on the animal. For an effective hit, aim at the front of the shoulder of the near front leg. *Caution:* A light bullet may deflect off the shoulder bones of large game, such as elk, deer, or large bears. Be certain to use a firearm and ammunition adequate for the game you hunt and the angle of shot you might select.
- **Bow:** This angle offers a poor shot opportunity and **should not be taken**. Heavy shoulder bones shield the majority of vital organs from broadhead-tipped arrow penetration. Also, bowhunters should never fire an arrow at an animal that is looking at them.

#### ■ Head-On

The animal will certainly detect your movements with a head-on shot angle.

- **Firearm:** A head-on shot can be effective if you have an adequate firearm and your firearm is already positioned for the shot. However, head-on shots rarely result in a clean kill and ruin a lot of meat. Aim at the center of the chest to hit the vital organs.
- **Bow:** These angles offer very poor shot selection and **should not be taken**. Heavy bones in front and muscle mass and non-vital organs in back block penetration of the main vital areas.

#### ■ Rear-End

The rear-end shot **should not be taken** by hunters using firearms or bows.

### Approaching Downed Game

- A downed deer or other large animal should be approached carefully from above and behind the head.
  - If the animal appears to be dead, wait a short distance away for a few minutes. Watch for any rise and fall of the chest cavity.
  - Notice whether the eyes are closed—the eyes of a dead animal are usually open. You can be certain that the animal is dead if the eye doesn't blink when touched with a stick.

### Trailing Wounded Game

It is a hunter's ethical responsibility to stop the hunt and search for any wounded animal.

- You should wait for at least a half-hour to an hour before trailing a deer, unless the downed deer is in sight.
- Make a practice of carefully observing every movement of a game animal after you shoot it. Investigate the ground and trail after shooting before assuming you missed.
- Once at the site of the shot, look for signs:
  - Blood on the ground or vegetation
  - Broken twigs or branches, or scattered leaves
  - A "dew" line if early in the morning
  - Tracks
  - Hair, meat, or bone fragments
  - Downhill trails, especially toward water
- If you lose a trail, search in a circular or grid pattern, and try to pick up the trail again.
- Use fluorescent orange flagging to mark the blood trail in case darkness or weather forces you to quit the search and return the next day. Marking the blood trail also shows where to look for more signs if you lose the trail. Be sure to remove the orange flagging after use.

Approach downed game from above and behind the head; wait a short distance away, watching for any rise and fall of the chest cavity.

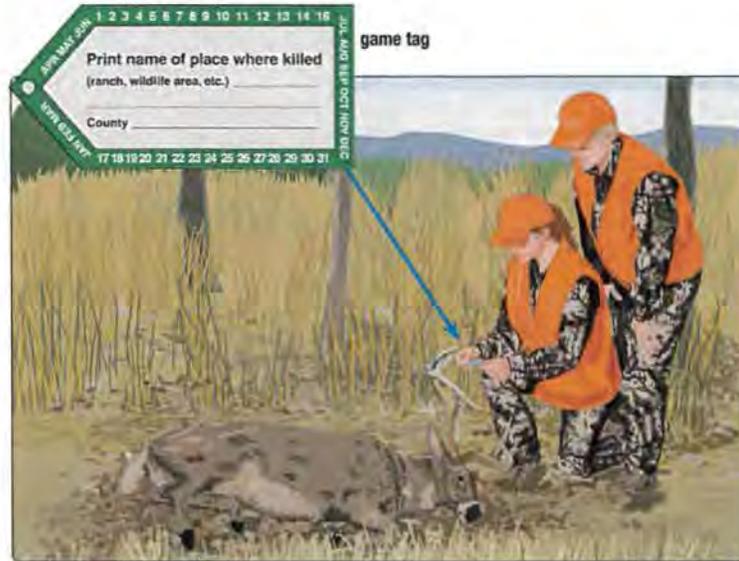

**Game Care Kit**

Other typical items include:

- Black pepper to repel insects
- Cheesecloth bags for organs you plan to use as meat (heart, liver)
- Cooler and ice
- Disposable plastic gloves
- Fluorescent orange flagging
- Foil
- Gambrel and pulley system
- Hand towels
- Large bag for caped or trophy head
- Plastic bags for cleanup
- Plastic or cotton gloves
- Salt (non-iodized) for hide care

- If the animal is still alive, it should be finished with a quick shot to the base of the ear. If you wish to mount the head, place your shot in the heart-lung area. For bowhunters, the only option is placing an arrow in the heart-lung area.
- Once the animal is dead, follow the state regulations for reporting or recording a kill. Some states require you to tag the animal immediately and indicate the date of the kill. Then begin field dressing.

**Field Care of Game**

The way you handle game after it's harvested can have a significant impact on the quality of the meat.

**Field Care Basics**

- The growth of bacteria is the cause of spoiled meat. Three factors contribute to bacteria growth.
  - **Heat:** Heat is the number-one concern. Bacteria grow rapidly in a carcass, especially if it's allowed to stay warm. Meat begins to spoil above 40° Fahrenheit. The higher the temperature—and the longer the meat is exposed—the greater the chance of spoilage. This is particularly true with large game.
  - **Moisture:** Moisture also encourages the growth of bacteria.
  - **Dirt:** Dirt can introduce bacteria.
- Basic field dressing techniques help cool game by removing entrails, which lowers body heat by allowing air into the body cavity. As a rule, it's best to field dress immediately.
  - When cooling the body, use available shade. Hang deer, if possible. For larger animals, such as deer, elk, and moose, you should prop the carcass open with a clean stick to allow air to circulate.

- In warm weather, it's helpful to place squirrels and doves in a cooler after dressing, as long as they remain dry.
  - Dispose of entrails carefully. Don't leave them lying by the side of a road or near a residence where they can be dragged home by a dog.
  - Keep meat clean by covering it with cheesecloth. This also protects it from flies, which lay eggs in exposed flesh. Rubbing meat with black pepper also will repel insects. If you have to drag the game to camp, try to keep dirt and debris out of the chest cavity.
  - Because moisture damages meat, don't use excessive amounts of water to wash the cavity. Allow it to dry.
  - If you plan to process the animal yourself, skin the animal as soon as possible to allow the carcass to cool.
- Finally, a sure way to ruin meat—as well as earn the disdain of non-hunters—is to tie the animal to the hood or roof of a car, where it's exposed to heat, exhaust fumes, road salt, and airborne dust.

### Transporting Game

- Keep the dressed game cool and free of insects. If you've quartered the animal, pack the quarters in ice chests—don't process the deer beyond quartering until you reach your final destination. Be sure to keep proper "evidence of sex" if required by your game laws.
- Most hunters take their game to a commercial meat cooler, where a typical white-tailed deer can be properly aged up to three or four days at 40° Fahrenheit.

When transporting game, be sure to keep it covered to avoid offending others.

### Field Dressing Larger Game

Here are some additional tips for dressing large game.

- Because it's harder to move larger animals, you may need to skin and quarter the animal to pack it out, particularly in a remote area.
- If you're unable to hang the animal for skinning, begin by making a lengthwise cut and removing one side of the hide. Then, turn the animal onto the skinned hide, and skin the other side.
- To keep dirt off the meat, use the inside of the removed hide as a protective mat as you quarter the animal.
- Put each quarter in a game sack, and attach the sacks to a backpack frame for the hike out.

### Remember...

A clean kill improves the flavor of game meat. A wounded animal that has to be chased down yields strong-flavored meat because waste products, produced by stress, accumulate in the flesh.

## Primitive Hunting Equipment and Techniques

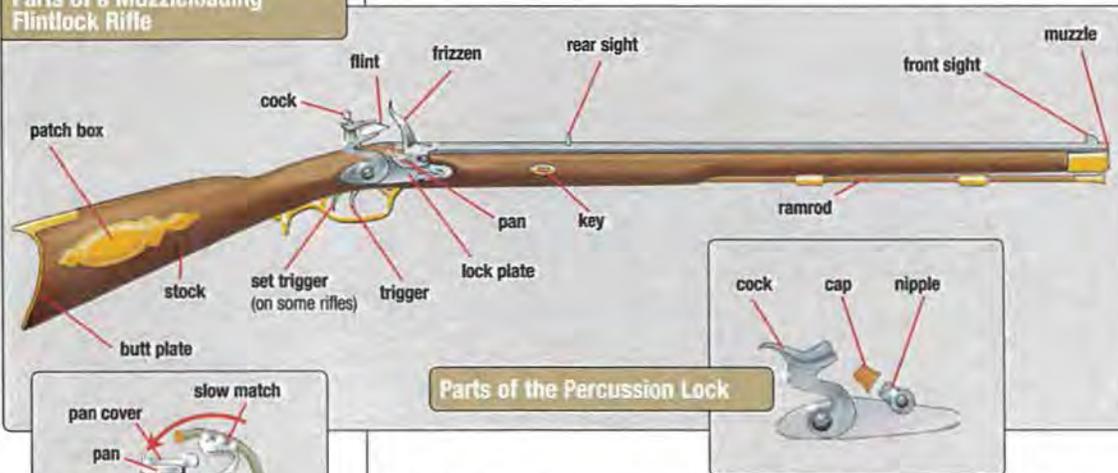

### You should be able to...

- Identify the basic parts of a muzzleloader.
- Explain why you should use only black powder or a synthetic substitute in muzzleloaders.
- State three safety practices when using muzzleloaders.
- Demonstrate safe loading and unloading of a muzzleloader.
- Demonstrate safe firing of a muzzleloader.
- Identify the common bow types and their basic parts.
- Identify the basic parts of an arrow.
- List the different types of arrowheads and the primary use of each.
- State three safety practices for archers.
- Explain additional precautions that must be practiced when using broadheads.
- Explain the safety rules that should be followed when using a crossbow.
- Demonstrate how to nock an arrow and how to draw and anchor the bow.
- Demonstrate how to use a bow sight and how to aim a bow instinctively.

### Know Your Muzzleloader

Primitive hunting arms include the muzzleloader firearm, the bow and arrow, and the crossbow. Today, these hunting arms are sought as collector's items and used for sporting purposes.

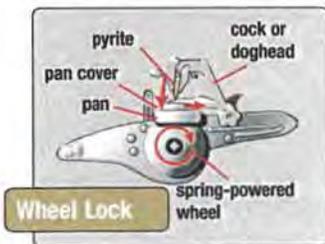

#### Parts of a Muzzleloading Flintlock Rifle

#### Parts of the Percussion Lock

#### Matchlock

#### Wheel Lock

Muzzleloader is the term given to early firearms because they are loaded from the muzzle or open end. Read about the history of muzzleloaders in Chapter Two.

- On these early firearms, locks played the role of modern-day actions. Matchlock and wheel lock muzzleloaders are rare and valuable, but they also may be unsafe to use. Flintlocks and percussion locks are the muzzleloaders typically used for shooting competitions and for hunting. They are generally less expensive, lighter, more reliable, and easier to load and maintain than matchlocks and wheel locks.

- Muzzleloaders are most commonly rifles. However, there are also smooth-bored muzzleloaders—shotguns. Shotgun muzzleloaders can have either a single barrel or double barrels joined side by side. When loading the double-barreled muzzleloader, it's critical to avoid putting the two loads down the same barrel. Double-barreled guns usually have two locks, one for each barrel. This allows the shooter to fire each barrel separately before the gun is reloaded. Most double-barreled guns were designed with two triggers.
- Muzzleloading handguns come as both pistols and revolvers. Pistols are mainly single-shot. The revolvers contain multiple-shot chambers. Chain firing muzzleloading revolvers can be dangerous. When the chamber round is fired, it produces sparks that could accidentally ignite loads in another cylinder(s). Therefore, be sure to protect each load in the cylinder with a coating of grease to prevent sparks from entering the open end of the other cylinders.
- Black powder is the only type of powder that should be used in muzzleloaders. However, synthetic substitutes, such as Pyrodex, also can be used. Don't use modern-day smokeless powders in black powder firearms. Smokeless powders can cause serious injury if used in muzzleloaders.

### Basic Muzzleloader Safety and Skills

#### Cleaning a Muzzleloader

- Firing a muzzleloader leaves a corrosive residue inside the barrel that causes pitting and reduces accuracy. The buildup of residue, called fouling, also will make loading difficult.
- To avoid fouling, swab the barrel with a moist patch after each shot. The patches or cleaning rags used to wipe the barrel must be the correct size and should be made of cotton or approved synthetic materials. Follow the recommendations of retailers who sell muzzleloaders or those who regularly use muzzleloaders.
- Thoroughly clean a muzzleloader after each shooting session. Black powder residue can damage the barrel if left overnight.
- Clean the gun's lock periodically. Normally it's held in place by one or two bolts. Once the lock has been removed, scrub both sides with an old toothbrush and hot water. Make sure the entire lock is completely dry, and then lightly oil and replace it.

#### Ammunition for Muzzleloaders

Three types of projectiles—the round ball, the bullet, and shot—are used in muzzleloaders. Most are melted and cast from pure lead.

Round balls are used mainly for target practice but also can be used for hunting. Bullets are preferred for hunting because they are generally more accurate at certain ranges. Shot pellets are designed to spread, just as with today's shotguns.

Black powder is made of potassium nitrate (saltpeter), sulfur, and charcoal. When ignited, it causes a dense cloud of white smoke. It comes in four sizes or granulations.

- **Fg:** Coarse grain typically used in cannons, rifles larger than .75 caliber, and 10-gauge shotguns or larger
- **FFg:** Medium grain typically used in larger rifles between .50 and .75 caliber, 20-gauge to 12-gauge shotguns, and pistols larger than .50 caliber
- **FFFg:** Fine grain typically used in smaller rifles and pistols under .50 caliber and smaller shotguns
- **FFFFg:** Extra-fine grain typically used as a priming powder in flintlocks

Pyrodex and Clear Shot are black powder substitutes that can be used in amounts equal to black powder, but loading may vary. Be sure to get instructions from a qualified gunsmith for loading procedures. Substitutes are not recommended for use in flintlocks because they may not ignite from sparks as easily.

**Basic Muzzleloader Safety**

Muzzleloaders take significantly more knowledge to operate than modern firearms. They also present greater risks. Several rules must be followed to ensure safe operation.

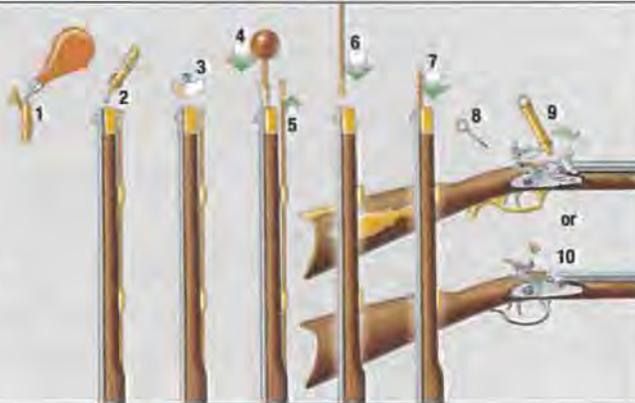

- Keep the muzzle pointed in a safe direction. Do not lean over, stand in front of, or blow down the muzzle.
- Use only black powder or a safe substitute in a muzzleloading firearm.
- Wait until you're ready to fire before you prime or cap a muzzleloader.
- Always wear shooting glasses and ear protection when shooting a muzzleloader; a long-sleeved shirt is also advisable.
- Never smoke while shooting or loading or when near a powder horn or flask.
- Load a muzzleloader directly from a calibrated powder measure—do not load from a horn, flask, or other container. A loose spark or glowing ember in the barrel can cause the powder to explode.
- Load only one charge at a time.
- Unload a muzzleloader before bringing it into your home, camp, or vehicle.
- Stay with your charged muzzleloader at all times.

**Loading a Muzzleloader**

- Loading or charging a muzzleloading firearm presents some special concerns because it requires the muzzle to be pointed upward.
- For rifles, position the butt on the ground between your feet. You should be facing the underside of the barrel. The muzzle should be pointed upward and away from your body. Never work directly over the muzzle.
- Determine whether the gun is already loaded by checking the barrel with a marked ramrod, which has an "unloaded" or empty marking. If you aren't sure, consult an experienced muzzleloader user or gunsmith.
- Measure out the proper amount and type of powder using the calibrated powder measure. Replace the powder flask's cap, and swing the flask to the other side of your body. Pour the powder into the barrel from the measure. Tap the barrel to make sure all powder falls to the breech end.
- Center a lubricated, precut patch over the muzzle. You can lubricate the patch with a manufactured lubricant or with saliva by placing it in your mouth. Lay the ball on the patch with the sprue or flat side up, if the ball comes with this feature. Then seat the ball, and start it down the barrel using the short starter.
- Use the longer ramrod to push the ball the rest of the way, making sure it's seated well on the powder charge. Push the ramrod in short strokes, gripping it just a few inches above the muzzle. If you use longer strokes, you might accidentally snap the rod and injure your hands or arm. Your ramrod should be marked to show when the ball is properly seated over a specific load, such as 70 grains of FFFg powder.

**Steps for Loading a Muzzleloader**

1. Measure powder charge.
2. Pour measured powder down barrel.
3. Place patch and ball on muzzle.
4. Tap ball into barrel with starter.
5. Take out ramrod.
6. Ram ball down barrel.
7. Be sure ball is completely seated.
8. Clear vent hole with pick if necessary.
9. On flintlock muzzleloader, pour powder into pan and close frizzen.
10. On percussion lock muzzleloader, place cap on nipple.

### Unloading a Muzzleloader

- There are three ways to unload a muzzleloader.
  - Unload a muzzleloader by discharging it into a suitable backstop. Do not fire into the air or into the ground at your feet in case the projectile ricochets.
  - Use a CO<sub>2</sub> discharger to clear the barrel.
    - **Percussion Lock Muzzleloader:** Slip the discharger over the nipple.
    - **Flintlock Muzzleloader:** Place the discharger against the touchhole.
  - On a modern in-line muzzleloader, remove the breech plug and simply push the projectile and powder out the rear of the barrel.
- When a muzzleloader is unloaded, place your ramrod or loading rod in the barrel before leaning the firearm against a good rest—this will prevent debris from falling down the barrel and blocking the touchhole.

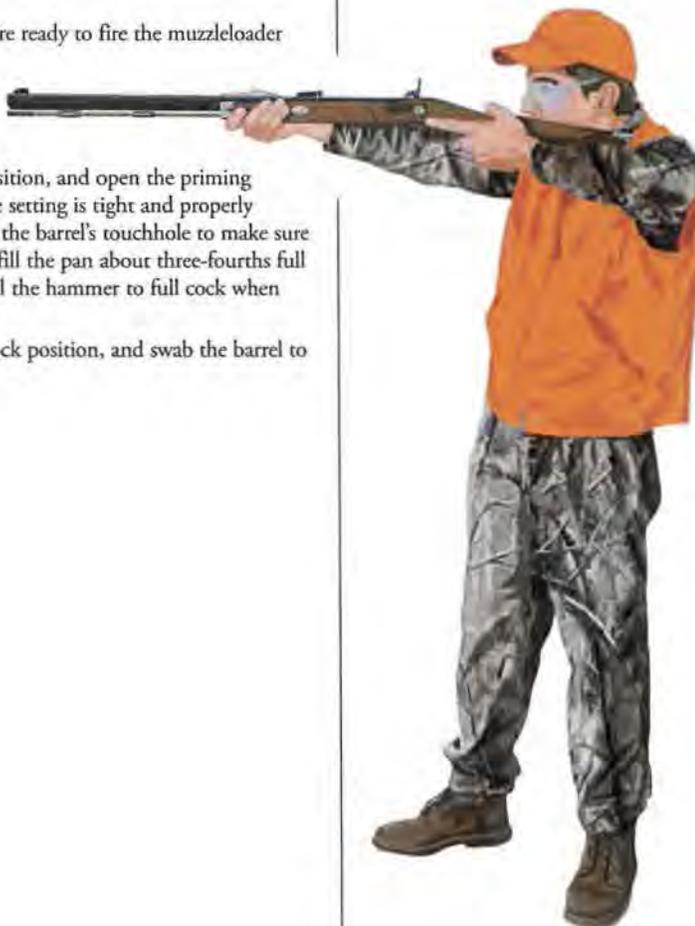

### Firing a Muzzleloader

- **Percussion Lock Muzzleloader:** When you're ready to fire the muzzleloader safely, place the percussion cap on the nipple. Be sure that your surroundings and your backstop are safe. Then aim and fire.
- **Flintlock Muzzleloader:** When priming a flintlock, pull the hammer to a half-cock position, and open the priming pan cover. Check your flint, making sure the setting is tight and properly adjusted. Insert a vent pick or fine wire into the barrel's touchhole to make sure the opening is clear. With your pan primer, fill the pan about three-fourths full of FFFFg powder. Close the frizzen, and pull the hammer to full cock when you're ready to fire the shot safely.
- After firing, place the hammer in the half-cock position, and swab the barrel to remove sparks that might be inside.

### Hang Fire Situations

Sometimes a muzzleloader will not fire immediately when the trigger is pulled. This is known as "hang fire" and requires great caution because the gun might fire some time after the cap or flint created the initial sparks.

- Keep the gun pointed in a safe direction, preferably downrange.
- Don't take it anywhere that it could injure someone or damage property if it fires.
- If a muzzleloader doesn't fire properly, get help from an experienced shooter to unload it using a ball discharger.

**History of the Bow and Arrow**

The use of the bow and arrow is recorded as early as 3000 BC.

- The Egyptians used bows shorter than a man's height, with arrows two feet long or more.
- Early bows were C-shaped. When shooting these bows, the archer would pull the string with a ring held around the thumb. The early longbow was 5-6 feet in length and was usually made of yew. The legend of Robin Hood romanticized the longbow.
- Native American Indians were America's first bowhunters. European settlers brought their skills to America and contributed to the development of bows and arrows in the U.S.
- In 1879, the National Archery Association was founded. It initiated the first U.S.-sponsored tournament in 1879.
- Bowhunting did not really take off until the 1950s and 1960s as hunters learned more about this sport and about newer bows that were being developed.
- Like other methods of hunting, the bowhunter first must acquire the knowledge and skills necessary to be a safe and responsible hunter.

**Accessories**

- To protect the three fingers that draw the bowstring, archers wear three-fingered gloves or finger tabs, or use mechanical releases.
- A mechanical release snaps onto the string and is pulled back with the shooting hand. The archer pulls a trigger to release the string.
- An armguard protects the inner part of the bow arm during release as the string snaps back. The armguard prevents the bowstring from hitting loose clothing and also helps protect the arm if an arrow breaks during release.

**Know Your Bow and Arrow**

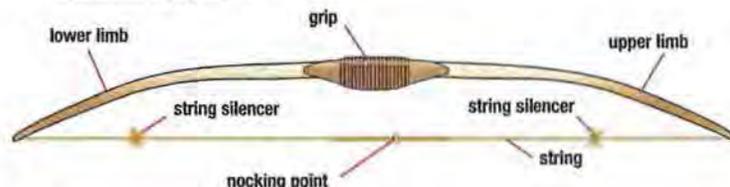

While modern bows can shoot arrows up to 400 yards at speeds exceeding 200 miles per hour, the bow is a short-range hunting tool. Any bow can be dangerous at any range and should be handled responsibly. Shots are usually limited to 40 yards or less; and at this range, the arrow penetrates and can even pass through an animal. To ensure accuracy, most shots are taken at 15 yards.

**Common Bow Types**

Proper bow selection and fit are essential to your accuracy and performance when bowhunting.

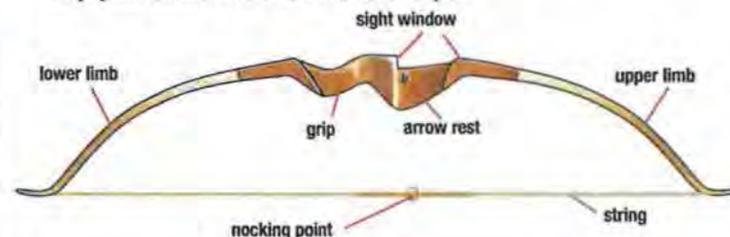

■ **Longbow (Stick Bow)**

- The "traditional" bow, which has straight limbs that form an arc when strung
- Used by those interested in traditional shooting with little additional equipment

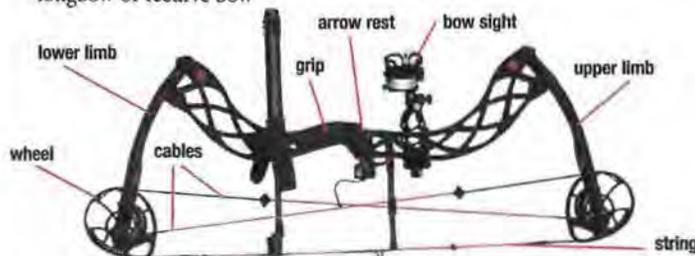

■ **Recurve Bow**

- Much like the longbow, but the limbs curve back away from the belly of the bow, which can provide more power in a shorter bow than the longbow
- A popular choice because it's smooth and quiet

■ **Compound Bow**

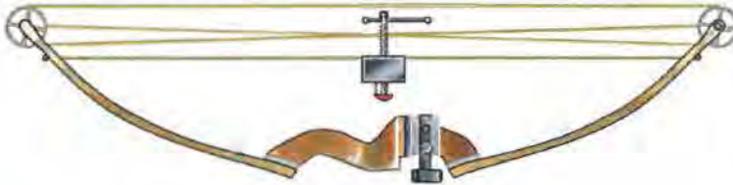

- The most popular bow for both hunting and target shooting
- A bow with many styles, but they work basically the same way: wheels and cables attached to the limbs make it easier to hold at full draw (pulled completely back) and able to propel an arrow faster than either a longbow or recurve bow

### Stringing a Bow

The safe and easy way to string a recurve bow or longbow is to use a bowstringer. The push-pull or step-through method can be hazardous to yourself or your bow.

- A bowstringer is simply a strong cord with a loop or pocket at each end that fits over the limb tip of recurve bows and some longbows. By standing on the loose middle of the cord after it's attached to the tips, the limbs can be flexed as the handle is pulled. This allows the bowstring to be slipped safely into place.
- To replace compound bowstrings, you must use a bow press. A bow press is used to place and hold tension on the limbs, allowing the strings to be changed. Inexperienced bowhunters should have a qualified dealer or individual replace the string on a compound bow.

### Parts of an Arrow

Arrows have four parts.

- **Shaft:** The long spine of the arrow. Modern arrow shafts are made of wood, fiberglass, aluminum, or carbon. The arrow, regardless of shaft material, must have the correct stiffness to match the bow. As an arrow is released, the shaft bends before straightening in flight. Incorrect stiffness will cause the arrow to fly erratically and inaccurately.
- **Fletching:** The plastic vanes or feathers on an arrow. Fletching creates wind drag and also can cause the arrow to spin similar to a rifle bullet, providing stability and accuracy in flight. Fletching is made up of three or more vanes or feathers. One of the feathers will be a different color and is called the "cock" feather. The remaining feathers are referred to as the "hen" feathers.
- **Arrowhead:** The point of the arrow. Many different kinds of arrow points are available, each with a different purpose and advantage.
- **Nock:** A slotted plastic tip located on the rear end of the arrow that snaps onto the string and holds the arrow in position. There is a certain point on the bowstring, called the "nocking point," where arrows are nocked. Fine-tuning of this location, by moving it up or down the bowstring, is usually required.

### Arrow Parts

### Nocking Point

Types of Arrowheads

Bullet Point

Blunt Point

Field Point

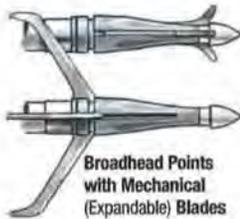

JUDO Point

Fish Point

Broadhead Points

Broadhead Points with Mechanical (Expandable) Blades

*Remember...*

Broadheads kill by cutting blood vessels, unlike the high-energy shock of bullets. Hemorrhage is typically the result. A responsible bowhunter will use razor-sharp broadheads and only take shots that allow a clear, close shot to the vital area of the game animal.

**Common Types of Arrowheads**

- **Bullet Point:** Steel point used for target shooting and small game hunting.
- **Blunt Point:** Used for small game hunting and some types of target shooting; made of steel, hard rubber, or plastic.
- **Field Point:** Steel point used for target shooting and small game hunting.
- **JUDO Point:** Designed with spring arms attached to catch in grass and leaves, preventing arrow loss; used for "stump" shooting and small game hunting.
- **Fish Point:** Long barbed or spring-loaded arrowhead that spears fish and secures them until landed with an attached line.
- **Broadhead:** Used primarily for big game hunting. The number of steel blades it contains may vary. The only arrowhead that may be used for big game hunting is the broadhead. It must be solidly built and always razor-sharp. Many states have laws governing the minimum diameter and number of cutting edges of the broadhead used to hunt big game.
  - **Mechanical (Expandable) Blade Broadhead:** Blades are retracted close to the ferrule before the shot. Upon impact, the blades expand to expose the cutting edges. These are recommended for use only with bows rated 50 pounds or more because most require additional energy to open upon penetration.

**Know Your Crossbow**

A crossbow is a bow with a rifle-like stock that shoots bolts or short arrows. Safe use of a crossbow requires following the safety rules for both firearms and bows.

- Many states have laws that limit the use of crossbows.
- Never travel with a loaded, cocked crossbow.
- Like conventional bows, the crossbow is limited to short-range shooting.

## Bowhunting Safety and Skills

Many states require a bowhunter education course to hunt legally with archery equipment. Even if not required, taking a course will give you an excellent start to becoming a safe and skillful bowhunter.

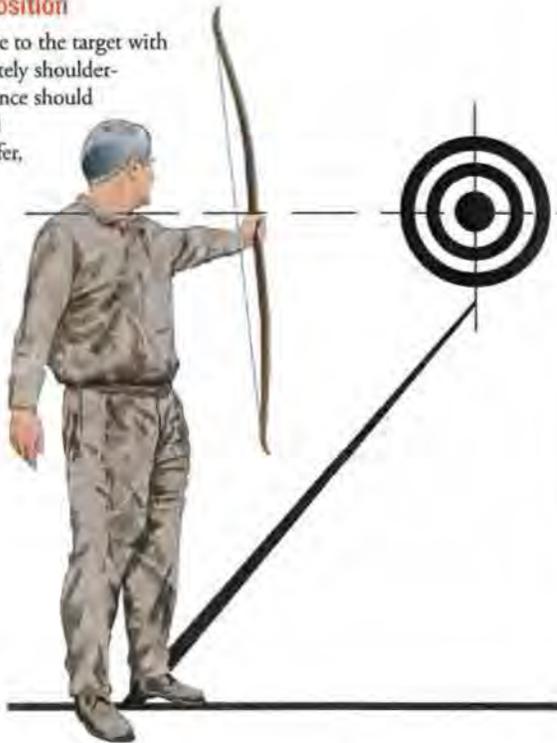

### Bow-Shooting Safety

An arrow is as deadly as a bullet, so the basic safety rules that govern firearm shooting also apply to archery. Although shooting accidents are rare among bowhunters, they do happen. Archers must obey a few common safety rules, whether on the range or in the field.

- Release an arrow only when the path to the target and beyond is clear.
- Make sure there's something to stop the arrow if you miss—never shoot over the horizon.
- Avoid shooting an arrow in the general direction of another person. Arrows are easily deflected. A small twig, unseen by you, can cause an arrow to veer dangerously off course.
- Don't shoot straight up. A falling arrow carries enough force to penetrate the human skull.
- Carry arrows in the nocked position only when slowly approaching game—never nock an arrow or draw a bow if someone is in front of you.
- Use a haul line to raise a bow and quiver into a tree stand to avoid serious injury (see "Hauling Hunting Equipment Into a Stand" in Chapter Six for more on this subject).

### Bow-Shooting Position

Stand at a right angle to the target with your feet approximately shoulder-width apart. The stance should feel comfortable and balanced. If you prefer, you may slide your front foot back a little, creating a slightly open stance.

### Archery Equipment Safety

Before practicing or hunting, an archer must examine each arrow to make certain there are no cracks or breaks in the shaft and that the nock is in good condition. A cracked or broken nock can be replaced, but a shaft that has cracks or breaks should be discarded.

Never use a cracked arrow. The shaft may shatter on release and be driven into the shooter's wrist or arm. Some common types of damage to look for are:

- Cracks and splinters in wood arrows
- Creases, dents, or cracks in aluminum arrows
- Crushed sidewalls on fiberglass or graphite arrows

Always keep broadheads in a covered quiver.

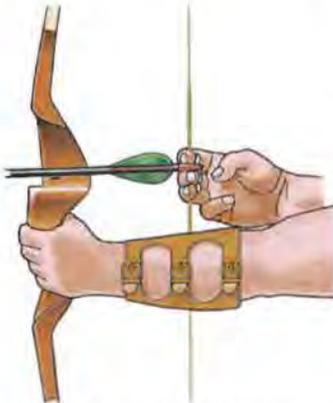

### Broadhead Safety

Many archers' injuries come from broadheads. Broadheads must be kept razor-sharp for hunting, which creates a safety problem if they are handled carelessly. To prevent injury:

- Use a special wrench to screw on broadheads. This device covers the blades while a broadhead is being tightened on an arrow. If a wrench isn't used, the slightest slip can cause a serious cut. When sharpening broadheads, always stroke the blade away from your hands and body.
- Keep broadheads covered with a quiver while traveling to and from the field. Many arrow injuries occur while loading or unloading equipment in vehicles.
- While dressing bow-killed game, remember that the broadhead may remain in the animal. Use great caution until all parts of the broadhead have been found.

When the arrow is nocked and the bow is raised, the cock feather points to the left if you are right-handed.

If you are right-handed, raise the bow as you pull back the string with the three drawing fingers of your right hand. Simultaneously extend your left arm.

*Safety Tip*

A bow should never be "dry fired." Releasing a string without an arrow nocked transfers energy back to the limbs instead of the arrow. The bow can fly apart, injuring anyone nearby.

**Nocking an Arrow**

- A nocked arrow should be positioned about a quarter inch above the arrow rest on the bow handle. On most bows, a small brass band called a "nocking point" is crimped onto the bowstring to mark the correct position.
- To nock the arrow:
  - Grasp the arrow between the thumb and index finger of the right hand (if you're a right-handed shooter).
  - With your left hand, hold the bow parallel to the ground about waist-high, and string toward the body.
  - Lay the arrow shaft on the bow's arrow rest.
  - Align the slot in the nock with the string, and make sure that the cock feather points up (while the bow is parallel to the ground).
  - Pull the arrow back until the string snaps into the slot.

**Drawing and Anchoring the Bow**

- To draw the bow:
  - Grip the bow handle firmly in the left hand, but don't squeeze.
  - With your bow arm straight, raise the bow to a point that your arm is parallel to the ground while simultaneously drawing the string back to your "anchor point" with your shooting hand. The anchor point may be the corner of your mouth, your cheekbone, or your chin.
- Practice will help you determine your best anchor point—one that's both comfortable and provides the most accurate shooting. Your fingers should touch the same anchor point each time you draw the bow.

## Aiming the Bow

There are two main methods for aiming bows—bow sights and instinctive aiming.

- **Bow sights** work best when the distance to the target is known. For instance, when hunting from a tree stand or blind, you can measure the distance to the area where you expect the game to appear. Then it's a matter of lining up the appropriate sight pin on the target. In hunting situations where it's hard to know the exact distance to the target, bow sights may not work well. The key to using bow sights is to practice judging distances.
- **Instinctive aiming** is more versatile than the bow sight method. You simply look at the intended target with both eyes open and release. You adjust the aim for different distances by instinct developed with practice. Instinctive aiming takes longer to perfect than the bow sight method, but it eliminates much of the guesswork from shooting under some hunting conditions.

## Holding and Releasing the Bow

- Allow your fingers to slip quickly away from the string. This gives the arrow a straight, stable flight.
- Keep your bow arm pointed directly at the target after the release. If the bow is jerked on release, the arrow will fly off target.
- Follow through by leaving your drawing hand at the anchor point well after the string is released.

With bow sights, you line up the appropriate sight pin on the target.

With instinctive aiming, you simply look at the intended target with both eyes open and release.

## Be a Safe Hunter

### You should be able to...

- State three practices for handling and storing firearms safely in the home.
- Demonstrate the four primary rules of firearm safety.
- Name the four main causes of hunting incidents.
- Demonstrate six field carries for a rifle or shotgun.
- Demonstrate proper field carries while walking two or three abreast and while walking two or three in single file.
- Demonstrate the safe method for crossing an obstacle if hunting alone and if hunting with a partner.
- Explain how to check safely to see that the barrel of a firearm is free of obstructions.
- List the steps to load and unload a firearm safely.
- Explain how to transport firearms safely in vehicles and in boats.
- Demonstrate proper spacing between hunters and the safe zone-of-fire when hunting in a group.
- Explain why self-control, target identification, and accuracy are critical for hunting safety.
- State five functions needed for hunting that are impaired if the hunter consumes alcohol or drugs.
- List advantages and disadvantages of hunting from an elevated stand.
- Name the accessory you should wear at all times when climbing a tree and when on a tree stand.
- Demonstrate how to haul a firearm into an elevated stand safely.
- Demonstrate a safe position and the zone-of-fire when hunting with a partner in a boat.
- Name the accessory you should wear at all times when hunting from a boat.
- Demonstrate what to do to help retain body heat if you are stranded in chilly water.
- List seven rules for safe and ethical operation when hunting with an all-terrain vehicle.

### The Four Primary Rules of Firearm Safety

- Point the muzzle in a safe direction.
- Treat every firearm with the respect due a loaded gun.
- Be sure of the target and what is in front of it and beyond it.
- Keep your finger outside the trigger guard until ready to shoot.

### Remember...

- The most common hunting incidents result from hunter judgment mistakes.
- Eighty percent of all firearm incidents occur within 10 yards of the muzzle.

### Why Firearm Safety Is Important

Whenever firearms are being handled, an incident can occur if the firearm is not handled responsibly. Preventing hunting incidents depends on knowing and understanding firearms and handling them skillfully and safely. Responsible hunters practice safe habits until they become second nature.

### Firearm Safety in the Home

Statistics show that more than half of the fatal firearm incidents reported each year occur in the home. Because almost all incidents are caused by carelessness and lack of knowledge, it's the hunter's duty to help prevent firearm mishaps in the home.

- Most importantly, lock guns away where children cannot reach them, and store ammunition in a separate location. Check to see that a firearm is unloaded before allowing it in any building or living area.
- Practice these safety rules if handling a firearm in the home.
  - Immediately point the muzzle in a safe direction when you pick up a firearm.
  - Keep your finger off the trigger.
  - Always check to see that the chamber and the magazine are empty.
- If a gun is taken from storage to show friends, be sure they understand safe gun handling rules.

## Hunting Incidents

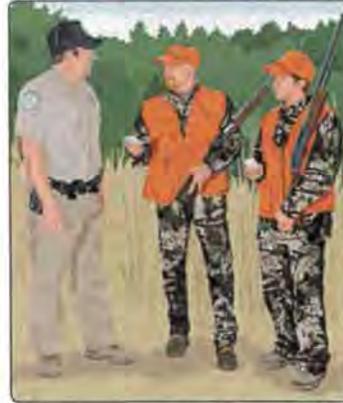

- From a law enforcement perspective, a hunting incident occurs when a hunter directly or indirectly causes personal injury or death while using a firearm or bow.
- More broadly defined, a hunting incident is any unplanned, uncontrolled action that occurs while using a sporting arm. It can include near misses.
- Being responsible in order to prevent hunting incidents is your first priority.

### Four Main Causes of Hunting Incidents

- **Hunter Judgment Mistakes**, such as mistaking another person for game or not checking the foreground or background before firing
- **Safety Rule Violations**, including pointing the muzzle in an unsafe direction and ignoring proper procedures for crossing a fence, obstacle, or difficult terrain
- **Lack of Control and Practice**, which can lead to accidental discharges and stray shots
- **Mechanical Failure**, such as an obstructed barrel or improper ammunition

Be sure of the target and what is in front of it and beyond it. If you cannot see what lies beyond the target, do not take the shot.

When approached by a law enforcement officer or any other law enforcement official, point your muzzle in a safe direction and follow the officer's instructions.

### Using Firearms at the Shooting Range

A successful hunt begins with target practice at the shooting range.

Many of the rules that govern safe firearm handling in the field apply to the shooting range. But a shooting range has some additional requirements.

- Read all range rules that apply to the type of shooting you will do that day.
- If there is a range master, be sure to follow his or her instructions while shooting.
- When not shooting, unload your firearm, and leave it on the range line or bench until you're given further instructions.
- Don't handle your firearm while other shooters are downrange. Step away from the firing line or bench until the range is clear and the range master instructs you to approach the line or bench.
- If no range master is present, all shooters must decide on safety commands beforehand so that it's clear when someone intends to go downrange.
- Before any person goes beyond the firing line or downrange, unload your firearm and step away from the line until the other person returns.
- Under no circumstances should you shoot a firearm when someone is downrange or past the firing line.
- Always wear hearing and eye protection, even if you're watching others shoot.
- Respond immediately to anyone calling for a "cease fire."

Sling Carry

### Safely Carrying Firearms in the Field

There are several ways to carry a gun safely and still have it ready for quick action. Three rules apply to all carrying methods:

- Muzzle pointed in a safe direction and under control
- Safety "on" until immediately before you're ready to shoot
- Finger outside the trigger guard

Cradle Carry

Trail Carry

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners, [www.kalkomey.com](http://www.kalkomey.com)

**Proper Field Carries**

- **Sling Carry**  
Easy carry for long treks through open country. Keep a hand on the sling when walking so that it doesn't slide off your shoulder if you trip. Not recommended for thick brush because the gun could be knocked from your shoulder.
- **Trail Carry**  
Leaves a hand free for balance, but don't use it when you're behind someone. Not recommended when walking in snow or brush—debris can get in the barrel.
- **Cradle Carry**  
Comfortable and secure; reduces arm fatigue.
- **Elbow or Side Carry**  
Comfortable, but it has the least muzzle control. It also can snag in brushy terrain. Use it when no one is in front of you.
- **Shoulder Carry**  
Good choice when walking beside or behind others. Don't use it if someone is behind you.
- **Two-Handed or "Ready" Carry**  
Provides the best control, particularly in thick brush or weeds, or when you need to fire quickly.

Two-Handed or "Ready" Carry

Elbow or Side Carry

Shoulder Carry

**Checking for Obstructions**

Occasionally you may trip or stumble in the field, accidentally dipping the barrel into the ground or snow. Immediately check for an obstruction.

- Point the muzzle in a safe direction.
- Open the action, and make sure the firearm is unloaded.
- Check for debris in the barrel. If the firearm is a break-action, look through the barrel from the breech end, or use a barrel light to inspect the barrel for obstructions.
- Remove any obstructions with a cleaning rod.
- Check the barrel again to make sure no debris remains.

**Selecting the Right Carry When Hunting With Others**

Carry selection is based primarily on muzzle control and terrain.

- If three hunters are walking side by side, the ones at the sides may carry their guns pointing either to the side away from their party or to the front. The one in the center should keep the gun pointing to the front or up.

- If three hunters are walking single file, the one in the lead should have the gun pointed ahead but never over the shoulder. The one in the middle must have the gun pointed to the side. The hunter in the rear may point the gun to either side or the rear.

- When facing another hunter, any carry is safe except the trail carry or forward-facing elbow or side carry.
- Remember that the same rules for safe carry apply when your hunting companion is a dog.

**Crossing Obstacles**

- Always unload guns before crossing fences or other obstacles or before negotiating rough terrain.
- Cross wire fences close to a fence post to prevent damage to the fence.
- After unloading it, place the gun on the other side of the fence or obstacle to be crossed, with the muzzle pointed away from you and your crossing point. Then cross the fence and retrieve your gun.

*Remember...*

In addition to gun handling, several other factors affect your safety during the hunt:

- Weather, especially the sun's glare
- Pests, such as fire ants, snakes, and bees
- Your emotional state
- Your stamina, especially when hunts are physically demanding

- Pull a gun toward you by the butt—never by the muzzle.
- If two people are crossing, one person gives the other person both guns, crosses first, and then receives the unloaded guns from the other hunter.

*Remember...*

Removal of ammunition from the magazine or removal of the magazine from the firearm does not mean the firearm is unloaded!

## Safely Loading and Unloading Firearms

Even something as simple as loading or unloading a firearm can result in tragedy if it isn't done properly. Here's how to do it safely.

### ■ Loading

- Point the muzzle in a safe direction.
- Open the action; make sure the barrel is unobstructed.
- Put the safety on if the firearm can be loaded with the safety on.
- Load the ammunition.
- Close the action.
- Put the safety on if you were not able to do so before loading.

### ■ Unloading

- Point the muzzle in a safe direction.
- Put the safety on if it is not already on.
- Keep your finger outside the trigger guard.
- Open the action.
- Remove the ammunition by first detaching the magazine. Eject cartridges or shells if it's the only way to remove them. (See "Firearm Actions" in Chapter Two for details on specific actions.)
- Make sure the gun is empty by checking both the chamber and the magazine.

## Safely Transporting Firearms

Transporting firearms involves both legal and safe practices. In addition to federal laws, there are regulations that vary from state to state.

### General Rules

- Always unload and case firearms before transporting them. In many states, this may be the law. The action should be open or the gun broken down, whichever makes the firearm safest if it's mishandled.
- Firearms should not be displayed in window gun racks because the display may provoke anti-hunter sentiment. It's also an invitation to thieves.
- Lean a firearm against a secure rest only. A vehicle does not provide a secure resting place. A gun that falls over might accidentally discharge or be damaged.

### Typical Gun Cases

#### Padded, soft-sided case

Material: Canvas, nylon, neoprene, polyester, or leather

**Advantages:**

- Light, easy to handle and store
- Many designs accommodate scoped rifles
- Offered in camouflage
- Waterproof and floating cases available for duck hunters
- Less costly than hard cases

**Disadvantage:**

- Less protection than hard-sided cases

#### Lockable, hard-sided case

Material: Aluminum or composite

**Advantages:**

- Lightweight but sturdy
- Meets airline standards
- Can include deep foam padding that holds firearm in place and cushions impact
- Composite models can be molded to fit firearm
- Available in waterproof models

**Disadvantage:**

- Bulkier and costlier than soft-sided cases

#### Gun sock

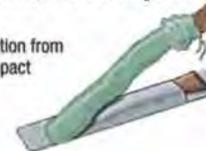

Material: Durable stretch fabric (polyester/ acrylic) or soft pile materials

**Advantages:**

- Lightweight protection from dust, dirt, and moisture
- Offered in camouflage
- Often used as a second case to carry a firearm from a vehicle into a hunting area

**Disadvantage:**

- Minimal protection from elements or impact

*Safety Tip*

A hunter's zone-of-fire changes with every step. It's important to remain alert and aware of your companions' locations at all times.

Only one hunter should aim at the target. Also, hunters should only shoot if there is an adequate backstop. Don't shoot at a "skylined" animal.

*Safety Tip*

When hunting in a group, hunters should shoot only at game in front of them.

**Safe Zone-of-Fire**

The area in which a hunter can shoot safely is referred to as a zone-of-fire. Before setting off in a group, hunters should agree on the zone-of-fire each person will cover. A zone-of-fire depends on many factors, including the hunter's shooting ability, the game being hunted, the hunting environment, and the hunting strategy being used. A hunter's zone-of-fire changes with every step. This is particularly true of groups hunting birds, rabbits, or other small game.

- For safety purposes, it's best to have no more than three hunters in a group. For new hunters, two is a safer number until they become familiar with maintaining a proper zone-of-fire.
- Hunters should be spaced 25 to 40 yards apart and always in sight of one another. Each hunter has a zone-of-fire, which spans about 45 degrees directly in front of each hunter. (Some states require an adult to be immediately beside a youth hunter. In this case, the adult should be a supervisor only—not a hunter.)
- A way to visualize 45 degrees is to focus on a distant, fixed object that is straight out in front of you. Stretch your arms straight out from your sides. Make a fist with your thumbs held up. Gradually draw your arms in toward the front until both thumbs are in focus without moving your eyes. This will give you your outer boundaries.

- If three hunters are walking side by side hunting pheasants, the hunter in the center will shoot at birds flushed in the middle that fly straight away. The other hunters will shoot at birds flying toward their end of the line.
- If a bird turns and flies back across the line of hunters, it's best if all three hold their swings and do not fire. The same is true of a rabbit scurrying back between the hunters.
- No hunter, especially when swinging on game, should allow his or her gun to point at a person. Better to pass up a shot than risk injuring someone or damaging property.
- Everyone hunting in these situations should wear daylight fluorescent orange whether it's required by law or not.

## Other Safety Considerations

### Self-Control and Target Identification

- Some hunters may become overly anxious or excited on a hunt, which can lead to careless behavior. They may fire at sounds, colors, movements, or unidentified shapes, or simply shoot too quickly. In the excitement after hitting their target, they may swing a loaded firearm toward their companions or run with the safety off toward a downed animal.
- Slow, careful shooting is not only safer, but it also produces a higher degree of success.

### Accuracy

- Shooting accurately is not only the key to successful hunting, but it's also a safety factor. Some incidents, often deadly ones, have occurred when stray bullets have hit people out of the shooter's sight. Be sure you have a proper backstop before you shoot.
- Accuracy is also essential for achieving a clean kill. No real sportsman wants to wound game and cause needless suffering. You must learn how to hit the vital organs of the game you hunt. Knowing your game, equipment, and skill level will tell you when you're in position to make a clean kill.

### Alcohol and Drugs

- Consuming alcohol before or during the hunt increases the risk of incidents because it impairs coordination, hearing, vision, communication, and judgment.
- Drugs can have a similar effect. If you have to take prescription medicine, check with your physician to see if it's safe to take while hunting.

### Hunting From Elevated Stands

Elevated stands place the hunter above ground level. They can be tree stands placed in or against trees, or freestanding structures. They have become increasingly popular in recent years with both firearm and bow hunters. While they offer certain advantages, they also have some drawbacks, including a degree of risk.

- **Advantages**
  - Provide a wider field of vision—game is spotted sooner than at ground level
  - Allow time to plan for the best shot through earlier detection of game
  - Position a hunter above the animal's normal field of vision
  - Make a hunter's scent harder to detect and movement less noticeable
  - Make a hunter more visible to other sportsmen so that he or she is less likely to be hit by a stray bullet
  - Provide a good backstop for arrows or bullets due to shooting at a downward angle
- **Disadvantages**
  - Increase risk of injury resulting from falling
  - Can be difficult to carry, especially large portable stands
  - Provide no protection from cold or wind
  - Give little room for movement
  - Cannot move toward game while hunting

### Remember...

A rifle scope should never be used as a pair of binoculars.

### Safety Tip

Self-control is an essential aspect of hunter safety. Only shoot when you know the target is legal game and that no people, domestic animals, buildings, or equipment are in the zone-of-fire—remember that bullets can pass through game and continue on for some distance with deadly force.

### A DEADLY MIX

The best thing you can do for your safety and the safety of others is simple...

#### Don't drink and hunt!

Because you can drink faster than your system can burn the alcohol off, there is an increasing level of alcohol in your blood. This level is referred to as Blood Alcohol Concentration (BAC).

### Elevated Stand Location

- Place a stand adjacent to game trails or where game sign is abundant.
- Place a stand no higher than necessary.
- Never place a stand in a dead tree, in trees with large overhanging dead limbs, or on or near utility poles.
- Select only trees that are straight.
- Locate the stand downwind from the animals' expected route.
- Never place stands on fence lines or near another landowner's property.

## Types of Elevated Stands

Hang-On Stand

Climbing Stand

Ladder Stand

Tripod Stand

## Suspension Trauma

Hanging motionless and suspended in your FAS after a fall can cause the leg straps to constrict blood flow. The pressure can make blood pool in the legs, limiting circulation and depriving organs of oxygen. This is called suspension trauma and can lead quickly to unconsciousness followed by death.

To avoid suspension trauma while you wait to be rescued:

- Step into your suspension relief strap, and stand up to relieve the pressure caused by the leg straps.
- If you do not have a suspension relief strap, move your legs continuously by pushing off from the tree, or raise your knees and pump your legs frequently to keep your blood flowing until help arrives.

## Types of Elevated Stands

## ■ Portable Tree Stands

Portable tree stands can be safe and environmentally friendly. **Homemade stands should not be used.** Commercial stands that are manufactured, certified, and tested to industry standards are best. You should follow the manufacturer's instructions and also practice installing a tree stand before you go hunting. Portable tree stands come in three basic types.

- **Hang-On Stands:** These simple stands provide about four square feet of space. They must be hauled into place and secured to the tree with belts or chains.

These stands require separate climbing aids, such as segmented ladders or climbing sticks. When installing a climbing aid, determine your climbing route first. Attach the aid to the tree so that it extends above the stand's platform, and you can step down onto the center of the platform.

- **Climbing Stands:** These self-climbing stands are designed for trees with straight trunks and consist of two sections. A hunter "walks" the stand up a tree by moving the top section with the hands and the bottom section with the feet. While still on the ground, adjust the stand to allow for the tapering of the tree that occurs as you go up. When climbing, go slowly, take small steps, and keep the two sections of the stand connected with a tether. This stand is not suited for trees with shaggy bark or with branches between the ground and the desired elevation. Never use these stands on trees covered with ice or snow.

- **Ladder Stands:** Ladder stands provide a platform 10 to 20 feet above the ground. The built-in ladder lets you use these stands with a wider range of trees. Due to their size and weight, hunters normally assemble and set up ladder stands before the first day of hunting. Three to five people are needed to erect or take down a ladder stand safely. When setting up the stand, clear the base area of all rocks and debris, making sure the ground is level. Then lean the stand against the tree, and chain or strap it into place. Using all parts, assemble the stand as instructed by the manufacturer.

## ■ Tripods, Quadpods, or Tower Stands (Freestanding)

These stands are similar to a ladder tree stand but are freestanding and do not require a tree. They can be placed anywhere that has a firm base. Some resemble one or two chairs atop stilts. Others are enclosed, box-like platforms.

## Fall-Arrest Systems (FASs)

You should use a fall-arrest system (FAS) that is manufactured to industry standards. **Never use single-strap belts and chest harnesses**—they can be deadly. Before hunting, carefully read the manufacturer's instructions for proper use of your FAS, and follow all safety guidelines.

- Most tree stand falls occur when a hunter is climbing up or down a tree. Always use a properly fitting FAS that includes a full-body harness at all times when your feet are off the ground. Make sure your FAS includes these components:
  - **Full-body harness**—the vest harness is a very effective style of full-body harness
  - **Lineman's-style belt and/or climbing belt**—used when climbing up and down the tree
  - **Tree strap**—goes around the tree
  - **Tether**—attaches the harness to the tree strap
  - **Suspension relief strap**—provides a loop to stand in if you fall
- With an adult present, practice adjusting and using your FAS, including the suspension relief strap, at ground level before hunting from an elevated stand.

- To protect yourself if you fall, always wear your FAS full-body harness, attaching it to the tree at ground level and keeping it attached throughout your hunt.
  - Attach one end of the FAS lineman's-style belt to one side of the FAS full-body harness, wrap the belt around the tree, and attach the other end of the belt to the other side of the harness.
  - Use the FAS lineman's-style belt with your FAS full-body harness when you are *installing* or *uninstalling* the stand or the climbing aids for a hang-on tree stand.
  - Also use the belt with your full-body harness when you are climbing into or out of a hang-on stand.
- When you are in any tree stand, including a ladder stand, use the FAS tree strap and tether to attach your FAS full-body harness to the tree. Attach the tree strap to the tree so that the strap is at, or above, head level when you are standing. After attaching the tether, adjust both the tree strap and tether so that you have **no** slack in the tether while seated in your stand. If you fall, you do not want to drop below a level that would keep you from returning to the platform.
- If you should fall while in your stand:
  - Do not panic. Your FAS will hold you.
  - Signal for help.
  - Climb back onto the platform as quickly as possible.
  - Take actions to avoid suspension trauma if you must wait for rescue. If you do not have a suspension relief strap, keep moving your legs.
- Discard any FAS that shows signs of wear and tear or has been worn during a fall. Also adhere to the expiration date sewn into the FAS by the manufacturer.
- Due to the risks of injuries or death, hunters who choose not to wear and use their FAS properly should stay on the ground to hunt.

### Hauling Hunting Equipment Into a Stand

- Never carry your hunting equipment up or down the tree with you as you climb. Always use a haul line.
- Before attaching the haul line to your hunting equipment:
  - If using a firearm, unload it, and open the action.
  - If using a bow, put the arrows in a covered quiver secured to the bow.
- Use a haul line of heavy cord attached to your stand to bring up your hunting equipment or to lower it prior to climbing down from your stand.
  - If using a firearm, attach the haul line to the firearm's sling so that the firearm hangs with the muzzle pointed down.
  - If using a bow, attach the haul line so that the arrow fletching points down when raising your equipment and points up when lowering it.
- Slip the end of the haul line through your belt—leave it untied so that it can pull free if you fall. Put on your FAS full-body harness, secure yourself to the tree, and climb to your stand.
- After you are in the stand and secure, haul up your hunting equipment, and untie the haul line.

### Elevated Stand Safety

Merely climbing into or out of a tree stand or other elevated platform to hunt puts you at risk. Long hours spent waiting in a stand, as well as poor safety techniques, can lead to accidental falls. To protect yourself, use good judgment and follow these recommendations, always putting safety first.

- Purchase a commercial stand that is manufactured, certified, and tested to industry standards.
- Read the manufacturer's instructions, and watch the video that accompanies the stand. Review this information each season before using the stand.
- **Attach your FAS to the tree while at ground level, and keep it attached throughout your hunt—from the time you leave the ground until you get back down.**
- Use a tree stand only during daylight hours.
- Practice first with your tree stand and FAS at ground level, using all safety devices that were included with the stand. Then continue to practice, gradually going higher.
- When climbing into or out of a tree stand, always use three points of contact with your hands and feet.
- Keep a firm hold on the climbing system as you enter or leave a platform, and don't let go until you're certain you are secure.
- Get enough sleep to ensure that you are well-rested before using a tree stand.
- Carry a signaling device, such as a whistle, radio, or cell phone, to let others know if you have a problem.
- Take your time, and plan every move you make while installing and using an elevated stand.
- Check your stand carefully prior to each use. Do not leave a stand attached to a tree for more than two weeks.
- Never exceed the weight limit of your stand or FAS. Remember that the weight includes you plus your equipment.
- Do not climb with anything in your hands or on your back. Use a haul line.
- Raise and lower all hunting equipment on the opposite side of the tree from your climbing route.

*Remember...*  
 Don't press your luck in bad weather. At the first sign of a storm, head for shore.

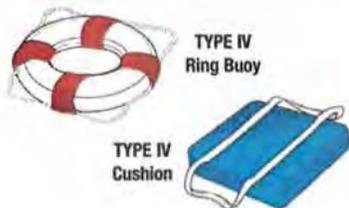

**Types of PFDs**

Read and follow the label restrictions on all PFDs.

**Wearable PFDs**

**Throwable PFDs**

**Hunting With Boats**

Hunters often use boats in difficult conditions, such as wind, cold, and snow. Special care must be exercised to ensure a safe trip.

**Trip Preparation**

- Leave a hunting plan with family or friends with details on the boating portion of your trip. It should include your planned route and when you plan to return.
- Be sure the boat is large enough to carry you and your gear safely.
- Load gear low in the boat, and distribute the weight evenly.
- Have each person on board wear a personal flotation device (PFD), sometimes called a life jacket.
- Have throwable PFDs on board in case someone falls overboard.
- Stow required visual distress signals.
- Check an up-to-date weather forecast before heading out.
- Cancel your trip if wind and water conditions aren't safe.

**Transporting Firearms in a Boat**

- The same rules apply as when transporting firearms in a vehicle—unload and case firearms before transporting them. The action should be open or the gun broken down, whichever makes the firearm safest.
- Before boarding the boat, place the unloaded firearm into the bow (front) of the boat with its muzzle pointing forward.
- When hunting with others, the first person settles in the bow position facing forward after the first gun is placed. Next, place the second unloaded firearm in the stern (rear) of the boat with its muzzle pointing rearward. Then, the second person settles in the stern position facing rearward. Repeat the procedure when unloading.

**Zone-of-Fire in a Boat**

When duck hunting, the back-to-back position is the safest, with the zone-of-fire confined to a 180-degree area in front of each hunter.

## Surviving Water Emergencies

- Always wear a U.S. Coast Guard–approved PFD while you're in the boat. PFDs will not only keep you afloat, but they'll also help you keep warm.
- If you get caught in a storm and your boat swamps or capsizes, stay with the boat. Most small boats will float even when upside down or filled with water. Signal passing boats by waving a bright cloth or raising an oar if one is available.
- Placing an oar under your back and shoulders and another under your legs can help you float. If decoys are in reach, stuff them inside your jacket.
- Chest waders and hip boots also will help you stay afloat.
  - If in chest waders, trap air in the waders by bending your knees and raising your feet. Lie on your back.
- If in hip boots, trap air in the boots by bending your knees. Lie on your stomach.
- Equip your boat with a means for re-entry (ladder, sling, etc.) to use if you should fall into the water.

## Cold Water Immersion and Hypothermia

- Sudden immersion into cold water can cause immediate, involuntary gasping; hyperventilation; panic; and vertigo—all of which can result in water inhalation and drowning. Immersion in cold water can also cause sudden changes in blood pressure, heart rate, and heart rhythm, which can result in death.
- Prepare for boating in cold water conditions by always wearing a secured life jacket. Also wear layered clothing for insulation.
- The best prevention is to take all measures necessary to avoid capsizing your boat or falling into cold water in the first place. If you do fall into cold water:
  - Don't panic. Try to get control of your breathing. Hold onto something, or stay as still as possible until your breathing is controlled.
  - When your breathing is under control, *perform the most important functions first* before you lose dexterity (10–15 minutes after immersion).
  - Put on a PFD immediately if you don't already have one on. Don't take your clothes off unless absolutely necessary—they help insulate you.
  - Focus on getting out of the water quickly before you lose full use of your hands, arms, and legs. Try to reboard your boat, even if it is swamped or capsized. Get as much of your body out of the water as possible—the rate of heat loss will be slower than if immersed in water.
  - If you cannot get out of the water quickly, act to protect against rapid heat loss. In as few as 10 minutes, you may be unable to self-rescue.
    - Stay as motionless as possible, protecting the high heat loss areas of your body, and *keep your head and neck out of the water*.
    - Safety typically looks closer than it actually is, so staying with the boat is usually a better choice than swimming.
    - Adopt a position to reduce heat loss. If alone, use the Heat Escape Lessening Posture (HELP); if there are others in the water with you, huddle together.
  - Be prepared at all times to signal rescuers.
- Read more about the symptoms and treatment of hypothermia in Chapter Eight.

### Safety Tip

If you fall into the cold water, remain clothed; clothing helps retain body heat.

boat-ed.com®  
Get Safe. Get Certified.

### Recognizing Advanced Stages of Hypothermia

When a victim has these symptoms, dry clothing, heat, and medical attention are required immediately:

- Bluish-white appearance
- Weak heartbeat
- Shallow breathing
- Rigid body muscles
- May be unconscious

Heat Escape Lessening Posture (HELP)

### Huddle

Retains body heat and increases survival time

*Remember...*

Shooting from vehicles is unsafe, unethical, and, in many instances, illegal.

offroad-ed.com™  
Get Safe, Get Certified.

#### Considerations When Hunting With All-Terrain Vehicles (ATVs)

- In many states, it is illegal to hunt from any motorized vehicle, including ATVs; this includes molesting, stirring up, or driving any game animals or game birds with a motorized vehicle.
- It is illegal in some states to operate an ATV off the trail, or there may be trails specifically closed to ATV use.
- In many states, it is prohibited to operate an ATV off-roads or trails in a manner that damages or disturbs the land, wildlife, or vegetation.
- Some states require that ATVs be equipped with approved and operating spark-arresting mufflers and that they comply with sound regulations.

#### Hunting With All-Terrain Vehicles

All-terrain vehicles (ATVs) are special-purpose vehicles that require careful, responsible handling and good judgment.

- They're useful for traveling into back country, but they can damage the environment if used recklessly. It also requires training and practice to handle them safely on rough terrain.
- Studies show that the majority of ATV accidents occur when the rider unexpectedly encounters an obstacle, such as a rock or a ditch. Maintaining a safe speed is critical.
- If you use ATVs to hunt, prepare yourself and your family by attending an approved ATV course.

Before hunting with ATVs on private land, be sure to get the landowner's permission.

- Always follow the rules for safe and ethical operation.
  - Wear a helmet approved by the Department of Transportation.
  - Wear protective clothing, including goggles, gloves, and boots.
  - Carry firearms unloaded, cased, and on a proper gun rack.
  - When using the plastic scabbard mounted on an ATV, clear the inside of the scabbard of debris, and check your firearm's muzzle for obstructions.
  - Stay on the main roads and trails.
  - Pick your route carefully to minimize terrain damage.
  - Don't drive over crops or planted fields.
  - Don't shoot from an ATV.
  - Use ATVs only to get to the hunting area or to haul an animal from the woods.

## Be a Responsible and Ethical Hunter

Chapter Seven / Page 65

### You should be able to...

- Give five reasons why we have hunting laws.
- State how the "father of wildlife management" defined ethical behavior.
- Describe how responsible and ethical hunters show respect for natural resources.
- Describe how responsible and ethical hunters show respect for other hunters.
- Describe how responsible and ethical hunters show respect for landowners.
- Describe how responsible and ethical hunters show respect for non-hunters.
- Identify public and private land where you can go hunting.
- List and describe the five stages of hunter development.
- Give three examples of what you can do to be involved in making hunting a respected sport.

### Why Do We Have Hunting Laws?

During the 19th century, many game animals were hunted nearly into extinction. The thundering herds of bison that once roamed the plains were reduced to about 800 head. The beaver was almost wiped out. Elk, deer, and pronghorn were reduced to a fraction of their once-plentiful numbers.

#### Game Conservation

To conserve wildlife for future generations to enjoy, wildlife management laws were passed. These laws allow game to flourish by:

- Establishing hunting seasons that limit harvesting and avoid nesting and mating seasons.
- Limiting hunting methods and equipment.
- Setting "bag" limits on the number of animals that can be taken.
- Establishing check stations and game tag requirements to enforce the laws.

#### Safety, Opportunity, and Funding

In addition to ensuring the availability of game for future generations, hunting laws:

- Establish safety guidelines for hunting that protect both hunters and non-hunters.
- Offer equal opportunity for all hunters, whether they use modern firearms, muzzleloaders, or bows.
- Ensure adequate funding for wildlife programs by collecting license fees.

#### Fair Chase

- Hunting laws also define the rules of fair chase. The concept began in the Middle Ages when hunters increased the challenge of sport hunting by setting rules that limited how they took game.
- More recently, fair chase rules were developed to stem public criticism of hunters. One of the earliest models was the "Fair Chase Principle" established in the late 1800s by the Boone and Crockett Club, which was founded by Theodore Roosevelt. Those who violated club rules were expelled.
- The rules were later expanded, banning the use of vehicles, airplanes, and radios; electronic calling; or shooting in a fenced enclosure. Many states have made those rules into law.

#### Know the Law

Ignorance of hunting laws is not a valid excuse for violating them. It is the hunter's responsibility to review state game laws before the hunting season.

#### Remember...

A substantial amount of funding for wildlife management comes from the purchase of licenses, which annually raises millions of dollars.

#### How Hunting Laws Are Passed

In most states, a wildlife management agency sets hunting regulations. These agencies will have regular meetings where the public can voice their concerns and make suggestions. Hunters wishing to propose changes to the regulations should participate in these meetings, or join a hunting organization that interacts with the agency.

### How Hunters Make a Positive Impact

- Put in countless hours to improve wildlife habitat.
- Help biologists transplant game species and save other species from extinction.
- Encourage others to practice ethical behavior.

#### ethics

Moral principles or values that distinguish between right and wrong; they are unwritten rules that society expects to be followed

### How to Ask Landowners for Permission

- Make contact well ahead of the hunting season.
- Wear street clothes—no hunting gear or firearms.
- Don't bring companions—a "crowd" could be intimidating.
- Be polite, even if permission is denied. Your courtesy may affect the outcome of future requests.

Contact the landowner while wearing street clothes and well in advance of when you wish to hunt.

### The Hunter's Image Matters

- Responsible hunters welcome laws that enforce sportsmanlike hunting practices because the behavior of irresponsible hunters has caused some people to oppose hunting.
- Nationally, about 5% of the population hunts, and roughly the same percentage actively opposes hunting. The rest of the population is predominantly neutral. However, bad behavior by hunters could sway some of the neutral crowd into the anti-hunting camp.

### Hunter Ethics

- While hunting laws preserve wildlife, **ethics** preserve the hunter's opportunity to hunt. Because ethics generally govern behavior that affects public opinion of hunters, ethical behavior ensures that hunters are welcome, and hunting areas stay open.
- Ethics generally cover behavior that has to do with issues of fairness, respect, and responsibility not covered by laws. For instance, it's not illegal to be rude to a landowner when hunting on his or her property or to be careless and fail to close a pasture gate after opening it, but most hunters agree that discourteous and irresponsible behavior is unethical.
- Then there are ethical issues that are just between the hunter and nature. For example, an animal appears beyond a hunter's effective range for a clean kill. Should the hunter take the shot anyway and hope to get lucky? Ethical hunters would say no.

### The Hunter's Ethical Code

As Aldo Leopold, the "father of wildlife management," once said, "Ethical behavior is doing the right thing when no one else is watching—even when doing the wrong thing is legal."

The ethical code hunters use today has been developed by sportsmen over time. Most hunting organizations agree that responsible hunters do the following.

- **Respect Natural Resources**
  - Leave the land better than you found it.
  - Adhere to fair chase rules.
  - Know your capabilities and limitations as a marksman, and stay within your effective range.
  - Strive for a quick, clean kill.
  - Ensure that meat and usable parts are not wasted.
  - Treat both game and non-game animals ethically.
  - Abide by game laws and regulations.
  - Cooperate with conservation officers.
  - Report game violations.
- **Respect Other Hunters**

Follow safe firearm handling practices, and insist your companions do the same.

  - Refrain from interfering with another's hunt.
  - Avoid consuming alcohol, which can impair you to the point of endangering others.
  - Share your knowledge and skills with others.

### ■ Respect Landowners

- Ask landowners for permission to hunt.
- Follow their restrictions on when and where you may hunt.
- Treat livestock and crops as your own.
- Offer to share a part of your harvest with the owner.
- Leave *all* gates the way you found them.
- If you notice something wrong or out of place, notify the landowner immediately.
- Never enter private land that is cultivated or posted unless you have obtained permission first.

### ■ Respect Non-Hunters

- Transport animals discreetly—don't display them.
- Keep firearms out of sight.
- Refrain from taking graphic photographs of the kill and from vividly describing the kill while within earshot of non-hunters.
- Maintain a presentable appearance while on the street—no bloody or dirty clothing.

### Personal Choice

- As in every human endeavor, there are gray areas of ethical behavior that come down to a matter of personal choice.
- Examples of gray areas of ethical behavior, which may even be illegal in some locales, are:
  - Baiting deer with corn or protein pellets
  - Shooting birds on the ground, on the water, or in trees
  - Shooting from a vehicle or boat within private boundaries or on private waters

### Landowner Complaints About Hunters

- Don't get permission to hunt.
- Don't tell the landowners when they arrive at or leave the property.
- Make too much noise.
- Leave litter behind.
- Carry loaded firearms in vehicles.
- Drive off the ranch roads.
- Don't leave gates as they were found (open or shut) when the hunter arrived.
- Shoot too close to neighbors or livestock.
- Leave fires unattended.
- Violate game laws.
- Drink alcohol to excess.

### Remember...

Hunting is a privilege and can be taken away if hunters fail to act responsibly.

### How to Behave if Confronted by Anti-Hunter Protesters

- Remain calm and polite, and do not engage in arguments—never lose your temper.
- Never touch an anti-hunter or use any physical force, and especially **never threaten an anti-hunter with your firearm.**
- Report hunter harassment to law enforcement authorities. If possible, record the vehicle license number of harassers.

### Hunting Opportunities on Public Lands

All states have federal- or state-owned public lands that are available for hunting. Public lands may have regulations that control hunting on these properties and may require special permits. Check with your state's wildlife agency, and get maps before you go.

Public lands that may be open for hunting:

- Bureau of Land Management properties
- Bureau of Reclamation properties
- National forests
- National parks
- National Wildlife Refuge properties
- State parks and forests
- State-owned wildlife management areas

### The Five Stages of Hunter Development

It should be the goal of every responsible hunter to become a true sportsman. As a hunter gains experience and skill, studies have shown that he or she will typically pass through five distinct stages of development. Keep in mind, however, that not everyone passes through all of these stages, nor do they necessarily do it in the same order.

#### 1. Shooting Stage

#### ■ Shooting Stage

The priority is getting off a shot, rather than patiently waiting for a good shot. This eagerness to shoot can lead to bad decisions that endanger others. A combination of target practice and mentoring helps most hunters move quickly out of this stage.

#### ■ Limiting-Out Stage

Success is determined by bagging the limit. In extreme cases, this need to limit out also can cause hunters to take unsafe shots. Spending time with more mature hunters helps people grow out of this phase.

#### ■ Trophy Stage

The hunter is selective and judges success by quality rather than quantity. Typically, the focus is on big game. Anything that doesn't measure up to the desired trophy is ignored.

#### 3. Trophy Stage

#### 2. Limiting-Out Stage

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners. [www.kalkomey.com](http://www.kalkomey.com)

■ **Method Stage**

In this stage, the process of hunting becomes the focus. A hunter may still want to limit out but places a higher priority on how it's accomplished.

■ **Sportsman Stage**

Success is measured by the total experience—the appreciation of the out-of-doors and the animal being hunted, the process of the hunt, and the companionship of other hunters.

4. Method Stage

5. Sportsman Stage

**Involvement**

- Part of the process of becoming a true, responsible sportsman is becoming involved in efforts to make hunting a respected sport. That includes teaching proper knowledge and skills to others, working with landowners, and cooperating with wildlife officials.
- It also includes joining conservation organizations dedicated to improving habitat and management efforts. Young hunters can be involved by joining organizations, such as 4-H, Boy Scouts, and Girl Scouts, as well as by participating in wildlife projects in their local communities.
- Responsible, ethical behavior and personal involvement are both essential to the survival of hunting. How you behave and how other people see you will determine whether hunting will continue as a sport.

## Preparation and Survival Skills

### You should be able to...

- List and describe four ways to prepare properly for hunting.
- Prepare a sample hunting plan.
- List three conditions that affect a hunter's physical ability to perform safely and responsibly.
- Describe how to dress for hunting in cold weather.
- State why hunters should wear daylight fluorescent orange clothing.
- Demonstrate how to read a topographic map and use a compass.
- List the five primary requirements for survival.
- List the eight basic survival rules.
- Describe three ways to signal for help when lost in the outdoors.
- Give the causes and symptoms of hypothermia, and explain how to prevent and treat hypothermia.
- Give the causes and symptoms of heat exhaustion, and explain how to prevent and treat heat exhaustion.
- Give three examples of why it's important for every hunter to attend first-aid and CPR training courses.
- Demonstrate how to stop bleeding.
- Explain what to do if someone breaks a bone.
- Describe how to recognize first-, second-, and third-degree burns and how to treat them.
- Explain what to do immediately if a person suffers a chest wound.

### Hunting Plan

Before you depart, leave a hunting plan with a family member or friend. A hunting plan tells where and with whom you intend to hunt and when you expect to return. It also should contain specific directions on your route to your destination and any alternate destination you may have if bad weather changes your plans.

**HUNTING PLAN**

Complete this form before departing on a hunt, and leave it with a reliable person who will be depended upon to notify the authorities in case you do not return as scheduled. A word of caution: in case you are delayed and it is not an emergency, inform those with your hunting plan of your delay in order to avoid an unnecessary search.

1. Name of person filing this plan: \_\_\_\_\_ Telephone #: (\_\_\_\_) \_\_\_\_\_

2. Name of others on hunt: \_\_\_\_\_ Age: \_\_\_\_\_ Address: \_\_\_\_\_ Telephone #: (\_\_\_\_) \_\_\_\_\_  
 \_\_\_\_\_ Telephone #: (\_\_\_\_) \_\_\_\_\_

3. Radio:  Yes  No Type: \_\_\_\_\_ Call sign: \_\_\_\_\_

4. Trip plan: \_\_\_\_\_  
 Leaving date: \_\_\_\_\_ Going to: \_\_\_\_\_  
 Home date: \_\_\_\_\_

5. Departure: \_\_\_\_\_ 7 am 12 pm \_\_\_\_\_ 12 pm 12 pm  
 Arriving: \_\_\_\_\_ 7 am 12 pm \_\_\_\_\_ 12 pm 12 pm  
 And in an emergency, call: \_\_\_\_\_ 12 pm 12 pm

6. Alternate route if bad weather is encountered: \_\_\_\_\_

7. Description of automobile: \_\_\_\_\_  
 Make: \_\_\_\_\_ Color: \_\_\_\_\_ License #: \_\_\_\_\_ Where parked: \_\_\_\_\_

8. Plan prepared by: \_\_\_\_\_ 12 pm 12 pm  
 Call: \_\_\_\_\_  
 Local authority: \_\_\_\_\_ Telephone #: (\_\_\_\_) \_\_\_\_\_

### Importance of Planning and Preparation

Hunting is a safe sport, but it does involve a certain amount of risk. Aside from firearm safety issues, a variety of incidents can occur on a trip outdoors. The rougher the terrain—particularly when it's unfamiliar terrain—the greater the chance of accidents. Climate extremes also increase the risk. In remote areas, there's always the possibility of becoming lost.

To plan properly, address these four areas when preparing for your hunt.

- **Be Ready:** To help you avoid or minimize problems, it's essential that you plan carefully for the hunt. Responsible hunters anticipate potential problems and make plans to deal with them. Considerations include terrain, location, weather, dangerous game, and the potential for forest fires.
- **Know Your Location:** Learn as much as you can about your chosen hunting area before you arrive. Purchase a topographic map, and familiarize yourself with the terrain. If the location is within a convenient drive, it's a good idea to visit the area in the off-season.
- **Prepare for Safety:** You also need to assess your physical condition and equipment. Refresh your memory of hunting and firearm safety rules, and review the rules with your hunting partners.
- **Tell Others:** Prepare a hunting plan that tells where and with whom you are hunting and when you expect to return. Give specific directions on your route to your destination and any alternate destinations. Leave the plan with a family member or friend. Do not deviate from your hunting plan without notification. When hunting with a group, each person should discuss their route plan.

**Physical Conditioning**

- Hunting often demands more physical exertion than you're accustomed to doing. Conditions that may hamper your physical ability to perform safely and responsibly while hunting include:
  - Allergies
  - Asthma
  - Excess weight
  - Heart condition
  - Poor physical conditioning
- Your mental condition impacts your performance as well.
- Prepare for your hunt by getting in shape well in advance. The amount of time that it will take to get in shape will depend on your physical condition and the difficulty of the planned hunt.

**Clothing**

- Clothing also can affect your ability to perform safely and responsibly. Select clothing based on the weather you expect while being prepared for the worst.
- In warm weather, wear a hat and light clothing that covers as much of your skin as possible to prevent heat exhaustion or sunburn.

- Cold weather conditions call for clothing that is worn in layers. Layers offer superior insulation. Also, as weather warms up, you can shed a layer at a time to stay comfortable. Layers should include:
  - A vapor transmission layer (material such as polypropylene)—worn next to the body; it should release moisture from the skin while retaining warmth.
  - An insulating layer—weightier or bulkier; it should hold warm air around you.
  - A protective outer layer—available in various weights and materials according to conditions; it should protect the inner layers from water and wind.

- The most important clothing choices are a daylight fluorescent orange hat *and* daylight fluorescent orange outerwear—a shirt, vest, or jacket. Daylight fluorescent orange clothing makes it easier for one hunter to spot and recognize another hunter because nothing in nature matches this color. The orange color of the clothing should be plainly visible from all directions. This is required by law in many states.

**Other Clothing Essentials**

- A hat or cap with earflaps and gloves to retain body heat—most body heat is lost through the head and hands; gloves also protect your hands from abrasions and rope burns
- Footwear that is sturdy, suitable for the conditions you'll encounter, and has been broken in before the hunt
- Two layers of socks—polypropylene against the skin and a wool outer layer

*Remember...*

Wool is the best all-around choice for insulation because it still provides warmth when wet. The best clothing combination in bad weather is polyester or polypropylene underwear and shirt, wool pants, heavy jacket, and water-repellent rain pants and parka. Soaking wet clothing can lose heat several hundred times faster than dry clothing. Cotton clothing (underwear, T-shirts, jeans, flannel shirts) is a poor choice for cold, wet weather. When wet, cotton loses its already limited insulating ability and can cause rapid transfer of heat away from the body, increasing the risk of hypothermia.

**Day Pack/Survival Kit and Equipment**

In addition to your hunting gear, which includes your firearm—or bow—and field-dressing equipment, you also should prepare a day pack that includes emergency supplies. Although the contents will vary based on conditions and personal preference, an emergency day pack could include:

- Base plate compass with signal mirror
- Candle
- Emergency high-energy food
- Extra boot laces
- Extra pair of glasses
- Extra two-day supply of prescription medicine
- Fire starters—waterproof matches, butane lighter, etc.
- First-aid kit
- Fishing line and hooks
- Flashlight with spare batteries and bulbs
- Folding saw
- Knives
- Map
- Metal carrying case that can double as a cooking pot
- Nylon rope
- Plastic sheet or large garbage bag
- Poncho
- Signal flares
- Single-edged razor blade
- Small can of lighter fluid
- Snare wire or twine
- Tablets for water purification
- Thermal foil blanket
- Tissues
- Water
- Water purification tablets
- Whistle (plastic)

**Additional Equipment**

- A pair of binoculars or spotting scope
- Biodegradable trail markers
- Duct tape
- Hatchet or ax
- Pencil and paper pad
- Shovel
- Sleeping bag appropriate for climate

*Remember...*

Metal objects, such as knives, gun barrels, belt buckles, etc., will affect a magnetic needle.

**Topographic Maps and Compasses**

**Reading a Topographic Map**

- Whenever you're in a remote or unfamiliar area, a topographic map and compass are a must.
- Topographic maps are created from aerial photographs and reveal the contours of the land, including hills, ridges, and valleys, as well as lakes, rivers, creeks, trails, and roads.
  - Contour lines show the elevation of the ground.
  - Contour intervals reveal how much vertical distance there is between each contour line—closely spaced contour lines indicate very steep slopes.
  - Contour lines that are sharply tapered indicate an uphill direction.
  - Rounded contour lines typically indicate a downhill direction.

**Selecting a Compass**

- The orienteering compass is a critical piece of equipment for outdoor travel.
- A good orienteering compass has these features:
  - Clear base plate that allows you to see the map underneath
  - Straight sides for aligning two points or for drawing lines
  - Liquid-filled needle housing that keeps the magnetic needle relatively steady when taking readings
  - Two arrows: a direction arrow painted on the base plate (or you may use the edge of the compass) is used to point the compass from your starting point to your destination; an orienting arrow, located in the needle housing, is used to orient your compass to your map

## Understanding Declination

- Topographic maps are drawn to true north (North Pole), which is indicated by the grid lines on the map. However, a compass will always point to magnetic north, which is in the Hudson Bay area. The difference between true north and magnetic north is called “declination.”
- When true north and magnetic north are aligned, you’re at zero degrees declination. Your compass needle will point to true north. However, if you’re east or west of zero degrees declination, your compass will not be in line with true north.
- **To compensate for declination:**
  - Center the north arrow (the N) of the compass dial along a north/south line of the map.
  - Check the diagram at the bottom of the map that shows whether magnetic north is to the left or right of true north.
  - Turn the compass dial the correct number of degrees left or right as indicated on the map. The N is now pointing at magnetic north.
  - Hold the compass level in front of you, and rotate your body until the tip of the compass needle aligns with the N on the compass dial. The direction arrow on the base plate now points in the direction you want to go.

## Plotting Your Progress

- As you hike into unfamiliar terrain, you can keep your bearings by taking frequent compass readings and plotting your progress on a map.
  - Note key points, such as stream crossings, to help you find your way back.
  - Pay particular attention when you reach a high point at the top of a ridge; use the elevation to locate landmarks visible from there.
- Learning to set a course and take bearings takes study and practice. The best way to become proficient with a compass is under the guidance of an experienced individual.

## Map Resources

Topographic maps are available at many outdoor stores or may be obtained from the U.S. Geological Survey at [www.usgs.gov](http://www.usgs.gov). Or contact the USGS by calling toll-free 1-888-ASK-USGS (1-888-275-8747).

National Forest Service Motor Vehicle Use Maps (MVUMs) show forest road networks and restrictions. They are available from the U.S. Forest Service at [www.fs.fed.us](http://www.fs.fed.us).

## Remember...

If you're an experienced map reader, you can:

- Read terrain.
- Determine direction.
- Follow rivers, valleys, and ridges.
- Find your location in relationship to your camp.
- Identify areas preferred by game animals.

## Global Positioning System (GPS)

- The Global Positioning System (GPS) is a navigation system based on a network of satellites. Users with a GPS unit can determine their exact location (latitude and longitude) in any weather condition, all over the world, 24 hours a day. 
- GPS satellites circle the earth twice a day and transmit information to the earth. GPS receivers use this information to calculate the user's location by comparing the time a signal was transmitted by a satellite with the time it was received. The time difference tells the GPS receiver the distance from the satellite. By calculating the distances from several satellites, the receiver can determine and display the user's location on the GPS unit.
- Once the user's position is determined, a GPS unit can calculate other information—bearing, trip distance, distance to destination, sunrise and sunset times, and more.
- GPS receivers are accurate to within 15 meters (49 feet) on average. Certain atmospheric factors and other sources of error can affect the accuracy. Accuracy can be improved with a Differential GPS (DGPS) or Wide Area Augmentation System (WAAS).

*Remember...*

When you find yourself in a survival situation, the most important tool is your brain.

**S**top when you realize you've got a problem. The first thing to do is admit to yourself that you are in trouble.

**T**hink about what you need to do to survive.

**O**bserve the area, and look for shelter, fuel, etc.

**P**lan how you are going to use your survival kit and your other available resources. Don't wait until dark to plan!

Remain calm. Think clearly. Use the tools you have available to you.

**Rules of Survival**

- Give a responsible person your hunting plan as discussed previously.
- Don't travel or hunt alone.
- Take enough food and water to last for several days in an emergency.
- Bring a map and compass, and always orient yourself before leaving camp.
- Wear layered clothing, and take extra clothing, preferably wool and polyester, with you.
- Plan your outings so that you can return to camp before dark.
- Never leave camp without taking fire-starting equipment and a foil blanket.
- Don't panic if you become lost.

A tepee of larger sticks enclosing the kindling is a good way to start a fire.

**Survival Skills**

Planning and preparation should keep you from having an outdoor misadventure. If something does go wrong, switch into survival mode.

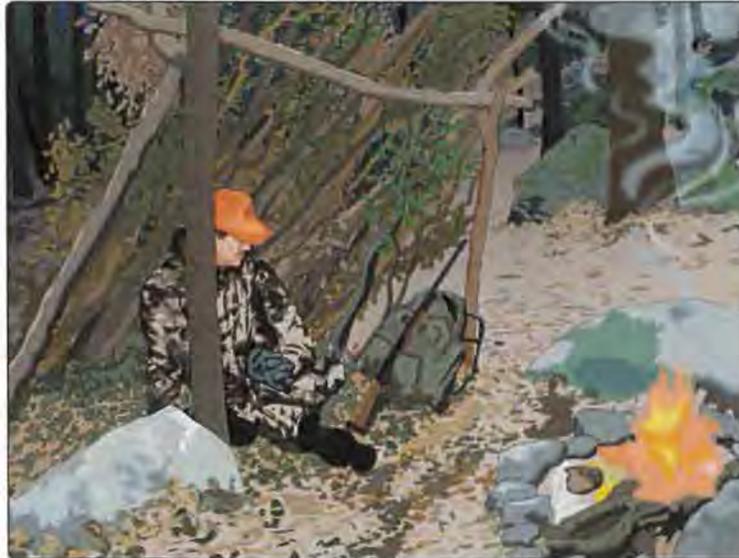

Most everyone who treks into the wilderness gets turned around occasionally. How you respond in the early stages often determines whether your disorientation becomes a temporary inconvenience or a traumatic ordeal. If you keep a cool head, you'll usually get your bearings fairly quickly.

Think through recent events to see if you can retrace your path. If you decide you cannot return to your camp or car, commit yourself to spending the night where you are. If you remain in one spot, it's very likely that you will be found in a few days.

You now have three priorities: shelter, fire, and signal.

**Preparing a Shelter**

- Start preparing your camp well before dark. Look for a natural shelter, such as a rock overhang or a thick stand of evergreens. The site should be dry and well-drained and protect you from the wind. Ideally, it also should be near water and plenty of firewood.
- If no natural shelter is available, pick an area with materials nearby to build a lean-to or debris hut.
- A lean-to is constructed by leaning branches against a horizontal support to form a frame for a roof. Be sure to orient the opening away from the wind. Cover the frame with evergreen branches to block wind or precipitation. Leaves and twigs are another option. If you need additional protection, you can add side walls.
- Build your fire where its heat will radiate into the shelter. Your sleeping area should be located between the shelter wall and the fire.

### Starting a Fire

- If there is snow on the ground, build the fire on a platform of green logs or rocks. If the terrain is dry, clear a patch of bare dirt to avoid starting a grass or forest fire.
- Gather everything you need before starting the fire. Pile fuel ranging from small twigs to fuel logs next to the fire site. Collect more fuel than you think you can use; you may need more than you estimate.
- Pile fine twigs, grass, or bark shavings loosely as a base. If you cannot find dry kindling, remove bark from trees. Use your knife to shave dry wood from the inside of the bark.
- Place slightly larger sticks on the starter material until you have a pile about 10 inches high.
- If there's no breeze, light the kindling in the middle of the base. If there is a breeze, light one end of the kindling so that the flame will be blown toward the rest of the fuel. As the kindling lights and the flames spread to the larger twigs, slowly add more wood to the blaze. Add larger pieces as the fire grows. A large fire will throw more heat and be easier to maintain.

### Signaling for Help

- When you decide to stay put and wait for rescue, prepare help signals as soon as possible.
- The international emergency sign for distress is three of any signal: three shots, three blasts on a whistle, three flashes with a mirror, or three fires evenly spaced. If you're near an open space, walk an X in the snow, grass, or sand. Make it as large as possible so that it can be seen easily from the air. Placing branches, logs, or rocks along the X will make it more visible. Do not light signal fires until you hear an aircraft. Adding green boughs, preferably pine if available, to the fire will help create smoke.
- Once you have a shelter, fire, and your signal prepared, you can focus on water and food.

### Drinking Enough Water

- Even in cool weather, you need two to four quarts of water a day. Under most conditions, humans can only last about three days without water.
- Pure drinking water is rare, even in the most remote regions. Clear mountain streams often are contaminated by *Giardia lamblia*, a parasite that causes serious intestinal sickness in humans.
- The best way to purify water is by boiling. Chemical purifiers such as iodide/iodine or chlorine and filter systems can be used, but some may not be satisfactory. Never make survival problems worse by drinking unsafe water.

### Finding Food

- Humans can go for two weeks or more without food. Although the need for food is not that urgent, you'll be more comfortable and clearheaded if you eat. Anywhere there is game, there is food, but probably not what you're accustomed to eating.
- Before you head into a remote area, it's a good idea to learn what's edible in that particular region. Hopefully, you'll be able to use your hunting equipment to harvest the bulk of your food.

### One Less Spark— One Less Wildfire

[preventwildfireca.org/OneLessSpark](http://preventwildfireca.org/OneLessSpark)

To prevent wildfires, follow these recommendations provided by the U.S. Forest Service.

- Contact the landowner or agency managing the land to make sure fires are allowed. Get a campfire permit from the agency if it is required.
- Go to <https://smokeybear.com/en/prevention-how-to/campfire-safety> to review how to build, maintain, and put out a campfire. Even the most experienced campers can use a campfire safety refresher.
- Before you light a fire, be ready to put it out.
  - Drown it! Stir it! Feel it!
  - Drown it and stir it again! If it is too hot to touch, it is too hot to leave.
- Maintain your equipment, and avoid creating sparks.
  - Use spark arrestors.
  - Don't drag chains.
  - Don't park over dry grass.
- Do not leave a fire unattended.
- Before you build a campfire, know your legal and financial responsibilities if you cause a wildfire.
- Never forget that fire is a helpful tool, but it is also a dangerous tool. Learn more about wildland fire at [www.nps.gov/fire/wildland-fire/learning-center/fire-in-depth.cfm](http://www.nps.gov/fire/wildland-fire/learning-center/fire-in-depth.cfm).

### Personal Locator Beacon

Personal locator beacons (PLBs) provide a distress and alerting system for use in a life-and-death situation. A PLB is a small transmitter that sends out a personalized emergency distress signal to a monitored satellite system. When you buy a PLB, you must register it with the National Oceanic and Atmospheric Administration (NOAA). PLBs are a highly effective and internationally recognized way to summon help.

Hypothermia is often induced by cold, wet conditions, such as rain, snow, sleet, or immersion in water.

## Coping With Extreme Weather

Some of the most common and dangerous risks to hunters result from exposure to extreme weather.

### Hypothermia

Hypothermia occurs when your body loses heat faster than it can produce it, causing your core body temperature to fall. Hypothermia is often induced by cold, wet conditions, such as rain, snow, sleet, or immersion in water. However, hypothermia can occur at temperatures as high as 50° Fahrenheit.

Moisture from perspiration, humidity, and dew or rain on bushes and trees also can soak your clothing over time, putting you at risk in cold weather. Wet or damp clothes will draw heat out of your body more rapidly than cold air. Wind lowers your body temperature as it evaporates moisture from your body. Resting against cold surfaces will also draw heat from your body.

#### ■ Prevention of Hypothermia

- Hypothermia can be prevented by dressing properly, by avoiding potentially dangerous weather conditions, and by drying out as quickly as possible when you get wet.
- High-calorie foods, such as chocolate, peanuts, or raisins, provide quick energy that helps your body produce heat.

#### ■ Symptoms of Hypothermia

- Uncontrolled shivering—usually the first obvious symptom, but ceases as hypothermia progresses
- Slow, slurred speech
- Memory loss
- Irrational behavior, such as removing clothing
- Lack of body movement
- Sleepiness
- Unconsciousness, which could lead to death

**■ Treatment of Hypothermia**

- Find shelter for the victim.
- Remove wet clothing, and replace with dry clothing and other protective covering. If there is no dry clothing, use a fire to dry one layer at a time.
- Give warm liquids to rehydrate and rewarm, but never give the victim alcohol to drink. Quick-energy foods also produce inner body heat.
- For mild cases, use fire, blankets, or another person's body heat to warm the victim.
- In more advanced stages, rewarm the victim slowly by placing one or more people in body contact with the victim. Place canteens of hot water insulated with socks or towels on the groin, armpits, and sides of the neck of the victim.
- A victim at or near unconsciousness must be handled gently and not immersed in a warm bath or exposed to a large fire, which can lead to traumatic shock or death. Immediately contact emergency medical personnel to evacuate the victim to a hospital for treatment.

**Frostbite**

Frostbite occurs when tissue freezes. The best prevention is to avoid severe weather. If you're caught in extremely cold weather, pay attention to your head and extremities, such as fingers, toes, ears, and nose. Wear a face cover if the temperature is below 0° Fahrenheit. If you experience any symptom of frostbite, treat immediately.

**■ Symptoms of Frostbite**

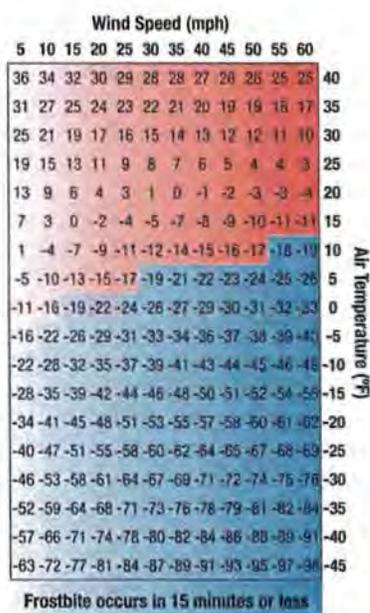

- Skin turns off-white.
- Prickly or tingling feeling occurs as ice crystals form.
- Pain may be present initially, then disappears as frostbite progresses.
- In severe cases, victim experiences a loss of feeling in the affected area.

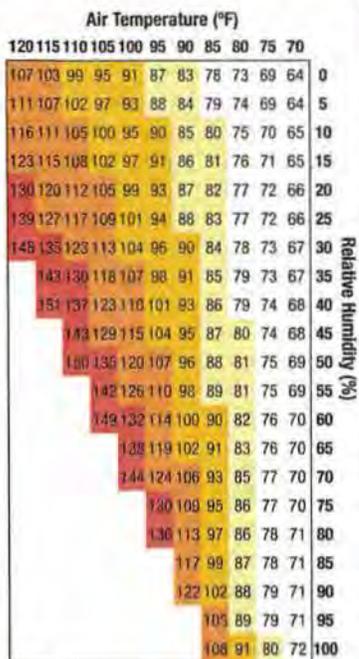

**■ Treatment of Frostbite**

- Warm the affected area with body heat, but avoid rubbing the area—it can damage tissue.
- Don't use hot water or other external heat sources, which could cause burns.
- Wrap with warm, dry clothing.
- Move to a warm shelter.
- Drink hot liquids.
- Get medical attention.

**Basics of Cold Survival Without Fire**

- Wear the proper type of clothing (no cotton).
- Stay dry. Use water-repellent outer garments.
- Build a shelter. The best is a nylon tarp shelter as it will protect you from wind, rain, and snow. Insulate the floor of the shelter with pine boughs, if available.
- Avoid contact with cold surfaces (the ground, rocks, or snow).
- Wrap your body in a thermal foil blanket. This will maintain a temperature of 60° F inside the wrap even when the outside temperature is -10° F.
- Limit your physical activity to conserve energy.

| Heat Index   | General Effect of Heat Index                                                                                                |
|--------------|-----------------------------------------------------------------------------------------------------------------------------|
| Light Yellow | Fatigue possible with prolonged exposure and/or physical activity                                                           |
| Yellow       | Sunstroke, heat cramps, or heat exhaustion possible with prolonged exposure and/or physical activity                        |
| Orange       | Sunstroke, heat cramps, or heat exhaustion likely and heat stroke possible with prolonged exposure and/or physical activity |
| Red          | Heat stroke highly likely with continued exposure                                                                           |

**Heat Exhaustion**

Heat exhaustion is the opposite of hypothermia—the core body temperature increases, usually as a result of hot and humid conditions, plus a lack of water.

■ **Prevention of Heat Exhaustion**

- Drink plenty of water.
- Take frequent breaks if you're hiking to or from your hunting spot, especially when carrying a large load.
- Dress in layers, and shed layers as physical activity increases.

■ **Symptoms of Heat Exhaustion**

- Pale and clammy skin
- Weakness
- Nausea
- Headache
- Muscle cramps

■ **Treatment of Heat Exhaustion**

- Move to a cooler place, and drink water.
- Fan to lower body temperature, but don't over-chill.

**Heat Stroke**

Heat stroke should be treated as a medical emergency—it can be fatal.

■ **Symptoms of Heat Stroke**

- Dry, hot, and flushed skin—dark or purple in color
- Dilated pupils
- Rapid, weak pulse
- Shallow breathing
- High temperature—may be in excess of 106° Fahrenheit

■ **Treatment of Heat Stroke**

- Wrap in a sheet and soak with cool—not cold—water.
- Fan, but don't over-chill.
- Get to a hospital immediately.

## Basic First Aid

Every hunter should take a first-aid course to learn what to do in case of injuries. Below are some common injuries that could occur while hunting.

### Bleeding

- Severe bleeding is a life-threatening medical emergency. The rapid loss of just two pints of blood can result in shock and loss of consciousness. A victim can bleed to death in a short time.
- **To stop bleeding:**
  - Apply direct pressure on the wound.
  - Cover with a sterile gauze pad—or the cleanest cloth readily available. Concerns about infection are secondary when it comes to preventing massive blood loss.
  - Press the pad firmly over the wound using the palm of your hand. Don't lift the pad to check the wound—it will only renew bleeding.
  - When a pad becomes soaked, put a fresh one directly over the old pad.
  - If the wound is on a limb and there's no fracture, raise the limb above the level of the heart. Gravity will reduce the blood pressure in the limb.
- Direct pressure and elevation are usually sufficient to stop bleeding. If profuse bleeding continues, try shutting off circulation in the artery that supplies blood to the injured limb.

### Broken Bones

- You can assume someone has a broken bone if pain lasts more than a few minutes, moving the injured area is difficult, or there is swelling in the injured area.
- If you have to transport the victim a long distance, it's best to immobilize the joint above and below the break to prevent further injury and relieve pain. Don't try to straighten the limb—splint it the way you found it.
- For a broken foot, do not remove the shoe. Tie a pillow or thick padding around the foot over the shoe.
- **To splint a broken leg:**
  - Place a blanket or some other type of thick padding between the legs.
  - Bind the injured leg to the uninjured one with strips of cloth.
  - Bind the legs together snugly at several places above and below the painful area.

### Burns

- First- and second-degree burns with closed blisters are best treated with cold water.
  - Immerse the burned area, or cover it with cloths that have been soaked in cold water—don't use ice water.
  - Avoid using butter or any type of greasy ointment because they can interfere with healing and cause an allergic reaction.
- Second- and third-degree burns with open blisters should be wrapped with a loose, dry dressing.

### Remember

Every hunter should take a first-aid course and a course in cardiopulmonary resuscitation (CPR) to be prepared to handle outdoor emergencies. A prepared hunter also will carry a complete first-aid kit.

### Moving an Injured Person

Moving a victim with a back or neck injury should be left to paramedics or other professionals because permanent damage could result from improper handling.

If a victim must be pulled to safety, move him or her lengthwise and head first, supporting the head and neck. Keep the spine in alignment.

### First-Aid Kit

- 2-inch-square sterile gauze pads
- 2-inch-wide gauze bandage roll
- 4-inch-square sterile gauze pads
- 42-inch-square cloth for triangular bandage or sling
- Antacid
- Antibiotic salve
- Aspirin
- Assorted adhesive dressings
- Assorted butterfly dressings
- Cell phone
- Cotton swabs
- Decongestant
- Eye dropper
- Hand sanitizer
- Instant chemical cold packs
- Instant chemical hot packs
- Latex gloves
- Moleskin
- Needles
- One-half percent hydrocortisone cream
- Petroleum jelly
- Roll of 1-inch adhesive tape
- Roll of 2-inch adhesive tape
- Safety pins
- Scissors
- Single-edged razor blades
- Sterile eyewash
- Thermometer
- Tweezers

### Carbon Monoxide Poisoning

- Improperly working camp stoves and lanterns, as well as wood and charcoal fires, can produce lethal carbon monoxide.
- Symptoms of carbon monoxide poisoning include headache, dizziness, weakness, and difficulty in breathing. The victim's skin can turn red, and he or she can lose consciousness.
- Get victims into fresh air immediately, and keep them lying quietly. Prompt medical care is essential.

### Chest Wounds

- A bullet striking the chest can cause a sucking chest wound—a deep, open wound of the chest wall that allows air into the chest cavity.
- All chest injuries are very serious and need immediate medical attention.
- **To respond immediately to a chest wound:**
  - Use the palm of your hand to cover the wound until a bandage is located.
  - Cover the wound with sterile gauze, a clean cloth, plastic, or foil.
  - Make sure the wound cover forms an airtight seal.
  - Hold the gauze in place with a bandage or tape.
  - If the victim has trouble breathing, remove the bandage, and replace it quickly.
  - Transport the victim to the hospital with the injured side down.

### Shock

- Shock can result from any serious injury. Symptoms include pale, cold, clammy skin; rapid pulse; shallow breathing; and fear in the victim.
- **To treat shock:**
  - Keep the victim lying on his or her back. In some cases, shock victims improve by raising their feet 8–10 inches.
  - If the victim is having trouble breathing, raise the victim's head and shoulders about 10 inches rather than raising the feet.
  - Maintain normal body temperature, and loosen any restrictive clothing.
  - Try to keep the victim calm and comfortable, and get medical help as quickly as possible.

### Snakebite

- Most doctors agree that the best response is to rush the victim to a hospital emergency room. Do not try to remove poison from snakebites. Cutting and suctioning the bite can do more harm than good.
- Fear and panic aggravate snakebite reactions. Calm the victim as much as possible. Keep the victim in a reclining position to slow the spread of venom. If the bite is on a limb, keep the wound at or below the level of the heart.

### Wildlife Conservation

- The concept of wildlife **conservation** has been around since ancient times. Restrictions on taking game are mentioned in the Bible, and the first official hunting season may have been established in the 13th century by Kublai Khan.

- Today, wildlife conservation has evolved into a science, but its goal remains essentially the same: to ensure the wise use and management of renewable resources. Given the right circumstances, the living organisms that we call renewable resources can replenish themselves indefinitely.
- **Preservation** is another means of protecting or saving a resource, such as by outlawing hunting of endangered species. Both preservation and conservation are necessary to sustain resources for future generations.

**conservation**

Wise use of natural resources, without wasting them

**preservation**

Saving natural resources, but with no consumptive use of them

**wildlife management**

Science and practice of maintaining wildlife populations and their habitats

**habitat**

Complete environmental requirements of an animal for survival: food, water, cover, space, and arrangement

**Causes of Threatened and Endangered Species**

Of the possible causes for a species becoming endangered or threatened, legal hunting equals 0%.

*Remember...*

No North American animal has become extinct because of sport hunting.

**Lessons in Wildlife Management**

- Initially, **wildlife management** in the United States was skewed toward protection. In the early 1900s, for example, wildlife managers attempted to preserve a mule deer herd in the remote Kaibab Plateau of Arizona. Hunting was banned, and predators were destroyed. The result was severe overpopulation, **habitat** destruction, and mass starvation.
- The Kaibab Plateau was opened to hunting in 1929, which brought the population into balance with the habitat. Today, a large, healthy herd of mule deer inhabits the area.
- Around the same period, a similar event took place in Pennsylvania. Deer had been brought into the state after the native population was thought to be extinct. With most of the predators eliminated and little hunting allowed, the herd grew out of control. As the food supply dwindled, thousands of white-tailed deer starved to death.
- From these hard lessons, wildlife managers learned that there is more to conservation than just protecting wildlife. They discovered that nature overproduces its game resources and that good wildlife management yields a surplus that can be harvested by hunters.

**The North American Model of Wildlife Conservation**

In the first two decades of the 20th century, sportsmen from the United States and Canada developed a set of guiding principles for managing wildlife resources. Called the North American Model of Wildlife Conservation, these seven principles provide the foundation for the success of fish and wildlife conservation in North America.

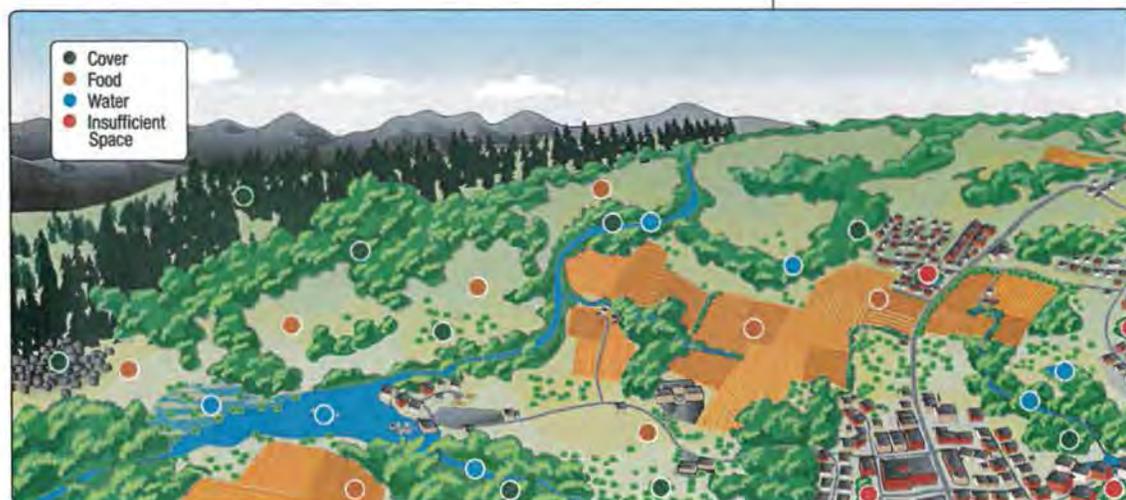

- Wildlife is public property. The government holds wildlife in trust for the benefit of all people.
- Wildlife cannot be slaughtered for commercial use. This policy eliminates trafficking in dead game animals.
- Wildlife is allocated by law. Every citizen in good standing—regardless of wealth, social standing, or land ownership—is allowed to participate in the harvest of fish and wildlife within guidelines set by lawmakers.
- Wildlife shall be taken by legal and ethical means, in the spirit of “fair chase,” and with good cause. Animals can be killed only for legitimate purposes—for food and fur, in self-defense, or for protection of property.
- Wildlife is an international resource. As such, hunting and fishing shall be managed cooperatively across state and province boundaries.
- Wildlife management, use, and conservation shall be based on sound scientific knowledge and principles.
- Hunting, fishing, and trapping shall be democratic. This gives all people—rich and poor alike—the opportunity to participate.

### Habitat Management

- The habitat is where a species fulfills its basic life needs: nourishment, procreation, and rest. If not managed properly, urban development can result in habitat loss, which presents the greatest threat to wildlife. Habitat management, the most essential aspect of wildlife management, safeguards the essential elements to meet these needs.
  - **Food and water** are necessary to all wildlife. Competition for these elements among species makes cover, space, and arrangement top priorities.
  - **Cover** protects animals from predators and the weather while they feed, breed, roost, nest, and travel. Cover ranges from thick weeds and brush to a few rocks piled together.
  - **Space** is necessary for adequate food among wildlife, territorial space for mating and nesting, and freedom from stress-related diseases.
  - The ideal **arrangement** places food, water, cover, and space in a small area so that animals minimize their energy use while fulfilling their basic needs for nourishment, procreation, and rest.
- **Edge effect** refers to the consequence of placing two contrasting ecosystems adjacent to one another. Most animals are located where food and cover meet, particularly near water. An example would be a river bottom, which offers many animals all their habitat needs along one corridor.

### Balancing Act

Habitats must be in balance in order to support wildlife. Remove a certain population of plants or animals from a community, and the community may not survive. This typically happens when urban development pushes into wildlife areas.

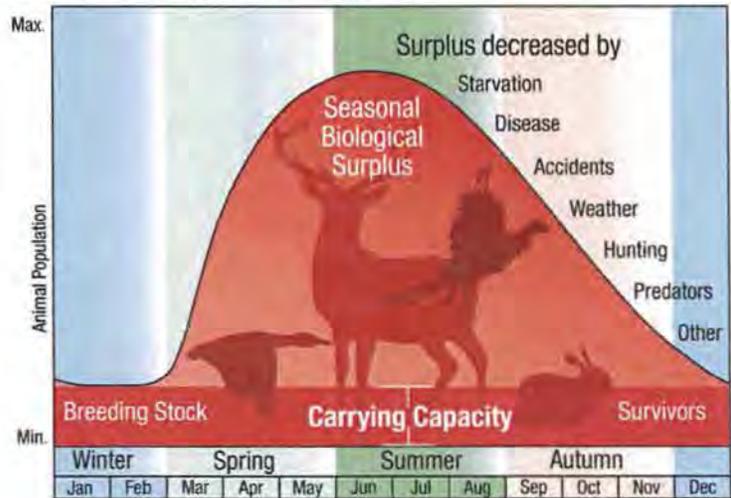

**carrying capacity**

The number of animals the habitat can support throughout the year without damage to the animals or to the habitat

**Carrying Capacity**

- The resources in any given habitat can support only a certain quantity of wildlife. As seasons change, food, water, or cover may be in short supply. **Carrying capacity** is the number of animals the habitat can support all year long. The carrying capacity of a certain tract of land can vary from year to year. It can be changed by nature or humans.
- **Factors that limit the potential production of wildlife include:**
  - Disease/parasites
  - Starvation
  - Predators
  - Pollution
  - Accidents
  - Old age
  - Hunting
- If the conditions are balanced, game animals will produce a surplus, which can be harvested on an annual, sustainable basis.

**The Hunter's Role in Wildlife Conservation**

- Because wildlife is a renewable resource with a surplus, hunters help control wildlife populations at a healthy balance for the habitat. Regulated hunting has never caused a wildlife population to become threatened or endangered.
- Hunting is an effective wildlife management tool. Hunters play an important role by providing information from the field that wildlife managers need.
- Funding from hunting licenses has helped many game and non-game species recover from dwindling populations.

**Hunters and Wildlife Conservation**

Hunters spend more time, money, and effort on wildlife conservation than any other group in society. In addition to participating in the harvest of surplus animals, hunters help sustain game populations by:

- Filling out questionnaires
- Participating in surveys
- Stopping at hunter check stations
- Providing samples from harvested animals
- Helping fund wildlife management through license fees

### Wildlife Management and Conservation Principles

- The wildlife manager's job is to maintain the number of animals in a habitat at or below the habitat's carrying capacity so that no damage is done to the animals or to their habitat.
- In a sense, a wildlife manager's task is similar to a rancher's. Just as a rancher limits the number of animals in a cattle herd to a level that the habitat can tolerate, wildlife managers try to keep the number of animals in balance with their habitat. In addition to looking at the total number of each species in a habitat, wildlife managers also monitor the breeding stock—the correct mix of adult and young animals needed to sustain a population.
- To manage a habitat, wildlife managers must consider historical trends, current habitat conditions, breeding population levels, long-term projections, and breeding success. With that knowledge, wildlife managers have a variety of practices at their disposal to keep habitats in balance.

### Wildlife Management Practices

- **Monitoring Wildlife Populations:** Wildlife managers continuously monitor the **birth rate** and **death rate** of various species and the condition of their habitat. This provides the data needed to set hunting regulations and determine whether other wildlife management practices are needed to conserve wildlife species.
- **Habitat Improvement:** As **succession** occurs, the change in habitat affects the type and number of wildlife the habitat can support. Wildlife managers may cut down or burn forested areas to promote new growth and slow down the process of succession. This practice enables them to increase the production of certain wildlife species.
- **Hunting Regulations:** Hunting regulations protect habitat and preserve animal populations. Regulations include setting daily and seasonal time limits, bag limits, and legal methods for taking wildlife.
- **Hunting:** Hunting is an effective wildlife management tool. Hunting practices help managers keep animal populations in balance with their habitats.
- **Predator Control:** In rare instances, **predators** must be reduced to enable some wildlife populations to establish stable populations, particularly threatened or endangered species.
- **Artificial Stocking:** Restocking of game animals has been successful in many parts of the nation. An example of restocking is trapping animals in areas where they are abundant and releasing them in areas of suitable habitat where they are not abundant.
- **Controlling or Preventing Disease and Its Spread:** Disease can have a devastating effect on wildlife. Avian cholera, for example, poses a serious threat, especially to ducks and geese on crowded wintering grounds. Once avian cholera occurs, managers must work to prevent its spread by gathering and burning waterfowl carcasses daily.
- **Management Funds/Programs:** In addition to Pittman–Robertson funds, many states have initiated programs that help finance conservation efforts.

### Beneficial Habitat Management Practices

- Brush pile creation
- Controlled burning
- Diking
- Ditching
- Food plots and planting
- Mechanical brush or grass control
- Nuisance plant or animal control
- Timber cutting
- Water holdings

Suppose each adult pair of waterfowl produces six young each year, and none of the factors that limit wildlife production are active. At the end of the fifth year, the initial pair will have grown to more than 2,000 waterfowl.

#### birth rate

The ratio of number of young born to females of a species to total population of that species over one year

#### death rate

The ratio of number of deaths in a species to total population of that species spanning one year

#### succession

Natural progression of vegetation and wildlife populations in an area; for example, as trees grow and form a canopy, shrubs and grasses will disappear along with the wildlife that use them as cover

#### predator

Animal that kills other animals for food

**Characteristics of Mammals**

- Mammals are warm-blooded animals with hair. Young are nourished with milk from the mother.
- Mammals can be carnivorous (meat-eating), herbivorous (plant-eating), or omnivorous (meat- and plant-eating).
- Mammals seek to regulate their temperature. Mammals in cold climates must keep warm, and mammals in hot climates must keep cool.
- Small mammals live shorter lives than large mammals, in general.
- Mammals vary in social behavior—some species live in groups, and other species are solitary except when mating or raising offspring.

**Wildlife Identification**

- Developing wildlife identification skills is a basic requirement for hunters. Knowing the key characteristics of animals will help you distinguish between similar species and between the male and female of the same species. Mistakes in identification can lead to illegal harvest of game or non-game animals. To identify game properly, you must learn to recognize key characteristics of the animal you're hunting.
- Identifying animals accurately is a skill that improves with experience. It can be difficult, especially when you must observe quickly or when the differences between animals are subtle. Sometimes the difference between animals in the same species is only the size of their ears or distinctive coloring. Scat and tracks provide additional clues for identifying species.
- Many resources are available for learning about wildlife. Good sources are books, television shows featuring hunting and nature topics, and websites, such as that of the U.S. Fish & Wildlife Service ([www.fws.gov](http://www.fws.gov)).
- It is common to categorize wild animals into groups that are similar in some way. For example:
  - Large mammals
  - Small mammals
  - Upland birds
  - Waterfowl and wetland birds
  - Birds of prey
- Within each of the groups, species may be "threatened" or "endangered." Some species are protected from hunting because their numbers are small, and they produce no surplus to harvest. "Threatened" and "endangered" species are protected by law.

**Large Mammals**

**Bighorn Sheep**

Courtesy of Texas Parks & Wildlife

Dark brown to gray coloring; white rump patch with short darker tail. Two heavy, tapering, curled brown horns on male; smaller and less curled on female.

**Habitat and Habits:** Lives in rocky, mountainous terrain, preferring bluffs or steep slopes. Herbivorous. Lives for 15 years. Male is polygamous; rut runs Nov.–Dec.; males engage in battles, butting heads. One small brown lamb typical.

**Black Bear**

Courtesy of Hollingsworth

Color varies from black or cinnamon to blond in west and black in east; muzzle usually brown; may have a small white patch on chest. Male much larger than female.

**Habitat and Habits:** Lives primarily in forest and swamps in east, in forest and wooded mountains in west. Omnivorous. Lives up to 30 years. Nocturnal, usually solitary, except mother with cubs. Mates Jun.–Jul. Typically two to three cubs, born in winter.

**Black-Tailed Deer**

© Tom J. Ulrich, used with permission

Smaller than mule deer with a less extensive range. Can be distinguished from mule deer by its blackish or brown coloring on top of tail.

**Habitat and Habits:** Lives in mixed open to wooded terrain along the Pacific Coast. Herbivorous. Lives up to 16 years. Male is polygamous; rut runs Oct.–Dec. One to two spotted fawns typical.

summer range     winter range     all-year range     not present

**Large Mammals**

**Elk (Wapiti)**

Courtesy of Texas Parks & Wildlife

Dark brown to tan coloring; yellowish rump patch and tail. Large, spreading antlers on male.

**Habitat and Habits:** Lives in mountainous terrain in summer and may move to lower elevations, wooded slopes in winter. Herbivorous.

Lives up to 15 years. Male is polygamous; rut runs Sept.–Nov. Usually one calf; spotted until 3 months of age.

**Gray Wolf (Timber Wolf)**

© Tom J. Ulrich, used with permission

Largest wild dog. Color varies from white (Arctic) to black, but usually a grizzled gray. Tails often black-tipped. Unlike coyote, holds tail straight out when running.

**Habitat and Habits:** Lives in north wilderness forests and tundra, and all habitats in other ranges except desert and high mountains. Carnivorous. Mainly nocturnal, but can be active anytime. One to eleven pups born Apr.–Jun.

**Moose**

© Tom J. Ulrich, used with permission

Dark brown coloring; legs are grayish. Large overhanging snout; dewlap on throat. Antlers on male are massive, palmate, and flat.

**Habitat and Habits:** Lives in forests with lakes and swamps. Herbivorous. Lives up to 20 years.

Male is polygamous; rut runs Sept.–Oct. Usually one calf; light reddish-brown with dark stripe down back.

**Large Mammals**

**Mountain Goat**

© Tom J. Ulrich, used with permission

Long white fur that turns yellowish in winter, black hooves and horns that curve slightly backward, and a distinctive beard.

**Habitat and Habits:** Usually found above timberline on rocky precipices or steep slopes; moves closer to the timberline during winter months.

Herbivorous. Lives up to 12 years. Movement limited to three to six miles. Male is polygamous; rut runs Nov.–Dec. Typically one to two kids; brown hairs along back.

**Mountain Lion (Cougar)**

© Tom J. Ulrich, used with permission

Large tan cat with long dark-tipped tail.

**Habitat and Habits:** Lives mainly in rugged mountains and sometimes in forests and swamplands with dens in caves, rock crevices, and other concealed locations. Carnivorous; makes a food “cache” out of uneaten prey. Mainly nocturnal. Typically two to four spotted cubs born throughout the year.

**Mule Deer**

© Tom J. Ulrich, used with permission

Reddish coloring in summer and blue-gray in winter. Rump patch is cream-colored with black tip; tail is cream-colored. Ears are larger than the white-tailed deer. Antlers branch equally.

**Habitat and Habits:** Lives in forests, desert shrubs, thickets of shrubs or trees, grasslands, plains, foothills, and river bottoms. Herbivorous. Lives up to 16 years. Male is polygamous; rut runs Oct.–Dec. One to two spotted fawns typical.

summer range    
  winter range    
  all-year range    
  not present

**Large Mammals**

**Pronghorn**

Courtesy of U.S. Fish & Wildlife Service

Reddish to tan coloring. Large white rump patch with short white tail; rump hair stands up when alerted or fleeing. Two broad white bands across neck. Male has large black jaw patch and larger, slightly curved horns with single prong growing forward.

**Habitat and Habits:** Lives in open prairies, plains, and brushlands. Herbivorous. Lives for 14 years. Male is polygamous; rut runs Aug.–Nov. Two fawns typical.

**White-Tailed Deer**

Courtesy of Texas Parks & Wildlife

Reddish-brown to blue-gray or tan coloring; underside of tail is white, producing a “flag” when raised off the rump. Antlers on males consist mainly of a main beam with tines growing from it.

**Habitat and Habits:** Lives in forests, swamps, open brushy areas, foothills, plains, and river bottoms. Herbivorous.

Movement limited from one to two miles. Lives up to 16 years. Male is polygamous; rut runs Oct.–Dec. One to two spotted fawns typical.

**Wild Pig (Feral Hog)**

Courtesy of Florida Fish & Wildlife Conservation Commission

Larger than the collared peccary and resembling the Eurasian wild boar or domestic pig. Can be mistaken for the black bear. Coarse, bristled hair. Usually black but can be gray,

dark brown, blond, white, or red; some are spotted or striped. Long snouts with four sharp tusks; upper tusks point up. Tail longer and straighter than domestic pig.

**Habitat and Habits:**

Lives primarily in swamps, river bottoms, brushlands, woodlands, and forests. Damages property. Omnivorous; eats crops and the food of livestock and wildlife. Lives up to 25 years. Mainly nocturnal but can be active any time. Four to twelve piglets in a litter; one or two litters per year.

**Small Mammals**

**American Badger**

Courtesy of Texas Parks & Wildlife

Medium-sized with short black legs and yellowish-gray hair. Medium white stripe over head to nose, white cheeks, and black patch in front of each ear. Long front claws for digging.

**Habitat and Habits:** Lives in open grasslands, deserts, and thickets of shrubs and trees.

Carnivorous; feeds mainly on small rodents. Lives 12 years. Breeds during Jul.–Aug.; two to five young; one litter per year.

**American Beaver**

© Tom J. Ulrich, used with permission

Large-sized, brown rodent; naked tail, scaly and paddle-shaped. Large chestnut-colored front teeth and webbed short feet for swimming.

**Habitat and Habits:** Lives in streams, rivers, ponds, or lakes. Constructs houses of sticks, logs, and mud or burrows in banks;

builds dams serving as habitat. Herbivorous. Lives up to 11 years. Two to four kits born Apr.–Jul.

**Black-Tailed Jackrabbit**

Courtesy of Texas Parks & Wildlife

Medium-sized with grayish-brown fur with large black-tipped ears and black streak on top of short tail.

**Habitat and Habits:** Lives in prairies, shrublands, and semi-arid deserts. Herbivorous. Two to four young per litter.

**Small Mammals**

**Bobcat**

Courtesy of R. V. Shiver

Medium-sized with reddish-spotted fur (grayer in winter) and black on top and at tip of very short tail. Light-spotted underside including face.

**Habitat and Habits:** Lives in thickets of shrubs or trees, swamplands, woodlands, rimrock, and rocky prairies. Carnivorous. Mainly

nocturnal and solitary. Two to four kittens in one litter can be born throughout the year.

**Common Gray Fox**

Courtesy of Texas Parks & Wildlife

Medium-sized with salt-and-pepper fur; face is white under gray and rust; rust color on neck, flanks, and legs; bushy tail topped with black stripe and tip.

**Habitat and Habits:** Lives in thickets of shrubs or trees, open woodlands, and rocky areas. Omnivorous. Mostly nocturnal. Three to seven

young born Apr.–May.

**Common Muskrat**

© Tom J. Ulrich, used with permission

Small-sized with brown to grayish-brown fur and grayish underside; black, scaly tail; partially-webbed hind feet.

**Habitat and Habits:** Lives in marshes, ponds, and streams. Omnivorous; feeds primarily on aquatic vegetation, but

also on frogs, and small fish on occasion. Two to six young per litter; two to three litters per year.

**Small Mammals**

**Common Raccoon**

Courtesy of Texas Parks & Wildlife

Medium-sized with dark and light mixed fur; distinctive black mask across white face; small-to medium-sized ears and ringed tail.

**Habitat and Habits:** Lives in woods, often near water; also found in urban areas. Omnivorous. Nocturnal. Two to seven young born Apr.–May.

**Coyote**

Courtesy of Texas Parks & Wildlife

Medium-sized with gray to reddish-gray fur, more red on legs, feet, and ears; dark-tipped tail; whitish belly and throat.

**Habitat and Habits:** Lives in prairies, open woodlands, shrublands, and a variety of habitats. Carnivorous. Mainly nocturnal, but

can be active anytime. Five to ten pups born Apr.–May.

**Fisher**

© Tom J. Ulrich, used with permission

Long-bodied, dark brown to nearly black with grayish head.

**Habitat and Habits:** Lives in mixed coniferous and hardwood forests. Good climbers and swimmers, at home on the ground or in trees.

Omnivorous, primarily carnivorous. One to six young born Mar.–Apr.

Small Mammals

Kit Fox (Swift Fox)

© Tom J. Ulrich, used with permission

Small- to medium-sized with pale gray to buff yellow body; whitish underside; large ears; black-tipped tail.

**Habitat and Habits:** Lives in open deserts or plains with low vegetation. Carnivorous; feeds primarily on small rodents and insects. Nocturnal. Four to seven pups born Feb.–Apr.

Long-Tailed Weasel

© Tom J. Ulrich, used with permission

Long-bodied and short-legged; brown back and white or yellow underside; long tail with black tip.

young born Apr.–May.

**Habitat and Habits:** Lives on all types of land, preferably near water. Carnivorous. Mostly nocturnal. Four to eight

Mink

© Tom J. Ulrich, used with permission

Medium-sized with dark brown fur and white chin patch; tail slightly bushy.

Four to ten young born Jan.–Mar.

**Habitat and Habits:** Lives along rivers, streams, marshes, ponds, and lakes. Carnivorous. Polygamous.

Small Mammals

Mountain Cottontail Rabbit (Nuttall's)

© Tom J. Ulrich, used with permission

Small-sized with brownish-gray fur; white cottontail and underside; rounded ears are shorter than those of the Eastern Cottontail and

Desert Cottontail and are furry on the insides with black tips. **Habitat and Habits:** Lives in wooded areas and in brushy areas with sagebrush. Herbivorous. Three to eight young per litter; 2–5 litters per year.

Pine Marten

© Tom J. Ulrich, used with permission

Dark brown to blond, with an orange or tan throat patch, dark legs, light-colored head, and long bushy tail.

Omnivorous, primarily carnivorous. Two to five young.

**Habitat and Habits:** Prefers coniferous forests or cedar swamps. Active late afternoon, early mornings, and at night.

Porcupine

© Tom J. Ulrich, used with permission

Large rodent, size of small dog; chunky body with short legs. Color varies from black to brownish-yellow. Sharp spines on rump and tail.

in fall; one young born May–Jun.

**Habitat and Habits:** Lives in forests or in brushy areas. Herbivorous; likes salt. Lives 7–8 years. Primarily nocturnal. Mates

**Small Mammals**

**Red Fox**

Courtesy of Hollingworth

Medium-sized, usually reddish-yellow but sometimes gray; can range from darker to lighter; bushy tail with white tip; usually dark legs and paws.

**Habitat and Habits:** Lives in mixed woodlands, farming areas, and open country. Carnivorous.

Three to seven young born Apr.–May.

**Ring-Tailed Cat**

Courtesy of Texas Parks & Wildlife

Small- to medium-sized with yellowish gray to darker fur; long whitish and blackish-brown ringed tail; small head and medium-sized ears.

**Habitat and Habits:** Lives in rocky ridges, cliffs, thickets of shrubs or trees, semi-deserts, and near water. Omnivorous. Lives up to eight years. Nocturnal. Three to four young born May–Jun.

**River Otter**

Courtesy of Texas Parks & Wildlife

Large-sized and weasel-like with brown fur and silvery face, chin, and underside; feet webbed; tail thick at base.

**Habitat and Habits:** Lives in aquatic habitats around marshes, ponds, and streams. Carnivorous; feeds on fish, frogs, crayfish, and crustacea. Lives more than 14 years. One to five young.

**Small Mammals**

**Spotted Skunk**

Courtesy of Texas Parks & Wildlife

Small-sized with black fur and white patches on forehead and under ears; four broken white stripes along neck, back, and sides; white-tipped tail.

**Habitat and Habits:** Lives in shrublands, farming areas, open wooded lots, prairies, and along streams. Carnivorous. Nocturnal. Like striped skunk, emits a strong scent in defense. Four to seven young born May–Jun.

**Squirrel**

Courtesy of Texas Parks & Wildlife

© Tom J. Ulrich, used with permission

© Tom J. Ulrich, used with permission

**Habitat and Habits:** Lives in open woodlands, forests, river bottoms, pine forests interspersed with hardwoods, and clearings. Herbivorous. Lives up to 15 years. Two to seven young per litter.

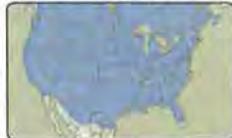

**Striped Skunk**

Courtesy of Texas Parks & Wildlife

Medium-sized with black fur and white stripes from top of head to nose.

**Habitat and Habits:** Lives in semi-open prairies, thickets of shrubs or trees, farming areas, and mixed woods near water. Omnivorous. Mostly nocturnal. Emits a strong scent in defense. Five to six young born in May.

summer range     winter range     all-year range     not present

**Small Mammals**

**Virginia Opossum**

Courtesy of Ed McCrea

Small- to medium-sized with gray to dark gray fur; whitish face; small ears; rat-like tail.

**Habitat and Habits:** Lives in woodland and farming areas; also found in urban areas. Omnivorous. Nocturnal. Up to 14 young

per litter several times a year. Young remain in mother's pouch for several months.

**Wolverine**

© Tom J. Ulrich, used with permission

Dark brown and bear-like with yellowish stripes starting at the shoulder and joining at the rump.

**Habitat and Habits:** Lives close to the timberline or on the tundra. Omnivorous, primarily carnivorous. Travels miles in search of food. Primarily nocturnal. Young born Feb.-Apr.

**Upland Birds**

**Upland Birds' Feet**

Grouse

Wild Turkey

**Upland Birds**

**American Crow**

© F. Eugene Hester, used with permission

Stocky, all-black bird with fan-shaped tail.

**Habitat and Habits:** Lives almost anywhere except deserts and pine forests. Makes a "caw-caw" call. Nests in trees; 4-6 green-colored eggs with brown spots.

**Band-Tailed Pigeon**

© Brian E. Small, used with permission

Dark gray with purple below; broad light band on end of square tail; white crescent on back of head; black tip on end of yellow bill.

**Habitat and Habits:** Lives in coniferous forests and oak or pine-oak woodlands. Makes an owl-like "whoo-hoo" call. Nests in trees; 1 white egg.

**California (Valley) Quail**

© Tom J. Ulrich, used with permission

Male is gray with a grayish-blue chest and scaled appearance below; black face outlined in white; brown crown; black topknot with 6 feathers. Female is brown with scaled appearance below; smaller black topknot.

**Habitat and Habits:** Lives in brush, in foothills, and in live oak canyons. Makes a loud "ka-kah-ko" call. Nests in depressions; 12-16 cream-colored eggs with golden brown spots.

summer range     winter range     all-year range     not present

**Upland Birds**

**Chukar**

© Tom J. Ulrich, used with permission

Light brown back with gray head and chest; white below; white face and neck outlined in black; black and white rust-colored stripes on sides; bright red on edge of tail.

**Habitat and Habits:**

Lives in rocky hills and canyons. Makes a "chuck-chuck-chuck" call. Nests in rocks or brush; 8-15 white eggs with brown spots.

**Dusky (Blue) Grouse**

Courtesy of Kharth Tran

© Tom J. Ulrich, used with permission

Male is gray with orange-yellow or red comb over eye; yellow skin on neck; gray band at end of dark tail. Female is brown with dark tail.

**Habitat and Habits:**

Lives in coastal rain forest and just below mountain timberline. Makes a

"whoop, whoop, whoop, whoop" call. Nests in shelter of stumps or rocks; 5-10 cream-colored eggs with brown spots.

**Gambel's Quail**

Courtesy of Hollingsworth

Pale gray; black face outlined in white; back of head is rust-colored; teardrop-shaped topknot. Female is brown with a buff-colored neck and smaller topknot.

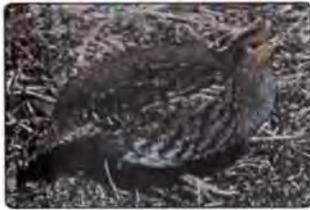

**Habitat and Habits:**

Lives in desert-like shrublands. Makes "coo-cut" and "chi-ca-co-coo" call.

**Upland Birds**

**Gray (Hungarian) Partridge**

© Alan G. Nelson, used with permission

Chicken-like with gray body; rust-colored face and throat; brown stripes on wings; rust-colored tail visible in flight. Male has large brown patch below.

**Habitat and Habits:**

Lives in open farmlands and in trees separating farms. Makes a hoarse "kee-uck" call; cackles rapidly when flushed. Nests in depressions hidden in vegetation; 10-20 olive-colored eggs.

**Mountain Quail**

© Brian E. Small, used with permission

Brown back with gray head, neck, and chest; rust-colored throat; rust-colored sides with white stripes; long, straight, black head feathers.

**Habitat and Habits:**

Lives in mountains and in brushy areas and thickets. Makes a loud "kyork"

or "wook" call. Nests in hidden depressions; 8-12 light red eggs.

**Mourning Dove**

Courtesy of Texas Parks & Wildlife

Light grayish-brown; lighter below; wings are darker; tail has tipped outer feathers.

**Habitat and Habits:**

Lives in dry uplands, grain fields, thickets of shrubs or trees, shrublands, and deserts. Unmated male makes a

"ooahoo-oo-oo-oo" sound. Breeding male and female make a short "ooahoo" call. Nests in trees; two white eggs.

summer range     winter range     all-year range     not present

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners, www.kalkomey.com

**Upland Birds**

**Ring-Necked Pheasant**

Courtesy of Texas Parks & Wildlife

Large, chicken-like bird. Male is gold-colored with white neck band; green and purple iridescent head; red wattle around eyes. Hen is dull brown with dark flecks on wings and back. Both have long tail feathers.

**Habitat and Habits:** Lives in farmlands near woods. Male makes "skwagock" cackle; female

makes "kia-kia" sound. Flies for short distances. Nests in grasses and shrubs; 10-12 brownish-green eggs.

**Rock Dove (Pigeon)**

© Tom J. Ulrich, used with permission

Most often dark gray head, iridescent neck, and dark bars on wings.

**Habitat and Habits:** Lives in cities, parks, bridges, and steep cliffs. Male and female make a "coo-coo" sound when breeding. Nests on building

ledges, rafters, and barn beams; 1-2 white eggs.

**Ruffed Grouse**

© Tom J. Ulrich, used with permission

Brown to grayish-brown, with black ruffs (sides of neck). Chicken-like in form with slight crest.

**Habitat and Habits:** Lives in forests with dense undergrowth and brushy areas. Alarm call is a sharp "quit-quit"; female makes soft clucking sound. Nests under brush; 9-12 buff-colored eggs.

**Upland Birds**

**Sage Grouse**

© Tom J. Ulrich, used with permission

Grayish-brown; black below. Male has long pointed tail and white breast; inflates yellowish-green air sacs during courtship.

**Habitat and Habits:** Lives in open country and sagebrush plains. Makes a cackling

sound; male makes bubbling sounds during courtship. Nests in depressions, usually under sagebrush; 6-9 olive-colored eggs with light brown spots.

**Spruce Grouse**

© Tom J. Ulrich, used with permission

Male has grayish-brown body; black throat and breast; red comb over eye. Female has brown body with black bars below.

**Habitat and Habits:** Lives in coniferous forests. Male makes a low-pitched

"krrrrk, krrrk, krrk" sound; female makes low clucking sound. Nests on ground; 8-11 buff-colored eggs, possibly with brown spots.

**White-Winged Dove**

Courtesy of Texas Parks & Wildlife

Light grayish-brown; white line along edge of closed wing.

**Habitat and Habits:** Lives in dry grasslands with shrubs and small trees. Makes a soft "who-cooks-for-you" call. Nests in tree branches; 1-4 creamy white eggs.

summer range     winter range     all-year range     not present

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners. www.kalkomey.com

**Upland Birds**

**Wetland Birds**

**Wild Turkey**

Courtesy of Texas Parks & Wildlife

Large, long-legged bird with dark, iridescent body; featherless, reddish head. Male is larger and more iridescent than female.

**Habitat and Habits:** Lives in open woodlands, brush country, thickets of shrubs or trees, river

bottoms, and hardwoods. Lives up to 12 years. Polygamous males. Mating call is a gobble; normal calls are clucks, putts, and purrs. Nests in depressions; 6–20 whitish eggs.

**American White Pelican**

Courtesy of John Foster

Large with white body; large orange bill and throat pouch. Immature has gray bill and pouch.

**Habitat and Habits:**

In summer found on marshes and lakes; in winter on coastal areas. Usually quiet. Nests in depressions near water; 1–3 white eggs.

**Brown Pelican**

Courtesy of Texas Parks & Wildlife

Large with grayish-brown body and dark bill and throat pouch.

**Habitat and Habits:**

Found exclusively on coastal areas year-round. Usually makes no sound. Nests in colonies on high ground in dirt; 2–4 white eggs.

**Wetland Birds**

**Great Blue Heron**

© Tom J. Ulrich, used with permission

Large grayish-blue heron with black areas on wings and top of head; white face; light yellow bill. Neck folded in flight.

**Habitat and Habits:** Found on lakes, rivers, ponds, marshes, and swamps. Makes a

squawking sound. Nests in colonies usually found in trees or shrubs, but sometimes on the ground; 3–7 aqua-colored eggs.

**Great Egret**

© Joe Kosak, used with permission

Large white heron with black legs and yellow bill.

**Habitat and Habits:** Found in marshy areas and on seashores. Makes a croaking or squawking sound. Nests in trees, bushes, or cattails; 1–6 aqua-colored eggs.

**Sandhill Crane**

© Don Baccus Photography, used with permission

Tall, grayish with some reddish coloring on back and red patch above bill. Immature is also gray, but more reddish and without red patch above bill.

**Habitat and Habits:**

In summer found on tundra, wetlands, prairies, and fields; in winter found in shallow ponds, marshes, and fields. Makes a low-pitched call. Nests in grasses in or near water; 1–3 pale green eggs.

**Wetland Birds**

**Wilson's (Common) Snipe**

© Tom J. Ulrich, used with permission

Long-billed, dark brown and black shorebird with white stripes on head and back. Outer tail feathers are white with black bars. Flies in zigzag pattern.

**Habitat and Habits:** Found in wet meadows and freshwater marshes; in winter also found in saltwater marshes. Makes a "scaip" call when flushed. Nests in depressions in marshy areas; 4 yellowish-olive-colored eggs with brown spots and brown circle at large end.

flushed. Nests in depressions in marshy areas; 4 yellowish-olive-colored eggs with brown spots and brown circle at large end.

**Birds of Prey**

**American Kestrel (Sparrow Hawk)**

© Tom J. Ulrich, used with permission

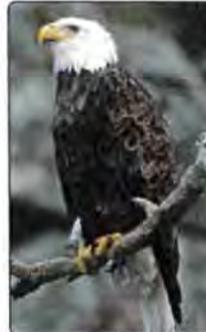

Small falcon. Male has rust-colored back and tail; blue-gray wings; white with dark spots below; black tip on tail. Female has rust-colored back, tail, and wings; white with dark spots below; narrow brown stripes on tail. Both have 2 black stripes on side of white face.

**Habitat and Habits:** Found in cities, on farms, and in open country. Makes a "killy-killy-killy" call. Nests in cavities; 3-7 white or pink eggs with dark blotches.

call. Nests in cavities; 3-7 white or pink eggs with dark blotches.

**Bald Eagle**

Courtesy of Gary Kramer

Large, dark bird with white head and tail; yellow bill. Immature: Brownish, speckled with more white under wings and belly.

**Habitat and Habits:** Found on lakes, rivers, and coastal areas. Makes a loud screech. Nests on cliffs or in trees; 1-3 pale blue eggs.

**Birds of Prey**

**Barred Owl**

© Tom J. Ulrich, used with permission

Large, grayish-brown with cross-barring on neck and chest, striping on belly; dark eyes; no ear tufts.

**Habitat and Habits:** Found in densely forested areas and wooded swamps. Makes "hoo-hoo-hoo" call, and also screams. Nests in tree cavities; 2-4 white eggs.

**Burrowing Owl**

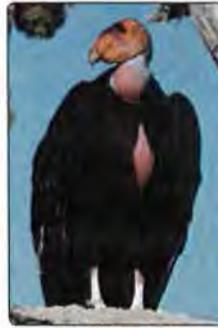

Courtesy of Texas Parks & Wildlife

Dark brown with white spots; lighter chest with dark spots; yellow eyes.

**Habitat and Habits:** Found in fields, grasslands, and deserts. Makes a "coo-coo" call. Nests in burrows deserted by small mammals; 6-11 white eggs.

**California Condor**

© Tom J. Ulrich, used with permission

Largest bird of prey in North America. Black with reddish head; white on underside of wings. Immature: Black head.

**Habitat and Habits:** Found in mountains and surrounding open country. Usually silent. Nests in inaccessible caves or cliff cavities; 1 white egg.

☐ summer range    ☐ winter range    ☐ all-year range    ☐ not present

**Birds of Prey**

**Common Barn Owl**

Courtesy of Texas Parks & Wildlife

Light brown with white heart-shaped face, dark eyes, and white breast.

**Habitat and Habits:** Found in fields, grasslands, deserts, and suburban areas. Makes a screeching call. Nests in abandoned buildings, tree hollows, and holes in ground; 4-7 white eggs.

**Ferruginous Hawk**

© Tom J. Ulrich, used with permission

Very large hawk that is reddish above and white below with reddish leg feathers and black tips on underside of wings.

**Habitat and Habits:**

Found on open land, grasslands, sagebrush plains, and badlands. Makes a loud "kree-e-ah" call. Nests in trees, on cliff

edges, or on the ground; 2-6 white eggs with brown spots or blotches.

**Golden Eagle**

Courtesy of Texas Parks & Wildlife

Large, dark bird. Immature: Dark with white patches under wings and on tail.

**Habitat and Habits:** Found in mountains, foothills, sagebrush plains, grasslands, and open woodlands. Mostly quiet. Nests on cliffs, on ground, or in trees; 1-4 speckled eggs.

**Birds of Prey**

**Great Horned Owl**

Courtesy of Texas Parks & Wildlife

Large, grayish with brown specks; yellow eyes and ear tufts.

**Habitat and Habits:** Found almost everywhere. Makes a rhythmic hooting call. Lives in nests abandoned by other birds and small mammals; 1-4 white eggs.

**Northern Harrier (Marsh Hawk)**

© Tom J. Ulrich, used with permission

Male is grayish-brown with lighter underside. Female is larger and brown with streaked underside. Both have white patch on rump.

**Habitat and Habits:** Found in fields, grasslands, and marshes. Generally quiet unless alarmed. Nests on ground; 3-9 pale blue eggs.

**Peregrine Falcon**

Courtesy of Luther Goldman

Large, speckled brown falcon with bluish-gray back, darker head, and lighter neck and chest. Immature: Streaked belly and breast.

**Habitat and Habits:** Found near cliffs, urban, and coastal areas. Makes a high-pitched "ki-ki-ki-ki" call. Nests in cliffs; 3-4 white eggs.

summer range     winter range     all-year range     not present

**Birds of Prey**

**Prairie Falcon**

Large speckled brown falcon with dark moustache-type lines down face; dark patches on underside of wings.

**Habitat and Habits:**  
Found on plains, grasslands, and barren mountains. Makes a "kree-kree-kree" call, usually near nest. Nests on cliff ledges; 2-7 white or pink-colored eggs with brown marks.

**Red-Tailed Hawk**

Most common hawk. Light phase: Brown with white chest and short, rust-colored tail. Dark phase: Dark brown with darker rust-colored tail. Immature: Lacks rust-colored tail.

**Habitat and Habits:**  
Found in deciduous forests and open country such as grasslands, plains, and farming areas. Makes a "keeeceer," "klooecek," or "chwirk" call. Nests in tall trees or on rocky ledges; 1-5 white eggs with dark spots.

**Rough-Legged Hawk**

Large long-winged hawk with dark band at end of tail. Light phase: White with dark areas on underside of wings; male's chest is darker than belly; female's belly is darker than chest. Dark phase: Dark with dark base feathers and tips on underside of gray wings;

male's tail has narrow white bands; female's tail is gray with dark band at tip. Immature: Gray band at end of tail.

**Habitat and Habits:**  
In summer found on the arctic tundra; in winter on open plains, farmland, and marshes. Makes a loud or soft whistling sound. Nests on cliffs or open tundra; 2-7 white eggs with brown and black spots.

**Birds of Prey**

**Spotted Owl**

Dark brown with white spots; chest white with brown stripes; dark eyes; no ear tufts.

**Habitat and Habits:**  
Found in coniferous forests and wooded canyons. Makes a hooting call followed by "hooo-ah." Nests in trees or rock crevices; 2-3 white eggs.

**Swainson's Hawk**

Brown with white throat, light brown chest, and white below; pale area on underside of long wings; dark brown tail with indistinct stripes. Rare dark phase: All dark with reddish area on underside of wings.

**Habitat and Habits:**  
Found in plains, grasslands, and prairies. Makes a whistling "kreee" sound. Nests in trees; 2-4 white eggs with dark spots.

**White-Tailed Kite (Black-Shouldered)**

Gray with white chest, head, and tail; black patch on top of wings ("shoulders"); white and black on underside of wings. Immature: Black wings; brown back; reddish chest; buff-colored stripe near tip of tail.

**Habitat and Habits:**  
Found in open country with scattered trees, fields, and grasslands. Makes a "keep-keep-keep" call. Nests in tall trees; 3-6 white eggs with brown spots.

**Waterfowl**

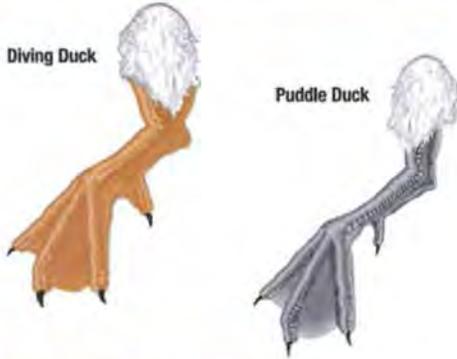

Waterfowl are warm-blooded animals that live on or near water, and include diving ducks and puddle ducks.

Puddle ducks are found primarily on the shallows of lakes, rivers, and freshwater marshes. Puddle ducks prefer to feed on or near the water's surface. They launch themselves directly upward when taking off.

Diving ducks inhabit large deep lakes and rivers, coastal bays, and inlets. Diving ducks obtain most of their food by diving. They must run across the water to build up speed to take off.

Eclipse plumage: Most ducks shed their body feathers twice each year. Nearly all drakes lose their bright plumage after mating, and for a few weeks resemble females. This hen-like appearance is called the eclipse plumage. The return to breeding coloration varies in species and individuals of each species. Blue-winged teal and shovelers may retain the eclipse plumage until well into the winter. Wing feathers are shed only once a year; wing colors are always the same.

**Waterfowl Feet**

**Puddle Duck**

surface-feeds on fresh, shallow marshes and ponds

**Diving Duck**

dives for food in deeper lakes and ponds, coastal bays, and inlets

**Goose or Swan**

**American Wigeon**

**Blue-Winged Teal**

Male is brown with white crown, green eye patch; green and white on wings visible in flight. Female is mottled brown with gray head. Both have pale blue bill.

**Habitat and Habits:** Found on lakes, marshes, and ponds. Makes quacking and whistling sounds. Nests in grasses near water; 9-11 cream eggs.

Male is brown- and buff-speckled; gray head with white crescent in front of eye; pale blue patch on wings. Female is brown-speckled; smaller pale blue patch on wings.

**Habitat and Habits:** In summer found on small lakes in open grasslands; in winter on marshes and coastal areas. Male peeps; female quacks. Nests in grasses near water; 6-15 white eggs.

summer range     winter range     all-year range     not present

 **Cinnamon Teal**

Male has reddish body, neck, and head with black coloring on top of head, wings, and back. Female is speckled brown with white around bill.

**Habitat and Habits:** Found on lakes and marshes. Male whistles; female quacks. Nests in grasses; 7-12 pinkish eggs.

Drake

Hen

 **Gadwall**

Male is gray with light brown head; white patch on back of wing; black rump. Female is mottled brown with white patch on back of wing.

**Habitat and Habits:** Found on open lakes and marshes. Male makes a whistle and "kack-kack." Nests on islands in colonies; 7-13 white eggs.

Drake

Hen

 **Eurasian Wigeon**

Male is gray with rust-colored head, pinkish chest, and buff-colored crown. Female is mottled brown. Both have large white patches on wings ("shoulders") and dull blue bill with black tip.

**Habitat and Habits:** Found on lakes, marshes, and ponds. Makes a one- or two-note whistling call; usually silent in the United States. Nests in grasses hidden in vegetation; 7-10 white eggs.

Drake

Hen

 **Greater Scaup**

Male has a light gray body and white sides with dark head, breast, and tail. Female is dark brown with white spots on either side of bill. Heads on both are shaped like a rounded rectangle. Light band on edge of wings extends almost to the tip.

**Habitat and Habits:** In summer found on lakes, bays, and ponds; in winter often found on salt water and coastal ponds. Male makes a "scaup, scaup" call; female is mostly silent. Nests in grasses on land or on islands away from shore; 8-12 pale green eggs.

Drake

Hen

**Green-Winged Teal**

Male is gray with white vertical bar on shoulder; rust head with green band. Female is speckled dark brown and white with dark band across eye.

**Habitat and Habits:** In summer found on ponds and lakes; in winter on rivers and coastal marshes. Male whistles; female quacks. Nests in grasses, not always near water; 7-15 pale green eggs.

**Mallard**

Most common duck. Male often called "greenhead."

**Habitat and Habits:** Found in deep lakes, slow rivers, ponds, and sometimes bays. Main wintering area is the lower Mississippi basin and along the Gulf Coast; many as far north as open waters permit. Female quacks loudly; male makes quiet "yeeb" or low "kwek." Nests near water; 8-10 greenish-white eggs.

**Northern Pintail**

Long-necked, slender duck with pointed tail. Male has dark brown head; white breast and neck; gray flanks and wings. Female has light brown-speckled body; light brown head and neck; gray bill.

**Habitat and Habits:** Summers on marshes and ponds; winters on coastal bays, lakes, and grain fields. Female quacks coarsely; male whistles. Nests near water; 6-12 light green eggs.

**Northern Shoveler**

Male has dark green head; white breast; rust-colored wings. Female is brown-flecked with pale blue on shoulders.

**Habitat and Habits:** Found on shallow lakes and ponds, and sometimes on brackish marshes. Male croaks; female quacks. Nests in grasses, not always near water; 6-14 pale green eggs.

summer range     winter range     all-year range     not present

**Wood Duck**

Male has colorful crested head and red eyes; iridescent greens, purples, and blues over entire body with white markings. Female is light brown-speckled and has white-ringed eyes.

**Habitat and Habits:** Found on swamps, ponds, and rivers near wooded areas. Male makes a "hoo-w-ett" call; female makes an "oo-ek." Nests in tree cavities; 10-15 dull whitish eggs.

**Bufflehead**

Male is mostly white with black back and white patch at back of head. Female is grayish with white patch below eye.

**Habitat and Habits:** In summer found on lakes and rivers near woods; in winter on lakes and coastal areas. Male is usually silent; female quacks. Nests in tree cavities; 8-10 buff eggs.

**Barrow's Goldeneye**

Male is white with black back and head; head actually purple in bright light; black and white wings; white spot in front of eye; black bill. Female is gray with brown head and white collar; usually a yellow-orange bill.

**Habitat and Habits:** In summer found on wooded lakes and rivers; in winter on coastal areas. Male grunts and croaks during courtship; female is mostly silent. Nests in hollow trees or rock crevices; 5-15 pale olive-colored eggs.

**Canvasback**

Male has white body; reddish head; black breast, bill, and tail. Female has gray body and brown head.

**Habitat and Habits:** In summer found on lakes and marshes; in winter on lakes and coastal waters. Male coos during breeding; female quacks. Nests in reeds and grasses; 7-12 greenish eggs.

summer range     winter range     all-year range     not present

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners. www.kalkomey.com

**Common Goldeneye**

Male has white flanks; black head and back with round white spot below eye. Female is gray with dark head and white collar.

**Habitat and Habits:** In summer found on lakes and marshes; in winter on lakes and coastal areas. Male makes a shrill whistle; female a low quack during breeding. Otherwise, usually quiet. Nests in tree cavities; 5-15 light green eggs.

**Common Merganser**

Male has dark green head; dark back; white neck and underside. Female is grayish-brown with reddish-brown head and white breast.

**Habitat and Habits:** In summer found on lakes and rivers near woods; in winter on freshwater lakes and ponds. Nests in tree cavities and rock crevices; 8-11 cream eggs.

**Hooded Merganser**

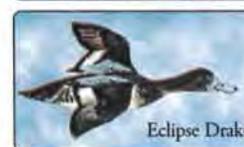

Male has dark crested head with white patches, brownish sides, and white breast. Female is gray with reddish-brown crest and lighter gray breast.

**Habitat and Habits:** In summer found on rivers and lakes in wooded areas; in winter on coastal areas. Male makes a croak-like sound; female a "gak." Nests in tree cavities; 6-18 white eggs.

**Lesser Scaup**

Male has white flanks with dark head, breast, and tail; speckled gray back. Female is dark brown with white spots on either side of bill base.

**Habitat and Habits:** In summer found on lakes and marshes; in winter on lakes and coastal areas. Male makes a purring call; females are mostly silent. Nests in grasses near water; 8-14 pale green eggs.

summer range     winter range     all-year range     not present

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners, www.kalkomey.com

**Red-Breasted Merganser**

Male has dark green head, white neck, rusty red breast, and gray sides. Female is gray-speckled with light red head and grayish neck.  
**Habitat and Habits:** In summer found on rivers and lakes; in winter on coastal areas. Nests under shrubs and logs; 5–11 greenish eggs.

**Redhead**

Male is gray with reddish head and black breast. Female is brown with darker brown back and crown.  
**Habitat and Habits:** Found on lakes and bays. Male makes “meow” sound or quacks; female makes a soft low call. Nests in rushes and grasses; 9–13 pale eggs.

**Ring-Necked Duck**

Male is black with pale gray sides. Female is brown with darker back and has white-ringed eyes.  
**Habitat and Habits:** In summer found on lakes and marshes; in winter on large lakes and coastal areas. Nests in grasses near water; 6–14 pale green eggs.

**Ruddy Duck**

Male is reddish-brown with black head and white cheek; in winter male looks similar to female. Female is brown; darker on head and back.  
**Habitat and Habits:** In summer found on lakes; in winter on coastal areas. Both sexes are mostly silent. Nests in grasses near water; 6–10 white eggs.

summer range     winter range     all-year range     not present

Copyright © 2017 Kalkomey Enterprises, LLC and its divisions and partners. www.kalkomey.com

**Canada Goose**

Both male and female are brownish-gray; black head and tail; white patch on cheek, breast, and underside.

**Habitat and Habits:**  
Found on lakes, marshes, fields, and parks. Male and female make honking call. Nests on water edges; 4-7 white eggs.

**Greater White-Fronted Goose**

Male and female are brown with white ring around base of bill; black bars on belly; orange bill and feet.

**Habitat and Habits:** In summer found on tundra; in winter on fields and marshes. Male and female make a high-pitched "kow-kow-kow-kow." Nests in depressions; 4-7 whitish eggs.

**Ross's Goose**

Small and white with a short pink bill; round head; black tips on wings.

**Habitat and Habits:**

In summer found on the arctic tundra; in winter on saltwater and freshwater marshes. Makes cackling and grunting sounds. Nests on islands in lakes or rivers; 3-5 light cream-colored eggs.

**Snow Goose**

Male and female are white with dark gray on underside of wings; short neck; large head.

**Habitat and Habits:** In summer found on tundra; in winter on fields and wetlands. Male and female both honk. Nests in grasses near water in colonies; 3-5 white eggs.

**Trumpeter Swan**

One of the largest, rarest North American waterfowl. All white with a black bill. (Swans, unlike snow geese, do not have black wingtips. Also, swans are much larger and have longer necks than snow geese.)

**Habitat and Habits:** Almost driven into extinction, their numbers have been increasing due to conservation efforts. Prefer bodies of water with dense vegetation. Found in marshes, lakes, and rivers mostly in the Northwest. Nests in bulrushes and beaver lodges; 4-6 whitish eggs.

**Tundra Swan**

Most common swan in western part of North America. All white; black bill with yellow spot in front of eye.

**Habitat and Habits:** In summer found on the arctic tundra; in winter on marshes, lakes, and ponds. Makes a "hoo-ho-hoo" or "kow-wow" call. Nests on mounds of grass on island or shore of tundra lake; 2-7 cream-colored eggs.

## Chapter Review Exercises

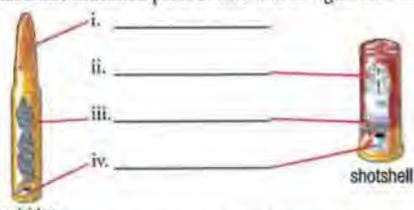

### Chapter 1

1. A primary objective of hunter education programs is to \_\_\_\_\_.
  - a. give every hunter the same degree of skill and knowledge.
  - b. ensure that everyone enjoys hunting and has an opportunity to hunt.
  - c. produce knowledgeable, responsible, and involved hunters.
  - d. none of the above.
2. Name three hunting-related projects for which the Federal Aid in Wildlife Restoration Act (Pittman–Robertson Act) provides funding.
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_
3. Which of these is *not* a source of hunter education funding?
  - a. State highway departments
  - b. State wildlife agencies
  - c. International Hunter Education Association
  - d. U.S. Fish & Wildlife Service
4. Name three behaviors of a responsible hunter.
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_

### Chapter 2

1. The three basic parts of a modern firearm are \_\_\_\_\_.
  - a. cartridge, stock, and barrel.
  - b. action, stock, and barrel.
  - c. stock, trigger, and action.
  - d. barrel, chamber, and muzzle.
2. Label the indicated parts of a bolt-action rifle:
 

3. The component in ammunition that ignites the gunpowder when struck by the firing pin is the \_\_\_\_\_.
4. The action of a firearm is made up of parts that \_\_\_\_\_.
  - a. block the trigger or hammer to prevent accidental firing.
  - b. hold ammunition before it's loaded into the chamber.
  - c. load, unload, fire, and eject the cartridge or shotshell.
  - d. serve as the handle of the firearm.
5. You should use only ammunition that exactly matches the caliber or gauge specifications marked on the \_\_\_\_\_ of your firearm.
6. Label the indicated parts of rifle and shotgun ammunition:
 

7. List six types of firearm actions.
 

|            |           |
|------------|-----------|
| i. _____   | iv. _____ |
| ii. _____  | v. _____  |
| iii. _____ | vi. _____ |
8. A safety is located around the receiver of the firearm and \_\_\_\_\_.
  - a. ensures that the firearm can never be accidentally fired.
  - b. is a device that blocks the action to prevent accidental firing.
  - c. is always located either inside or on the trigger guard.
  - d. all of the above.
9. The most accurate sight for a firearm is the \_\_\_\_\_.
10. The design feature that causes a bullet to spiral, which increases accuracy and distance, is called \_\_\_\_\_.
11. \_\_\_\_\_ is a measure related to the diameter of the bore and the size of the shotshell designed for that bore.
12. When referring to firearms, "caliber" is \_\_\_\_\_.
  - a. the length of the barrel of a rifle or handgun.
  - b. always expressed in hundredths of an inch.
  - c. used to describe the size of a rifle bore and the size of cartridges designed for different bores.
  - d. all of the above.
13. List the most common shotgun chokes.
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_
  - iv. \_\_\_\_\_
14. Steel shot is \_\_\_\_\_.
  - a. lighter than lead shot, reducing velocity and distance.
  - b. harder than lead, keeping the pattern tighter.
  - c. non-toxic, unlike lead shot, which can be toxic to waterfowl.
  - d. all of the above.
15. Knowing your firearm's range is critical—it allows you to \_\_\_\_\_.
  - a. determine whether or not you're able to make a clean kill.
  - b. make accurate shots at any distance as long as they are within your firearm's range.
  - c. know at what distances your firearm could cause injury.
  - d. both a. and c.
16. Why is it important to keep shotshells separated by size?
  - a. Once mixed, it is impossible to separate them accurately.
  - b. A smaller gauge shotshell can slip past the chamber of a larger gauge gun and result in serious personal injury.
  - c. A 12-gauge shotshell can be chambered into a 20-gauge shotgun and result in serious personal injury.
  - d. None of the above.
17. Firearms should be stored \_\_\_\_\_, in a \_\_\_\_\_ location, and separate from \_\_\_\_\_.

### Chapter 3

1. Good marksmanship is \_\_\_\_\_.
  - a. being able to hit your target at least 50% of the time.
  - b. correctly marking your target.
  - c. being a good sport if you miss your target.
  - d. hitting your target accurately and consistently.
2. Sight alignment is \_\_\_\_\_.

cartridge

shotshell

3. To help you steady the rifle when you're ready to shoot, draw a deep breath and \_\_\_\_\_.
4. The proper technique for pulling the trigger when firing a rifle is to \_\_\_\_\_.
  - a. pull the trigger quickly, moving only your finger.
  - b. squeeze the trigger slowly.
  - c. jerk the trigger.
  - d. snap the trigger.
5. Of the four standard rifle firing positions, the steadiest is the \_\_\_\_\_ position.
6. All handguns should be fired at \_\_\_\_\_ length.
7. If you are hunting small, fast, close birds, the best choke selection would be \_\_\_\_\_ or \_\_\_\_\_ choke.
8. When patterning a shotgun, the goal is to produce a pattern of pellets with even \_\_\_\_\_ and a sufficient percentage of the \_\_\_\_\_ within a 30-inch circle.
9. Which shotgun-shooting technique is best for a beginning hunter and is performed by pointing at a moving target, and then moving past it and firing?
  - a. snap-shooting
  - b. swing-through
  - c. sustained lead
  - d. patterning
10. A common error when hunting birds with a shotgun is \_\_\_\_\_.
  - a. tapping the trigger and not squeezing it slowly.
  - b. bringing the stock all the way up to the cheek without lowering the head.
  - c. lowering the head and cheek to the stock of the shotgun.
  - d. failing to align the sights on the target properly and then take a deep breath.

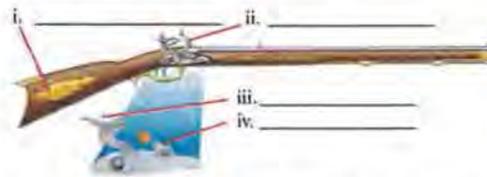

**Chapter 4**

1. It is critical that you know about the game you are hunting because \_\_\_\_\_.
  - a. only one sex of the game you're hunting may be legal.
  - b. there may be protected species in the same area that you need to avoid shooting.
  - c. it will increase your chance of success.
  - d. all of the above.
2. List the four basic characteristics used for animal identification.
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_
  - iv. \_\_\_\_\_
3. Unlike still hunting, stalking involves \_\_\_\_\_.
  - a. following signs left by the animal.
  - b. spending at least 10 times longer being still and observing than walking.
  - c. using a game call.
  - d. using dogs to locate the game.
4. \_\_\_\_\_ is a hunting technique that involves a group of hunters who are spread out and move to push the game toward other hunters waiting at the end of the cover.
5. A true sportsman not only strives to bring home the game he or she is seeking but also strives to \_\_\_\_\_ the quarry.
  - a. fire as soon as possible on
  - b. cripple
  - c. inflict the minimal amount of suffering on
  - d. none of the above

6. The most effective place to shoot an animal is the vital organs, which are the \_\_\_\_\_ and \_\_\_\_\_.
7. A \_\_\_\_\_ shot is the preferred shot for larger game animals, such as deer, elk, and bear.
  - a. broadside
  - b. rear-end
  - c. head-on
  - d. quartering-toward
8. When approaching a downed deer or other large animal, you should \_\_\_\_\_.
  - a. approach from the front and make noise to startle the animal.
  - b. pause above and behind the animal's head and watch the chest cavity for any movement.
  - c. approach from the front if the animal's eyes are closed.
  - d. any of the above are safe methods for approaching downed animals.
9. Once you are sure your quarry is dead, you should immediately \_\_\_\_\_ it and then begin field dressing.
10. \_\_\_\_\_ would *not* contribute to meat spoiling.
  - a. Cold
  - b. Dirt
  - c. Moisture
  - d. Heat

**Chapter 5**

1. Label the indicated parts of a muzzleloader:

2. \_\_\_\_\_ is the only type of powder that should be used in muzzleloaders.
3. An unsafe practice when using a muzzleloader is \_\_\_\_\_.
  - a. loading directly from a horn, flask, or other container.
  - b. wearing shooting glasses and ear protection when shooting.
  - c. waiting until you're ready to fire before you prime or cap a muzzleloader.
  - d. not smoking while shooting or loading.
4. How many charges should you load in a muzzleloader at a time?
  - a. one charge
  - b. two charges
  - c. three charges
  - d. four charges
5. Name the three common bow types.
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_
6. Label the indicated parts of an arrow:
  - i. \_\_\_\_\_
  - ii. \_\_\_\_\_
  - iii. \_\_\_\_\_
  - iv. \_\_\_\_\_

7. \_\_\_\_\_ arrowheads are used primarily for big game hunting.

8. \_\_\_\_\_ is the process of placing the arrow shaft on the bow's arrow rest and pulling the arrow back until the string snaps into the slot.
9. A good safety rule to follow when shooting a bow is \_\_\_\_\_.  
 a. always carry arrows in the nocked position when hunting.  
 b. use cracked arrows only for target practice.  
 c. release an arrow only when the path to the target and beyond is clear.  
 d. dry fire a bow as a strengthening exercise.

### Chapter 6

1. To minimize the risk of a firearm incident in the home, you should *never* \_\_\_\_\_.  
 a. point the muzzle in a safe direction.  
 b. keep your finger off the trigger when handling the firearm.  
 c. store the firearm and ammunition together.  
 d. check that the chamber and the magazine are empty.
2. Name the four main causes of hunting incidents.  
 i. \_\_\_\_\_  
 ii. \_\_\_\_\_  
 iii. \_\_\_\_\_  
 iv. \_\_\_\_\_
3. List the four primary rules of firearm safety.  
 i. \_\_\_\_\_  
 ii. \_\_\_\_\_  
 iii. \_\_\_\_\_  
 iv. \_\_\_\_\_
4. If three hunters are walking side by side, the hunter in the center should keep the gun pointed \_\_\_\_\_ or \_\_\_\_\_.
5. If three hunters are walking in single file, it is acceptable for the hunter in the middle to use the \_\_\_\_\_.  
 a. cradle carry.                      c. shoulder carry.  
 b. elbow or side carry.              d. trail carry.
6. If crossing a fence while hunting alone, you should \_\_\_\_\_.  
 a. cross the fence with the gun held under your arm.  
 b. place the gun on the other side of the fence with the muzzle pointed away from you, and then cross.  
 c. set the gun down, cross, and then pull the muzzle to you.  
 d. any of the above.
7. To load or unload a firearm safely, you should always \_\_\_\_\_.  
 a. put the safety on.  
 b. dry fire the firearm before loading and after unloading.  
 c. point the muzzle in a safe direction.  
 d. both a. and c.
8. \_\_\_\_\_ is *not* a safe way to transport a firearm.  
 a. Unloaded                              c. In a gun case  
 b. With the action open              d. Loaded and in a gun rack in the rear window
9. Hunters should be spaced \_\_\_\_\_ yards apart, and each should have a zone-of-fire of \_\_\_\_\_ degrees in front.
10. Consuming alcohol before or during a hunt does *not* \_\_\_\_\_.  
 a. impair your coordination.              c. affect your judgment.  
 b. increase your chance of a hunting incident.              d. enhance your chance of a successful hunt.

11. \_\_\_\_\_ should be worn at all times while climbing a tree and when on a tree stand.  
 a. Climbing boots                      c. A safety harness  
 b. Thick outerwear                      d. Camouflage outerwear
12. To get your firearm into an elevated stand safely, \_\_\_\_\_.  
 a. climb into the stand using the cradle carry.  
 b. climb into the stand and have your companion carefully toss your firearm up to you.  
 c. climb into the stand using the sling carry.  
 d. haul up the unloaded firearm after you have secured yourself in the stand.
13. When hunting from a boat, it is best to always wear a \_\_\_\_\_.  
 a. personal flotation device.              c. red jacket.  
 b. camouflage jacket.                      d. safety harness.
14. If you fall into cold water while hunting from a boat, you should try to \_\_\_\_\_ the boat.

### Chapter 7

1. Which of these was *not* a reason for establishing hunting laws?  
 a. to limit hunting methods and equipment  
 b. to limit the profits of sporting goods manufacturers  
 c. to set rules on how hunters take game  
 d. to limit harvesting and avoid hunting during nesting and mating seasons
2. According to Aldo Leopold, the "father of wildlife management," ethical behavior is \_\_\_\_\_.  
 a. killing game only for food.  
 b. harvesting as much game as the law allows.  
 c. doing the right thing when no one else is watching—even when doing the wrong thing is legal.  
 d. not killing any wildlife but preserving it for future generations.
3. A responsible and ethical hunter would *not* \_\_\_\_\_.  
 a. waste meat and usable parts of the game harvested.  
 b. strive for a quick, clean kill.  
 c. leave the land better than he or she found it.  
 d. abide by game laws and regulations.
4. Responsible hunters \_\_\_\_\_.  
 a. use land without asking permission from the landowner.  
 b. keep firearms out of sight when not hunting.  
 c. draw attention to themselves by wearing bloody or dirty hunting clothes when it's not necessary.  
 d. unnecessarily harass or frighten livestock.
5. There are five distinct stages of development that most hunters will experience. The most responsible and ethical is the \_\_\_\_\_ stage.
6. In the \_\_\_\_\_, success is determined by bagging the limit, which can cause hunters to take unsafe shots.  
 a. shooting stage                              c. trophy stage  
 b. limiting-out stage                              d. sportsman stage
7. To bring respect to the sport of hunting, hunters can \_\_\_\_\_.  
 a. transport bagged animals on the hood or roof of their automobiles.  
 b. share graphic accounts and photographs of their hunting experiences with non-hunters.  
 c. support organizations dedicated to improving habitat and management efforts.  
 d. consume alcohol and loudly proclaim their hunting prowess.

**Chapter 8**

- There are four areas to address when preparing for a hunting trip: be ready, know your location, prepare for safety, and \_\_\_\_\_.
- \_\_\_\_\_ would *not* be an essential part of a hunting plan that you would leave with a family member or friend.
  - The number of game you plan to harvest
  - Where and with whom you intend to hunt
  - Specific directions on the route to your destination
  - When you expect to return
- What color is the safest choice for clothing?
  - bright red
  - hunter green
  - fluorescent orange
  - camouflage
- If dressing for cold weather conditions, you should \_\_\_\_\_.
  - wear several layers of clothing instead of one heavy article of clothing.
  - wear cotton because it can provide warmth even when wet.
  - wear wool.
  - both a. and c.
- When laid on a map, a compass needle points to \_\_\_\_\_.
  - the direction you're heading.
  - true north.
  - magnetic north.
  - contour lines.
- List the five primary requirements for survival.
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
- The international emergency signal for distress is \_\_\_\_\_.
  - three fires evenly spaced.
  - three shots.
  - three blasts of a whistle.
  - any of the above.
- List four of the eight rules of survival that every hunter should follow.
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
- Hypothermia can be prevented by \_\_\_\_\_.
  - staying dry.
  - dressing properly.
  - exposing yourself to the wind to dry out if wet.
  - both a. and b.
- Heat exhaustion can be prevented by \_\_\_\_\_ water.
- Bleeding should be controlled by applying \_\_\_\_\_ to the wound.
  - butter
  - fresh air
  - direct pressure
  - cold water
- What should you do if a hunting companion breaks a leg and no medical help is readily available?
  - Try to straighten the limb and put a splint on it.
  - Splint the limb the way you found it without trying to straighten it.
  - Leave the leg exposed to the air to reduce the swelling.
  - Place a thick pad around it without splinting it.

**Chapter 9**

- Wildlife conservation ensures that \_\_\_\_\_.
  - hunting seasons established by Kublai Khan will continue.
  - no animals are ever harvested.
  - natural resources can be drawn on despite unwise use.
  - renewable resources can replenish themselves indefinitely.
- Wildlife preservation \_\_\_\_\_.
  - allows for the consumptive use of natural resources.
  - is a Biblical rule for saving natural resources.
  - saves natural resources but with no consumptive use of them.
  - allows hunting of endangered species.
- A habitat for wildlife must include \_\_\_\_\_.
  - space, arrangement, food, cover, and water.
  - brush and rocks, predators, water, and space.
  - space, vegetation, food, and resting and breeding places.
  - cover, predators, large area, arrangement, and food.
- The "carrying capacity" of a wildlife area is the \_\_\_\_\_.
- List four factors that can limit wildlife populations.
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
- Hunting is an effective wildlife conservation tool because \_\_\_\_\_.
  - funding from hunting licenses helps many game and non-game species recover from dwindling populations.
  - hunters play an important role by supplying wildlife managers with needed information from the field.
  - hunting contributes to threatened or endangered wildlife.
  - both a. and b.
- By continuously monitoring the birth rate and death rate of various species and the condition of their habitat, wildlife managers \_\_\_\_\_.
  - know how to set hunting regulations and can determine if other management practices are needed to conserve wildlife species.
  - know when to ignore hunting regulations they set earlier.
  - can obtain data to eliminate wildlife species.
  - both b. and c.
- Trapping and relocating animals is an example of the \_\_\_\_\_ wildlife management practice.
  - hunting
  - artificial stocking
  - setting bag limits and legal methods for taking wildlife
  - habitat improvement
- Some species are protected by law from being hunted because \_\_\_\_\_.
  - they are predators for a pest species.
  - they are migrating.
  - their habitat is gone.
  - their numbers are small.
- It is critical that hunters are able to identify wildlife correctly so that they don't mistakenly \_\_\_\_\_.
  - harvest illegal game animals or non-game animals.
  - confuse horns with antlers.
  - confuse cloven hooves with cud chewers.
  - confuse meat-eating animals with those that eat meat as well as plants.

## Regulations and Information Summary

**Note:** The following are abbreviated laws or regulations. For complete text go to: <https://www.wildlife.ca.gov/Regulations>.

### Shooting Hours

#### 310. Shooting Hours on Resident Small Game Mammals.

The shooting hours for all resident small game mammals shall be one-half hour before sunrise to one-half hour after sunset.

#### 310.5 Shooting Hours for Upland Game Birds.

The shooting hours for all upland game birds, except for pheasants and the spring wild turkey season, shall be from one-half hour before sunrise to sunset. The shooting hours for pheasants shall be from 8:00 a.m. to sunset. The shooting hours for the spring wild turkey season shall be from one-half hour before sunrise to 5:00 p.m.

#### 352. Shooting Hours on Big Game.

Hunting and shooting hours for big game, including but not limited to deer, antelope, elk, bear, and wild pig, shall be from one-half hour before sunrise to one-half hour after sunset.

#### 506. Shooting Hours (Migratory Game Birds).

The shooting hours for migratory game birds, including mourning doves, white-winged doves, band-tailed pigeons, American coots, common moorhens, common snipe (jacksnipe), and waterfowl for all of California shall be from one-half hour before sunrise to sunset.

**Exception:** In areas open to hunting on, over, or adjacent to the waters of Morro Bay, San Luis Obispo County, the shooting time shall be from 7:00 a.m. to sunset.

### General Information

**18. "Bag limit"** means the maximum limit, in number or amount, of birds, mammals, fish, reptiles, or amphibians that may lawfully be taken by any one person during a specified period of time.

**19. "Possession limit"** means the maximum, in number or amount, of birds, mammals, fish, reptiles, or amphibians that may be lawfully possessed by one person.

**2016.** It is unlawful to enter land for the purpose of discharging a firearm or taking or destroying a mammal or bird, including waterfowl, on that land without having first obtained written permission from the owner, the owner's agent, or the person in lawful possession of that land, if either of the following is true:

- (a) The land belongs to or is occupied by another person and is either under cultivation or enclosed by a fence.
- (b) There are signs of any size and wording forbidding trespass or hunting or both displayed along all exterior boundaries of the land, at intervals not less than three to the mile, and at all roads and trails entering the land, including land temporarily inundated by water flowing outside the established banks of a river, stream, slough, or other waterway, which fairly advise

a person about to enter the land that the use of the land is so restricted.

#### 351. Forked-Horn Buck, Antlerless, and Either-Sex Deer Defined.

- (a) **Forked-Horn Buck Defined.** For the purpose of these regulations a forked-horn buck is defined as a male deer having a branched antler on either side with the branch in the upper two-thirds of the antler. Eyeguards or other bony projections on the lower one-third of the antler shall not be considered as points or branches.
- (b) **Antlerless Deer Defined.** For the purpose of these regulations, antlerless deer are defined as female deer, fawns of either sex other than spotted fawns, and male deer with an unbranched antler on one or both sides that is not more than three inches in length.
- (c) **Either-Sex Deer Defined.** For the purpose of these regulations, either-sex deer are defined as antlerless deer as described in Section 351(b), or legal bucks that have two or more points in the upper two-thirds of either antler. Spike bucks may not be taken.

#### 353. Methods Authorized for Taking Big Game.

- (a) It shall be unlawful to take or attempt to take big game in violation of this section or Section 250.1. The take or attempted take of any big game (as defined by Section 350 of these regulations) with a firearm shall be in accordance with the use of nonlead projectiles and ammunition pursuant to Section 250.1 of these regulations.
- (b) **Definition.** For purposes of this section, a projectile is any bullet, ball, sabot, slug, buckshot, or other device which is expelled from a firearm through a barrel by force. The following definitions shall apply:
  - (1) A softnose or expanding projectile is a bullet designed to increase from its original diameter, commonly referred to as "mushrooming," and retain a significant part of its original weight upon impact with, or when passing through, the tissues of an animal.
  - (2) Projectiles commonly referred to as "frangible" bullets, designed to disintegrate upon impact with, or when passing through, the tissues of an animal are not softnose or expanding projectiles.
- (c) Except for the provisions of the following subsections (d) through (j), big game may only be taken by rifles using centerfire cartridges with softnose or expanding projectiles; bow and arrow (see Section 354 of these regulations for archery equipment regulations); or wheellock, matchlock, flintlock, or percussion type, including "in-line" muzzleloading rifles using black powder or equivalent black powder substitute, including pellets, with a single projectile loaded from the muzzle and at least .40 caliber in designation.
- (d) Shotguns capable of holding not more than three shells firing single slugs may be used for the taking of deer, bear, and wild pigs. In areas where the discharge of rifles or shotguns with slugs is prohibited by county ordinance, shotguns capable of holding not more than three shells firing size 0 or 00 buckshot may be used for the taking of deer only.
- (e) Pistols and revolvers using centerfire cartridges with softnose or expanding projectiles may be used to take deer, bear, and wild pigs.

- (f) Pistols and revolvers with minimum barrel lengths of 4 inches, using centerfire cartridges with softnose or expanding projectiles, may be used to take elk and bighorn sheep.
- (g) Except as provided in subsection 354(j) of these regulations, crossbows may be used to take deer and wild pigs only during the regular seasons.
- (h) Under the provisions of a muzzleloading rifle-only tag, hunters may only possess muzzleloading rifles as described in subsection (c) equipped with open or "peep" type sights only except as described in subsection (l).
- (i) Under the provisions of a muzzleloading rifle/archery tag, hunters may only possess muzzleloading rifles with sights as described in subsection (h); archery equipment as described in Section 354 of these regulations; or both. For purposes of this subsection, archery equipment does not include crossbows, except as provided in subsection 354(j) of these regulations.
- (j) Except as otherwise provided, while taking or attempting to take big game under the provisions of this section or Section 354 of these regulations, it is unlawful to use any device or devices which: 1) throw, cast, or project an artificial light or electronically alter or intensify a light source for the purpose of visibly enhancing an animal; or 2) throw, cast, or project an artificial light or electronically alter or intensify a light source for the purpose of providing a visible point of aim directly on an animal. Devices commonly referred to as "sniperscopes," night vision scopes or binoculars, or those utilizing infrared, heat-sensing, or other non-visible spectrum light technology used for the purpose of visibly enhancing an animal or providing a visible point of aim directly on an animal, are prohibited and may not be possessed while taking or attempting to take big game. Devices commonly referred to as laser rangefinders, "red-dot" scopes with self-illuminating reticles, and fiberoptic sights with self-illuminating sight or pins which do not throw, cast, or project a visible light onto an animal are permitted.

#### 354. Archery Equipment and Crossbow Regulations.

- (a) Bow, as used in these regulations, means any device consisting of a flexible material having a string connecting its two ends and used to propel an arrow held in a firing position by hand only. Bow includes long bow, recurve, or compound bow.
- (b) Crossbow, as used in these regulations, means any device consisting of a bow or cured latex band or other flexible material (commonly referred to as a linear bow) affixed to a stock, or any bow that utilizes any device attached directly or indirectly to the bow for the purpose of keeping a crossbow bolt, an arrow, or the string in a firing position. Except as provided in subsection 354(j), a crossbow is not archery equipment and cannot be used during the archery deer season.
- (c) For the taking of big game, hunting arrows and crossbow bolts with a broad head type blade which will not pass through a hole seven-eighths of an inch in diameter shall be used. Mechanical/retractable broad heads shall be measured in the open position. For the taking of migratory game birds, resident small game, furbearers, and nongame mammals and birds, any arrow or crossbow bolt may be used except as prohibited by subsection (d) below. Notwithstanding the general prohibition of the use of lights in Fish and Game Code section 2005, arrows or crossbow bolts with lighted nocks that do not emit a directional beam of light may be used.
- (d) No arrows or crossbow bolt with an explosive head or with any

substance which would tranquilize or poison any animal may be used. No arrows or crossbow bolt without flu-flu fletching may be used for the take of pheasants and migratory game birds, except for provisions of section 507(a)(2).

- (e) No arrow or crossbow bolt may be released from a bow or crossbow upon or across any highway, road, or other way open to vehicular traffic.
- (f) No bow or crossbow may be used which will not cast a legal hunting arrow, except flu-flu arrows, a horizontal distance of 130 yards.
- (g) Except as described in subsection 354(j), crossbows may not be used to take game birds and game mammals during archery seasons.
- (h) Except as provided in subsection 353(g) of these regulations and in Section 4370 of the Fish and Game Code, archers may not possess a firearm while hunting in the field during any archery season, or while hunting during a general season under the provisions of an archery-only tag.
- (i) No person may nock or fit the notch in the end of an arrow to a bowstring or crossbow string in a ready-to-fire position while in or on any vehicle.

## Deer Tag Laws and Regulations

**4336.** (a) The person to whom a deer tag has been issued shall carry the tag while hunting deer. Upon the killing of any deer, that person shall immediately fill out the tag completely, legibly, and permanently, and cut out or punch out and completely remove notches or punch holes for the month and date of the kill. The deer tag shall be immediately attached to the antlers of antlered deer or to the ear of any other deer and kept attached during the open season and for 15 days thereafter. The holder of the deer tag shall immediately, upon harvesting a deer, notify the department in a manner specified by the commission.

(b) Except as otherwise provided by this code or regulation adopted pursuant to this code, it is unlawful to possess any untagged deer.

**4340.** (a) Any person who is convicted of a violation of any provision of this code, or of any rule, regulation, or order made or adopted under this code, relating to deer, shall forfeit his or her deer tags, and no new deer tags shall be issued to that person during the then-current license year for hunting licenses.

(b) No person described in subdivision (a) may apply for deer tags for the following license year.

**4341.** Any person legally killing a deer in this state shall have the tag countersigned by a person employed in the department, a person designated for this purpose by the commission, or by a notary public, postmaster, postmistress, peace officer, or an officer authorized to administer oaths, before transporting such deer, except for the purpose of taking it to the nearest person authorized to countersign the tag, on the route being followed from the point where the deer is taken.

#### 708.5. Deer Tagging and Reporting Requirements.

- (a) Upon the killing of any deer the tag holder shall immediately fill out all portions of the tag including the report card completely, legibly, and permanently, and cut out or punch out and completely remove notches or punch holes for the month and date of the kill. The deer license tag shall be attached to the antlers of an antlered deer or to the ear of any other deer and kept

attached during the open season and for 15 days thereafter. Except as otherwise provided, possession of any untagged deer shall be a violation. (Refer to Fish and Game Code, Section 4336).

**It is unlawful to:**

- Fail to exhibit on the demand of a Wildlife Officer, all licenses, tags, fish, or wildlife taken or otherwise dealt with under the Fish and Game Code, and any device or apparatus designed to be, and capable of being, used to take fish or wildlife. FGC 2012.
- Take game birds, game mammals, or furbearing mammals except as permitted by regulations. CCR T14-250.
- Hunt big game without a valid hunting license and tag. FGC 1054.2.
- Hunt with a crossbow during archery season (except with a Disabled Archer Permit). CCR T14-354(g).
- Possess a firearm while hunting during archery season or while hunting during the general season with an archery only tag. CCR T14-354(h).
- Take spike buck. CCR T14-351(c).
- Pursue, drive, herd, or take any bird or mammal from any type of motor-driven air or land vehicles, motorboat, airboat, sailboat, or snowmobile, except when the motor is off and/or the sails furled and it is drifting, beached, moored, resting at anchor, or is being propelled by paddle, oar, or pole. CCR T14-251.
- Knowingly feed big game mammals. CCR T14-251.3.
- Take game birds and mammals within 400 yards of any baited area. This does not apply to the taking of game birds and mammals on or over standing crops, croplands, or grains found scattered solely as the result of normal agricultural operations or procedures. CCR T14-257.5.
- Take bears within 400 yards of any garbage dump or bait. CCR T14-365(e).
- Take more than two deer per license year. CCR T14-708.1.(a)(1).
- Intentionally discharge a firearm or release an arrow or crossbow bolt from a bow or crossbow upon or across any highway, road, or other way open to vehicular traffic. CCR T14-354(e), FGC 3004(b).
- Nock or fit the notch in the end of an arrow to a bowstring or crossbow string in a ready-to-fire position while in or on any vehicle. CCR T14-354(i).
- Hunt with a bow or crossbow that will not cast a legal hunting arrow, except flu-flu arrows, a horizontal distance of 130 yards. CCR T14-354(f).
- Hunt big game from one-half hour after sunset to one-half hour before sunrise. CCR T14-352.
- Use dogs for pursuit/take, or for dog training, during the archery seasons for deer or bear. CCR T14-265(a)(1).
- Use dogs to take bear, bobcat, elk, bighorn sheep, and antelope. CCR T14 265 (a)(2).
- Use an artificial light to assist in taking any game bird or game mammal. FGC 2005(a).
- To deposit, permit to pass into, or place where it can pass into the waters of the state, or to abandon, dispose of, or throw away, within 150 feet of the high water mark of the waters of the state, any cans, bottles, garbage, rubbish, or the viscera or carcass of any dead mammal, or the carcass of any dead bird. FGC 5652.
- Fail to send a complete written report to the Department within 48 hours after killing or wounding while hunting; any human being or domestic animal belonging to another, or after witnessing such killing or wounding. FGC 12151.5.
- Use of a shotgun larger than 10 gauge for the taking of any game bird or game mammal, or a shotgun capable of holding more than three shells in the magazine and chamber combined. FGC 2010; CCR T14-311 and 353(b).
- Possess a short-barreled shotgun (barrel less than 18 inches), or a short-barreled rifle (barrel less than 16 inches). PC 33215.
- Possess in any State Game Refuge any bird or mammal or part thereof, or any weapon capable of taking any bird or mammal. FGC 10500. However, possession of firearms or bows and arrows by persons traveling through game refuges on a public highway or other public thoroughfare or right of way is permitted when the firearms are taken apart or encased and unloaded, and the bows are unstrung. FGC 10506. (National Parks and Monuments have special regulations regarding the possession of weapons, game, and the running of hunting dogs. Check with federal officials before entering these areas.)
- Hunt any game bird or mammal without having the required licenses, tags, and/or stamps in possession. FGC 1054.2.
- Transfer, use, possess, or alter any license, tag, stamp, permit, application, or reservation. FGC 1052.
- Damage another's property or injure livestock while hunting. FGC 2004.
- Sell or barter game taken under the authority of a hunting license. FGC 3039.
- Possess a loaded rifle or shotgun in any vehicle or conveyance or its attachments which is standing on or along or is being driven on or along any public highway or other way open to the public.
- A rifle or shotgun shall be deemed to be loaded for the purposes of this section when there is an unexpended cartridge or shell in the firing chamber but not when the only cartridges or shells are in the magazine. FGC 2006
- The provisions of this section shall not apply to peace officers or members of the armed forces of this state or the United States, while on duty or going to or returning from duty. FGC 2006.

## LEAD EXPOSURE WARNING

Discharging firearms in poorly ventilated areas, cleaning firearms, or handling ammunition may result in exposure to lead, a substance known by the State of California to cause birth defects, reproductive harm, and other serious physical injury. It is important that steps be taken to avoid inhaling or ingesting lead particles.

Whether you are shooting, cleaning firearms, or handling ammunition, make certain there is adequate ventilation at all times to reduce the risk of inhalation. Care must also be taken to avoid ingestion. Never handle food or drink without first washing your hands, and keep food and drink away from the shooting environment. Do not smoke when exposed to lead. Most importantly, wash your hands thoroughly after exposure.

## A

**Action.** The moving parts of a firearm which loads, fires, and ejects a shell or cartridge. Types include bolt, lever, pump, break, and semi-automatic.

**Airgun.** A rifle or pistol operated by means of compressed air.

**Ammunition.** Any powder, shot, or bullets used in rifles, pistols, and shotguns.

**Antlers.** Bony structures that grow out of bone pads or lumps on the heads of animals in the deer family. Antlers are shed annually.

**Arrow.** Slender shaft, pointed at one end and feathered at the other, for shooting from a bow.

**Automatic.** Firearm which loads, fires, and ejects ammunition continuously with one trigger squeeze. Often confused with semi-automatic. Machine guns are true automatics.

## B

**Bag limit.** The maximum number of birds or mammals which may be lawfully taken by any one person during a specified period of time.

**Ballistics.** Modern science dealing with the speed, weight, gravitational influences, and impact of projectiles.

**Barrel.** A metal tube of a firearm through which a projectile passes.

**Birth rate.** The ratio of number of young born to females of a species to total population of that species over one year.

**Black powder.** Granulated powder made of charcoal, sulfur, and salt peter.

**Blaze Orange.** Fluorescent orange color which can easily be seen in the field.

**Blind.** A concealed hunting station in which hunters stand or sit, while waiting for game to come within range.

**Bolt.** Movable metal block that seals a cartridge into the chamber on some actions.

**Bolt handle.** Handle used to open a bolt action.

**Bore.** Inside of the firearm barrel through which the projectile travels when fired.

**Bow.** Device for shooting arrows. Types include longbow, recurve, and compound.

**Breech.** The rear end of a firearm barrel.

**Broadhead.** Razor sharp arrowhead used for hunting.

**Buck.** Male of the lesser deer species, such as blacktail, and of antelope.

**Buckshot.** A large lead pellet used for taking big game.

**Bull.** Male of the larger deer species, such as elk.

**Bullet.** A single projectile fired from a handgun or rifle. It is one part of a cartridge.

## C

**Caliber.** The diameter of the bore usually measured from land to opposite land.

**Camouflage.** Disguise, usually one which makes a hunter blend in with the background.

**Carnivore.** A meat-eating animal.

**Carrying capacity.** The number of animals the habitat can support throughout the year without damage to the animals or to the habitat.

**Carrying positions.** Safe ways in which to carry a firearm. Positions include double hand, cradle carry, elbow carry, shoulder carry, and sling carry.

**Cartridge.** Ammunition used in modern rifles and handguns; a case containing primer, gunpowder, and a bullet. A cartridge can be either rimfire or centerfire.

**Case.** The container which holds all the ammunition components together.

**Centerfire.** Ammunition in which the primer is located in the center of the casing base.

**Chamber.** Base of the barrel used to hold the cartridge or shotshell ready for shooting.

**Choke.** The degree of narrowing at the muzzle end of the shotgun barrel. Types include cylinder, improved cylinder, modified, and full.

**Cloven-hooved.** A hoof in two parts. Deer and elk are examples of cloven-hooved animals.

**Cock.** The hammer on a muzzle-loader. Also used to refer to the act of pulling the hammer back and placing a firearm in the ready-to-fire position.

**Cock feather.** The feather or fletch that is used to correctly align an arrow on a bow.

**Compass.** Instrument for showing direction, especially one consisting of a magnetic needle swinging freely on a pivot and pointing to the magnetic north.

**Conservation.** The wise use of natural resources, without wasting them.

**Core temperature.** The temperature of the human body's trunk/vital area.

**Cow.** Female of the elk species of deer.

**CPR.** Cardiopulmonary resuscitation. The art of restarting a person's heart and/or breathing once stopped.

**Crosshairs.** Crossed lines mounted in the optical system of a telescopic gun sight.

**Cylinder.** Part of a revolver in which cartridges are held.

## D

**Death rate.** The ratio of number of deaths in a species to total population of that species over one year.

**Declination.** The difference between true north and magnetic north.

**Dehydration.** Condition where the body has lost water content, and can result in death.

**Diameter.** A line passing through the center of a circle from one side to the other.

**Discharge.** The act of a firearm being fired or going off.

**Diving ducks.** Ducks that live on lakes and deep ponds and dive for food. These ducks run on the surface of the water to take off.

**Doe.** Female of the blacktail, mule deer, and antelope species.

**Dominant eye.** The eye that sends better information to the brain. Also called master eye.

**Draw.** To pull back the bowstring of a bow.

**Draw length.** The length of an archer's arms determines draw length and hence the length of his or her arrows.

**Draw weight.** The weight that is required to pull back a given bow.

## E

**Edge effect.** Habitat conditions of an area created when two types of habitat are brought together.

**Elevation.** The angular distance of the muzzle of a firearm above the horizontal.

**Endangered species.** Species that face extinction in all or a large part of its range, and are protected by law for this reason.

**Entrails.** Intestines and inner organs.

**Ethics.** Moral principles or values that distinguish between right and wrong.

**Evisceration.** The removal of the entrails of an animal.

**Extinct.** No longer in existence; having no living descendant.

## F

**FFFFg.** Extra fine grain priming powder, used in the flash pan on muzzleloaders.

**Fg.** Coarse powder used in muzzleloaders

**Field dressing.** Removing the entrails and skin from game to prevent its meat from spoiling.

**Firearm.** Mechanical device that uses pressure from a burning powder to force a projectile through and out of a metal tube.

**Firing pin.** A pin that strikes the primer of the cartridge, causing ignition.

**Flash pan.** A small pan attached to the side of a muzzleloader adjacent to the flash hole, which leads to the main charge within the muzzle-loader.

**Flask.** A container used to carry black powder.

**Fletching.** The plastic vanes or feathers on an arrow. The fletches perform the same task as does rifling in a firearm, in that they spin the arrow to achieve greater accuracy.

**Fluorescent orange.** See Blaze Orange.

**Flushing.** Using noise, movement, or dogs to cause game to become nervous and leave cover.

**Forearm, fore end, or forestock.** Front portion of the stock extending under the barrel in front of the receiver.

**Fouling.** The buildup of residue in the barrel of a firearm.

**Frizzen.** Piece of metal which creates spark when struck by the flint on a flintlock muzzleloader.

**Frostbite.** Tissue damage caused by freezing.

**Fur bearers.** Small mammals which are hunted or trapped primarily for their fur (pelts).

## G

**Game.** Wildlife that may be hunted or trapped for sport according to legal seasons and limits.

**Gauge.** Term used to designate bore diameter of a shotgun; gauge is the number of lead balls with diameters equal to the diameter of the bore that, when combined, weigh one pound.

**GPS.** Global Positioning System, a system of satellites in Earth orbit emitting signals by which receivers can determine their position.

**Grip.** The handle of a handgun.

**Grooves.** The spiral cuts in a rifled bore.

**Gunpowder.** A chemical mixture that burns very rapidly and converts to an expanding gas when ignited. One of the five components of ammunition.

## H

**Habitat.** Complete environmental requirements of an animal for survival: food, water, cover, and space.

**Half-cock.** Certain point between having the firearm hammer in a firing position and in a down position.

**Hammer.** The part of the action on a handgun which strikes the firing pin, causing the ignition of the ammunition. Also referred to as a cock on muzzleloaders.

**Handgun.** Short-barreled firearms. Also known as revolvers or pistols.

**Hangfire.** Delay in ignition.

**Heat exhaustion.** Condition that occurs when the core body temperature increases. The acute form of which is hyperthermia, the opposite of hypothermia.

**HELP.** Heat Escape Lessening Posture. Position used by a lone person in the water to increase survival time.

**Hen.** Female bird.

**Hen feather.** The remaining feathers on an arrow other than the cock feather.

**Horns.** Hard, compressed fibrous protein (hair) permanent projection that grows on the head of various hoofed animals. With the exception of the pronghorn, horns are not shed.

**Huddle.** Position used by two or more people in the water to increase survival time by retaining body heat.

**Hyperthermia.** A condition in which the body core temperature cannot emit enough heat and as such increases to dangerous levels, leading to death.

**Hypothermia.** Condition that occurs when the body loses heat faster than it can produce it. This condition if unchecked will result in death.

## I

**Ignition.** Setting fire to the projectile or powder charge.

**Illegal.** Against the law.

**Instinctive aiming.** The method of simply looking at the target with both eyes open and releasing the arrow when bow hunting.

**Intoxication.** Impairment caused by excessive consumption of alcohol and/or drugs.

## J

**Jag.** Device used on the end of a cleaning rod to hold cloth for the purpose of cleaning the bore on a firearm.

**Jake.** A young male turkey.

## L

**Lands.** The ridges of metal between the grooves in a rifled bore.

**Lead.** A heavy metal used in bullets or shot.

**Lead.** (pronounced *lead*.) The distance by which a shotgun shooter must aim in front of a moving target.

**Legacy.** Anything handed down from an ancestor.

**Legal.** Based upon or authorized by law.

**Limit.** The number of game a hunter is legally allowed to take during a season or day, as defined in the regulations.

**Load.** The amount of gunpowder in the cartridge or shotshell together with the weight of the bullet or shot charge.

**Lock.** Early types of ignition systems used in firearms, such as matchlock, wheel lock, flintlock, percussion cap lock.

## M

**Magazine.** Container on a repeating firearm which holds ammunition until it is ready to be fed into the chamber; usually tubes or boxes attached to the receiver.

**Mammals.** Animals with vertebrae (spines). Mammals produce live young. Female mammals feed their young with milk from mammary glands.

**Master eye.** See Dominant eye.

**Migrate.** To move from one region to another with the change in seasons.

**Misfire.** Failure to fire.

**Muzzle.** The end of the barrel through which the projectile exits.

**Muzzleloader.** Firearm that is loaded through the muzzle instead of the breech.

## N

**Nipple.** Part of the muzzleloader which holds the percussion cap.

**Nock.** A slotted plastic tip located on the rear end of an arrow, which attaches the arrow to the bow string.

**Nock point.** A device used to ensure that an arrow is attached to the bow string at the same point each time and hence ensures accuracy.

## O

**Omnivore.** An animal that eats both plants and meat.

**Orient.** To adjust the map and compass to accommodate for the difference between the grid north of the map and the magnetic north of the compass.

## P

**Parallax.** Optical bending of telescopic crosshairs in relation to the target.

**Parasite.** Unhealthy form of life feeding on and in wildlife, such as ticks, worms, or flukes.

**Pattern.** Density and scattering of shot pellets when fired. Patterns are affected by choke.

**Percussion cap.** Cap placed on the nipple under the hammer of a muzzleloader.

**PFD.** Personal Flotation Device. Used whenever one is in a boat. Also known as a life preserver.

**Poaching.** The illegal taking of game.

**Powder horn.** Container used to hold black powder.

**Predation.** Act of predators feeding on prey.

**Predator.** Animal that kills other animals for food.

**Preservation.** Saving natural resources, but with no consumptive use of them.

**Prey.** Animal hunted or killed for food by other animals.

**Primer.** Explosive cap used to ignite the powder when struck with a sharp blow from the firing pin.

**Privileges.** Exceptional benefits which are allowed to individuals or groups and can be controlled or withheld.

**Projectile.** An object propelled from a firearm, airgun, or bow.

**Protected species.** Species protected by law for any reason.

**Puddle ducks.** Ducks which favor shallow ponds and marshes, and which spring directly into the air to fly. They feed by dabbling or tipping.

## Q

**Quiver.** Container for arrows.

- R**
- Ramrod.** Rod used to push the ball and patch down the barrel of a muzzleloader.
- Rare species.** Species which are small in number and are protected by law for this reason.
- Receiver.** Metal housing for the working parts of the action.
- Recoil.** Real and perceived energy in a backward direction emitted by a firearm when fired. Also referred to as "kick."
- Regulations.** Laws or rules by which conduct is regulated.
- Renewable.** To make new or as if new again; bring back into good condition.
- Responsible.** Answering for or accounting for your actions.
- Reticle.** The aiming device inside a rifle or pistol scope (telescopic sight).
- Revolver.** Firearm (generally a handgun) having a rotating cylinder.
- Rifling.** Spiral grooves in the bore of the rifle barrel which cause the projectile to spin upon firing.
- Rights.** Powers to which a person has a just claim. Unlike a privilege, a right cannot be taken away from you.
- Rimfire.** Cartridge in which the primer is in the rim of the ammunition casing. Rimfire cartridges cannot be reloaded.
- S**
- Safety.** Mechanism that blocks the action to prevent the firearm from accidental firing.
- Season.** Part of the year during which game may be legally taken.
- Shaft.** The long spine of the arrow.
- Shell.** Container which holds shot and other parts of ammunition for shotguns.
- Shot.** Balls of metal used to fill a shotgun shell.
- Shotshell.** Ammunition used in modern shotguns; a case containing primer, gunpowder, wad, and a slug or shot.
- Shot pattern.** The spread of shot pellets.
- Sight.** Device used for aiming, usually by aligning a front and rear sight.
- Sighting-in.** A process of adjusting a firearm's sights to hit a target at a specific range.
- Smoothbore.** Firearm without rifling in the bore, usually a shotgun.
- Species.** A naturally existing population of similar organisms that are given a unique name to distinguish them from all other creatures.
- Spine.** Term used when referring to the stiffness of an arrow.
- Stamina.** Resistance to fatigue, illness, hardship; endurance.
- Stance.** The way a person or animal stands, specifically referring to placement of the feet.
- Starvation.** Lack of food, leading to death.
- Stock.** Handle of firearm.
- S.T.O.P.** Acronym used for Stop, Think, Observe, Plan, to remind one of the necessary thought process once one has determined that one is lost.
- Succession.** Natural progression of vegetation and wildlife populations in an area.
- Surplus game.** Numbers of wildlife above those needed for reproduction of the species.
- T**
- Target identification.** Making absolutely sure of the target before firing.
- Tarsal gland.** Gland on the rear legs of a buck that exudes odor such that other deer are aware of the presence of the buck.
- Telescopic sight.** Small telescope mounted on a firearm.
- Terrain.** Ground or a portion of ground.
- Tom.** Male of some species, for example, a turkey.
- Topographic map.** Type of map with grids, showing details such as roads, elevation, water sources, and types of vegetation.
- Trap.** Device used for trapping an animal.
- Trapping.** Catching animals, usually fur bearers or varmints, in traps.

**Tree stand.** Elevated platform mounted in a tree on which a hunter waits for game to come within range.

**Trigger.** Small lever that is pulled or squeezed to start the firing process.

**Trigger guard.** Piece that surrounds the trigger to protect it from being accidentally squeezed or bumped.

## U

**Unlawful.** Against the law.

**Upland birds.** Chicken-like birds with short rounded wings and heavy bodies, such as grouse, pheasant, quail, and turkeys.

## V

**Varmints.** Huntible animals regarded as troublesome.

**Velocity.** The speed of a projectile.

## W

**Wad.** Paper or plastic unit used between powder and shot in a shotshell.

**Warm-blooded.** Having warm blood and a natural constant internal body temperature. Mammals are warm-blooded.

**Waterfowl.** Water bird or birds, especially those that swim. Ducks and geese are examples.

**Wattles.** Fleshy growths beneath the head of a male (tom) turkey, on either side of the neck.

**Wildlife.** Non-domesticated animals, including mammals, birds, and fish, which may be hunted as controlled by law.

**Wildlife management.** Wise use and manipulation of renewable wildlife resources. A field of study based on scientific fact.

## Z

**Zone-of-fire.** The area in which a hunter may safely shoot, to be agreed upon before beginning a hunt.

POACHERS  
AND POLLUTERS BY CALLING,  
TOLL FREE, 24 HOURS A DAY —**

**1-888-334-2258**

***You may even be eligible for a reward!!!!***

California's secret witness program, CalTIP, is available 24 hours a day, seven days a week. If you witness or become aware of a poaching or polluting incident, please call the CalTIP hotline as soon as possible and be prepared to relay the following information:

***Location of violation***

***Date/time***

***Number of violators***

***Species of poaching***

***Vehicle make, color, and license number (including state of issue)***

Please state the activity you witnessed, direction of travel, description of suspect(s), name(s) if known, and firearm description. You may remain anonymous.

***Stay Safe: Do not approach poachers or put your life in danger!***

## Cal Pen Code § 26840

Deering's California Codes are current through Chapters 1-70, 72-136, 138-173, 175-185, 188-193, 195, 196, 198-200, 202-213, 215, and 217-222 of the 2019 Regular Session, including all legislation effective September 4, 2019 or earlier.

*Deering's California Codes Annotated > PENAL CODE (§§ 1 — 34370) > Part 6 Control of Deadly Weapons (Titles 1 — 4) > Title 4 Firearms (Divs. 1 — 12) > Division 6 Sale, Lease, or Transfer of Firearms (Chs. 1 — 6) > Chapter 2 Issuance, Forfeiture, and Conditions of License to Sell, Lease, or Transfer Firearms at Retail (Arts. 1 — 6) > Article 2 Grounds for Forfeiture of License (§§ 26800 — 26915)*

### § 26840. Presentation of safety certificate

(a) A dealer shall not deliver a firearm unless the person receiving the firearm presents to the dealer a valid firearm safety certificate, or, in the case of a handgun, an unexpired handgun safety certificate. The firearms dealer shall retain a photocopy of the firearm safety certificate as proof of compliance with this requirement.

(b) This section shall become operative on January 1, 2015.

### History

Added [Stats 2013 ch 761 § 4 \(SB 683\)](#), effective January 1, 2014, operative January 1, 2015.

Annotations

## STUDY GUIDE

Office of the Attorney General  
California Department of Justice  
Bureau of Firearms  
January 2019

**Exhibit 4**  
**0134**

# P r e f a c e

Firearm safety is the law in California. Every firearm owner should understand and follow firearm safety practices, have a basic familiarity with the operation and handling of their firearm, and be fully aware of the responsibility of firearm ownership. Pursuant to Penal Code section 26840, any person who acquires a firearm must have a Firearm Safety Certificate (FSC), unless they are statutorily exempt from the FSC requirement. To obtain an FSC, a person must pass a Department of Justice (DOJ) written test on firearm safety. The test is administered by DOJ Certified Instructors, who are often located at firearms dealerships.

This study guide provides the basic firearm safety information necessary to pass the test. Following the firearm safety information in this guide will help reduce the potential for accidental deaths and injuries, particularly those involving children, caused by the unsafe handling and storing of firearms.

In addition to safety information, this study guide provides a general summary of the state laws that govern the sale and use of firearms. Finally, there is a glossary that defines the more technical terms used in the study guide.

Simply reading this study guide will not make you a safe firearm owner. To be a safe firearm owner you must practice the firearm safety procedures described in the following pages.

# Introduction

## WHY FIREARM SAFETY?

Firearm safety is important to all Californians. No one wants firearm accidents to happen yet they do every day. Firearm accidents involving children are especially disturbing. Studies show that easy access to loaded firearms in homes is often a contributing factor in accidental shootings of children.

While there may be no way to guarantee safety, firearm owners can take steps to help prevent many accidental shootings. This study guide will give you valuable information to help you become a safe and responsible firearm owner.

## FIREARM SAFETY IS THE LAW

The intent of the California Legislature in enacting the FSC law is to ensure that persons who obtain firearms have a basic familiarity with those firearms, including but not limited to, the safe handling and storage of those firearms. It is not the intent of the Legislature to require an FSC for the mere possession of a firearm. (Pen. Code, § 31610.)

Firearms must be handled responsibly and securely stored to prevent access by children and other unauthorized users. California has strict laws pertaining to firearms, and you can be fined or imprisoned if you fail to comply with them. Visit the Web site of the California Attorney General at <https://oag.ca.gov/firearms> for information on firearms laws applicable to you and how you can comply.

## FIREARM SAFETY CERTIFICATE INFORMATION

To obtain an FSC, you must take the DOJ written test and receive a passing score of at least 75% (the information needed to pass the test is contained in this study guide).

An FSC is valid for five years from the date of issuance. If your FSC is lost, stolen or destroyed, a replacement may be obtained from the DOJ Certified Instructor who issued your original FSC.

Pursuant to Penal Code section 31700, there are exemptions from the FSC requirement including, but not limited to:

- Federal Firearms License Collectors with a Certificate of Eligibility (for Curio and Relic transactions only);
- Active, active reserve, or honorably retired military;

- Carry Concealed Weapon (CCW) permit holders; and
- Persons who have completed Peace Officers Standards and Training (POST)(Pen. Code, § 832) firearms training.

For a complete list of exemptions visit the DOJ website at <http://oag.ca.gov/firearms> or contact the DOJ Bureau of Firearms, General Information Line at (916) 227-7527. You are required to provide documentation of your exemption to the firearms dealer each time you acquire a firearm.

## CAUSES OF FIREARM ACCIDENTS

Ignorance and carelessness are major causes of firearm accidents. To help reduce the number of firearm accidents, it is critical that gun safety rules are understood and practiced at all times by every family member.

Following are some examples of firearm accidents that could have been avoided if the basic gun safety rules had been practiced:

*Two young children playing in their home found a loaded handgun with the magazine removed on a bedside table. One child was injured when the handgun was fired.*

*A handgun owner assumed a firearm was unloaded. While cleaning it, he accidentally fired the handgun, causing injury to himself.*

*A hunter was walking with his finger loosely on the trigger of his rifle. Distracted by a sudden noise behind him, he turned and accidentally fired, injuring his buddy walking nearby.*

Knowing the safety rules and applying them most of the time is not enough. Firearm accidents can happen even to a person who knows the safety rules, but is careless in following them. For example, you may think you can leave your loaded firearm out on the kitchen table just for a moment while you go outside to turn off the garden hose. Although you know you should never leave a firearm where a child may find it, you carelessly think it will be alright “just this once.”

**REMEMBER:** Ignorance and carelessness can result in firearm accidents. Basic gun safety rules must be applied ALL OF THE TIME.

## PREVENTING MISUSE TRAGEDIES

It’s a fact that many depressed, intoxicated, substance abusive, or enraged individuals commit suicide every year with firearms, usually handguns. The developmental issues associated with adolescence make teenagers particularly susceptible to this unfortunate outcome. Safe and responsible firearm storage, particularly when a member of the household is experiencing one of the aforementioned conditions, can help prevent tragedies.

## BECOMING A SAFE AND RESPONSIBLE FIREARM OWNER

Becoming a safe firearm owner is similar to becoming a safe driver—you combine a good working knowledge of the equipment, the basic skills of operation, and a mind set dedicated to safe and responsible usage and storage.

This means you must have:

- Respect for the danger of firearms;
- An awareness and concern about the possible safety hazards related to firearms; and
- A desire to learn and practice safe conduct with firearms.

Developing a mind set for safe and responsible firearm usage and storage is the first step in actually becoming a responsible firearm owner. The next step is building your knowledge of firearms and gun safety, which you can do by reading and understanding the information in this study guide. The final steps are becoming skillful in handling firearms and using the safety knowledge that you have acquired.

# CHAPTER 1

## Gun Safety Rules

This chapter will introduce you to specific gun safety rules to give you a better understanding of firearm safety.

### THE SIX BASIC GUN SAFETY RULES

There are six basic gun safety rules for gun owners to understand and practice at all times:

1. Treat all guns as if they are loaded.
2. Keep the gun pointed in the safest possible direction.
3. Keep your finger off the trigger until you are ready to shoot.
4. Know your target, its surroundings, and beyond.
5. Know how to properly operate your gun.
6. Store your gun safely and securely to prevent unauthorized use. Guns and ammunition should be stored separately.

#### 1. Treat all guns as if they are loaded.

- Always assume that a gun is loaded even if you think it is unloaded.
- Every time a gun is handled for any reason, check to see that it is unloaded. For specific instructions on how to unload a firearm, see Chapter 3.
- If you are unable to check a gun to see if it is unloaded, leave it alone and seek help from someone more knowledgeable about guns.

#### 2. Keep the gun pointed in the safest possible direction.

- Always be aware of where the gun is pointing. A “safe direction” is one where an accidental discharge of the gun will not cause injury or damage.
- Only point a gun at an object that you intend to shoot.
- Never point a gun toward yourself or another person.

#### 3. Keep your finger off the trigger until you are ready to shoot.

- Always keep your finger off the trigger and outside the trigger guard until you are ready to shoot.

- Even though it may be comfortable to rest your finger on the trigger, it is unsafe.
- If you are moving around with your finger on the trigger and stumble or fall, you could inadvertently pull the trigger.
- Sudden loud noises or movements can result in an accidental discharge because there is a natural tendency to tighten the muscles when startled.
- The trigger is for firing, the handle is for handling.

#### **4. Know your target, its surroundings, and beyond.**

- Check that the areas in front of and behind your target are safe before shooting.
- Be aware that if the bullet misses or completely passes through the target, it could strike a person or object.
- Identify the target and make sure it is what you intend to shoot. If you are in doubt, DON'T SHOOT!
- Never fire at a target that is only a movement, color, sound or unidentifiable shape.
- Be aware of all the people around you before you shoot.

#### **5. Know how to properly operate your gun.**

- It is important to become thoroughly familiar with your gun. You should know its mechanical characteristics including how to properly load, unload and clear a malfunction from your gun.
- Obviously, not all guns are mechanically the same. Never assume that what applies to one make or model is exactly applicable to another.
- You should direct questions regarding the operation of your gun to your firearms dealer, or contact the manufacturer directly.

#### **6. Store your gun safely and securely to prevent unauthorized use. Guns and ammunition should be stored separately.**

- Even when the gun is not in your hands, you must still think of safety.
- Use a California-approved firearms safety device on the gun, such as a trigger lock or cable lock, so it cannot be fired.
- Store your gun unloaded in a locked container, such as a California-approved lock box or a gun safe.
- Store your gun in a different location than the ammunition.
- For maximum safety you should use both a locking device and a storage container.

## ADDITIONAL SAFETY POINTS

The six basic safety rules are the foundational rules for gun safety. However, there are additional safety points which must not be overlooked:

- Never handle a gun when you are in an emotional state such as anger or depression. Your judgment may be impaired.
- Never shoot a gun in celebration (such as on the Fourth of July or New Year's Eve, for example). Not only is this unsafe, but it is generally illegal. A bullet fired into the air can return to the ground with enough speed to cause injury or death.
- Do not shoot at water, flat or hard surfaces. The bullet can ricochet and hit someone or something other than the target.
- Hand your gun to someone only after you verify that it is unloaded and the cylinder or action is open. Take a gun from someone only after you verify that it is unloaded and the cylinder or action is open.
- Guns, alcohol and drugs don't mix. Alcohol and drugs can negatively affect judgment as well as physical coordination. Alcohol and any other substances are likely to impair normal mental or physical functions and should not be used before or while handling guns. Avoid handling and using your gun when you are taking medications that cause drowsiness or include a warning to not operate machinery while taking the drug.
- The loud noise from a fired gun can cause hearing damage, and the debris and hot gas that is often emitted can result in eye injury. Always wear ear and eye protection when shooting a gun.

## CHAPTER 1: Self Test

1. A safe practice when handling a gun is to rest your finger on the outside of the trigger guard or along the side of the gun until you are ready to shoot. (page 4)  
True    False
2. To “know your target, its surroundings and beyond,” you must consider that if the bullet misses or completely passes through the target, it could strike a person or object. (page 5)  
True    False
3. Drinking alcohol while handling firearms is safe if your blood alcohol level remains below the legal limit. (page 6)  
True    False
4. Which of the following safety points should you remember when handling a gun? (page 6)
  - A. Never shoot a gun in celebration.
  - B. Do not fire at water, flat or hard surfaces.
  - C. Wear ear and eye protection when shooting a gun.
  - D. All of the above.
5. As a safety measure, your firearm should always be pointed: (page 4)
  - A. To the north.
  - B. In the safest possible direction.
  - C. Up.
  - D. Down.
6. One of the safety rules is to know how to properly: (page 5)
  - A. Clear a malfunction.
  - B. Operate your gun.
  - C. Load your gun.
  - D. Clean your gun.

## CHAPTER 2

# Firearms and Children

### FIREARM OWNER RESPONSIBILITY

It is a firearm owner's responsibility to take all possible steps to make sure a child cannot gain access to firearms. In fact, this responsibility is mandated by California law. The overall abiding rule is to store your gun in a safe and responsible manner at all times. As a firearm owner, you should be aware of the laws regarding children and firearms.

#### Summary of Safe Storage Laws Regarding Children

You may be guilty of a misdemeanor or a felony if you keep a loaded firearm within any premises that are under your custody or control and a child under 18 years of age obtains and uses it, resulting in injury or death, or carries it to a public place, unless you stored the firearm in a locked container or locked the firearm with a locking device to temporarily keep it from functioning. Please refer to Page 42 for more specific information regarding safe storage laws related to children.

#### You Cannot Be Too Careful with Children and Guns

There is no such thing as being too careful with children and guns. Never assume that simply because a toddler may lack finger strength, they can't pull the trigger. A child's thumb has twice the strength of the other fingers. When a toddler's thumb "pushes" against a trigger, invariably the barrel of the gun is pointing directly at the child's face. NEVER leave a firearm lying around the house. Please refer to Pages 31 and 32 for more information regarding safe storage and methods of childproofing your firearm.

Child safety precautions still apply even if you have no children or if your children have grown to adulthood and left home. A nephew, niece, neighbor's child or a grandchild may come to visit. Practice gun safety at all times.

To prevent injury or death caused by improper storage of guns in a home where children are likely to be present, you should store all guns unloaded, lock them with a firearms safety device and store them in a locked container. Ammunition should be stored in a location separate from the gun.

## Talking to Children about Guns

Children are naturally curious about things they don't know about or think are "forbidden." When a child asks questions or begins to act out "gun play," you may want to address his or her curiosity by answering the questions as honestly and openly as possible. This will remove the mystery and reduce the natural curiosity. Also, it is important to remember to talk to children in a manner they can relate to and understand. This is very important, especially when teaching children about the difference between "real" and "make-believe." Let children know that, even though they may look the same, real guns are very different than toy guns. A real gun will hurt or kill someone who is shot.

## Instill a Mind Set of Safety and Responsibility

The American Academy of Pediatrics reports that adolescence is a highly vulnerable stage in life for teenagers struggling to develop traits of identity, independence and autonomy. Children, of course, are both naturally curious and innocently unaware of many dangers around them. Thus, adolescents as well as children may not be sufficiently safeguarded by cautionary words, however frequent contrary actions can completely undermine good advice. A "do as I say and not as I do" approach to gun safety is both irresponsible and dangerous.

Remember that actions speak louder than words. Children learn most by observing the adults around them. By practicing safe conduct you will also be teaching safe conduct.

## RULES FOR KIDS

Adults should be aware that a child could discover a gun when a parent or any other adult is not present. This could happen in the child's own home; the home of a neighbor, friend or relative; or in a public place such as a school or park. If this should happen, a child should know the following rules and be taught to practice them.

### 1. Stop

The first rule for a child to follow if he/she finds or sees a gun is to stop what he/she is doing.

### 2. Don't Touch!

The second rule is for a child not to touch a gun he/she finds or sees. A child may think the best thing to do if he/she finds a gun is to pick it up and take it to an adult. A child needs to know he/she should NEVER touch a gun he/she may find or see.

### 3. Leave the Area

The third rule is to immediately leave the area. This would include never taking a gun away from another child or trying to stop someone from using gun.

#### **4. Tell an Adult**

The last rule is for a child to tell an adult about the gun he/she has seen. This includes times when other kids are playing with or shooting a gun.

Please note that, while there is no better advice at this time for children or adolescents who encounter a gun by happenstance, the California Chapter of the American College of Emergency Physicians reports that such warnings alone may be insufficient accident prevention measures with children and adolescents.

## CHAPTER 2: Self Test

1. Toddlers lack the strength to pull the trigger of a firearm. (page 8)  
True    False
2. You may face misdemeanor or felony charges if you keep a loaded firearm where a child obtains and improperly uses it. (page 8)  
True    False
3. There is no such thing as being too careful with children and guns. (page 8)  
True    False
4. An important lesson children should learn is that guns are not toys. (page 9)  
True    False
5. The four safety “Rules for Kids” if they see a gun are: (page 9)  
A. \_\_\_\_\_  
B. \_\_\_\_\_  
C. \_\_\_\_\_  
D. \_\_\_\_\_
6. Child safety precautions only apply if you have children. (page 8)  
True    False

Answers: 1: False, 2: True, 3: True, 4: True, 5: A. Stop, B. Don't Touch, C. Leave the Area, D. Tell an Adult, 6: False

## CHAPTER 3

# Firearm Operation and Safe Handling

### SAFE HANDLING DEMONSTRATION

Pursuant to Penal Code sections 26850 and 26860, prior to taking delivery of a firearm from a licensed firearms dealer in California, an individual must correctly perform a safe handling demonstration with the firearm he or she is acquiring. The safe handling demonstration must be performed in the presence of a DOJ Certified Instructor on or after the date the Dealer Record of Sale (DROS) is submitted to the DOJ and before the firearm is delivered. This section lists each of the steps that constitute the statutorily mandated safe handling demonstrations for the most common handgun types (semiautomatic pistols, double-action revolvers and single-action revolvers). This section also includes safe handling demonstration steps for most long gun types. However, this information will not appear on the DOJ written test on firearm safety. Please note that a dummy round as stated in this guide refers to one bright orange, red or other readily identifiable dummy round. If no readily identifiable dummy round is available, an empty cartridge casing with an empty primer pocket may be used.

The safe handling demonstration shall commence with the firearm unloaded and locked with the firearm safety device with which it is required to be delivered, if applicable. While maintaining muzzle awareness (that is, the firearm is pointed in a safe direction, preferably down at the ground) and trigger discipline (that is, the trigger finger is outside of the trigger guard and alongside of the firearm frame) at all times, the firearm recipient shall correctly and safely perform the safe handling demonstration steps for each firearm type.

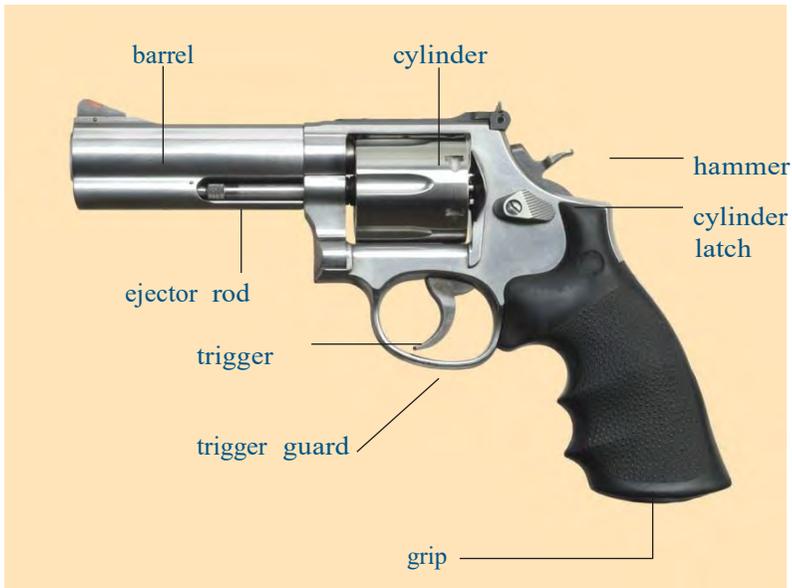

### REVOLVER PARTS AND OPERATION

#### How a Revolver Works

A revolver has a rotating cylinder containing a number of chambers. There are usually five or six chambers. The action of the trigger or hammer will line up a chamber with the barrel and firing pin. Releasing the cylinder latch allows the cylinder to swing out for loading, unloading and inspection.

Revolvers are either single or double-action. The primary difference between these two types of revolvers is the function of the trigger. On a single-action revolver the trigger has a single function to release the hammer. The trigger on a double-action revolver has two functions to cock the hammer and to release it.

## DOUBLE-ACTION REVOLVER SAFE HANDLING

1. Open the cylinder.

2. Visually and physically inspect each chamber to ensure that the revolver is unloaded.

3. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.

4. While maintaining muzzle awareness and trigger discipline, load one dummy round into a chamber of the cylinder and rotate the cylinder so that the round is in the next-to-fire position.

5. Close the cylinder.

6. Open the cylinder and eject the round.

7. Visually and physically inspect each chamber to ensure that the revolver is unloaded.

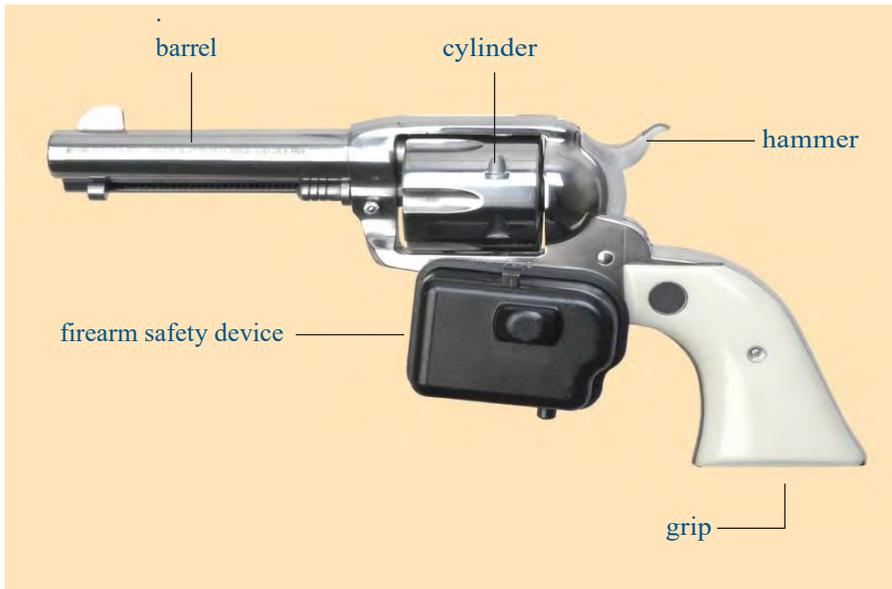

8. Apply the firearm safety device, if applicable.

NOTE: Simply spinning a revolver to an empty chamber does not unload it or make it safe. The cylinder rotates to the next chamber before the hammer falls.

## SINGLE-ACTION REVOLVER SAFE HANDLING

1. Open the loading gate.

2. Visually and physically inspect each chamber to ensure that the revolver is unloaded.

3. Remove the firearm safety device required to be sold with the firearm. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.

4. Load one dummy round into a chamber of the cylinder, close the loading gate and rotate the cylinder so that the round is in the next-to-fire position (the revolver may need to be placed on half-cock or the loading gate reopened).

5. Open the loading gate and unload the revolver.

6. Visually and physically inspect each chamber to ensure that the revolver is unloaded.

7. Apply the firearm safety device, if applicable.

- \* 1873 Rule: Recipients of original versions of single-action army revolvers should be advised to carry five rounds in the cylinder and leave the chamber under the hammer empty.

## SEMIAUTOMATIC PISTOL PARTS AND OPERATION

### How a Semiautomatic Pistol Works

A semiautomatic pistol has a single chamber. Each time the trigger is pulled, a cartridge is fired, the empty case is automatically extracted and ejected, the hammer is cocked, and a new cartridge is loaded into the chamber.

The primary difference between revolvers and semiautomatic pistols is how the ammunition is held. Revolvers use a cylinder to hold ammunition. Semiautomatic pistols use a magazine to hold ammunition. A magazine is a separate metal boxlike container into which cartridges are loaded. It is usually located within the grip. A button or catch releases the magazine.

Another difference is most semiautomatic pistols have a “safety” that is designed to prevent firing when engaged. However, it is not foolproof so do not rely on the safety to prevent an accidental discharge. A safety should be considered an additional safety measure.

Never pull the trigger on any firearm with the safety in the “safe” position because thereafter the firearm could fire at any time without the trigger ever being touched. If a firearm is dropped, it may land hard enough to activate the firing mechanism without the trigger being touched.

## SEMIAUTOMATIC PISTOL SAFE HANDLING

**Exhibit 4**  
**0154**

1. Remove the magazine.

2. Lock the slide back. If the model of firearm does not allow the slide to be locked back, pull the slide back, visually and physically inspect the chamber to ensure that it is clear.

3. Visually and physically inspect the chamber, to ensure that the firearm is unloaded.

4. Remove the firearm safety device, if applicable. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.

5. Load one dummy round into the magazine.

6. Insert the magazine into the magazine well of the firearm.

7. Manipulate the slide release or pull back and release the slide.

8. Remove the magazine.

9. Visually inspect the chamber to reveal that a round can be chambered with the magazine removed.

10. Lock the slide back to eject the dummy round. If the firearm is of a model that does not allow the slide to be locked back, pull the slide back and physically check the chamber to ensure that the chamber is clear.

11. Apply the safety, if applicable.

12. Apply the firearm safety device, if applicable.

Note: If you release the slide before inserting the magazine, there will NOT be a cartridge in the chamber.

**CAUTION**

You should NOT assume a semiautomatic pistol is unloaded just because the magazine is removed from the handgun.

Do not allow the slide to go forward UNLESS you have:

1. Checked again to be sure the chamber is empty, and
2. Checked again to be sure the magazine has been REMOVED.

If you pull the slide back ejecting the cartridge, check the chamber, let the slide go forward, and THEN remove the magazine, you have a loaded, dangerous firearm (a cartridge is in the chamber) even though you have removed the magazine. It is common and sometimes fatal to make this error.

**ALWAYS REMOVE THE MAGAZINE FIRST!**

## LONG GUN SAFE HANDLING

The demonstration shall commence with the firearm unloaded and locked with the firearm safety device with which it is required to be delivered, if applicable. While maintaining muzzle awareness (that is, the firearm is pointed in a safe direction, preferably down at the ground) and trigger discipline (that is, the trigger finger is outside of the trigger guard and alongside of the receiver) at all times, the firearms recipient shall correctly and safely perform the steps identified for each firearm type.

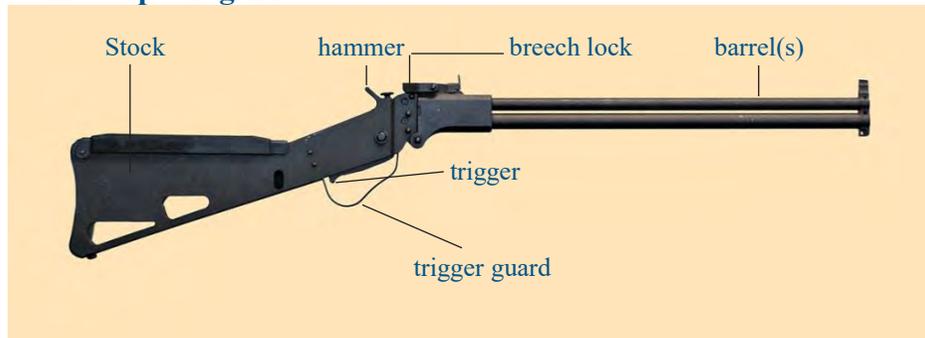

The following safe handling demonstration steps for long guns are generally applicable to the various firearm models of each firearm “type” (e.g. pump action long gun, break-top revolver, etc.). However, the specified safe handling demonstration steps may not be appropriate for a particular model of firearm. If uncertain, refer to the owner’s manual or consult with a DOJ Certified Instructor.

### Pump Action Long Gun

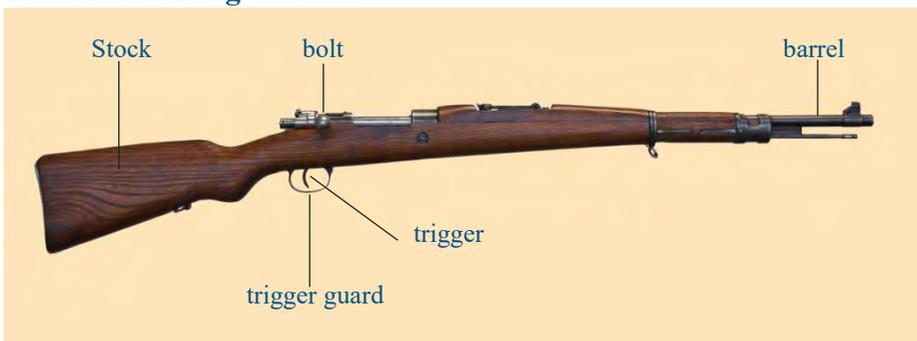

1. Open the ejection port.
2. Visually and physically inspect the chamber to ensure the firearm is unloaded. Visually and physically inspect the magazine follower to ensure the magazine is unloaded (if the magazine follower is not visible, there may be shotshells or cartridges lodged in the tubular magazine).
3. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
4. While maintaining muzzle awareness and trigger discipline, load one dummy round into the magazine loading port.
5. Pull the forend (or forearm) rearward toward the receiver causing the dummy round to enter the breech. Push the forend forward to chamber the round. The dummy round should have moved from the tubular magazine into the chamber.
6. Push the action (carrier) release button and again pull the forend toward the receiver causing the action to open. The dummy round should extract from the chamber and be ejected through the ejection port.
7. Engage the safety.
8. Apply the firearm safety device, if applicable.

## Break-Top Long Gun

1. Open the breech.
2. Visually and physically inspect the chamber/barrel to ensure the firearm is unloaded.
3. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
4. While maintaining muzzle awareness and trigger discipline, load one dummy round into a barrel.
5. Close and lock the action.
6. Unlock and open the action.
7. Remove the dummy round.
8. Apply the firearm safety device, if applicable.

## Bolt Action Long Gun

1. Visually and physically inspect the chamber/barrel to ensure the long gun is unloaded. Also visually and physically inspect the internal magazine to ensure it is unloaded.
2. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
3. While maintaining muzzle awareness and trigger discipline, load one dummy round into the chamber/barrel.
4. Close and lock the action.
5. Unlock and open the action.
6. Remove the dummy round.
7. Apply the firearm safety device, if applicable.

## Lever Action Long Gun

When handling a lever action firearm with an exposed hammer, please use caution and consult with a DOJ Certified Instructor for proper handling steps. Use only flat point, hollow point, round nose flat point, or similar rounds. Never use pointed or conical point rounds in a center fire rifle with a tubular magazine. Failure to follow these instructions may result in injury to yourself or others, or cause damage to your firearm.

1. Open the breech.
2. Visually and physically inspect the chamber/barrel to ensure the firearm is unloaded. Visually and physically inspect the magazine follower to ensure the magazine is unloaded (if the magazine follower is not visible, there may be cartridges lodged in the tubular magazine).
3. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
4. While maintaining muzzle awareness and trigger discipline, load one dummy round into the chamber/barrel.
5. Close and lock the action.
6. Unlock and open the action.
7. Remove the dummy round.
8. Apply the firearm safety device, if applicable.

## Semiautomatic Long Gun With a Detachable Magazine

1. Remove the magazine.
2. Pull the bolt back and lock it open if possible.
3. Visually and physically inspect the barrel/chamber to ensure the firearm is unloaded.
4. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
5. While maintaining muzzle awareness and trigger discipline, load one dummy round into the magazine.
6. Insert the magazine into the magazine well.
7. Close and lock the action.
8. Unlock and open the action.
9. Remove the dummy round.
10. Apply the firearm safety device, if applicable.

## Semiautomatic Long Gun With a Fixed Magazine

1. Pull the bolt back and lock it open if possible.
2. Visually and physically inspect the barrel/chamber to ensure the firearm is unloaded. Also visually and physically inspect the internal magazine to ensure it is unloaded.
3. Remove the firearm safety device. If the firearm safety device prevents any of the previous steps, remove the firearm safety device during the appropriate step.
4. While maintaining muzzle awareness and trigger discipline, load one dummy round into the magazine.
5. Close and lock the action.
6. Unlock and open the action.
7. Remove the dummy round (the dummy round should have extracted from the chamber and ejected from the breech).

**Exhibit 4**

**0164**

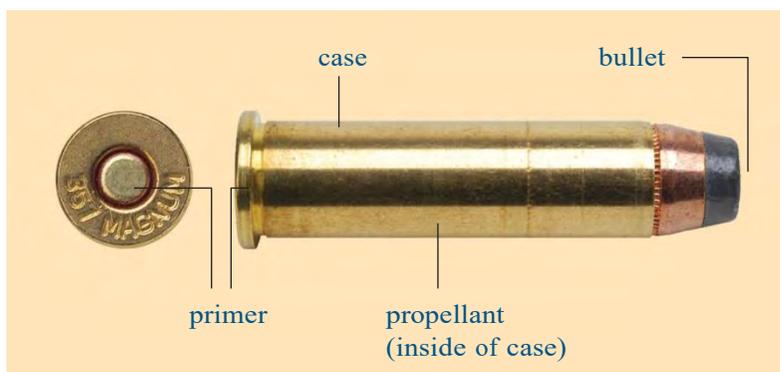

## AMMUNITION

An often overlooked aspect of safe firearm operation is knowing about the ammunition you use. It is important for you to know which ammunition can be used safely in your firearm.

### Ammunition Components

A firearm cartridge, commonly referred to as a “round,” is a single unit of ammunition made up of four parts: the case, the primer, the propellant and the bullet.

### Components of a Cartridge

The case is the metal cylinder that is closed at one end and contains the other three components.

The primer is the impact-sensitive chemical compound used for ignition. The propellant is a fast-burning chemical compound.

The bullet is the projectile fired from a firearm. It is usually made of lead, sometimes covered with a layer of copper or other metal and is located at the tip of the cartridge. People often mistakenly refer to the entire cartridge as a “bullet.” Actually the bullet is just one part of a cartridge.

## PHYSICS OF GUNFIRE

To understand the power of a firearm, it is helpful to know some of the physics of gunfire. The fall of the hammer causes the primer to ignite the powder, which burns to produce gases. These rapidly-expanding gases push the bullet through the barrel and toward the target. The push of gases against the firearm results in what is called recoil. Some shooters are startled by recoil. Firearms vary in how much recoil they generate. Anticipation of recoil may cause an inexperienced shooter to grasp the firearm too tightly or flinch. Shooting a firearm properly minimizes the negative effects of recoil on the shooter.

## FIREARM AND AMMUNITION CALIBERS

Firearms and ammunition are made in various calibers. Firearm caliber refers to barrel diameter. Revolvers generally have the caliber information on the barrel.

Semiautomatic pistols generally have the caliber information on the slide. Ammunition caliber refers to bullet diameter. Ammunition has the caliber information on the box.

Some of the more common calibers are the .22, .45, and 9 mm. You must only use the caliber of ammunition recommended by the manufacturer of your firearm.

.357 Magnum

9 mm Luger

Just because a cartridge fits your firearm does not necessarily mean the cartridge is safe to shoot. A firearm may not be able to handle the pressure created by using incorrect ammunition. This could result in damage to the firearm and possible injury to yourself or bystanders.

Never shoot ammunition that is old, dirty, corroded or wet, or ammunition that cannot be fully identified. This could cause a malfunction such as a jam or a misfire, or explosion of the firearm. Never throw ammunition in the trash. Call your local refuse department and ask for proper disposal instructions.

Some ammunition is illegal. Your firearms dealer can help you identify the correct and legal ammunition for your firearm. Purchase your ammunition from an authorized ammunition dealer only.

## DANGEROUS RANGE

In order to shoot a firearm safely, you need to know not only your target but also the dangerous range of your ammunition. The dangerous range is the distance that a bullet can travel. Most ammunition can travel at least a mile, with some having the capability of traveling MORE than two miles. Therefore, even though you may fire at a target only a few feet or yards away, your bullet could travel far beyond your target. As it travels, the potential for damage widens. The importance of the dangerous range is that you must consider how much farther the bullet can travel beyond the target because a bullet that misses or passes through a target could strike a person or object. If you think only of your target and not the dangerous range, you might mistakenly think someone or something is “too far away” to be in danger.

Another important point to remember is that most ammunition can easily penetrate the interior walls of a house and still travel some distance before losing its energy. High velocity or magnum ammunition has even greater penetration and distance capabilities.

**Remember: Once you fire, you are responsible for any damage or injury your bullet causes.**

## MALFUNCTIONS

Any machine can malfunction. A firearm is no different. If your firearm malfunctions, always keep the basic safety rules in mind and do the following:

**CAUTION**

**STOP FIRING!**

**KEEP THE GUN POINTED IN A SAFE DIRECTION.**

**WAIT TEN SECONDS.**

**SEEK COMPETENT HELP.**

If you are at a range, the usual procedure to follow when a malfunction occurs is to keep your firearm pointed down range, keep your finger off the trigger and raise your non-shooting hand until a range official arrives. You have a potentially dangerous situation!

## CHAPTER 3: Self Test

1. The importance of the “dangerous range” is that a bullet can travel far beyond the intended target. (page 27)  
True False
2. The safety on a semiautomatic pistol is not foolproof. (page 17)  
True False
3. Just because a cartridge fits into your firearm does not necessarily mean it is safe to shoot. (page 26)  
True False
4. In the case of a malfunction, you should: (page 27)
  - A. Keep your finger on the trigger.
  - B. Immediately drop the firearm.
  - C. Try and determine where the malfunction is.
  - D. Keep the gun pointed in a safe direction.
5. After ensuring a double-action revolver is pointed in a safe direction and with your finger off the trigger, you begin unloading the firearm by: (page 13)
  - A. Opening the cylinder.
  - B. Locking the slide back.
  - C. Opening the loading gate.
  - D. Pushing the magazine release.
6. Firearm or ammunition caliber refers to: (page 26)
  - A. Barrel length.
  - B. Magazine capacity.
  - C. Barrel or bullet diameter.
  - D. Bullet velocity.
7. A magazine is part of a: (page 17)
  - A. Single-action revolver.
  - B. Double-action revolver.
  - C. Semiautomatic pistol.
  - D. Single-action and a double-action revolver.

Answers: 1: True, 2: True, 3: True, 4: D, 5: A, 6: C, 7: C

## CHAPTER 4

# Firearm Ownership

### UNDERSTAND THE SAFETY ASPECTS OF YOUR FIREARM

Firearms must be handled responsibly and securely stored to prevent access by children and other unauthorized users. California has strict laws pertaining to firearms, and you can be fined or imprisoned if you fail to comply with them. Visit the Web site of the California Attorney General at <https://oag.ca.gov/firearms> for information on firearms laws applicable to you and how you can comply.

Get advice from a professional sales person on the safety aspects of the firearm you are considering buying. Select the firearm that best suits your personal needs. Ask a lot of questions! Ask about the correct ammunition for the firearm you have selected.

Become thoroughly familiar with the mechanics of the firearm you have selected. By knowing exactly how your firearm works, you are more likely to recognize any possible safety problems.

### CAREFULLY READ ALL INSTRUCTIONAL MATERIAL

An owner's manual from the manufacturer of your firearm should be provided when you buy a new firearm. Manuals for used firearms usually can be obtained by writing or calling the manufacturer.

Carefully read the manual and use it to familiarize yourself with the firearm and its operation.

### ENROLL IN A FIREARM TRAINING COURSE

To help you learn to drive a car you probably had some "behind the wheel" training and practice before you got your driver's license. This also applies to firearm ownership. The best way to become skilled in using and understanding how your firearm operates is to enroll in a "hands-on" training course. There are many firearm training courses that can provide additional safety information.

For information on training courses in your area, contact a local firearms dealer or firearms safety organization.

### CLEANING AND REPAIR

Maintenance is part of being a responsible firearms owner. Firearms should be cleaned regularly and especially after prolonged storage. The barrel should be cleaned after every use. Accumulated moisture, dirt or grease can interfere with the efficient and safe operation of a firearm.

Firearm cleaning kits and materials can be purchased from most firearms dealers. Be aware that some firearm cleaning substances are toxic. Carefully read and follow the instructions on the cleaning products.

You should clean your firearm in a location where you will have no distractions. Before you begin, always make sure your firearm is unloaded and remove any ammunition from the cleaning area. Accidents can happen if cleaning procedures are not followed correctly and safely. Therefore, you should follow the cleaning instructions in your owner's manual and on your cleaning products. Firearms dealers or gunsmiths also are good sources for cleaning information.

Care should be taken to ensure adequate ventilation at all times to reduce the risk of inhaling lead particles. To avoid accidental ingestion of lead particles, never handle food or drink without first washing your hands. Do not smoke when exposed to lead. Wash your hands thoroughly after exposure.

Periodically inspect all firearms you own to be sure that they are in good working condition. If you notice any problems, have your firearm checked by a competent gunsmith. Any repairs should be made only by a gunsmith or the manufacturer of the firearm. You should not attempt to make any major modifications to your firearm. Some modifications are illegal and dangerous. They also could void the manufacturer's warranty.

By keeping your firearm properly maintained, you will ensure that it is safe to operate and will function reliably for many years.

## SAFETY AND STORAGE DEVICES

If you decide to keep a firearm in your home you must consider the issue of how to store the firearm in a safe and secure manner. California recognizes the importance of safe storage by requiring that all firearms sold in California be accompanied by a DOJ-approved firearms safety device or proof that the purchaser owns a gun safe that meets regulatory standards established by the DOJ. The current list of DOJ-approved firearms safety devices and the gun safe standards can be viewed at the following DOJ website:  
<http://oag.ca.gov/firearms/fsdcertlist>.

There are a variety of safety and storage devices currently available to the public in a wide range of prices. Some devices are locking mechanisms designed to keep the firearm from being loaded or fired, but don't prevent the firearm from being handled or stolen. There are also locking storage containers that hold the firearm out of sight. For maximum safety you should use both a firearm safety device and a locking storage container to store your unloaded firearm.

Two of the most common locking mechanisms are trigger locks and cable locks. Trigger locks are typically two-piece devices that fit around the trigger and trigger guard to prevent access to the trigger. One side has a post that fits into a hole in the other side. They are locked by a key or combination locking mechanism. Cable locks typically work by looping a strong steel cable through the action of the firearm to block the firearm's operation and prevent accidental firing. However, neither trigger locks nor cable locks are designed to prevent access to the firearm.

Smaller lock boxes and larger gun safes are two of the most common types of locking storage containers. One advantage of lock boxes and gun safes is that they are designed to completely prevent unintended handling and removal of a firearm. Lock boxes are generally constructed of sturdy, high-grade metal opened by either a key or combination lock. Gun safes are quite heavy, usually weighing at least 50 pounds. While gun safes are typically the most expensive firearm storage devices, they are generally more reliable and secure.

**Remember: Safety and storage devices are only as secure as the precautions you take to protect the key or combination to the lock.**

## METHODS OF CHILDPROOFING

As a responsible firearm owner, you need to be aware of the methods of childproofing your firearm, whether or not you have children.

Whenever children could be around, whether your own, or a friend's, relative's or neighbor's, additional safety steps should be taken when storing firearms and ammunition in your home.

- Always store your firearm unloaded.
- Use a firearms safety device AND store the firearm in a locked container.
- Store the ammunition separately in a locked container.

Always storing your firearm securely is the best method of childproofing your firearm; however, your choice of a storage place can add another element of safety. Carefully choose the storage place in your home especially if children may be around.

- Do not store your firearm where it is visible.
- Do not store your firearm in a bedside table, under your mattress or pillow, or on a closet shelf.
- Do not store your firearm among your valuables (such as jewelry or cameras) unless it is locked in a secure container.
- Make sure the location you store your firearm and ammunition is not easily accessible to children.
- Consider storing firearms not possessed for self-defense in a safe and secure manner away from the home.

## CHAPTER 4: Self Test

1. It is important to carefully read all instructional material you receive with your firearm. (page 29)  
True      False
2. Certain modifications, when made to a firearm, may void its warranty. (page 30)  
True      False
3. It is safe to store a loaded firearm in your bedside table. (page 32)  
True      False
4. Two common firearms safety devices are trigger locks and cable locks. (page 31)  
True      False
5. Which of the following steps should be taken to “childproof” your firearm? (page 32)
  - A. Use a firearms safety device AND store the firearm in a locked container.
  - B. Always store your firearm unloaded.
  - C. Store ammunition separately in a locked container.
  - D. All of the above.

Answers: 1: True, 2: True, 3: False, 4: True, 5: D

# Prohibited Firearms Transfers and Straw Purchases

## What is a straw purchase?

A straw purchase is buying a gun for someone who is prohibited by law from possessing one, or buying a gun for someone who does not want his or her name associated with the transaction.

It is a violation of California law for a person who is not licensed as a California firearms dealer to transfer a firearm to another unlicensed person, without conducting such a transfer through a licensed firearms dealer. (Pen. Code, § 27545.) Such a transfer may be punishable as a felony. (Pen. Code, § 27590.)

Furthermore, it is a violation of federal law to either (1) make a false or fictitious statement on an application to purchase a firearm about a material fact, such as the identity of the person who ultimately will acquire the firearm (commonly known as "lying and buying") (18 U.S.C. 922(a)(6)), or (2) knowingly transfer a firearm to a person who is prohibited by federal law from possessing and purchasing it. (18 U.S.C. 922(d).) Such transfers are punishable under federal law by a \$250,000 fine and 10 years in federal prison. (18 U.S.C. 924(a)(2).)

## Things to remember about prohibited firearms transfers and straw purchases:

An illegal firearm purchase (straw purchase) is a federal crime.

An illegal firearm purchase can bring a felony conviction sentence of 10 years in jail and a fine of up to \$250,000.

Buying a gun and giving it to someone who is prohibited from owning one is a state and federal crime.

**Never buy a gun for someone who is prohibited by law or unable to do so.**

## CHAPTER 5

# Firearms Laws

### INTRODUCTION TO THE LAWS

As the owner of a firearm, it is your responsibility to understand and comply with all federal, state and local laws regarding firearms ownership. Many of the laws described below pertain to the possession, use and storage of firearms in the home and merit careful review. This section contains a general summary of the state laws that govern the use of firearms, particularly handguns, by persons other than law enforcement officers or members of the armed forces. It is not designed to provide individual guidance for specific situations, nor does it address federal or local laws. Persons having specific questions are encouraged to seek legal advice from an attorney, or consult their local law enforcement agency, local prosecutor or law library.

### SALES AND TRANSFERS OF FIREARMS

In California, only licensed California firearms dealers are authorized to engage in retail sales of firearms. These retail sales require the purchaser to provide personal identifier information for the Dealers' Record of Sale (DROS) document that the firearms dealer must submit to the DOJ. There is a mandatory 10-day waiting period before the firearms dealer can deliver the firearm to the purchaser. During this 10-day waiting period, the DOJ conducts a firearms eligibility background check to ensure the purchaser is not prohibited from lawfully possessing firearms. Although there are exceptions, generally all firearms purchasers must be at least 21 years of age to purchase either a handgun (pistol or revolver) or a long gun (rifle or shotgun). Additionally, purchasers must be California residents with a valid driver's license or identification card issued by the California Department of Motor Vehicles.

Generally, it is illegal for any person who is not a California licensed firearms dealer (private party) to sell or transfer a firearm to another non-licensed person (private party) unless the sale is completed through a licensed California firearms dealer. "Private party transfers" can be conducted at any licensed California firearms dealership that sells firearms. The buyer and seller must complete the required DROS document in person at the licensed firearms dealership and deliver the firearm to the dealer who will retain possession of the firearm during the mandatory 10-day waiting period. In addition to the applicable state fees, the firearms dealer may charge a fee not to exceed \$10 per firearm for conducting the private party transfer.

The infrequent transfer of firearms between immediate family members is exempt from the law requiring private party transfers to be conducted through a licensed firearms dealer. For purposes of this exemption, “immediate family” means parent and child, and grandparent and grandchild, but does not include other types of transfers, such as between brother and sister. Please note that the transferee must comply with the FSC requirement described below, prior to taking possession of the firearm. Within 30 days of the transfer, the transferee must also submit a report of the transaction to the DOJ. The required report form (Firearm Ownership Record BOF 4542A) can be downloaded from the DOJ’s website at <http://oag.ca.gov/firearms/forms>.

The reclaiming of a pawned firearm is subject to the DROS and 10-day waiting period requirements.

### **Proof-of-Residency Requirement**

To purchase a handgun in California you must present documentation indicating that you are a California resident. Acceptable documentation includes a utility bill from within the last three months, a signed residential lease, a property deed or military permanent duty station orders indicating assignment within California. The address provided on the DROS must match either the address on the proof-of-residency document or the address on the purchaser’s California Driver license or Identification Card. (Pen. Code, § 26845.)

### **Firearm Safety Certificate Requirement**

To purchase or acquire a firearm, you must have a valid FSC. To obtain an FSC, you must score at least 75% on an objective written test pertaining to firearms laws and safety requirements. The test is administered by DOJ Certified Instructors, who are generally located at firearms dealerships. An FSC is valid for five years. The fee for taking the FSC test and being issued an FSC is twenty-five dollars (\$25). Firearms being returned to their owners, such as pawn returns, are exempt from this requirement. In the event of a lost, stolen or destroyed FSC, the issuing DOJ Certified Instructor will issue a replacement FSC for a fee of \$5. You must present proof of identity to receive a replacement FSC. (Pen. Code, §§ 31610-31670.)

### **Safe Handling Demonstration Requirement**

Prior to taking delivery of a firearm, you must successfully perform a safe handling demonstration with the firearm being purchased or acquired. Safe handling demonstrations must be performed in the presence of a DOJ Certified Instructor sometime between the date the DROS is submitted to the DOJ and the delivery of the firearm, and are generally performed at the firearms dealership. The purchaser, firearms dealer and DOJ Certified Instructor must sign an affidavit stating the safe handling demonstration was completed. The steps required to complete the safe handling demonstration for most firearm types is described in Chapter 3. Pawn returns and intra-familial transfers are not subject to the safe handling demonstration requirement. (Pen. Code, § 26850.)

## Firearms Safety Device Requirement

All firearms (long guns and handguns) purchased in California must be accompanied with a firearms safety device (FSD) that has passed required safety and functionality tests and is listed on the DOJ's official roster of DOJ-approved firearms safety devices. The current roster of certified FSDs is available on the Bureau of Firearms website at <http://oag.ca.gov/firearms/fsdcertlist>. The FSD requirement also can be satisfied if the purchaser signs an affidavit declaring ownership of either a DOJ-approved lock box or a gun safe capable of accommodating the firearm being purchased. Pawn returns and intra-familial transfers are not subject to the FSD requirement. (Pen. Code, §§ 23635-23690.)

## Roster of Handguns Certified for Sale in California

No handgun may be sold by a firearms dealer to the public unless it is of a make and model that has passed required safety and functionality tests and is listed on the DOJ's official roster of handguns certified for sale in California. The current roster of handguns certified for sale in California is available on the Bureau of Firearms website at <http://certguns.doj.ca.gov>. Private party transfers, intra-familial transfers, and pawn/consignment returns are exempt from this requirement. (Pen. Code, § 32000.)

## One-Handgun-per-Thirty-Days Requirement

No person shall make an application to purchase more than one handgun within any 30-day period. Exemptions to the one-handgun-per-thirty-days requirement include pawn returns, intra-familial transfers and private party transfers. (Pen. Code, § 27540.)

## Firearm Sales and Transfer Requirements

|                                                     | Retail Sales | Private Party Transfers | Intra-familial Transfers | Pawn Returns |
|-----------------------------------------------------|--------------|-------------------------|--------------------------|--------------|
| Proof-of-Residency Requirement (handguns)           | Yes          | Yes                     | No                       | Yes          |
| Proof-of-Residency Requirement (long guns)*         | No           | No                      | No                       | No           |
| Firearm Safety Certificate Requirement              | Yes          | Yes                     | Yes                      | No           |
| Safe Handling Demonstration Requirement             | Yes          | Yes                     | No                       | No           |
| Firearms Safety Device Requirement                  | Yes          | Yes                     | No                       | No           |
| Roster of Handguns Certified for sale in California | Yes          | No                      | No                       | No           |
| One Handgun Per 30 Days Requirement                 | Yes          | No                      | No                       | No           |

\*Federal requirements may apply.

## NEW CALIFORNIA RESIDENT REQUIREMENT

Persons who move to California with the intention of establishing residency in this state must either report ownership of firearms to the DOJ within 60 days, or sell or transfer the firearm(s) pursuant to California law. (Pen. Code, § 28050.) Persons who want to keep their firearms must submit a New Resident Firearm Ownership Report, along with a \$19 fee, to the DOJ. Forms are available at licensed firearms dealers, the Department of Motor Vehicles or on-line at the Bureau of Firearms web site at <http://oag.ca.gov/firearms/forms>. (Pen. Code, § 27560.)

## CARRYING A CONCEALED WEAPON

### Carrying a Concealed Handgun Without a License on One's Person or in a Vehicle

It is illegal for any person to carry a handgun concealed upon his or her person or concealed in a vehicle without a license issued pursuant to Penal Code section 26150. (Pen. Code, § 25400.) A firearm locked in a motor vehicle's trunk or in a locked container carried in the vehicle other than in the utility or glove compartment is not considered concealed within the meaning of the Penal Code section 25400; neither is a firearm carried within a locked container directly to or from a motor vehicle for any lawful purpose. (Pen. Code, § 25610.)

The prohibition from carrying a concealed handgun does not apply to licensed hunters or fishermen while engaged in hunting or fishing, or while going to or returning from the hunting expedition. (Pen. Code, § 25640.) Notwithstanding this exception for hunters or fishermen, these individuals may not carry or transport loaded firearms when going to or from the expedition. The unloaded firearms should be transported in the trunk of the vehicle or in a locked container other than the utility or glove compartment. (Pen. Code, § 25610.)

There are also occupational exceptions to the prohibition from carrying a concealed weapon, including authorized employees while engaged in specified activities. (Pen. Code, §§ 25630 & 25640.)

### Licenses to Carry Concealed Weapons

A license to carry a concealed handgun or other firearm may be granted by the sheriff of the county in which the applicant resides, or the chief of the city police department of the city in which the applicant resides. Such licenses are issued only after finding that the applicant is of good moral character, that good cause exists for such a license and the applicant is not prohibited from possessing firearms. (Pen. Code, § 26150.)

Where the population of the county is less than 200,000 persons, the licensing authority may issue a license to carry a pistol, revolver or other firearm capable of being concealed upon the person, loaded and exposed. (Pen. Code, § 26150.)

Unless otherwise restricted, a license is valid throughout the state.

## FIREARMS ABOARD COMMON CARRIERS

Federal and state laws generally prohibit a person from carrying any firearm or ammunition aboard any commercial passenger airplane. Similar restrictions may apply to other common carriers such as trains, ships and buses. Persons who need to carry firearms or ammunition on a common carrier should always consult the carrier in advance to determine conditions under which firearms may be transported.

## FIREARMS IN THE HOME, BUSINESS OR AT THE CAMPSITE

Unless otherwise unlawful, any person over the age of 18 who is not prohibited from possessing firearms may have a loaded or unloaded firearm at his or her place of residence, temporary residence, campsite or on private property owned or lawfully possessed by the person. Any person engaged in lawful business (including nonprofit organizations) or any officer, employee or agent authorized for lawful purposes connected with the business may have a loaded firearm within the place of business if that person is over 18 years of age and not otherwise prohibited from possessing firearms. (Pen. Code, §§ 25605 & 26035.)

**NOTE:** If a person's place of business, residence, temporary residence, campsite or private property is located within an area where possession of a firearm is prohibited by local or federal laws, such laws would prevail.

## THE USE OF LETHAL FORCE IN SELF-DEFENSE

The question of whether use of lethal force is justified in self-defense cannot be reduced to a simple list of factors. This section is based on the instructions generally given to the jury in a criminal case where self-defense is claimed and illustrates the general rules regarding the use of lethal force in self-defense.

### Permissible Use of Lethal Force in Defense of Life and Body

The killing of one person by another may be justifiable when necessary to resist the attempt to commit a forcible and life-threatening crime, provided that a reasonable person in the same or similar situation would believe that (a) the person killed intended to commit a forcible and life-threatening crime; (b) there was imminent danger of such crime being accomplished; and (c) the person acted under the belief that such force was necessary to save himself or herself or another from death or a forcible and life-threatening crime. Murder, mayhem, rape and robbery are examples of forcible and life-threatening crimes. (Pen. Code, § 197.)

### Limitations on the Use of Force in Self-Defense

The right of self-defense ceases when there is no further danger from an assailant. Thus, where a person attacked under circumstances initially justifying self-defense renders the attacker incapable of inflicting further injuries, the law of self-defense ceases and no further force may be used. Furthermore, a person may only use the amount of force, up to deadly force, as a reasonable person in the same or similar circumstances would believe necessary to prevent imminent injury. It is important to note the use of excessive force to counter an assault may result in civil or criminal penalties.

The right of self-defense is not initially available to a person who assaults another. However, if such a person attempts to stop further combat and clearly informs the adversary of his or her desire for peace but the opponent nevertheless continues the fight, the right of self-defense returns and is the same as the right of any other person being assaulted.

## LOADED FIREARMS IN PUBLIC

It is illegal to carry a loaded firearm on one's person or in a vehicle while in any public place, on any public street, or in any place where it is unlawful to discharge a firearm. (Pen. Code, § 25850, subd. (a).)

It is illegal for the driver of any motor vehicle, or the owner of any motor vehicle irrespective of whether the owner is occupying the vehicle to knowingly permit any person to carry a loaded firearm into the vehicle in violation of Penal Code section 25850, or Fish and Game Code section 2006. (Pen. Code, § 26100.) Also, see "Miscellaneous Prohibited Acts" on next page.

In order to determine whether a firearm is loaded, peace officers are authorized to examine any firearm carried by anyone on his or her person or in a vehicle while in any public place, on any public street or in any prohibited area of an unincorporated territory. Refusal to allow a peace officer to inspect a firearm pursuant to these provisions is, in itself, grounds for arrest. (Pen. Code, § 25850, subd. (b).)

The prohibition from carrying a loaded firearm in public does not apply to any person while hunting in an area where possession and hunting is otherwise lawful or while practice shooting at target ranges. (Pen. Code, §§ 26005 & 26040.)

There are also occupational exceptions to the prohibition from carrying a loaded firearm in public, including authorized employees while engaged in specified activities. (Pen. Code, §§ 26015 & 26030.)

## LARGE-CAPACITY MAGAZINES

It is generally illegal to manufacture, offer for sale, give, lend, buy, or receive any large-capacity magazine or any large-capacity conversion kit that is capable of converting an ammunition feeding device into a large-capacity magazine. (Pen. Code, §§ 32310 & 32311.)

## FIREARM STORAGE DURING PROHIBITION

A person who is prohibited from owning or possessing a firearm can transfer his or her firearm(s) to a licensed firearms dealer for storage for the duration of the prohibition, provided the prohibition will end on a date specified in a court order. (Pen. Code, § 29830.)

## MISCELLANEOUS PROHIBITED ACTS

### **Obliteration or Alteration of Firearm Identification**

It is illegal for any person to obliterate or alter the identification marks placed on any firearm including the make, model, serial number or any distinguishing mark lawfully assigned by the owner or by the DOJ. (Pen. Code, § 23900.)

It is illegal for any person to buy, sell or possess a firearm knowing its identification has been obliterated or altered. (Pen. Code, § 23920.)

### **Openly Carrying an Unloaded Handgun**

It is generally illegal for any person to carry upon his or her person or in a vehicle, an exposed and unloaded handgun while in or on:

- A public place or public street in an incorporated city or city and county; or
- A public street in a prohibited area of an unincorporated city or city and county. (Pen. Code, § 26350.)

### **Unauthorized Possession of a Firearm on School Grounds**

It is illegal for any unauthorized person to possess or bring a firearm upon the grounds of, or into, any public school, including the campuses of the University of California, California State University campuses, California community colleges, any private school (kindergarten through 12th grade) or private university or college. (Pen. Code, § 626.9.)

### **Unauthorized Possession of a Firearm in a Courtroom, the State Capitol, etc.**

It is illegal for any unauthorized person to bring or possess any firearm within a courtroom, courthouse, court building or at any meeting required to be open to the public. (Pen. Code, § 171b.)

It is illegal for any unauthorized person to bring or possess a loaded firearm within (including upon the grounds of) the State Capitol, any legislative office, any office of the Governor or other constitutional officer, any Senate or Assembly hearing room, the Governor's Mansion or any other residence of the Governor or the residence of any constitutional officer or any Member of the Legislature. For these purposes, a firearm shall be deemed loaded whenever both the firearm and its unexpended ammunition are in the immediate possession of the same person. (Pen. Code, §§ 171c, 171d, & 171e.)

### **Drawing or Exhibiting a Firearm**

If another person is present, it is illegal for any person, except in self defense, to draw or exhibit a loaded or unloaded firearm in a rude, angry or threatening manner or in any manner use a firearm in a fight or quarrel. (Pen. Code, § 417. )

### **Threatening Acts with a Firearm on a Public Street or Highway**

It is illegal for any person to draw or exhibit a loaded or unloaded firearm in a threatening manner against an occupant of a motor vehicle which is on a public street or highway in such a way that would cause a reasonable person apprehension or fear of bodily harm. (Pen. Code, § 417.3.)

### **Discharge of a Firearm in a Grossly Negligent Manner**

It is illegal for any person to willfully discharge a firearm in a grossly negligent manner which could result in injury or death to a person. (Pen. Code, § 246.3.)

### **Discharge of a Firearm at an Inhabited/Occupied Dwelling, Building, Vehicle, Aircraft**

It is illegal for any person to maliciously and willfully discharge a firearm at an inhabited dwelling, house, occupied building, occupied motor vehicle, occupied aircraft, inhabited house car or inhabited camper. (Pen. Code, § 246.)

### **Discharge of a Firearm at an Unoccupied Aircraft, Motor Vehicle, or Uninhabited Building or Dwelling**

It is illegal for any person to willfully and maliciously discharge a firearm at an unoccupied aircraft. It is illegal for any person to discharge a firearm at an unoccupied motor vehicle, building or dwelling. This does not apply to an abandoned vehicle, an unoccupied motor vehicle or uninhabited building or dwelling with permission of the owner and if otherwise lawful. (Pen. Code, § 247.)

### **Discharge of a Firearm from a Motor Vehicle**

It is illegal for any person to willfully and maliciously discharge a firearm from a motor vehicle. A driver or owner of a vehicle who allows any person to discharge a firearm from the vehicle may be punished by up to three years imprisonment in state prison. (Pen. Code, § 26100.)

### **Criminal Storage**

“Criminal storage of firearm of the first degree” – Keeping any loaded firearm within any premises that are under your custody or control and you know or reasonably should know that a child (any person under 18) or a person prohibited from possessing a firearm or deadly weapon pursuant to state or federal law is likely to gain access to the firearm without the permission of the child’s parent or legal guardian and the child or prohibited person obtains access to the firearm and thereby causes death or great bodily injury to himself, herself, or any other person. (Pen. Code, § 25100, subd. (a).)

“Criminal storage of firearm of the second degree” – Keeping any loaded firearm within any premises that are under your custody or control and you know or reasonably should know that a child (any person under 18) or a person prohibited from possessing a firearm or deadly weapon pursuant to state or federal law is likely to gain access to the firearm without the permission of the child’s parent or legal guardian and the child or prohibited person obtains access to the firearm and thereby causes injury, other than great bodily

injury, to himself, herself, or any other person, or carries the firearm either to a public place or in violation of Penal Code section 417. (Pen. Code, § 25100, subd. (b).)

“Criminal Storage of firearm of the third degree” – Keeping any loaded firearm within any premises that are under your custody or control and negligently storing or leaving a loaded firearm in a location where you know or reasonably should know that a child (any person under 18) is likely to gain access to the firearm without the permission of the child’s parent or legal guardian, unless you have taken reasonable action to secure the firearm against access by the child. (Pen. Code, § 25100, subd. (c).)

None of the criminal storage offenses (first degree, second degree, third degree) shall apply whenever the firearm is kept in a locked container or locked with a locking device that has rendered the firearm inoperable. (Pen. Code, § 25105.)

## **Sales, Transfers and Loans of Firearms to Minors**

Generally, it is illegal to sell, supply, deliver, or give possession of any firearm, either a handgun or a long gun, to a person under 21 years of age. (Pen. Code, § 27510.)

## **Possession of a Handgun or Live Ammunition by Minors**

It is unlawful for a minor to possess a handgun or live ammunition unless one of the following circumstances exists:

- The minor is accompanied by his or her parent or legal guardian and the minor is actively engaged in a lawful recreational sporting, ranching or hunting activity, or a motion picture, television or other entertainment event;
- The minor is accompanied by a responsible adult and has prior written consent of his or her parent or legal guardian and is involved in one of the activities cited above; or
- The minor is at least 16 years of age, has prior written consent of his or her parent or legal guardian, and the minor is involved in one of the activities cited above. (Pen. Code, §§ 29610-29655.)

## **PERSONS INELIGIBLE TO POSSESS FIREARMS**

The following persons are prohibited from possessing firearms (Pen. Code, §§ 29800-29825, 29900; Welf. & Inst. Code, §§ 8100, 8103.):

### **Lifetime Prohibitions**

- Any person convicted of any felony or any offense enumerated in Penal Code section 29905.
- Any person convicted of an offense enumerated in Penal Code section 23515.
- Any person with two or more convictions for violating Penal Code section

417, subdivision (a)(2).

- Any person adjudicated to be a mentally disordered sex offender. (Welf. & Inst. Code, § 8103, subd. (a)(1).)
- Any person found by a court to be mentally incompetent to stand trial or not guilty by reason of insanity of any crime, unless the court has made a finding of restoration of competence or sanity. (Welf. & Inst. Code, § 8103, subd. (b)(1), (c)(1), & (d)(1).)

## 10-Year Prohibitions

- Any person convicted of a misdemeanor violation of the following: Penal Code sections 71, 76, 136.5, 140, 148 (d), 171b, 171c, 171d, 186.28, 240, 241, 242, 243, 244.5, 245, 245.5, 246, 246.3, 247, 273.5, 273.6, 417, 417.1, 417.2, 417.6, 422, 626.9, 646.9, 830.95(a), 17500, 17510(a), 25300, 25800, 27510, 27590(c), 30315, or 32625, and Welfare and Institutions Code sections 871.5, 1001.5, 8100, 8101, or 8103.

## 5-Year Prohibitions

- Any person taken into custody as a danger to self or others, assessed, and admitted to a mental health facility under Welfare and Institutions Code sections 5150, 5151, 5152; or certified under Welfare and Institutions Code sections 5250, 5260, 5270.15.

## Juvenile Prohibitions

- Juveniles adjudged wards of the juvenile court are prohibited until they reach age 30 if they committed an offense listed in Welfare and Institutions Code section 707, subdivision (b).

## Miscellaneous Prohibitions

- Any person denied firearm possession as a condition of probation pursuant to Penal Code section 29900, subdivision (c).
- Any person charged with a felony offense, pending resolution of the matter. (18 U.S.C. § 922(g).)
- Any person while he or she is either a voluntary patient in a mental health facility or under a gravely disabled conservatorship (due to a mental disorder or impairment by chronic alcoholism) and if he or she is found to be a danger to self or others. (Welf. & Inst. Code, § 8103, subd. (e).)
- Any person addicted to the use of narcotics. (Pen. Code, § 29800, subd. (a).)
- Any person who communicates a threat (against any reasonably identifiable victim) to a licensed psychotherapist which is subsequently reported to law enforcement, is prohibited for five years. (Welf. & Inst. Code, § 8104, subd. (c).)
- Any person who is subject to a protective order as defined in Family Code section 6218, Penal Code section 136.2, or a temporary restraining order issued pursuant to Code of Civil Procedure sections 527.6 or 527.8.

True    False

Answers: 1: True, 2: True, 3: True, 4: True, 5: True

## Safe Handling Demonstration Glossary

**Action:** A series of moving parts that allow a firearm to be loaded, fired and unloaded.

**Barrel:** The metal tube through which a bullet passes on its way to a target.

**Breech:** The part of a firearm at the rear of the barrel.

**Bullet:** The projectile located at the tip of the cartridge case.

**Caliber:** The bullet or barrel diameter.

**Cartridge:** A single unit of ammunition made up of the case, primer, propellant and bullet.

**Cartridge Case:** A container for all other components which comprise a cartridge.

**Chamber:** The rear part of a gun barrel where the cartridge is located when the gun is loaded.

**Cylinder:** The part of a revolver that holds ammunition in individual chambers.

**Cylinder Latch:** A latch on double-action revolvers that allows the cylinder to swing out.

**Double-Action:** A type of firearm action in which a single pull of the trigger both cocks the hammer and releases it.

**Dummy Round:** A bright orange, red or other readily identifiable dummy round or an inert cartridge without powder and primer.

**Ejector Rod:** The part used to remove cartridges from the cylinder.

**Grip:** The handle of the firearm.

**Hammer:** The part of the firing mechanism which strikes the firing pin or primer.

**Jam:** A malfunction that prevents a firearm from firing properly.

**Magazine:** A separate box-like metal container for semi-automatic pistols into which cartridges are loaded.

**Magazine Release:** A device that releases the magazine so that it can be removed from the firearm.

**Magazine Well:** The opening in a firearm into which a magazine is inserted.

**Muzzle:** The front end of the barrel from which a bullet exits.

**Revolver:** A firearm that has a rotating cylinder containing a number of chambers.

**Round:** See cartridge.

**Safety:** A device on a firearm intended to help provide protection against accidental discharge under normal usage when properly engaged.

**Semiautomatic pistol:** A firearm that fires a single cartridge each time the trigger is pulled, and which automatically extracts and ejects the empty cartridge case and reloads the chamber.

**Single-action:** A type of firearm action in which pulling the trigger causes the hammer to release.

**Trigger Guard:** Located on the underside of the gun, the trigger guard is a rigid loop which particularly surrounds the trigger to prevent damage or accidental discharge.
