Colonies were formerly planted by warlike nations, to keep their enemies in awe, to give vent to a surplus of inhabitants, or to discharge a number of discontented and troublesome citizens. But in modern ages, the spirit of violence, being in some measure sheathed in commerce, colonies have been settled, by the nations of Europe, for the purposes of trade. These were to be attained by their raising, for the Mother Country, such [49] commodities as she did not produce, and supplying themselves from her with such things as they wanted. In subserviency to these views, Great-Britain planted colonies, and made laws, obliging them to carry to her, all their products which she wanted, and all their raw materials which she chose to work up. Besides this restriction, she forbade them to procure manufactures from any other part of the globe, or even the products of European countries, which could rival her, without being first brought to her ports. By a variety of laws, she regulated their trade, in such a manner, as was thought most conducive to their mutual advantage, and her own particular welfare. This principle of commercial monopoly, ran through no less than 29 acts of parliament from 1660, to 1764. In all these acts, the system of commerce was established, as that, from which alone, their contributions to the strength of the empire, were expected. During this whole period, a parliamentary revenue was no part of the object of colonisation. Accordingly, in all the laws which regarded them, the technical words of revenue laws, were avoided. Such have usually a title purporting their being “grants,” and the words “give and grant,” usually precede their enacting clauses. Although duties were imposed on America, by previous acts of parliament, no one title of “giving an aid to his majesty,” or any other of the usual titles to revenue acts, was to be found in any of them. They were intended as regulations of trade, and not as sources of national supplies. Till the year 1764, all stood on commercial regulation, and restraint.

While Great-Britain attended to this first system of colonisation, her American settlements, though exposed in unknown climates, and unexplored wildernesses, grew and flourished, and in the same proportion; the trade and riches of the Mother Country increased. Some estimate may be made of this increase, from the following statement. The whole export trade of England, including that to the colonies, in the year 1704, amounted to £6,509,000 sterling: but so immensely had the colonies increased, that the exports to them alone [50] in the year 1772, amounted to £6,022,132 sterling, and they were yearly increasing. In the short space of 68 years, the colonies added nearly as much to the export commerce of Great-Britain, as she had grown to by a progressive increase of improvement in 1700 years. And this increase of colonial trade, was not at the expence of the general trade of the kingdom, for that increased in the same time, from six millions, to sixteen millions.

In this auspicious period, the Mother Country contented herself with exercising her supremacy in superintending the general concerns of the colonies, and in harmonising the commercial interest of the whole empire. To this the most of them bowed down with such a filial submission as demonstrated that they, though not subjected to parliamentary taxes, could be kept in due subordination, and in perfect subserviency to the grand views of colonisation.

Immediately after the peace of Paris, 1763, a new scene was opened. The national debt of Great-Britain, then amounted to 148 millions, for which an interest of nearly 5

millions, was annually paid. While the British minister was digesting plans for diminishing this amazing load of debt, he conceived the idea of raising a substantial revenue in the British colonies, from taxes laid by the parliament of the parent state. On the one hand it was urged that the late war originated on account of the colonies—that it was reasonable, more especially as it had terminated in a manner so favourable to their interest, that they should contribute to the defraying of the expences it had occasioned. Thus far both parties were agreed, but Great-Britain contended, that her parliament as the supreme power, was constitutionally vested with an authority to lay them on every part of the empire. This doctrine, plausible in itself, and conformable to the letter of the British constitution, when the whole dominions were represented in one assembly, was reprobated in the colonies, as contrary to the spirit of the same government, when the empire became so far extended, as to have many distinct representative assemblies. The colonists believed that the chief excellence of the [51] British constitution consisted in the right of subjects to grant, or withhold taxes, and in their having a share in enacting the laws, by which they were to be bound.

They conceived, that the superiority of the British constitution, to other forms of government was, not because their supreme council was called Parliament, but because, the people had a share in it, by appointing members, who constituted one of its constituent branches, and without whose concurrence, no law, binding on them, could be enacted. In the Mother Country, it was asserted to be essential to the unity of the empire, that the British Parliament should have a right of taxation, over every part of the royal dominions. In the colonies, it was believed, that taxation and representation were inseparable, and that they could neither be free, nor happy, if their property could be taken from them, without their consent. The common people in America reasoned on this subject, in a summary way: “If a British Parliament,” said they, “in which we are unrepresented, and over which we have no control, can take from us any part of our property, by direct taxation, they may take as much as they please, and we have no security for any thing, that remains, but a forbearance on their part, less likely to be exercised in our favour, as they lighten themselves of the burthens of government, in the same proportion, that they impose them on us.” They well knew, that communities of mankind, as well as individuals, have a strong propensity to impose on others, when they can do it with impunity, and, especially, when there is a prospect, that the imposition will be attended with advantage to themselves. The Americans, from that jealousy of their liberties, which their local situation nurtured, and which they inherited from their forefathers, viewed the exclusive right of laying taxes on themselves, free from extraneous influence, in the same light, as the British Parliament views its peculiar privilege of raising money, independent of the crown. The parent state appeared to the colonists to stand in the same relation to their local legislatures, as the monarch of Great-Britain, to the British [52] Parliament. His prerogative is limited by that palladium of the people’s liberty, the exclusive privilege of granting their own money. While this right rests in the hands of the people, their liberties are secured. In the same manner reasoned the colonists “in order to be stiled freemen, our local assemblies, elected by ourselves, must enjoy the exclusive privilege of imposing taxes upon us.” They contended, that men settled in foreign parts to better their condition, and not to submit their liberties—to continue the equals, not to become the slave of their less adventurous

fellow-citizens, and that by the novel doctrine of parliamentary power, they were degraded from being the subjects of a King, to the low condition of being subjects of subjects. They argued, that it was essentially involved in the idea of property, that the possessor had such a right therein, that it was a contradiction to suppose any other man, or body of men, possessed a right to take it from him, without his consent. Precedents, in the history of England, justified this mode of reasoning. The love of property strengthened it, and it had a peculiar force on the minds of colonists, 3000 miles removed from the seat of government, and growing up to maturity, in a new world, where, from the extent of country, and the state of society, even the necessary restraints of civil government, were impatiently born. On the other hand, the people of Great-Britain revolted against the claims of the colonists. Educated in habits of submission to parliamentary taxation, they conceived it to be the height of contumacy for their colonists to refuse obedience to the power, which they had been taught to revere. Not adverting to the common interest, which existed between the people of Great-Britain, and their representatives, they believed, that the same right existed, although the same community of interests was wanting. The pride of an opulent, conquering nation, aided this mode of reasoning. "What," said they, "shall we, who have so lately humbled France and Spain, be dictated to by our own colonists? Shall our subjects, educated by our care, and defended by our arms, presume to question the rights of Parliament, to which we are obliged to submit." [53] Reflections of this kind, congenial to the natural vanity of the human heart, operated so extensively, that the people of Great-Britain spoke of their colonies and of their colonists, as of a kind of possession, annexed to their persons. The love of power, and of property, on the one side of the Atlantic, were opposed by the same powerful passions on the other.

The disposition to tax the colonies, was also strengthened by exaggerated accounts of their wealth. It was said, "that the American planters lived in affluence, and with inconsiderable taxes, while the inhabitants of Great-Britain were born down, by such oppressive burdens, as to make a bare subsistence, a matter of extreme difficulty." The officers who have served in America, during the late war, contributed to this delusion. Their observations were founded on what they had seen in cities, and at a time, when large sums were spent by government, in support of fleets and armies, and when American commodities were in great demand. To treat with attention those, who came to fight for them, and also to gratify their own pride, the colonists had made a parade of their riches, by frequently and sumptuously entertaining the gentlemen of the British army. These, judging from what they saw, without considering the general state of the country, concurred in representing the colonists, as very able to contribute, largely, towards defraying the common expences of the empire.

The charters, which were supposed to contain the principles on which the colonies were founded, became the subject of serious investigation on both sides. One clause was found to run through the whole of them, except that which had been granted to Mr. Penn. This was a declaration, "that the emigrants to America should enjoy the same privileges, as if they had remained, or had been born within the realm;" but such was the subtilty of disputants, that both parties construed this general principle, so as to favour their respective opinions. The American patriots contended, that as English freeholders could not be taxed, but by representatives, in chusing whom they had a

vote, neither could the colonists: But [54] it was replied, that if the colonists had remained in England, they must have been bound to pay the taxes, imposed by parliament. It was therefore inferred, that, though taxed by that authority, they lost none of the rights of native Englishmen, residing at home. The partizans of the Mother Country could see nothing in charters, but security against taxes, by royal authority. The Americans, adhering to the spirit more than to the letter, viewed their charters, as a shield, against all taxes, not imposed by representatives of their own choice. This construction they contended to be expressly recognized by the charter of Maryland. In that, King Charles bound, both himself and his successors, not to assent to any bill, subjecting the inhabitants to internal taxation, by external legislation.

The nature and extent of the connection between Great-Britain and America, was a great constitutional question, involving many interests, and the general principles of civil liberty. To decide this, recourse was in vain had to parchment authorities, made at a distant time, when neither the grantor, nor grantees, of American territory, had in contemplation, any thing like the present state of the two countries.

Great and flourishing colonies, daily increasing in numbers, and already grown to the magnitude of a nation, planted at an immense distance, and governed by constitutions, resembling that of the country, from which they sprung, were novelties in the history of the world. To combine colonies, so circumstanced, in one uniform system of government, with the parent state, required a great knowledge of mankind, and an extensive comprehension of things. It was an arduous business, far beyond the grasp of ordinary statesmen, whose minds were narrowed by the formalities of law, or the trammels of office. An original genius, unfettered with precedents, and exalted with just ideas of the rights of human nature, and the obligations of universal benevolence, might have struck out a middle line, which would have secured as much liberty to the colonies, and as great a degree of supremacy to the parent state, as their common good required: But [55] the helm of Great-Britain was not in such hands. The spirit of the British constitution on the one hand, revolted at the idea, that the British parliament should exercise the same unlimited authority over the unrepresented colonies, which it exercised over the inhabitants of Great-Britain. The colonists on the other hand did not claim a total exemption from its authority. They in general allowed the Mother Country a certain undefined prerogative over them, and acquiesced in the right of Parliament, to make many acts, binding them in many subjects of internal policy, and regulating their trade. Where parliamentary supremacy ended, and at what point colonial independency began, was not ascertained. Happy would it have been, had the question never been agitated, but much more so, had it been compromised by an amicable compact, without the horrors of a civil war.

The English colonies were originally established, not for the sake of revenue, but on the principles of a commercial monopoly. While England pursued trade and forgot revenue, her commerce increased at least fourfold. The colonies took off the manufactures of Great-Britain, and paid for them with provisions, or raw materials. They united their arms in war, their commerce and their councils in peace, without nicely investigating the terms on which the connection of the two countries depended.

A perfect calm in the political world is not long to be expected. The reciprocal happiness, both of Great-Britain and of the colonies, was too great to be of long duration. The calamities of the war of 1755, had scarcely ended, when the germ of another war was planted, which soon grew up and produced deadly fruit.

At that time sundry resolutions passed the British parliament, relative to the imposition of a stamp duty in America, which gave a general alarm. By them the right, the equity, the policy, and even the necessity of taxing the colonies was formally avowed. These resolutions being considered as the preface of a system of American revenue, were deemed an introduction of evils of much greater magnitude. They opened a prospect of oppression, [56] boundless in extent, and endless in duration. They were nevertheless not immediately followed by any legislative act. Time, and an invitation, were given to the Americans, to suggest any other mode of taxation, that might be equivalent in its produce to the stamp act: But they objected, not only to the mode, but the principle, and several of their assemblies, though in vain, petitioned against it. An American revenue was in England, a very popular measure. The cry in favour of it was so strong, as to confound and silence the voice of petitions to the contrary. The equity of compelling the Americans to contribute to the common expences of the empire, satisfied many, who, without enquiring into the policy or justice of taxing their unrepresented fellow subjects, readily assented to the measures adopted by the parliament, for this purpose. The prospect of easing their own burdens, at the expence of the colonists, dazzled the eyes of gentlemen of landed interest, so as to keep out of their view, the probable consequences of the innovation.

1764

The omnipotence of parliament was so familiar a phrase on both sides of the Atlantic, that few in America, and still fewer in Great-Britain, were impressed in the first instance, with any idea of the illegality of taxing the colonists.

The illumination on that subject was gradual. The resolutions in favour of an American stamp act, which passed in March, 1764, met with no opposition. In the course of the year, which intervened between these resolutions, and the passing of a law grounded upon them, the subject was better understood and constitutional objections against the measure, were urged by several, both in Great-Britain and America. This astonished and chagrined the British ministry: But as the principle of taxing America, had been for some time determined upon, they were unwilling to give it up.

Impelled by partiality for a long cherished idea, Mr. Grenville brought into the house of commons his long expected bill, for laying a stamp duty in America. By this after passing through the usual forms, it was enacted, that the instruments [57] of writing which are in daily use among a commercial people, should be null and void, unless they were executed on stamped paper or parchment, charged with a duty imposed by the British parliament.

March, 1765

When the bill was brought in, Mr. Charles Townsend concluded a speech in its favour, with words to the following effect, "And now will these Americans, children planted by our care, nourished up by our indulgence, till they are grown to a degree of strength and opulence, and protected by our arms, will they grudge to contribute their

mite to relieve us from the heavy weight of that burden which we lie under.” To which Colonel Barré replied,

They planted by your care? No, your oppressions planted them in America. They fled from tyranny to a then uncultivated and inhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable; and among others to the cruelty of a savage foe the most subtle, and I will take upon me to say, the most formidable of any people upon the face of God’s earth; and yet, actuated by principles of true English liberty, they met all hardships with pleasure compared with those they suffered in their own country, from the hands of those that should have been their friends. They nourished up by your indulgence? They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them in one department and another, who were perhaps the deputies of deputies to some members of this house, sent to spy out their liberties, to misrepresent their actions and to prey upon them. Men, whose behaviour on many occasions, has caused the blood of those sons of liberty to recoil within them. Men promoted to the highest seats of justice, some who to my knowledge were glad by going to a foreign country, to escape being brought to the bar of a court of justice in their own. They protected by your arms? They have nobly taken up arms in your defence, have exerted a valour amidst their constant and laborious industry, for the defence of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your emolument. And believe [58] me, remember I this day told you so, that same spirit of freedom which actuated that people at first will accompany them still: but prudence forbids me to explain myself farther. God knows, I do not at this time speak from any motives of party heat, what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience, the respectable body of this house may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people I believe are as truly loyal as any subjects the King has, but a people jealous of their liberties, and who will vindicate them, if ever they should be violated: but the subject is too delicate—I will say no more.

During the debate on the bill, the supporters of it insisted much on the colonies being virtually represented in the same manner as Leeds, Halifax, and some other towns were. A recurrence to this plea was a virtual acknowledgment, that there ought not to be taxation without representation. It was replied, that the connexion between the electors and non-electors of parliament in Great-Britain, was so interwoven, from both being equally liable to pay the same common tax, as to give some security of property to the latter: but with respect to taxes laid by the British parliament, and paid by the Americans, the situation of the parties was reversed. Instead of both parties bearing a proportionable share of the same common burden, what was laid on the one, was exactly so much taken off from the other.

The bill met with no opposition in the house of Lords, and on the 22d of March, it received the royal assent.

The night after it passed, Dr. Franklin wrote to Mr. Charles Thomson. “The sun of liberty is set, you must light up the candles of industry and economy.” Mr. Thomson answered, “he was apprehensive

1765

that other lights would be the consequence,” and foretold the opposition that shortly took place. On its being suggested from authority, that the stamp officers would not be sent from Great-Britain: but selected from among the Americans, the colony agents were desired to point out proper persons [59] for the purpose. They generally nominated their friends which affords a presumptive proof, that they supposed the act would have gone down. In this opinion they were far from being singular. That the colonists would be ultimately obliged to submit to the stamp act, was at first commonly believed, both in England and America. The framers of it, in particular, flattered themselves that the confusion which would arise upon the disuse of writings, and the insecurity of property, which would result from using any other than that required by law, would compel the colonies, however reluctant, to use the stamp paper, and consequently to pay the taxes imposed thereon. They therefore boasted that it was a law which would execute itself.

By the terms of the stamp act, it was not to take effect till the first day of November, a period of more than seven months after

1765

its passing. This give the colonists an opportunity for leisurely canvassing the new subject, and examining it fully on every side. In the first part of this interval, struck with astonishment, they lay in silent consternation, and could not determine what course to pursue. By degrees they recovered their recollection.

Virginia led the way in opposition to the stamp act. Mr. Patrick Henry brought into the house of burgesses of that colony, the following resolutions which were substantially adopted.

May 28, 1765

Resolved, That the first adventurers, settlers of this his Majesty’s colony and dominion of Virginia, brought with them and transmitted to their posterity, and all other, his Majesty’s subjects, since inhabiting in this, his Majesty’s said colony, all the liberties, privileges and immunities, that have at any time been held, enjoyed and possessed by the people of Great-Britain.

Resolved, That by two royal charters, granted by King James the first, the colonies aforesaid are declared, and entitled to all liberties, privileges, and immunities of denizens, and natural subjects, to all intents and purposes, as if they had been abiding, and born within the realm of England,

Resolved, That his Majesty’s liege people, of this, his ancient colony, have enjoyed the rights of being thus governed [60] by their own assembly, in the article of taxes, and internal police, and that the same have never been forfeited, or yielded up, but have been constantly recognized by the King and people of Britain.

1765

Resolved, therefore, That the general assembly of this colony, together with his Majesty, or his substitutes, have, in their representative capacity, the only exclusive right and power, to lay taxes and imposts, upon the inhabitants of this colony, and that every attempt to vest such power in any other person or persons, whatsoever, than the general assembly aforesaid, is illegal, unconstitutional, and unjust, and hath a manifest tendency to destroy British, as well as American Liberty.

Resolved, That his Majesty's liege people, the inhabitants of this colony, are not bound to yield obedience to any law, or ordinance whatever, designed to impose any taxation whatever upon them, other, than the laws or ordinances of the general assembly aforesaid.

Resolved, That any person, who shall, by speaking, or writing, assert, or maintain, that any person, or persons, other than the general assembly of this colony, have any right or power, to impose, or lay any taxation on the people here, shall be deemed an enemy to this, his Majesty's colony.

Upon reading these resolutions, the boldness and novelty of them affected one of the members to such a degree, that he cried out, "Treason! Treason!" They were, nevertheless, well received by the people, and immediately forwarded to the other provinces. They circulated extensively, and gave a spring to all the discontented. Till they appeared, most were of opinion, that the act would be quietly adopted. Murmurs, indeed, were common, but they seemed to be such, as would soon die away. The countenance of so respectable a colony, as Virginia, confirmed the wavering, and emboldened the timid. Opposition to the stamp act, from that period, assumed a bolder face. The fire of liberty blazed forth from the press; some well judged publications set the rights of the colonists, in a plain, but strong point of view.

The tongues and the pens of the well informed [61] citizens laboured in kindling the latent sparks of patriotism. The flame spread from breast to breast, till the conflagration, became general. In this business, New-England had a principal share. The inhabitants of that part of America, in particular, considered their obligations to the Mother Country for past favours, to be very inconsiderable. They were fully informed, that their forefathers were driven, by persecution, to the woods of America, and had there, without any expence to the parent state, effected a settlement on bare creation. Their resentment, for the invasion of their accustomed right of taxation, was not so much mitigated, by the recollection of late favours, as it was heightened by the tradition of grievous sufferings, to which their ancestors, by the rulers of England, had been subjected. The descendants of the exiled, persecuted, Puritans, of the last century, opposed the stamp act with the same spirit, with which their forefathers were actuated, when they set themselves against the arbitrary impositions of the House of Stuart.

1765

The heavy burdens, which the operation of the stamp-act would have imposed on the colonists, together with the precedent it would establish of future exactions, furnished the American patriots with arguments, calculated as well to move the passions, as to convince the judgments of their fellow colonists. In great warmth they exclaimed, "If the parliament has a right to levy the stamp duties, they may, by the same authority, lay on us imposts, excises, and other taxes, without end, till their rapacity is satisfied, or our abilities are exhausted. We cannot, at future elections, displace these men, who so lavishly grant away our property. Their seats and their power are independent of us, and it will rest with their generosity, where to stop, in transferring the expences of government, from their own, to our shoulders."

It was fortunate for the liberties of America, that News-papers were the subject of a heavy stamp duty. Printers, when uninfluenced by government, have generally

arranged themselves on the side of liberty, nor are they less remarkable for attention to the profits of their profession.

A stamp duty, which openly invaded the first, [62] and threatened a great diminution of the last, provoked their united zealous opposition. They daily presented to the public, original dissertations, tending to prove, that if the stamp-act was suffered to operate, the liberties of America, were at end, and their property virtually transferred, to their Trans-Atlantic fellow-subjects. The writers among the Americans, seriously alarmed for the fate of their country, came forward, with essays, to prove, that agreeably to the British constitution, taxation and representation were inseparable, that the only constitutional mode of raising money from the colonists, was by acts of their own legislatures, that the Crown possessed no farther power, than that of requisition, and that the parliamentary right of taxation was confined to the Mother Country, and there originated, from the natural right of man, to do what he pleased with his own, transferred by consent from the electors of Great-Britain, to those whom they chose to represent them in Parliament. They also insisted much on the mis-application of public money by the British ministry. Great pains were taken, to inform the colonists, of the large sums, annually bestowed on pensioned favorites, and for the various purposes of bribery. Their passions were inflamed, by high coloured representations of the hardship of being obliged to pay the earnings of their industry, into a British treasury, well known to be a fund for corruption.

1765

The writers on the American side were opposed by arguments, drawn from the unity of the empire. The necessity of one supreme head, the unlimited power of Parliament, and the great numbers in the Mother Country, who, though legally disqualified, from voting at elections, were nevertheless bound to pay the taxes, imposed by the representatives of the nation. To these objections it was replied, that the very idea of subordination of parts, excluded the notion of simple undivided unity.

That as England was the head, she could not be the head and the members too—that in all extensive empires, where the dead uniformity of servitude did not prevent, the subordinate parts had many local privileges and immunities—that between these privileges and the supreme [63] common authority, the line was extremely nice; but nevertheless, the supremacy of the head had an ample field of exercise, without arrogating to itself the disposal of the property of the unrepresented subordinate parts. To the assertion, that the power of Parliament was unlimited, the colonists replied, that before it could constitutionally exercise that power, it must be constitutionally formed, and that, therefore, it must at least, in one of its branches, be constituted by the people, over whom it exercised unlimited power. That with respect to Great-Britain, it was so constituted—with respect to America, it was not. They therefore inferred, that its power ought not to be the same over both countries. They argued also, that the delegation of the people was the source of power, in regard to taxation, and as that delegation was wanting in America, they concluded the right of Parliament, to grant away their property, could not exist. That the defective representation in Great-Britain, should be urged as an argument for taxing the Americans, without any representation at all, proved the encroaching nature of power. Instead of convincing the colonists of the propriety of their submission, it demonstrated the wisdom of their resistance; for, said they, “one

1765

invasion of natural right is made the justification of another, much more injurious and oppressive.”

The advocates for parliamentary taxation laid great stress on the rights, supposed to accrue to Great-Britain, on the score of her having reared up and protected the English settlements, in America, at great expence. It was, on the other hand, contended by the colonists, that in all the wars which were common to both countries, they had taken their full share, but in all their own dangers, in all the difficulties belonging separately to their situation, which did not immediately concern Great-Britain, they were left to themselves, and had to struggle through a hard infancy; and in particular, to defend themselves without any aid from the Parent State, against the numerous savages in their vicinity. That when France had made war upon them, it was not on their own account, but as appendages to Great-Britain.

That confining their trade [64] for the exclusive benefit of the Parent State, was an ample compensation for her protection, and a sufficient equivalent for their exemption from parliamentary taxation. That the taxes imposed on the inhabitants of Great-Britain, were incorporated with their manufactures, and ultimately fell on the colonists, who were the consumers.

1765

The advocates for the stamp act, also contended that as the parliament was charged with the defence of the colonies, it ought to possess the means of defraying the expences incurred thereby. The same argument had been used by King Charles the 1st, in support of ship money; and it was now answered in the same manner, as it was by the patriots of that day. “That the people who were defended or protected, were the first to judge of and to provide the means of defraying the expences incurred on that account.” In the mean time, the minds of the Americans underwent a total transformation. Instead of their late peaceable and steady attachment to the British nation, they were daily advancing to the opposite extreme. A new mode of displaying resentment against the friends of the stamp act, began in Massachusetts, and was followed by the other colonies.

A few gentlemen hung out, early in the morning, on the limb of a large tree, towards the entrance of Boston, two effigies, one designed for the stamp master, the other for a jack boot, with a head and horns peeping out at the top. Great numbers both from town and country came to see them. A spirit of enthusiasm was diffused among the spectators. In the evening the whole was cut down and carried in procession by the populace shouting “liberty and property forever, no stamps.” They next pulled down a new building, lately erected by Mr. Oliver, the stamp master. They then went to his house, before which they beheaded his effigy, and at the same time broke his windows. Eleven days after similar violences were repeated. The mob attacked the house of Mr. William Story, deputy register of the court of admiralty—broke his windows—forced into his dwelling house, and destroyed the books and files belonging to the said court, and ruined a great part of his furniture. They [65] next proceeded to the house of Benjamin Hallowell, comptroller of the customs, and repeated similar excesses, and drank and destroyed his liquors. They afterwards proceeded to the house of Mr. Hutchinson, and soon demolished it. They carried off his plate, furniture and apparel, and scattered or destroyed manuscripts and other curious and useful papers, which for thirty years he had been collecting. About half a dozen of the meanest of the mob

1765 Aug. 14

were soon after taken up and committed, but they either broke jail, or otherwise escaped all punishment. The town of Boston condemned the whole proceeding, and for some time, private gentlemen kept watch at night, to prevent further violences.

Similar disturbances broke out in the adjacent colonies, nearly about the same time. On the 27th August, the people of New-Port in Rhode-Island, 1765 exhibited three effigies intended for Messieurs Howard, Moffatt, and Johnson, in a cart with halters about their necks, and after hanging them on a gallows for some time, cut them down and burnt them, amidst the acclamations of thousands. On the day following, the people collected at the house of Mr. Martin Howard, a lawyer, who had written in defence of the right of Parliament to tax the Americans, and demolished every thing, that belonged to it. They proceeded to Dr. Moffatt's, who, in conversation, had supported the same right, and made a similar devastation of his property.

In Connecticut they exhibited effigies in sundry places, and afterwards committed them to the flames.

In New-York, the stamp master having resigned, the stamp papers were taken into Fort George, by Lieutenant Governor Colden. The people, disliking his political sentiments, broke open his stable, took out his coach, and carried it in triumph, through the principal streets, to the gallows. On one end of this they suspended the effigy of the Lieut. Governor, having in his right hand a stamped bill of lading, and in the other a figure of the devil. After some time, they carried the apparatus to the gate of the fort, and from thence to the bowling green, under the muzzles of the guns, and burned the [66] whole amid the acclamations of many thousands. They went thence to Major James' house, stripped it of every article, and consumed the whole, because he was a friend to the stamp act. Nov. 1, 1765

The next evening the mob re-assembled, and insisted upon the Lieutenant Governor delivering the stamped papers into their hands, and threatened, in case of a refusal, to take them by force. After some negotiation, it was agreed that they should be delivered to the corporation, and they were deposited in the city hall. Ten boxes of the same, which came by another conveyance, were burned.

The stamp-act was not less odious to many of the inhabitants of the British West-India islands, than to those on the continent of North America. The people of St. Kitts obliged the stamp officer, and his deputy, to resign. Barbadoes, Canada, and Halifax, submitted to the act.

When the ship, which brought the stamp papers to Philadelphia, first appeared round Gloucester point, all the vessels in the harbour hoisted their colours half mast high. The bells were rung muffled till evening, and every countenance added to the appearance of sincere mourning. A large number of people assembled, and endeavoured to procure the resignation of Mr. Hughes, the stamp distributor. He held out long, but at length found it necessary to comply.

As opportunities offered, the assemblies generally passed resolutions, asserting their exclusive right, to lay taxes on their constituents. The people, in their town meetings, instructed their representatives to oppose the stamp act. As a specimen of these, the instructions given to Thomas Forster, their representative, by the freeholders and other inhabitants of the town of Plymouth, are subjoined. In these the yeomanry of the country spoke the determined language of freemen.

After expressing the highest esteem for the British constitution, and setting forth their grievances, they proceeded as follows:

October, 1765

You, Sir, represent a people, who are not only descended from the first settlers of this country, but inhabit the very spot they first possessed. Here was first laid [67] the foundation of the British empire, in this part of America, which, from a very small beginning, has increased and spread, in a manner very surprising, and almost incredible, especially, when we consider, that all this has been effected, without the aid or assistance of any power on earth; that we have defended, protected and secured ourselves against the invasions and cruelty of savages, and the subtlety and inhumanity of our inveterate and natural enemies, the French; and all this without the appropriation of any tax by stamps, or stamp acts, laid upon our fellow subjects, in any part of the King's dominions, for defraying the expence thereof. This place, Sir, was at first the asylum of liberty, and we hope, will ever be preserved sacred to it, though it was then no more than a barren wilderness, inhabited only by savage men and beasts. To this place our Fathers (whose memories be revered) possessed of the principles of liberty in their purity, disdaining slavery, fled to enjoy those privileges, which they had an undoubted right to, but were deprived of, by the hands of violence and oppression, in their native country. We, Sir, their posterity, the freeholders, and other inhabitants of this town, legally assembled for that purpose, possessed of the same sentiments, and retaining the same ardour for liberty, think it our indispensable duty, on this occasion, to express to you these our sentiments of the stamp-act, and its fatal consequences to this country, and to enjoin upon you, as you regard not only the welfare, but the very being of this people, that you (consistent with our allegiance to the King, and relation to the government of Great Britain) disregarding all proposals for that purpose, exert all your power and influence in opposition to the stamp act, at least till we hear the success of our petitions for relief. We likewise, to avoid disgracing the memories of our ancestors, as well as the reproaches of our own consciences, and the curses of posterity, recommend it to you, to obtain, if possible, in the honorable house of representatives of this province, a full and explicit assertion of our rights, and to have the same entered on their public records, that all generations yet to come, may be convinced, that we have [68] not only a just sense of our rights and liberties, but that we never, with submission to Divine Providence, will be slaves to any power on earth.

The expediency of calling a continental Congress to be composed of deputies from each of the provinces, had early occurred to the people of Massachusetts.

The assembly of that province passed a resolution in favour of that measure, and fixed on New-York as the place, and the

1765 June 6

second Tuesday of October, as the time, for holding the same. Soon after, they sent circular letters to the speakers of the several assemblies, requesting their concurrence. This first advance towards continental union was seconded in South-Carolina, before

it had been agreed to by any colony to the southward of New England. The example of this province had a considerable influence in recommending the measure to others, who were divided in their opinions, on the propriety of it.

The assemblies of Virginia, North-Carolina, and Georgia, were prevented, by their governors, from sending a deputation to this Congress. Twenty eight deputies from Massachusetts, Rhode-Island, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, and South-Carolina met at New-York; and after mature deliberation agreed on a declaration of their rights, and on a statement of their grievances. They asserted in strong terms, their exemption from all taxes, not imposed by their own representatives. They also concurred in a petition to the King, and memorial to the House of Lords, and a petition to the House of Commons. The colonies that were prevented from sending their representatives to this Congress, forwarded petitions, similar to those which were adopted by the deputies which attended.

While a variety of legal and illegal methods were adopted to oppose the stamp act, the first of November, on which it was to commence its operation, approached. This in Boston was ushered in by a funeral tolling of bells. Many shops and stores were shut. The effigies of the planners and friends of the stamp act, were carried [69] about the streets in public derision, and then torn in pieces, by the enraged populace. It was remarkable that though a large crowd was assembled, there was not the least violence, or disorder.

At Portsmouth in New-Hampshire, the morning was ushered in, with tolling all the bells in town. In the course of the day, notice was given to the friends of liberty, to attend her funeral. A coffin, neatly ornamented inscribed with the word *Liberty* in large letters, was carried to the grave. The funeral procession began from the state house, attended with two unbraced drums. While the inhabitants who followed the coffin were in motion, minute guns were fired, and continued till the corpse arrived at the place of interment. Then an oration in favour of the deceased was pronounced. It was scarcely ended before the corpse was taken up, it having been perceived that some remains of life were left, at which the inscription was immediately altered to "Liberty revived." The bells immediately exchanged their melancholy, for a more joyful sound, and satisfaction appeared in every countenance. The whole was conducted with decency, and without injury or insult, to any man's person or property.

Nov. 1

In Maryland, the effigy of the stamp master, on one side of which was written, "Tyranny" on the other "Oppression," and across the breast, "Damn my country I'll get money," was carried through the streets, from the place of confinement, to the whipping post, and from thence to the pillory. After suffering many indignities, it was first hanged and than burnt.

The general aversion to the stamp act, was, by similar methods, in a variety of places, demonstrated. It is remarkable that the proceedings of the populace, on these occasions, were earned on with decorum, and regularity. They were not ebullitions of a thoughtless mob, but for the most part, planned by leading men of character and

influence, who were friends to peace and order. These, knowing well that the bulk of mankind, are more led by their senses, than by their reason, conducted the public [70] exhibitions on that principle, with a view of making the stamp act, and its friends, both ridiculous, and odious.

Though the stamp act was to have operated from the first of November; yet legal proceedings in the courts, were carried on as before. Vessels entered and departed without stamped papers. The printers boldly printed and circulated their news-papers, and found a sufficient number of readers, though they used common paper, in defiance of the act of parliament. In most departments, by common consent, business was carried on, as though no stamp act had existed. This was accompanied by spirited resolutions to risqué all consequences, rather than submit to use the paper required by law. While these matters were in agitation, the colonists entered into associations against importing British manufactures, till the stamp act should be repealed. In this manner British liberty was made to operate against British tyranny. Agreeably to the free constitution of Great Britain, the subject was at liberty to buy, or not to buy, as he pleased. By suspending their future purchases on the repeal of the stamp act, the colonists made it the interest of merchants, and manufacturers, to solicit for that repeal. They had usually taken off so great a proportion of British manufactures, that the sudden stoppage of all their orders, amounting, annually, to several millions sterling, threw some thousands in the Mother Country out of employment, and induced them, from a regard to their own interest, to advocate the measures wished for by America. The petitions from the colonies were seconded by petitions from the merchants and manufacturers of Great-Britain. What the former prayed for as a matter of right, and connected with their liberties, the latter also solicited from motives of immediate advantage. In order to remedy the deficiency of British goods, the colonists betook themselves to a variety of necessary domestic manufactures. In a little time, large quantities of course and common clothes were brought to market, and these though dearer, and of a worse quality, were cheerfully preferred to similar articles, imported from Britain. That wool might not be wanting, they entered into resolutions [71] to abstain from eating lambs. Foreign elegancies were generally laid aside. The women were as exemplary as the men, in various instances of self denial. With great readiness, they refused every article of decoration for their persons, and of luxury for their tables. These restrictions, which the colonists had voluntarily imposed on themselves, were so well observed, that multitudes of artificers in England, were reduced to great distress, and some of their most flourishing manufactories, were, in a great measure, at a stand. An association was entered into by many of the sons of liberty, the name given to those who were opposed to the stamp act, by which they agreed “to march with the utmost expedition at their own proper costs and expence, with their whole force to the relief of those that should be in danger from the stamp act, or its promoters and abettors, or any thing relative to it, on account of any thing that may have been done, in opposition to its obtaining.” This was subscribed by so many in New-York and New-England, that nothing but a repeal could have prevented the immediate commencement of a civil war.

From the decided opposition to the stamp act, which had been by the colonies adopted, it became necessary for Great Britain to enforce, or to repeal it. Both

1765

methods of proceeding had supporters. The opposers of a repeal urged arguments, drawn from the dignity of the nation, the danger of giving way to the clamours of the Americans, and the consequences of weakening parliamentary authority over the colonies. On the other hand it was evident, from the determined opposition of the colonies, that it could not be enforced without a civil war, by which, in every event, the nation must be a loser. In the course of these discussions, Dr. Franklin was examined at the bar of the House of Commons, and gave extensive information on the state of American affairs, and the impolicy of the stamp act, which contributed much to remove prejudices, and to produce a disposition that was friendly to a repeal.

Some speakers of great weight, in both houses of parliament, denied their right of taxing the colonies. The [72] most distinguished supporters of this opinion were Lord Camden, in the House of Peers, and Mr. Pitt, in the House of Commons. The former, in strong language, said, "My position is this, I repeat it, I will maintain it to my last hour. Taxation and representation are inseparable. This position is founded on the laws of nature. It is more, it is itself an eternal law of nature. For whatever is a man's own, is absolutely his own. No man has a right to take it from him without his consent. Whoever attempts to do it, attempts an injury, whoever does it, commits a robbery." Mr. Pitt, with an original boldness of expression, justified the colonists, in opposing the stamp-act. "You have no right," said he, "to tax America. I rejoice, that America has resisted. Three millions of our fellow subjects so lost to every sense of virtue, as tamely to give up their liberties, would be fit instruments to make slaves of the rest." He concluded with giving his advice, that the stamp-act be repealed absolutely, totally, and immediately, that the reason for the repeal be assigned, that it was founded on an erroneous principle. "At the same time," said he, "let the sovereign authority of this country, over the colonies, be asserted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever; that we may bind their trade, confine their manufactures, and exercise every power, except that of taking their money out of their pockets, without their consent." The approbation of this illustrious statesman, whose distinguished abilities had raised Great Britain to the highest pitch of renown, inspired the Americans with additional confidence, in the rectitude of their claims of exemption from parliamentary taxation, and emboldened them to farther opposition, when at a future day, as shall be hereafter related, the project of an American revenue was resumed. After much debating, and two protests in the House of Lords, and passing an act "for securing the dependence of America on Great Britain" the repeal of the stamp act was finally carried.

This event gave great joy in London. Ships in the river Thames displayed their colours, and houses were illuminated all [73] over the city. It was no sooner known in America, than the colonists rescinded their resolutions, and recommenced their mercantile intercourse with the Mother Country. They presented their homespun clothes to the poor, and imported more largely than ever. The churches resounded with thanksgivings, and their public and private rejoicings knew no bounds. By letters, addresses, and other means, almost all the colonies shewed unequivocal marks of acknowledgment, and gratitude. So sudden a calm recovered after so violent a storm, is without a parallel in history. By the judicious sacrifice of one law, the parliament of Great Britain procured an acquiescence, in all that remained.

March 18

There were enlightened patriots, fully impressed with an idea, that the immoderate joy of the colonists was disproportioned to the advantage they had gained.

The stamp act, though repealed, was not repealed on American principles. The preamble assigned as the reason thereof, "That the collecting the several duties and revenues, as by the said act was directed, would be attended with many inconveniencies, and productive of consequences, dangerous to the commercial interests of these kingdoms." Though this reason was a good one in England, it was by no means satisfactory in America. At the same time that the stamp act was repealed, the absolute, unlimited supremacy of parliament was, in words, asserted. The opposers of the repeal contended for this as essential, the friends of that measure acquiesced in it to strengthen their party, and make sure of their object. Many of both sides thought, that the dignity of Great Britain required something of the kind to counterbalance the loss of authority, that might result from her yielding to the clamours of the colonists. The act for this purpose was called the declaratory act, and was in principle more hostile to American rights, than the stamp act; for it annulled those resolutions and acts of the provincial assemblies, in which they had asserted their right to exemption from all taxes, not imposed by their own representatives; and also enacted, "That the parliament [74] had, and of right ought to have, power to bind the colonies, in all cases whatsoever. "

The bulk of the Americans, intoxicated with the advantage they had gained, overlooked this statute, which in one comprehensive sentence, not only deprived them of liberty and property, but of every right, incident to humanity. They considered it as a salvo for the honor of parliament, in repealing an act, which had so lately received their sanction, and flattered themselves it would remain a dead letter, and that although the right of taxation was in words retained, it would never be exercised. Unwilling to contend about paper claims of ideal supremacy, they returned to their habits of good humour, with the parent state.

The repeal of the stamp act, in a relative connexion with all its circumstances and consequences, was the first direct step to American independency. The claims of the two countries were not only left undecided, but a foundation was laid for their extending at a future period, to the impossibility of a compromise. Though for the present Great-Britain receded from enforcing her claim of American revenue, a numerous party, adhering to that system, reserved themselves for more favourable circumstances to enforce it; and at the same time the colonists, more enlightened on the subject, and more fully convinced of the rectitude of their claims, were encouraged to oppose it, under whatsoever form it should appear, or under whatsoever disguise it should cover itself.

Elevated with the advantage they had gained, from that day forward, instead of feeling themselves dependent on Great-Britain, they conceived that, in respect to commerce, she was dependent on them. It inspired them with such high ideas of the importance of their trade, that they considered the Mother Country to be brought under greater obligations to them, for purchasing her manufactures, than they were to her for protection and the administration of civil government. The freemen of British America, impressed with the exalting sentiments of patriotism and of liberty,

conceived it to be within their power, by future combinations, at any time to [75] convulse, if not to bankrupt the nation, from which they sprung.

Opinions of this kind were strengthened by their local situation, favouring ideas, as extensive as the unexplored continent of which they were inhabitants. While the pride of Britons revolted at the thought of their colonies refusing subjection to that parliament which they obeyed, the Americans with equal haughtiness exclaimed, “shall the petty island of Great-Britain, scarce a speck on the map of the world, controul the free citizens of the great continent of America?”

These high sounding pretensions would have been harmless, or at most, spent themselves in words, had not a ruinous policy, untaught by recent experience, called them into serious action. Though the stamp act was repealed, an American revenue was still a favourite object with many in Great-Britain. The equity and the advantage of taxing the colonists by parliamentary authority were very apparent to their understandings, but the mode of effecting it, without hazarding the public tranquility, was not so obvious. Mr. Charles Townsend, afterwards chancellor of the exchequer, pawned his credit to accomplish what many so earnestly desired. He accordingly brought into parliament a bill for granting duties in the British colonies on glass, paper, painters colours, and tea, which was afterwards enacted into a law. If the small duties imposed on these articles, had preceded the stamp act, they might have passed unobserved: but the late discussions occasioned by that act, had produced among the colonists, not only an animated conviction of their exemption from parliamentary taxation, but a jealousy of the designs of Great-Britain. The sentiments of the Americans on this subject, bore a great resemblance to those of their British countrymen of the preceding century, in the case of ship money. The amount of that tax was very moderate, little exceeding twenty thousand pounds. It was distributed upon the people with equality, and expended for the honour and advantage of the kingdom, yet all these circumstances could not reconcile the people of England to the imposition. [76] It was entirely arbitrary. “By the same right,” said they, “any other tax may be imposed.” In like manner the Americans considered these small duties, in the nature of an entering wedge, designed to make way for others, which would be greater and heavier. In a relative connection with late acts of parliament, respecting domestic manufactures and foreign commerce, laws for imposing taxes on British commodities exported to the colonies, formed a complete circle of oppression, from which there was no possibility of escaping. The colonists had been, previously, restrained from manufacturing certain articles, for their own consumption. Other acts confined them to the exclusive use of British merchandize. The addition of duties, put them wholly in the power and discretion of Great-Britain “We are not” said they,

1767

permitted to import from any nation, other than our own parent state, and have been in some cases by her restrained from manufacturing for ourselves, and she claims a right to do so in every instance which is incompatible with her interest. To these restrictions we have hitherto submitted, but she now rises in her demands, and imposes duties on those commodities, the purchasing of which, elsewhere than at her market, her laws forbid, and the manufacturing of which for our own use, she may any moment she pleases restrain. If her right is valid to lay a small tax, it is equally so

to lay a large one, for from the nature of the case, she must be guided exclusively by her own opinions of our ability, and of the propriety of the duties she may impose. Nothing is left for us but to complain, and, pay.

They contended that there was no real difference between the principle of these new duties and the stamp act, they were both designed to raise a revenue in America, and in the same manner. The payment of the duties, imposed by the stamp act, might have been eluded by the total disuse of stamped paper, and so might the payment of these duties, by the total disuse of those articles on which they were laid, but in neither case, without great difficulty. The colonists were therefore reduced to the hard alternative of being obliged totally to disuse articles of the greatest necessity in human [77] life, or to pay a tax without their consent. The fire of opposition, which had been smothered by the repeal of the stamp act, burned afresh against the same principle of taxation, exhibited in its new form. Mr. Dickenson, of Pennsylvania, on this occasion presented to the public a series of letters signed a Farmer, proving the extreme danger which threatened the liberties of America, from their acquiescence in a precedent which might establish the claim of parliamentary taxation. They were written with great animation, and were read with uncommon avidity. Their reasoning was so convincing, that many of the candid and disinterested citizens of Great-Britain, acknowledged that the American opposition to parliamentary taxation was justifiable. The enormous sums which the stamp act would have collected, had thoroughly alarmed the colonists for their property. It was now demonstrated by several writers, especially by the Pennsylvania Farmer, that a small tax, though more specious, was equally dangerous, as it established a precedent which eventually annihilated American property. The declaratory act which at first was the subject of but a few comments, was now dilated upon, as a foundation for every species of oppression; and the small duties, lately imposed, were considered as the beginning of a train of much greater evils.

Had the colonists admitted the propriety of raising a parliamentary revenue among them, the erection of an American board of commissioners for managing it, which was about this time instituted at Boston, would have been a convenience, rather than an injury; but united as they were in sentiments, of the contrariety of that measure to their natural and constitutional rights, they illy brooked the innovation. As it was coeval with the new duties, they considered it as a certain evidence that the project of an extensive American revenue, notwithstanding the repeal of the stamp act, was still in contemplation. A dislike to British taxation naturally produced a dislike to a board which was to be instrumental in that business, and occasioned many insults to its commissioners.

[78] The revenue act of 1767 produced resolves, petitions, addresses, and remonstrances, similar to those, with which the colonists opposed the stamp act. It also gave rise to a second association for suspending farther importations of British manufactures, till these offensive duties should be taken off. Uniformity, in these measures, was promoted by a circular letter from the assembly of Massachusetts to the speakers of the other assemblies.

This stated the petitions, and representations, which they had forwarded against the late duties, and strongly pointed out the

1768

great difficulties, that must arise to themselves and their constituents, from the operation of acts of parliament, imposing duties on the unrepresented American colonies, and requesting a reciprocal free communication, on public affairs. Most of the provincial assemblies, as they had opportunities of deliberating on the subject, approved of the proceedings of the Massachusetts assembly, and harmonised with them in the measures, which they had adopted. In resolves, they stated their rights, in firm but decent language, and, in petitions, they prayed for a repeal of the late acts, which they considered as infringements on their liberties.

It is not unreasonable to suppose, that the minister, who planned these duties, hoped, that they would be regarded as regulations of trade. He might also presume, that as they amounted only to an inconsiderable sum, they would not give any alarm. The circular letter of the Massachusetts assembly, which laid the foundation for united petitions against them, gave therefore great offence. Lord Hillsborough, who had lately been appointed Secretary of State, for the American department, wrote letters to the governors of the respective provinces, urging them to exert their influence, to prevent the assemblies from taking any notice of it, and he called on the Massachusetts assembly, to rescind their proceedings on that subject. This measure was both injudicious and irritating. To require a public body to rescind a resolution, for sending a letter, which was already sent, answered, and acted upon, was a bad specimen of the wisdom of the new minister. To call a vote, for sending a circular [79] letter to invite the assemblies of the neighbouring colonies to communicate together in the pursuit of legal measures to obtain a redress of grievances, “a flagitious attempt to disturb the public peace,” appeared to the colonists a very injudicious application of harsh epithets to their constitutional right of petitioning. To threaten a new house of Assembly with dissolution, in case of their not agreeing to rescind an act of a former assembly, which was not executory, but executed, clashed no less with the dictates of common sense, than the constitutional rights of British colonists. The proposition for rescinding was negatived, by a majority of 97 to 17. The assembly was immediately dissolved, as had been threatened. This procedure of the new secretary was considered, by the colonists, as an attempt to suppress all communication of sentiments between them, and to prevent their united supplications, from reaching the royal ear. It answered no one valuable purpose, but naturally tended to mischief.

The bad humour, which from successive irritation already too much prevailed, was about this time wrought up to a high pitch of resentment and violence, on occasion of the seizure of Mr. Hancock’s sloop Liberty, for not having entered all the wines she had brought from Madeira.

The popularity of her owner, the name of the sloop, and the general aversion to the board of commissioners, and parliamentary taxation, concurred to inflame the minds of the people. They resented the removal of the sloop from the wharf, as implying an apprehension of a rescue. They used every means in their power to interrupt the officers, in the execution of their business; and numbers swore that they would be revenged. Mr. Harrison the collector, Mr. Hallowell the comptroller, and Mr. Irwine the inspector of imports and exports, were so roughly handled, as to bring their lives in danger. The windows of some of their houses were broken, and the boat of the collector was dragged through

1768 June 10

the town, and burned on the common. Such was the temper and disposition of many of the inhabitants, that the commissioners of the customs thought [80] proper to retire on board the Romney man of war; and afterwards to Castle William. The commissioners, from the first moment of their institution, had been an eye sore to the people of Boston. This, though partly owing to their active zeal in detecting smugglers, principally arose from the association which existed in the minds of the inhabitants, between that board and an American revenue. The declaratory act of 1766, the revenue act of 1767; together with the pomp and expence of this board, so disproportionate to the small income of the present duties, conspired to convince not only the few who were benefited by smuggling, but the great body of enlightened freemen, that farther and greater impositions of parliamentary taxes were intended. In proportion as this opinion gained ground, the inhabitants became more disrespectful to the executive officers of the revenue, and more disposed, in the frenzy of patriotism, to commit outrages on their persons and property. The constant bickering that existed between them and the inhabitants, together with the steady opposition given by the latter, to the discharge of the official duties of the former, induced the commissioners and friends of an American revenue, to solicit the protection of a regular force, to be stationed at Boston. In compliance with their wishes, his Majesty ordered two regiments and some armed vessels to repair thither, for supporting and assisting the officers of the customs in the execution of their duty. This restrained the active exertion of that turbulent spirit, which since the passing of the late revenue laws had revived, but it added to the pre-existing causes thereof.

When it was reported in Boston, that one or more regiments were ordered there, a meeting of the inhabitants was called, and a committee appointed, to request the governor, to issue precepts, for convening a general assembly. He replied, "that he could not comply with their request, till he had received his Majesty's commands for that purpose." This answer being reported, some spirited resolutions were adopted. In particular it was voted, that the select men of Boston should write [81] to the select men of other towns, to propose, that a convention be held, of deputies from each, to meet at Faneuil hall, in Boston, on the 22d instant.

Sept. 13

It was afterwards voted, "That as there is apprehension in the minds of many, of an approaching war with France, those inhabitants, who are not provided, be requested to furnish themselves forthwith with arms."

Sept. 22

Ninety six towns, and eight districts, agreed to the proposal made by the inhabitants of Boston, and appointed deputies, to attend a convention, but the town of Hatfield refused its concurrence. When the deputies met, they conducted with moderation, disclaimed all legislative authority, advised the people to pay the greatest deference to government, and to wait patiently for a redress of their grievances, from his Majesty's wisdom and moderation. After stating to the world the causes of their meeting, and an account of their proceedings, they dissolved themselves, after a short session, and went home.

Within a day after the convention broke up, the expected regiments arrived, and were peaceably received. Hints had been thrown out by some idle people, that they should

not be permitted to come on shore. Preparations were made by the captains of the men of war in the harbour, to fire on the town, in case opposition had been made to their landing, but the crisis for an appeal to arms was not yet arrived. It was hoped by some, that the folly and rage of the Bostonians would have led them to this rash measure, and thereby have afforded an opportunity for giving them some naval and military correction, but both prudence and policy induced them to adopt a more temperate line of conduct.

While the contention was kept alive, by the successive irritations, which have been mentioned, there was, particularly in Massachusetts, a species of warfare carried on between the royal governors, and the provincial assemblies. Each watched the other with all the jealousy, which strong distrust could inspire. The latter regarded the former as instruments of power, wishing to pay their court to the Mother Country, by curbing the spirit of [82] American freedom, and the former kept a strict eye on the latter, lest they might smooth the way to independence, at which they were charged with aiming. Lieut. Governor Hutchinson, of Massachusetts, virtually challenged the assembly to a dispute, on the ground of the controversy between the two countries. This was accepted by the latter, and the subject, discussed with all the subtilty of argument, which the ingenuity of either party could suggest.

The war of words was not confined to the colonies. While the American assemblies passed resolutions, asserting their exclusive right to tax their constituents, the parliament by resolves, asserted their unlimited supremacy in and over the colonies. While the former, in their public acts, disclaimed all views of independence, they were successively represented in parliamentary resolves, royal speeches, and addresses from Lords and commons, as being in a state of disobedience to law and government, and as having proceeded to measures subversive of the constitution, and manifesting a disposition to throw off all subordination to Great Britain.

In February 1769, both houses of parliament went one step beyond all that had preceded. They then concurred in a joint address to his majesty, in which they expressed their satisfaction in the measures his majesty had pursued—gave the strongest assurances, that they would effectually support him in such farther measures as might be found necessary, to maintain the civil magistrates in a due execution of the laws, in Massachusetts's Bay, and beseeched him

1769

to direct the governor to take the most effectual methods of procuring the fullest information, touching all treasons or misprisions of treason, committed within the government, since the 30th day of December, 1767; and to transmit the same together with the names of the persons who were most active in the commission of such offences, to one of the secretaries of state, in order that his majesty might issue a special commission for enquiring of, hearing, and determining, the said offences, within the realm of Great-Britain, pursuant to the provision of the statute of the 35th [83] of King Henry the 8th.

The latter part of this address, which proposed the bringing of delinquents from Massachusetts, to be tried at a tribunal in Great-Britain, for crimes committed in America, underwent many severe animadversions.

It was asserted to be totally inconsistent with the spirit of the constitution, for in England a man charged with a crime, had a right to be tried in the county in which his offence was supposed to have been committed. "Justice is regularly and impartially administered in our courts," said the colonists "and yet by direction of parliament, offenders are to be taken by force, together with all such persons as may be pointed out as witnesses and carried to England, there to be tried in a distant land, by a jury of strangers, and subject to all the disadvantages which result from want of friends, want of witnesses and want of money."

The house of burgesses of Virginia met, soon after official accounts of the joint address of lords and commons on this subject reached America; and in a few days after their meeting, passed resolutions expressing

their exclusive right to tax their constituents, and their right to petition their sovereign for redress of grievances, and the lawfulness of procuring the concurrence of the other colonies in praying for the royal interposition, in favour of the violated rights of America: and that all trials for treason, or for any crime whatsoever, committed in that colony, ought to be before his majesty's courts, within the said colony; and that the seizing any person residing in the said colony, suspected of any crime whatsoever, committed therein, and sending such person to places beyond the sea to be tried, was highly derogatory of the rights of British subjects.

The next day lord Botetourt the governour of Virginia, sent for the house of burgesses and addressed them as follows. "Mr. Speaker and gentlemen of the house of burgesses. I have heard of your resolves, and augur ill of their effects. You have made it my duty to dissolve you, and you are dissolved accordingly."

[84] The assembly of North-Carolina adopted resolutions, similar to those of Virginia, for which Tryon their governour dissolved them. The members of the house of burgesses in Virginia, and of the assembly of North-Carolina, after their dissolution, met as private gentlemen, chose their late speakers moderators, and adopted resolutions against importing British goods. The non-importation agreement, was in this manner forwarded by the very measures which were intended to curb the spirit of American freedom, from which it sprung. Meetings of the associators were regularly held in the various provinces. Committees were appointed to examine all vessels arriving from Britain. Censures were freely passed on such as refused to concur in these associations, and their names published in the news-papers as enemies to their country. The regular acts of the provincial assemblies were not so much respected and obeyed as the decrees of these committees, the associations were in general, as well observed as could be expected; but nevertheless there were some collusions. The fear of mobs, of public resentment and contempt, co-operating with patriotism, preponderated over private interest and convenience. One of the importing merchants of Boston, who hesitated in his compliance with the determination of the inhabitants, was waited upon by a committee of tradesmen, with an axeman and a carpenter at

their head, who informed him, “that 1000 men were waiting for his answer, and that if he refused to comply, they could not tell what might be the consequence.” He complied, and the newspapers soon after published, that he did it voluntarily.

In Boston, Lieut. Governor Hutchinson endeavoured to promote a counter association, but without effect. The friends of importation objected, that till parliament made provision for the punishment of the confederacies against importation, a counter association would answer no other purpose, than to expose the associators to popular rage.

The Bostonians, about this time, went one step farther. They reshipped goods to Great Britain, instead of [85] storing them as formerly. This was resolved upon in a town meeting, on the information of an inhabitant, who communicated a letter he had lately received from a member of parliament, in which it was said, “that shipping back ten thousand pounds worth of goods would do more, than storing a hundred thousand.” This turned the scale, and procured a majority of votes for reshipping. Not only in this, but in many other instances, the violences of the colonists were fostered by individuals in Great Britain. A number of these were in principle with the Americans, in denying the right of parliament, to tax them, but others were more influenced by a spirit of opposition to the ministerial majority, than by a regard to the constitutional liberties of either country.

The non-importation agreement had now lasted some time, and by degrees had become general. Several of the colonial assemblies had been dissolved, or prorogued, for asserting the rights of their constituents. The royal governours, and other friends to an American revenue, were chagrined. The colonists were irritated. Good men, both in England and America, deplored these untoward events, and beheld with concern an increasing ill humour between those, who were bound by interest and affection, to be friends to each other.

In consequence of the American non-importation agreement, founded in opposition to the duties of 1767, the manufacturers of Great Britain experienced a renewal of the distresses, which followed the adoption of similar resolutions, in the year 1765, the repeal of these duties was therefore solicited by the same influence, which had procured the repeal of the stamp act. The rulers of Great Britain acted without decision. Instead of persevering in their own system of coercion or indeed in any one uniform system of colonial government, they struck out a middle line, embarrassed with the consequences, both of severity and of lenity, and which was without the complete benefits of either.

Soon after the spirited address to his Majesty, last mentioned, 1769 had passed both houses of parliament, assurances were given for [86] repealing all the duties, imposed in 1767, excepting that of three-pence per pound on tea.

Anxious on the one hand to establish parliamentary supremacy, and on the other, afraid to stem the torrent of opposition, they conceded enough to weaken the former, and yet not enough to satisfy the latter. Had Great Britain generously repealed the whole, and for ever relinquished all claim to the right, or even the exercise of the right

of taxation, the union of the two countries, might have lasted for ages. Had she seriously determined to compel the submission of the colonies, nothing could have been more unfriendly to this design, than her repeated concessions to their reiterated associations. The declaratory act, and the reservation of the duty on tea, left the cause of contention between the two countries, in full force, but the former was only a claim on paper, and the latter might be evaded, by refusing to purchase any tea, on which the parliamentary tax was imposed. The colonists, therefore, conceiving that their commerce might be renewed, without establishing any precedent, injurious to their liberties, relaxed in their associations, in every particular, except tea, and immediately recommenced the importation of all other articles of merchandise. A political calm once more took place. The parent state might now have closed the dispute for ever, and honorably receded, without a formal relinquishment of her claims. Neither the reservation of the duty on tea, by the British parliament, nor the exceptions made by the colonists, of importing no tea, on which a duty was imposed, would, if they had been left to their own operation, have disturbed the returning harmony of the two countries. Without fresh irritation, their wounds might have healed, and not a scar been left behind.

Unfortunately for the friends of union, so paltry a sum as 3 [pence for] so insignificant an article as tea, in consequence of a combination between the British ministry and East-India company, revived the dispute to the rending of the empire.

[87] These two abortive attempts to raise a parliamentary revenue in America, caused a fermentation in the minds of the colonists, and gave birth to many enquiries respecting their natural rights. Reflections and reasonings on this subject produced a high sense of liberty, and a general conviction that there could be no security for their property, if they were to be taxed at the discretion of a British parliament, in which they were unrepresented, and over which they had no controul. A determination not only to oppose this new claim of taxation, but to keep a strict watch, least it might be established in some disguised form, took possession of their minds.

It commonly happens in the discussion of doubtful claims between States, that the ground of the original dispute insensibly changes. When the mind is employed in investigating one subject, others associated with it, naturally present themselves. In the course of enquiries on the subject of parliamentary taxation, the restriction on the trade of the colonists—the necessity that was imposed on them to purchase British and other manufactures, loaded with their full proportion of all taxes paid by those who made or sold them, became more generally known. While American writers were vindicating their country from the charge of contributing nothing to the common expences of the empire, they were led to set off to their credit, the disadvantage of their being confined exclusively to purchase such manufactures in Britain. They instituted calculations by which they demonstrated that the monopoly of their trade, drew from them greater sums for the support of government, than were usually paid by an equal number of their fellow citizens of Great-Britain; and that taxation, superadded to such a monopoly, would leave them in a state of perfect uncompensated slavery. The investigation of these subjects brought matters into view which the friends of union ought to have kept out of sight. These circumstances, together with the extensive population of the Eastern States, and their adventurous

spirit of commerce, suggested to some bold spirits that not only British taxation, but British navigation laws were unfriendly to the interests of [88] America. Speculations of this magnitude suited well with the extensive views of some capital merchants, but never would have roused the bulk of the people, had not new matter brought the dispute between the two countries to a point, in which every individual was interested.

On reviewing the conduct of the British ministry, respecting the colonies, much weakness as well as folly appears. For a succession of years there was a steady pursuit of American revenue, but great inconsistency in the projects for obtaining it. In one moment the parliament was for enforcing their laws, the next for repealing them. Doing and undoing, menacing and submitting, straining and relaxing, followed each other, in alternate succession. The object of administration, though twice relinquished as to any present efficiency, was invariably pursued, but without any unity of system.

On the 9th of May, 1769, the King in his speech to parliament, highly applauded their hearty concurrence, in maintaining the execution of the laws, in every part of his dominions. Five days after this speech, lord Hillsborough, secretary of state for the colonies, wrote to lord Botetourt, governor of Virginia:

I can take upon me to assure you, notwithstanding information to the contrary, from men, with factious and seditious views, that his Majesty's present administration have at no time entertained a design to propose to parliament, to lay any farther taxes upon America, for the purpose of raising a revenue, and that it is at present their intention to propose the next session of parliament, to take off the duties upon glass, paper, and colours, upon consideration of such duties having been laid contrary to the true principles of commerce.

The governor was also informed, that "his Majesty relied upon his prudence and fidelity, to make such an explanation of his Majesty's measures, as would tend to remove prejudices, and to re-establish mutual confidence and affection between the Mother Country and the colonies." In the exact spirit of his instructions, lord Botetourt addressed the Virginia assembly as follows:

It may possibly be objected, that as his [89] Majesty's present administration are not immortal, their successors may be inclined to attempt to undo what the present ministers shall have attempted to perform, and to that objection I can give but this answer, that it is my firm opinion, that the plan I have stated to you, will certainly take place, and that it will never be departed from; and so determined am I forever to abide by it, that I will be content to be declared infamous, if I do not to the last hour of my life, at all times, in all places, and upon all occasions, exert every power, with which I either am, or ever shall be, legally invested, in order to obtain and maintain for the continent of America, that satisfaction, which I have been authorised to promise this day, by the confidential servants of our gracious sovereign, who, to my certain knowledge, rates his honor so high, that he would rather part with his crown, than preserve it by deceit.

These assurances were received with transports of joy by the Virginians. They viewed them as pledging his Majesty for security, that the late design for raising a revenue in

America was abandoned, and never more to be resumed. The Assembly of Virginia, in answer to lord Botetourt, expressed themselves thus:

We are sure our most gracious sovereign, under whatever changes may happen in his confidential servants, will remain immutable in the ways of truth and justice, and that he is incapable of deceiving his faithful subjects; and we esteem your lordship's information not only as warranted, but even sanctified by the royal word.

How far these solemn engagements with the Americans were observed, subsequent events will demonstrate. In a perfect reliance on them, most of the colonists returned to their ancient habits of good humour, and flattered themselves that no future parliament would undertake to give, or grant away their property.

From the royal and ministerial assurances given in favour of America, in the year 1769, and the subsequent repeal in 1770, of five sixths of the duties which had been imposed in 1767; together with the consequent renewal of the mercantile intercourse between Great-Britain [90] and the colonies: Many hoped that the contention between the two countries was finally closed. In all the provinces, excepting Massachusetts, appearances seemed to favour that opinion. Many incidents operated there to the prejudice of that harmony, which had begun, elsewhere, to return. The stationing a military force among them, was a fruitful source of uneasiness. The royal army had been brought thither, with the avowed design of enforcing submission to the Mother Country. Speeches from the throne, and addresses from both houses of parliament, had taught them to look upon the inhabitants as a factious turbulent people, who aimed at throwing off all subordination to Great-Britain.

They, on the other hand were accustomed to look upon the soldiery as instruments of tyranny, sent on purpose to dragoon them out of their liberties.

1770

Reciprocal insults soured the tempers, and mutual injuries embittered the passions, of the opposite parties: besides, some fiery spirits who thought it an indignity to have troops quartered among them, were constantly exciting the towns-people to quarrel with the soldiers.

On the second of March, a fray took place near Mr. Gray's ropewalk, between a private soldier of the 29th regiment, and an inhabitant. The former was supported by his comrades, the latter by the rope makers, till several on both sides were involved in the consequences. On the 5th a more dreadful scene was presented. The soldiers, when under arms, were pressed upon, insulted and pelted by a mob armed with clubs, sticks, and snowballs covering stones. They were also dared to fire. In this situation, one of the soldiers who had received a blow, in resentment fired at the supposed aggressor. This was followed by a single discharge from six others. Three of the inhabitants were killed, and five were dangerously wounded. The town was immediately in commotion. Such was the temper, force, and number of the inhabitants, that nothing but an engagement to remove the troops out of the town; together with the advice of moderate men, prevented the townsmen from falling on the soldiers. The killed were buried in one vault, and in a most respectful, [91] manner to express the indignation of the inhabitants at the slaughter of their brethren, by

soldiers quartered among them, in violation of their civil liberties. Preston the captain who commanded the party, which fired on the inhabitants [was] committed to jail, and afterwards tried. The captain, and six of the men, were acquitted. Two were brought in guilty of man-slaughter. It appeared on the trial, that the soldiers were abused, insulted, threatened, and pelted, before they fired. It was also proved, that only seven guns were fired by the eight prisoners. These circumstances induced the jury to make a favourable verdict. The result of the trial reflected great honour on John Adams, and Josiah Quincy, the council for the prisoners, and also on the integrity of the jury, who ventured to give an upright verdict, in defiance of popular opinions.

The events of this tragical night, sunk deep in the minds of the people, and were made subservient to important purposes. The anniversary of it was observed with great solemnity. Eloquent orators, were successively employed to deliver an annual oration, to preserve the remembrance of it fresh in their minds. On these occasions the blessings of liberty—the horrors of slavery—the dangers of a standing army—the rights of the colonies, and a variety of such topics were presented to the public view, under their most pleasing and alarming forms. These annual orations administered fuel to the fire of liberty, and kept it burning, with an incessant flame.

The obstacles to returning harmony, which have already been mentioned, were increased, by making the governor and judges in Massachusetts, independent of the province. Formerly, they had been paid by yearly grants from the assembly, but about this time provision was made for paying their salaries by the crown. This was resented as a dangerous innovation, as an infraction of their charter, and as destroying that balance of power, which is essential to free governments. That the crown should pay the salary of the chief justice, was represented by the assembly, as a species of bribery, tending to bias his judicial determinations. They made it the foundation for [92] impeaching Mr. Justice Oliver, before the governor, but he excepted to their proceedings, as unconstitutional. The assembly, nevertheless, gained two points. They tendered the governor more odious to the inhabitants, and increased the public respect for themselves, as the counterpart of the British house of commons, and as guardians of the rights of the people.

A personal animosity, between Lieut. Governor Hutchinson, and some distinguished patriots, in Massachusetts, contributed to perpetuate a flame of discontent in that province, after it had elsewhere visibly abated. This was worked up, in the year 1773, to a high pitch, by a singular combination of circumstances. Some letters had been written, in the course of the dispute, by governor Hutchinson, lieut. governor Oliver, and others, in Boston, to persons in power and office, in England, which contained a very unfavourable representation of the state of public affairs, and tended to shew the necessity of coercive measures, and of changing the chartered system of government, to secure the obedience of the province. These letters fell into the hands of Dr. Franklin, agent of the province, who transmitted them to Boston. The indignation and animosity, which was excited on the receipt of them, knew no bounds. The house of assembly agreed on a petition and remonstrance to his Majesty, in which they charged their governor and lieut. governor with being betrayers of their trusts, and of the people they governed, and of giving private, partial, and false information. They also

declared them enemies to the colonies, and prayed for justice against them, and for their speedy removal from their places.

These charges were carried through by a majority of 82 to 12.

Jan. 29, 1774

This petition and remonstrance being transmitted to England, the merits of it were discussed before his Majesty's privy council. After a hearing before that board, in which Dr. Franklin represented the province of Massachusetts, the governor and lieutenant-governor were acquitted. Mr. Wedderburne, who defended the accused royal servants, in the course of his pleadings, inveighed against Dr. Franklin, in the severest language, as the fomentor of the disputes between the two countries. It [93] was no protection to this venerable sage, that being the agent of Massachusetts, he conceived it his duty to inform his constituents, of letters, written on public affairs, calculated to overturn their chartered constitution. The age, respectability, and high literary character of the subject of Mr. Wedderburne's philippic, turned the attention of the public, on the transaction. The insult offered to one of their public agents, and especially to one, who was both the idol and ornament of his native country, sunk deep in the minds of the Americans. That a faithful servant, whom they loved, and almost adored, should be insulted, for discharging his official duty, rankled in their hearts. Dr. Franklin was also immediately dismissed from the office of deputy postmaster general, which he held under the crown. It was not only by his transmission of these letters, that he had given offence to the British ministry, but by his popular writings, in favor of America. Two pieces of his, in particular, had lately attracted a large share of public attention, and had an extensive influence on both sides of the Atlantic. The one purported to be an edict from the King of Prussia, for taxing the inhabitants of Great-Britain, as descendants of emigrants from his dominions. The other was entitled, "Rules for reducing a great empire to a small one." In both of which he had exposed the claims of the Mother Country, and the proceedings of the British ministry, with the severity of poignant satire.

For ten years, there had now been but little intermission to the disputes between Great-Britain and her colonies. Their respective claims had never been compromised on middle ground. The calm which followed the repeal of the stamp act, was in a few months disturbed, by the revenue act of the year 1767. The tranquility which followed the repeal of five sixths of that act in the year 1770, was nothing more than a truce. The reservation of the duty on tea, made as an avowed evidence of the claims of Great-Britain to tax her colonies, kept alive the jealousy of the colonists, while at the same time the stationing of a standing army in Massachusetts—the continuance of a board of commissioners in Boston—the constituting the governors and judges of that province [94] independent of the people, were constant sources of irritation. The altercations which, at this period, were common between the royal governors and the provincial assemblies, together with numerous vindications of the claims of America, made the subject familiar to the colonists. The ground of the controversy was canvassed in every company. The more the Americans read, reasoned, and conversed on the subject, the more were they convinced of their right to the exclusive disposal of their property. This was followed by a determination to resist all encroachments on that palladium of British liberty. They were as strongly convinced of their right to refuse and resist parliamentary taxation, as the ruling powers of Great-Britain, of their right to demand and enforce their submission to it.

The claims of the two countries, being thus irreconcilably opposed to each other, the partial calm which followed the concession of parliament in 1770, was liable to disturbance, from every incident. Under such circumstances, nothing less than the most guarded conduct on both sides could prevent a renewal of the controversy. Instead of following those prudential measures which would have kept the ground of the dispute out of sight, an impolitic scheme was concerted, between the British ministry and the East-India company, which placed the claims of Great-Britain and of her colonies in hostile array against each other.

CHAPTER III

Tea Is Sent By The East India Company To America, And Is Refused, Or Destroyed, By The Colonists. Boston Port Act, &C.

In the year 1773, commenced a new era of the American controversy. To understand this in its origin, it is necessary to recur to the period, when the solitary duty on tea, was excepted from the partial repeal of the revenue act of 1767. When the duties which had been laid on glass, paper and painters colours, were taken off, a [95] respectable minority in parliament contended, that the duty on tea should also be removed. To this it was replied, “That as the Americans denied the legality of taxing them, a total repeal would be a virtual acquiescence in their claims; and that in order to preserve the rights of the Mother Country, it was necessary to retain the preamble, and at least one of the taxed articles.” It was answered, that a partial repeal would be a source of endless discontent—that the tax on tea would not defray the expences of collecting it. The motion in favour of a total repeal, was thrown out by a great majority. As the parliament thought fit to retain the tax on tea for an evidence of their right of taxation, the Americans in like manner, to be consistent with themselves, in denying that right, discontinued the importation of that commodity. While there was no attempt to introduce tea into the colonies against this declared sense of the inhabitants, these opposing claims were in no danger of collision. In that case the Mother Country might have solaced herself, with her ideal rights, and the colonies, with their favorite opinion of a total exemption from parliamentary taxes, without disturbing the public peace. This mode of compromising the dispute, which seemed at first designed as a salvo for the honor and consistency of both parties, was, by the interference of the East-India Company, in combination with the British ministry, completely overset.

The expected revenue from tea failed, in consequence of the American association to import none, on which a duty was charged. This, though partially violated in some of the colonies, was well observed in others, and particularly in Pennsylvania, where the duty was never paid on more than one chest of that commodity. This proceeded as much from the spirit of gain as of patriotism. The merchants found means of supplying their countrymen with tea, smuggled from countries to which the power of Britain did not extend. They doubtless conceived themselves to be supporting the rights of their country, by refusing to purchase tea from Britain, but they also reflected that if they could bring the same commodity to market, free of duty, their profits would be proportionably greater.

[96] The love of gain was not peculiar to the American merchants. From the diminished exportation to the colonies, the ware-houses of the British East-India company had in them about seventeen millions of pounds of tea, for which a market could not readily be procured. The ministry and East-India company unwilling to lose, the one the expected revenue from the sale of tea in America—the other, their usual

commercial profits, agreed on a measure by which they supposed both would be secured.

The East-India company were by law authorized to export their tea free of duties to all places whatsoever. By this regulation, tea, though loaded with an exceptionable duty, would come cheaper to the colonies, than before it had been made a source of revenue: For the duty when taken off it, when exported from Great-Britain, was greater than what was to be paid on its importation into the colonies. Confident of success in finding a market for their tea, thus reduced in its price, and also of collecting a duty on its importation and sale in the colonies, the East-India company freighted several ships, with teas for the different colonies, and appointed agents for the disposal thereof. This measure united several interests in opposition to its execution. The patriotism of the Americans was corroborated by several auxiliary aids, no ways connected with the cause of liberty.

The merchants in England were alarmed at the losses that must accrue to themselves, from the exportations of the East-India company, and from the sales going through the hands of consignees. Letters were written from that country, to colonial patriots, urging that opposition to which they of themselves were prone.

The smugglers who were both numerous and powerful, could not relish a scheme which by underselling them, and taking a profitable branch of business, out of their hands, threatened a diminution of their gains. The colonists were too suspicious of the designs of Great-Britain to be imposed upon.

The cry of endangered liberty once more excited an alarm from New-Hampshire to Georgia. The first opposition [97] to the execution of the scheme adopted by the East-India company began with the American merchants. They saw a profitable branch of their trade likely to be lost, and the benefits of it to be transferred to people in Great-Britain. They felt for the wound that would be inflicted on their country's claim of exemption from parliamentary taxation, but they felt with equal sensibility for the losses they would sustain by the diversion of the streams of commerce, into unusual channels. Though the opposition originated in the selfishness of the merchants, it did not end there. The great body of the people, from principles of the purest patriotism, were brought over to second their wishes. They considered the whole scheme, as calculated to seduce them into an acquiescence with the views of parliament, for raising an American revenue. Much pains were taken to enlighten the colonists on this subject, and to convince them of the eminent hazard to which their liberties were exposed.

The provincial patriots insisted largely on the persevering determination of the parent state to establish her claim of taxation, by compelling the sale of tea in the colonies against the solemn resolutions and declared sense of the inhabitants, and that at a time when the commercial intercourse of the two countries was renewed, and their ancient harmony fast returning. The proposed venders of the tea were represented as revenue officers, employed in the collection of an unconstitutional tax, imposed by Great-Britain. The colonists reasoned with themselves, that as the duty and the price of the commodity were inseparably blended, if the tea was sold, every purchaser would pay

a tax imposed by the British parliament, as part of the purchase money. To obviate this evil, and to prevent the liberties of a great country from being sacrificed by inconsiderate purchasers, sundry town meetings were held in the capitals of the different provinces, and combinations were formed to obstruct the sales of the tea, sent by the East-India company.

[98] The resolutions entered into by the inhabitants of Philadelphia, on October the 18th 1773, afford a good specimen of the whole—these were as follows:

1. That the disposal of their own property is the inherent right of freemen; that there can be no property in that which another can, of right, take from us without our consent; that the claim of parliament to tax America, is in other words, a claim of right to levy contributions on us at pleasure.
2. That the duty imposed by parliament upon tea landed in America, is a tax on the Americans, or levying contributions on them without their consent.
3. That the express purpose for which the tax is levied on the Americans—namely, for the support of government, administration of justice, and defence of his Majesty's dominions in America, has a direct tendency to render assemblies useless, and to introduce arbitrary government and slavery.
4. That a virtuous and steady opposition to this ministerial plan of governing America, is absolutely necessary to preserve even the shadow of liberty, and is a duty which every freeman in America owes to his country, to himself, and to his posterity.
5. That the resolution lately entered into by the East-India company, to send out their tea to America, subject to the payment of duties on its being landed here, is an open attempt to enforce this ministerial plan, and a violent attack upon the liberties of America.
6. That it is the duty of every American to oppose this attempt.
7. That whoever shall directly or indirectly, countenance this attempt, or in any wise aid or abet in unloading, receiving, or vending the tea sent, or to be sent out by the East-India company, while it remains subject to the payment of a duty here, is an enemy to his country.
8. That a committee be immediately chosen to wait on those gentlemen, who, it is reported, are appointed by the East-India company, to receive and sell said tea, and request them, from a regard to their own character [99] and the peace and good order of the city and province, immediately to resign their appointment.

As the time approached when the arrival of the tea ships might be soon expected, such measures were adopted as seemed most likely to prevent the landing of their cargoes. The tea consignees, appointed by the East-India company, were in several places compelled to relinquish their appointments, and no others could be found hardy enough to act in their stead. The pilots in the river Delaware, were warned not to conduct any of the tea ships into their harbour. In New-York, popular vengeance was denounced against all who would contribute, in any measure, to forward the views of the East-India company. The captains of the New-York and Philadelphia ships, being apprized of the resolution of the people, and fearing the consequences of landing a commodity, charged with an odious duty, in violation of their declared public

sentiments, concluded to return directly to Great-Britain, without making any entry at the custom house.

It was otherwise in Massachusetts. The tea ships designed for the supply of Boston, were consigned to the sons, cousins, and particular friends, of governor Hutchinson. When they were called upon to resign, they answered, "That it was out of their power." The collector refused to give a clearance, unless the vessels were discharged of dutiable articles. The governor refused to give a pass for the vessels, unless properly qualified from the custom-house. The governor likewise requested Admiral Montague to guard the passages out of the harbour, and gave orders to suffer no vessels, coasters excepted, to pass the fortress from the town, without a pass signed by himself. From a combination of these circumstances, the return of the tea vessels from Boston, was rendered impossible. The inhabitants then, had no option, but to prevent the landing of the tea, or to suffer it to be landed, and depend on the unanimity of the people not to purchase it, or to destroy the tea, or to suffer a deep laid scheme against their sacred liberties to take effect. The first would have required incessant [100] watching by night, as well as by day, for a period of time, the duration of which no one could compute. The second would have been visionary to childishness, by suspending the liberties of a growing country, on the self denial and discretion of every tea drinker in the province. They viewed the tea as the vehicle of an unconstitutional tax, and as inseparably associated with it. To avoid the one, they resolved to destroy the other. About seventeen persons, dressed as Indians, repaired to the tea ships, broke open 342 chests of tea, and without doing any other damage, discharged their contents into the water.

Thus by the inflexibility of the governor, the issue of this business was different, at Boston, from what it was elsewhere. The whole cargoes of tea were returned from New-York and Philadelphia. That which was sent to Charleston was landed and stored, but not offered for sale. Mr. Hutchinson had repeatedly urged government, at home, to be firm and persevering, he could not therefore consistent with his honour depart from a line of conduct, he had so often and so strongly recommended to his superiors. He also believed that the inhabitants would not dare to perfect their engagements, and flattered himself that they would desist, when the critical moment arrived.

Admitting the rectitude of the American claims of exemption, from parliamentary taxation, the destruction of the tea by the Bostonians, was warranted by the great law of self preservation, for it was not possible for them, by any other means, within the compass of probability, to discharge the duty they owed to their country.

The event of this business was very different from what had been expected in England. The colonists acted with so much union and system, that there was not a single chest of any of the cargoes sent out by the East-India company, on this occasion, sold for their benefit.

Intelligence of these proceedings was, on the 7th of March 1774, communicated, in a message from the throne, to both houses of parliament. In this communication the conduct of the colonists was represented as [101] not only obstructing the commerce

of Great-Britain, but as subversive of its constitution. The message was accompanied with a number of papers, containing copies and extracts of letters, from the several royal governors and others, from which it appeared that the opposition to the sale of the tea was not peculiar to Massachusetts, but common to all the colonies. These papers were accompanied with accounts setting forth, that nothing short of parliamentary interference was capable of re-establishing order among the turbulent colonists, and that therefore decisive measures should be immediately adopted for securing the dependence of the colonies. If the right of levying taxes on the Americans was vested in the parent state, these inferences were well founded; but if it was not, their conduct in resisting an invasion of their rights was justified, not only by many examples in the history of Britain, but by the spirit of the constitution of that country which they were opposing.

By the destruction of the tea, the people of Boston had incurred the sanction of penal laws. Those in Great-Britain who wished for an opportunity to take vengeance on that town, commonly supposed by them to be the mother of sedition and rebellion, rejoiced that her inhabitants had laid themselves open to castigation.

It was well known that the throwing of the tea into the river, did not originate with the persons who were the immediate instruments of that act of violence. That the whole had been concerted at a public meeting, and was, in a qualified sense, the act of the town. The universal indignation which in Great-Britain was excited against the people of Boston, pointed out to the ministry the suitability of the present moment for humbling them. Though the ostensible ground of complaint was nothing more than a trespass on private property, committed by private persons, yet it was well known to be part of a long digested plan of resistance to parliamentary taxation. Every measure that might be pursued on the occasion seemed to be big with the fate of the empire. To proceed in the usual forms of law, appeared to the rulers in Great-Britain to be a departure from their [102] dignity. It was urged by the ministry that parliament, and parliament only, was capable of re-establishing tranquility among these turbulent people, and of bringing order out of confusion. To stifle all opposition from the merchants, the public papers were filled with writings which stated the impossibility of carrying on a future trade to America, if this flagrant outrage on commerce should go unpunished.

It was in vain urged by the minority that no good could arise from coercion, unless the minds of the Americans were made easy on the subject of taxation. Equally vain was a motion for a retrospect into the conduct of the ministry, which had provoked their resistance.

The parliament discovered an aversion from looking back to the original ground of the dispute, and confined themselves solely to the late misbehavior of the Americans, without any enquiry into the provoking causes thereof.

The violence of the Bostonians in destroying an article of commerce, was largely insisted upon, without any indulgence for the jealous spirit of liberty, in the descendants of Englishmen. The connexion between the tea and the unconstitutional duty imposed thereon, was overlooked, and the public mind of Great-Britain solely

fixed on the obstruction given to commerce, by the turbulent colonists. The spirit raised against the Americans became as high, and as strong, as their most inveterate enemies could desire. This was not confined to the common people, but took possession of legislators, whose unclouded minds ought to be exalted above the mists of prejudice or partiality. Such, when they consult on public affairs, should be free from the impulses of passion, for it rarely happens that resolutions adopted in anger, are founded in wisdom. The parliament in Great-Britain, transported with indignation against the people of Boston, in a fit of rage resolved to take legislative vengeance, on that devoted town.

Disregarding the forms of her own constitution by which none are to be condemned unheard, or punished without a trial, a bill was finally passed, on the 17th day [103] after it was first moved for, by which the port of Boston was virtually blocked up, for it was legally precluded from the privilege of landing and discharging, or of lading and shipping of goods, wares and merchandise. The minister who proposed this measure, stated in support of it, that the opposition to the authority of parliament, had always originated in that colony, and had always been instigated by the seditious proceedings of the town of Boston: that it was therefore necessary to make an example of that town, which by an unparalleled outrage had violated the freedom of commerce; that Great-Britain would be wanting in the protection she owed to her peaceable subjects, if she did not punish such an insult, in an exemplary manner. He therefore proposed, that the town of Boston should be obliged to pay for the tea which had been destroyed. He was farther of opinion, that making a pecuniary satisfaction for the injury committed, would not alone be sufficient, but that in addition thereto, security must be given in future, that trade may be safely carried on—property protected—laws obeyed—and duties paid. He urged, therefore that it would be proper to take away from Boston the privilege of a port, until his Majesty should be satisfied in these particulars, and publicly declare in council, on a proper certificate, of the good behaviour of the town, that he was so satisfied. Until this should happen he proposed that the custom house officers should be removed to Salem. The minister hoped that this act would execute itself, or at most, that a few frigates would secure its execution. He also hoped, that the prospect of advantage to the town of Salem, from its being made the seat of the custom house, and from the occlusion of the port of Boston, would detach them from the interest of the latter, and dispose them to support a measure, from which they had so much to expect. It was also presumed that the other colonies would leave Boston to suffer the punishment due to her demerits. The abettors of parliamentary supremacy flattered themselves that this decided conduct of Great-Britain would, forever, extinguish all opposition from the refractory colonists to the claims of [104] the Mother Country; and the apparent equity of obliging a delinquent town to make reparation for an injury occasioned by the factious spirit of its inhabitants, silenced many of the friends of America. The consequences resulting from this measure, were the reverse of what were wished for by the first, and dreaded by the last.

By the operation of the Boston port act, the preceding situation of its inhabitants, and that of the East-India company was reversed. The former had more reason to complain of the disproportionate penalty to which they were indiscriminately subjected, than the latter of that outrage on their property, for which punishment had

been inflicted. Hitherto the East-India company were the injured party, but from the passing of this act, the balance of injury was on the opposite side. If wrongs received entitled the former to reparation, the latter had a much stronger title on the same ground. For the act of seventeen or eighteen individuals, twice as many thousands were involved in one general calamity.

Both parties viewed the case on a much larger scale than that of municipal law. The people of Boston alledged, in vindication of their conduct, that the tea was a weapon aimed at their liberties, and that the same principles of self preservation which justify the breaking of the assassins sword uplifted for destruction, equally authorised the destruction of that tea which was the vehicle of an unconstitutional tax subversive of their liberties. The parliament of Great-Britain considered the act of the people of Boston, in destroying the tea, as an open defiance of that country. The demerit of the action as an offence against property, was lost, in the supposed superior demerit of treasonable intention to emancipate themselves from a state of colonial dependence. The Americans conceived the case to be intimately connected with their liberties; the inhabitants of Great-Britain with their supremacy, the former considered it as a duty they owed their country, to make a common cause with the people of Boston, the latter thought themselves under equal obligations to support the privileges of parliament.

[105] On the third reading of the Boston port bill, a petition was presented by the lord mayor, in the name of several natives and inhabitants of North America, then residing in London. It was drawn with great force of language, and stated that “the proceedings of parliament against Boston were repugnant to every principle of law and justice, and established a precedent by which no man in America could enjoy a moment’s security.” The friends of parliamentary supremacy had long regretted the democratic constitutions of the provinces as adverse to their schemes. They saw with concern the steady opposition that was given to their measures by the American legislatures. These constitutions were planned when Great-Britain neither feared nor cared for her colonies. Not suspecting that she was laying the foundation of future states, she granted charters that gave to the people so much of the powers of government as enabled them to make not only a formidable, but a regular, constitutional, opposition, to the country from which they sprung.

Long had her rulers wished for an opportunity to revoke these charters, and to new model these governments. The present moment seemed favourable to this design. The temper of the nation was high, and the resentment against the province of Massachusetts general and violent. The late outrages in Boston furnished a tolerable pretence for the attempt. An act of the British parliament speedily followed the one for shutting up the port of Boston, entitled, an act for the better regulating the government of Massachusetts. The object of this was to alter the charter of the province in the following particulars: The council or second branch of the legislature heretofore elected by the general court, was to be from the first of August 1774, appointed by the crown. The royal governor was also by the same act, invested with the power of appointing and removing all judges of the inferior courts of common pleas—commissioners of oyer and terminer—the attorney general—provost marshal—justices—sheriffs, &c. The town meetings which were sanctioned by the

charter, were with a few exceptions [106] expressly forbidden to be held, without the leave of the governor or lieutenant governor in writing, expressing the special business of said meeting, first had and obtained; and with a farther restriction, that no matter should be treated of at these meetings, excepting the election of public officers, and the business expressed in the leave given by the governor or lieutenant governor. Jurymen which had been before elected by the freeholders and inhabitants of the several towns, were to be, by this new act, all summoned and returned, by the sheriffs of the respective counties. The whole executive government was taken out of the hands of the people, and the nomination of all important officers vested in the king or his governor.

This act excited a greater alarm than the port act. The one effected only the metropolis, the other the whole province. The one had the appearance of being merited, as it was well known that an act of violence had been committed by its inhabitants, under the sanction of a town meeting; but the other had no stronger justifying reason than that the proposed alterations were, in the opinion of the parliament, become absolutely necessary, in order to the preservation of the peace and good order of the said province. In support of this bill, the minister who brought it in alledged, that an executive power was wanting in the country. The very people, said he, who commit the riots are the posse comitatus in which the force of the civil power consists. He farther urged the futility of making laws, the execution of which, under the present form of government in Massachusetts, might be so easily evaded, and therefore contended for a necessity to alter the whole frame of their constitution, as far as related to its executive and judicial powers. In opposition it was urged, that the taking away the civil constitution of a whole people, secured by a solemn charter, upon general charges of delinquencies and defects, was a stretch of power of the most arbitrary and dangerous nature.

By the English constitution charters were sacred, and only revokable by a due course of law, and on a conviction [107] of misconduct. They were solemn compacts between the prince and the people, and without the constitutional power of either party. The abettors of the British schemes reasoned in a summary way. Said they,

the colonies, particularly Massachusetts, by their circular letters; associations and town meetings, have for years past thwarted all the measures of government, and are meditating independency. This turbulent spirit of theirs is fostered by their constitution, which invests them with too much power to be consistent with their state of subordination. Let us therefore lay the axe at the root—new model their charter, and lop off those privileges which they have abused.

When the human mind is agitated with passion it rarely discerns its own interest, and but faintly foresees consequences. Had the parliament stopped short with the Boston port act, the motives to union and to make a common cause with that metropolis, would have been feeble, perhaps ineffectual to have roused the other provinces; but the arbitrary mutilation of the important privileges contained in a solemn charter, without a trial—without a hearing, by the will of parliament, convinced the most moderate that the cause of Massachusetts was the cause of all the provinces.

It readily occurred to those who guided the helm of Great-Britain, that riots would probably take place, in attempting the execution of the acts just mentioned. They also discerned that such was the temper of the people, that trials for murders committed in suppressing riots, if held in Massachusetts, would seldom terminate in favour of the parties, who were engaged on the side of government. To make their system compleat, it was necessary to go one step farther, and to screen their active friends from the apprehended partiality of such trials. It was therefore provided by law, that if any person was indicted for murder, or for any capital offence committed in aiding magistracy, that the governor might send the person so indicted to another colony, or to Great-Britain to be tried. This law was the subject of severe comments. It was considered as an act of indemnity to those who should [108] embroil their hands in the blood of their fellow citizens. It was asked how the relations of a murdered man could effectually prosecute, if they must go three thousand miles to attend that business. It was contended that the act by stopping the usual course of justice, would probably give rise to assassinations and dark revenge among individuals, and encourage all kinds of lawless violence. The charge of partiality was retorted. For said they, "If a party spirit against the authority of Great-Britain would condemn an active officer in Massachusetts as a murderer, the same party spirit for preserving the authority of Great-Britain, would, in that country, acquit a murderer as a spirited performer of his duty.["] The case of captain Preston was also quoted as a proof of the impartial administration of justice in Massachusetts.

The same Natives of America who had petitioned against the Boston port bill, presented a second one against these two bills. With uncommon energy of language, they pointed out many constitutional objections against them, and concluded with fervently beseeching, "that the parliament would not, by passing them, reduce their countrymen to an abject state of misery and humiliation, or drive them to the last resource of despair." The lords of the minority entered also a protest against the passing of each of these bills.

It was fortunate for the people of Boston, and those who wished to promote a combination of the colonies against Great-Britain, that these three several laws passed nearly at the same time. They were presented in quick progression, either in the form of bills or of acts, to the consideration of the inflamed Americans, and produced effects on their minds, infinitely greater than could have been expected from either, especially from the Boston port act alone.

When the fire of indignation, excited by the first, was burning, intelligence of these other acts, operated like fuel, and made it flame out with increasing vehemence. The three laws were considered as forming a complete system of tyranny, from the operation of which, there was no chance of making a peaceable escape.

[109] "By the first," said they, "the property of unoffending thousands is arbitrarily taken away, for the act of a few individuals; by the second our chartered liberties are annihilated; and by the third, our lives may be destroyed with impunity. Property, liberty, and life, are all sacrificed on the altar of ministerial vengeance." This mode of reasoning was not peculiar to Massachusetts. These three acts of parliament, contrary to the expectation of those who planned them, became a cement of a firm union

among the colonies, from New-Hampshire to Georgia. They now openly said, “our charters and other rights and immunities must depend on the pleasure of parliament.” They were sensible that they had all concurred, more or less, in the same line of opposition which had provoked these severe statutes against Massachusetts; and they believed that vengeance, though delayed, was not remitted, and that the only favour the least culpable could expect, was to be the last that would be devoured. The friends of the colonies contended, that these laws were in direct contradiction to the letter, and the spirit of the British constitution. Their opposers could support them on no stronger grounds than those of political necessity and expedience. They acknowledged them to be contrary to the established mode of proceeding, but defended them as tending ultimately to preserve the constitution, from the meditated independency of the colonies.

Such was the temper of the people in England, that the acts hitherto passed were popular. A general opinion had gone forth in the Mother Country, that the people of Massachusetts, by their violent opposition to government, had drawn on themselves merited correction.

The parliament did not stop here, but proceeded one step farther, which inflamed their enemies in America, and lost them friends in Great-Britain. The general clamor in the provinces was, that the proceedings in the parliament were arbitrary, and unconstitutional. Before they completed their memorable session in the beginning of the year 1774, they passed an act respecting the government of Quebec, which in the opinion of their friends merited these appellations. By this act the government of that [110] province was made to extend southward to the Ohio, and westward to the banks of the Mississippi, and northward, to the boundary of the Hudson’s Bay company. The principal objects of the act were to form a legislative council, for all the affairs of the province, except taxation, which council should be appointed by the crown; the office to be held during pleasure, and his Majesty’s Roman Catholic subjects to be entitled to a place therein—to establish the French laws, and a trial without jury, in civil cases, and the English laws, with a trial by jury, in criminal—to secure to the Roman Catholic clergy, except the regulars, the legal enjoyment of their estates, and their tythes, from all who were of their own religion. Not only the spirit but the letter of this act were so contrary to the English constitution, that it diminished the popularity of the measures which had been formed against the Americans.

Among the more southern colonists, it was conceived that its evident object was to make the inhabitants of Canada fit instruments, in the hands of power, to reduce them to a state of slavery.

They well remembered the embarrassments occasioned to them in the late war between France and England, by the French inhabitants of Canada—they supposed that the British administration meant, at this time, to use these people in the same line of attack, for their subjugation. As Great-Britain had new modelled the chartered government of Massachusetts, and claimed an authority so to do in every province, the colonists were apprehensive, that in the plenitude of her power, she would impose on each of them, in their turns, a constitution similar to what she had projected, for the province of Canada.

They foresaw, or thought they foresaw, the annihilation of their ancient assemblies, and their whole legislative business transferred to creatures of the crown. The legal parliamentary right to a maintenance conferred on the clergy of the Roman Catholic religion, gave great offence to many in England, but the political consequences expected to result from it, were most dreaded by the colonists.

[111] They viewed the whole act as an evidence that hostilities were intended against them, and that part of it which respected religion, as calculated to make Roman Catholics subservient to the purposes of military coercion.

The session of parliament which passed these memorable acts, had stretched far into summer. As it drew near a close, the most sanguine expectations were indulged, that from the resolution and great unanimity of parliament on all American questions, the submission of the colonies would be immediate, and their future obedience and tranquility effectually secured. The triumphs and congratulations of the friends of the ministry, were unusually great.

In passing the acts which have been just mentioned, dissentients in favour of America, were unusually few. The ministerial majority, believing that the refractory colonists depended chiefly on the countenance of their English abettors, were of opinion, that as soon as they received intelligence of the decrease of their friends, and of the decisive conduct of parliament, they would acquiesce in the will of Great-Britain—the fame and grandeur of the nation was such, that it was never imagined they would seriously dare to contend with so formidable a people. The late triumphs of Great-Britain had made such an impression on her rulers, that they believed the Americans, on seeing the ancient spirit of the nation revive, would not risque a trial of prowess with those fleets and armies, which the combined force of France and Spain, were unable to resist. By an impious confidence in their superior strength, they precipitated the nation into rash measures, from the dire effects of which, the world may learn a useful lesson.

CHAPTER IV

Proceedings Of The Colonies In 1774, In Consequence Of The Boston Port Act, Viz.

The winter which followed the destruction of the tea in Boston, was an anxious one to those of the [112] colonists who were given to reflection. Many conjectures were formed about the line of conduct, Great-Britain would probably adopt, for the support of her dignity. The fears of the most timid were more than realized by the news of the Boston port bill.

This arrived on the 10th of May, and its operation was to commence the first of the next month. Various town meetings were called to deliberate on the state of public affairs. On the 13th of May, the town of Boston passed the following vote.

1774

That it is the opinion of this town, that if the other colonies come into a joint resolution to stop all importation from Great-Britain and the West-Indies, till the act for blocking up this harbour be repealed, the same will prove the salvation of North-America, and her liberties. On the other hand if they continue their exports and imports, there is high reason to fear that fraud, power, and the most odious oppression, will rise triumphant over justice, right, social happiness, and freedom. And moreover that this vote, be transmitted by the moderator, to all our sister colonies, in the name and behalf of this town.

Copies of this vote were transmitted to each of the colonies. The opposition to Great-Britain, had hitherto called forth the pens of the ingenious, and in some instances imposed the self denial of non-importation agreements: but the bulk of the people, had little to do with the dispute. The spirited conduct of the people of Boston, in destroying the tea, and the alarming precedents set by Great-Britain, in consequence thereof, brought subjects into discussion, with which every peasant and day labourer was concerned.

The patriots who had hitherto guided the helm, knew well, that if the other colonies did not support the people of Boston, they must be crushed, and it was equally obvious, that in their coercion a precedent, injurious to liberty, would be established. It was therefore the interest of Boston to draw in the other colonies. It was also the interest of the patriots in all the colonies, to bring over the bulk of the people, to adopt such efficient measures as were likely to extricate the inhabitants of [113] Boston from the unhappy situation in which they were involved. To effect these purposes much prudence as well as patriotism was necessary. The other provinces were but remotely affected by the fate of Massachusetts. They were happy, and had no cause, on their own account, to oppose the government of Great-Britain. That a people so circumstanced, should take part with a distressed neighbour, at the risque of incurring the resentment of the Mother Country, did not accord with the selfish maxims by which states, as well as individuals, are usually governed. The ruled are, for the most

part, prone to suffer as long as evils are tolerable, and in general they must feel before they are roused to contend with their oppressors; but the Americans acted on a contrary principle.

They commenced an opposition to Great-Britain, and ultimately engaged in a defensive war, on speculation. They were not so much moved by oppression actually felt, as by a conviction that a foundation was laid, and a precedent about to be established for future oppressions. To convince the bulk of the people, that they had an interest in foregoing a present good, and submitting to a present evil, in order to obtain a future greater good, and to avoid a future greater evil, was the task assigned to the colonial patriots. But it called for the exertion of their utmost abilities. They effected it in a great measure, by means of the press. Pamphlets, essays, addresses and news paper dissertations were daily presented to the public, proving that Massachusetts was suffering in the common cause, and that interest and policy, as well as good neighbourhood, required the united exertions of all the colonies, in support of that much injured province. It was inculcated on the people, that if the ministerial schemes were suffered to take effect in Massachusetts, the other colonies must expect the loss of their charters, and that a new government would be imposed upon them, like that projected for Quebec. The king and parliament held no patronage in America, sufficient to oppose this torrent. The few who ventured to write in their favour found a difficulty in communicating their sentiments to the public. [114] No pensions or preferments awaited their exertions. Neglect and contempt were their usual portion, but popularity, consequence, and fame, were the rewards of those who stepped forward in the cause of liberty. In order to interest the great body of people, the few who were at the helm, disclaimed any thing more decisive, than convening the inhabitants, and taking their sense on what was proper to be done. In the mean time great pains were taken to prepare them for the adoption of vigorous measures.

The words whigs and tories, for want of better, were now introduced, as the distinguishing names of parties. By the former, were meant those who were for making a common cause with Boston, and supporting the colonies in their opposition to the claims of parliament. By the latter those who were at least so far favourers of Great-Britain, that they wished, either that no measures, or only palliative measures, should be adopted in opposition to her schemes.

These parties were so nearly balanced in New-York, that nothing more was agreed to at the first meeting of the inhabitants, than a recommendation to call a Congress.

At Philadelphia the patriots had a delicate part to act. The government of the colony being proprietary, a multitude of officers connected with that interest, had much to fear from convulsions, and nothing to expect from a revolution. A still greater body of people called Quakers, denied the lawfulness of war, and therefore could not adopt such measures for the support of Boston, as naturally tended to produce an event so adverse to their system of religion.

The citizens of Boston, not only sent forward their public letter, to the citizens of Philadelphia; but accompanied it with private communications to individuals of known patriotism and influence, in which they stated the impossibility of their

standing alone, against the torrent of ministerial vengeance, and the indispensable necessity, that the leading colony of Pennsylvania, should afford them its support and countenance. The advocates in Philadelphia, for making a common cause [115] with Boston, were fully sensible of the state of parties in Pennsylvania. They saw the dispute with Great-Britain, brought to a crisis, and a new scene opening, which required exertions different from any heretofore made. The success of these they well knew, depended on the wisdom with which they were planned, and the union of the whole people, in carrying them into execution.

They saw the propriety of proceeding with the greatest circumspection; and therefore resolved at their first meeting, on nothing more than to call a general meeting of the inhabitants, on the next evening.

May 20

At this second meeting the patriots had so much moderation and policy, as to urge nothing decisive, contenting themselves with taking the sense of the inhabitants, simply on the propriety of sending an answer to the public letter from Boston. This was universally approved. The letter agreed upon was firm but temperate.

21

They acknowledged the difficulty of offering advice on the present occasion, sympathized with the people of Boston in their distress, and observed that all lenient measures, for their relief, should be first tried. That if the making restitution for the tea destroyed, would put an end to the unhappy controversy, and leave the people of Boston upon their ancient footing of constitutional liberty, it could not admit of a doubt what part they should act. But that it was not the value of the tea, it was the indefeasible right of giving and granting their own money, which was the matter in consideration. That it was the common cause of America; and therefore necessary in their opinion, that a congress of deputies from the several colonies should be convened to devise means for restoring harmony between Great-Britain and the colonies, and preventing matters from coming to extremities. Till this could be brought about, they recommended firmness, prudence, and moderation to the immediate sufferers, assuring them, that the people of Pennsylvania would continue to evince a firm adherence to the cause of American liberty.

In order to awaken the attention of the people, a series of letters was published well calculated to rouse [116] them to a sense of their danger, and point out the fatal consequences of the late acts of parliament. Every newspaper teemed with dissertations in favour of liberty—with debates of the members of parliament, especially with the speeches of the favourers of America, and the protests of the dissenting lords. The latter had a particular effect on the colonists, and were considered by them as irrefragable proofs, that the late acts against Massachusetts were unconstitutional and arbitrary.

The minds of the people being thus prepared, the friends of liberty promoted a petition to the governor, for convening the assembly. This they knew would not be granted, and that the refusal of it, would smooth the way for calling the inhabitants together.

The governor having refused to call the assembly, a general meeting of the inhabitants was requested. About 8000 met and adopted sundry spirited resolutions. In these they declared, that the Boston port act

Jun. 18

was unconstitutional—that it was expedient to convene a continental congress—to appoint a committee for the city and county of Philadelphia, to correspond with their sister colonies and the several counties of Pennsylvania, and to invest that committee with power, to determine on the best mode for collecting the sense of the province, and appointing deputies to attend a general congress.

Under the sanction of this last resolve, the committee appointed 28 for that purpose, wrote a circular letter to all the counties of the Province, requesting them to appoint deputies to a general meeting, proposed to be held on the 15th of July, part of this letter was in the following words:

We would not offer such an affront to the well known public spirit of Pennsylvanians, as to question your zeal on the present occasion. Our very existence in the rank of freemen, and the security of all that ought to be dear to us, evidently depends on our conducting this great cause to its proper issue, by firmness, wisdom, and magnanimity. It is with pleasure we assure you, that all the colonies from South-Carolina to New-Hampshire, are animated with one spirit, in the common cause, and consider that as the proper crisis for having our differences with the Mother Country [117] brought to some certain issue, and our liberties fixed upon a permanent foundation, this desirable end can only be accomplished by a free communication of sentiments, and a sincere and fervent regard for the interests of our common country.

The several counties readily complied with the request of the inhabitants of Philadelphia, and appointed deputies, who met at the time appointed, and passed sundry resolves, in which they reprobated the late acts of parliament—expressed their sympathy with Boston, as suffering in the common cause—approved of holding a congress, and declared their willingness to make any sacrifices that might be recommended by a congress, for securing their liberties.

Thus, without tumult, disorder, or divided counsels, the whole province of Pennsylvania was, by prudent management and temperate proceedings, brought into the opposition with its whole weight and influence. This is the more remarkable as it is probable, that if the sentiments of individuals had been separately taken, there would have been a majority against involving themselves in the consequences of taking part with the destroyers of the tea, at Boston.

While these proceedings were carrying on in Pennsylvania, three of the most distinguished patriots of Philadelphia, under color of an excursion of pleasure, made a tour throughout the province, in order to discover the real sentiments of the common people. They were well apprized of the consequences of taking the lead in a dispute which every day became more serious, unless they could depend on being supported by the yeomanry of the country. By freely associating and conversing with many of every class and denomination; they found them unanimous in that fundamental principle of the American controversy, “That the parliament of Great-Britain had no right to tax them.” From their general determination on this subject, a favourable prognostic was formed, of a successful opposition to the claims of Great-Britain.

In Virginia the house of burgesses on the 26th of May, 1774, resolved, that the first of June, the day on which [118] the operation of the Boston port bill was to commence,

should be set apart by the members as a day of fasting, humiliation and prayer, “devoutly to implore the divine interposition, for averting the heavy calamities which threatened destruction to their civil rights, and the evils of a civil war—to give them one heart and one mind, to oppose by all just and proper means, every injury to American rights.” On the publication of this resolution, the royal governor, the Earl of Dunmore dissolved them. The members notwithstanding their dissolution, met in their private capacities, and signed an agreement, in which, among other things, they declared, “that an attack made on one of their sister colonies, to compel submission to arbitrary taxes, was an attack made on all British America, and threatened ruin to the rights of all, unless the united wisdom of the whole be applied.”

In South-Carolina the vote of the town of Boston of the 13th of May, being presented to a number of the leading citizens in Charleston, it was unanimously agreed to call a meeting of the inhabitants.

That this might be as general as possible, letters were sent to every parish and district in the province, and the people were invited to attend, either personally, or by their representatives at a general meeting of the inhabitants.

A large number assembled, in which were some, from almost every part of the province. The proceedings of the parliament

July 18, 1774

against the province of Massachusetts were distinctly related to this convention. Without one dissenting voice, they passed sundry resolutions, expressive of their rights, and of their sympathy with the people of Boston. They also chose five delegates to represent them in a continental Congress, and invested them “with full powers, and authority, in behalf of them and their constituents, to concert, agree to, and effectually to prosecute such legal measures as in their opinion, and the opinion of the other members, would be most likely to obtain a redress of American grievances.”

The events of this time may be transmitted to posterity, but the agitation of the public mind can never be fully comprehended, but by those who were witnesses of it.

[119] In the counties and towns of the several provinces, as well as in the cities, the people assembled and passed resolutions, expressive of their rights, and of their detestation of the late American acts of parliament. These had an instantaneous effect on the minds of thousands. Not only the young and impetuous, but the aged and temperate, joined in pronouncing them to be unconstitutional and oppressive. They viewed them as deadly weapons aimed at the vitals of that liberty, which they adored; as rendering abortive the generous pains taken by their forefathers, to procure for them in a new world, the quiet enjoyment of their rights. They were the subjects of their meditation when alone, and of their conversation when in company.

Within little more than a month, after the news of the Boston port bill reached America, it was communicated from state to state, and a flame was kindled, in almost every breast, through the widely extended provinces.

In order to understand the mode by which this flame was spread with such rapidity over so great an extent of country, it is necessary to observe, that the several colonies

were divided into counties, and these again subdivided into districts, distinguished by the names of towns, townships, precincts, hundreds or parishes. In New-England the subdivisions which are called towns, were by law, bodies corporate—had their regular meetings, and might be occasionally convened by their proper officers. The advantages derived from these meetings, by uniting the whole body of the people in the measures taken to oppose the stamp act, induced other provinces to follow the example. Accordingly under the association which was formed to oppose the revenue act of 1767, committees were established not only in the capitals of every province, but also in most of the subordinate districts. Great-Britain, without designing it, had by her two preceding attempts at American revenue, taught her colonies not only the advantages, but the means of union. The system of committees, which prevailed in 1765, and also in 1767, was revived in 1774. By them there was a quick transmission of intelligence from the capital towns through [120] the subordinate districts to the whole body of the people, and a union of counsels and measures was effected among widely disseminated inhabitants.

It is perhaps impossible for human wisdom, to contrive any system more subservient to these purposes, than such a reciprocal exchange of intelligence, by committees. From the want of such a communication with each other, and consequently of union among themselves, many states have lost their liberties, and more have been unsuccessful in their attempts to regain them, after they have been lost.

What the eloquence and talents of Demosthenes could not effect among the states of Greece, might have been effected by the simple device of committees of correspondence. The few have been enabled to keep the many in subjection in every age, from the want of union among the latter. Several of the provinces of Spain complained of oppression under Charles the 5th, and in transports of rage took arms against him; but they never consulted or communicated with each other. They resisted separately, and were therefore separately subdued.

The colonists sympathizing with their distressed brethren in Massachusetts, felt themselves called upon, to do something for their relief; but to determine on what was proper to be done, did not so obviously occur. It was a natural idea, that for harmonising their measures, a Congress of deputies from each province should be convened. This early occurred to all, and being agreed to by all, was the means of procuring union and concert among inhabitants, removed several hundred miles from each other. In times less animated, various questions about the place and legality of their meeting, and about the extent of their power, would have produced a great diversity of sentiments; but on this occasion, by the special agency of providence, there was the same universal bent of inclination in the great body of the people. A sense of common danger, extinguished selfish passions. The public attention was fixed on the great cause of liberty. Local attachments and partialities, were sacrificed on the altar of patriotism.

There were not wanting moderate men, who would [121] have been willing to pay for the tea destroyed, if that would have put an end to the controversy, for it was not the value of the tea nor of the tax, but the indefeasible right of giving and granting their money, for which the colonists contended. The act of parliament was so cautiously

worded, as to prevent the opening of the port of Boston, even though the East-India company had been reimbursed for all damages, “until it was made [to] appear to his majesty in council, that peace and obedience to the laws were so far restored in the town of Boston, that the trade of Great-Britain might be safely carried on there and his majesty’s customs duly collected.” The latter part of this limitation, “the due collection of his majesty’s customs,” was understood to comprehend submission to the late revenue laws. It was therefore inferred, that payment for the tea destroyed, would produce no certain relief, unless they were willing to give operation to the law, for raising a revenue on future importations of that commodity, and also to acquiesce in the late mutilation of their charter. As it was deliberately resolved, never to submit to either the most lukewarm or well informed patriots, possessing the public confidence, neither advised nor wished for the adoption of that measure. A few in Boston, who were known to be in the royal interest, proposed a resolution for that purpose, but they met with no support. Of the many who joined the British in the course of the war, there was scarcely an individual to be found in this early stage of the controversy, who advocated the right of parliamentary taxation. There were doubtless many timid persons, who fearing the power of Britain, would rather have submitted to her encroachments, than risk the vengeance of her arms, but such for the most part suppressed their sentiments. Zeal for liberty, being immediately rewarded with applause, the patriots had every inducement to come forward, and avow their principles; but there was something so unpopular in appearing to be influenced by timidity, interest or excessive caution, when essential interests were attacked, that such persons shunned public notice, and sought the shade of retirement.

[122] In the three first months, which followed the shutting up of the port of Boston, the inhabitants of the colonies in hundreds of small circles, as well as in their provincial assemblies and congresses, expressed their abhorrence of the late proceedings of the British parliament against Massachusetts—their concurrence in the proposed measure of appointing deputies for a general congress, and their willingness to do and suffer whatever should be judged conducive to the establishment of their liberties.

A patriotic flame, created and diffused by the contagion of sympathy, was communicated to so many breasts, and reflected from such a variety of objects, as to become too intense to be resisted.

While the combination of the other colonies to support Boston, was gaining strength, new matter of dissention daily took place in Massachusetts. The resolution for shutting the port of Boston, was no sooner taken, than it was determined to order a military force to that town. General Gage, the commander in chief of the royal forces in North-America, was also sent thither, in the additional capacity of Governor of Massachusetts. He arrived in Boston on the third day after the inhabitants received the first intelligence of the Boston port bill. Though the people were irritated by that measure, and though their republican jealousy was hurt by the combination of the civil and military character in one person, yet the general was received with all the honours which had been usually paid to his predecessors. Soon after his arrival, two regiments of foot, with a detachment of artillery and some cannon, were landed in

Boston. These troops were by degrees re-inforced, with others from Ireland, New-York, Halifax and Quebec.

The governor announced that he had the king's particular command, for holding the general court at Salem, after the first of June. When that eventful day arrived, the act for shutting up the port of Boston commenced its operation. It was devoutly kept at Williamsburgh, as a day of fasting and humiliation. In Philadelphia it was solemnized with every manifestation of public calamity and grief. The inhabitants shut up their houses. After [123] divine service a stillness reigned over the city, which exhibited an appearance of the deepest distress.

In Boston a new scene opened on the inhabitants. Hitherto, that town had been the seat of commerce and of plenty. The immense business carried on therein, afforded a comfortable subsistence to many thousands. The necessary—the useful, and even some of the elegant arts were cultivated among them. The citizens were polite and hospitable. In this happy state they were sentenced on the short notice of twenty one days, to a total deprivation of all means of subsisting. The blow reached every person. The rents of the landholders, either ceased or were greatly diminished. The immense property in stores and wharfs, was rendered comparatively useless. Labourers, artifices and others, employed in the numerous occupations created by an extensive trade, partook in the general calamity. They who depended on a regular income, flowing from previous acquisitions of property, as well as they who with the sweat of their brow, earned their daily subsistence, were equally deprived of the means of support; and the chief difference between them, was that the distresses of the former were rendered more intolerable by the recollection of past enjoyments. All these inconveniences and hardships, were born with a passive, but inflexible fortitude. Their determination to persist in the same line of conduct, which had been the occasion of their suffering was unabated.

The authors and advisers of the resolution for destroying the tea, were in the town, and still retained their popularity and influence. The execrations of the inhabitants fell not on them, but on the British parliament. Their countrymen acquitted them of all selfish designs, and believed that in their opposition to the measures of Great-Britain, they were actuated by an honest zeal for constitutional liberty. The sufferers in Boston had the consolation of sympathy from the other colonists. Contributions were raised in all quarters for their relief. Letters and addresses came to them from corporate bodies, town meetings and provincial conventions, applauding their conduct, and exhorting them to perseverance.

[124] The people of Marblehead, who by their proximity were likely to reap advantage from the distresses of Boston, generously offered the merchants thereof, the use of their harbour, wharfs, warehouses, and also their personal attendance on the lading or unlading of their goods free of all expence.

The inhabitants of Salem in an address to governor Gage, concluded with these remarkable words,

By shutting up the port of Boston, some imagine that the course of trade might be turned hither, and to our benefit: But nature in the formation of our harbour, forbid, our becoming rivals in commerce with that convenient mart; and were it otherwise, we must be dead to every idea of justice, lost to all feelings of humanity, could we indulge one thought to seize on wealth, and raise our fortunes on the ruins of our suffering neighbours.

The Massachusetts general court met at Salem, according to adjournment, on the 7th of June. Several of the popular leaders took, in a private way, the sense of the members on what was proper to be done. Finding they were able to carry such measures as the public exigencies required, they prepared resolves and moved for their adoption. But before they went on the latter business, their door was shut.

One member nevertheless contrived means of sending information to governor Gage of what was doing. His secretary was sent off to dissolve the general court, but was refused admission. As he could obtain no entrance, he read the proclamation at the door, and immediately after in council, and thus dissolved the general court. The house while sitting with their doors shut, appointed five of the most respectable inhabitants as their committee, to meet committees from other provinces, that might be convened the first of September at Philadelphia—voted them 75 pounds sterling each, and recommended to the several towns and districts to raise the said sum by equitable proportions. By these means the designs of the governor were disappointed. His situation in every respect was truly disagreeable. It was his duty to forward the execution of laws which were universally execrated. Zeal for [125] his master's service, prompted him to endeavour that they should be earned into full effect, but his progress was retarded by obstacles from every quarter. He had to transact his official business with a people who possessed a high sense of liberty, and were uncommonly ingenious in evading disagreeable acts of parliament. It was a part of his duty to prevent the calling of the town meetings after the first of August, 1774. These meetings were nevertheless held. On his proposing to exert authority for the dispersion of the people, he was told by the select men, that they had not offended against the act of parliament, for that only prohibited the calling of town meetings, and that no such call had been made: A former constitutional meeting before the first of August, having only adjourned themselves from time to time. Other evasions, equally founded on the letter, of even the late obnoxious laws, were practised.

As the summer advanced, the people of Massachusetts received stronger proofs of support from the neighbouring provinces. They were therefore encouraged to farther opposition. The inhabitants of the colonies, at this time, with regard to political opinions, might be divided into three classes; of these, one was for rushing precipitately into extremities. They were for immediately stopping all trade, and could not even brook the delay of waiting till the proposed continental congress should meet. Another party, equally respectable, both as to character, property, and patriotism, was more moderate, but not less firm. These were averse to the adoption of any violent resolutions, till all others were ineffectually tried. They wished that a clear statement of their rights, claims, and grievances, should precede every other measure. A third class disapproved of what was generally going on. A few from principle, and a persuasion that they ought to submit to the Mother Country; some

from the love of ease, others from self-interest, but the bulk from fear of the mischievous consequences likely to follow: All these latter classes, for the most part, lay still, while the friends of liberty acted with spirit. If they, or any of them, ventured to oppose popular measures, they [126] were not supported, and therefore declined farther efforts. The resentment of the people was so strong against them, that they sought for peace by remaining quiet. The same indecision that made them willing to submit to Great-Britain, made them apparently acquiesce in popular measures which they disapproved. The spirited part of the community, being on the side of liberty, the patriots had the appearance of unanimity; though many either kept at a distance from public meetings, or voted against their own opinion, to secure themselves from resentment, and promote their present ease and interest.

Under the influence of those who were for the immediate adoption of efficacious measures, an agreement by the name of the solemn league and covenant, was adopted by numbers. The subscribers of this, bound themselves to suspend all commercial intercourse with Great-Britain, until the late obnoxious laws were repealed, and the colony of Massachusetts restored to its chartered rights.

General Gage published a proclamation, in which he stiled this solemn league and covenant, “An unlawful, hostile, and traitorous combination.” And all magistrates were charged, to apprehend and secure for trial, such as should have any agency in publishing or subscribing the same, or any similar covenant. This proclamation had no other effect, than to exercise the pens of the lawyers, in shewing that the association did not come within the description of legal treason, and that therefore the governor’s proclamation was not warranted by the principles of the constitution.

June 29

The late law, for regulating the government of the provinces, arrived near the beginning of August, and was accompanied with a list of 36 new counsellors, appointed by the crown, and in a mode, variant from that prescribed by the charter. Several of these in the first instance, declined an acceptance of the appointment. Those, who accepted of it, were every where declared to be enemies to their country. The new judges were rendered incapable of proceeding in their official duty. Upon opening the courts, the juries refused to be sworn, or to act in any manner, either under them, or in conformity to the late [127] regulations.

In some places, the people assembled, and filled the court-houses and avenues to them in such a manner, that neither the judges, nor their officers could obtain entrance; and upon the sheriff’s commanding them, to make way for the court, they answered, “That they knew no court independent of the ancient laws of their country, and to none other would they submit.”

Aug. 4

In imitation of his royal master, governor Gage issued a proclamation “for the encouragement of piety and virtue, and for the prevention and punishing vice, prophaneness and immorality.” In this proclamation, hypocrisy was inserted as one of the immoralities against which the people were warned. This was considered by the inhabitants, who had often been ridiculed for their strict attention to the forms of religion, to be a studied insult, and as such was more resented than an actual injury. It greatly added to the inflammation which had already taken place in their minds.

The proceedings and apparent dispositions of the people, together with the military preparations which were daily made through the province, induced general Gage to fortify that neck of land which joins Boston to the continent.

He also seized upon the powder which was lodged in the arsenal at Charlestown.

This excited a most violent and universal ferment. Several thousands of the people assembled at Cambridge, and it was with difficulty they were restrained from marching directly to Boston, to demand a delivery of the powder, with a resolution in case of refusal to attack the troops.

Sept. 1

The people thus assembled, proceeded to lieutenant governor Oliver's house, and to the houses of several of the new counsellors, and obliged them to resign, and to declare that they would no more act under the laws lately enacted. In the confusion of these transactions a rumor went abroad, that the royal fleet and troops were firing upon the town of Boston. This was probably designed by the popular leaders, on purpose to ascertain what aid they might expect from the country in case of extremities. The result exceeded their most sanguine expectations. [128] In less than twenty four hours, there were upwards of 30,000 men in arms, and marching towards the capital. Other risings of the people took place in different parts of the colony, and their violence was such, that in a short time the new counsellors, the commissioners of the customs, and all who had taken an active part in favour of Great-Britain, were obliged to skreen themselves in Boston. The new seat of government at Salem was abandoned, and all the officers connected with the revenue were obliged to consult their safety, by taking up their residence in a place which an act of parliament had proscribed from all trade.

About this time, delegates from every town and district in the county of Suffolk, of which Boston is the county town, had a meeting, at which they prefaced a number of spirited resolutions, containing a detail of the particulars of their intended opposition to the late acts of parliament, with a general declaration, "That no obedience was due from the province to either, or any part of the said acts, but that they should be rejected as the attempts of a wicked administration to enslave America." The resolves of this meeting were sent on to Philadelphia, for the information and opinion of the Congress, which, as shall be hereafter related, had met there about this time.

The people of Massachusetts rightly judged, that from the decision of congress on these resolutions, they would be enabled to determine what support they might expect. Notwithstanding present appearances they feared that the other colonies, who were no more than remotely concerned, would not hazard the consequences of making a common cause with them, should subsequent events make it necessary to repel force by force. The decision of Congress exceeded their expectations. They "most thoroughly approved the wisdom and fortitude with which opposition to wicked ministerial measures had been hitherto conducted in Massachusetts, and recommended to them perseverance in the same firm and temperate conduct as expressed in the resolutions of the delegates from the county of Suffolk."

By this approbation and advice, the [129] people of Massachusetts were encouraged to resistance, and the other

1774

colonies became bound to support them. The former, more in need of a bridle than a spur, proceeded as they had begun, but with additional confidence.

Governor Gage had issued writs for holding a general assembly at Salem; but subsequent events, and the heat and violence which every where prevailed, made him think it expedient to counteract the writs by a proclamation for suspending the meeting of the members. The legality of a proclamation for that purpose was denied, and in defiance thereof 90 of the newly elected members met at the time and place appointed. They soon after resolved themselves into a provincial congress, and adjourned to Concord, about 20 miles from Charlestown. On their meeting there, they chose Mr. Hancock president, and proceeded to business. One of their first acts was to appoint a committee to wait on the governor, with a remonstrance, in which they apologized for their meeting, from the distressed state of the colony; complained of their grievances, and, after stating their apprehensions, from the hostile preparations on Boston neck, concluded with an earnest request, "That he would desist from the construction of the fortress at the entrance into Boston, and restore that pass to its natural state." The governor found some difficulty in giving them an answer, as they were not, in his opinion, a legal body, but the necessity of the times over-ruled his scruples. He replied, by expressing his indignation at the supposition, "That the lives, liberties or property of any people, except enemies, could be in danger, from English troops." He reminded them, that while they complained of alterations made in their charter, by acts of parliament, they were by their own acts subverting it altogether. He therefore warned them of the rocks they were upon; and to desist from such illegal and unconstitutional proceedings. The governor's admonitions were unavailing. The provincial congress appointed a committee to draw up a plan for the immediate defence of the province. It was resolved to enlist a number of the inhabitants under the name of minute men, who were to be under obligations to turn out at a [130] minute's warning. Jedediah Pribble, Artemas Ward and Seth Pomeroy, were elected general officers to command those minute men and the militia, in case they should be called out to action. A committee of safety, and a committee of supplies were appointed. These consisted of different persons and were intended for different purposes. The first were invested with an authority to assemble the militia when they thought proper, and were to recommend to the committee of supplies the purchase of such articles as the public exigencies required; the last were limited to the small sum of £15,627.15s. sterl. which was all the money at first voted to oppose the power and riches of Great Britain. Under this authority, and with these means, the committees of safety and of supplies, acting in concert, laid in a quantity of stores, partly at Worcester and partly at Concord.

The same congress met again, and soon after resolved to get in readiness twelve thousand men to act on any given emergency; and that a fourth part of the militia should be enlisted as minute men, and receive pay. John Thomas and William Heath were appointed general officers. They also sent persons to New-Hampshire, Rhode-Island and Connecticut, to inform them of the steps they had taken and to request their co-operation in making up an army of 20,000 men. Committees from these several colonies met with a committee from the provincial congress of Massachusetts, and settled their plans. The proper period of commencing opposition to general Gage's troops, was determined to be whenever they marched out with their baggage, ammunition and artillery. The aid of the clergy

was called in upon this occasion, and a circular letter was addressed to each of the several ministers in the province, requesting their assistance “in avoiding the dreadful slavery with which they were threatened.”

As the winter approached, general Gage ordered barracks for his troops to be erected, but such was the superior influence of the popular leaders, that on their recommendation the workmen desisted from fulfilling the general’s wishes, though the money for their labour would have been paid by the crown.

An application to New-York was equally unsuccessful, [131] and 1774 it was with difficulty that the troops could be furnished with winter lodgings. Similar obstructions were thrown in the way of getting winter covering for the soldiery. The merchants of New-York on being applied to, answered, “That they would never supply any article for the benefit of men who were sent as enemies to the country.” The inhabitants of Massachusetts encouraged the desertion of the soldiers; and acted systematically in preventing their obtaining any other supplies but necessary provisions. The farmers were discouraged from selling them straw, timber, boards and such like articles of convenience. Straw, when purchased for their service, was frequently burnt. Vessels, with bricks intended for their use, were sunk, and carts with wood were overturned, and the king’s property by one contrivance or other, was daily destroyed.

A proclamation had been issued by the king, prohibiting the exportation of military stores from Britain, which reached America in the latter end of the year 1774.

On receiving intelligence thereof, in Rhode-Island, the people seized upon and removed from the public battery about 40 pieces of cannon; and the assembly passed resolutions for obtaining arms and military stores by every means, and also for raising and arming the inhabitants: soon after 400 men beset his majesty’s castle at Portsmouth. They sustained a fire from three four-pounders and small arms, but before they could be ready for a second fire, the assailants stormed the fort, and secured and confined the garrison till they broke open the powder house, and took the powder away. The powder being secured, the garrison was released from confinement. Dec. 14

Throughout this whole season, civil government, legislation, judicial proceedings and commercial regulations were in Massachusetts, to all appearance, annihilated. The provincial Congress exercised all the semblance of government which existed. From their coincidence, with the prevailing disposition, of the people, their resolutions had the weight and efficacy of laws.

Under the simple stile of recommendation, they organized the militia, made ordinances respecting public monies and such farther regulations [132] as were necessary for preserving order, and for defending themselves against the British troops. 1774

In this crisis it seemed to be the sense of the inhabitants of Massachusetts to wait events. They dreaded every evil that could flow from resistance, less than the operation of the late acts of parliament, but at the same time were averse to be the aggressors in bringing on a civil war. They chose to submit to a suspension of regular

government, in preference to permitting the streams of justice to flow in the channel prescribed by the late acts of parliament, or to conducting them forcibly in the old one, sanctioned by their charter. From the extinction of the old, and the rejection of the new constitution, all regular government was for several months abolished. Some hundred thousands of people, were in a state of nature without legislation, magistrates or executive officers: there was nevertheless a surprising degree of order. Men of the purest morals were among the most active opposers of Great-Britain. While municipal laws ceased to operate, the laws of reason, morality and religion, bound the people to each other as a social band, and preserved as great a degree of a decorum as had at any time prevailed. Even those who were opposed to the proceedings of the populace when they were prudent and moderate, for the most part enjoyed safety both at home and abroad.

Though there were no civil officers, there was an abundance of military ones. These were chosen by the people, but exercised more authority than any who had been honoured with commissions from the governor. The inhabitants in every place devoted themselves to arms. Handling the musket, and training, were the fashionable amusements of the men, while the women by their presence, encouraged them to proceed. The sound of drums and fifes was to be heard in all directions. The young and the old were fired with a martial spirit. On experiment it was found, that to force on the inhabitants, a form of government, to which they were totally averse, was not within the fancied omnipotence of parliament.

During these transactions in Massachusetts effectual [133] measures had been taken by the colonies for convening a continental Congress, though there was no one entitled to lead in this business, yet in consequence of the general impulse on the public mind, from a sense of common danger, not only the measure itself, but the time and place of meeting, were with surprising unanimity agreed upon. The colonies though formerly agitated with local prejudices, jealousies and aversions, were led to assemble together in a general diet, and to feel their weight and importance in a common union. Within four months from the day on which the first intelligence of the Boston port bill reached America, the deputies of eleven provinces had convened in Philadelphia, and in four days more, by the arrival of delegates from North-Carolina, there was a complete representation of twelve colonies, containing three millions of people, disseminated over 260,000 square miles of territory. Some of the delegates were appointed by the constitutional assemblies[;] in other provinces, where they were embarrassed by royal governors, the appointments were made in voluntary meetings of the people. Perhaps there never was a body of delegates more faithful to the interest of their constituents than the Congress of 1774. The public voice elevated none to a seat in that august assembly, but such as in addition to considerable abilities, possessed that ascendancy over the minds of their fellow citizens, which can neither be acquired by birth nor purchased by wealth. The instructions given to these deputies were various, but in general they contained strong professions of loyalty, and of constitutional dependence on the Mother Country: the framers of them acknowledged the prerogatives of the crown, and disclaimed every wish of separation from the Parent State. On the other hand, they were firm in declaring that they were entitled to all the rights of British born

1774

subjects, and that the late acts respecting Massachusetts were unconstitutional and oppressive.

They particularly stated their grievances, and for the most part concurred in authorising their deputies to concert and agree to such measures in behalf of their constituents [134], as in their joint opinion would be most likely to obtain a redress of American grievances, ascertain American rights, on constitutional principles, and establish union and harmony between Great-Britain and the colonies. Of the various instructions, on this occasion, those which were drawn up by a convention of delegates, from every county in the province of Pennsylvania, and presented by them in a body to the constitutional assembly, were the most precise and determinate. By these it appears, that the Pennsylvanians were disposed to submit to the acts of navigation, as they then stood, and also to settle a certain annual revenue on his majesty, his heirs and successors, subject to the control of parliament, and to satisfy all damages done to the East-India company, provided their grievances were redressed, and an amicable compact was settled, which, by establishing American rights in the manner of a new Magna Charta, would have precluded future disputes.

1774

Of the whole number of deputies, which formed the Continental Congress, of 1774, one half were lawyers. Gentlemen of that profession had acquired the confidence of the inhabitants by their exertions in the common cause. The previous measures in the respective provinces had been planned and carried into effect, more by lawyers than by any other order of men. Professionally taught the rights of the people, they were among the foremost to decry every attack made on their liberties. Bred in the habits of public speaking, they made a distinguished figure in the meetings of the people, and were particularly able to explain to them the tendency of the late acts of parliament. Exerting their abilities and influence in the cause of their country, they were rewarded with its confidence.

On the meeting of Congress, they chose Peyton Randolph their president, and Charles Thomson their secretary. They agreed as one of the rules of their doing business, that no entry should be made on their journals of any propositions discussed before them, to which they did not finally assent.

This august body, to which all the colonies looked up [135] for wisdom and direction, had scarcely convened, when a dispute arose about the mode of conducting business, which alarmed the friends of union. It was contended by some, that the votes of the small provinces should not count as much as those of the larger ones. This was argued with some warmth and invidious comparisons were made between the extensive dominion of Virginia, and the small colonies of Delaware and Rhode-Island. The impossibility of fixing the comparative weight of each province, from the want of proper materials, induced Congress to resolve, that each should have one equal vote. The mode of conducting business being settled, two committees were appointed. One, to state the rights of the colonies, the several instances in which these rights had been violated, and the means most proper to be pursued for obtaining a restoration of them; the other, to examine and report the several statutes which affected the trade and manufactures of the colonies. The first

1774

committee were farther instructed to confine themselves to the consideration of such rights as had been infringed since the year 1763.

Congress soon after their meeting, agreed upon a declaration of their rights, by which it was among other things declared, that the inhabitants of the English colonies in North-America, by the immutable laws of nature, the principles of the English constitution, and the several charters or compacts, were entitled to life, liberty and property; and that they had never ceded to any sovereign power whatever, a right to dispose of either, without their consent.

That their ancestors, who first settled the colonies were entitled to all the rights, liberties and immunities of free and natural born subjects within the realm of England, and that by their migrating to America, they by no means forfeited, surrendered or lost any of those rights; that the foundation of English liberty, and of all free government was, a right in the people to participate in their legislative council, and that as the English colonists were not, and could not be properly represented in the British parliament, they were entitled to a free and exclusive power of legislation in their [136] several provincial legislatures, in all cases of taxation and internal polity, subject only to the negative of their sovereign. They then run the line, between the supremacy of parliament, and the independency of the colonial legislatures by provisoes and restrictions, expressed in the following words.

1774

But from the necessity of the case, and a regard to the mutual interests of both countries, we cheerfully consent to the operation of such acts of the British parliament, as are *bona fide*, restrained to the regulation of our external commerce, for the purpose of securing the commercial advantages of the whole empire to the Mother Country, and the commercial benefits of its respective members, excluding every idea of taxation; internal and external for raising a revenue on the subjects in America without their consent.

This was the very hinge of the controversy. The absolute unlimited supremacy of the British parliament, both in legislation and taxation, was contended for on one side; while on the other, no farther authority was conceded than such a limited legislation, with regard to external commerce, as would combine the interest of the whole empire. In government, as well as in religion, there are mysteries from the close investigation of which little advantage can be expected. From the unity of the empire it was necessary, that some acts should extend over the whole. From the local situation of the colonies it was equally reasonable that their legislatures should at least in some matters be independent. Where the supremacy of the first ended and the independency of the last began, was to the best informed a puzzling question. Happy would it have been for both countries, had the discussion of this doubtful point never been attempted.

Congress also resolved, that the colonists were entitled to the common law of England, and more especially to the privilege of being tried by their peers of the vicinage. That they were entitled to the benefit of such of the English statutes as existed at the time of their colonization, and which they had found to be applicable to

their local circumstances, and also to the immunities and privileges granted and confirmed to them by royal charters or secured [137] by provincial laws. That they had a right peaceably to assemble, consider of their grievances, and petition the king; that the keeping a standing army in the colonies, without the consent of the legislature of the colony where the army was kept, was against law. That it was indispensibly necessary to good government, and rendered essential by the English constitution, that the constituent branches of the legislature be independent of each other, and that therefore, the exercise of legislative power, in several colonies by a council, appointed during pleasure by the crown, was unconstitutional, dangerous and destructive to the freedom of American legislation. All of these liberties, Congress in behalf of themselves and their constituents, claimed, demanded and insisted upon as their indubitable rights, which could not be legally taken from them, altered or abridged by any power whatever, without their consent. Congress then resolved, that sundry acts, which had been passed in the reign of George the Third, were infringements and violations of the rights of the colonists, and that the repeal of them was essentially necessary, in order to restore harmony between Great-Britain and the colonies. The acts complained of, were as follow: The several acts of 4 George III. ch. 15 and ch. 34; 5 Geo. III. ch. 25; 6 Geo. III. ch. 52; 7 Geo. III. ch. 41 and ch. 46; 8 Geo. III. ch. 22 which imposed duties for the purpose of raising a revenue in America, extended the power of the admiralty courts beyond their ancient limits, deprived the American subject of trial by jury, authorized the judges certificate to indemnify the prosecutor from damages, that he might otherwise be liable to requiring oppressive security from a claimant of ships and goods seized before he was allowed to defend his property.

1774

Also 12 Geo. III. ch. 24 entitled, “An act for the better securing his majesty’s dock yards, magazines, ships, ammunition and stores,” which declares a new offence in America, and deprives the American subject of a constitutional trial by jury of the vicinage, by authorizing the trial of any person charged with the committing any offence described in the said act out of the realm, to be indicted [138] and tried for the same in any shire or county within the realm.

1774

Also the three acts passed in the last session of parliament for stopping the port and blocking up the harbour of Boston, for altering the charter and government of Massachusetts Bay, and that which is entitled, “An act for the better administration of justice, &c.”

Also the act passed in the same session, for establishing the Roman Catholic religion in the province of Quebec, abolishing the equitable system of English laws, and erecting a tyranny there to the great danger (from so total a dissimilarity of religion, law and government) of the neighbouring British colonies, by the assistance of whose blood and treasure the said country had been conquered from France.

Also the act passed in the same session, for the better providing suitable quarters for officers and soldiers in his majesty’s service in North-America.

Also that the keeping a standing army in several of these colonies in time of peace, without the consent of the legislature of that colony in which such army was kept, was against law.

Congress declared, that they could not submit to these grievous acts and measures. In hopes that their fellow subjects in Great-Britain would restore the colonies to that state in which both countries found happiness and prosperity, they resolved for the present only to pursue the following peaceable measures: 1st, To enter into a non-importation, non-consumption and non-exportation agreement or association; 2d, To prepare an address to the people of Great-Britain, and a memorial to the inhabitants of British America; and 3dly, to prepare a loyal address to his majesty.

By the association they bound themselves and their constituents,

1774

from and after the 1st day of December next, not to import into British America, from Great-Britain or Ireland, any goods, wares or merchandize, whatsoever; not to purchase any slave, imported after the said first day of December; not to purchase or use any tea, imported on account of the East-India company, or [139] any on which a duty hath been or shall be paid; and from and after the first day of the next ensuing March, neither to purchase or use any East-India tea whatever. That they would not after the tenth day of the next September, if their grievances were not previously redressed, export any commodity whatsoever, to Great-Britain, Ireland or the West-Indies, except rice to Europe. That the merchants should, as soon as possible, write to their correspondents in Great-Britain and Ireland, not to ship any goods to them on any pretence whatever; and if any merchant there, should ship any goods for America, in order to contravene the non-importation agreement, they would not afterwards have any commercial connexion with such merchant; that such as were owners of vessels, should give positive orders to their captains and masters, not to receive on board their vessels, any goods prohibited by the said non-importation agreement; that they would use their endeavors to improve the breed of sheep and increase their numbers to the greatest extent; that they would encourage frugality, oeconomy and industry, and promote agriculture, arts and American manufactures; that they would discountenance and discourage every species of extravagance and dissipation, and that on the death of relations or friends, they would wear no other mourning than a small piece of black crape or ribbon; that such as were venders of goods, should not take any advantage of the scarcity so as to raise their prices; that if any person should import goods after the first day of December, and before the first day of February, then next ensuing, the same ought to be immediately reshipped or delivered up to a committee to be stored or sold: in the last case, all the clear profits to be applied towards the relief of the inhabitants of Boston; and that if any goods should be imported after the first day of February, then next ensuing, they should be sent back without breaking any of the packages; that committees be chosen in every county, city and town, to observe the conduct of all persons touching the association, and to publish in gazettes, the names of the violaters of it, as foes to the rights of British America; that the committees of correspondence [140] in the respective colonies frequently inspect the entries of their custom houses, and inform each other from time to time of the true state thereof; that all manufactures of America should be sold at reasonable prices; and no advantages be taken of a future scarcity of goods; and lastly, that they would have no dealings or

intercourse whatever, with any province or colony of North-America, which should not accede to, or should violate the aforesaid associations.

These several resolutions, they bound themselves and their constituents, by the sacred ties of virtue, honour and love of their country, to observe till their grievances were redressed.

In their address to the people of Great-Britain they complimented them for having at every hazard maintained their independence, and transmitted the rights of man and the blessings of liberty to their posterity, and requested them not to be surprised, that they who were descended from the same common ancestors, should refuse to surrender their rights, liberties and constitution. They proceeded to state their rights and their grievances, and to vindicate themselves from the charges of being seditious, impatient of government and desirous of independency. They summed up their wishes in the following words, "Place us in the same situation that we were, at the close of the last war, and our former harmony will be restored."

In the memorial of Congress to the inhabitants of the British colonies, they recapitulated the proceedings of Great-Britain against them, since the year 1763, in order to impress them with a belief, that a deliberate system was formed for abridging their liberties. They then proceeded to state the measures they had adopted to counteract this system, and gave the reasons which induced them to adopt the same. They encouraged them to submit to the inconveniences of non-importation and non-exportation by desiring them "to weigh in the opposite balance the endless miseries, they and their descendants must endure from an established arbitrary power." They concluded with informing them "that the schemes agitated 1774 against the colonies, had been so conducted as to render it prudent [141] to extend their views to mournful events, and to be in all respects prepared for every contingency."

In the petition of Congress to the king, they begged leave to lay their grievances before the throne. After a particular enumeration of these, they observed that they wholly arose from a destructive system of colony administration, adopted since the conclusion of the last war. They assured his majesty that they had made such provision for defraying the charges of the administration of justice, and the support of civil government, as had been judged just and suitable to their respective circumstances, and that for the defence, protection and security of the colonies, their militia would be fully sufficient in time of peace, and in case of war they were ready and willing, when constitutionally required, to exert their most strenuous efforts in granting supplies and raising forces. They said, "we ask but for peace, liberty and safety. We wish not a diminution of the prerogative, nor do we solicit the grant of any new right in our favour. Your royal authority over us, and our connexion with Great-Britain, we shall always carefully and zealously endeavour to support and maintain." They then solicited for a redress of their grievances, which they had enumerated, and appealing to that Being, who searches thoroughly the hearts of his creatures, they solemnly professed, "that their counsels had been influenced by no other motives, than a dread of impending destruction." They concluded with imploring his majesty, "for the honor of Almighty God, for his own glory, for the interests of his family, for

the safety of his kingdoms and dominions, that as the loving father of his whole people, connected by the same bonds of law, loyalty, faith and blood, though dwelling in various countries, he would not suffer the transcendent relation formed by these ties, to be farther violated by uncertain expectation of effects, that if attained never could compensate for the calamities through which they must be gained.”

The Congress also addressed the French inhabitants of Canada. In this they stated the right they had on becoming English subjects, to the benefits of the English [142] constitution.

They explained what these rights were, and pointed out the difference between the constitution imposed on them by act of parliament, and that to which as British subjects they were entitled. They introduced their countryman Montesquieu, as reprobating their parliamentary constitution, and exhorting them to join their fellow colonists in support of their common rights. They earnestly invited them to join with the other colonies in one social compact, formed on the generous principles of equal liberty, and to this end recommended, that they would chuse delegates to represent them in Congress.

1774

All these addresses were written with uncommon ability. Coming from the heart, they were calculated to move it. Inspired by a love of liberty, and roused by a sense of common danger, the patriots of that day spoke, wrote and acted, with an animation unknown in times of public tranquility; but it was not so much on the probable effect of these addresses, that Congress founded their hopes of obtaining a redress of their grievances, as on the consequences which they expected from the operation of their non-importation, and non-exportation agreement. The success that had followed the adoption of a measure similar to the former, in two preceding instances, had encouraged the colonists to expect much from a repetition of it. They indulged, in extravagant opinions of the importance of their trade to Great-Britain. The measure of a non-exportation of their commodities was a new expedient, and from that, even more was expected than from the non-importation agreement. They supposed that it would produce such extensive distress among the merchants and manufacturers of Great-Britain, and especially among the inhabitants of the British West-India islands, as would induce their general co-operation in procuring a redress of American grievances. Events proved that young nations, like young people, are prone to over rate their own importance.

Congress having finished all this important business, in less than eight weeks, dissolved themselves, after giving their opinion, “that another Congress should be held on the 10th of May next ensuing at Philadelphia, unless [143] the redress of their grievances should be previously obtained,”

October 26

and recommended “to all the colonies to chuse deputies as soon as possible, to be ready to attend at that time and place, should events make their meeting necessary.”

1774

On the publication of the proceedings of Congress, the people obtained that information which they desired. Zealous to do something for their country, they patiently waited for the decision of that body, to whose direction they had resigned

themselves. Their determinations were no sooner known, than they were cheerfully obeyed. Though their power was only advisory, yet their recommendations were more generally and more effectually carried into execution, than the laws of the best regulated states. Every individual felt his liberties endangered, and was impressed with an idea, that his safety consisted in union. A common interest in warding off a common danger, proved a powerful incentive to the most implicit submission; provincial congresses and subordinate, committees were every where instituted. The resolutions of the Continental Congress, were sanctioned with the universal approbation of these new representative bodies, and institutions were formed under their direction to carry them into effect.

The regular constitutional assemblies also gave their assent to the measures recommended. The assembly of New-York, was the only legislature which withheld its approbation. Their metropolis had long been head quarters of the British army in the colonies, and many of their best families were connected with people of influence in Great-Britain. The unequal distribution of their land, fostered an aristocratic spirit. From the operation of these and other causes, the party for royal government, was both more numerous and respectable in New-York, than in any of the other colonies.

The assembly of Pennsylvania, though composed of a majority of Quakers, or of those who were friendly to their interests, was the first legal body of representatives that ratified unanimously the acts of the general Congress.

They not only voted their approbation of what that [144] body had done, but appointed members to represent them in the new Congress, proposed to be held on the 10th day of May next ensuing, and took sundry steps to put the province in a posture of defence.

1774

To relieve the distresses of the people of Boston, liberal collections were made throughout the colonies, and forwarded for the supply of their immediate necessities. Domestic manufactures were encouraged, that the wants of the inhabitants from the non-importation agreement might be diminished, and the greatest zeal was discovered by a large majority of the people, to comply with the determinations of these new made representative bodies. In this manner, while the forms of the old government subsisted, a new and independent authority was virtually established. It was so universally the sense of the people, that the public good required a compliance with the recommendations of Congress, that any man who discovered an anxiety about the continuance of trade and business, was considered as a selfish individual, preferring private interest to the good of his country. Under the influence of these principles, the intemperate zeal of the populace, transported them frequently so far beyond the limits of moderation, as to apply singular punishments to particular persons, who contravened the general sense of the community.

The British ministry were not less disappointed than mortified at this unexpected combination of the colonies. They had flattered themselves with a belief, that the malcontents in Boston were a small party headed by a few factious men, and that the majority of the inhabitants would arrange themselves on the side of government, as soon as they found Great-Britain determined to support her authority, and should even Massachusetts take part with its offending capital, they could not believe that the

other colonies would make a common cause in supporting so intemperate a colony: but should even that expectation fail, they conceived that their association must be founded on principles so adverse to the interests and feelings of individuals, that it could not be of long duration.

They were encouraged in these ill founded opinions by [145] the 1774 recollection that the colonies were frequently quarrelling about boundaries, clashing in interest, differing in policy, manners, customs, forms of government and religion, and under the influence of a variety of local prejudices, jealousies and aversions. They also remembered the obstacles which prevented the colonies from acting together, in the execution of schemes, planned for their own defence, in the late war against the French and Indians. The failure of the expected co-operation of the colonies in one uniform system at that time, was not only urged by the British ministry, as a reason for parliamentary control over the whole, but flattered them with a delusive hope, that they never could be brought to combine their counsels and their arms. Perhaps the colonists apprehended more danger from British encroachments on their liberties, than from French encroachment on Indian territories, in their neighbourhood: or more probably the time to part being come, the Governor of the Universe, by a secret influence on their minds, disposed them to union. From whatever cause it proceeded, it is certain, that a disposition to do, to suffer, and to accommodate, spread from breast to breast, and from colony to colony, beyond the reach of human calculation. It seemed as though one mind inspired the whole. The merchants put far behind them the gains of trade, and cheerfully submitted to a total stoppage of business, in obedience to the recommendations of men, invested with no legislative powers. The cultivators of the soil, with great unanimity assented to the determination, that the hard earned produce of their farms, should remain unshipped, although in case of a free exportation, many would have been eager to have purchased it from them, at advanced prices. The sons and daughters of ease, renounced imported conveniences, and voluntarily engaged to eat, drink, and wear, only such articles as their country afforded. These sacrifices were made, not from the pressure of present distress, but on the generous principle of sympathy, with an invaded sister colony, and the prudent policy of guarding against a precedent which might, in a future day, operate against their liberties.

[146]

This season of universal distress, exhibited a striking proof, how 1774 practicable it is for mankind to sacrifice ease, pleasure, and interest, when the mind is strongly excited by its passions. In the midst of their sufferings, cheerfulness appeared in the face of all the people. They counted every thing cheap in comparison with liberty, and readily gave up whatever tended to endanger it. A noble strain of generosity and mutual support was generally excited. A great and powerful diffusion of public spirit took place. The animation of the times, raised the actors in these scenes above themselves, and excited them to deeds of self denial, which the interested prudence of calmer seasons can scarcely credit.

CHAPTER V

Transactions In Great-Britain, In Consequence Of The Proceedings Of Congress, In 1774.

Some time before the proceedings of Congress reached England, it was justly apprehended that a non-importation agreement would be one of the measures they would adopt. The ministry apprehending that this event, by distressing the trading and manufacturing towns, might influence votes against the court, in the election of a new parliament, which was of course to come on in the succeeding year, suddenly dissolved the parliament, and immediately ordered a new one to be chosen. It was their design to have the whole business of elections over, before the inconveniences of a non-importation agreement could be felt. The nation was thus surprised into an election without knowing that the late American acts, had driven the colonies into a firm combination, to support, and make a common cause, with the people of Massachusetts. A new parliament was returned, which met in thirty-four days after the proceedings of Congress were first published in Philadelphia, and before they were known in Great-Britain.

This, for the most part consisted, either of the former members, or of those who held similar sentiments.

1774

[147] On the 30th of November, the king in his speech to his new parliament informed them,

that a most daring spirit of resistance and disobedience to the laws, unhappily prevailed in the province of Massachusetts, and had broke forth in fresh violences of a very criminal nature, and that these proceedings had been countenanced and encouraged in his other colonies, and unwarrantable attempts had been made to obstruct the commerce of his kingdoms by unlawful combinations, and that he had taken such measures, and given such orders as he judged most proper and effectual, for carrying into execution the laws which were passed in the last session of the late parliament, relative to the province of Massachusetts.

An address which was proposed in the house of commons in answer to this speech, produced a warm debate. The minister was reminded of the great effects he had predicted from the late American acts. "They were to humble that whole continent, without further trouble, and the punishment of Boston, was to strike so universal a panic on all the colonies, that it would be totally abandoned, and instead of obtaining relief, a dread of the same fate would awe the other provinces to a most respectful submission." An address re-echoing the royal speech, was nevertheless carried by a great majority. A similar address was carried, after a spirited debate, in the upper house, but the lords Richmond, Portland, Rockingham, Stamford, Stanhope, Torrington, Ponsonby, Wycombe and Camden, entered a protest against it, which concluded with these remarkable words.

Whatever may be the mischievous designs, or the inconsiderate temerity which leads others to this desperate course, we wish to be known as persons who have disapproved of measures so injurious in their past effects, and future tendency, and who are not in haste, without enquiry or information, to commit ourselves in declarations, which may precipitate our country into all the calamities of a civil war.

Soon after the meeting of the new parliament, the proceedings of the Congress reached Great-Britain.

The first impression made by them, was in favour of [148] America. Administration seemed to be staggered, and their opposers triumphed, in the eventual truth of their prediction, that an universal confederacy to resist Great-Britain, would be the consequence of the late American acts. The secretary of state, after a days perusal, during which a council was held, said that the petition of Congress to the King, was a decent and proper one. He also cheerfully undertook to present it, and afterwards reported, that his majesty was pleased very graciously to receive it, and to promise to lay it before his two houses of parliament. From these favourable circumstances, the sanguine friends of America, concluded that it was intended to make the petition, the foundation of a change of measures, but these hopes were of short duration.

1774

The warmer partisans of administration, placed so much confidence in the efficacy of the measures, they had lately taken to bring the Americans to obedience, that they regarded the boldest resolutions of Congress, as the idle clamors of an unruly multitude, which proper exertions on the part of Great-Britain would speedily silence. So much had been asserted and contradicted by both parties, that the bulk of the people could form no certain opinion, on the subject.

The parliament adjourned for the christmas holidays, without coming to any decision on American affairs.

As soon as they met in January, a number of papers, containing information, were laid before them. These were mostly letters from governors, and other servants of his majesty, which detailed the opposition of the colonists, in language calculated to give a bad impression of their past conduct, and an alarming one of their future intentions.

1775

It was a circumstance unfavourable to the lovers of peace, that the rulers of Great-Britain received almost the whole of their American intelligence from those, who had an interest in deceiving them. Governors, judges, revenue-officers, and other royal servants, being both appointed and paid by Great-Britain, fancied that zeal for the interest of that country, would be the most likely way to ensure their farther promotion. They were therefore, [149] in their official dispatches, to government, often tempted to abuse the colonists, with a view of magnifying their own watchfulness and recommending themselves to Great-Britain. The plain, simple language of truth, was not acceptable to courtly ears. Ministers received and caressed those, and those only, whose representations coincided with their own views and wishes. They who contended that by the spirit of the English constitution British subjects, residing on one side of the Atlantic, were entitled to equal privileges with

those who resided on the other, were unnoticed, while the abettors of ministerial measures were heard with attention.

In this hour of national infatuation lord Chatham, after a long retirement, resumed his seat in the house of lords, and exerted his unrivalled eloquence, in sundry attempts to dissuade his countrymen from attempting to subdue the Americans by force of arms. The native dignity of his superior genius, and the recollection of his important services, entitled him to distinguished notice. His language, voice, and gesture, were calculated to force conviction on his hearers. Though venerable for his age, he spoke with the fire of youth. He introduced himself with some general observations on the importance of the American quarrel. He enlarged on the dangerous events that were coming on the nation, in consequence of the present dispute. He arraigned the conduct of ministers with great severity, and reprobated their whole system of American politics, and moved that an humble address, be presented to his majesty, most humbly to advise and beseech him to dispatch orders to general Gage, to remove his majesty's forces from the town of Boston. His lordship supported this motion in a pathetic animated speech, but it was rejected by a great majority. From this and other circumstances it soon became evident, that the Americans could expect no more favour from the new parliament, than they had experienced from the late one.

Jan. 20

A majority in both houses was against them, and resolved to compel them to obedience; but a respectable minority in their favour was strongly seconded by petitions from the merchants and manufacturers, [150] throughout the kingdom, and particularly by those of London and Bristol. As these were well apprised of the consequences that must follow from a prosecution of coercive measures, and deeply interested in the event, they made uncommon exertions to prevent their adoption. They circumstantially pointed out the various evils that would result from them, and faithfully warned their countrymen of the danger, to which their commercial interests were exposed.

1775

When the petition from the merchants of London was read in the house of commons, it was moved to refer it to the committee appointed to take into consideration the American papers; but it was moved by way of amendment on the ministerial side, that it should be referred to a separate committee, to meet on the 27th, the day succeeding that appointed for the consideration of American papers. This, though a dishonorable evasion, was carried by a majority of more than two to one.

A similar fate attended the petitions from Bristol, Glasgow, Norwich, Liverpool, Manchester, Birmingham, Woolverhampton, Dudley, and some other places. These on their being presented, were in like manner consigned to what the opposition humorously termed, the committee of oblivion.

About the same time a petition was offered from Mr. Bollan, Dr. Franklin, and Mr. Lee, stating that they were authorized by Congress to present their petition to the king, which his majesty had referred to that house, and that they were enabled to throw great light on the subject, and praying to be heard at the bar, in support of the said petition. The friends of the ministry alledged, that as Congress was not a legal body, nothing could be received from them. It was in vain replied, that the Congress,

however illegal as to other purposes, was sufficiently legal for presenting a petition, and that as it was signed by the individual members of Congress, it might be received as a petition from individuals. That the signers of it were persons of great influence in America, and it was the right of all subjects to have their petitions heard.

[151]

In the course of the debate on Lord Chatham's motion for addressing his majesty to withdraw his troops from Boston, it had been observed by some lords in administration, that it was common and easy to censure their measures, but those who did so, proposed nothing better.

1775

Lord Chatham answered, that he should not be one of those idle censurers, that he had thought long and closely upon the subject, and purposed soon to lay before their lordships the result of his meditations, in a plan for healing the differences between Great-Britain and the colonies, and for restoring peace to the empire. When he had matured his plan, he introduced it into the house, in the form of a bill for settling the troubles in America. In this he proposed that the colonists should make a full acknowledgement of the supremacy of the legislature, and the superintending power of the British parliament. The bill did not absolutely decide on the right of taxation, but partly as a matter of grace, and partly as a compromise, declared and enacted, "that no tollage tax, or other charge, should be levied in America, except by common consent in their provincial assemblies." It asserted the right of the king to send a legal army to any part of his dominions at all times, but declared, "that no military force could ever be lawfully employed to violate or destroy the just rights of the people." It also legalised the holding a Congress in the ensuing May for the double purpose "of recognising the supreme legislative authority, and superintending power of parliament over the colonies, and for making a free grant to the king, his heirs and successors, of a certain and perpetual revenue, subject to the disposition of parliament, and applicable to the alleviation of the national debt." On these conditions the bill proposed, "to restrain the powers of the admiralty courts to their ancient limits, and suspended for a limited time, those acts which had been complained of by Congress." It proposed to place the judges in America on the same footing, as to the holding of their salaries and offices, with those in England, and secured to the colonies all the privileges, franchises, and immunities, granted by their several charters and constitutions.

Feb. 1st

His lordship introduced this [152] plan with a speech, in which he explained and supported every part of it. When he sat down, lord Dartmouth rose and said, "it contained matter of such magnitude as to require consideration, and therefore hoped, that the noble Earl did not expect their lordships to decide upon it by an immediate vote, but would be willing it should lie on the table for consideration." Lord Chatham answered, "that he expected no more," but lord Sandwich rose, and in a petulant speech opposed its being received at all, and gave his opinion, "that it ought immediately to be rejected with the contempt it deserved. That he could not believe it to be the production of any British peer—that it appeared to him rather the work of some American," and turning his face towards Dr. Franklin, who was leaning on the bar, said, "he fancied he had in his eye the person who drew it up, one of the bitterest and most mischievous enemies this country had ever known." This turned the eyes of many lords on the insulted American, who, with that self command, which is peculiar to great minds, kept his countenance unmoved. Several

1775

other lords of the administration gave their sentiments also, for rejecting lord Chatham's conciliatory bill, urging that it not only gave a sanction to the traitorous proceedings of the Congress already held, but legalised their future meeting. They enlarged on the rebellious temper and hostile disposition of the Americans, and said, "that, though the duty on tea was the pretence, the restrictions on their commerce, and the hopes of throwing them off, were the real motives of their disobedience, and that to concede now, would be to give up the point forever."

The Dukes of Richmond and Manchester, lord Camden, lord Lyttleton and others, were for receiving lord Chatham's conciliatory bill—some from approbation of its principles, but others only from a regard to the character and dignity of the house.

Lord Dartmouth who, from indecision rarely had any will or judgment of his own, and who with dispositions for the best measures, could be easily prevailed upon to join in support of the worst, finding the opposition from [153] his coadjutors in administration unexpectedly strong, turned round and gave his voice with them for immediately rejecting the plan; lord Chatham, in reply to lord Sandwich, declared,

1775

the bill proposed by him to be entirely his own, but he made no scruple to declare, that if he were the first minister of the country, and had the care of settling this momentous business, he should not be ashamed of publicly calling to his assistance a person so perfectly acquainted with the whole of the American affairs as the gentleman alluded to, and so injuriously reflected upon [(J)Dr. Franklin). One whom all Europe held in high estimation for his knowledge and wisdom, and ranked with her Boyles and her Newtons—who was an honour, not only to the English nation, but to human nature.

The plan proposed by lord Chatham was rejected, by a majority of 64 to 32, and without being admitted to lie on the table. That a bill on so important a subject, offered by one of the first men of the age, and who, as prime minister of the nation, had but a few years before taken up Great-Britain when in the lowest despondency, and conducted her to victory and glory, through a war with two of the most powerful kingdoms of Europe, should be rejected without any consideration, or even a second reading, was not only a breach of decency, but a departure from that propriety of conduct which should mark the proceedings of a branch of the national legislature. It could not but strike every thinking American, that such legislators, influenced by passion, prejudice, and party spirit, many of whom were totally ignorant of the subject, and who would not give themselves an opportunity by a second reading, or farther consideration, to inform themselves better, were very unfit to exercise unlimited supremacy over three millions of virtuous, sensible people, inhabiting the other side of the globe.

On the day after the rejection of lord Chatham's bill, a petition was presented to the house of commons, from the planters of the sugar colonies residing in Great-Britain, and the merchants of London trading to the colonies.

In this they stated, that the British property in [154] the West-India islands amounted to upwards of 30 millions, and that a

1775

further property of many millions was employed in the commerce created by the said islands, and that the profits and produce of these immense capitals which ultimately centered in Great-Britain, would be deranged and endangered by the continuance of the American troubles. The petitioners were on the 16th of the next month admitted to a hearing, when Mr. Glover, as their agent, ably demonstrated the folly and danger of persevering in the contest, but without any effect. The immediate coercion of the colonies was resolved upon, and the ministry would not suffer themselves to be diverted from its execution. They were confident of success, if they could once bring the controversy to the decision of arms. They expected more from conquest than they could promise themselves by negotiation or compromise. The free constitutions of the colonies and their rapid progress in population, were beheld with a jealous eye, as the natural means of independence. They conceived the most effectual method of retaining them long, would be to reduce them soon. They hoped to be able to extinguish remonstrance and debate by such a speedy and decisive conquest, as would give them an opportunity to new model the colonial constitutions, on such principles as would have prevented future altercations on the subject of their chartered rights. Every representation that tended to retard or obstruct the coercion of the colonies, was therefore considered as tending only to prolong the controversy. Confident of victory, and believing that nothing short of it would restore the peace of the empire, the ministry turned a deaf ear to all petitions and representations. They even presumed that the petitioners, when they found Great-Britain determined on war, would assist in carrying it on with vigour, in order to expedite the settlement of the dispute. They took it for granted, that when the petitioning towns were convinced that a renewal of the commercial intercourse between the two countries would be sooner obtained by going on, than turning back, that the same interest which led them at first to petition, would lead them afterwards to support coercive [155] measures, as the most effectual and shortest way of securing commerce from all future interruptions.

1775

The determination of ministers to persevere was also forwarded by hopes of the defection of New-York from her sister colonies. They flattered themselves, that when one link of the continental chain gave way, it would be easy to make an impression on the disjointed extremities.

Every attempt to close the breach which had been opened by the former parliament, having failed, and the ministry having made up their minds on the mode of proceeding with the colonists, their proposed plan was briefly unfolded. This was to send a greater force to America, and to bring in a temporary act to put a stop to all the foreign trade of the New England colonies, till they should make proper submissions and acknowledgments. An address to his majesty was at the same time moved for, to “beseech him to take the most effectual measures, to enforce due obedience to the laws and authority of the supreme legislature.”

Truly critical was that moment to the union of the empire. A new parliament might, without the charge of inconsistency, have repealed acts, passed by a former one, which had been found inconvenient on experiment; but pride and passion, under the specious names of national dignity and zeal for the supremacy of parliament, induced the adoption of measures, for immediately compelling the submission of the colonies.

The repeal of a few acts of parliament would, at this time, have satisfied America. Though she had been extending her claims, yet she was still willing that Great-Britain should monopolize her trade, and that the parliament should regulate it for the common benefit of the empire; nor was she disposed to abridge his majesty of any of his usual prerogatives. This authority was sufficient for the Mother Country to retain the colonists in a profitable state of subordination, and yet not so much as to be inconsistent with their claims, or the security of their most important interests. Britain viewed the matter in a different light.

To recede at this time, would be to acknowledge, that the ministry had hitherto been in the [156] wrong, a concession rarely made by private persons, but more rarely still by men in public stations. The leading members in parliament, not distinguishing the opposition of freemen to unconstitutional innovations, from the turbulence of licentious mobs breaking over the bounds of law and constitution, supposed that to redress grievances, was to renounce sovereignty. This inference, in some degree, resulted from the broad basis which they had assigned to the claims of the Mother Country. If, as was contended, on the part of Great-Britain, they had a right to bind the colonies in all cases whatsoever, and the power of parliament over them was absolute and unlimited, they were precluded from rescinding any act of theirs, however oppressive, when demanded as a matter of right. They were too highly impressed with ideas of their unlimited authority to repeal any of their laws, on the principle, that they had not a constitutional power to enact them, and too unwise to adopt the same measure on the ground of political expediency. Unfortunately for both countries, two opinions were generally believed, neither of which was perhaps true in its utmost extent, and one of which was most assuredly false. The ministry and parliament of England proceeded on the idea, that the claims of the colonists amounted to absolute independence, and that a fixed resolution to renounce the sovereignty of Great-Britain was concealed, under the specious pretext of a redress of grievances. The Americans on the other hand, were equally confident that the Mother Country not only harboured designs unfriendly to their interests, but seriously intended to introduce arbitrary government. Jealousies of each other were reciprocally indulged to the destruction of all confidence, and to the final dismemberment of the empire.

1775

In discussing the measures proposed by the minister for the coercion of the colonies, the whole ground of the American controversy was traversed.

The comparative merits of concession and coercion were placed in every point of view. Some of the minority in both houses of parliament, pointed out the dangers that would attend a war with America—the likelihood of the interference of [157] other powers—the probability of losing, and the impossibility of gaining any thing more than was already possessed. On the other hand, the friends of the ministry asserted that the Americans had been long aiming at independence—that they were magnifying pretended grievances to cover a premeditated revolt—that it was the business and duty of Englishmen, at every hazard to prevent its completion, and to bring them back to a remembrance that their present greatness was owing to the Mother Country; and that even their existence had been purchased at an immense expence of British blood and treasure. They acknowledged the danger to be great, but said “it must be encountered; that every day’s delay increased the evil, and that it would be base and cowardly to shift off for the present

1775

an unavoidable contest, which must fall with accumulated weight on the heads of their posterity.” The danger of foreign interference was denied, and it was contended that an appearance of vigorous measures, with a farther reinforcement of troops at Boston, would be sufficient to quell the disturbances; and it was urged, that the friends of government were both strong and numerous, and only waited for proper support, and favourable circumstances, to declare themselves.

After long and warm debates, and one or two protests, the ministerial plans were carried by great majorities. In consequence thereof, on the 9th of February, 1775, a joint address, from both lords and commons, was presented to his majesty, in which

they returned thanks for the communication of the papers relative to the state of the British colonies in America, and gave it as their opinion, that a rebellion actually existed in the province of Massachusetts, and beseeched his majesty that he would take the most effectual measures to enforce due obedience to the laws and authority of the supreme legislature, and begged in the most solemn manner to assure his majesty that it was their fixed resolution, at the hazard of their lives and properties, to stand by his majesty against all rebellious attempts, in the maintenance of the just rights of his majesty, and the two houses of parliament.

[158]

The lords, Richmond, Craven, Archer, Abergaveny, Rockingham, Wycombe, Courtenay, Torrington, Ponsonby, Cholmondeley, Abingdon, Rutland, Camden, Effingham, Stanhope, Scarborough, Fitzwilliam and Tankerville, protested against this address,

1775

as founded on no proper parliamentary information, being introduced by refusing to suffer the presentation of petitions against it (though it be the undoubted right of the subject to present the same)—as following the rejection of every mode of conciliation—as holding out no substantial offer of redress of grievances, and as promising support to those ministers who had inflamed America, and grossly misconducted the affairs of Great-Britain.

By the address, against which this protest was entered, the parliament of Great-Britain passed the Rubicon. In former periods, it might be alledged that the claims of the colonies were undefined, and that their unanimous resolution to defend them was unknown; but after a free representation from twelve provinces had stated their rights, and pledged themselves to each other to support them, and their determinations were known, a resolution that a rebellion actually existed, and that at the hazard of their lives and properties, they would stand by his majesty against all rebellious attempts, was a virtual declaration of war. Both parties were now bound in consequence of their own acts, to submit their controversy to the decision of arms. Issue was joined by the approbation Congress had given to the Suffolk resolves, and by this subsequent joint address of both houses of parliament to his majesty. It is probable that neither party, in the beginning, intended to go thus far, but by the inscrutable operations of providence, each was permitted to adopt such measures as not only rent the empire, but involved them both, with their own consent, in all the calamities of a long and bloody war. The answer from the throne to the joint address of parliament, contained

assurances of taking the most speedy and effectual measures for enforcing due obedience to the laws, and authority of the supreme legislature. This answer was accompanied with a message to the commons, in [159] which they were informed that some augmentation to the forces by sea and land would be necessary. An augmentation of 4383 men to the land forces, and of 2000 seamen, to be employed for the ensuing year, was accordingly asked for, and carried without difficulty. By the first it was stated, that the force at Boston would be ten thousand men, a number supposed to be sufficient for enforcing the laws. Other schemes, in addition to a military force, were thought advisable for promoting the projected coercion of the colonies. With this view a punishment was proposed, so universal in its operation, that it was expected the inhabitants of the New-England colonies, to obtain a riddance of its heavy pressure, would interest themselves in procuring a general submission to parliament. Lord North moved for leave to bring in a bill to restrain the trade and commerce of the provinces of Massachusetts Bay, and New-Hampshire, the colonies of Connecticut and Rhode-Island, and Providence Plantations in North-America, to Great-Britain, Ireland, and the British islands in the West-Indies, and to prohibit such provinces and colonies from carrying on any fishery on the banks of Newfoundland, or other places therein to be mentioned, under certain conditions, and for a limited time. The motion for this bill was supported, by declaring that as the Americans had refused to trade with the Mother Country, they ought not to be permitted to trade with any other. It was known that the New-England colonies earned on a circuitous trade and fishing, on the banks of Newfoundland, to a great extent. To cut them off from this resource, they were legislatively forbidden to fish, or to carry on foreign trade. It was presumed that the wants of a large body of people, deprived of employment, would create a clamor in favour of reconciliation.

1775

Feb. 10

The British ministry expected to excite the same temper in the unemployed New-England men, that Congress meant to raise by the non-importation agreement, among the British merchants and manufacturers. The motion for this bill brought into view, the whole of the American controversy.

The opposers of it said, that its cruelty [160] exceeded the examples of hostile rigour with avowed enemies; for that in the most dangerous wars, the fishing craft was universally spared—they desired the proposer of the bill to recollect, that he had often spoken of the multitude of friends he had in those provinces, and that now he confounded the innocent with the guilty—friends with enemies, and involved his own partizans in one common ruin with his opposers. They alledged farther, that the bill would operate against the people of Great-Britain, as the people of New England were in debt to them, and had no other means of paying that debt, but through the fishery, and the circuitous trade dependent on it. It was observed, that the fishermen being cut off from employment must turn soldiers, and that therefore while they were provoking the Americans to resistance by one set of acts, they were furnishing them with the means of recruiting an army by another. The favourers of the bill denied the charge of severity, alledging that the colonists could not complain of any distress the bill might bring on them, as they not only deserved it, but had set the example, that they had entered into lawful combinations to ruin the merchants and manufacturers of Great-Britain. It was said,

1775

that if any foreign power had offered a similar insult or injury, the whole nation would have demanded satisfaction. They contended that it was a bill of humanity and mercy; for, said they, the colonists have incurred all the penalties of rebellion, and are liable to the severest military execution. Instead of inflicting the extent of what they deserved, the bill only proposes to bring them to their senses, by restricting their trade. They urged farther that the measure was necessary, for said they, “the Americans have frequently imposed on us, by threatening to withdraw their trade, hoping through mercantile influence to bend the legislature to their demands—that this was the third time they had thrown the commerce of Great-Britain into a state of confusion. That both colonies and commerce were better lost than preserved on such terms.[”] They added farther, that they must either relinquish their connexion with America, or fix it on such a basis as would prevent [161] a return of these evils. They admitted the bill to be coercive, but said, “That the coercion which put the speediest end to the dispute, was eventually the most merciful.”

1775

In the progress of the bill, a petition from the merchants and traders of London, who were interested in the American commerce, was presented against it. They were heard by their agent, Mr. David Barclay, and a variety of witnesses were examined before the house. In the course of their evidence it appeared that in the year 1764, the four provinces of New-England employed in their several fisheries no less than 45,880 ton of shipping, and 6002 men; and that the produce of their fisheries that year, in foreign markets, amounted to 322,220£. 16s. sterling. It also appeared that the fisheries had very much increased since that time—that all the materials used in them, except salt, and the timber of which the vessels were built, were purchased from Great-Britain; and that the net proceeds of the whole were remitted thither. All this information was disregarded.

After much opposition in both houses, and a protest in the house of lords, the bill was, by a great majority, finally ratified. So intent was the ministry and parliament on the coercion of the colonists, that every other interest was sacrificed to its accomplishment. They conceived the question between the two countries to be simply whether they should abandon their claims, and at once give up all the advantages arising from sovereignty and commerce, or resort to violent measures for their security.

March 30

Since the year 1769, when a secretary of state officially disclaimed all views of an American revenue, little mention had been made of that subject, but the decided majority which voted with the ministry on this occasion, emboldened lord North once more to present it to the view of his countrymen; he therefore brought into parliament a scheme which had the double recommendation of holding forth the semblance of conciliation, and the prospect of an easement of British taxes, by a productive revenue from the colonies. This was a resolution which passed on the 20th of February.

[162]

Resolved, That when the governor, council, and assembly, or general court, of any of his majesty’s provinces or colonies in America, shall propose to make provision according to the condition, circumstances, and situations of such province or colony, for contributing their proportion for the

1775

common defence, (such proportion to be raised under the authority of the general court or general assembly of such province or colony, and disposable by parliament) and shall engage to make provision also for the support of the civil government, and the administration of justice in such province or colony, it will be proper, if such proposal shall be approved by his majesty and the two houses of parliament, and for so long as such provision shall be made accordingly, to forbear, in respect of such province or colony, to levy any duty, tax, or assessment, except only such duties as it may be expedient to continue to levy or to impose for the regulation of commerce, the net produce of the duties last mentioned, to be carried to the account of such province or colony respectively.

This was introduced by the minister in a long speech, in which he asserted that it would be an infallible touch stone to try the Americans; “if” said he, “their opposition is only founded on the principles which they pretend, they must agree with this proposition, but if they have designs in contemplation different from those they avow, their refusal will convict them of duplicity.” The oppositions to the minister’s motion originated among those who had supported him in previous questions. They objected to the proposal that in effect it was an acknowledgment of something grievous in the idea of taxing America by parliament, and that it was therefore a departure from their own principles. They contended that it was improper to make concessions to rebels with arms in their hands, or to enter into any measures for a settlement with the Americans, in which they did not, as a preliminary, acknowledge the supremacy of parliament.

The minister was likely to be deserted by some of his partizans, till others explained the consistency of the scheme with their former declarations. [163] It was asked, “what shall parliament lose by acceding to this resolution? Not the right of taxing America, for this is most expressly reserved. Not the profitable exercise of this right, for it proposed to enforce the only essential part of taxation, by compelling the Americans to raise not only what they, but what we, think reasonable. We are not going to war for trifles and a vain point of honor, but for substantial revenue.” The minister farther declared, that he did not expect his proposition to be generally relished by the Americans. But said he, if it does no good in the colonies, it will do good here, it will unite the people of England, by holding out to them a distinct object of revenue. He added farther, as it tends to unite England, it is likely to disunite America, for if only one province accepts the offer, their confederacy, which only makes them formidable, will be broken.

1775

The opposers of ministry attacked the proposition with the combined force of wit and argument. They animadverted on the inconsistency of holding forth the same resolution as a measure of concession, and as an assertion of authority. They remarked that hitherto it had been constantly denied that they had any contest about an American revenue—that the whole had been a dispute about obedience to trade-laws, and the general legislative authority of parliament, but now ministers suddenly changed their language, and proposed to interest the nation—console the manufacturers and animate the soldiery, by persuading them that it is not a contest for empty honour, but for the acquisition of a substantial revenue. It was said that the Americans would be as effectually taxed, without their consent, by being compelled to pay a gross sum, as by an aggregate of small duties to the same amount. That this

scheme of taxation exceeded in oppression any that the rapacity of mankind had hitherto devised. In other cases a specific sum was demanded, and the people might reasonably presume that the remainder was their own; but here they were wholly in the dark as to the extent of the demand.

This proposition, however for conciliation, though illy [164] 1775 relished by many of the friends of ministry, was carried on a division of 274 to 88. On its transmission to the colonies, it did not produce the effects of disunion expected from it. It was unanimously rejected. The reason for this cannot be expressed better than in the act of Congress on that subject, which after a recital of the said conciliatory motion, proceeded in the following words,

The Congress took the said resolution into consideration, and are thereupon of opinion,

That the colonies of America are entitled to the sole and exclusive privilege of giving and granting their own money. That this involves a right of deliberating whether they will make any gift, for what purposes it shall be made, and what shall be its amount; and that it is a high breach of this privilege for any body of men, extraneous to their Constitutions, to prescribe the purposes for which money shall be levied on them, to take to themselves the authority of judging of their conditions, circumstances, and situations, and of determining the amount of the contribution to be levied.

That as the colonies possess a right of appropriating their gifts, so are they entitled at all times to enquire into their application, to see that they be not wasted among the venal and corrupt for the purpose of undermining the civil rights of the givers, nor yet be diverted to the support of standing armies, inconsistent with their freedom and subversive of their quiet. To propose therefore, as this resolution does, that the monies given by the colonies shall be subject to the disposal of parliament alone, is to propose that they shall relinquish this right of enquiry, and put it in the power of others to render their gifts ruinous, in proportion as they are liberal.

That this privilege of giving, or of withholding our monies, is an important barrier against the undue exertion of prerogative, which, if left altogether without controul, may be exercised to our great oppression; and all history shews how efficacious is its intercession for redress of grievances, and re-establishment of rights, and how improvident it would be to part with so powerful a mediator.

We are of opinion that the proposition contained in [165] this 1775 resolution is unreasonable and insidious: Unreasonable, because, if we declare we accede to it, we declare without reservation, we will purchase the favour of parliament, not knowing at the same time at what price they will please to estimate their favour; it is insidious, because, individual colonies, having bid and bidden again, till they find the avidity of the seller too great for all their powers to satisfy, are then to return into opposition, divided from their sister colonies whom the minister will have previously detached by a grant of easier terms, or by an artful procrastination of a definitive answer.

That the suspension of the exercise of their pretended power of taxation being expressly made commensurate with the continuance of our gifts, these must be perpetual to make that so. Whereas no experience has shewn that a gift of perpetual revenue secures a perpetual return of duty or of kind disposition. On the contrary, the parliament itself, wisely attentive to this observation, are in the established practice of granting their supplies from year to year only.

Desirous, and determined as we are to consider, in the most dispassionate view, every seeming advance towards a reconciliation made by the British parliament, let our brethren of Britain reflect what would have been the sacrifice to men of free spirits had even fair terms been proffered, as these insidious proposals were, with circumstances of insult and defiance. A proposition to give our money; accompanied with large fleets and armies, seems addressed to our fears rather than to our freedom. With what patience would Britons have received articles of treaty from any power on earth when born on the point of a bayonet by military Plenipotentiaries?

We think the attempt unnecessary to raise upon us by force or by threats our proportional contributions to the common defence, when all know, and themselves acknowledge, we have fully contributed, whenever called upon to do so in the character of freemen.

We are of opinion it is not just that the colonies should be required to oblige themselves to other contributions, while Great-Britain possesses a Monopoly of their trade. [166]

This of itself lays them under heavy contribution. To demand, therefore, additional aids in the form of a tax, is to demand the double of their equal proportion, if we are to contribute equally with the other parts of the empire, let us equally with them, enjoy free commerce with the whole world. But while the restrictions on our trade shut to us the resources of wealth, is it just we should bear all other burthens, equally with those to whom every resource is open?

1775

We conceive that the British parliament has no right to intermeddle with our provisions for the support of civil government, or administration of justice. The provisions we have made are such as please ourselves, and are agreeable to our own circumstances: They answer the substantial purposes of government and of justice, and other purposes than these should not be answered. We do not mean that our people shall be burthened with oppressive taxes, to provide sinecures for the idle or the wicked, under colour of providing for a civil list. While parliament pursue their plan of civil government within their own jurisdiction, we also hope to pursue ours without molestation.

We are of opinion the proposition is altogether unsatisfactory; because it imports only a suspension of the mode, not a renunciation of the pretended right to tax us: Because too it does not propose to repeal the several acts of parliament, passed for the purposes of restraining the trade, and altering the form of government of one of our colonies; extending the boundaries and changing the government of Quebec; enlarging the jurisdiction of the courts of admiralty and vice-admiralty; taking from us the rights of a trial by jury of the vicinage, in cases affecting both life and property;

transporting us into other countries to be tried for criminal offences; exempting by mock-trial the murderers of colonists from punishment; and quartering soldiers on us in times of profound peace. Nor do they renounce the power of suspending our own legislatures, and for legislating for us themselves, in all cases whatsoever. On the contrary, to shew they mean no discontinuance of injury, they pass acts, at the very [167] time of holding out this proposition, for restraining the commerce and fisheries of the provinces of New-England, and for interdicting the trade of other colonies with all foreign nations, and with each other. This proves unequivocally they mean not to relinquish the exercise of indiscriminate legislation over us.

Upon the whole, this proposition seems to have been held up to the world, to deceive it into a belief that there was nothing in dispute between us but the mode of levying taxes; and that the parliament having now been so good as to give up this, the colonies are unreasonable if not perfectly satisfied: whereas, in truth, our adversaries still claim a right of demanding *adlibitum*, and of taxing us themselves to the full amount of their demand, if we do comply with it. This leaves us without any thing we can call property. But, what is of more importance, and what in this proposal they keep out of sight, as if no such point was now in contest between us, they claim a right to alter our charters and establish laws, and leave us without any security for our lives or liberties. The proposition seems also to have been calculated more particularly to lull into fatal security, our well affected fellow subjects on the other side of the water, till time should be given for the operation of those arms, which a British minister pronounced would instantaneously reduce the “cowardly” sons of America to unreserved submission. But when the world reflects, how inadequate to justice are these vaunted terms; when it attends to the rapid and bold succession of injuries, which, during a course of eleven years, have been aimed at these colonies; when it reviews the pacific and respectful expostulations, which, during that whole time, were the sole arms we opposed to them; when it observes that our complaints were either not heard at all, or were answered with new and accumulated injuries; when it recollects that the minister himself on an early occasion declared, “that he would never treat with America, till he had brought her to his feet,” and that an avowed partisan of ministry has more lately denounced against us the dreadful sentence “*delenda est Carthago*,” that this was done [168] in presence of a British senate, and being unreprieved by them, must be taken to be their own sentiment, (especially as the 1775 purpose has already in part been carried into execution, by their treatment of Boston and burning of Charlestown); when it considers the great Armaments with which they have invaded us, and the circumstances of cruelty with which these have commenced and prosecuted hostilities; when these things, we say, are laid together and attentively considered, can the world be deceived into an opinion that we are unreasonable, or can it hesitate to believe with us, that nothing but our own exertions may defeat the ministerial sentence of death or abject submission.

Other plans for conciliation with the colonies, founded on principles very different from those which were the basis of lord North’s conciliatory motion, were brought forward in the house of commons, but without receiving its approbation.

The most remarkable of these was proposed by Mr. Edmund Burke, in a speech which for strength of argument, extent of information, and sublimity of language, would bear a comparison with the most March 22

finished performance that ancient or modern times have produced. In his introduction to this admirable speech, he examined and explained the natural and accidental circumstances of the colonies, with respect to situation, resources, number, population, commerce, fisheries and agriculture, and from those considerations shewed their importance. He then enquired into their unconquerable spirit of freedom; and he traced it to its original sources; from these circumstances he inferred the line of policy which should be pursued with regard to America—he shewed that all proper plans of government must be adapted to the feelings, established habits, and received opinions of the people. On these principles he reprobated all plans of governing the colonies by force; and proposed as the ground work of his plan, that the colonists should be admitted to an interest in the constitution.

He then went into an historical detail of the manner in which British privileges had been extended to Ireland, Wales, and the counties palatine of Chester and Durham—the [169] state of confusion previously to that event—and the happy consequences which followed it. He contended that a communication to the members of an interest in the constitution, was the great ruling principle of British government. He therefore proposed to go back to the old policy for governing the colonies. He was for a parliamentary acknowledgment of the legal competency of the colony assemblies for the support of their government in peace, and for public aids in time of war—and of the futility of parliamentary taxation as a method of supply. He stated that much had been given in the old way of colonial grant, that from the year 1748 to 1763, the journals of the house of commons repeatedly acknowledged that the colonies not only gave, but gave to satiety; and that from the time in which parliamentary imposition had superseded the free gifts of the provinces, there was much discontent, but little revenue. He therefore moved six resolutions affirmatory of these facts, and grounded on them resolutions for repealing the acts complained of by the Americans, trusting to the liberality of their future voluntary contributions. This plan of conciliation, which promised immediate peace to the whole empire, and a lasting obedience of the colonies, though recommended by the charms of the most persuasive eloquence, and supported by the most convincing arguments, was by a great majority rejected.

1775

Mr. D. Hartley, not discouraged by the negative which had been given to Mr. Burke's scheme, came forward with another for the same purpose. This proposed that a letter of requisition should be sent to the colonies by a secretary of state, on a motion from the house for a contribution to the expences of the whole empire. He meant to leave to the provincial assemblies the right to judge of the expedience of the grant—its amount and application. In confidence that the colonies would give freely when called on in this constitutional way, he moved to suspend the acts complained of by the Americans. This was also rejected. Another plan which shall be more particularly explained was digested in private by Dr. Franklin, on the part of the Americans, and Dr. Fothergill and David [170] Barclay on behalf of the British ministry.

March 27

There appeared a disposition to concede some thing considerable on both sides, but the whole came to nothing, in consequence of an inflexible determination to refuse a repeal of the act of parliament for altering the chartered government of Massachusetts; Dr. Franklin agreed, that the tea destroyed should be paid for—the British ministers, that the Boston port act should be repealed,

1775

but the latter contended, “that the late Massachusetts acts being real amendments of their constitution, must for that reason be continued as well as to be a standing example of the power of parliament.” On the other hand it was declared by Dr. Franklin, “that while the parliament claimed and exercised a power of internal legislation for the colonies, and of altering American constitutions at pleasure, there could be no agreement, as that would render the Americans unsafe in every privilege they enjoyed, and would leave them nothing in which they could be secure.”

This obstinate adherence to support parliament in a power of altering the laws and charters of the provinces, particularly to enforce their late laws for new modelling the chartered constitution of Massachusetts, was the fatal rock by dashing on which the empire broke in twain; for every other point, in dispute between the two countries, seemed in a fair way for an amicable compromise.

The fishery bill was speedily followed by another, for restraining the trade and commerce of the colonies and provinces of New-Jersey, Pennsylvania, Maryland, Virginia and South-Carolina: The reasons assigned for this were the same with those offered for the other. These provinces had adopted the continental association. The British minister thought it proper, that as they had voluntarily interdicted themselves from trade with Great-Britain, Ireland, and the West-Indies, they should be restrained from it with all other parts of the world. He contended that the inhabitants of the colonies might render this act a dead letter, by relinquishing their own resolutions, as then they would meet with no restraint in carrying on trade in its ancient legal channel.

It is remarkable, that three of the associated colonies, viz. New-York, [171] Delaware and North-Carolina, were omitted in this restraining bill. Whatever might be the view of the British ministry for this discrimination, it was considered in the colonies as calculated to promote disunion among them. It is certain, that the colonies which were exempted from its operation, might have reaped a golden harvest from the exemption in their favour, had they been disposed to avail themselves of it. But such was the temper of the times, that a renunciation of immediate advantage in favour of the public was fashionable. The selfish passions which in seasons of peace are too often the cause of quarrels, were hushed by the pressure of common danger. The exempted colonies spurned the proffered favour, and submitted to the restraints imposed on their less favoured neighbours, so as to be equal sharers of their fate. The indulgence granted to New-York, in being kept out of this restraining bill, was considered by some as a premium for her superior loyalty. Her assembly had refused to approve the proceedings of the Congress, and had, in some other instances, discovered less warmth than the neighbouring legislatures. Much was expected from her moderation. At the very time the British parliament was framing the restraining acts just mentioned, the constitutional assembly of New-York petitioned the British parliament for a redress of their grievances. Great stress had been laid on the circumstance that Congress was not a legal assembly, and the want of constitutional sanction had been assigned as a reason for the neglect with which their petition had been treated. Much praise had been lavished on the colony of New-York for its moderation, and occasion had been taken, from their refusing to approve the proceedings of the Congress to represent the

1775

resolutions and claims of that body to be more the ebullitions of incendiaries, than the sober sentiments of the temperate citizens.

It was both unexpected and confounding to those who supported these opinions, that the representation and remonstrance of the very loyal assembly of New-York stated, “that an exemption from internal taxation, and the exclusive right of providing for their own civil government, and the administration of justice in [172] the colony, were esteemed by them as their undoubted and unalienable rights.”

1775

A motion being made in the house of commons for bringing up this representation and remonstrance of the assembly of New-York, it was amended on the suggestion of lord North, by adding, “in which the assembly claim to themselves rights derogatory to, and inconsistent with the legislative authority of parliament, as declared by the declaratory act.” The question, so amended, being put, it passed in the negative. The fate of this representation extinguished the hopes of those moderate persons, both in the parent state and the colonies, who flattered themselves that the disputes subsisting between the two countries might be accommodated by the mediation of the constitutional assemblies. Two conclusions were drawn from this transaction, both of which were unfriendly to a reconciliation. The decided language with which the loyal assembly of New-York claimed exemption from parliamentary taxation, proved to the people of Great-Britain that the colonists, however they might differ in modes of opposition, or in degrees of warmth, were nevertheless, united in that fundamental principle. The rejection of their representation proved that nothing more was to be expected from proceeding in the constitutional channel of the legal assemblies, than from the new system of a continental Congress. Solid revenue and unlimited supremacy were the objects of Great-Britain, and exemption from parliamentary taxation that of the most moderate of the colonies. So wide were the claims of the two countries from each other, that to reconcile them on any middle ground seemed to be impossible.

APPENDIX NO. I

Some Special Transactions Of Dr. Franklin In London, In Behalf Of America.

[173]

While the breach between Great-Britain and the colonies, was daily increasing, the enlightened and liberal, who loved peace, and the extension of human happiness, saw with regret the approaching horrors of a civil war, and wished to avert them. With these views Dr. Fothergill, Mr. David Barclay and Dr. Franklin, held sundry conferences in London on American affairs. The two former were English gentlemen of most amiable characters, and highly esteemed by the British ministry. The last was by birth an American, but a citizen of the world, who loved and was beloved by all good men. He was also agent for several of the colonies. At one of their conferences held at the house of Dr. Fothergill on the 4th December, 1774, before the proceedings of Congress had reached England—a paper drawn up by the last, at the request of the two first, was submitted to their joint consideration, which with a few additions proposed and agreed to by common consent was as follows.

1775

Hints for conversation upon the subjects of terms, that might probably produce a durable union between Britain and the colonies.

- 1st. The tea destroyed to be paid for.
- 2d. The tea duty act to be repealed, and all the duties that have been received upon it to be repaid into the treasuries of the several provinces from which they have been collected.
- 3d. The acts of navigation to be all re-enacted in the colonies.
- 4th. A naval officer to be appointed by the crown to see that these acts are observed.
- 5th. All the acts restraining manufactories in the colonies to be reconsidered.
- 6th. All duties arising on the acts for regulating trade with the colonies to be for the public use of the respective colonies and paid into their treasuries.

[174]

The collectors and custom house officers to be appointed by each governor and not sent from England.

1775

7th. In consideration of the Americans maintaining their own peace establishment, and the monopoly Britain is to have of their commerce, no requisition is to be made from them in time of peace.

8th. No troops to enter and quarter in any colony, but with the consent of its legislature.

9th. In time of war on requisition by the king with consent of parliament, every colony shall raise money by the following rules in proportion, viz. If Britain on account of the war, raises three shillings in the pound to its land tax, then the colonies to add to their last general provincial peace tax, a sum equal to one fourth part thereof, and if Britain on the same account pays four shillings in the pound, then the colonies to add to their last peace tax, a sum equal to the half thereof, which additional tax is to be granted to his majesty, and to be employed in raising and paying men for land or sea service, and furnishing provisions, transports, or for such other purposes as the king shall require and direct, and though no colony may contribute less, each may add as much by voluntary grant as it shall think proper.

10th. Castle William to be restored to the province of Massachusetts Bay, and no fortress to be built by the crown in any province, but with the consent of its legislature.

11th. The late Massachusetts and Quebec acts to be repealed, and a free government granted to Canada.

12th. All judges to be appointed during good behavior, with equally permanent salaries to be paid out of the province revenues by appointment of the assemblies, or if the judges are to be appointed during the pleasure of the crown, let the salaries be during the pleasure of the assemblies as heretofore.

13th. Governors to be supported by the assemblies of each province.

14th. If Britain will give up her monopoly of the American commerce, then the aid above mentioned to be given in time of peace, as well as in time of war.

[175]

15th. The extension of the act of Henry the 8th, concerning treasons to the colonies to be formally disowned by parliament.

1775

16th. The American admiralty courts to be reduced to the same powers they have in England, and the acts establishing them to be re-enacted in America.

17th. All power of internal legislation in the colonies to be disclaimed by parliament.

On reading this paper a second time, Dr. Franklin gave his reasons at length for each article. Some of his reasons were as follows.

On the first article he observed, that when the tea was destroyed at Boston, Great-Britain had a right to reparation, and would certainly have had it on demand, as was the case when injuries were done by mobs in the time of the stamp act, or she might have a right to return an equal injury if she rather chose to do that; but Great-Britain could not have a right both to reparation and to return an equal injury, much less had she a right to return the injury ten or twenty fold, as she had done by blocking up the

port of Boston. All which extra injury ought to be repaired by Great-Britain. That therefore if paying for the tea was agreed to, as an article fit to be proposed, it was merely from a desire of peace, and in compliance with the opinions of Dr. Fothergill and David Barclay, expressed at their first meeting; that this was indispensable, that the dignity of Great-Britain required it, and that if this was agreed to, every thing else would be easy.

On the second, it was observed that the tea duty act should be repealed as having never answered any good purpose, as having been the cause of the present mischief, and never likely to be executed. That the act being considered as unconstitutional by the Americans, and what parliament had no right to enact they must consider all the money extorted by it as so much wrongfully taken, and of which therefore restitution ought to be made, and the rather as it would furnish a fund out of which the tea destroyed would be best defrayed.

On the third and fourth articles it was observed, that the Americans were frequently charged with views of abolishing [176] the navigation act, but that in truth those parts of it, which were of most importance to Britain, as tending to increase its naval strength, were as acceptable to the colonists as they could be to the inhabitants of the Parent State, since they wished to employ their own ships in preference to those of foreigners, and they had no desire to see foreign ships enter their ports. That it would prevent disputes if they were re-enacted in the colonies, as that would demonstrate their consent to them, and then if all the duties arising on them were to be collected by officers appointed and paid in the respective governments, and the produce paid into their treasuries, the acts would be better and more faithfully executed, and at much less expence, and a great source of misunderstanding between the two countries removed—that the extension of the admiralty jurisdiction so much complained of would then no longer be necessary.

1775

In support of the 7th article it was observed, that if every distinct part of the king's dominions supported its own government in time of peace, it was all that could justly be required of it. That all the other confederated colonies had done so from their beginning, that their taxes for that purpose were very considerable, that new countries had many expences which old ones were free from, the work being done to their land by their ancestors, such as making roads and bridges, erecting churches, courthouses, forts, quays and other public buildings, founding schools and places of education, hospitals and almshouses—that the voluntary subscriptions and legal taxes for such purposes taken together amounted to more than was paid by equal estates in Great-Britain; that it would be best not to take money from the Americans as a contribution to its public expence in time of peace, first for that just so much less would be got from them in commerce, and secondly, that coming into the hands of British ministers accustomed to prodigality of public money, it would be squandered and dissipated without answering any general good purposes.

That on the whole it would be best for both countries, that no aids should be asked from the colonies in time of peace, [177] that it would then be their interest to grant bountifully, and exert themselves, in time of war, the sooner to put an end to it.

1775

In support of the 8th article, it was said, that if the king could bring into any one part of his dominions troops raised in any other part of them, without the consent of the legislature of the part to which they were brought, he might bring armies raised in America to England without the consent of parliament.

The 9th article was drawn in compliance with an idea of Dr. Fothergill, that the British government would probably not be satisfied with the promise of voluntary grants in time of war from the American assemblies, of which the quantity must be uncertain, that therefore it would be best to proportion them in some way to the shilling in the pound raised in England.

In support of the 10th article, was urged the injustice of seizing that fortress which had been built at an immense charge by the province, for the defence of their port against national enemies, and turning it into a citadel for awing the town, restraining their trade, blocking up their port, and depriving them of their privileges. That a great deal had been said of their injustice in destroying the tea, but here was a much greater injustice uncompensated, that castle having cost the province £300,000.

In support of the 11th article, it was said, that as the Americans had assisted in the conquest of Canada, at a great expence of blood and treasure, they had some right to be considered in the settlement of it; that the establishing an arbitrary government on the bank of their settlements would be dangerous to them all. That as to amending the Massachusetts government, though it might be shewn that every one of these pretended amendments were real mischiefs, yet, that as charters were compacts between two parties, the king and the people, no alteration could be made in them even for the better, but by the consent of both parties; that the parliamentary claim and exercise of power to alter American charters, had rendered all their constitutions uncertain and set them [178] quite afloat.

That by this claim of altering laws and charters at will they deprived the colonists of all rights and privileges whatever, but what they should hold at their pleasure. That this was a situation they could not be in and must risque life and every thing rather than submit to it.

1775

The 12th article was explained by stating the former situation of the judges in most of the colonies, viz. that they were appointed by the crown and paid by the assemblies, that the appointment being during the pleasure of the crown, the salary had been during the pleasure of the assembly; that when it was urged against the assemblies that their making judges dependent on them for their salaries, was aiming at an undue influence over the courts of justice, the assemblies usually replied, that making them dependent on the crown for continuance in their places was also retaining an undue influence over those courts, and that one undue influence was a proper balance for another; but that whenever the crown would consent to the appointment of judges only during good behaviour, the assemblies would at the same time grant their salaries to be permanent during their continuance in office; that instead of agreeing to this equitable offer the crown now claimed to make the judges in the colonies dependant on its favour for place, as well as salary, and both to be continued at its pleasure. This the colonies must oppose as inequitable, as putting both the weights into one of the scales of justice.

In favour of the 123th it was urged that the governors sent to the colonies were often men of no estate or principle, who came merely to make fortunes, and had no natural regard for the country they were to govern. That to make them quite independent of the people, was to make them careless of their conduct, and giving a loose to their rapacious and oppressive dispositions. That the dependence of the governors on the people for their salaries could never operate to the prejudice of the king's service, or to the disadvantage of Britain, since each governor was bound by a particular set of instructions which he had given surety to observe, and all the laws he assented [179] to were subject to be repealed by the crown.

That the payment of the salaries by the people was more satisfactory to them, and was productive of a good understanding between governors and governed, and that therefore the innovations lately made at Boston and New-York, should be laid aside.

1775

The 14th article was expunged on the representation of Dr. Fothergill and David Barclay, that the monopoly of the American commerce would never be given up, and that the proposing of it would only give offence, without answering any good purpose.

The 15th article was readily agreed to.

The 16th was thought to be of little consequence, if the duties were given to the colony treasuries.

The 17th it was thought could hardly be obtained, but it was supported by Dr. Franklin, alleging that without it, any compact made with the Americans, might be evaded by acts of the British parliament, restraining the intermediate proceedings, which were necessary for carrying it into effect.

This paper of hints was communicated to lord Dartmouth by Dr. Fothergill, who also stated the arguments which in conversation had been offered in support of them. When objections were made to them, as being humiliating to Great-Britain Dr. Fothergill replied "that she had been unjust, and ought to bear the consequences, and alter her conduct—that the pill might be bitter, but it would be salutary and must be swallowed; that sooner or later these or similar measures must be followed, or the empire would be divided and ruined."

These hints were handed about amongst ministers, and conferences were held on them. The result was on the 4th of February 1775 communicated to Dr. Franklin, in the presence of Dr. Fothergill and David Barclay, which as far as concerned the leading articles, was as follows:

1. The first article was approved.
2. The second agreed to so far as related to the tea act, but repayment of the duties that had been collected, was refused.
3. The third not approved, as it implied a deficiency of power in the parliament that made the acts. [180]

4. The fourth approved.
5. The fifth agreed to, but with a reserve that no change prejudicial to Britain was to be expected.
6. The sixth agreed to, so far as related to the appropriation of the duties, but the appointment of the officers and of their salaries to remain as at present.
7. The seventh relating to aids in time of war, agreed to.
8. The eighth relating to troops, was inadmissible.
9. The ninth could be agreed to with this difference, that no proportion should be observed with regard to preceding taxes, but each colony should give at pleasure.
10. The tenth agreed to as to the restitution of Castle William, but the restriction on the crown in building fortresses refused.
11. The eleventh refused absolutely, except as to the Boston port bill which would be repealed, and the Quebec act might be so far amended, as to reduce that province to its ancient limits. The other massachusetts acts being real amendments of their constitution, must for that reason be continued, as well as to be a standing example of the power of parliament.
12. The twelfth agreed to, that the judges should be appointed during good behaviour, on the assemblies providing permanent salaries, such as the Crown should approve of.
13. The thirteenth agreed to, provided the assemblies make provision, as in the preceding article.
15. The fifteenth agreed to.
16. The sixteenth agreed to, supposing the duties paid to the colony treasuries.
17. The seventeenth inadmissible.

At this interview the conversation was shortened by Dr. Franklin's observing, that while the parliament claimed and exercised a power of internal legislation for the colonies, and of altering American constitutions, at pleasure, there could be no agreement, as that would render the Americans unsafe in every privilege they enjoyed, [181] and would leave them nothing, in which they could be secure. It being hinted how necessary an agreement was for America, 1775 since it was so easy for Britain to burn all her seaport towns, Dr. Franklin replied,

that the chief part of his little property consisted of houses in such towns, that they might make bonfires of them whenever they pleased. That the fear of losing them would never alter his resolution of resisting to the last extremity, that claim of parliament, and that it behoved Great-Britain to take care what mischief she did to

America, for that sooner or later she would certainly be obliged to make good all damages with interest.

On the 16th of February, 1775, the three before mentioned gentlemen met, when a paper was produced by David Barclay entitled, “A plan which it is believed would produce a permanent union between Great-Britain and her colonies.[”] This, in the first article, proposed a repeal of the tea act, on payment being made for the tea destroyed. Dr. Franklin agreed to the first part, but contended that all the other Massachusetts acts should also be repealed, but this was deemed inadmissible. Dr. Franklin declared that the people of Massachusetts would suffer all the hazards and mischiefs of war, rather than admit the alteration of their charters and laws, by parliament. He was for securing the unity of the empire, by recognising the sanctity of charters, and by leaving the provinces to govern themselves, in their internal concerns, but the British ministry could not brook the idea of relinquishing their claim to internal legislation for the colonies, and especially to alter and amend their charters. The first was for communicating the vital principles of liberty to the provinces, but the latter though disposed to redress a few of their existing grievances, would by no means consent to a repeal of the late act of parliament, for altering the chartered government of Massachusetts, and least of all to renounce all claim to future amendments of charters, or of internal legislation for the colonies.

Dr. Franklin laboured hard to prevent the breach from becoming irreparable, and candidly stated the outlines [182] of a compact which he supposed would procure a durable union of the two countries, but his well meant endeavors proved abortive, and in the mean time he was abused as the fomentor of those disturbances which he was anxiously endeavouring to prevent. That the ministry might have some opening to proceed upon, and some salvo for their personal honor, he was disposed to engage, that pecuniary compensation should be made for the tea destroyed, but he would not give up essential liberty, for the purpose of procuring temporary safety. Finding the ministry bent on war, unless the colonists would consent to hold their rights, liberties and charters at the discretion of a British parliament, and well knowing that his countrymen would hazard every thing, rather than consent to terms so degrading as well as inconsistent with the spirit of the British constitution, he quitted Great-Britain in March 1775, and returned to Philadelphia. Dr. Fothergill, his worthy coadjutor in the great business of peace, wrote to him on the evening before he left London. “That whatever specious pretences were offered, they were all hollow, and that to get a larger field on which to fatten a herd of worthless parasites, was all that was intended.” With this conviction founded on personal observations, as well as the testimony of his esteemed friend, who in the course of his daily visits among the great, in the practice of his profession, had an opportunity of knowing their undisguised sentiments, Dr. Franklin joined his countrymen, and exerted his great abilities in conducting them through a war he had in vain laboured to prevent.

1775

CHAPTER VI

Consequences In America, Resulting From The Preceding Transactions Of Parliament; And Of The Commencement Of Hostilities.

The year 1774 terminated in america, with an expectation that a few months would bring them a redress of their grievances; but the probability of that event [183] daily diminished.

The colonists had indulged themselves in an expectation that the people of Great-Britain, from a consideration of the dangers and difficulties of a war with their colonies, would in their election have preferred those who were friends to peace and a reconciliation; but when they were convinced of the fallacy of these hopes, they turned their attention to the means of self defence. It had been the resolution of many never to submit to the operation of the late acts of parliament. Their number daily increased, and in the same proportion that Great-Britain determined to enforce, did they determine to oppose. Intelligence of the rejection of lord Chatham's bill, of the address of both houses of parliament to the king of the 9th of February, and of the fishery bill, all arrived among the colonists, about the same time, and diminished what remained of their first hopes of a speedy accommodation. The fishery bill excited a variety of emotions. The obvious tendency of it was to starve thousands. The severity of it did not strike an Englishman, for he viewed it as a merited correction for great provincial offences; but it appeared in the blackest colours to an American, who felt no consciousness of guilt, and who fancied that heaven approved his zeal in defence of liberty. It alienated the affections of the colonists, and produced in the breasts of thousands, a hatred of Great-Britain.

The penal acts of parliament in 1774, were all levelled against Massachusetts, but the fishery bill extended to New-Hampshire, Connecticut and Rhode-Island. The reasons assigned for this by lord North were, that they had aided and abetted their offending neighbours, and were so near to them that the intentions of parliament would be frustrated, unless they were in like manner comprehended in the proposed restraints. The extension of this penal statute to three additional provinces, operated powerfully in favour of union, and convinced the most moderate, of the increasing necessity for all the provinces to make a common cause of their opposition. Whatever might be the designs of parliament, their acts had a natural tendency to enlarge the demands of the Americans, [184] and to cement their confederacy, by firm principles of union.

At first they only claimed exemption from internal taxation, but by the combination of the East-India company and the British ministry, an external tax was made to answer all the purposes of a direct internal tax. They therefore in consistence with their own principles, were constrained to deny the right of taxing in any form for a supply. Nothing could more contribute to make the colonists deny the parliamentary claim of internal legislation, than the manner in which it was exercised, in depriving them of their charters, and passing an act relative

to trials, which promised indemnity to murderers. This convinced them that an opposition to so injurious a claim was essentially necessary to their security. But they still admitted the power of parliament to bind their trade. This was conceded by Congress but a few months before an act passed that they should have no foreign trade, nor be allowed to fish on their own coasts. The British ministry by their successive acts, impelled the colonists to believe, that while the Mother Country retained any authority over them, that authority would, in some shape or other, be exerted so as to answer all the purposes of a power to tax. While Great-Britain stretched that portion of controlling supremacy which the colonists were disposed to allow her, to such an extent as covered oppression equally grievous with that which they would not allow, the way was fast opening for a total renunciation of her sovereignty. The coercive measures adopted by the Parent State, produced a disposition in the colonies to extend their claims, and the extension of their claims produced an increasing disposition in Great-Britain to coerce them still more. The jealousy of liberty on one side, and the desire of supremacy on the other, were reciprocally cause and effect; and urged both parties, the one to rise in their demands, and the other to enforce submission. In the contest between Great-Britain and her colonies, there had been a fatal progression from small to greater grounds of dissention. The trifling tax of 3d per pound on tea, roused the jealous inhabitants of Boston to throw 340 chests of it into the ocean. [185]

This provoked the British parliament to shut up their port, and to 1775 new model their charter. Statutes so unconstitutional and alarming, excited a combination in twelve of the colonies, to stop all trade with Great-Britain, Ireland, and the West-Indies. Their combination gave birth to the restraining acts of parliament, by which nine of the colonies were interdicted all other trade but that from which they had voluntarily excluded themselves; and four of these nine were farther devoted to famine, by being forbidden to fish on their coasts. Each new resolution on the one side, and new act on the other, reciprocally gave birth to something from the opposite party, that was more irritating or oppressive, than what had preceded.

The beginning of strife between the Parent State and her colonies, was like the letting out of waters. From inconsiderable causes love was changed into suspicion that gradually ripened into ill will, and soon ended in hostility. Prudence, policy, and reciprocal interest, urged the expediency of concession; but pride, false honour, and misconceived dignity, drew in an opposite direction. Undecided claims and doubtful rights, which under the influence of wisdom and humility might have been easily compromised, imperceptibly widened into an irreconcilable breach. Hatred at length took the place of kind affections, and the calamities of war were substituted, in lieu of the benefits of commerce.

From the year 1768, in which a military force had been stationed in Boston, there was a constant succession of insulting words, looks, and gestures. The inhabitants were exasperated against the soldiers, and they against the inhabitants. The former looked on the latter as the instruments of tyranny, and the latter on the former as seditious rioters, or fraudulent smugglers. In this irritable state, every incident however trifling, made a sensible impression. The citizens apprehended constant danger from an armed force, in whose power they were; the soldiers on the other hand, considered

themselves as in the midst of enemies, and exposed to attacks from within and from without.

In proportion [186] as the breach between Great-Britain and her colonies widened, the distrust and animosity between the people and the army increased. From the latter end of 1774, hostile appearances daily threatened that the flames of war would be kindled from the collision of such inflammable materials. Whatsoever was done by either party by way of precaution, for the purposes of self defence, was construed by the other as preparatory to an intended attack. Each disclaimed all intentions of commencing hostilities, but reciprocally manifested suspicion of the others sincerity. As far as was practicable without an open rupture, the plans of the one were respectively thwarted by the other. From every appearance it became daily more evident that arms must ultimately decide the contest. To suffer an army that was soon expected to be an enemy, quietly to fortify themselves, when the inhabitants were both able and willing to cut them off, appeared to some warm spirits the height of folly; but the prudence and moderation of others, and especially the advice and recommendation of Congress, restrained their impetuosity. It was a fortunate circumstance for the colonies that the royal army was posted in New-England. The people of that northern country have their passions more under the command of reason and interest, than in the southern latitudes, where a warmer sun excites a greater degree of irascibility. One rash offensive action against the royal forces at this early period, though successful, might have done great mischief to the cause of America. It would have lost them European friends, and weakened the disposition of the other colonies to assist them. The patient and the politic New-England men, fully sensible of their situation, submitted to many insults, and bridled their resentment. In civil wars or revolutions it is a matter of much consequence who strikes the first blow. The compassion of the world is in favour of the attacked, and the displeasure of good men on those who are the first to imbrue their hands in human blood. For the space of nine months after the arrival of general Gage, the behaviour of the people of Boston is particularly worthy of imitation, by those who wish to [187] overturn established governments.

They conducted their opposition with exquisite address. They avoided every kind of outrage and violence, preserved peace and good order among themselves, successfully engaged the other colonies to make a common cause with them, and counteracted general Gage so effectually as to prevent his doing any thing for his royal master, while by patience and moderation they skreened themselves from censure. Though resolved to bear as long as prudence and policy dictated, they were all the time preparing for the last extremity. They were furnishing themselves with arms and ammunition, and training their militia.

Provisions were also collected and stored in different places, particularly at Concord, about 20 miles from Boston. General Gage, though zealous for his royal master's interest, discovered a prevailing desire after a peaceable accommodation. He wished to prevent hostilities by depriving the inhabitants of the means necessary for carrying them on. With this view he determined to destroy the stores which he knew were collected for the support of a provincial army. Wishing to accomplish this without bloodshed, he took every precaution to effect it by surprise, and without alarming the country.

At eleven o'clock at night 800 grenadiers and light infantry, the flower of the royal army, embarked at the Common, landed at Phipps's farm, and marched for Concord, under the command of lieutenant colonel Smith. Neither the secrecy with which this expedition was planned—the privacy with which the troops marched out, nor an order that no one inhabitant should leave Boston, were sufficient to prevent intelligence from being sent to the country militia, of what was going on. About two in the morning 130 of the Lexington militia had assembled to oppose them, but the air being chilly and intelligence respecting the regulars uncertain, they were dismissed, with orders to appear again at beat of drum.

April 18

They collected a second time to the number of 70, between 4 and 5 o'clock in the morning, and the British regulars soon after made their appearance. Major Pitcairn, who led the advanced corps, rode up to them and called out, "Disperse you [188] rebels, throw down your arms and disperse."

19th

They still continued in a body, on which he advanced nearer—discharged his pistol—and ordered his soldiers to fire.

1775

This was done with a huzza. A dispersion of the militia was the consequence, but the firing of the regulars was nevertheless continued. Individuals finding they were fired upon, though dispersing, returned the fire. Three or four of the militia were killed on the green. A few more were shot after they had begun to disperse. The royal detachment proceeded on to Concord, and executed their commission. They disabled two 24 pounders—threw 500 lb. of ball into rivers and wells, and broke in pieces about 60 barrels of flour. Mr. John Butterick of Concord, major of a minute regiment, not knowing what had passed at Lexington, ordered his men not to give the first fire, that they might not be the aggressors. Upon his approaching near the regulars, they fired, and killed captain Isaac Davis, and one private of the provincial minute men. The fire was returned, and a skirmish ensued. The king's troops having done their business, began their retreat towards Boston. This was conducted with expedition, for the adjacent inhabitants had assembled in arms, and began to attack them in every direction. In their return to Lexington they were exceedingly annoyed, both by those who pressed on their rear, and others who pouring in from all sides, fired from behind stone walls, and such like coverts, which supplied the place of lines and redoubts. At Lexington the regulars were joined by a detachment of 900 men, under lord Piercy, which had been sent out by general Gage to support lieutenant colonel Smith. This reinforcement having two pieces of cannon awed the provincials, and kept them at a greater distance, but they continued a constant, though irregular and scattering fire, which did great execution. The close firing from behind the walls by good marksmen, put the regular troops in no small confusion, but they nevertheless kept up a brisk retreating fire on the militia and minute men.

A little after sunset the regulars reached Bunkers-hill, worn down with excessive fatigue, having marched that day between thirty and forty miles. On [189] the next day they crossed Charlestown ferry, and returned to Boston.

1775

There never were more than 400 provincials engaged at one time, and often not so many. As some tired and gave out, others came up and took their places. There was scarcely any discipline observed among them. Officers and privates fired when they were ready, and saw a royal uniform without waiting for the word of command. Their knowledge of the country enabled them to gain opportunities by crossing fields and

fences, and to act as flanking parties against the king's troops who kept to the main road.

The regulars had 65 killed, 180 wounded, and 28 made prisoners. Of the provincials 50 were killed, and 38 wounded and missing.

As arms were to decide the controversy, it was fortunate for the Americans that the first blood was drawn in New-England. The inhabitants of that country are so connected with each other by descent, manners, religion, politics, and a general equality, that the killing of a single individual interested the whole, and made them consider it as a common cause. The blood of those who were killed at Lexington and Concord proved the firm cement of an extensive union.

To prevent the people within Boston from co-operating with their countrymen without in case of an assault which was now daily expected, General Gage agreed with a committee of the town, that upon the inhabitants lodging their arms in Faneuil-hall or any other convenient place, under the care of the selectmen, all such inhabitants as were inclined, might depart from the town, with their families and effects. In five days after the ratification of this agreement, the inhabitants had lodged 1778 fire arms, 634 pistols, 273 bayonets and 38 blunderbusses. The agreement was well observed in the beginning, but after a short time obstructions were thrown in the way of its final completion, on the plea that persons who went from Boston to bring in the goods of those who chose to continue within the town, were not properly treated. Congress remonstrated on the infraction of [190] the agreement, but without effect. The general, on a farther consideration of the consequences of moving the whigs out of Boston, evaded it in a manner not consistent with good faith. He was in some measure compelled to adopt this dishonourable measure, from the clamor of the tories, who alleged that none but enemies to the British government were disposed to remove, and that when they were all safe with their families and effects, the town would be set on fire. To prevent the provincials from obtaining supplies which they much wanted, a quibble was made on the meaning of the word effects, which was construed by the general as not including merchandize. By this construction, unwarranted by every rule of genuine interpretation, many who quitted the town were deprived of their usual resources for a support. Passports were not universally refused, but were given out very slowly, and the business was so conducted that families were divided—wives were separated from their husbands, children from their parents, and the aged and infirm from their relations and friends. The general discovered a disinclination to part with the women and children, thinking that, on their account, the provincials would be restrained from making an assault on the town. The select-men gave repeated assurances that the inhabitants had delivered up their arms, but as a cover for violating the agreement, general Gage issued a proclamation, in which he asserted that he had full proof to the contrary. A few might have secreted some favourite arms, but nearly all the training arms were delivered up. On this flimsy pretence the general sacrificed his honour, to policy and the clamors of the tories. Contrary to good faith he detained many, though fairly entitled by agreement to go out, and when he admitted the departure of others he would not allow them to remove their families and effects.

April 22

The provincial congress of Massachusetts, which was in session at the time of the Lexington battle, dispatched an account of it to Great-Britain, accompanied with many depositions, to prove that the British troops were the aggressors.

They also made an address to the inhabitants [191] of Great-Britain, in which, after complaining of their sufferings, they say, 1775
“these have not yet detached us from our royal sovereign; we profess to be his loyal and dutiful subjects, and though hardly dealt with, as we have been, are still ready with our lives and fortunes, to defend his person, crown, and dignity. Nevertheless, to the persecution and tyranny of his evil ministry, we will not tamely submit. Appealing to heaven for the justice of our cause, we determine to die or be free.” From the commencement of hostilities, the dispute between Great-Britain and the colonies took a new direction.

Intelligence that the British troops had marched out of Boston into the country on some hostile purpose, being forwarded by expresses from one committee to another, great bodies of the militia, not only from Massachusetts but the adjacent colonies, grasped their arms and marched to oppose them. The colonies were in such a state of irritability, that the least shock in any part was, by a powerful and sympathetic affection, instantaneously felt throughout the whole. The Americans who fell were revered by their countrymen, as martyrs who had died in the cause of liberty. Resentment against the British burned more strongly than ever. Martial rage took possession of the breasts of thousands. Combinations were formed and associations subscribed, binding the inhabitants to one another by the sacred ties of honour, religion, and love of country, to do whatever their public bodies directed for the preservation of their liberties. Hitherto the Americans had no regular army. From principles of policy they cautiously avoided that measure, lest they might subject themselves to the charge of being aggressors. All their military regulations were carried on by their militia, and under the old established laws of the land. For the defence of the colonies, the inhabitants had been, from their early years, enrolled in companies, and taught the use of arms. The laws for this purpose had never been better observed than for some months previous to the Lexington battle.

These military arrangements, which had been previously adopted 1775
for defending the colonies from hostile French and Indians, [192] were on this occasion turned against the troops of the Parent State. Forts, magazines, and arsenals, by the constitution of the country, were in the keeping of his majesty. Immediately after the Lexington battle, these were for the most part taken possession of throughout the colonies, by parties of the provincial militia. Ticonderoga, in which was a small royal garrison, was surprised and taken by adventurers from different states. Public money which had been collected in consequence of previous grants, was also seized for common services. Before the commencement of hostilities these measures would have been condemned by the moderate even among the Americans, but that event justified a bolder line of opposition than had been adopted. Sundry citizens having been put to death by British troops, self preservation dictated measures which, if adopted under other circumstances, would have disunited the colonists. One of the most important of this kind was the raising an army. Men of warm tempers, whose courage exceeded their prudence, had for months urged the necessity of raising troops; but they were restrained by the more moderate, who wished that the colonies might avoid extremities, or at least that they might not lead in

bringing them on. The provincial congress of Massachusetts being in session at the time the battle of Lexington was fought, voted that “an army of 30,000 men be immediately raised, that 13,600 be of their own province, and that a letter and delegate be sent to the several colonies of New-Hampshire, Connecticut and Rhode Island.” In consequence of this vote, the business of recruiting was begun, and in a short time a provincial army was paraded in the vicinity of Boston, which though far below what had been voted by the provincial congress, was much superior in numbers to the royal army. The command of this force was given to general Ward.

Had the British troops confined themselves to Boston, as before 1775 the 18th of April, the assembling an American army, though only for the purpose of observation and defence, would have appeared in the nature of a challenge, and would have made many less willing to support [193] the people of Massachusetts, but after the British had commenced hostilities the same measure was adopted without subjecting the authors of it to censure, and without giving offence or hazarding the union. The Lexington battle not only furnished the Americans with a justifying apology for raising an army, but inspired them with ideas of their own prowess. Amidst the most animated declarations of sacrificing fortune, and risking life itself for the security of American rights, a secret sigh would frequently escape from the breasts of her most determined friends, for fear that they could not stand before the bravery and discipline of British troops. Hoary sages would shake their heads and say, “Your cause is good and I wish you success, but I fear that your undisciplined valour must be overcome, in the unequal contest. After a few thousands of you have fallen, the provinces must ultimately bow to that power which has so repeatedly humbled France and Spain.” So confident were the British of their superiority in arms, that they seemed desirous that the contest might be brought to a military decision. Some of the distinguished speakers in parliament had publicly asserted that the natives of America had nothing of the soldier in them, and that they were in no respect qualified to face a British army. European philosophers had published theories, setting forth that not only vegetables and beasts, but that even men degenerated in the western hemisphere. Departing from the spirit of true philosophy, they overlooked the state of society in a new world, and charged a comparative inferiority, on every production that was American. The colonists themselves had imbibed opinions from their forefathers, that no people on earth were equal to those with whom they were about to contend. Impressed with high ideas of British superiority, and dissident of themselves, their best informed citizens, though willing to run all risques, feared the consequence of an appeal to arms. The success that attended their first military enterprize, in some degree banished these suggestions. Perhaps in no subsequent battle did the Americans appear to greater advantage than in their first essay at Lexington.

It is almost without parallel [194] in military history, for the 1775 yeomanry of the country to come forward in a single disjointed manner, without order, and for the most part without officers, and by an irregular fire to put to flight troops equal in discipline to any in the world. In opposition to the bold assertions, of some, and the desponding fears of others, experience proved that Americans might effectually resist British troops. The dissident grew bold in their country’s cause, and indulged in chearful hopes that heaven would finally crown their labours with success.

Soon after the Lexington battle, and in consequence of that event, not only the arms, ammunition, forts and fortifications in the colonies were secured for the use of the provincials, but regular forces were raised, and money struck for their support. These military arrangements were not confined to the New-England states, but were general throughout the colonies. The determination of the king and parliament to enforce submission to their acts, and the news of the Lexington battle, came to the distant provinces nearly about the same time. It was supposed by many that the latter was in consequence of the former, and that general Gage had recent orders to proceed immediately to subdue the refractory colonists.

From a variety of circumstances the Americans had good reason to conclude that hostilities would soon be carried on vigorously in Massachusetts, and also to apprehend that, sooner or later, each province would be the theatre of war. “The more speedily therefore said they, we are prepared for that event, the better chance we have for defending ourselves.” Previous to this period, or rather to the 19th of April 1775, the dispute had been carried on by the pen, or at most by associations and legislative acts; but from this time forward it was conducted by the sword. The crisis was arrived when the colonies had no alternative, but either to submit to the mercy, or to resist the power of Great-Britain. An unconquerable love of liberty could not brook the idea of submission, while reason more temperate in her decisions, suggested to the people their insufficiency to make effectual opposition.

They were fully apprized of the power [195] of Britain—they knew that her fleets covered the ocean, and that her flag had waved in triumph through the four quarters of the globe; but the animated language of the time was, “It is better to die freemen, than to live slaves.” Though the justice of their cause, and the inspiration of liberty gave, in the opinion of disinterested judges a superiority to the writings of Americans, yet in the latter mode of conducting their opposition, the candid among themselves acknowledged an inferiority. Their form of government was deficient in that decision, dispatch, and coercion, which are necessary to military operations.

1775

Europeans, from their being generally unacquainted with fire arms are less easily taught the use of them than Americans, who are from their youth familiar with these instruments of war; yet on other accounts they are more susceptible of military habits. The proportion of necessitous men in the new world is small to that in the old.

To procure subsistence is a powerful motive with an European to enlist, and the prospect of losing it makes him afraid to neglect his duty; but these incitements to the punctual discharge of military services, are wanting in America. In old countries the distinction of ranks and the submission of inferiors to superiors, generally takes place, but in the new world an extreme sense of liberty and equality indisposes to that implicit obedience which is the soul of an army. The same causes which nurtured a spirit of independence in the colonies, were hostile to their military arrangements. It was not only from the different state of society in the two countries, but from a variety of local causes, that the Americans were not able to contend in arms, on equal terms, with their Parent State. From the first settlement of the British colonies, agriculture and commerce, but especially the former, had been the favourite pursuits of their inhabitants. War was a business abhorrent from their usual habits of life. They had

never engaged in it from their own motion, nor in any other mode than as appendages to British troops, and under British establishments. By these means the military spirit of the colonies had no opportunity of expanding itself.

At the commencement of hostilities, the British [196] troops possessed a knowledge of the science and discipline of war, which could be acquired only by a long series of application, and substantial establishments. Their equipments, their artillery, and every other part of their apparatus for war approached perfection. To these important circumstances was added a high national spirit of pride, which had been greatly augmented by their successes in their last contest with France and Spain. On the other hand the Americans were undisciplined, without experienced officers, and without the shadow of military establishments. In the wars which had been previously carried on, in or near the colonies, the provincials had been, by their respective legislatures, frequently added to the British troops, but the pride of the latter would not consider the former, who were without uniformity of dress, or the pertness of military airs, to be their equals. The provincial troops were therefore for the most part, assigned to services which, though laborious, were not honourable.

1775

The ignorance of British generals commanding in the woods of America, sometimes involved them in difficulties from which they had been more than once relieved by the superior local knowledge of the colonial troops. These services were soon forgotten, and the moment the troops who performed them could be spared, they were disbanded. Such like obstacles had hitherto depressed military talents in America, but they were now overcome by the ardor of the people.

In the year 1775, a martial spirit pervaded all ranks of men in the colonies. They believed their liberties to be in danger, and were generally disposed to risque their lives for their establishment. Their ignorance of the military art, prevented their weighing the chances of war with that exactness of calculation which, if indulged, might have damped their hopes. They conceived that there was little more to do than fight manfully for their country. They consoled themselves with the idea, that though their first attempt might be unsuccessful; their numbers would admit of a repetition of the experiment, till the invaders were finally exterminated.

Not considering [197] that in modern war the longest purse decides oftener than the longest sword, they feared not the wealth of Britain. They both expected and wished that the whole dispute would be speedily settled in a few decisive engagements. Elevated with the love of liberty, and buoyed above the fear of consequences, by an ardent military enthusiasm, unabated by calculations about the extent, duration, or probable issue of the war, the people of America seconded the voice of their rulers, in an appeal to heaven for the vindication of their rights. At the time the colonies adopted these spirited resolutions, they possessed not a single ship of war, nor so much as an armed vessel of any kind. It had often been suggested that their seaport towns lay at the mercy of the navy of Great-Britain; this was both known and believed, but disregarded. The love of property was absorbed in the love of liberty. The animated votaries of the equal rights of human nature, consoled themselves with the idea that though their whole sea coast should be laid in ashes, they could retire to the western wilderness, and enjoy the luxury of being free; on this occasion it was observed in Congress by Christopher Gadsden, one

1775

of the South-Carolina delegates, "Our houses being constructed of brick, stone, and wood, though destroyed may be rebuilt, but liberty once gone is lost forever."

The sober discretion of the present age will more readily censure than admire, but can more easily admire than imitate the fervid zeal of the patriots of 1775, who in idea sacrificed property in the cause of liberty, with the ease that they now sacrifice almost every other consideration for the acquisition of property.

The revenues of Britain were immense, and her people were habituated to the payment of large sums in every form which contributions to government have assumed; but the American colonies possess neither money nor funds, nor were their people accustomed to taxes equal to the exigences of war. The contest having begun about taxation, to have raised money by taxes for carrying it on, would have been impolitic.

The temper of the times precluded the necessity of attempting the dangerous [198] expedient, for such was the enthusiasm of the 1775 day, that the colonists gave up both their personal services and their property to the public, on the vague promises that they should at a future time be reimbursed. Without enquiring into the solidity of funds, or the precise period of payment, the resources of the country were commanded on general assurances, that all expences of the war should ultimately be equalised. The Parent State abounded with experienced statesmen and officers, but the dependent form of government exercised in the colonies, precluded their citizens from gaining that practical knowledge which is acquired from being at the head of public departments. There were very few in the colonies who understood the business of providing for an army, and still fewer who had experience and knowledge to direct its operations. The disposition of the finances of the country, and the most effectual mode of drawing forth its resources, were subjects with which scarce any of the inhabitants were acquainted. Arms and ammunition were almost wholly deficient; and though the country abounded with the materials of which they are manufactured, yet there was neither time nor artists enough to supply an army with the means of defence. The country was destitute both of fortifications and engineers. Amidst so many discouragements there were some flattering circumstances. The war could not be carried on by Great-Britain, but to a great disadvantage, and at an immense expence. It was easy for ministers at St. James's to plan campaigns, but hard was the fate of the officer from whom the execution of them in the woods of America was expected. The country was so extensive, and abounded so much with defiles; that by evacuating and retreating, the Americans though they could not conquer, yet might save themselves from being conquered. The authors of the acts of parliament for restraining the trade of the colonies, were most excellent recruiting officers for the Congress. They imposed a necessity on thousands to become soldiers. All other business being suspended, the whole resources of the country were applied in supporting an army.

Though [199] the colonists were without discipline, they 1775 possessed native valour. Though they had neither gold nor silver, they possessed a mine in the enthusiasm of their people. Paper for upwards of two years produced to them more solid advantages than Spain derived from her superabounding precious metals. Though they had no ships to protect their trade or their towns, they had simplicity enough to live without the former, and enthusiasm

enough to risque the latter, rather than submit to the power of Britain. They believed their cause to be just, and that heaven approved their exertions in defence of their rights. Zeal originating from such motives, supplied the place of discipline, and inspired a confidence and military ardor which overleaped all difficulties.

Resistance being resolved upon by Americans—the pulpit—the press—the bench and the bar, severally laboured to unite and encourage them. The clergy of New-England were a numerous, learned and respectable body, who had a great ascendancy over the minds of their hearers. They connected religion and patriotism, and in their sermons and prayers, represented the cause of America as the cause of heaven. The synod of New-York and Philadelphia, also sent forth a pastoral letter, which was publicly read in their churches. This earnestly recommended such sentiments and conduct as were suitable to their situation. Writers and printers followed in the rear of the preachers, and next to them had the greatest hand in animating their countrymen. Gentlemen of the bench and of the bar denied the charge of rebellion, and justified the resistance of the colonists. A distinction founded on law, between the king and his ministry, was introduced. The former, it was contended, could do no wrong. The crime of treason was charged on the latter, for using the royal name to varnish their own unconstitutional measures. The phrase of a ministerial war became common, and was used as a medium for reconciling resistance with allegiance.

Coeval with the resolutions for organizing an army, was one appointing the 20th day of July, 1775, a day of public humiliation, fasting and prayer to Almighty God, [200] [“]to bless their rightful sovereign king George, and to inspire him with wisdom to discern and pursue the true interest of his subjects; and that the British nation might be influenced to regard the things that belonged to her peace, before they were hid from her eyes—that the colonies might be ever under the care and protection of a kind providence, and be prospered in all their interests—that America might soon behold a gracious interposition of heaven, for the redress of her many grievances; the restoration of her invaded rights, a reconciliation with the Parent State, on terms constitutional and honourable to both.” The forces which had been collected in Massachusetts, were stationed in convenient places for guarding the country from farther excursions of the regulars from Boston. Breast works were also erected in different places for the same purpose. While both parties were attempting to carry off stock from the several islands with which the bay of Boston is agreeably diversified, sundry skirmishes took place. These were of real service to the Americans. They habituated them to danger, and perhaps much of the courage of old soldiers, is derived from an experimental conviction, that the chance of escaping unhurt from engagements is much greater than young recruits suppose.

About the latter end of May a great part of the reinforcements ordered from Great-Britain, arrived at Boston.

Three British generals, Howe, Burgoyne and Clinton, whose behaviour in the preceding war had gained them great reputation, also arrived about the same time. General Gage, thus reinforced, prepared for acting with more decision, but before he proceeded to extremities he conceived it due to ancient forms to issue a proclamation, holding forth to the inhabitants the alternative of peace or war.

May 25

He therefore offered pardon in the king's name to all who should forthwith lay down their arms, and return to their respective occupations and peaceable duties, excepting only from the benefit of that pardon "Samuel Adams, and John Hancock, whose offences were said to be of too flagitious a nature to admit of any other consideration than that of condign punishment." He also [201] proclaimed that not only the persons above named and excepted, but also their adherents, associates, and correspondents, should be deemed guilty of treason and rebellion, and treated accordingly. By this proclamation it was also declared "that as the courts of judicature were shut, martial law should take place, till a due course of justice should be re-established." It was supposed that this proclamation was a prelude to hostilities, and preparations were accordingly made by the Americans. A considerable height, by the name of Bunkers-hill, just at the entrance of the peninsula of Charlestown, was so situated as to make the possession of it a matter of great consequence, to either of the contending parties.

June 12

1775

Orders were therefore issued by the provincial commanders that a detachment of a thousand men should intrench upon this height. By some mistake Breed's-hill, high and large like the other, but situated nearer Boston, was marked out for the intrenchments, instead of Bunkers-hill. The provincials proceeded to Breed's-hill and worked with so much diligence, that between midnight and the dawn of the morning, they had thrown up a small redoubt about 8 rods square. They kept such a profound silence that they were not heard by the British, on board their vessels, though very near. These having derived their first information of what was going on from the sight of the work near completion, began an incessant firing upon them. The provincials bore this with firmness, and though they were only young soldiers continued to labour till they had thrown up a small breastwork, extending from the east side of the redoubt to the bottom of the hill. As this eminence overlooked Boston general Gage thought it necessary to drive the provincials from it.

June 16

About noon therefore he detached major general Howe and brig. general Pigot, with the flower of his army, consisting of four battalions, ten companies of the grenadiers and ten of light infantry, with a proportion of field artillery, to effect this business. These troops landed at Moreton's point, and formed after landing, but remained in that position till they were reinforced by a second detachment of light infantry and grenadier companies, a battalion of land forces and a battalion of marines, [202] making in the whole nearly 3000 men. While the troops who first landed were waiting for this reinforcement, the provincials for their farther security, pulled up some adjoining post and rail fences, and set them down in two parallel lines at a small distance from each other, and filled the space between with hay, which having been lately mowed, remained on the adjacent ground.

June 17

1775

The king's troops formed in two lines, and advanced slowly, to give their artillery time to demolish the American works. While the British were advancing to the attack, they received orders to burn Charlestown. This was not done because they were fired upon from the houses in that town, but from the military policy of depriving enemies of a cover in their approaches. In a short time this ancient town, consisting of about 500 buildings, chiefly of wood, was in one great blaze. The lofty steeple of the

meeting house formed a pyramid of fire above the rest, and struck the astonished eyes of numerous beholders with a magnificent but awful spectacle. In Boston the heights of every kind were covered with the citizens, and such of the king's troops as were not on duty. The hills around the adjacent country which afforded a safe and distinct view, were occupied by the inhabitants of the country.

Thousands, both within and without Boston, were anxious spectators of the bloody scene. The honour of British troops beat high in the breasts of many, while others with a keener sensibility, felt for the liberties of a great and growing country. The British moved on but slowly, which gave the provincials a better opportunity for taking aim. The latter in general reserved themselves till their adversaries were within ten or twelve rods, but then began a furious discharge of small arms. The stream of the American fire was so incessant, and did so great execution that the king's troops retreated in disorder and precipitation. Their officers rallied them and pushed them forward with their swords, but they returned to the attack with great reluctance. The Americans again reserved their fire till their adversaries were near, and then put them a second time to flight.

General Howe and the officers redoubled their exertions, and were again [203] successful, though the soldiers discovered a great aversion to going on. By this time the powder of the Americans began so far to fail that they were not able to keep up the same brisk fire as before. The British also brought some cannon to bear which raked the inside of the breast work from end to end. The fire from the ships, batteries, and field artillery was redoubled—the soldiers in the rear were goaded on by their officers. The redoubt was attacked on three sides at once. Under these circumstances a retreat from it was ordered, but the provincials delayed, and made resistance with their discharged muskets as if they had been clubs, so long that the king's troops who easily mounted the works had half filled the redoubt before it was given up to them.

1775

While these operations were going on at the breast work and redoubt, the British light infantry were attempting to force the left point of the former, that they might take the American line in flank. Though they exhibited the most undaunted courage, they met with an opposition which called for its greatest exertions. The provincials here, in like manner, reserved their fire till their adversaries were near, and then poured it upon the light infantry, with such an incessant stream, and in so true a direction as mowed down their ranks. The engagement was kept up on both sides with great resolution. The persevering exertions of the king's troops could not compel the Americans to retreat, till they observed that their main body had left the hill. This, when begun, exposed them to new danger, for it could not be effected but by marching over Charlestown neck, every part of which was raked by the shot of the Glasgow man of war, and of two floating batteries. The incessant fire kept up across this neck prevented any considerable reinforcement from joining their countrymen who were engaged; but the few who fell on their retreat, over the same ground proved, that the apprehensions of those provincial officers who declined passing over to succour their companions, were without any solid foundation.

The number of Americans engaged, amounted only to 1500.

It was apprehended that the conquerors would [204] push the advantage they had gained, and march immediately to American head quarters at Cambridge, but they advanced no farther than Bunker's-hill. There they threw up works for their own security. The provincials did the same on Prospect-hill in front of them. Both were guarding against an attack, and both were in a bad condition to receive one. The loss of the peninsula depressed the spirits of the Americans, and their great loss of men produced the same effect on the British. There have been few battles in modern wars, in which all circumstances considered, there was a greater destruction of men than in this short engagement. The loss of the British, as acknowledged by general Gage, amounted to 1054. Nineteen commissioned officers were killed, and 70 more were wounded. The battle of Quebec in 1759, which gave Great-Britain the province of Canada, was not so destructive to British officers as this affair of a slight intrenchment, the work only of a few hours. That the officers suffered so much, must be imputed to their being aimed at. None of the provincials in this engagement were riflemen, but they were all good marksmen. The whole of their previous military knowledge had been derived, from hunting, and the ordinary amusements of sportsmen. The dexterity which by long habit they had acquired in hitting beasts, birds, and marks, was fatally applied to the destruction of British officers. From their fall much confusion was expected. They were therefore particularly singled out. Most of those who were near the person of general Howe were either killed or wounded, but the general, though he greatly exposed himself, was unhurt. The light infantry and grenadiers lost three-fourths of their men. Of one company not more than five, and of another, not more than fourteen escaped. The unexpected resistance of the Americans was such as wiped away the reproaches of cowardice, which had been cast on them by their enemies in Britain. The spirited conduct of the British officers merited and obtained great applause, but the provincials were justly entitled to a large portion of the same, for having made the utmost exertions of their adversaries necessary to dislodge them [205] from lines, which were the work only of a single night.

The Americans lost five pieces of cannon. Their killed amounted to 139. Their wounded and missing to 314. Thirty of the former fell into the hands of the conquerors. They particularly regretted the death of general Warren. To the purest patriotism and most undaunted bravery, he added the virtues of domestic life, the eloquence of an accomplished orator, and the wisdom of an able statesman. Nothing but a regard to the liberty of his country induced him to oppose the measures of government. He aimed not at a separation from, but a coalition with the Mother Country. He took an active part in defence of his country, not that he might be applauded and rewarded for a patriotic spirit, but because he was, in the best sense of the word, a real patriot. Having no interested or personal views to answer the friends of liberty, confided in his integrity. The soundness of his judgment, and his abilities as a public speaker, enabled him to make a distinguished figure in public councils, but his intrepidity and active zeal, induced his countrymen to place him in the military line. Within four days after he was appointed a major general, he fell a noble sacrifice to a cause which he had espoused from the purest principles. Like Hambden he lived and like Hambden he died, universally beloved and universally regretted. His many virtues were celebrated in an elegant eulogium written by Dr. Rush, in language equal

to the illustrious subject. The burning of Charlestown, though a place of great trade did not discourage the provincials. It excited resentment and execration, but not any disposition to submit. Such was the high toned state of the public mind, and so great the indifference for property when put in competition with liberty, that military conflagrations, though they distressed and impoverished, had no tendency to subdue the colonists. They might answer in the old world, but were not calculated for the new, where the war was undertaken, not for a change of masters, but for securing essential rights. The action at Breed's-hill, or Bunker's-hill, as it has been commonly called, produced many and very important [206] consequences.

It taught the British so much respect for Americans intrenched behind works, that their subsequent operations were retarded with a caution that wasted away a whole campaign, to very little purpose. It added to the confidence the Americans began to have in their own abilities, but inferences, very injurious to the future interests of America, were drawn from the good conduct of the new troops on that memorable day. It inspired some of the leading members of Congress, with such high ideas of what might be done by militia, or men engaged for a short term of enlistment, that it was long before they assented to the establishment of a permanent army. Not distinguishing the continued exertions of an army through a series of years, from the gallant efforts of the yeomanry of the country, led directly to action, they were slow in admitting the necessity of permanent troops. They conceived the country might be defended by the occasional exertions of her sons, without the expence and danger of an army engaged for the war. In the progress of hostilities, as will appear in the sequel, the militia lost much of their first ardor, while leading men in the councils of America, trusting to its continuance, neglected the proper time of recruiting for a series of years. From the want of perseverance in the militia, and the want of a disciplined standing army, the cause for which arms were at first taken up, was more than once brought to the brink of destruction.

CHAPTER VII

The Second Congress Meets And Organises A Regular Continental Army—Makes Sundry Public Addresses, And Petitions The King, &C. Transactions In Massachusetts.

It has already been mentioned, that Congress previous to its dissolution, on the 26th of October, 1774, recommended to the colonies, to chuse members for another to meet on the tenth of May 1775, unless the redress of their grievances was previously obtained. A circular letter had been addressed by lord Dartmouth, to the [207] several colonial governors, requesting their interference to prevent the meeting of this second Congress: but ministerial requisitions had lost their influence, delegates were elected not only for the twelve colonies that were before represented, but also for the parish of St. John's in Georgia, and in July following, for the whole province. The time of the meeting of this second Congress was fixed at so distant a day, that an opportunity might be afforded for obtaining information of the plans adopted by the British parliament in the winter of 1774, 1775. Had these been favourable, the delegates would either not have met, or dispersed after a short session, but as the resolution was then fixed to compel the submission of the colonies, and hostilities had already commenced, the meeting of Congress on the tenth of May, which was at first eventual, became fixed.

1775

On their meeting, they chose Peyton Randolph for their President, and Charles Thomson for their secretary. On the next day Mr. Hancock laid before them a variety of depositions, proving that the king's troops were the aggressors in the late battle at Lexington, together with sundry papers relative to the great events which had lately taken place in Massachusetts: Whereupon Congress resolved itself into a committee of the whole, to take into consideration the state of America. They proceeded in the same line of moderation and firmness, which marked the acts of their predecessors in the past year.

May 10

The city and county of New-York having applied to Congress for advice, how they should conduct themselves with regard to the troops expected to land there, they were advised "to act on the defensive so long as might be consistent with their safety—to permit the troops to remain in the barracks, so long as they behaved peaceably, but not to suffer fortifications to be erected, or any steps to be taken for cutting off the communication between the town and country."

May 15

Congress also resolved, "That exportation to all parts of British America, which had not adopted their association, should immediately cease;" and that, "no provision of any kind, or other necessaries be furnished to the British fisheries on the American [208] coasts."

May 17

And

1775

that no bill of exchange, draught, or order, of any officer in the British army or navy, their agents or contractors, be received or

June 2

negotiated, or any money supplied them, by any person in America—that no provisions or necessaries of any kind, be furnished or supplied, to or for the use of the British army or navy, in the colony of Massachusetts Bay—that no vessel employed in transporting British troops to America, or from one part of North-America to another, or warlike stores or provisions for said troops, be freighted or furnished with provisions or any necessaries.

These resolutions may be considered as the counterpart of the British acts for restraining the commerce, and prohibiting the fisheries of the colonies. They were calculated to bring distress on the British islands in the West-Indies, whose chief dependence for subsistence, was on the importation of provision from the American continent. They also occasioned new difficulties in the support of the British army and fisheries. The colonists were so much indebted to Great-Britain, that government bills for the most part found among them a ready market. A war in the colonies was therefore made subservient to commerce, by increasing the sources of remittance. This enabled the Mother Country, in a great degree, to supply her troops without shipping money out of the kingdom. From the operation of these resolutions, advantages of this nature were not only cut off, but the supply of the British army rendered both precarious and expensive. In consequence of the interdiction of the American fisheries, great profits were expected by British adventurers in that line. Such frequently found it most convenient to obtain supplies in America for carrying on their fisheries; but as Great-Britain had deprived the colonists of all benefits from that quarter, they now in their turn, interdicted all supplies from being furnished to British fishermen. To obviate this unexpected embarrassment, several of the vessels employed in this business, were obliged to return home, to bring out provisions for their associates. These restrictive resolutions, were not so much the effect of resentment as of policy.

The colonists conceived, that [209] by distressing the British commerce, they would encrease the number of those who would interest themselves in their behalf.

1775

The new Congress had convened but a few days when their venerable president Peyton Randolph, was under a necessity of returning home. On his departure John Hancock was unanimously chosen his successor. The objects of deliberation presented to this new Congress were, if possible, more important than those which in the preceding year, had engaged the attention of their predecessors. The colonists had now experienced the inefficacy of those measures, from which relief had been formerly obtained. They found a new parliament disposed to run all risques in enforcing their submission. They also understood that administration was united against them, and its members firmly established in their places. Hostilities were commenced. Reinforcements had arrived, and more were daily expected. Added to this, they had information that their adversaries had taken measures to secure the friendship and co-operation of the Indians; and also of the Canadians.

The coercion of the colonies being resolved upon, and their conquest supposed to be inevitable, the British ministry judged that it would be for the interest of both countries to proceed in that vigorous course, which bid fairest for the speediest

attainment of their object. They hoped by pressing the colonists on all quarters, to intimidate opposition, and ultimately to lessen the effusion of human blood.

In this awful crisis Congress had but a choice of difficulties. The New-England states had already organized an army and blockaded general Gage. To desert them would have been contrary to plighted faith and to sound policy. To support them would make the war general, and involve all the provinces in one general promiscuous state of hostility. The resolution of the people in favour of the latter was fixed, and only wanted public sanction for its operation.

Congress therefore resolved, “that for the express purpose of defending and securing the colonies, and preserving them in safety, against [210] all attempts to carry the late acts of a parliament into execution, by force of arms,

May 26

they be immediately put in a state of defence; but as they wished for a restoration of the harmony formerly subsisting between the Mother Country and the colonies, to the promotion of this most desirable reconciliation, an humble and dutiful petition be presented to his majesty.” To resist and to petition were coeval resolutions. As freemen they could not tamely submit, but as loyal subjects, wishing for peace as far as was compatible with their rights, they once more, in the character of petitioners, humbly stated their grievances to the common father of the empire. To dissuade the Canadians from co-operating with the British, they again addressed them, representing the pernicious tendency of the Quebec act, and apologizing for their taking Ticonderoga and Crown-Point, as measures which were dictated by the great law of self preservation. About the same time Congress took measures for warding off the danger that threatened their frontier inhabitants from Indians. Commissioners to treat with them were appointed, and a supply of goods for their use was ordered. A talk was also prepared by Congress, and transmitted to them, in which the controversy between Great-Britain and her colonies was explained, in a familiar Indian style. They were told that they had no concern in the family quarrel, and were urged by the ties of ancient friendship and a common birth place, to remain at home, keep their hatchet buried deep, and to join neither side.

1775

The novel situation of Massachusetts made it necessary for the ruling powers of that province to ask the advice of Congress on a very interesting subject, “The taking up and exercising the powers of civil government.” For many months they had been kept together in tolerable peace and order by the force of ancient habits, under the simple style of recommendation and advice from popular bodies, invested with no legislative authority. But as war now raged in their borders, and a numerous army was actually raised, some more efficient form of government became necessary.

At this early day it neither [211] comported with the wishes nor the designs of the colonists to erect forms of government independent of Great-Britain, Congress therefore recommended only such regulations as were immediately necessary, and these were conformed as near as possible to the spirit and substance of the charter, and were only to last till a governor of his majesty’s appointment would consent to govern the colony according to its charter.

1775

On the same principles of necessity, another assumption of new powers became unavoidable. The great intercourse that daily took place throughout the colonies,

pointed out the propriety of establishing a general post-office. This was accordingly done, and Dr. Franklin, who had by royal authority been dismissed from a similar employment about three years before, was appointed by his country, the head of the new department.

While Congress was making arrangements for their proposed continental army, it was thought expedient once more to address the inhabitants of Great-Britain, and to publish to the world a declaration setting forth their reasons for taking up arms—to address the speaker and gentlemen of the assembly of Jamaica, and the inhabitants of Ireland, and also to prefer a second humble petition to the king. In their address to the inhabitants of Great-Britain, they again vindicated themselves from the charge of aiming at independency, professed their willingness to submit to the several acts of trade and navigation which were passed before the year 1763, recapitulated their reasons for rejecting lord North's conciliatory motion—stated the hardships they suffered from the operations of the royal army in Boston, and insinuated the danger the inhabitants of Britain would be in of losing their freedom, in case their American brethren were subdued.

In their declaration, setting forth the causes and necessity of their taking up arms, they enumerated the injuries they had received, and the methods taken by the British ministry to compel their submission, and then said,

“We are reduced to the alternative of choosing an unconditional submission to the tyranny of irritated ministers, or [212]

1775

resistance by force. The latter is our choice. We have counted the cost of this contest, and find nothing so dreadful as voluntary slavery.” They asserted “that foreign assistance was undoubtedly attainable.” This was not founded on any private information, but was an opinion derived from their knowledge of the principles of policy, by which states usually regulate their conduct towards each other.

In their address to the speaker and gentlemen of the assembly of Jamaica, they dilated on the arbitrary systems of the British ministry, and informed them that in order to obtain a redress of their grievances, they had appealed to the justice, humanity, and interest of Great-Britain. They stated, that to make their schemes of non-importation and non-exportation produce the desired effects, they were obliged to extend them to the islands. “From that necessity, and from that alone, said they, our conduct has proceeded.” They concluded with saying, “the peculiar situation of your island forbids your assistance, but we have your good wishes—from the good wishes of the friends of liberty and mankind we shall always derive consolation.”

In their address to the people of Ireland they recapitulated their grievances, stated their humble petitions, and the neglect with which they had been treated. “In defence of our persons and properties under actual violations, said they, we have taken up arms. When that violence shall be removed, and hostilities cease on the part of the aggressors, they shall cease on our part also.”

These several addresses were executed in a masterly manner, and were well calculated to make friends to the colonies. But their petition to the king, which was drawn up at the same time, produced more solid advantages in favour of the American

cause, than any other of their productions. This was in a great measure carried through Congress by Mr. Dickinson.

Several members, judging from the violence with which parliament proceeded against the colonies, were of opinion that farther petitions were nugatory; but this worthy citizen, a friend to both countries, and devoted to a reconciliation on [213] constitutional principles, urged the expediency and policy of trying once more the effect of an humble, decent, and firm petition, to the common head of the empire. The high opinion that was conceived of his patriotism and abilities, induced the members to assent to the measure, though they generally conceived it to be labour lost. The petition agreed upon was the work of Mr. Dickinson's pen. In this, among other things, it was stated,

1775

that notwithstanding their sufferings, they had retained too high a regard for the kingdom from which they derived their origin, to request such a reconciliation as might in any manner be inconsistent with her dignity and welfare. Attached to his majesty's person, family, and government, with all the devotion that principle and affection can inspire, connected with Great-Britain by the strongest ties that can unite society, and deploring every event that tended in any degree to weaken them, they not only most fervently desired the former harmony between her and the colonies to be restored, but that a concord might be established between them, upon so firm a basis as to perpetuate its blessings, uninterrupted by any future dissensions, to succeeding generations, in both countries. They therefore beseeched that his majesty would be pleased to direct some mode by which the united applications of his faithful colonists to the throne, in pursuance of their common councils, might be improved into a happy and permanent reconciliation.

July 8

By this last clause Congress meant that the Mother Country should propose a plan for establishing by compact, something like Magna Charta for the colonies. They did not aim at a total exemption from the controul of parliament, nor were they unwilling to contribute in their own way, to the expences of government; but they feared the horrors of war less than submission to unlimited parliamentary supremacy. They wished for an amicable compact, in which doubtful, undefined points, should be ascertained so as to secure that proportion of authority and liberty which would be for the general good of the whole empire. They fancied themselves in the condition of the barons at Runnymede; but with this difference, that in [214] addition to opposing the king, they had also to oppose the parliament.

This difference was more nominal than real, for in the latter case the king and parliament stood precisely in the same relation to the people of America, which subsisted in the former between the king and people of England. In both, popular leaders were contending with the sovereign for the privileges of subjects. This well meant petition was presented on September 1st, 1775, by Mr. Penn and Mr. Lee, and on the 4th lord Dartmouth informed them, "that to it no answer would be given." This slight contributed not a little to the union and perseverance of the colonists. When pressed by the calamities of war, a doubt would sometimes arise in the minds of scrupulous persons, that they had been too hasty in their opposition to their protecting Parent State. To such it was usual to present the second petition of Congress to the king, observing thereon, that all the blood and all the guilt of the war, must be charged on British, and not on American counsels.

1775

Though the colonists were accused in a speech from the throne, as meaning only, “to amuse by vague expressions of attachment to the Parent State, and the strongest protestations of loyalty to their king, while they were preparing for a general revolt, and that their rebellious war was manifestly carried on for the purpose of establishing an independent empire.” Yet at that time, and for months after, a redress of grievances was their ultimate aim. Conscious of this intention, and assenting in the sincerity of their souls to the submissive language of their petition, they illy brooked the contempt with which their joint supplication was treated, and still worse, that they should be charged from the throne with studied duplicity. Nothing contributes more to the success of revolutions than moderation. Intemperate zealots overshoot themselves, and soon spend their force, while the calm and dispassionate persevere to the end. The bulk of the people in civil commotions are influenced to a choice of sides, by the general complexion of the measures adopted by the respective parties. When these appear to be dictated by justice and prudence, and to be [215] uninfluenced by passion, ambition or avarice, they are disposed to favour them. Such was the effect of this second petition, through a long and trying war, in which men of serious reflection were often called upon to examine the rectitude of their conduct.

Oct. 26

Though the refusal of an answer to this renewed application of Congress to the king, was censured by numbers in Great-Britain, as well as in the colonies, yet the partisans of ministry varnished the measure as proper and expedient. They contended that the petition, as it contained no offers of submission, was unavailing, as a ground work of negociation. Nothing was farther from the thoughts of Congress than such concessions as were expected in Great-Britain. They conceived themselves to be more sinned against than sinning. They claimed a redress of grievances as a matter of right, but were persuaded that concessions for this purpose were acts of justice and not of humiliation, and therefore could not be disgraceful to those by whom they were made. To prevent future altercations they wished for an amicable compact to ascertain the extent of parliamentary supremacy. The Mother Country wished for absolute submission to her authority, the colonists for a repeal of every act that imposed taxes, or that interfered in their internal legislation. The ministry of England being determined not to repeal these acts, and the Congress equally determined not to submit to them, the claims of the two countries were so wide of each other as to afford no reasonable ground to expect a compromise. It was therefore concluded, that any notice taken of the petition would only afford an opportunity for the colonies to prepare themselves for the last extremity.

A military opposition to the armies of Great-Britain being resolved upon by the colonies, it became an object of consequence to fix on a proper person to conduct that opposition.

Many of the colonists had titles of high rank in the militia, and several had seen something of real service, in the late war between France and England; but there was no individual of such superior military experience as to entitle him to a decided pre-eminence, or even [216] to qualify him, on that ground, to contend on equal terms with the British masters of the art of war. In elevating one man, by the free voice of an invaded country, to the command of thousands of his equal fellow citizens, no consideration was regarded but the interest

1775

of the community. To bind the uninvaded provinces more closely to the common cause, policy directed the views of Congress to the south.

Among the southern colonies Virginia, for numbers, wealth, and influence, stood pre-eminent. To attach so respectable a colony to the aid of Massachusetts, by selecting a commander in chief from that quarter, was not less warranted by the great military genius of one of her distinguished citizens, than dictated by sound policy.

George Washington was, by an unanimous vote appointed, June 15 commander in chief of all the forces raised, or to be raised, for the defence of the colonies. It was a fortunate circumstance attending his election, that it was accompanied with no competition, and followed by no envy. That same general impulse on the public mind, which led the colonists to agree in many other particulars, pointed to as the most proper person for presiding over the military arrangements of America. Not only Congress but the inhabitants in the east and the west, in the north and, the south, as well before as at the time of embodying a continental army were in a great degree unanimous in his favour. An attempt to draw the character of this truly great man would look like flattery. Posterity will doubtless do it justice. His actions, especially now, while fresh in remembrance, are his amplest panegyric. Suffice it, in his life time, only to particularise those qualities, which being more common, may be mentioned without offending the delicate sensibility of the most modest of men.

General Washington was born on the 11th of February 1732. His education was such as favoured the production of a solid mind and a vigorous body. Mountain air, abundant exercise in the open country—the wholesome toils of the chace, and the delightful scenes of rural life, expanded his limbs to an unusual but graceful [217] and well proportioned size.

His youth was spent in the acquisition of useful knowledge, and 1775 in pursuits, tending to the improvement of his fortune, or the benefit of his country. Fitted more for active, than for speculative life, he devoted the greater proportion of his time to the latter, but this was amply compensated by his being frequently in such situations, as called forth the powers of his mind, and strengthened them by repeated exercise. Early in life, in obedience to his country's call, he entered the military line, and began his career of fame in opposing that power in concert with whose troops, he acquired his last and most distinguished honours. He was with general Braddock in 1755, when that unfortunate officer from an excess of bravery, chose rather to sacrifice his army than retreat from an unseen foe. The remains of that unfortunate corpse were brought off the field of battle chiefly by the address and good conduct of colonel Washington. After the peace of Paris 1763, he retired to his estate, and with great industry and success pursued the arts of peaceful life. When the proceedings of the British parliament alarmed the colonists with apprehensions that a blow was levelled at their liberties, he again came forward into public view, and was appointed a delegate to the Congress, which met in September 1774. Possessed of a large proportion of common sense directed by a sound judgment, he was better fitted for the exalted station to which he was called, than many others who to a greater brilliancy of parts frequently add the eccentricity of original genius. Engaged in the busy scenes of life, he knew human nature, and the most proper method of accomplishing proposed objects. His passions were subdued and kept in subjection to reason. His soul superior to party spirit, to prejudice and illiberal views,

moved according to the impulses it received from an honest heart, a good understanding, common sense, and a sound judgment. He was habituated to view things on every side, to consider them in all relations, and to trace the possible and probable consequences of proposed measures. Much addicted to close thinking, his mind was constantly employed.

By frequent exercise, [218] his understanding and judgment expanded so as to be able to discern truth, and to know what was proper to be done in the most difficult conjunctures.

1775

Soon after general Washington was appointed commander in chief of the American army. Four major generals, one adjutant general, with the rank of a brigadier, and eight brigadiers general were appointed in subordination to him which were as follows.

1st. Major General Artemas Ward
2d. Charles Lee
3d. Philip Schuyler
4th. Israel Putnam
Adjutant General Horatio Gates

The 8 Brigadiers were

1st. Seth Pomeroy
2d. Richard Montgomery
3d. David Wooster
4th. William Heath
5th. Joseph Spencer
6th. John Thomas
7th. John Sullivan
8th. Nathaniel Greene

General Washington replied to the president of Congress, announcing his appointment in the following words.

Mr. President,

Though I am truly sensible of the high honour done me in this appointment, yet, I feel great distress from a consciousness, that my abilities and military experience may not be equal to the extensive and important trust: however as the Congress desire it, I will enter upon the momentous duty, and exert every power I possess in their service, and for support of the glorious cause. I beg they will accept my most cordial thanks for this distinguished testimony of their approbation.

But, lest some unlucky event should happen unfavourable to my reputation, I beg it may be remembered by every gentleman in the room, that I this day declare with the utmost sincerity, I do not think myself equal to the command I am honoured with.

[219]

As to pay sir, I beg leave to assure the Congress, that as no pecuniary consideration could have tempted me to accept this arduous employment, at the expence of my domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expences. Those I doubt not they will discharge, and that is all I desire.

1775

A special commission was drawn up and presented to him, and at the same time an unanimous resolution was adopted by Congress, "That they would maintain and assist him, and adhere to him with their lives and fortunes in the cause of American liberty." Instructions were also given him for his government, by which after reciting various particulars he was directed, "to destroy or make prisoners of all persons who now are, or who hereafter shall appear in arms against the good people of the colonies:" but the whole was summed up in authorizing him "to order and dispose of the army under his command as might be most advantageous for obtaining the end for which it had been raised, making it his special care in discharge of the great trust committed to him, that the liberties of America received no detriment."

About the same time twelve companies of riflemen were ordered to be raised in Pennsylvania, Maryland and Virginia. The men to the amount of 1430 were procured and forwarded with great expedition. They had to march from 4 to 700 miles, and yet the whole business was compleated and they joined the American army at Cambridge, in less than two months from the day on which the first resolution for raising them was agreed to.

June 14–22

Coeval with the resolution for raising an army, was another for emitting a sum not exceeding two millions of Spanish milled dollars in bills of credit for the defence of America, and the colonies were pledged for the redemption of them. This sum was increased from time to time by farther emissions. The colonies having neither money nor revenues at their command, were forced to adopt this expedient, the only one which was in their power for supporting an army.

June 22

No one delegate [220] opposed the measure. So great had been the credit of the former emissions of paper in the greater part of the colonies, that very few at that time foresaw or apprehended the consequences of unfunded paper emissions, but had all the consequences which resulted from this measure in the course of the war been forseen, it must notwithstanding have been adopted, for it was a less evil, that there should be a general wreck of property, than that the essential rights and liberties of a growing country should be lost. A happy ignorance of future events combined with the ardor of the times, prevented many reflections on this subject, and gave credit and circulation to these bills of credit.

1775

General Washington soon after his appointment to the command of the American army set out for the camp at Cambridge. On his way thither, he received an address from the provincial congress of New-York, in which they expressed their joy at his appointment. They also said, "we have the fullest assurances that whenever this important contest shall be decided by that fondest wish of each American soul, an accommodation with our Mother Country, you will chearfully resign the important

deposit committed into your hands, and re-assume the character of our worthiest citizen.[”] The general after declaring his gratitude for the regard shewn him, added,

Be assured that every exertion of my worthy colleagues and myself, will be extended to the re-establishment of peace and harmony between the Mother Country and these colonies. As to the fatal but necessary operations of war, when we assumed the soldier, we did not lay aside the citizen, and we shall most sincerely rejoice with you in that happy hour, when the re-establishment of American liberty, on the most firm and solid foundations shall enable us to return to our private stations, in the bosom of a free, peaceful, and happy country.

The general on his way to camp was treated with the highest honours in every place through which he passed. Large detachments of volunteers composed of private gentlemen turned out to escort him.

A committee from the Massachusetts Congress received him about 100 miles [221] from Boston, and conducted him to the army. He was soon after addressed by the Congress of that colony in the most affectionate manner, in his answer he said,

1775

Gentlemen, your kind congratulations on my appointment and arrival, demand my warmest acknowledgements, and will ever be retained in grateful remembrance. In exchanging the enjoyments of domestic life for the duties of my present honourable but arduous station, I only emulate the virtue and public spirit of the whole province of Massachusetts, which, with a firmness and patriotism without example, has sacrificed all the comforts of social and political life, in support of the rights of mankind and the welfare of our common country. My highest ambition is to be the happy instrument of vindicating these rights, and to see this devoted province again restored to peace, liberty and safety.

When general Washington arrived at Cambridge, he was received with the joyful acclamations of the American army. At the head of his troops he published a declaration, previously drawn up by Congress, in the nature of a manifesto, setting forth the reasons for taking up arms. In this, after enumerating various grievances of the colonies, and vindicating them from a premeditated design of establishing independent states, it was added,

July 3

In our own native land, in defence of the freedom which is our birthright, and which we ever enjoyed till the late violation of it—for the protection of our property, acquired solely by the industry of our forefathers and ourselves, against violence actually offered, we have taken up arms, we shall lay them down when hostilities shall cease on the part of the aggressors, and all danger of their being renewed shall be removed, and not before.

When general Washington joined the American army, he found the British intrenched on Bunker’s-hill, having also three floating batteries in Mystic river, and a twenty gun ship below the ferry, between Boston and Charlestown. They had also a battery on Copse’s hill, and were strongly fortified on the neck.

1775

The Americans were intrenched at Winter-hill, Prospect-hill, and Roxbury, communicating with one another by small posts, [222] over a distance of ten miles. There were also parties stationed in several towns along the sea coast. They had neither engineers to plan suitable works, nor sufficient tools for their erection.

In the American camp was collected a large body of men, but without those conveniencies which ancient establishments have introduced for the comfort of regular armies. Instead of tents, sails now rendered useless by the obstructions of commerce, were applied for their covering; but even of them, there was not a sufficiency. The American soldiers having joined the camp in all that variety of clothing which they used in their daily labour, were without uniformity of dress. To abolish provincial distinctions, the hunting shirt was introduced. They were also without those heads of departments in the line of commissaries or quarter masters, which are necessary for the regular and economical supply of armies. The troops from Connecticut had proper officers appointed to procure them supplies, but they who came from the other colonies were not so well furnished. Individuals brought to camp their own provisions on their own horses. In some parts committees of supplies were appointed, who purchased necessaries at public expence, sent them on to camp, and distributed them to such as were in want, without any regularity or system; the country afforded provisions, and nothing more was wanting to supply the army than proper systems for their collection and distribution. Other articles, though equally necessary, were almost wholly deficient, and could not be procured but with difficulty. On the 4th of August the whole stock of powder in the American camp, and in the public magazines of the four New-England provinces, would make but little more than nine rounds a man. The continental army remained in this destitute condition for a fortnight or more. This was generally known among themselves, and was also communicated to the British, by a deserter, but they suspecting a plot would not believe it. A supply of a few tons was sent on to them from the committee of Elizabeth-town, but this was done privately, lest the adjacent inhabitants, who were equally destitute [223] should stop it for their own use.

The public rulers in Massachusetts issued a recommendation to the inhabitants, not to fire a gun at beast, bird or mark, in order that they might husband their little stock for the more necessary purpose of shooting men. A supply of several thousand pounds weight of powder, was soon after obtained from Africa in exchange for New-England rum. This was managed with so much address, that every ounce for sale in the British forts on the African coasts, was purchased up and brought off for the use of the Americans.

1775

Embarrassments from various quarters occurred in the formation of a continental army. The appointment of general officers made by Congress, was not satisfactory. Enterprising leaders had come forward with their followers on the commencement of hostilities, without scrupulous attention to rank. When these were all blended together, it was impossible to assign to every officer the station which his services merited, or his vanity demanded. Materials for a good army were collected. The husbandmen who flew to arms were active, zealous, and of unquestionable courage, but to introduce discipline and subordination, among free men who were habituated to think for themselves, was an arduous labour.

The want of system and of union, under proper heads, pervaded every department. From the circumstance that the persons employed in providing necessaries for the army were unconnected with each other, much waste and unnecessary delays were occasioned. The troops of the different colonies came into service under variant establishments—some were enlisted with the express condition of choosing their officers. The rations promised by the local legislatures varied both as to quantity, quality and price. To form one uniform mass of these discordant materials, and to subject the licentiousness of independent freemen to the controul of military discipline, was a delicate and difficult business.

The continental army put under the command of general Washington, amounted to about 14,500 men.

These had been so judiciously stationed round Boston, as [224] to confine the British to the town, and to exclude them from the forage and provisions which the adjacent country and islands in Boston-bay afforded. This force was thrown into three grand divisions. General Ward commanded the right wing at Roxbury. General Lee the left at Prospect-hill, and the centre was commanded by general Washington. In arranging the army, the military skill of adjutant-general Gates was of great service. Method and punctuality were introduced. The officers and privates were taught to know their respective places, and to have the mechanism and movements as well as the name of an army.

1775

When some effectual pains had been taken to discipline the army, it was found that the term for which enlistments had taken place, was on the point of expiring. The troops from Connecticut and Rhode-Island were only engaged till the 1st day of December 1775, and no part of the army longer than the first day of January 1776. Such mistaken apprehensions respecting the future conduct of Great-Britain prevailed, that many thought the assumption of a determined spirit of resistance would lead to a redress of all their grievances.

Towards the close of the year, general Gage sailed for England, and the command devolved on general Howe.

Oct. 10

The Massachusetts assembly and continental Congress both resolved, to fit out armed vessels to cruise on the American coast, for the purpose of interrupting warlike stores and supplies designed for the use of the British army. The object was at first limited, but as the prospect of accommodation vanished, it was extended to all British property afloat on the high seas. The Americans were diffident of their ability to do any thing on water in opposition to the greatest naval power in the world, but from a combination of circumstances, their first attempts were successful.

Nov.

The Lee privateer, captain Manly, took the brig Nancy, an ordnance ship from Woolwich, containing a large brass mortar, several pieces of brass cannon, a large quantity of arms and ammunition, with all manner of tools, [225]

Nov. 29

utensils and machines, necessary for camps and artillery. Had Congress sent an order for supplies, they could not have made

1775

out a list of articles more suitable to their situation, than what was thus providentially thrown into their hands.

In about 9 days after three ships, with various stores for the British army, and a brig from Antigua with rum, were taken by capt. Manly. Before five days more had elapsed, several other store ships were captured. By these means the distresses of the British troops, in Boston, were increased, and supplies for the continental army were procured. Naval captures, being unexpected, were matter of triumph to the Americans, and of surprize to the British. The latter scarcely believed that the former would oppose them by land with a regular army, but never suspected that a people, so unfurnished as they were with many things necessary for arming vessels, would presume to attempt any thing on water. A spirit of enterprize, invigorated by patriotic zeal, prompted the hardy New Englandmen to undertake the hazardous business, and their success encouraged them to proceed.

Dec. 8

Before the close of the year, Congress determined to build 5 vessels of 32 guns, 5 of 28, and 3 of 24. While the Americans were fitting out armed vessels, and before they had made any captures, an event took place which would have disposed a less determined people to desist from provoking the vengeance of the British navy. This was the burning of Falmouth in the northern parts of Massachusetts.

Dec. 13

Captain Mowat, in the Canceaux of sixteen guns, destroyed 139 houses and 278 stores, and other buildings in that town.

Oct. 18

This spread an alarm on the coast, but produced no disposition to submit, many moved from the sea ports with their families and effects, but no solicitations were preferred for the obtaining of British protection.

In a few days after the burning of Falmouth, the old south meeting house in Boston, was taken into possession by the British, and destined for a riding school, and the service of the light dragoons. These proceedings produced, in the minds of the colonists, a more determined spirit of resistance, and a more general aversion to Great-Britain.

CHAPTER VIII

Ticonderoga Taken, And Canada Invaded.

[226]

It early occurred to many, that if the sword decided the controversy between Great-Britain and her colonies, the possession of Ticonderoga would be essential to the security of the latter. Situated on a promontory, formed at the junction of the waters of lake George and lake Champlain, it is the key of all communication between New-York and Canada. Messrs. Deane, Wooster, Parsons, Stevens, and others of Connecticut, planned a scheme for obtaining possession of this valuable post. Having procured a loan of 1800 dollars of public money, and provided a sufficient quantity of powder and ball, they set off for Bennington, to obtain the co-operation of colonel Allen of that place. Two hundred and seventy men, mostly of that brave and hardy people, who are called green mountain boys, were speedily collected at Castleton, which was fixed on as the place of rendezvous. At this place colonel Arnold, who, though attended only with a servant, was prosecuting the same object, unexpectedly joined them. He had been early chosen a captain of a volunteer company, by the inhabitants of New-Haven, among whom he resided. As soon as he recieved news of the Lexington battle, he marched off with his company for the vicinity of Boston, and arrived there, though 150 miles distant, in a few days. Immediately after his arrival he waited on the Massachusetts committee of safety, and informed them, that there were at Ticonderoga many pieces of cannon and a great quantity of valuable stores, and that the fort was in a ruinous condition, and garrisoned only by about 40 men. They appointed him a colonel, and commissioned him to raise 400 men, and to take Ticonderoga. The leaders of the party which had previously rendezvoused at Castleton, admitted colonel Arnold to join them, and it was agreed that colonel Allen should be the commander in chief of the expedition, and that colonel Arnold should be his assistant. They proceeded without delay, and arrived in the night at lake Champlain, opposite to Ticonderoga. [227] Allen and Arnold crossed over with 83 men, and landed near the garrison. They contended who should go in first, but it was at last agreed that they should both go in together.

1775

They advanced abreast, and entered the fort at the dawning of day.

May 9

A sentry snapped his piece at one of them, and then retreated through the covered way to the parade. The Americans followed and immediately drew up. The commander surprised in his bed, was called upon to surrender the fort. He asked, by what authority? Colonel Allen replied, "I demand it in the name of the great Jehovah, and the Continental Congress." No resistance was made, and the fort with its valuable stores, and forty-eight prisoners, fell into the hands of the Americans. The boats had been sent back for the remainder of the men, but the business was done before they got over. Colonel Seth Warner was sent off with a party to take possession of Crown-point, where a serjeant and 12 men performed garrison duty. This was speedily effected. The next object, calling for the

May 10

attention of the Americans, was to obtain the command of lake Champlain, but to accomplish this, it was necessary for them to get possession of a sloop of war, lying at St. John's, at the northern extremity of the lake. With the view of capturing this sloop it was agreed to man and arm a schooner lying at South Bay, and that Arnold should command her, and that Allen should command some batteaux on the same expedition. A favourable wind carried the schooner a-head of the batteaux, and colonel Arnold got immediate possession of the sloop by surprise. The wind again favouring him, he returned with his prize to Ticonderoga, and rejoined colonel Allen. The latter soon went home, and the former with a number of men agreed to remain there in garrison. In this rapid manner the possession of Ticonderoga, and the command of lake Champlain was obtained, without any loss, by a few determined men. Intelligence of these events was in a few days communicated to Congress, which met for the first time, at 10 o'clock of the same day, in the morning of which, Ticonderoga was taken. They rejoiced in the spirit of enterprise, displayed by their [228] 1775 countrymen, but feared the charge of being aggressors, or of doing any thing to widen the breach between Great-Britain and the colonies; for an accommodation was at that time, nearly their unanimous wish. They therefore recommended to the committees of the cities and counties of New-York and Albany, to cause the cannon and stores to be removed from Ticonderoga to the south end of lake George, and to take an exact inventory of them, "in order that they might be safely returned when the restoration of the former harmony between Great-Britain and the colonies, so ardently wished for by the latter, should render it prudent and consistent with the overruling law of self-preservation."

Colonel Arnold having begun his military career with a series of 1775 successes, was urged by his native impetuosity to project more extensive operations. He wrote a letter to Congress, strongly urging an expedition into Canada, and offering with 2000 men to reduce the whole province. In his ardent zeal to oppose Great-Britain, he had advised the adoption of offensive war, even before Congress had organised an army or appointed a single military officer. His importunity was at last successful, as shall hereafter be related, but not till two months had elapsed, subsequent to his first proposition of conducting an expedition against Canada. Such was the increasing fervor of the public mind in 1775, that what, in the early part of the year, was deemed violent and dangerous, was in its progress pronounced both moderate and expedient.

Sir Guy Carleton, the king's governor in Canada no sooner heard that the Americans had surprised Ticonderoga and Crown-point, and obtained the command of lake Champlain, than he planned a scheme for their recovery. Having only a few regular troops under his command, he endeavored to induce the Canadians and Indians to cooperate with him, but they both declined. He established martial law that he might compel the inhabitants to take arms. They declared themselves ready to defend the province, but refused to march out of it, or to commence hostilities on their neighbors. Colonel Johnston had, on the same occasion, repeated 1775 conferences with the [229] Indians, and endeavored to influence them to take up the hatchet, but they steadily refused. In order to gain their cooperation he invited them to feast on a Bostonian, and to drink his blood. This, in the Indian style, meant no more than to partake of a roasted ox and a pipe of wine, at a

public entertainment, which was given on design to influence them to co-operate with the British troops. The colonial patriots, affected to understand it in its literal sense. It furnished, in their mode of explication, a convenient handle for operating on the passions of the people.

These exertions in Canada, which were principally made with a view to recover Ticonderoga, Crown-point, and the command of lake Champlain, induced Congress to believe that a formidable invasion of their northwestern frontier was intended, from that quarter. The evident tendency of the Quebec act favoured this opinion. Believing it to be the fixed purpose of the British ministry to attack the united colonies on that side, they conceived that they would be inexcusable if they neglected the proper means for warding off so terrible a blow. They were also sensible that the only practicable plan to effect this purpose, was to make a vigorous attack upon Canada, while it was unable to resist the unexpected impression. Their success at Ticonderoga and Crown-point, had already paved the way for this bold enterprize, and had broken down the fences which guarded the entrance into that province. On the other hand, they were sensible that by taking this step, they changed at once the whole nature of the war. From defensive it became offensive, and subjected them to the imputation of being the aggressors. They were well aware that several who had espoused their cause in Britain, would probably be offended at this measure, and charge them with heightening the mischiefs occasioned by the dispute. They knew that the principles of resistance, as far as they had hitherto acted upon them, were abetted by a considerable party even in Great-Britain; and that to forfeit their good opinion, might be of great disservice. Considerations of this kind made them weigh well the important step before [230] they ventured upon it.

They on the other hand reflected that the eloquence of the minority in parliament, and the petitions and remonstrances of the merchants in Great-Britain, had produced no solid advantages in their favour; and that they had no chance of relief, but from the smiles of heaven on their own endeavors. The danger was pressing. War was not only inevitable, but already begun. To wait till they were attacked by a formidable force at their backs, in the very instant when their utmost exertions would be requisite, perhaps insufficient, to protect their cities and sea coast against an invasion from Britain, would be the summit of folly. The laws of war and of nations justified the forestalling of an enemy. The colonists argued that to prevent known hostile intentions, was a matter of self defence; they were also sensible they had already gone such lengths as could only be vindicated by arms; and that if a certain degree of success did not attend their resistance, they would be at the mercy of an irritated government, and their moderation in the single instance of Canada, would be an unavailing plea for indulgence. They were also encouraged to proceed, by certain information that the French inhabitants of Canada, except the noblesse and the clergy, were as much discontented with their present system of government as even the British settlers. It seemed therefore probable, that they would consider the provincials, rather as friends than as enemies. The invasion of that province was therefore determined upon, if found practicable, and not disagreeable to the Canadians.

Congress had committed the management of their military arrangements, in this northern department, to general Schuyler and general Montgomery. While the former

remained at Albany, to attend an Indian treaty, the latter was sent forward to Ticonderoga, with a body of troops from New-York and New-England. Soon after reaching Ticonderoga, he made a movement down Lake Champlain. General Schuyler overtook him at Cape le Motte; from thence they moved on to Isle aux Noix.

About this time general Schuyler addressed the inhabitants informing them, “that the only views of [231] Congress were to

1775

restore to them those rights which every subject of the British empire, of whatever religious sentiments he may be, is entitled to; and that in the execution of these truths he had received the most positive orders to cherish every Canadian, and every friend to the cause of liberty, and sacredly to guard their property.”

The Americans, about 1000 in number, effected a landing at St.

Sep. 10

John’s, which being the first British post in Canada, lies only 115

miles to the northward of Ticonderoga. The British piquets were driven into the fort. The environs were then reconnoitered, and the fortifications were found to be much stronger than had been suspected. This induced the calling of a council of war, which recommended a retreat to Isle aux Noix, twelve miles south of St. John’s, to throw a boom across the channel, and to erect works for its defence. Soon after this event, an extreme bad state of health induced general Schuyler to retire to Ticonderoga, and the command devolved on general Montgomery.

This enterprising officer in a few days returned to the vicinity of St. John’s, and opened a battery against it. Ammunition was so scarce, that the siege could not be carried on with any prospect of speedy success. The general detached a small body of troops, to attempt the reduction of fort Chamblee, only six miles distant. Success attended this enterprize. By its surrender six tons of gun powder were obtained, which enabled the general to prosecute the siege of St. John’s with vigor. The garrison, though straitened for provisions, persevered in defending themselves with unabating fortitude. While general Montgomery was prosecuting this siege, the governor of the province collected, at Montreal, about 800 men chiefly militia and Indians. He endeavored to cross the river St. Lawrence, with this force, and to land at Lonqueil, intending to proceed thence to attack the besiegers, but colonel Warner with 300 green mountain boys, and a four pounder, prevented the execution of the design. The governor’s party was suffered to come near the shore, but was then fired upon with such effect as to make them retire after sustaining great loss.

[232] An account of this affair being communicated to the garrison in St. John’s, major Preston, the commanding officer surrendered, on receiving honorable terms of capitulation. By these it was agreed, that the garrison should march out with the honors of war, that the officers and privates should ground their arms on the plain—the officers keep their side arms and their fire arms, be reserved for them, and that the people of the garrison should retain their effects. About 500 regulars and 100 Canadians became prisoners to the provincials. They also acquired 39 pieces of cannon, seven mortars, and two howitzers, and about 800 stand of arms. Among the cannon were many brass field pieces, an article of which the Americans were nearly destitute.

While the siege of St. John’s was pending, colonel Allen, who was returning with about 80 men from a tour on which he had been sent by his general, was captured by

the British near Montreal, loaded with irons, and in that condition sent to England. Major Brown proposed that colonel Allen should return to Lonqueil, procure canoes, and cross the river St. Lawrence, a little to the north of Montreal, while he with a force of about 200 men crossed a little to the south of it. The former crossed in the night, but the latter by some means failed on his part. Colonel Allen found himself the next morning unsupported, and exposed to immediate danger, but nevertheless concluded on maintaining his ground. General Carleton, knowing his weakness, marched out against him with a superior force. The colonel defended himself with his wonted bravery, but being deserted by several of his party, and having lost fifteen of his men, he was compelled to surrender with the remainder amounting to 38.

After the reduction of St. John's, general Montgomery proceeded towards Montreal. The few British forces there, unable to stand their ground, repaired for safety on board the shipping in hopes of escaping down the river, but they were prevented by colonel Easton, who was stationed at the point of Sorel river, with a number of continental troops, some cannon, and an armed gondola. [233]

General Prescott, who was on board with several officers, and about 120 privates, having no chance of escape, submitted to be prisoners on terms of capitulation. Eleven sail of vessels, with all their contents, consisting of ammunition, provision, and entrenching tools, became the property of the provincials. Governor Carleton, was about this time conveyed in a boat with muffled paddles, by a secret way to the Three Rivers, and from thence to Quebec in a few days.

1775

When Montreal was evacuated by the troops, the inhabitants applied to general Montgomery for capitulation. He informed them, that as they were defenseless, they could not expect such a concession, but he engaged upon his honour to maintain the individuals and religious communities of the city, in the peaceable enjoyment of their property, and the free exercise of their religion. In all his transactions, he spoke, wrote, and acted, with dignity and propriety, and in particular treated the inhabitants with liberality and politeness.

Montreal which at this time surrendered to the provincials carried on an extensive trade, and contained many of those articles, which from the operation of the resolutions of Congress, could not be imported into any of the united colonies. From these stores the American soldiers, who had hitherto suffered from the want of suitable clothing, obtained a plentiful supply.

General Montgomery, after leaving some troops in Montreal, and sending detachments into different parts of the province to encourage the Canadians, and to forward provisions, advanced towards the capital. His little army arrived with expedition before Quebec. Success had hitherto crowned every attempt of general Montgomery, but notwithstanding, his situation was very embarrassing. Much to be pitied is the officer, who having been bred to arms, in the strict discipline of regular armies, is afterwards called to command men who carry with them the spirit of freedom into the field.

The greater part of the Americans, officers as well as soldiers, having never seen any service, were ignorant of their duty, and

1775

but feebly impressed with the military ideas of union, subordination [234] and discipline. The army was continental in name and pay, but in no other respect. Not only the troops of different colonies conceived themselves independent of each other, but in some instances the different regiments of the same colony, were backward to submit to the orders of officers in a higher grade of another line. They were also soon tired of a military life. Novelty and the first impulse of passion had led them to camp; but the approaching cold season, together with the fatigues and dangers incident to war, induced a general wish to relinquish the service. Though by the terms of their enlistment, they were to be discharged in a few weeks, they could not brook an absence from their homes for that short space of time. The ideas of liberty and independence, which roused the colonists to oppose the claims of Great-Britain, operated against that implicit obedience which is necessary to a well regulated army.

Even in European states, where long habits have established submission to superiors as a primary duty of the common people, the difficulty of governing recruits, when first led to the field from civil occupations, is great; but to exercise discipline over freemen, accustomed to act only from the impulse of their own minds, required not only a knowledge of human nature, but an accommodating spirit, and a degree of patience which is rarely found among officers of regular armies. The troops under the immediate command of general Montgomery, were from their usual habits, averse to the ideas of subordination, and had suddenly passed from domestic ease, to the numberless wants and distresses which are incident to marches through strange and desert countries. Every difficulty was increased by the short term for which they were enlisted. To secure the affections of the Canadians, it was necessary for the American general to restrain the appetites, and control the licentiousness of his soldiery, while the appearance of military harshness was dangerous, lest their good will might be forfeited. In this choice of difficulties, the genius of Montgomery surmounted many obstacles.

During his short but glorious [235] career, he conducted with so much prudence, as to make it doubtful whether we ought to admire most the goodness of the man, or the address of the general.

1775

About the same time that Canada was invaded, in the usual route from New-York, a considerable detachment from the American army at Cambridge, was conducted into that royal province by a new and unexpected passage.

Colonel Arnold, who successfully conducted this bold undertaking, thereby acquired the name of the American

Sep. 13

Hannibal. He was detached with a thousand men, from Cambridge to penetrate into Canada, by ascending the river Kennebeck, and descending by the Chaundiere to the river St. Lawrence. Great were the difficulties these troops had to encounter in marching by an unexplored route, 300 miles through an uninhabited country. In ascending the Kennebeck, they were constantly obliged to work upwards against an impetuous current. They were often compelled by cataracts or other impediments, to land and to haul their batteaux up rapid streams, and over falls of rivers. Nor was their march by land more eligible than this passage by water. They had deep swamps, thick woods, difficult mountains, and craggy precipices alternatively to encounter. At some places they had to cut their way for miles together through forests so embarrassed, that their progress was only four or five miles a day. The constant fatigue caused

many men to fall sick. One third of the number which set out, were from want of necessaries obliged to return; the others proceeded with unabated fortitude and constancy. Provisions grew at length so scarce, that some of the men ate their dogs, cartouch boxes, breeches and shoes. When they were an hundred miles from any habitation or prospect of a supply their whole store was divided, which yielded four pints of flour for each man. After they had baked and eaten their last morsel, they had thirty miles to travel before they could expect any farther supply. The men bore up under these complicated distresses with the greatest fortitude. They gloried in the hope of completing a march which would rival the fame of similar expeditions undertaken by the heroes of antiquity. [236]

Having spent thirty one days in traversing a hideous wilderness, 1775 without ever seeing anything human, they at length reached the inhabited parts of Canada. They were there well received, and supplied with every thing necessary for their comfort. The Canadians were struck with amazement when they saw this armed force emerging from the wilderness. It had never entered their conceptions that it was possible for human beings to traverse such immense wilds. The most pointed instructions had been given to this corps, to conciliate the affections of the Canadians. It was particularly enjoined upon them, if the son of lord Chatham, then an officer in one of the British regiments in that province, should fall into their hands, to treat him with all possible attention, in return for the great exertions of his father in behalf of American liberty. A manifesto subscribed by general Washington, which had been sent from Cambridge with this detachment, was circulated among the inhabitants of Canada. In this they were invited to arrange themselves under the standard of general liberty; and they were informed that the American army was sent into the province, not to plunder but to protect them.

While general Montgomery lay at Montreal, colonel Arnold Nov. 8 arrived at Point Levy, opposite to Quebec. Such was the consternation of the garrison and inhabitants at his unexpected appearance, that had not the river intervened, an immediate attack in the first surprize and confusion, might have been successful. The bold enterprise of one American army marching through the wilderness, at a time when success was crowning every undertaking of another invading in a different direction, struck terror into the breasts of those Canadians who were unfriendly to the designs of Congress. The embarrassments of the garrison were increased by the absence of sir Guy Carleton. That gallant officer, on hearing of Montgomery's invasion, prepared to oppose him in the extremes of the province. While he was collecting a force to attack invaders in one direction, a different corps, emerging out of the depths of an unexplored wilderness, suddenly appeared from another.

In a few days after colonel Arnold [237] had arrived at Point 1775 Levy, he crossed the river St. Lawrence, but his chance of succeeding by a coup de main was in that short space greatly diminished. The critical moment was past. The panic occasioned by his first appearance had abated, and solid preparations for the defence of the town were adopted. The inhabitants, both English and Canadians as soon as danger pressed, united for their common defence. Alarmed for their property, they were, at their own request, embodied for its security. The sailors were taken from the shipping in the harbour, and put to the batteries on shore. As colonel Arnold had no artillery, after parading some days on the heights near

Quebec, he drew off his troops, intending nothing more until the arrival of Montgomery, than to cut off supplies from entering the garrison.

So favourable were the prospects of the united colonies at this period, that general Montgomery set on foot a regiment of Canadians, to be in the pay of Congress. James Livingston, a native of New York, who had long resided in Canada, was appointed to the command thereof, and several recruits were engaged for the term of twelve months. The inhabitants on both sides of the river St. Laurence, were very friendly. Expresses in the employ of the Americans, went without molestation, backwards and forwards, between Montreal and Quebec. Many individuals performed signal services in favour of the invading army. Among a considerable number Mr. Price stands conspicuous, who advanced 5000£. in specie, for their use.

Various causes had contributed to attach the inhabitants of Canada, especially those of the inferior classes, to the interest of Congress, and to alienate their affections from the government of Great-Britain. The contest was for liberty, and there is something in that sound, captivating to the mind of man in a state of original simplicity. It was for the colonies, and Canada was also a colony. The objects of the war were therefore supposed to be for their common advantage. The form of government lately imposed on them by act of parliament, was far from being so free as the constitutions of the other [238] colonies, and was in many respects particularly oppressive.

The common people had no representative share in enacting the laws by which they were to be governed, and were subjected to the arbitrary will of persons, over whom they had no constitutional control.

1775

Distinctions so degrading were not unobserved by the native Canadians, but were more obvious to those who had known the privileges enjoyed in the neighbouring provinces. Several individuals educated in New-England and New-York, with the high ideas of liberty inspired by their free constitutions, had in the interval between the peace of Paris 1763, and the commencement of the American war, migrated into Canada. Such, sensibly felt the difference between the governments they had left, and the arbitrary constitution imposed on them, and both from principle and affection, earnestly persuaded the Canadians to make a common cause with the United Colonies.

Though motives of this kind induced the peasantry of the country to espouse the interest of Congress, yet sundry individuals, and some whole orders of men, threw the weight of their influence into the opposite scale. The legal privileges which the Roman Catholic clergy enjoyed, made them averse to a change, lest they should be endangered by a more intimate connection with their protestant neighbours. They used their influence in the next world, as an engine to operate on the movements of the present. They refused absolution to such of their flocks as abetted the Americans. This interdiction of the joys of heaven, by those who were supposed to hold the keys of it, operated powerfully on the opinions and practices of the superstitious multitude. The seigneurs had also immunities unknown in the other colonies. Such is the fondness for power in every human breast, that revolutions are rarely favoured by any order of men who have reason to apprehend that their future situation will, in case of a change, be less pre-eminent than before. The sagacious general Montgomery, no less

a man of the world than an officer, discovered great address in accommodating himself to these clashing interests.

Though he knew the part the popish clergy had acted in opposition [239] to him, yet he conducted towards them as if totally ignorant of the matter; and treated them and their religion with great respect and attention. As far as he was authorised to promise, he engaged that their ecclesiastical property should be secured, and the free exercise of their religion continued. To all he held forth the flattering idea of calling a convention of representatives, freely chosen, to institute by its own will, such a form of government as they approved. While the great mind of this illustrious man, was meditating schemes of liberty and happiness, a military force was collecting and training to oppose him, which in a short time put a period to his valuable life.

1775

At the time the Americans were before Montreal, general Carleton, as has been related, escaped through their hands, and got safe to Quebec. His presence was itself a garrison. The confidence reposed in his talents, inspired the men under his command to make the most determined resistance. Soon after his arrival he issued a proclamation, setting forth, "That all persons liable to do militia duty, and residing in Quebec, who refused to arm in conjunction with the royal army, should in four days quit Quebec with their families, and withdraw themselves from the limits of the district by the first of December, on pain of being treated afterwards as spies or rebels." All who were unwilling to co-operate with the British army, being thus disposed of, the remaining inhabitants, though unused to arms, became in a little time so far acquainted with them as to be very useful in defending the town. They supported fatigues and submitted to command with a patience and cheerfulness, that could not be exceeded by men familiarized to the hardships and subordination of a military life.

General Montgomery having effected at Point aux Trembles, a junction with colonel Arnold, commenced the siege of Quebec. Upon his arrival before the town, he wrote a letter to the British governor, recommending an immediate surrender, to prevent the dreadful consequences of a storm.

Dec. 1

Though the flag which conveyed this letter was fired upon, and all communication refused, [240] general Montgomery found other means to convey a letter of the same tenor into the garrison, but the inflexible firmness of the governor could not be moved either by threats or dangers. The Americans soon after commenced a bombardment with five small mortars, but with very little effect. In a few days general Montgomery opened a six gun battery, at the distance of seven hundred yards from the walls, but his metal was too light to make any impression.

1775

The news of general Montgomery's success in Canada had filled the colonies with expectations, that the conquest of Quebec would soon add fresh lustre to his already brilliant fame. He knew well the consequences of popular disappointment, and was besides of opinion that unless something decisive was immediately done, the benefit of his previous acquisitions would in a great degree be lost to the American cause. On both accounts, he was strongly impelled to make every exertion for satisfying the

expectations and promoting the interest of a people, who had honoured him with so great a share of their confidence. The government of Great-Britain, in the extensive province of Canada, was at that time reduced to the single town of Quebec. The astonished world saw peaceable colonists suddenly transformed into soldiers, and these marching through unexplored wildernesses, and extending themselves by conquests, in the first moment after they had assumed the profession of arms. Towards the end of the year, the tide of fortune began to turn. Dissentions broke out between colonel Arnold and some of his officers, threatening the annihilation of discipline. The continental currency had no circulation in Canada, and all the hard money furnished for the expedition, was nearly expended. Difficulties of every kind were daily increasing. The extremities of fatigue were constantly to be encountered. The American general had not a sufficient number of men to make the proper reliefs in the daily labours they underwent; and that inconsiderable number, worn down with toil, was constantly exposed to the severities of a Canada winter. The period for which a great part of his men had enlisted, being on the point of expiration, [241] he apprehended that they who were entitled to it, would insist on their discharge. On the other hand, he saw no prospect of staggering the resolution of the garrison. They were well supplied with every thing necessary for their defence, and were daily acquiring additional firmness. The extremity of winter was fast approaching. From these combined circumstances, general Montgomery was impressed with a conviction, that the siege should either be raised, or brought to a summary termination. To storm the place was the only feasible method of effecting the latter purpose. But this was an undertaking, in which success was but barely possible. Great minds are seldom exact calculators of danger. Nor do they minutely attend to the difficulties which obstruct the attainment of their objects. Fortune, in contempt of the pride of man, has ever had an influence in the success or failure of military enterprises. Some of the greatest achievements, of that kind, have owed their success to a noble contempt of common forms.

1775

The upper part of Quebec was surrounded with very strong works, and the access from the lower town was excessively difficult, from its almost perpendicular steepness. General Montgomery, from a native intrepidity, and an ardent thirst for glory, overlooked all these dangers, and resolved at once either to carry the place or perish in the attempt. Trusting much to his good fortune—confiding in the bravery of his troops, and their readiness to follow whithersoever he should lead; and depending somewhat on the extensiveness of the works, he determined to attempt the town by escalade.

The garrison of Quebec at this time consisted of about 1520 men, of which 800 were militia, and 450 were seamen, belonging to the king's frigates, or merchant ships in the harbour. The rest were marines, regulars, or colonel Maclean's new raised emigrants. The American army consisted of about 800 men. Some had been left at Montreal, and near a third of Arnold's detachment, as has been related, had returned to Cambridge.

General Montgomery having divided this little force into four detachments, ordered two feints to be made [242] against the upper town, one by colonel Livingston, at the head of the Canadians against St. John's gate; and the other by major Brown, against

cape Diamond, reserving to himself and colonel Arnold the two principal attacks, against the lower town.

At five o'clock in the morning general Montgomery advanced against the lower town. He passed the first barrier, and was just opening to attack the second, when he was killed, together with his aid de camp, captain John M'Pherson, captain Cheesman, and some others. This so dispirited the men that colonel Campbell, on whom the command devolved, thought proper to draw them off. In the mean time colonel Arnold, at the head of about 350 men, passed through St. Roques, and approached near a two gun battery, without being discovered. This he attacked, and though it was well defended, carried it, but with considerable loss. In this attack colonel Arnold received a wound, which made it necessary to carry him off the field of battle. His party nevertheless continued the assault, and pushing on, made themselves masters of a second barrier. These brave men sustained the force of the whole garrison for three hours, but finding themselves hemmed in, and without hopes either of success, relief or retreat, they yielded to numbers, and the advantageous situation of their adversaries. The loss of the Americans in killed and wounded, was about 100, and 300 were taken prisoners. Among the slain were captain Kendricks, lieutenant Humphries, and lieutenant Cooper. The behaviour of the provincial troops was such as might have silenced those who had reproached them for being deficient in courage. The most experienced veterans could not have exceeded the firmness they displayed in their last attack. The issue of this assault relieved the garrison of Quebec from all apprehensions for its safety. The provincials were so much weakened, as to be scarcely equal to their own defence. However, colonel Arnold had the boldness to encamp within three miles of the town, and had the address, even with his reduced numbers, to impede the conveyance of refreshments and provisions into the garrison. His situation was extremely difficult.

Dec. 31

He was [243] at an immense distance from those parts where effectual assistance could be expected. On his first entrance into the province, he had experienced much kind treatment from the inhabitants. The Canadians, besides being fickle in their resolutions, are apt to be biassed by success. Their disposition to aid the Americans, became therefore daily more precarious. It was even difficult to keep the provincial troops from returning to their respective homes. Their sufferings were great. While their adversaries were comfortably housed in Quebec, they were exposed in the open air to the extreme rigour of the season. The severity of a Canada winter was far beyond any thing with which they were acquainted. The snow lay above four feet deep on a level.

1775

This deliverance of Quebec may be considered as a proof how much may be done by one man for the preservation of a country. It also proves that soldiers may in a short time be formed out of the mass of citizens.

The conflict being over, the ill will which had subsisted, during the siege, between the royal and provincial troops gave way to sentiments of humanity. The Americans, who surrendered, were treated with kindness. Ample provisions were made for their wounded, and no unnecessary severity shewn to any. Few men have ever fallen in battle, so much regretted by both sides, as general Montgomery. His many amiable qualities had procured him an uncommon share of private affection, and his great abilities an equal proportion of public esteem. Being a sincere lover of liberty, he had

engaged in the American cause from principle, and quitted the enjoyment of an easy fortune, and the highest domestic felicity, to take an active share in the fatigues and dangers of a war, instituted for the defence of the community of which he was an adopted member. His well known character was almost equally esteemed by the friends and foes of the side which he had espoused. In America he was celebrated as a martyr to the liberties of mankind; in Great-Britain as a misguided, good man, sacrificing to what he supposed to be the rights of his country. His name was mentioned in parliament with singular respect.

Some of the most [244] powerful speakers in that illustrious assembly, displayed their eloquence in sounding his praise and lamenting his fate. Those in particular who had been his fellow soldiers in the late war, expatiated on his many virtues. The minister himself acknowledged his worth, while he reprobated the cause for which he fell. He concluded an involuntary panegyric, by saying, "Curse on his virtues, they have undone his country."

1775

Though the invasion of Canada was finally unsuccessful, yet the advantages which the Americans gained in the months of September and October, gave fresh spirits to their army and people. The boldness of the enterprise, might have taught Great-Britain the folly of persisting in the design of subjugating America. But instead of preserving the union, and restoring the peace of the empire by repealing a few of her laws, she from mistaken dignity, resolved on a more vigorous prosecution of the war.

CHAPTER IX

Transactions In Virginia, The Carolinas, Georgia, And The General State Of Public Affairs In The Colonies.

It has already been mentioned, that the colonists from the rising of Congress in October 1774, and particularly after the Lexington battle, were attentive to the training their militia, and making the necessary preparations for their defence.

The effects of their arrangements, for this purpose, varied with circumstances.

Where there were no royal troops, and where ordinary prudence was observed, the public peace was undisturbed. In other cases, the intemperate zeal of governors, and the imprudent warmth of the people, anticipated the calamities of war before its proper time. Virginia, though there was not a single British soldier within its limits, was, by the indiscretion of its governor, lord Dunmore, involved, for several months, in difficulties, but little short of those to which the inhabitants of Massachusetts were [245] subjected.

His lordship was but illy fitted to be at the helm in this tempestuous season. His passions predominated over his understanding, and precipitated him into measures injurious both to the people whom he governed, and to the interest of his royal master. The Virginians from the earliest stages of the controversy, had been in the foremost line of opposition to the claims of Great-Britain, but at the same time treated lord Dunmore with the attention that was due to his station. In common with the other provinces they had taken effectual measures to prepare their militia for the purposes of defence.

1775

While they were pursuing this object, his lordship engaged a party belonging to a royal vessel in James' river, to convey some public powder from a magazine in Williamsburg on board their ship. The value or quantity of the powder was inconsiderable, but the circumstances attending its removal begat suspicions that lord Dunmore meant to deprive the inhabitants of the means of defence. They were therefore alarmed, and assembled with arms to demand its restitution. By the interposition of the mayor and corporation of Williamsburg, extremities were prevented. Reports were soon after spread that a second attempt to rob the magazine was intended. The inhabitants again took arms, and instituted nightly patrols, with a determined resolution to protect it. The governor was irritated at these commotions, and in the warmth of his temper threatened to set up the royal standard—franchise the negroes, and arm them against their masters. This irritated, but did not intimidate. Several public meetings were held in the different counties, in all of which the removal of the powder from the magazine, and the governor's threats, were severely condemned. Some of the gentlemen of Hanover and the neighbouring counties assembled in arms, under the conduct of Mr. Patrick Henry, and marched towards Williamsburg, with an avowed design to obtain restitution of the powder, and to take measures for securing the public treasury. This ended in a negotiation, by

Apr. 20

which it was agreed that payment for the powder, by [246] the receiver general of the colony, should be accepted in lieu of restitution; and that upon the engagement of the inhabitants of Williamsburg to guard both the treasury and the magazine, the armed parties should return to their habitations.

The alarm of this affair induced lord Dunmore to send his lady and family on board the Fowey man of war in James' river. About the same time his lordship, with the assistance of a detachment of marines, fortified his palace and surrounded it with artillery. He soon after issued a proclamation, in which Mr. Henry and his associates were charged with rebellious practices, and the present commotions were attributed to a desire in the people of changing the established form of government. Several meetings were held in the neighbouring counties, in which the conduct of Mr. Henry and of his associates was applauded, and resolutions were adopted, that at every risque he and they should be indemnified. About this time copies of some letters from governor Dunmore to the minister of the American department were made public. These in the opinion of the Virginians contained unfair and unjust representations of facts, and also of their temper and disposition. Many severe things were said on both sides, and fame as usual, magnified or misrepresented whatever was said or done. One distrust begat another. Every thing tended to produce a spirit of discontent, and the fever of the public mind daily increased.

In this state of disorder the governor convened the general assembly. The leading motive for this unexpected measure, was to procure their approbation and acceptance of the terms of the conciliatory motion agreed to in parliament, on the 20th of the preceding February. His lordship introduced this to their consideration, in a long and plausible speech. In a few days they presented their address in answer, in which, among other grounds of rejection they stated that, "the proposed plan only changed the form of oppression, without lessening its burthen;" but they referred the papers for a final determination, to Congress. For themselves they declared,

[247]

We have exhausted every mode of application which our invention could suggest, as proper and promising. We have decently remonstrated with parliament. They have added new injuries to the old. We have wearied our king with supplications; he has not deigned to answer us. We have appealed to the native honour and justice of the British nation. Their efforts in our favour have been hitherto ineffectual.

1775

The assembly, among their first acts, appointed a committee to enquire into the causes of the late disturbances, and particularly to examine the state of the magazine. They found most of the remaining powder buried; the muskets deprived of their locks, and spring guns planted in the magazine. These discoveries irritated the people, and occasioned intemperate expressions of resentment.

Lord Dunmore quitted the palace privately, and retired on board the Fowey man of war, which then lay near York-town. He left a message for the house of burgesses, acquainting them

May 8

that he thought it prudent to retire to a place of safety, having reason to believe that he was in constant danger of falling a sacrifice to popular fury; he nevertheless, hoped they would proceed in the great business before them; and he engaged to render the communication between him and the house as easy and as safe as possible. He assured them that he would attend as heretofore, to the duties of his office, and that he was well disposed to restore that harmony which had been unhappily interrupted.

This message produced a joint address from the council and house of burgesses, in which they represented his lordship's fears to be groundless, and declared their willingness to concur in any measure he would propose for the security of himself and family; and concluded by entreating his return to the palace. Lord Dunmore in a reply, justified his apprehensions of danger from the threats which had been repeatedly thrown out. He charged the house of burgesses with countenancing the violent proceedings of the people, and with a design to usurp the executive power, and subvert the constitution. This produced a reply fraught with recrimination and defensive [248] arguments. Every incident afforded fresh room for altercation. There was a continued intercourse by addresses, messages and answers, between the house of burgesses and the Fowey, but little of the public business was completed. His lordship was still acknowledged as the lawful governor of the province, but did not think proper to set his foot on shore, in the country over which his functions were to be exercised.

1775

At length, when the necessary bills were ready for ratification, the council and burgesses jointly intreated the governor's presence, to give his assent to them and finish the session. After several messages and answers, lord Dunmore peremptorily refused to meet the assembly at the capital, their usual place of deliberation; but said he would be ready to receive them on the next Monday, at his present residence on board the Fowey, for the purpose of giving his assent to such bills as he should approve of. Upon receiving this answer, the house of burgesses passed resolutions in which they declared, that the message requiring them to attend the governor on board a ship of war, was a high breach of their rights and privileges—that they had reason to fear a dangerous attack was meditated against the colony, and it was therefore their opinion, that they should prepare for the preservation of their rights and liberties. After strongly professing loyalty to the king, and amity to the Mother Country, they broke up their session.

The royal government in Virginia, from that day ceased. Soon after, a convention of delegates was appointed, to supply the place of the assembly. As these had an unlimited confidence reposed in them, they became at once possessed of undefined discretionary powers, both legislative and executive. They exercised this authority for the security of their constituents. They raised and embodied an armed force, and took other measures for putting the colony in a state of defence. They published a justification of their conduct, and set forth the necessity of the measures they had adopted.

July 18

They concluded with professions of loyalty, and declared that though they were determined at every hazard, to maintain their rights and privileges, [249] it was also their fixed resolution to disband such forces as were raised for the defence of the colony, whenever their dangers were removed. The headstrong passions of lord Dunmore precipitated him into farther follies. With the

1775

aid of the loyalists, run away negroes, and some frigates that were on the station, he established a marine force. By degrees, he equipped and armed a number of vessels of different kinds and sizes, in one of which he constantly resided, except when he went on shore in a hostile manner. This force was calculated only for depredation, and never became equal to any essential service. Obnoxious persons were seized and taken on board. Negroes were carried off—plantations ravaged—and houses burnt. These proceedings occasioned the sending of some detachments of the new raised provincial forces to protect the coasts. This produced a predatory war, from which neither honour nor benefit could be acquired, and in which every necessary from on shore was purchased at the risque of blood.

The forces under his lordship attempted to burn Hampton; but Oct. 25 the crews of the royal vessels employed in that business, though they had begun to cannonade it, were so annoyed by riflemen from on shore, that they were obliged to quit their station.

In a few days after this repulse, a proclamation was issued by the Nov. 7 governor, dated on board the ship *William*, off Norfolk, declaring, that as the civil law was at present insufficient to punish treason and traitors, martial law should take place and be executed throughout the colony; and requiring all persons capable of bearing arms, to repair to his majesty's standard, or to be considered as traitors. He also declared all indented servants, negroes and others, appertaining to rebels, who were able and willing to bear arms, and who joined his majesty's forces, to be free.

Among the circumstances which induced the rulers of Great-Britain to count on an easy conquest of America, the great number of slaves had a considerable weight. On the sea coast of five of the most southern provinces, the number of slaves exceeded that of freemen.

It was supposed that the proffer of freedom would detach them 1775 [250] from their master's interest, and bind them by strong ties to support the royal standard. Perhaps, under favourable circumstances, these expectations would in some degree have been realised; but lord Dunmore's indiscretion deprived his royal master of this resource. Six months had elapsed since his lordship first threatened its adoption. The negroes had in a great measure ceased to believe, and the inhabitants to fear. It excited less surprize, and produced less effect, than if it had been more immediate and unexpected. The country was now in a tolerable state of defence, and the force for protecting the negroes, in case they had closed with his lordship's offer, was far short of what would have been necessary for their security. The injury done the royal cause by the bare proposal of the scheme, far outweighed any advantage that resulted from it. The colonists were struck with horror, and filled with detestation of a government which was exercised in loosening the bands of society, and destroying domestic security. The union and vigor which was given to their opposition, was great, while the additional force, acquired by his lordship, was inconsiderable. It nevertheless produced some effect in Norfolk and the adjoining country, where his lordship was joined by several hundreds, both whites and blacks. The governor having once more got footing on the main, amused himself with hopes of acquiring the glory of reducing one part of the province by means of the other. The provincials had now an object against which they might direct their arms. An expedition was therefore concerted against the force which had taken post at

Norfolk. To protect his adherents lord Dunmore constructed a fort at the great bridge, on the Norfolk side, and furnished it with artillery. The provincials also fortified themselves near to the same place, with a narrow causeway in their front. In this state both parties continued quiet for some days.

The royalists commenced an attack. Captain Fordyce, at the head of about 60 British grenadiers, passed the causeway, and boldly marched up to the provincial entrenchments with fixed bayonets.

Dec. 9

They were exposed without cover to the fire of the provincials [251] in front, and enfiladed by another part of their works. The brave captain and several of his men fell. The lieutenant, with others, were taken, and all who survived were wounded. The slaves in this engagement were more prejudicial to their British employers than to the provincials. Captain Fordyce was interred by the victors, with military honors. The English prisoners were treated with kindness, but the Americans who had joined the king's standard, experienced the resentment of their countrymen.

1775

The royal forces, on the ensuing night, evacuated their post at the great bridge, and lord Dunmore shortly after abandoned Norfolk, and retired with his people on board his ships. Many of the tories, a name which was given to those who adhered to the royal interest, sought the same asylum, for themselves and moveable effects. The provincials took possession of Norfolk, and the fleet, with its new incumbrances, moved to a greater distance. The people on board, cut off from all peaceable intercourse with the shore, were distressed for provisions and necessaries of every kind. This occasioned sundry unimportant contests between the provincial forces and the armed ships and boats. At length, on the arrival of the Liverpool man of war from England, a flag was sent on shore to put the question, whether they would supply his majesty's ships with provisions. An answer was returned in the negative. It was then determined to destroy the town.

This was carried into effect, and Norfolk was reduced to ashes.

Jan. 1, 1776

The whole loss was estimated at 300,000£. sterling. The provincials, to deprive the ships of every resource of supply, destroyed the houses and plantations that were near the water, and obliged the people to move their cattle, provisions, and effects, farther into the country. Lord Dunmore, with his fleet, continued for several months on the coast and in the rivers of Virginia. His unhappy followers suffered a complication of distresses. The scarcity of water and provisions, the closeness and filth of the small vessels, produced diseases which were fatal to many, especially to the negroes. Though his whole force was trifling when compared with [252] the resources of Virginia, yet the want of suitable armed vessels made its expulsion impracticable. The experience of that day evinced the inadequacy of land forces for the defence of a maritime country; and the extensive mischief which may be done, by even an inconsiderable marine, when unopposed in its own way. The want of a navy was both seen and felt. Some arrangements to procure one, were therefore made. Either the expectation of an attack from this quarter, or the sufferings of the crews on board, induced his lordship in the summer 1776 to burn the least valuable of his vessels, and to send the remainder, amounting to 30 or 40 sail, to Florida, Bermuda, and the West-Indies. The hopes which lord Dunmore had entertained of subduing Virginia by the cooperation of the negroes, terminated with

this movement. The unhappy Africans who had engaged in it, are said to have almost universally perished.

While these transactions were carrying on, another scheme, in which lord Dunmore was a party, in like manner miscarried. It was in contemplation to raise a considerable force at the back of the colonies, particularly in Virginia and the Carolinas. One Connelly, a native of Pennsylvania, was the framer of the design. He had gained the approbation of lord Dunmore, and had been sent by him to general Gage at Boston, and from him he received a commission to act as colonel commandant. It was intended that the British garrisons at Detroit, and some other remote posts, with their artillery and ammunition, should be subservient to this design. Connelly also hoped for the aid of the Canadians and Indians. He was authorised to grant commissions, and to have the supreme direction of the new forces. As soon as they were in readiness he was to penetrate through Virginia, and to meet lord Dunmore near Alexandria, on the river Potowmac. Connelly was taken up on suspicion, by one of the committees in Maryland, while on his way to the scene of action. The papers found in his possession betrayed the whole. Among these was a general sketch of the plan, and a letter from lord Dunmore to one of the Indian chiefs.

He was imprisoned, [253] and the papers published. So many fortunate escapes induced a belief among serious Americans, that their cause was favoured by heaven. The various projects which were devised and put in operation against them, pointed out the increasing necessity of union, while the havock made on their coasts—the proffer of freedom to their slaves, and the encouragement proposed to Indians for making war on their frontier inhabitants, quickened their resentment against Great-Britain.

North-Carolina was more fortunate than Virginia. The governors of both were perhaps equally zealous for the royal interest, and the people of both equally attached to the cause of America, but the former escaped with a smaller portion of public calamity. Several regulations were at this time adopted by most of the provinces. Councils of safety, committees, and conventions, were common substitutes for regular government. Similar plans for raising, arming and supporting troops, and for training the militia, were from north to south generally adopted. In like manner royal governors throughout the provinces, were exerting themselves in attaching the people to the schemes of Great-Britain. Governor Martin, of North-Carolina, was particularly zealous in this business. He fortified and armed his palace at Newbern, that it might answer the double purpose of a garrison and magazine. While he was thus employed, such commotions were excited among the people, that he thought it expedient to retire on board a sloop of war in Cape Fear river. The people on examining, found powder and various military stores which had been buried in his garden and yard. Governor Martin, though he had abandoned his usual place of residence, continued his exertions for reducing North-Carolina to obedience. He particularly addressed himself to the regulators and Highland emigrants. The former had acquired this name from their attempting to regulate the administration of justice in the remote settlements, in a summary manner subversive of the public peace.

They had suffered the consequences of opposing royal government, and from obvious principles of human nature, were disposed to [254] support the authority whose power to punish they had recently

experienced. The Highland emigrants had been but a short time in America, and were yet more under the influence of European ideas than those which their new situation was calculated to inspire. Governor Martin sent commissions among these people for raising and commanding regiments; and he granted one to Mr. M'Donald to act as their general. He also sent them a proclamation commanding all persons, on their allegiance, to repair to the royal standard. This was erected by general M'Donald, about the middle of February. Upon the first intelligence of their assembling brigadier general Moore, with some provincial troops and militia, and some pieces of cannon, marched to oppose them. He took possession of Rock fish bridge and threw up some works. He had not been there many days when M'Donald approached, and sent a letter to Moore, enclosing the governor's proclamation, and advising him and his party to join the king's standard; and adding, that in case of refusal they must be treated as enemies. To this Moore replied, that he and his officers considered themselves as engaged in a cause the most glorious and honourable in the world, the defence of mankind; and in his turn offered, that if M'Donald's party laid down their arms they should be received as friends, but, otherwise they must expect consequences similar to those which they threatened. Soon after this, general M'Donald with his adherents pushed on to join governor Martin, but colonels Lillington and Caswell, with about 1000 militia men, took possession of Moore's creek bridge, which lay in their way, and raised a small breast work to secure themselves.

On the next morning the Highland emigrants attacked the militia posted at the bridge, but M'Cleod, the second in command, and some more of their officers being killed at the first onset, they fled with precipitation. General M'Donald was taken prisoner, and the whole of his party broken and dispersed. This overthrow produced consequences very injurious to the British interest. A royal fleet and army was expected on the coast. A [255] junction formed between them and the Highland emigrants in the interior country, might have made a sensible impression on the province. From an eagerness to do something, the insurgents prematurely took arms, and being crushed before the arrival of proper support, their spirits were so entirely broken, that no future effort could be expected from them.

1776 Feb. 27

While the war raged only in Massachusetts, each province conducted as under the expectation of being next attacked. Georgia, though a majority of its inhabitants were at first against the measures, yet about the middle of this year, joined the other colonies. Having not concurred in the petitions from Congress to the king, they petitioned by themselves, and stated their rights and grievances, in firm and decided language. They also adopted the continental association, and sent on their deputies to Congress.

In South-Carolina there was an eagerness to be prepared for defence, which was not surpassed in any of the provinces. Regiments were raised—forts were built—the militia trained, and every necessary preparation made for that purpose. Lord William Campbell, the royal governor, endeavoured to form a party for the support of government, and was in some degree successful. Distrusting his personal safety on

shore, about the middle of September, he took up his residence on board an armed vessel, then in the harbour.

The royal government still existed in name and form; but the real power which the people obeyed, was exercised by a provincial congress, a council of safety, and subordinate committees. To conciliate the friendship of the Indians, the popular leaders sent a small supply of powder into their country. They who were opposed to Congress embodied, and robbed the waggons which were employed in its transportation. To inflame the minds of their adherents, they propagated a report that the powder was intended to be given to the Indians, for the purpose of massacring the friends of royal government. The inhabitants took arms, some to support royal government, but others to support the American measures.

The royalists [256] acted feebly and were easily overpowered. They were disheartened by the superior numbers that opposed them. They every where gave way and were obliged either to fly or feign submission. Solicitations had been made about this time for royal forces to awe the southern provinces, but without effect till the proper season was over. One scheme for this purpose was frustrated by a singular device. Private intelligence had been received of an express being sent from Sir James Wright, governor of Georgia, to general Gage. By him the necessity of ordering a part of the royal army to the southward was fully stated. The express was waylaid, and compelled by two gentle men to deliver his letters. One to general Gage was kept back, and another one forwarded in its room. The seal and hand writing were so exactly imitated that the deception was not suspected. The forged letter was received and acted upon. It stated such a degree of peace and tranquility as induced an opinion that there was no necessity of sending royal troops to the southward. While these states were thus left to themselves, they had time and opportunity to prepare for extremities, and in the mean time the friends of royal government were severally crushed. A series of disasters followed the royal cause in the year 1775. General Gage's army was cooped up in Boston, and rendered useless. In the southern states, where a small force would have made an impression, the royal governors were unsupported. Much was done to irritate the colonists and to cement their union, but very little, either in the way of conquest or concession, to subdue their spirits or conciliate their affections.

1776

In this year the people of America generally took their side. Every art was made use of by the popular leaders to attach the inhabitants to their royal cause; nor were the votaries of the royal interest inactive. But little impression was made by the latter, except among the uninformed. The great mass of the wealth, learning, and influence, in all the southern colonies, and in most of the northern, was in favour of the American cause. Some aged persons were exceptions to the contrary.

Attached to ancient habits, and enjoying the fruits of their industry, [257] they were slow in approving new measures subversive of the former, and endangering the latter. A few who had basked in the sunshine of court favour, were restrained by honour, principle and interest, from forsaking the fountain of their enjoyments. Some feared the power of Britain, and others doubted the perseverance of America; but a great majority resolved to hazard every thing in preference to a tame submission. In the beginning of the year, the colonists were farmers, merchants and mechanics; but in its close they had assumed

1776

the profession of soldiers. So sudden a transformation of so numerous, and so dispersed a people, is without a parallel.

This year was also remarkable for the general termination of royal government. This was effected without any violence to its executive officers. The new system was not so much forcibly imposed or designedly adopted, as introduced through necessity, and the imperceptible agency of a common danger, operating uniformly on the mind of the public. The royal governors, for the most part, voluntarily abdicated their governments, and retired on board ships of war. They assigned for reason, that they apprehended personal danger, but this, in every instance, was unfounded. Perhaps these representatives of royalty thought, that as they were constitutionally necessary to the administration of justice, the horrors of anarchy would deter the people from prosecuting their opposition. If they acted from this principle, they were mistaken. Their withdrawing from the exercise of their official duties, both furnished an apology, and induced a necessity, for organising a system of government independent of royal authority. By encouraging opposition to the popular measures, they involved their friends in great distress. The unsuccessful insurrections which they fomented, being improperly timed, and unsupported, were easily overthrown, and actually strengthened the popular government, which they meant to destroy.

CHAPTER X

Transactions In Massachusetts, And Evacuation Of Boston.

[258]

As the year 1775 drew near to a close, the friends of Congress were embarrassed with a new difficulty. Their army was temporary, and only engaged to serve out the year. The object for which they had taken up arms was not yet obtained. Every reason which had previously induced the provinces to embody a military force still existed, and with increasing weight. It was therefore resolved to form a new army. The same flattering hopes were indulged, that an army for the ensuing year would answer every purpose. A committee of Congress, consisting of Dr. Franklin, Mr. Lynch, and Mr. Harrison, repaired to head quarters at Cambridge, and there in conjunction with general Washington made arrangements for organizing an army for the year 1776. It was presumed that the spirit which had hitherto operated on the yeomanry of the country, would induce most of the same individuals to engage for another twelve-month, but on experiment it was found that much of their military ardor had already evaporated. The first impulse of passion, and the novelty of the scene, had brought many to the field, who had great objections against continuing in the military line. They found, that to be soldiers required sacrifices of which, when they assumed that character, they had no idea. So unacquainted were the bulk of the people with the mode of carrying on modern war, that many of them flew to arms with the delusive expectation of settling the whole dispute by a few decisive and immediate engagements. Experience soon taught them to risque life in open fighting, was but a part of the soldier's duty. Several of the inferior officers retired—the men frequently refused to enlist, unless they were allowed to chuse their officers. Others would not engage unless they were indulged with furloughs. Fifty would apply together for leave of absence; indulgence threatened less ruinous consequences than a refusal would probably have produced. On the whole enlistments went on slowly.

1776

Though the recruits [259] for the new army had not arrived, yet the Connecticut troops, whose time expired on the first of December, could not be persuaded to continue in service. On their way home several of them were stopped by the country people and compelled to return. When every thing seemed to be exposed, by the departure of so great a part of the late army, the militia was called on for a temporary aid. A new difficulty obstructed, as well the recruiting of the army, as the coming in of the militia. Sundry persons infected with the small pox, were sent out of Boston and landed at Point Shirley. Such was the dread of that disease, that the British army scarcely excited equal terror. So many difficulties retarded the recruiting service, that on the last day of the year 1775, the whole American army amounted to no more than 9650 men. Of the remarkable events with which this important year was replete, it was not the least, that within musket shot of twenty British regiments, one army was disbanded and another enlisted.

1776

All this time the British troops at Boston were suffering the inconvenience of a blockade. From the 19th of April they were cut off from those refreshments which their situation required. Their supplies from Britain did not reach the coast for a long time after they were expected. Several were taken by the American cruisers, and others were lost at sea. This was in particular the fate of many of their coal ships. The want of fuel was peculiarly felt in a climate where the winter is both severe and tedious. They relieved themselves in part from their sufferings on this account, by the timber of houses which they pulled down and burnt. Vessels were dispatched to the West-Indies to procure provisions; but the islands were so straitened, that they could afford but little assistance. Armed ships and transports were ordered to Georgia with an intent to procure rice, but the people of that province, with the aid of a party from South-Carolina, so effectually opposed them, that of eleven vessels, only two got off safe with their cargoes.

It was not till the stock of the garrison was nearly exhausted that the transports from England entered the port of [260] Boston, and relieved the distresses of the garrison.

1776

While the troops within the lines were apprehensive of suffering from want of provisions, the troops without were equally uneasy for want of employment. Used to labour and motion on their farms, they but illy relished the inactivity and confinement of a camp life. Fiery spirits declaimed in favour of an assault. They preferred a bold spirit of enterprize, to that passive fortitude which bears up under present evils, while it waits for favorable junctures. To be in readiness for an attempt of this kind, a council of war recommended to call in 7280 militia men, from New-Hampshire or Connecticut.

This number added to the regular army before Boston, would have made an operating force of about 17,000 men.

January 17–18

The provincials laboured under great inconveniences from the want of arms and ammunition. Very early in the contest, the king of Great-Britain, by proclamation, forbade the exportation of warlike forces to the colonies. Great exertions had been made to manufacture salt petre and gun powder, but the supply was slow and inadequate. A secret committee of Congress had been appointed, with ample powers to lay in a stock of this necessary article. Some swift sailing vessels had been dispatched to the coast of Africa to purchase what could be procured in that distant region. A party from Charleston forcibly took about 17000 lbs. of powder from a vessel near the bar of St. Augustine. Some time after, commodore Hopkins stripped Providence, one of the Bahama islands of a quantity of artillery and stores; but the whole, procured from all these quarters, was far short of a sufficiency. In order to supply the new army before Boston with the necessary means of defence, an application was made to Massachusetts for arms, but on examination it was found that their public stores afforded only 200. Orders were issued to purchase firelocks from private persons, but few had any to sell, and fewer would part with them. In the month of February, there were 2000 of the American infantry, who were destitute of arms. Powder was equally scarce, and yet daily applications were made for dividends of the small quantity [261] which was on hand, for the defence of various parts threatened with invasion. The eastern colonies presented an unusual sight. A powerful enemy safely intrenched in their first city, while a fleet

1776

was ready to transport them to any part of the coast. A numerous body of husbandmen was resolutely bent on opposition, but without the necessary arms and ammunition for self defence. The eyes of all were fixed on general Washington, and from him it was unreasonably expected that he would by a bold exertion, free the town of Boston from the British troops. The dangerous situation of public affairs led him to conceal the real scarcity of arms and ammunition, and with that magnanimity which is characteristical of great minds, to suffer his character to be assailed, rather than vindicate himself by exposing his many wants. There were not wanting persons, who judging from the superior numbers of men in the American army, boldly asserted, that if the commander in chief was not desirous of prolonging his importance at the head of an army, he might by a vigorous exertion gain possession of Boston. Such suggestions were reported and believed by several, while they were uncontradicted by the general, who chose to risque his fame, rather than expose his army and his country.

Agreeably to the request of the council of war, about 7000 of the militia had rendezvoused in February. General Washington stated to his officers that the troops in camp, together with the reinforcements which had been called for, and were daily coming in, would amount nearly to 17,000 men—that he had not powder sufficient for a bombardment, and asked their advice whether, as reinforcements might be daily expected to the enemy, it would not be prudent before that event took place, to make an assault on the British lines. The proposition was negatived; but it was recommended to take possession of Dorchester heights. To conceal this design, and to divert the attention of the garrison, a bombardment of the town from other directions commenced, and was carried on for three days with as much briskness as a deficient stock of powder would admit.

In this first essay, [262] three of the mortars were broken, either from a defect in their construction, or more probably from ignorance of the proper mode of using them.

1776

The night of the 4th of March was fixed upon for taking possession of Dorchester heights. A covering party of about 800 men led the way. These were followed by the carts with the intrenching tools, and 1200 of a working party, commanded by general Thomas. In the rear there were more than 200 carts, loaded with fascines, and hay in bundles. While the cannon were playing in other parts, the greatest silence was kept by this working party. The active zeal of the industrious provincials completed lines of defence by the morning, which astonished the garrison. The difference between Dorchester heights on the evening of the 4th, and the morning of the 5th, seemed to realise the tales of romance. The admiral informed general Howe, that if the Americans kept possession of these heights, he would not be able to keep one of his majesty's ships in the harbour. It was therefore determined in a council of war, to attempt to dislodge them. An engagement was hourly expected. It was intended by general Washington, in that case, to force his way into Boston with 4000 men, who were to have embarked at the mouth of Cambridge river. The militia had come forward with great alertness, each bringing three days provision, in expectation of an immediate assault. The men were in high spirits, and impatiently waiting for the appeal.

They were reminded that it was the 5th of March, and were called upon to avenge the death of their countrymen killed on that day. The many eminences in and near Boston, which overlooked the ground on which it was expected that the contending parties would engage, were crowded with numerous spectators. But general Howe did not intend to attack till the next day. In order to be ready for it, the transports went down in the evening towards the castle. In the night a most violent storm, and towards morning a heavy flood of rain, came on.

A carnage was thus providentially prevented, that would probably have equalled, if not exceeded, the fatal [263] 17th of June, at Bunker's-hill. In this situation it was agreed by the British, in a council of war, to evacuate the town as soon as possible.

1776

In a few days after, a flag came out of Boston, with a paper signed by four select men, informing, "that they had applied to general Robertson, who, on application to general Howe, was authorised to assure them, that he had no intention of burning the town, unless the troops under his command were molested, during their embarkation, or at their departure, by the armed force without." When this paper was presented to general Washington, he replied, "that as it was an unauthenticated paper, and without an address, and not obligatory on general Howe, he could take no notice of it;" but at the same time intimated his good wishes for the security of the town.

A proclamation was issued by general Howe, ordering all woollen and linen goods to be delivered to Crean Brush, Esq. Shops were opened and stripped of their goods. A licentious plundering took place. Much was carried off, and more was wantonly destroyed. These irregularities were forbidden in orders, and the guilty threatened with death, but nevertheless every mischief which disappointed malice could suggest, was committed.

The British amounting to more than 7000 men, evacuated Boston, leaving their barracks standing, and also a number of pieces of cannon spiked, four large iron sea mortars, and stores, to the value of £ 30,000. They demolished the castle, and knocked off the trunnions of the cannon. Various incidents caused a delay of nine days after the evacuation, before they left Nantasket road.

March 17

This embarkation was attended with many circumstances of distress and embarrassment. On the departure of the royal army from Boston, a great number of the inhabitants attached to their sovereign, and afraid of public resentment, chose to abandon their country. From the great multitude about to depart, there was no possibility of procuring purchasers for their furniture, neither was there a sufficiency of vessels for its convenient transportation. Mutual jealousy subsisted between the [264] army and navy; each charging the other as the cause of some part of their common distress. The army was full of discontent. Reinforcements though long promised, had not arrived. Both officers and soldiers thought themselves neglected. Five months had elapsed since they had received any advice of their destination. Wants and inconveniencies increased their ill humour. Their intended voyage to Halifax subjected them to great dangers. The coast at all times hazardous, was eminently so at that tempestuous equinoctial season. They had reason to fear they

would be blown off to the West-Indies, and without a sufficient stock of provisions. They were also going to a barren country. To add to their difficulties, this dangerous voyage when completed, was directly so much out of their way. Their business lay to the southward, and they were going northward. Under all these difficulties, and with all these gloomy prospects, the fleet steered for Halifax. Contrary to appearances, the voyage thither was both short and prosperous. They remained there for some time, waiting for reinforcements and instructions from England. When the royal fleet and army departed from Boston, several ships were left behind for the protection of vessels coming from England, but the American privateers were so alert that they nevertheless made many prizes. Some of the vessels which they captured, were laden with arms and warlike stores. Some transports, with troops on board, were also taken. These had run into the harbour, not knowing that the place was evacuated. The boats employed in the embarkation of the British troops, had scarcely completed their business when general Washington, with his army, marched into Boston. He was received with marks of approbation more flattering than the pomps of a triumph. The inhabitants released from the severities of a garrison life, and from the various indignities to which they were subjected, hailed him as their deliverer. Reciprocal congratulations between those who had been confined within the British lines, and those [who] were excluded from entering them, were exchanged with an ardor which cannot be discribed.

General Washington [265] was honoured by Congress with a vote of thanks. They also ordered a medal to be struck, with suitable devices to perpetuate the remembrance of the great event. The Massachusetts council and house of representatives complimented him in a joint address, in which they expressed their good wishes in the following words, “May you still go on approved by heaven—revered by all good men, and dreaded by those tyrants, who claim their fellow men as their property.” His answer was modest and proper.

1776

The evacuation of Boston had been previously determined upon by the British ministry, from principles of political expedience. Being resolved to carry on the war for purposes affecting all the colonies, they conceived a central position to be preferable to Boston. Reasoning of this kind had induced the adoption of the measure, but the American works on Roxbury expedited its execution. The abandonment of their friends, and the withdrawing their forces from Boston, was the first act of a tragedy in which evacuations and retreats were the scenes which most frequently occurred, and the epilogue of which was a total evacuation of the United States.

CHAPTER XI

Transactions In Canada.

The tide of good fortune which in the autumn of 1775 flowed in upon general Montgomery, induced Congress to reinforce the army under his command. Chamblee, St. Johns, and Montreal having surrendered to the Americans, a fair prospect opened of expelling the British from Canada, and of annexing that province to the united colonies. While they were in imagination anticipating these events, the army in which they confided was defeated, and the general whom they adored was killed.

The intelligence transmitted from general Montgomery, previous Jan. 8, 1776 to his assault on Quebec, encouraged Congress to resolve that nine battalions should be kept up and maintained in Canada. The repulse of their army, [266] though discouraging, did not extinguish the ardor of the Americans. It was no sooner known, at headquarters in Cambridge, than general Washington convened a council of war by which it was resolved, “That as no troops could be spared from Cambridge, the colonies of Massachusetts, Connecticut and New-Hampshire, should be requested to raise three regiments and forward them to Canada.[”]

Congress also resolved to forward the reinforcements previously Jan. 19 voted, and to raise four battalions in New-York, for the defence of that colony, and to garrison Crown-Point, and the several posts to the southward of that fortress. That the army might be supplied with blankets for this winter expedition, a committee was appointed to procure from householders, such as could be spared from their families. To obtain a supply of hard money for the use of the army in Canada, proper persons were employed to exchange paper money for specie. Such was the enthusiasm of the times that many thousand Mexican dollars were freely exchanged at par, by individuals for the paper bills of Congress. It was also resolved, to raise a corps of artillery for this service, and to take into the pay of the colonies one thousand Canadians, in addition to colonel Livingston’s regiment. Moses Hazen, a native of Massachusetts, who had resided many years in Canada, was appointed to the command of this new corps.

Congress addressed a letter to the Canadians in which they Jan. 24 observed, “Such is the lot of human nature, that the best of causes are subject to vicissitudes; but generous souls, enlightened and warmed with the fire of liberty, become more resolute as difficulties increase.[”] They stated to them, “that eight battalions were raising to proceed to their province, and that if more force was necessary it should be sent.” They requested them to seize with eagerness the favourable opportunity then offered to co-operate in the present glorious enterprise, and they advised them to establish associations in their different parishes—to elect deputies for forming a provincial assembly, and for representing them in Congress.

The cause of the Americans had received such powerful aid from many patriotic publications in their gazettes, [267] and from the fervent exhortations of popular preachers, connecting the cause of liberty with the animating principles of religion, that it was determined to employ these two powerful instruments of revolutions—printing and preaching, to operate on the minds of the Canadians. A complete apparatus for printing, together with a printer and a clergyman, were therefore sent into Canada.

1776

Congress also appointed Dr. Franklin, Mr. Chase and Mr. Carrol, the two first of whom were members of their body, and the last a respectable gentleman of the Roman catholic persuasion to proceed to Canada with the view of gaining over the people of that colony to the cause of America, and authorised them to promise on behalf of the united colonies, that Canada should be received into their association on equal terms, and also that the inhabitants thereof should enjoy the free exercise of their religion, and the peaceable possession of all their ecclesiastical property.

The desire of effecting something decisive in Canada before the approaching spring, would permit relief to ascend the river St. Lawrence, added to the enthusiasm of the day, encountered difficulties which, in less animated times, would be reckoned unsurmountable. Arthur St. Clair who was appointed colonel of one of the Pennsylvania regiments received his recruiting orders on the 10th of January, and notwithstanding the shortness of the period, his regiment was not only raised, but six companies of it had, in this extreme cold season, completed their march from Pennsylvania to Canada, a distance of several hundred miles, and on the eleventh of April following, joined the American army before Quebec.

Though Congress and the states made great exertions to support the war in Canada, yet from the fall of Montgomery their interest in that colony daily declined. The reduction of Quebec was an object to which their resources were inadequate. Their unsuccessful assault on Quebec made an impression both on the Canadians and Indians unfavorable to their views.

A woman infected with the small-pox had either been sent out, or voluntarily came out of Quebec, and by mixing with the American soldiers [268] propagated that scourge of the new world to the great diminution of the effective force of their army. The soldiers inoculated themselves, though their officers issued positive orders to the contrary. By the first of May so many new troops had arrived that the American army, in name, amounted to 3000, but from the prevalence of the small-pox there were only 900 fit for duty. The increasing number of invalids retarded their military operations, and discouraged their friends, while the opposite party was buoyed up with the expectation that the advancing season would soon bring them relief. To these causes of the declining interest of Congress, it must be added that the affections of the Canadians were alienated. They had many and well founded complaints against the American soldiers. Unrestrained by the terror of civil law and refusing obedience to a military code, the hope of impunity and the love of plunder, led many of the invading army to practices not less disgraceful to themselves, than injurious to the cause in which they had taken arms. Not only the common soldiers but the officers of the American army deviated, in their intercourse with the Canadians, from the maxims of sound policy. Several of them

1776

having been lately taken from obscure life were giddy with their exaltation. Far from home they were unawed by those checks which commonly restrain the ferocity of man.

The reduction of Chamblee, St. Johns', and Montreal, together with the exposed situation of Quebec, being known in England, measures were without delay adopted by the British ministry to introduce into Canada, as soon as possible, a force sufficient for the double purpose of recovering what they had lost, and of prosecuting offensive operations from that quarter against the revolted colonies.

The van of this force made good its passage, very early in the spring, through the ice up the river St. Lawrence. The expectation of their coming had for some time damped the hopes of the besiegers, and had induced them to think of a retreat. The day before the first of the British reinforcements arrived, that measure was resolved upon by a council of war, and arrangements were made for carrying it into execution.

May 5

[269]

Governor Carleton was too great a proficient in the art of war, to delay seizing the advantages which the consternation of the besiegers, and the arrival of a reinforcement, afforded. A small detachment of soldiers and marines from the ships which had just ascended the river St. Lawrence, being landed and joined to the garrison in Quebec, he marched out at their head to attack the Americans. On his approach, he found every thing in confusion. The late besiegers abandoning their artillery and military stores, had in great precipitation retreated. In this manner at the expiration of five months, the mixed siege and blockade of Quebec was raised. The fortitude and perseverance of the garrison reflected honour on both officers and privates.

1776

The reputation acquired by general Carleton in his military character, for bravely and judiciously defending the province committed to his care, was exceeded by the superior applause, merited from his exercise of the virtues of humanity and generosity. Among the numerous sick in the American hospitals, several incapable of being moved were left behind.

The victorious general proved himself worthy of success by his treatment of these unfortunate men, he not only fed and clothed them, but permitted them when recovered to return home, apprehending that fear might make some conceal themselves in the woods, rather than by applying for relief, make themselves known, he removed their doubts by a proclamation, in which he engaged, "that as soon as their health was restored, they should have free liberty of returning to the respective provinces." This humane line of conduct was more injurious to the view of the leaders in the American councils, than the severity practised by other British commanders. The truly politic, as well as humane general Carleton, dismissed these prisoners after liberally supplying their wants with a recommendation, "to go home, mind their farms, and keep themselves and their neighbours from all participation in the unhappy war."

May 10

The small force which arrived at Quebec early in May, was followed by several British regiments; together with [270] the

1776

Brunswic troops in such a rapid succession, that in a few weeks the whole was estimated at 13,000 men.

The Americans retreated forty five miles before they stopped. After a short halt, they proceeded to the Sorel, at which place they threw up some slight works for their safety. They were there joined by some battalions coming to reinforce them. About this time general Thomas, the commander in chief in Canada was seized with the small pox and died, having forbidden his men to inoculate, he conformed to his rule, and refused to avail himself of that precaution. On his death, the command devolved at first on general Arnold, and afterwards on general Sullivan. It soon became evident, that the Americans must abandon the whole province of Canada.

From a desire to do something which might counterbalance in the minds of the Canadians, the unfavorable impression which this farther retreat would communicate, General Thomson projected an attack on the British post at the Three Rivers. This lies about half way between Quebec and Montreal, and is so called from the vicinity of one of the branches of a large river, whose waters are discharged through three mouths into the St. Lawrence. With this view a detachment of six hundred men was put under the command of colonel St. Clair. At their head he advanced to the village of Nicolette. When every thing was ready for the enterprise, intelligence was received that six transports escorted by two frigates from Quebec, had arrived and brought a large addition to the late force at the Three Rivers. This caused some new movements, and a delay till more troops could be brought forward. General Thomson then came on with a reinforcement and took the command of the whole. It was determined to make the proposed attack in four different places at the same time. One division commanded by colonel Wayne was to gain the eastern extremity of the town. One commanded by colonel Maxwell was to enter from the northward about the center, and the other two divisions commanded by colonels Sinclair and Irvine were to enter from the westward.

The whole [271] having embarked at midnight, landed at the Point du Lac, about three hours before day. At some distance from this point, there are two ways of approaching Three Rivers, one by a road that leads along the banks of the St. Lawrence, the other by a road almost parallel, but at a considerable distance. It had been determined to advance on the last. Intelligence was brought to general Thomson, soon after his landing that a party of 3 or 400 men were posted at three miles distance. The troops were instantly put in motion to dislodge them. The intelligence proved to be false but it had carried the detachment, some distance beyond the point, where the roads separated. To have returned, would have consumed time that could not be spared as the day was fast approaching. It was therefore resolved to proceed in a diagonal direction towards the road they had left. After being much retarded by very difficult grounds, they arrived at a morass which seemed impassable. Here the day broke, when they were six miles from the object. General Thomson suspecting the fidelity of his guides, put them under arrest—reversed the order of his march, and again reached the road by the river. He had advanced but a small distance before he was fired upon by two armed vessels. All expectation of succeeding by surprise, was now at an end. It was therefore instantly determined to make an open attack. The sun was rising. The drums were ordered to beat, and the troops moved on with the greatest alacrity. Having advanced three miles

1776

farther, the ships of war began to fire on them. The American officer who led the advance, struck into a road on the left, which also led to the town, and was covered from the fire of the ships. This last road was circuitous and led through a vast tract of woodland at that season almost impassable. He nevertheless entered the wood, and the rest of the detachment followed. After incredible labour, and wading a rivulet breast deep, they gained the open country north of the village. A party of the British were soon discovered about a mile to the left of the Americans, and between them and the town. Colonel Wayne, ardent for action immediately attacked them. The onset was gallant [272] and vigorous, but the contest was unequal.

The Americans were soon repulsed and forced to retreat. In the beginning of the action general Thomson left the main body of his corps to join that which was engaged. The woods were so thick, that it was difficult for any person in motion, after losing sight of an object to recover it. The general therefore never found his way back. The situation of colonel St. Clair, the next in command became embarrassing. In his opinion a retreat was necessary, but not knowing the precise situation of his superior officer, and every moment expecting his return, he declined giving orders for that purpose. At last when the British were discovered on the river road, advancing in a direction to gain the rear of the Americans, colonel St. Clair in the absence of gen. Thomson, ordered a retreat. This was made by treading back their steps through the same dismal swamp by which they had advanced. The British marched directly for the point du Lac with the expectation of securing the American batteaux. On their approach major Wood, in whose care they had been left, retired with them to the Sorel. At the point du Lac, the British halted and took a very advantageous position. As soon as it was discovered that the Americans had retired, a party of the British pursued them. When the former arrived near the place of their embarkation, they found a large party of their enemies posted in their front, at the same time that another was only three quarters of a mile in their rear. Here was a new and trying dilemma, and but little time left for consideration. There was an immediate necessity, either to lay down their arms or attempt by a sudden March to turn the party in front and get into the country beyond it. The last was thought practicable. Colonel St. Clair having some knowledge of the country from his having served in it in the preceding war, gave them a route by the Acadian village where the river de Loups is fordable. They had not advanced far when colonel St. Clair found himself unable to proceed from a wound, occasioned by a root which had penetrated through his shoe.

His men offered to carry him, but this generous proposal was declined. [273] He and two or three officers, who having been worn down with fatigue, remained behind with him, found an asylum under cover of a large tree which had been blown up by the roots. They had not been long in this situation when they heard a firing from the British in almost all directions. They nevertheless lay still, and in the night stole off from the midst of surrounding foes. They were now pressed with the importunate cravings of hunger, for they were entering on the third day without food. After wandering for some time, they accidentally found some peasants, who entertained them with great hospitality. In a few days they joined the army at Sorel, and had the satisfaction to find that the greatest part of the detachment had arrived safe before them. In their way through the country, although they might in almost every step of it have been made prisoners, and had reason to fear that the inhabitants from the prospect of reward, would have been

tempted to take them, yet they met with neither injury nor insult. General Thomson was not so fortunate. After having lost the troops and falling in with colonel Irwine, and some other officers, they wandered the whole night in thick swamps, without being able to find their way out. Failing in their attempts to gain the river, they had taken refuge in a house, and were there made prisoners.

The British forces having arrived, and a considerable body of them having rendezvoused at the Three Rivers, a serious pursuit of the American army commenced. Had Sir Guy Carleton taken no pains to cut off their retreat, and at once attacked their post, or rather their fortified camp at Sorel, it would probably have fallen into his hands; but either the bold, though unsuccessful attack, at the Three rivers had taught him to respect them, or he wished to reduce them without bloodshed. In the pursuit he made three divisions of his army, and arranged them so as to embrace the whole American encampment, and to command it in every part. The retreat was delayed so long that the Americans evacuated Sorel, only about two hours before one division of the British made its appearance.

[274]

While the Americans were retreating, they were daily assailed by the remonstrances of the inhabitants of Canada, who had either joined or befriended them. Great numbers of Canadians had taken a decided part in their favour, rendered them essential services, and thereby incurred the heavy penalties annexed to the crime of supporting rebellion. These, though Congress had assured them but a few months before “that they would never abandon them to the fury of their common enemies” were from the necessity of the case left exposed to the resentment of their provincial rulers. Several of them with tears in their eyes, expostulated with the retreating army, and bewailing their hard fate prayed for support. The only relief the Americans could offer was an assurance of continued protection, if they retreated with them, but this was a hard alternative to men who had wives, children and immovable effects. They generally concluded, that it was the least of two evils to cast themselves on the mercy of that government, against which they had offended.

The distresses of the retreating army were great. The British were close on their rear and threatening them with destruction. The unfurnished state of the colonies in point of ordnance, imposed a necessity of preserving their cannon. The men were obliged to drag their loaded batteaus up the rapids by mere strength, and when they were to the middle in water. The retreating army was also incumbered with great numbers labouring under the small-pox, and other diseases. Two regiments, at one time, had not a single man in health. Another had only six, and a fourth only forty, and two more were in nearly the same condition.

To retreat in face of an enemy is at all times hazardous; but on this occasion it was attended with an unusual proportion of embarrassments. General Sullivan, who conducted the retreat, nevertheless acted with so much judgment and propriety, that the baggage and public stores were saved, and the numerous sick brought off. The American army reached Crown-Point on the first of July, and at that place made their first stand.

[275]

A short time before the Americans evacuated the province of Canada, General Arnold convened the merchants of Montreal, and proposed to them to furnish a quantity of specified articles, for the use of the army in the service of Congress. While they were deliberating on the subject, he placed centinels at their shop doors, and made such arrangements, that what was at first only a request, operated as a command. A great quantity of goods were taken on pretence that they were wanted for the use of the American army, but in their number were many articles only serviceable to women, and to persons in civil life. His nephew soon after opened a store in Albany, and publicly disposed of goods which had been procured at Montreal.

1776

The possession of Canada so eminently favoured the plans of defence adopted by Congress, that the province was evacuated with great reluctance. The Americans were not only mortified at the disappointment of their favourite scheme, of annexing it as a fourteenth link in the chain of their confederacy, but apprehended the most serious consequences from the ascending of the British power in that quarter. Anxious to preserve a footing there, they had persevered for a long time in stemming the tide of unfavorable events.

General Gates was about this time appointed to command in Canada, but on coming to the knowledge of the late events in that province, he concluded to stop short within the limits of New-York. The scene was henceforth reversed. Instead of meditating the recommencement of offensive operations, that army which had lately excited so much terror in Canada, was called upon to be prepared for repelling an invasion threatened from that province.

Jun. 17

The attention of the Americans being exclusively fixed on plans of defence, their general officers commanding in the northern department, were convened to deliberate on the place and means most suitable for that purpose. To form a judgment on this subject, a recollection of the events of the late war, between France and England, was of advantage. The same ground was to be fought over, [276] and the same posts to be again contended for. On the confines of Lake George and Lake Champlain two inland seas, which stretch almost from the sources of Hudson's river to the St. Lawrence, are situated the famous posts of Ticonderoga and Crown-Point. These are of primary necessity to any power which contends for the possession of the adjacent country, for they afford the most convenient stand either for its annoyance or defence. In the opinion of some American officers, Crown-Point to which the army on the evacuation of Canada had retreated, was the most proper place for erecting works of defence, but it was otherwise determined, by the council convened, on this occasion. It was also by their advice resolved, to move lower down, and to make the principal work on the strong ground east of Ticonderoga, and especially by every means to endeavour to maintain a naval superiority in Lake Champlain. In conformity to these resolutions general Gates with about 12,000 men, which collected in the course of the summer, was fixed in command of Ticonderoga, and a fleet was constructed at Skenesborough. This was carried on with so much rapidity, that in a short time there were afloat, in Lake Champlain, one sloop, three schooners, and six gondolas, carrying in the whole 58 guns, 86 swivels, and 440 men.

August 22

Six other vessels were also nearly ready for launching at the same time. The fleet was put under the command of general Arnold, and he was instructed by general Gates, to proceed beyond Crown-Point, down Lake Champlain, to the Split Rock; but most peremptorily restrained from advancing any farther, as security against an apprehended invasion was the ultimate end of the armament.

The expulsion of the American invaders from Canada, was but a part of the British designs in that quarter. They urged the pursuit no farther than St. John's, but indulged the hope of being soon in a condition for passing the lakes, and penetrating through the country to Albany, so as to form a communication with New-York. The objects they had in view were great, and the obstacles in the way of their accomplishment equally so. [277]

Before they could advance with any prospect of success, a fleet superior to that of the Americans on the lakes, was to be constructed. The materials of some large vessels were, for this purpose, brought from England, but their transportation, and the labour necessary to put them together required both time and patience. The spirit of the British commanders rose in proportion to the difficulties which were to be encountered. Nevertheless it was so late as the month of October, before their fleet was prepared to face the American naval force, on Lake Champlain. The former consisted of the ship *Inflexible*, mounting 18 twelve pounders, which was so expeditiously constructed, that she sailed from St. John's 28 days after laying her keel. One schooner mounting 14 and another 12 six pounders. A flat bottomed radeau carrying six 24 and six 12 pounders, besides howitzers, and a gondola with seven nine pounders. There were also twenty smaller vessels with brass field pieces, from 9 to 24 pounders, or with howitzers. Some long boats were furnished in the same manner. An equal number of large boats acted as tenders. Besides these vessels of war, there was a vast number destined for the transportation of the army, its stores, artillery, baggage and provisions. The whole was put under the command of captain Pringle. The naval force of the Americans, from the deficiency of means, was far short of what was brought against them. Their principal armed vessel was a schooner, which mounted only 12 six and four pounders, and their whole fleet in addition to this, consisted of only fifteen vessels of inferior force.

No one step could be taken towards accomplishing the designs of the British, on the northern frontiers of New-York, till they had the command of Lake Champlain.

With this view their fleet proceeded up the lake, and engaged the Americans. The wind was so unfavorable to the British, that their ship *Inflexible*, and some other vessel of force, could not be brought to action. This lessened the inequality between the contending fleets so much, that the principal damage sustained by the Americans, was the loss of a schooner and gondola.

At the [278] approach of night the action was discontinued. The vanquished took the advantage, which the darkness afforded to make their escape. This was effected by general Arnold, with great judgment and ability. By the next morning the whole fleet under his command was out of sight. The British pursued with all the sail they could crowd. The wind having become more favorable, they overtook the Americans, and brought them to action near Crown-Point.

A smart engagement ensued and was well supported on both sides for about two hours. Some of the American vessels which were most ahead escaped to Ticonderoga. Two gallies and five gondolas remained and resisted an unequal force, with a spirit approaching to desperation. One of the gallies struck and was taken. General Arnold, though he knew that to escape was impossible, and to resist unavailing, yet instead of surrendering, determined that his people should not become prisoners, nor his vessels a re-inforcement to the British. This spirited resolution was executed with a judgment, equal to the boldness, with which it had been adopted. He ran the Congress galley, on board of which he was, together with the five gondolas on shore, in such a position, as enabled him to land his men and blow up the vessels. In the execution of this perilous enterprise, he paid a romantic attention to a point of honour. He did not quit his own galley till she was in flames, lest the British should board her, and strike his flag. The result of this action, though unfavorable to the Americans, raised the reputation of general Arnold, higher than ever. In addition to the fame of a brave soldier, he acquired that of an able sea officer.

Oct. 13

The American naval force being nearly destroyed, the British had undisputed possession of Lake Champlain. On this event a few continental troops which had been at Crown-Point, retired to their main body at Ticonderoga. General Carleton took possession of the ground from which they had retreated, and was there soon joined by his army. He sent out several reconnoitering parties, and at one time pushed forward a strong detachment on both sides of the lake, which approached near [279] to Ticonderoga.

Some British vessels appeared at the same time, within cannon shot of the American works, at that place. It is probable he had it in contemplation, if circumstances favoured to reduce the post, and that the apparent strength of the works, restrained him from making the attempt, and induced his return to Canada.

1776

Such was the termination of the northern campaign in 1776. Though after the surrender of Montreal evacuations, defeats, and retreats, had almost uninterruptedly been the portion of the Americans, yet with respect to the great object of defence on the one side, and of conquest on the other, a whole campaign was gained to them, and lost to their adversaries.

The British had cleared Canada of its invaders, and destroyed the American fleet on the lakes, yet from impediments thrown in their way, they failed in their ulterior designs. The delays contrived by general Gates, retarded the British for so great a part of the summer, that by the time they had reached Ticonderoga, their retreat on account of the approaching winter, became immediately necessary. On the part of the Americans, some men, and a few armed vessels were lost, but time was gained, their army saved, and the frontier of the adjacent states secured from a projected invasion. On the part of the British, the object of a campaign, in which 13,000 men were employed, and near a million of money expended, was rendered in a great measure abortive.

CHAPTER XII

The Proceedings Of Parliament, Against The Colonies, 1775–6. Operations In South-Carolina, New-York, And New-Jersey.

The operations carried on against the united colonies, in the year 1775, were adapted to cases of criminal combination among subjects not in arms. The military arrangements for that year, were therefore made on the idea of a trifling addition to a peace establishment. [280]

It was either not known, that a majority of the Americans had determined to resist the power of Great-Britain, rather than submit to the late coercive laws, or it was not believed that they had spirit sufficient to act in conformity to that determination. The propensity in human nature, to believe that to be true, which is wished to be so, had deceived the royal servants in America, and the British ministry in England, so far as to induce their general belief, that a determined spirit on the part of government, and a few thousand troops to support that determination, would easily compose the troubles in America. Their military operations in the year 1775, were therefore calculated on the small scale of strengthening the civil power, and not on the large one of resisting an organised army. Though it had been declared by parliament in February, 1775, that a rebellion existed in Massachusetts, yet it was not believed that the colonists would dare to abet their opposition by an armed force. The resistance made by the militia at Lexington, the consequent military arrangements adopted, first by Massachusetts, and afterwards by Congress, together with the defence of Bunker's-hill, all conspired to prove that the Americans were far from being contemptible adversaries. The nation finding itself, by a fatal progression of the unhappy dispute, involved in a civil war, was roused to recollection. Though several corporate bodies, and sundry distinguished individuals in Great-Britain, were opposed to coercive measures, yet there was a majority for proceeding. The pride of the nation was interested in humbling the colonists, who had dared to resist the power which had lately triumphed over the combined force of France and Spain. The prospect of freeing their own estates from a part of the heavy taxes charged thereon, induced numbers of the landed gentlemen in Great-Britain to support the same measures. They conceived the coercion of the colonies to be the most direct mode of securing their contribution towards sinking the national debt. Influenced by these opinions, such not only justified the adoption of rigorous measures, but cheerfully consented to present additional taxes with the same spirit [281] which induces litigants in private life to advance money for forwarding a lawsuit, from the termination of which great profits are expected. Lord North, the prime minister of England, finding himself supported by so many powerful interests, was encouraged to proceed. He had already subdued a powerful party in the city of London, and triumphed over the East-India company. The submission of the colonies was only wanting to complete the glory of his administration. Previous success emboldened him to attempt the arduous business. He flattered himself that the accomplishment of it would, not only restore peace to the

1776

1775

empire, but give a brilliancy to his name, far exceeding that of any of his predecessors.

Such was the temper of a great part of the nation, and such the ambitious views of its prime minister, when the parliament was convened, on the 24th of October 1775. In the speech from the throne great complaints were made of the leaders in the colonies, who were said by their misrepresentatives to have infused into the minds of the deluded multitude opinions, repugnant to their constitutional subordination, and afterwards to have proceeded to the commencement of hostilities, and the usurpation of the whole powers of government. His majesty also charged his subjects in America with “meaning only to amuse by vague expressions of attachment to the Parent State, while they were preparing for a general revolt.” And he farther asserted “that the rebellious war now levied by them was become more general, and manifestly carried on for the purpose of establishing an independent empire, and that it was become the art of wisdom, and in its effects, of clemency to put a speedy end to these disorders, by the most decisive exertions.”

Information was also given, that “the most friendly offers of foreign assistance had been received, and that his majesty’s electoral troops were sent to the garrison of Gibraltar and Port Mahon, in order that a large number of the established forces of the kingdom might be applied to the maintenance of its authority.”

The severity of these assertions was mitigated by a declaration, 1775 “that when the unhappy and deluded multitude against [282] whom this force should be directed, would become sensible of their error, his majesty would be ready to receive the misled with tenderness and mercy,” “and that to prevent inconveniences, he should give authority to certain persons on the spot, to grant general or particular pardons and indemnities to such as should be disposed to return to their allegiance.” The sentiments expressed in this speech and the heavy charges therein laid against the colonists, were re-echoed in addresses to the king from both houses of parliament, but not without a spirited protest in the house of lords. In this, nineteen dissenting members asserted the American war to be “unjust and impolitic in its principles, and fatal in its consequences.” They also declared, that they could not consent to an address, “which might deceive his majesty and the public into a belief of the confidence of their house in the present ministers, who had disgraced parliament, deceived the nation—lost the colonies, and involved them in a civil war against their clearest interests, and upon the most unjustifiable grounds wantonly spilling the blood of thousands of their fellow subjects.”

The sanction of parliament being obtained for a vigorous prosecution of the American war, estimates for the public service, were agreed to on the idea of operating against the colonies as an hostile armed foreign power. To this end it was voted to employ 28,000 sea-men, and 55,900 land forces, and the sanction of authority was not long after given to measures for engaging foreign mercenaries. No ministry had in any preceding war exerted themselves more to prosecute military operations against alien enemies, than the present to make the ensuing campaign decisive of the dispute between the Mother Country and the colonies.

One legislative act was still wanting to give full efficacy to the intended prosecution of hostilities. This was brought into

Nov. 20, 1775

parliament in a bill interdicting all trade and intercourse with the thirteen united colonies. By it all property of Americans, whether of ships or goods, on the high seas, or in harbour, was declared “to be forfeited to the captors, being the officers and crews of his majesty’s ships of war.” It farther enacted [283] “that the masters, crews and other persons found on board captured American vessels, should be entered on board his majesty’s vessels of war, and there considered to be in his majesty’s service to all intents and purposes, as if they had entered of their own accord.” This bill also authorised the crown to appoint commissioners, who over and above granting pardons to individuals were empowered to “enquire into general and particular grievances, and to determine whether any colony or part of a colony was returned to that state of obedience, which might entitle it to be received within the king’s peace and protection.” In that case upon a declaration from the commissioners “the restrictions of the proposed law were to cease.”

It was said in favour of this bill,

that as the Americans were already in a state of war, it became necessary that hostilities should be carried on against them, as was usual against alien enemies. That the more vigorously and extensively military operations were prosecuted, the sooner would peace and order be restored. That as the commissioners went out with the sword in one hand, and terms of conciliation in the other, it was in the power of the colonists to prevent the infliction of any real or apparent severities, in the proposed statute.

In opposition to it, it was said, “that treating the Americans as a foreign nation, was chalking out the way for their independence.” One member observed, that as the indiscriminate rapine of property authorised by the bill, would oblige the colonists to coalesce as one man, its title ought to be “A bill for carrying more effectually into execution the resolves of Congress.” The clause for vesting the property of the seizures in the captors, was reprobated as tending to extinguish in the breasts of seamen the principles of patriotism—of national pride and glory, and to substitute in their room habits of cruelty, of piracy and robbery. But of all parts of this bill none was so severely condemned as that clause by which persons taken on board the American vessels, were indiscriminately compelled to serve as common sailors in British ships of war. This was said to be “a refinement of [284] tyranny worse than death.”

It was also said, “That no man could be despoiled of his goods as 1776 a foreign enemy, and at the same time obliged to serve as a citizen, and that compelling captives to bear arms against their families, kindred, friends and country—and after being plundered themselves to become accomplices in plundering their brethren, was unexampled, except among pirates, the outlaws and enemies of human society.” To all these high charges the ministry replied, “that the measure was an act of grace and favour, for” said they, “the crews of American vessels, instead of being put to death, the legal punishment of their demerits, as traitors and rebels, are by this law to be rated on the king’s books, and treated as if they were on the same footing with a great body of his most useful and faithful subjects.” It was also said, “that their pay and emoluments in the service of their

lawful sovereign would be a compensation for all scruples that might arise from the supposed violation of their principles.”

In the progress of the debates on this bill, lord Mansfield declared, “that the questions of original right and wrong were no longer to be considered—that they were engaged in a war, and must use their utmost efforts to obtain the ends proposed by it, that they must either fight or be pursued, and that the justice of the cause must give way to their present situation.” Perhaps no speech in or out of parliament operated more extensively on the irritated minds of the colonists than this one.

The great abilities and profound legal knowledge of lord Mansfield were both known and admired in America. That this illustrious oracle of law should declare from the seat of legislation, that the justice of the cause was no longer to be regarded, excited the astonishment, and cemented the union of the colonists. “Great-Britain, said they, has commenced war against us for maintaining our constitutional liberties, and her lawgivers now declare they must proceed without any retrospect to the merits of the original ground of dispute. Our peace and happiness must be sacrificed to British honour and consistency, in their continuing to prosecute [285] an unjust invasion of our rights.”

A number of lords, as usual, entered a spirited protest against the bill, but it was carried by a great majority in both houses of parliament, and soon after received the royal assent.

Dec. 21, 1775

This law arrived in the colonies in March 1776. The effects resulting from it were such as had been predicted by its opposers. It not only united the colonies in resisting Great-Britain, but produced a favorable opinion of independence in the minds of thousands, who previously reprobated that measure. It was considered from New-Hampshire to Georgia, as a legal discharge from allegiance to their native sovereign. What was wanting to produce a decided majority of the party for breaking off all connexion with Great-Britain, was speedily obtained from the irritation excited by the hiring of foreign troops to fight against the colonists. This measure was nearly coincident with the ratification of the prohibitory law just mentioned, and intelligence of both arrived in the colonies about the same time.

The treaties which had been lately concluded with the Landgrave of Hesse Cassel, the duke of Brunswic, and the hereditary prince of Hesse Cassel for hiring their troops to the king of Great-Britain, to be employed in the American service being laid before the house of commons, a motion was made thereon for referring them to the committee of supply.

This occasioned a very interesting debate on the propriety of employing foreign troops against the Americans. The measure was supported on the necessity of prosecuting the war, and the impracticability of raising a sufficient number of domestic levies. It was also urged “that foreign troops inspired with the military maxims, and ideas of implicit submission, would be less apt to be biassed by that false lenity, which native soldiers might indulge, at the expence of national interest.” It was said,

Feb. 29, 1776

Are we to sit still and suffer an unprovoked rebellion to terminate in the formation of an independent hostile empire? Are we to suffer our colonies, the object of the great national expence, and of two bloody wars to be lost forever to us, and given away to strangers from a scruple of [286]

employing foreign troops to preserve our just rights, over colonies for which we have paid so dear a purchase? As the Americans by refusing the obedience and taxes of subjects, deny themselves to be a part of the British empire, and make themselves foreigners, they cannot complain that foreigners are employed against them.

1775

On the other side the measure was severely condemned. The necessity of the war was denied, and the nation was represented as disgraced by applying to the petty princes of Germany, for succours against her own rebellious subjects. The tendency of the example to induce the Americans to form alliances with foreign powers, was strongly urged. It was said,

hitherto the colonists have ventured to commit themselves singly in this arduous contest, without having recourse to foreign aid, but it is not to be doubted, that in future they will think themselves fully justified both by our example, and the laws of self preservation, to engage foreigners to assist them in opposing those mercenaries, whom we are about to transport for their destruction. Nor is it doubtful that in case of their application, European powers of a rank far superior to that of those petty princes, to whom we have so abjectly sued for aid, will consider themselves to be equally entitled to interfere in the quarrel between us and our colonies.

The supposition of the Americans receiving aid from France or Spain, was on this and several other occasions ridiculed, on the idea that these powers would not dare to set to their own colonies the dangerous example of encouraging those of Great-Britain, in opposing their sovereign. It was also supposed, that they would be influenced by considerations of future danger to their American possessions, from the establishment of an independent empire in their vicinity.

In this session of parliament between the 26th of October, 1775, and the 23d, of May 1776, the ultimate plan for reducing the colonies was completely fixed. The Americans were declared out of the royal protection, and 16,000 foreign mercenaries, employed by national authority, to effect their subjugation.

These measures [287] induced Congress in the following summer to declare themselves independent, and to seek for foreign aid: Events which shall be hereafter more fully explained.

1776

Parliamentary sanction for carrying on the war against the colonists, as against alien enemies being obtained, it became necessary to fix on a commander of the royal forces to be employed on this occasion. This as a matter of right was, in the first instance, offered to general Oglethorpe, as being the first on the list of general officers. To the surprise of the minister that respectable veteran, readily accepted the command, on condition of his being properly supported. A numerous well appointed army and a powerful fleet were promised him, to which he replied, "I will undertake the business without a man or a ship of war, provided you will authorise me to assure

the colonists on my arrival among them, that you will do them justice.” He added farther, “I know the people of America well, and am satisfied, that his majesty has not in any part of his dominions, more obedient, or more loyal subjects. You may secure their obedience by doing them justice, but you will never subdue them by force of arms.” These opinions so favourable to the Americans, proved general Oglethorpe to be an improper person for the purpose intended by the British ministry. He was therefore passed over, and the command given to Sir William Howe.

It was resolved to open the campaign, with such a powerful force as “would look down all opposition, and effectuate submission without bloodshed,” and to direct its operations to the accomplishment of three objects. The first was the relief of Quebec, and the recovery of Canada, which also included a subsequent invasion of the northwestern frontiers of the adjacent provinces. The second was a strong impression on some of the southern colonies. The third and principal, was to take possession of New-York, with a force sufficiently powerful to keep possession of Hudson’s-River, and form a line of communication with the royal army in Canada, or to over-run the adjacent country.

The partial success of the first part of this plan, has been in the preceding chapter explained. The execution [288] of the second part was committed to general Clinton, and Sir Peter Parker. The former with a small force having called at New-York, and also visited in Virginia lord Dunmore, the late royal governor of that colony, and finding that nothing could be done at either place, proceeded to Cape-Fear-River. At that place he issued a proclamation from on board the Pallas transport, offering free pardon to all such as should lay down their arms, excepting Cornelius Hasnett, and Robert Howe, but the recent defeat of the regulators and Highlanders, restrained even their friends from paying any attention to this act of grace.

At Cape-Fear a junction was formed between Sir Henry Clinton, and Sir Peter Parker, the latter of whom had sailed with his squadron directly from Europe. They concluded to attempt the reduction of Charleston as being, of all places within the line of their instructions, the object at which they could strike with the greatest prospect of advantage. They had 2,800 land forces, which they hoped, with the co-operation of their shipping, would be fully sufficient.

For some months past every exertion had been made to put the colony of South-Carolina, and especially its capital Charleston, in a respectable posture of defence. In subserviency to this view, works had been erected on Sullivan’s island, which is situated so near the channel leading up to the town, as to be a convenient post for annoying vessels approaching it.

Sir Peter Parker attacked the fort on that island, with two fifty gun ships, the Bristol and Experiment, four frigates, the Active, Acteon, Solebay and Syron, each of 28 guns. The Sphynx of 20 guns, the Friendship armed vessel of 22 guns, Ranger sloop, and Thunder bomb, each of 8 guns. On the fort were mounted 26 cannon, 26, 18 and 9 pounders. The attack commenced between ten and eleven in the forenoon, and was continued for upwards of ten hours. The garrison consisting of 375 regulars and a few

militia, under the command of colonel Moultrie, made a most gallant defence. They fired deliberately, for the most part took [289] aim and seldom missed their object. The ships were torn almost to pieces, and the killed and wounded 1776 on board exceeded 200 men. The loss of the garrison was only ten men killed, and 22 wounded. The fort being built of palmetto, was little damaged. The shot which struck it were ineffectually buried in its soft wood. General Clinton had some time before the engagement, landed with a number of troops on Long-Island, and it was expected that he would have co-operated with Sir Peter Parker, by crossing over the narrow passage, which divides the two islands, and attacking the fort in its unfinished rear; but the extreme danger to which he must unavoidably have exposed his men, induced him to decline the perilous attempt. Colonel Thomson with 7 or 800 men was stationed at the east end of Sullivan's island, to oppose their crossing. No serious attempt was made to land either from the fleet, or the detachment commanded by Sir Henry Clinton. The firing ceased in the evening, and soon after the ships slipped their cables. Before morning they had retired about two miles from the island. Within a few days more the troops re-embarked and the whole sailed from New-York. The thanks of Congress were given to general Lee, who had been sent on by Congress to take the command in Carolina, and also to colonels Moultrie and Thomson, for their good conduct on this memorable day. In compliment to the commanding officer the fort from that time was called Fort Moultrie.

During the engagement the inhabitants stood with arms in their hands at their respective posts, prepared to receive the enemy wherever they might land. Impressed with high ideas of British power and bravery, they were apprehensive that the fort would be either silenced or passed, and that they should be called to immediate action. They were cantoned in the various landing places near Charleston, and their resolution was fixed to meet the invaders at the water's edge, and dispute every inch of ground, trusting the event to heaven.

By the repulse of this armament the southern states obtained a respite from the calamities of war for two years and a half.

The defeat the British met with at Charleston, [290] seemed in 1776 some measure to counterbalance the unfavourable impression made, by their subsequent successes, to the northward. Throughout the whole summer, and till the close of the year, Congress had little else than the victory on Sullivan's island, to console them under the various evacuations, retreats, and defeats, to which, as shall hereafter be related, their armies were obliged to submit in every other part of the union. The event of the expedition contributed greatly to establish the cause which it was intended to overset. In opposition to the bold assertions of some, and the desponding fears of others, experience proved that America might effectually resist a British fleet and army. Those, who from interested motives had abetted the royal government, ashamed of their opposition to the struggles of an infant people for their dearest rights, retired into obscurity.

The effects of this victory, in animating the Americans, were much greater than could be warranted, by the circumstances of the action. As it was the first attack made by the British navy, its unsuccessful issue inspired a confidence which a more exact knowledge of military calculations would have corrected. The circumstance of its

happening in the early part of the war, and in one of the weaker provinces, were happily instrumental in dispelling the gloom which overshadowed the minds of many of the colonists, on hearing of the powerful fleets and numerous armies which were coming against them.

The command of the force which was designed to operate against New-York in this campaign, was given to admiral lord Howe, and his brother Sir William, officers who, as well from their personal characters, as the known bravery of their family, stood high in the confidence of the British nation. To this service was allotted a very powerful army, consisting of about 30,000 men. This force was far superior to any thing that America had heretofore seen. The troops were amply provided with artillery, military stores, and warlike materials of every kind, and were supported by a numerous fleet. The admiral and general, in addition to their military powers, were appointed commissioners for restoring peace to the colonies.

[291]

General Howe having in vain waited two months at Halifax for his brother, and the expected re-inforcements from England, impatient of farther delays, sailed from that harbour, with the force which he had previously commanded in Boston,

1776

and directing his course towards New-York, arrived in the latter end of June, off Sandy-Hook. Admiral lord Howe, with part of the re-inforcement from England, arrived at Halifax, soon after his brother's departure.

Jun. 10

Without dropping anchor he followed, and soon after joined him near Staten-Island. The British general, on his approach, found every part of New-York island, and the most exposed parts of Long-Island fortified and well defended by artillery. About fifty British transports anchored near Staten-Island, which had not been so much the object of attention. The inhabitants thereof, either from fear, policy, or affection, expressed great joy on the arrival of the royal forces. General Howe was there met by Tryon, late governor of the province, and by several of the loyalists, who had taken refuge with him in an armed vessel. He was also joined by about sixty persons from New-Jersey, and 200 of the inhabitants of Staten-Island were embodied, as a royal militia. From these appearances, great hopes were indulged that as soon as the army was in a condition to penetrate into the country, and protect the loyalists, such numbers would flock to their standard as would facilitate the attainment of the objects of the campaign.

Jun. 12

On the fourth day after the British transports appeared off Sandy-Hook. Congress, though fully informed of the numbers and appointment of the force about to be employed against the colonies, ratified their famous declaration of independence. This was publicly read to the American army, and received by them with unfeigned acclamations of joy. Though it was well known, that Great-Britain had employed a force of 55,000 men, to war upon the new-formed states, and that the continental army was not near equal to half that number, and only engaged for a few months, and that Congress was without any assurance of foreign aid, yet both the American [292] officers and privates gave every evidence

of their hearty approbation of the decree which severed the colonies from Great-Britain, and submitted to the decision of the sword, whether they should be free states, or conquered provinces. Now, said they, “we know the ground on which we stand. Now we are a nation. No more shall the opprobrious term of rebel, with any appearance of justice, be applied to us. Should the fortune of war throw us into the hands of our enemies, we may expect the treatment of prisoners, and not the punishment of rebels. The prize for which we contend is of such magnitude that we may freely risque our lives to obtain it.”

1776

It had early occurred to general Washington, that the possession of New-York, would be with the British a favourite object. Its central situation and contiguity to the ocean, enabled them to carry with facility the war to any part of the sea coast. The possession of it was rendered still more valuable by the ease with which it could be maintained. Surrounded on all sides by water, it was defensible by a small number of British ships, against adversaries whose whole navy consisted only of a few frigates. Hudson’s river, being navigable for ships of the largest size to a great distance, afforded an opportunity of severing the eastern from the more southern states, and of preventing almost any communication between them.

From these well known advantages, it was presumed by the Americans, that the British would make great exertions to effect the reduction of New-York. General Lee, while the British were yet in possession of the capital of Massachusetts had been detached from Cambridge, to put Long-Island and New-York into a posture of defence. As the departure of the British from Boston became more certain, the probability of their instantly going to New-York, increased the necessity of collecting a force for its safety.

It had been therefore agreed in a council of war, that five regiments, together with a rifle battalion should march without delay to New-York, and that the states of New-York and New-Jersey should be requested to furnish the former two thousand, and the [293] latter one thousand men for its immediate defence.

March 13

General Washington soon followed, and early in April fixed his head quarters in that city. A new distribution of the American army took place. Part was left in Massachusetts. Between two and three thousand were ordered to Canada: But the greater part rendezvoused at New-York.

1776

Experience had taught the Americans the difficulty of attacking an army, after it had effected a lodgment. They therefore made strenuous exertions to prevent the British from enjoying the advantages in New-York, which had resulted from their having been permitted to land and fortify themselves in Boston. The sudden commencement of hostilities in Massachusetts, together with the previous undisturbed landing of the royal army, allowed no time for deliberating on a system of war. A change of circumstances indicated the propriety of fixing on a plan for conducting the defence of the new formed states. On this occasion general Washington, after much thought, determined on a war of posts. This mode of conducting military operations gave confidence to the Americans, and besides, it both retarded and alarmed their adversaries. The soldiers in the American army were new levies, and had not yet learned to stand uncovered, before the instruments of death. Habituating them to the

sound of fire arms, while they were sheltered from danger, was one step towards inspiring them with a portion of mechanical courage. The British remembered Bunker's-hill, and had no small reverence for even slight fortifications, when defended by freemen. From views of this kind, works were erected in and about New-York, on Long Island, and the heights of Haerlem. These, besides batteries, were field redoubts, formed of earth with a parapet and ditch. The former were sometimes fraised, and the latter palisadoed, but they were in no instance formed to sustain a siege. Slight as they were, the campaign was nearly wasted away before they were so far reduced, as to permit the royal army to penetrate into the country.

[294]

The war having taken a more important turn than in the preceding year had been foreseen, Congress at the opening of the campaign, found themselves distitute of a force sufficient for their defence. They therefore in June determined on a plan to reinforce their continental army by bringing into the field, a new species of troops, that would be more permanent than the common militia, and yet more easily raised than regulars. With this view they instituted a flying camp, to consist of an intermediate corps, between regular soldiers and militia.

1776

Ten thousand men were called for from the states of Pennsylvania, Maryland, and Delaware, to be in constant service to the first day of the ensuing December. Congress at the same time called for 13,800 of the common militia from Massachusetts, Connecticut, New-York, and New-Jersey. The men for forming the flying camp were generally procured, but there were great deficiencies of the militia, and many of those who obeyed their country's call, so far as to turn out, manifested a reluctance to submit to the necessary discipline of camps.

June 3

The difficulty of providing the troops with arms while before Boston, was exceeded by the superior difficulty of supplying them, in their new position. By the returns of the garrison at fort Montgomery, in the Highlands in April, it appeared that there were 208 privates, and only forty one guns fit for use. In the garrison at fort Constitution, there were 136 men, and only 68 guns fit for use. Flints were also much wanted. Lead would have been equally deficient, had not a supply for the musquetry been obtained by stripping dwelling houses.

The uncertainty of the place, where the British would commence their operations, added much to the imbarassment of general Washington. Not only each colony, but each seaport town, supposed itself to be the object of the British, and was ardent in its supplications, to the commander in chief for his puculiar attention. The people of Massachusetts were strongly impressed with an idea, that the evacuation of Boston was only a feint, and that the British army would soon return.

They were for that reason very desirous, that the continental troops should not be withdrawn [295] from their state. The inhabitants of Rhode-Island urged in a long petition, that their maritime situation exposed them to uncommon danger, while their great exertions in fitting out armed vessels, had deprived them of many of their citizens. They therefore prayed for a body of continental soldiers, to be stationed for their constant and peculiar defence. So various were the applications for troops, so numerous the calls for arms, that a

1776

decided conduct became necessary to prevent the feeble American force, and the deficient stock of public arms from being divided and subdivided, so as to be unequal to the proper defence of any one place.

In this crisis of particular danger, the people of New-York acted with spirit. Though they knew they were to receive the first impression of the British army, yet their convention resolved, “that all persons residing within the state of New-York, and claiming protection from its laws, owed it allegiance, and that any person owing it allegiance and levying war against the state, or being an adherent to the king of Great-Britain, should be deemed guilty of treason and suffer death.” They also resolved [“]that one fourth of the militia of West-Chester, Dutchess and Orange counties, should be forthwith drawn out for the defence of the liberties, property, wives and children, of the good people of the state, to be continued in service till the last day of December,” and, “that as the inhabitants of King’s county, had determined not to oppose the enemy, a committee should be appointed to enquire into the authenticity of these reports, and to disarm and secure the disaffected. To remove or destroy the stock of grain, and if necessary to lay the whole country waste.”

The two royal commissioners, admiral and general Howe, thought proper, before they commenced their military operations, to try what might be done in their civil capacity, towards effecting a re-union between Great-Britain and the colonies. It was one of the first acts of lord Howe, to send on shore a circular letter to several of the royal governors in America, informing them of the late act of parliament, “for restoring peace to the colonies, [296] and granting pardon to such as should deserve mercy,” and desiring them to publish a declaration which accompanied the same. In this he informed the colonists of the power with which his brother and he were intrusted “of granting general or particular pardons to all those who though they had deviated from their allegiance, were willing to return to their duty,” and of declaring “any colony, province, county or town, port, district or place to be at the peace of his majesty.” Congress, impressed with a belief, that the proposals of the commissioners, instead of disuniting the people, would have a contrary effect, ordered them to be speedily published in the several American news-papers. Had a redress of grievances been at this late hour offered, though the honour of the states was involved in supporting their late declaration of independence, yet the love of peace, and the bias of great numbers to their Parent State, would in all probability have made a powerful party for rescinding the act of separation, and for re-uniting with Great-Britain. But when it appeared that the power of the royal commissioners was little more than to grant pardons, Congress appealed to the good sense of the people, for the necessity of adhering to the act of independence. The resolution for publishing the circular letter, and the declaration of the royal commissioners, assigned as a reason thereof,

that the good people of the United States may be informed of what nature are the commissioners, and what the terms, with expectation of which the insidious court of Great-Britain had endeavoured to amuse and disarm them, and that the few who still remain suspended by a hope, founded either in the justice or moderation of their late king, may now at length be convinced that the valour alone of their country is to save its liberties.

About the same time flags were sent ashore by lord Howe, with a letter directed to George Washington, Esq. which he refused to receive as not being addressed to him with the title due to his rank.

In his letter to Congress on this subject, he wrote as follows, “I 1776 would not on any occasion sacrifice essentials to punctilio, but in this instance I deemed it a duty to my country and appointment, to insist [297] on that respect, which in any other than a public view, I would willingly have waved. “Congress applauded his conduct in a public resolution, and at the same time directed [“]that no letter or message should be received on any occasion whatever, from the enemy, by the commander in chief, or others the commanders of the American army, but such as were directed to them in the characters they severally sustained.”

Some time after, adjutant general Patterson was sent to New-York, by general Howe, with a letter addressed to George Washington, &c. &c. &c. On an interview the adjutant general, after expressing his high esteem for the person and character of the American general, and declaring, that it was not intended to derogate from the respect due to his rank, expressed his hopes, that the *et ceteras* would remove the impediments to their correspondence. General Washington replied, “That a letter directed to any person in a public character, should have some description of it, otherwise it would appear a mere private letter. That it was true the *et ceteras* implied every thing, but they also implied any thing, and that he should therefore decline the receiving any letter directed to him as a private person, when it related to his public station.[”] A long conference ensued, in which the adjutant general observed, that “the commissioners were armed with great powers, and would be very happy in effecting an accommodation.” He received for answer, “that from what appeared, their powers were only to grant pardon, that they who had committed no fault, wanted no pardon.” Soon after this interview, a letter from Howe, respecting prisoners, which was properly addressed to Washington was received.

While the British, by their manifestoes and declarations, were endeavouring to separate those who preferred a reconciliation with Great-Britain from those who were the friends of independence, Congress, by a similiar policy, was attempting to detach the foreigners, who had come with the royal troops from the service of his Britannic majesty. Before hostilities had commenced, the following resolution was adopted and circulated among those [298] on whom it was intended to operate.

Resolved, that these states will receive all such foreigners who August 14 shall leave the armies of his Britannic majesty in America, and shall chuse to become members of any of these states, and they shall be protected in the free exercise of their respective religions, and be invested with the rights, privileges and immunities of natives, as established by the laws of these states, and moreover, that this congress will provide for every such person, fifty acres of unappropriated lands in some of these states, to be held by him and his heirs, as absolute property.

The numbers which were prepared to oppose the British, when they should disembark, made them for some time cautious of proceeding to their projected land

operations, but the superiority of their navy enabled them to go by water, whithersoever they pleased.

A British forty gun ship, with some smaller vessels, sailed up North-River, without receiving any damage of consequence, though fired upon from the batteries of New-York, Paules-Hook, Red-Bank, and Governor's Island. An attempt was made, not long after, with two fire ships, to destroy the British vessels in the North-River, but without effecting any thing more than the burning of a tender. They were also attacked with row gallies, but to little purpose. After some time the Phoenix and Rose men of war, came down the river, and joined the fleet. Every effort of the Americans from their batteries on land, as well as their exertions on the water, proved ineffectual. The British ships passed with less loss than was generally expected, but nevertheless the damage they received was such as deterred them from frequently repeating the experiment. In two or three instances they ascended the North-River, and in one or two the East-River, but those which sailed up the former, speedily returned, and by their return, a free communication was opened through the upper part of the state.

July 12

The American army in and near New-York amounted to 17,225 men. These were mostly new troops, and were divided in many small and unconnected posts, some of which were fifteen miles removed from others.

The [299] British force before New-York was increasing by frequent successive arrivals from Halifax, South-Carolina, Florida, the West-Indies and Europe. But so many unforeseen delays had taken place, that the month of August was far advanced, before they were in a condition to open the campaign.

1776

When all things were ready, the British commanders resolved to make their first attempt on Long-Island. This was preferred to New-York, as it abounded with those supplies which their forces required.

The British landed without opposition, between two small towns, Utrecht and Gravesend. The American works protected a small peninsula having Wallabout-Bay to the left, and stretching over to Red-Hook on the right, and the East-River being in their rear. General Sullivan, with a strong force, was encamped within these works at Brooklyne. From the east-side of the narrows runs a ridge of hills covered with thick wood, about five or six miles in length, which terminates near Jamaica. There were three passes through these hills, one near the narrows, a second on the Flatbush road, and a third on the Bedford road, and they are all defensible. These were the only roads which could be passed from the southside of the hills to the American lines, except a road which led round the easterly end of the hills to Jamaica. The Americans had 800 men on each of these roads, and colonel Miles was placed with his battalion of riflemen, to guard the road from the south of the hills to Jamaica, and to watch the motions of the British.

General de Heister, with his Hessians, took post at Flatbush, in the evening. In the following night the greater part of the British army, commanded by general Clinton, marched to gain the road leading round the

August 26

easterly end of the hills to Jamaica, and to turn the left of the Americans. He arrived about two hours before day, within half a mile of this road. One of his parties fell in with a patrol of American officers, and took them all prisoners, which prevented the early transmission of intelligence.

Upon the first appearance of day general Clinton advanced, and took possession of the heights over [300] which the road passed.

1776

General Grant, with the left wing, advanced along the coast by the west road, near the narrows; but this was intended chiefly as a feint.

The guard which was stationed at this road, fled without making any resistance. A few of them were afterwards rallied, and lord Stirling advanced with 1500 men, and took possession of a hill, about two miles from the American camp, and in front of general Grant.

An attack was made very early in the morning by the Hessians from Flatbush, under general de Heister, and by general Grant on

Aug. 27

the coast, and was well supported for a considerable time by both sides. The Americans who opposed general de Heister were first informed of the approach of general Clinton, who had come round on their left. They immediately began to retreat to their camp, but were intercepted by the right wing under general Clinton, who got into the rear of their left, and attacked them with his light infantry and dragoons, while returning to their lines. They were driven back till they were met by the Hessians. They were thus alternately chased and intercepted, between general de Heister and general Clinton. Some of their regiments nevertheless found their way to the camp. The Americans under lord Stirling, consisting of colonel Miles' two battalions, colonel Atlee's, colonel Smallwood's, and colonel Hatche's, regiments, who were engaged with general Grant, fought with great resolution for about six hours. They were uninformed of the movements made by general Clinton, till some of the troops under his command, had traversed the whole extent of country in their rear. Their retreat was thus intercepted, but several notwithstanding, broke through and got into the woods. Many threw themselves into the marsh, some were drowned, and others perished in the mud, but a considerable number escaped by this way to their lines.

The king's troops displayed great valour throughout the whole day. The variety of the ground occasioned a succession of small engagements, pursuits and slaughter, which lasted for many hours.

British discipline in every instance, triumphed over the native valour of raw troops, [301] who had never been in action, and whose officers were unacquainted with the stratagems of war.

1776

The loss of the British and Hessians was about 450. The killed, wounded and prisoners of the Americans, including those who were drowned or perished in the woods or mud, considerably exceeded a thousand. Among the prisoners of the latter were two of their general officers, Sullivan and lord Stirling. Three Colonels, 4 lieutenant colonels, 3 majors, 18 captains, 43 lieutenants, and 11 ensigns. Smallwood's regiment, the officers of which were young men of the best families in the state of Maryland, sustained a loss of 259 men. The British after their victory were

so impetuous, that it was with difficulty, they could be restrained from attacking the American lines.

In the time of, and subsequent to the engagement, General Washington drew over to Long-Island, the greatest part of his army. After he had collected his principal force there, it was his wish and hope, that Sir William Howe, would attempt to storm the works on the island. These though insufficient to stand a regular siege, were strong enough to resist a coup de main. The remembrance of Bunker's-hill, and a desire to spare his men, restrained the British general from making an assault. On the contrary he made demonstrations of proceeding by siege, and broke ground within three hundred yards to the left at Putnam's redoubt.

Though general Washington wished for an assault, yet being certain that his works would be untenable, when the British batteries should be fully opened, he called a council of war, to consult on the measures proper to be taken. It was then determined that the objects in view were in no degree proportioned to the dangers to which, by a continuation on the island, they would be exposed. Conformably to this opinion, dispositions were made for an immediate retreat. This commenced soon after it was dark from two points, the upper and lower ferries, on East river. General M'Dougal, regulated the embarkation at one, and colonel Knox at the other.

Aug. 30

The intention of evacuating the island, had been so prudently concealed [302] from the Americans, that they knew not whither they were going, but supposed to attack the enemy. The field artillery, tents, baggage, and about 9000 men were conveyed to the city of New-York over East River, more than a mile wide, in less than 13 hours, and without the knowledge of the British, though not six hundred yards distant. Providence, in a remarkable manner favoured the retreating army. For some time after the Americans began to cross the state of the tide, and a strong north-east wind made it impossible for them to make use of their sail boats, and their whole number of row boats was insufficient for completing the business, in the course of the night. But about eleven o'clock, the wind died away, and soon after sprung up at south-east, and blew fresh, which rendered the sail boats of use, and at the same time made the passage from the island to the city, direct, easy and expeditious. Towards morning an extreme thick fog came up, which hovered over Long-Island, and by concealing the Americans, enabled them to complete their retreat without interruption, though the day had begun to dawn some time before it was finished. By a mistake in the transmission of orders, the American lines were evacuated for about three quarters of an hour, before the last embarkation took place, but the British though so near, that their working parties could be distinctly heard, being enveloped in the fog knew nothing of the matter. The lines were repossessed and held till six o'clock in the morning, when every thing except some heavy cannon was removed. General Mifflin, who commanded the rear guard left the lines, and under the cover of the fog got off safe. In about half an hour the fog cleared away, and the British entered the works which had been just relinquished. Had the wind not shifted, the half of the American army could not have crossed, and even as it was, if the fog had not concealed their rear, it must have been discovered, and could hardly have escaped. General Sullivan, who was taken prisoner on Long-Island, was immediately sent on parole, with the following verbal message from lord Howe to Congress,

1776

that though he could not at present treat [303] with them in that character, yet he was very desirous of having a conference with some of the members, whom he would consider as private gentlemen; that he with his brother the general, had full powers to compromise the dispute between Great-Britain and America, upon terms advantageous to both—that he wished a compact might be settled, at a time when no decisive blow was struck, and neither party could say it was compelled to enter into such agreement. That were they disposed to treat, many things which they had not yet asked, might and ought to be granted, and that if upon conference they found any probable ground of accommodation, the authority of Congress would be afterwards acknowledged to render the treaty complete.

1776

Three days after this message was received, general Sullivan was requested to inform lord Howe,

that Congress being the representatives of the free and independent states of America, they cannot with propriety send any of their members to confer with his lordship in their private characters, but that ever desirous of establishing peace on reasonable terms, they will send a committee of their body, to know whether he has any authority to treat with persons authorised by Congress, for that purpose, on behalf of America, and what that authority is; and to hear such propositions as he shall think fit to make respecting the same.

They elected Dr. Franklin, John Adams, and Edward Rutledge their committee, for this purpose. In a few days they met lord Howe on Staten-Island, and were received with great politeness. On their return they made a report of their conference, which they summed up by saying,

It did not appear to your committee that his lordship's commission contained any other authority than that expressed in the act of parliament—namely, that of granting pardons, with such exceptions as the commissioners shall think proper to make, and of declaring America, or any part of it, to be in the king's peace, on submission: For as to the power of enquiring into the state of America, which his lordship mentioned to us, and of conferring and consulting with any persons the commissioners might think proper,

and representing the result [304] of such conversation to the ministry, who, provided the colonies would subject themselves, might after all, or might not, at their pleasure, make any alterations in the former instructions to governors, or propose in parliament, any amendment of the acts complained of, we apprehended any expectation from the effect of such a power, would have been too uncertain and precarious, to be relied on by America, had she still continued in her state of dependence.

1776

Lord Howe, had ended the conference on his part, by expressing his regard for America, and the extreme pain he would suffer in being obliged to distress those whom he so much regarded. Dr. Franklin, thanked him for his regards, and assured him, [“]that the Americans would shew their gratitude, by endeavouring to lessen as much as possible, all pain he might feel on their account, by exerting their utmost abilities, in taking good care of themselves.”

The committee in every respect maintained the dignity of Congress. Their conduct and sentiments were such as became their character. The friends to independence rejoiced that nothing resulted from this interview, that might disunite the people. Congress, trusting to the good sense of their countrymen, ordered the whole to be printed for their information. All the states would have then rejoiced at less beneficial terms than they obtained about seven years later. But Great-Britain counted on the certainty of their absolute conquest, or unconditional submission. Her offers therefore comported so little with the feelings of America, that they neither caused demur nor disunion, among the new formed states.

The unsuccessful termination of the action on the 27th, led to consequences more seriously alarming to the Americans, than the loss of their men. Their army was universally dispirited. The militia ran off by companies. Their example infected the regular regiments. The loose footing on which the militia came to camp, made it hazardous to exercise over them that discipline, without which, an army is a mob. To restrain one part of an army, while another claimed and exercised the right of doing as they pleased, was no less impracticable than absurd.

[305]

A council of war, recommended to act on the defensive, and not to risque the army for the sake of New-York.

1776

To retreat, subjected the commander in chief to reflections painful to bear, and yet impolitic to refute. To stand his ground, and by suffering himself to be surrounded, to hazard the fate of America on one decisive engagement, was contrary to every rational plan of defending the wide extended states committed to his care. A middle line between abandoning and defending was therefore for a short time adopted. The public stores were moved to Dobbs' ferry, about 26 miles from New-York. 12,000 men were ordered to the northern extremity of New-York island, and 4500 to remain for the defence of the city, while the remainder occupied the intermediate space, with orders, either to support the city or Kingsbridge, as exigencies might require. Before the British landed, it was impossible to tell what place would be first attacked. This made it necessary to erect works for the defence of a variety of places, as well as of New-York. Though every thing was abandoned when the crisis came that either the city must be relinquished, or the army risqued for its defence, yet from the delays, occasioned by the redoubts and other works, which had been erected on the idea of making the defence of the states a war of posts, a whole campaign was lost to the British, and saved to the Americans. The year began with hopes, that Great-Britain would recede from her demands, and therefore every plan of defence was on a temporary system. The declaration of independence, which the violence of Great-Britain forced the colonies to adopt in July, though neither foreseen nor intended at the commencement of the year, pointed out the necessity of organising an army, on new terms, correspondent to the enlarged objects for which they had resolved to contend.

Sept. 7

Congress accordingly determined to raise 88 battalions, to serve during the war. Under these circumstances to wear away the campaign, with as little misfortune as possible, and thereby to gain time for raising a

Sep. 16

permanent army against the next year, was to the Americans a matter of the last importance.

Though the commander in chief abandoned those works, [306] 1776 which had engrossed much time and attention yet the advantage resulting from the delays they occasioned, far overbalanced the expence incurred by their erection.

The same shortsighted politicians, who had before censured general Washington, for his cautious conduct, in not storming the British lines at Boston, renewed their clamors against him, for adopting this evacuating and retreating system. Supported by a consciousness of his own integrity, and by a full conviction that these measures were best calculated for securing the independence of America, he for the good of his country, voluntarily subjected his fame to be overshadowed by a temporary cloud.

General Howe having prepared every thing for a descent on Sep. 15 New-York island, began to land his men under cover of ships of war, between Kepps'-bay and Turtle bay. A breast work had been erected in the vicinity, and a party stationed in it to oppose the British, in case of their attempting to land. But on the first appearance of danger, they ran off in confusion. The commander in chief came up, and in vain attempted to rally them. Though the British in sight, did not exceed sixty, he could not either by example, intreaty, or authority, prevail on a superior force to stand their ground, and face that inconsiderable number. Such dastardly conduct raised a tempest in the usually tranquil mind of general Washington. Having embarked in the American cause from the purest principles, he viewed with infinite concern this shameful behaviour, as threatening ruin to his country. He recollected the many declarations of Congress, of the army, and of the inhabitants, preferring liberty to life, and death to dishonour, and contrasted them with their present scandalous flight. His soul was harrowed up with apprehensions that his country would be conquered—her army disgraced, and her liberties destroyed. He anticipated, in imagination, that the Americans would appear to posterity in the light of high sounding boasters, who blustered when danger was at a distance, but shrunk at the shadow of opposition. Extensive confiscations and numerous attainders presented, themselves in full view to his agitated mind.

He saw, in imagination, new formed states, with [307] 1776 the means of defence in their hands, and the glorious prospects of liberty before them, levelled to the dust, and such constitutions imposed on them as were likely to crush the vigour of the human mind, while the unsuccessful issue of the present struggle would for ages to come, deter posterity from the bold design of asserting their rights. Impressed with these ideas he hazarded his person for some considerable time in rear of his own men, and in front of the enemy with his horse's head towards the latter, as if in expectation, that by an honourable death he might escape the infamy he dreaded from the dastardly conduct of troops on whom he could place no dependance. His aids and the confidential friends around his person, by indirect violence, compelled him to retire. In consequence of their address and importunity, a life was saved for public service, which otherwise from a sense of honour, and a gust of passion, seemed to be devoted to almost certain destruction.

On the day after this shameful flight of part of the American army, a skirmish took place between two battalions of light infantry and highlanders commanded by brigadier Leslie, and some detachments from the American army, under the command of lieutenant colonel Knowlton of Connecticut, and major Leitch of Virginia. The colonel was killed and the major badly wounded. Their men behaved with great bravery, and fairly beat their adversaries from the field. Most of these were the same men, who had disgraced themselves the day before, by running away[;] struck with a sense of shame for their late misbehaviour, they had offered themselves as volunteers, and requested the commander in chief to give them an opportunity to retrieve their honour. Their good conduct, at this second engagement, proved an antidote to the poison of their example on the preceding day. It demonstrated that the Americans only wanted resolution and good officers to be on a footing with the British, and inspired them with hopes that a little more experience would enable them to assume, not only the name and garb, but the spirit and firmness of soldiers.

The Americans having evacuated the city of New-York, [308] a brigade of the British army marched into it.

They had been but a few days in possession, when a dreadful fire, most probably occasioned by the disorderly conduct of some British sailors, who had been permitted to regale themselves on shore, broke out, and consumed about a thousand houses. Dry weather, and a brisk wind, spread the flames to such an extent, that had it not been for great exertions of the troops and sailors, the whole city must have shared the same fate. After the Americans had evacuated New-York, they retired to the north end of the island, on which that city is erected. In about four weeks general Howe began to execute a plan for cutting off general Washington's communication with the eastern states, and enclosing him so as to compel a general engagement on the island. With this view, the greater part of the royal army passed through Hellgate, entered the sound, and landed on Frog's neck, in West-Chester county.

Two days after they made this movement, general Lee arrived from his late successful command to the southward.

He found that there was a prevailing disposition among the officers in the American army for remaining on New-York island.

A council of war was called, in which general Lee gave such convincing reasons for quitting it, that they resolved immediately to withdraw the bulk of the army. He also pressed the expediency of evacuating Fort Washington, but in this he was opposed by general Greene, who argued that the possession of that post would divert a large body of the enemy, from joining their main force, and in conjunction with Fort Lee, would be of great use in covering the transportation of provisions and stores up the North-River, for the service of the American troops. He added farther, that the garrison could be brought off at any time, by boats from the Jersey side of the river. His opinion prevailed. Though the system of evacuating and retreating was in general adopted, an exception was made in favour of Fort Washington, and near 3000 men were assigned for its defence.

1776

Oct. 12

Oct. 14

Oct. 16

Oct. 18

The royal army, after a halt of six days, at Frog's neck, advanced near to New-Rochelle. On their march they [309] sustained a considerable loss by a party of Americans, whom general Lee posted behind a wall. After three days, general Howe moved the right and centre of his army two miles to the northward of New Rochelle, on the road to the White Plains, and there he received a large reinforcement.

1776

Oct. 21

General Washington, while retreating from New-York island, was careful to make a front towards the British, from East-Chester, almost to White Plains, in order to secure the march of those who were behind, and to defend the removal of the sick, the cannon and stores of his army. In this manner his troops made a line of small detached and intrenched camps, on the several heights and strong grounds, from Valentine's hill, on the right, to the vicinity of the White Plains, on the left.

The royal army moved in two columns, and took a position with the Bronx in front, upon which the Americans assembled their main force at White Plains, behind entrenchments. A general action was hourly expected, and a considerable one took place, in which several hundreds fell.

Oct. 25

The Americans were commanded by general M'Dougal, and the British by general Leslie. While they were engaged, the American baggage was moved off, in full view of the British army. Soon after this, general Washington changed his front, his left wing stood fast, and his right fell back to some hills. In this position, which was an admirable one in a military point of view, he both desired and expected an action; but general Howe declined it, and drew off his forces towards Dobbs' ferry. The Americans afterwards retired to North-Castle.

Oct. 28

General Washington, with part of his army, crossed the North-River, and took post in the neighborhood of Fort-Lee. A force of about 7500 men was left at North-Castle, under general Lee.

The Americans having retired, Sir William Howe determined to improve the opportunity of their absence, for the reduction of Fort Washington. This, the only post the Americans then held on New-York island, was under the command of colonel Magaw. The royal army made four attacks upon it. The first on the north [310] side, was led on by general Kniphausen. The second on the east by general Mathews, supported by lord Cornwallis.

Nov. 12

The third was under the direction of lieutenant colonel Stirling, and the fourth was commanded by lord Piercy. The troops under Kniphausen, when advancing to the fort, had to pass through a thick wood, which was occupied by colonel Rawling's regiment of riflemen, and suffered very much from their well directed fire. During this attack, a body of the British light infantry advanced against a party of the Americans, who were annoying them from behind rocks and trees, and obliged them to disperse. Lord Piercy, carried an advance work on his side, and lieutenant colonel Stirling, forced his way up a steep height, and took 170 prisoners. Their outworks being carried, the Americans left their lines, and crowded into the fort. Colonel Rahl, who led the right column of Kniphausen's attack, pushed forward, and lodged his column within a hundred yards of the fort, and was there soon joined by the left column—the garrison surrendered on terms of

Nov. 16

capitulation, by which the men were to be considered as prisoners of war, and the officers to keep their baggage and side arms. The number of prisoners amounted to 2700. The loss of the British, inclusive of killed and wounded, was about 1200.

Shortly after Fort Washington had surrendered.

Lord Cornwallis, with a considerable force passed over to attack Fort Lee, on the opposite Jersey shore.

Nov. 18

The garrison was saved by an immediate evacuation, but at the expense of their artillery and stores. General Washington, about this time retreated to New-Ark. Having abundant reason from the posture of affairs, to count on the necessity of a farther retreat he asked colonel Reed—"Should we retreat to the back parts of Pennsylvania, will the Pennsylvanians support us?" The colonel replied, if the lower counties are subdued and give up, the back counties will do the same. The general replied, ["we must retire to Augusta county, in Virginia. Numbers will be obliged to repair to us for safety, and we must try what we can do in carrying on a predatory war, and if overpowered, we must cross the Allegany mountains."]

[311]

While a tide of success, was flowing in upon general Howe, he and his brother, as royal commissioners, issued a proclamation, in which they commanded, "All persons assembled in arms against his majesty's government to disband, and all general or provincial congresses to desist from their treasonable actings, and to relinquish their usurped power." They also declared "that every person who within sixty days should appear before the governor, lieutenant governor, or commander in chief of any of his majesty's colonies, or before the general, or commanding officer of his majesty's forces, and claim the benefit of the proclamation; and testify his obedience to the laws, by subscribing a certain declaration, should obtain a full and free pardon of all treasons by him committed, and of all forfeitures, and penalties for the same." Many who had been in office, and taken an active part in support of the new government, accepted of these offers, and made their peace by submission. Some who had been the greatest blusterers in favour of independence, veered round to the strongest side. Men of fortune generally gave way. The few who stood firm, were mostly to be found in the middle ranks of the people.

1776

The term of time for which the American soldiers had engaged to serve, ended in November or December, with no other exception, than that of two companies of artillery, belonging to the state of New-York, which were engaged for the war. The army had been organized at the close of the preceding year, on the fallacious idea, that an accommodation would take place, within a twelve month. Even the flying camp, though instituted after the prospect of that event had vanished, was enlisted only till the first of December, from a presumption that the campaign would terminate by that time.

When it was expected that the conquerors would retire to winter quarters, they commenced a new plan of operations more alarming, than all their previous conquests. The reduction of Fort Washington, the evacuation of Fort Lee, and the diminution of the American army, by the departure of those whose time of service had expired, encouraged the British,

notwithstanding the [312] severity of the winter, and the badness of the roads, to pursue the remaining considerable continental force, with the prospect of annihilating it. By this turn of affairs, the interior country was surprised into confusion, and found an enemy within its bowels, without a sufficient army to oppose it. To retreat, was the only expedient left. This having commenced, lord Cornwallis followed, and was close in the rear of general Washington, as he retreated successively to New-Ark, to Brunswick, to Princeton, to Trenton, and to the Pennsylvania side of the Delaware. The pursuit was urged with so much rapidity, that the rear of the one army, pulling down bridges was often within sight, and shot off the van of the other, building them up.

1776

This retreat into, and through New-Jersey, was attended with almost every circumstance that could occasion embarrassment, and depression of spirits. It commenced in a few days, after the Americans had lost 2700 men in Fort Washington. In fourteen days after that event, the whole flying camp claimed their discharge. This was followed by the almost daily departure of others, whose engagements terminated nearly about the same time. A farther disappointment happened to general Washington at this time. Gates had been ordered by Congress to send two regiments from Ticonderoga, to reinforce his army. Two Jersey regiments were put under the command of general St. Clair, and forwarded in obedience to this order, but the period for which they were enlisted was expired, and the moment they entered their own state, they went off to a man. A few officers without a single private, were all that general St. Clair brought off these two regiments, to the aid of the retreating American army. The few who remained with general Washington were in a most forlorn condition. They consisted mostly of the troops which had garrisoned Fort Lee, and had been compelled to abandon that post so suddenly, that they commenced their retreat without tents or blankets, and without any utensils to dress their provisions. In this situation they performed a march of about ninety miles, and had the address to prolong it to [313] the space of nineteen days.

As the retreating Americans marched through the country, scarcely one of the inhabitants joined them, while numbers were daily flocking to the royal army, to make their peace and obtain protection. They saw on the one side a numerous well appointed and full clad army, dazzling their eyes with the elegance of uniformity; on the other a few poor fellows, who from their shabby cloathing were called ragamuffins, fleeing for their safety. Not only the common people changed sides in this gloomy state of public affairs, but some of the leading men in New-Jersey and Pennsylvania adopted the same expedient. Among these Mr. Galloway, and the family of the Allens of Philadelphia, were most distinguished. The former, and one of the latter, had been members of Congress. In this hour of adversity they came within the British lines, and surrendered themselves to the conquerors, alledging in justification of their conduct, that though they had joined with their countrymen, in seeking for a redress of grievances in a constitutional way, they had never approved of the measures lately adopted, and were in particular, at all times, averse to independence.

1776

On the day general Washington retreated over the Delaware, the British took possession of Rhode-Island without any loss, and at the same time blocked up commodore Hopkins' squadron, and a number of privateers at Providence.

In this period, when the American army was relinquishing its general—the people giving up the cause, some of their leaders going over to the enemy, and the British commanders succeeding in every enterprise, general Lee was taken prisoner at Baskenridge, by lieutenant colonel Harcourt. This caused a depression of spirits among the Americans, far exceeding any real injury done to their essential interests. He had been repeatedly ordered to come forward with his division and join general Washington, but these orders were not obeyed.

This circumstance, and the dangerous crisis of public affairs, together with his being alone at some distance, from the troops which he commanded, begat suspicions that he chose to [314] fall into the hands of the British. Though these apprehensions were without foundation, they produced the same extensive mischief, as if they had been realities. The Americans had reposed extravagant confidence in his military talents, and experience of regular European war. Merely to have lost such an idol of the states at any time, would have been distressful, but losing him under circumstances, which favoured an opinion that, despairing of the American cause, he chose to be taken a prisoner, was to many an extinguishment of every hope.

1776

By the advance of the British into New-Jersey, the neighbourhood of Philadelphia became the seat of war. This prevented that undisturbed attention to public business which the deliberations of Congress required.

They therefore adjourned themselves to meet in eight days at Baltimore, resolving at the same time, “that general Washington should be possessed of full powers to order and direct all things relative to the department, and the operations of war.”

Dec. 12 20

The activity of the British in the close of the campaign, seemed in some measure to compensate for their tardiness, in the beginning of it.

Hitherto they had succeeded in every scheme. They marched up and down the Jersey side of the river Delaware, and through the country, without any molestation. All opposition to the re-establishment of royal government, seemed to be on the point of expiring. The Americans had thus far acted without system, or rather feebly executed what had been tardily adopted. Though the war was changed from its first ground, a redress of grievances to a struggle for sovereignty, yet some considerable time elapsed, before arrangements, conformable to this new system were adopted, and a much longer before they were carried into execution.

With the year 1776, a retreating, half naked army, was to be dismissed, and the prospect of a new one was both distant and uncertain. The recently assumed independence of the States, was apparently on the verge of dissolution. It was supposed by many, that the record of their existence would have been no more than that

a fickle people, impatient of the restraints of regular government, [315] had in a fit of passion abolished that of Great-Britain, and established in its room free constitutions of their own, but these new establishments, from want of wisdom in their rulers, or of spirit in their people, were no sooner

1776

formed than annihilated. The leading men, in their respective governments, and the principal members of Congress, (for by this name the insurgents distinguished their supreme council) were hanged, and their estates confiscated. Washington, the gallant leader of their military establishments—worthy of a better fate—deserted by his army—abandoned by his country—rushing on the thickest battalions of the foe, provoked a friendly British bayonet to deliver him from an ignominious death.

To human wisdom it appeared probable, that such a paragraph would have closed some small section in the history of England, treating of the American troubles, but there is in human affairs an ultimate point of elevation or depression, beyond which they neither grow better nor worse, but turn back in a contrary course.

In proportion as difficulties increased, Congress redoubled their exertions to oppose them.

They addressed the states in animated language, calculated to remove their despondency—renew their hopes—and confirm their resolutions.

Dec. 10

They at the same time dispatched gentlemen of character and influence, to excite the militia to take the field. General Mifflin was, on this occasion, particularly useful. He exerted his great abilities in rousing his fellow citizens, by animated and affectionate addresses, to turn out in defence of their endangered liberties.

Congress also recommended to each of the United States “to appoint a day of solemn fasting and humiliation, to implore of Almighty God the forgiveness of their many sins, and to beg the countenance and assistance of his providence, in the prosecution of the present just and necessary war.”

11

In the dangerous situation to which every thing dear to the friends of independence was reduced, Congress transferred extraordinary powers to general Washington, by a resolution, expressed in the following words:

[316]

The unjust, but determined purposes of the British court to enslave these free states, obvious through every delusive insinuation to the contrary,

1776

having placed things in such a situation that the very existence of civil liberty now depends on the right execution of military powers, and the vigorous decisive conduct of these being impossible to distant, numerous, and deliberative bodies. This Congress, having maturely considered the present crisis; and having perfect reliance on the wisdom, vigour, and uprightness of general Washington, do hereby,

Dec. 27

Resolve, That general Washington shall be, and he is hereby vested with full, ample, and complete powers, to raise and collect together, in the most speedy and effectual manner, from any or all of these United States, sixteen battalions of infantry, in addition to those already voted by Congress; to appoint officers for the said battalions of infantry; to raise, officer, and equip 3000 light-horse; three regiments of artillery,

and a corps of engineers, and to establish their pay; to apply to any of the states for such aid of the militia as he shall judge necessary; to form such magazines of provisions, and in such places as he shall think proper; to displace and appoint all officers under the rank of brigadier general, and to fill up all vacancies in every other department in the American armies; to take, wherever he may be, whatever he may want, for the use of the army, if the inhabitants will not sell it, allowing a reasonable price for the same; to arrest and confine persons who refuse to take the continental currency, or are otherwise disaffected to the American cause; and return to the states, of which they are citizens, their names, and the nature of their offences, together with the witnesses to prove them: That the foregoing powers be vested in general Washington for and during the term of six months, from the date hereof, unless sooner determined by Congress.

In this hour of extremity, the attention of the Congress was employed, in devising plans to save the states from sinking under the heavy calamities which were bearing them down.

It is remarkable, that, neither in the present condition, though 1776 trying and severe, nor in any other [317] since the declaration of independence, was Congress influenced either by force, distress, artifice, or persuasion, to entertain the most distant idea of purchasing peace, by returning to the condition of British subjects. So low were they reduced in the latter end of 1776, that some members, distrustful of their ability to resist the power of Great-Britain, proposed to authorise their commissioners at the court of France (whose appointment shall be hereafter explained) to transfer to that country the same monopoly of their trade, which Great-Britain had hitherto enjoyed. On examination it was found, that concessions of this kind would destroy the force of many arguments heretofore used in favour of independence, and probably disunite their citizens. It was next proposed to offer a monopoly of certain enumerated articles of produce. To this the variant interests of the different states were so directly opposed, as to occasion a speedy and decided negative. Some proposed offering to France, a league offensive and defensive, in case she would heartily support American independence; but this was also rejected. The more enlightened members of Congress argued, "Though the friendship of small states might be purchased, that of France could not." They alledged, that if she would risque a war with Great-Britain, by openly espousing their cause, it would not be so much from the prospect of direct advantages, as from a natural desire to lessen the overgrown power of a dangerous rival. It was therefore supposed, that the only inducement, likely to influence France to an interference, was an assurance that the United States were determined to persevere in refusing a return to their former allegiance. Instead of listening to the terms of the royal commissioners, or to any founded on the idea of their resuming their character of British subjects, it was therefore again resolved, to abide by their declared independence, and proffered freedom of trade to every foreign nation, trusting the event to Providence, and risking all consequences. Copies of these resolutions were sent to the principal courts of Europe, and proper persons were appointed to solicit their friendship to the new formed states.

These despatches fell into the hands of the British, [318] and 1776 were by them published. This was the very thing wished for by Congress. They well knew, that an apprehension of their making up all differences

with Great-Britain was the principal objection to the interference of foreign courts, in what was represented to be no more than a domestic quarrel. A resolution adopted in the deepest distress, and the worst of times that Congress would listen to no terms of reunion with their Parent State, convinced those, who wished for the dismemberment of the British empire, that it was sound policy to interfere, so far as would prevent the conquest of the United States.

These judicious determinations in the cabinet, were accompanied with vigorous exertions in the field. In this crisis of danger 1500 of the Pennsylvania militia, embodied to re-inforce the continental army. The merchant, the farmer, the tradesman and the labourer, cheerfully relinquished the conveniences of home, to perform the duties of private soldiers, in the severity of a winter campaign. Though most of them were accustomed to the habits of a city life, they slept in tents, barns, and sometimes in the open air, during the cold months of December and January. There were, nevertheless, only two instances of sickness, and only one of death in that large body of men in the course of six weeks. The delay so judiciously contrived on the retreat through Jersey, afforded time for these volunteer reinforcements to join general Washington. The number of troops under his command at that time, fluctuated between two and three thousand men. To turn round and face a victorious and numerous foe, with this inconsiderable force was risking much; but the urgency of the case required that something should be attempted. The recruiting business for the proposed new continental army was at a stand, while the British were driving the Americans before them. The present regular soldiers could, as a matter of right, in less than a week claim their discharge, and scarce a single recruit offered to supply their place. Under these circumstances, the bold resolution was formed of recrossing into the state of Jersey, and attacking that part of the enemy, which was posted at Trenton.

[319]

When the Americans retreated over the Delaware, the boats in the vicinity were removed out of the way of their pursuers—this arrested their progress: But the British commanders in the security of conquest cantoned their army in Burlington, Bordenton, Trenton, and other towns of New-Jersey, in daily expectation of being enabled to cross into Pennsylvania, by means of ice, which is generally formed about that time.

1776

Of all events, none seemed to them more improbable, than that their late retreating half naked enemies, should in this extreme cold season, face about and commence offensive operations. They indulged themselves in a degree of careless inattention to the possibility of a surprise, which in the vicinity of an enemy, however contemptible, can never be justified. It has been said that colonel Rahl, the commanding officer in Trenton, being under some apprehension for that frontier post, applied to general Grant for a reinforcement, and that the general returned for answer. “Tell the colonel, he is very safe, I will undertake to keep the peace in New-Jersey with a corporal’s guard.”

In the evening of Christmas day, general Washington, made arrangements for recrossing the Delaware in three divisions; at M. Konkey’s ferry, at Trenton ferry, and at or near Bordenton. The troops which were to have crossed at the two last places,

were commanded by generals Ewing, and Cadwallader, they made every exertion to get over, but the quantity of ice was so great, that they could not effect their purpose. The main body which was commanded by general Washington crossed at M. Konkey's ferry, but the ice in the river retarded their passage so long, that it was three o'clock in the morning, before the artillery could be got over. On their landing in Jersey, they were formed into two divisions, commanded by general Sullivan, and Greene, who had under their command brigadiers, lord Stirling, Mercer and St. Clair: one of these divisions was ordered to proceed on the lower, or river road, the other on the upper or Pennington road. Col. Stark, with some light troops, was also directed to advance near to the river, and to possess himself [320] of that part of the town, which is beyond the bridge. The divisions having nearly the same distance to march, were ordered immediately on forcing the out guards, to push directly into Trenton, that they might charge the enemy before they had time to form. Though they marched different roads, yet they arrived at the enemy's advanced post, within three minutes of each other. The out guards of the Hessian troops at Trenton soon fell back, but kept up a constant retreating fire. Their main body being hard pressed by the Americans, who had already got possession of half their artillery, attempted to file off by a road leading towards Princeton, but were checked by a body of troops thrown in their way. Finding they were surrounded, they laid down their arms. The number which submitted, was 23 officers, and 885 men. Between 30 and 40 of the Hessians were killed and wounded. Colonel Rahl, was among the former, and seven of his officers among the latter. Captain Washington of the Virginia troops, and five or six of the Americans were wounded. Two were killed, and two or three were frozen to death. The detachment in Trenton consisted of the regiments of Rahl, Losberg, and Kniphausen, amounting in the whole to about 1500 men, and a troop of British light horse. All these were killed or captured, except about 600, who escaped by the road leading to Bordenton.

The British had a strong battalion of light infantry at Princeton, and a force yet remaining near the Delaware, superior to the American army. General Washington, therefore in the evening of the same day, thought it most prudent to recross into Pennsylvania, with his prisoners.

The effects of this successful enterprize were speedily felt in recruiting the American army. About 1400 regular soldiers whose time of service was on the point of expiring, agreed to serve six weeks longer, on a promised gratuity of ten paper dollars to each. Men of influence were sent to different parts of the country to rouse the militia. The rapine, and impolitic conduct of the British, operated more forcibly on the inhabitants, to expel them [323 (the original 1776 paging errs, skipping over 321–22)] from the state, than either patriotism or persuasion to prevent their overrunning it.

The Hessian prisoners taken on the 26th being secured, general Washington re-crossed the Delaware, and took possession of Dec. 28 Trenton. The detachments which had been distributed over New-Jersey, previous to the capture of the Hessians, immediately, after that event, assembled at Princeton, and were joined by the army from Brunswick under lord Cornwallis.

From this position they came forward towards Trenton in great force, hoping by a vigorous onset to repair the injury their cause had sustained by the late defeat.

1777

Truly delicate was the situation of the feeble American army. To retreat was to hazard the city of Philadelphia, and to destroy every ray of hope which had begun to dawn from their late success. To risque an action with a superior force in front, and a river in rear, was dangerous in the extreme. To get round the advanced party of the British, and by pushing forwards to attack in their rear, was deemed preferable to either.

Jan. 2d

The British on their advance from Princeton, about 4 P.M. attacked a body of Americans which were posted with four field pieces, a little to the northward of Trenton, and compelled them to retreat. The pursuing British, being checked at the bridge over Sanpink creek, which runs through that town, by some field pieces, which were posted on the opposite banks of that rivulet, fell back so far as to be out of reach of the cannon, and kindled their fires. The Americans were drawn up on the other side of the creek, and in that position remained till night, cannonading the enemy and receiving their fire. In this critical hour, two armies on which the success or failure of the American revolution, materially depended, were crouded into the small village of Trenton, and only separated by a creek in many places fordable. The British believing they had all the advantages they could wish for, and that they could use them when they pleased, discontinued all further operations, and kept themselves in readiness to make the attack next morning. Sir William Erskine is reported to have advised an immediate attack, or at least to place a strong [324] guard at a bridge over Sanpink creek, which lay in the route the Americans took to Princeton, giving for reason that, otherwise, Washington if a good general, would make a move to the left of the royal army, and attack the post at Princeton in their rear. The next morning presented a scene as brilliant on the one side, as it was unexpected on the other. Soon after it became dark, gen. Washington ordered all his baggage to be silently removed, and having left guards for the purpose of deception, marched with his whole force, by a circuitous route to Princeton. This manoeuvre was determined upon in a council of war, from a conviction that it would avoid the appearance of a retreat, and at the same time the hazard of an action in a bad position, and that it was the most likely way to preserve the city of Philadelphia, from falling into the hands of the British. General Washington also presumed, that from an eagerness to efface the impressions, made by the late capture of Hessians at Trenton, the British commanders had pushed forward their principal force, and that of course the remainder in the rear at Princeton was not more than equal to his own. The event verified this conjecture. The more effectually to disguise the departure of the Americans from Trenton, fires were lighted up in front of their camp. These not only gave an appearance of going to rest, but as flame cannot be seen through, concealed from the British, what was transacting behind them. In this relative position they were a pillar of fire to the one army, and a pillar of a cloud to the other. Providence favoured this movement of the Americans. The weather had been for some time so warm and moist, that the ground was soft and the roads so deep as to be scarcely passable: but the wind suddenly changed to the northwest, and the ground in a short time was frozen so hard, that when the Americans took up their line of march, they were no more retarded, than if they had been upon a solid pavement.

Jan. 2d

General Washington reached Princeton, early in the morning, and would have completely surprised the British, had not a party, which was on their way to Trenton, [325] descried his troops, when they were about two miles distant, and sent back couriers to alarm their unsuspecting fellow soldiers in their rear. These consisted of the 17th, the 40th, & 55th regiments of British infantry and some of the royal artillery with two field pieces, and three troops of light dragoons. The center of the Americans, consisting of the Philadelphia militia, while on their line of march, was briskly charged by a party of the British, and gave way in disorder. The moment was critical. General Washington pushed forward, and placed himself between his own men, and the British, with his horse's head fronting the latter. The Americans encouraged by his example, and exhortations, made a stand, and returned the British fire. The general, though between both parties, was providentially uninjured by either. A party of the British fled into the college and were there attacked with field pieces which were fired into it. The seat of the muses became for some time the scene of action. The party which had taken refuge in the college, after receiving a few discharges from the American field pieces came out and surrendered themselves prisoners of war. In the course of the engagement, sixty of the British were killed, and a greater number wounded, and about 300 of them were taken prisoners. The rest made their escape, some by pushing on towards Trenton, others by returning towards Brunswick. The Americans lost only a few, but colonels Haslet and Potter, and capt. Neal of the artillery, were among the slain. General Mercer received three bayonet wounds of which he died in a short time. He was a Scotchman by birth, but from principle and affection had engaged to support the liberties of his adopted country, with a zeal equal to that of any of its native sons. In private life he was amiable, and his character as an officer stood high in the public esteem.

Jan. 3

1776

While they were fighting in Princeton, the British in Trenton were under arms, and on the point of making an assault on the evacuated camp of the Americans. With so much address had the movement to Princeton been conducted, that though from the critical situation of the two armies, every ear may be supposed to have been [326] open, and every watchfulness to have been employed, yet General Washington moved completely off the ground, with his whole force, stores, baggage and artillery unknown to, and unsuspected by his adversaries. The British in Trenton, were so entirely deceived, that when they heard the report of the artillery at Princeton, though it was in the depth of winter, they supposed it to be thunder.

1776

That part of the royal army, which having escaped from Princeton, retreated towards New-Brunswick, was pursued for three or four miles. Another party which had advanced as far as Maidenhead, on their way to Trenton, hearing the frequent discharge of fire arms in their rear, wheeled round and marched to the aid of their companions. The Americans by destroying bridges, retarded these, though close in their rear, so long as to gain time for themselves, to move off, in good order, to Pluckemin.

So great was the consternation of the British at these unexpected movements, that they instantly evacuated both Trenton and Princeton, and retreated with their whole

force to New-Brunswick. The American militia, collected and forming themselves into parties, waylaid their enemies, and cut them off whenever an opportunity presented. In a few days they over-ran the Jerseys. General Maxwell surprised Elisabeth-town, and took near 100 prisoners. Newark was abandoned, and the late conquerors were forced to leave Woodbridge. The royal troops were confined to Amboy and Brunswick, which held a water communication with New-York. Thus, in the short space of a month, that part of Jersey, which lies between New-Brunswick and Delaware, was both overrun by the British, and recovered by the Americans. The retreat of the continental army, the timid policy of the Jersey farmers, who chose rather to secure their property by submission, than defend it by resistance, made the British believe their work was done, and that little else remained, but to reap a harvest of plunder as the reward of their labours.

Unrestrained by the terrors of civil law, uncontrolled by the severity of discipline, and elated with their success, the soldiers of the royal army, and particularly [327] the Hessians, gave full scope to the selfish and ferocious passions of human nature. A conquered country, and submitting inhabitants presented easy plunder, equal to their unbounded rapacity. Infants, children, old men and women were stripped of their blankets and cloathing. Furniture was burnt or otherwise destroyed. Domestic animals were carried off, and the people robbed of their necessary household provisions. The rapes and brutalities committed on women, and even on very young girls, would shock the ears of modesty, if particularly recited. These violences were perpetrated on inhabitants who had remained in their houses, and received printed protections, signed by order of the commander in chief. It was in vain, that they produced these protections as a safeguard. The Hessians could not read them, and the British soldiers thought they were entitled to a share of the booty, equally with their foreign associates.

1776

Such, in all ages, has been the complexion of the bulk of armies, that immediate and severe punishments are indispensably necessary, to keep them from flagrant enormities. That discipline, without which an army is a band of armed plunderers, was as far, as respected the inhabitants, either neglected, or but feebly administered in the royal army. The soldiers finding, they might take with impunity what they pleased, were more strongly urged by avarice, than checked by policy or fear. Had every citizen been secured in his rights, protected in his property, and paid for his supplies, the consequences might have been fatal to the hopes of those who were attached to independence. What the warm recommendations of Congress, and the ardent supplications of general Washington could not effect, took place of its own accord, in consequence of the plundering and devastations of the royal army.

The whole country became instantly hostile to the invaders. Sufferers of all parties rose as one man, to revenge their personal injuries. Those, who from age, or infirmities, were incapable of bearing arms, kept a strict watch on the movements of the royal army, and from time to time, communicated information to their countrymen [328] in arms.

Those who lately declined all military opposition, though called upon by the sacred tie of honour pledged to each other on the declaration of independence, cheerfully embodied, when they found submission to be unavailing for the security of their estates. This was not done originally in

1777

consequence of the victories of Trenton and Princeton. In the very moment of these actions, or before the news of them had circulated, sundry individuals unknowing of general Washington's movements, were concerting private insurrections, to revenge themselves on the plunderers. The dispute originated about property, or in other words, about the right of taxation. From the same source at this time, it received a new and forcible impulse. The farmer, who could not trace the consequences of British taxation, nor of American independence, felt the injuries he sustained from the depredation of licentious troops. The militia of New-Jersey, who had hitherto behaved most shamefully, from this time forward redeemed their character, and throughout a tedious war, performed services with a spirit and discipline in many respects, equal to that of regular soldiers.

The victories of Trenton and Princeton, seemed to be like a resurrection from the dead, to the desponding friends of independence. A melancholy gloom, had in the first 25 days of December overspread the United States; but from the memorable era of the 26th of same month, their prospects began to brighten. The recruiting service, which for some time had been at a stand, was successfully renewed, and hopes were soon indulged, that the commander in chief would be enabled to take the field in the spring, with a permanent regular force. General Washington retired to Morristown, that he might afford shelter to his suffering army. The American militia had sundry successful skirmishes with detachments of their adversaries. Within four days after the affair at Princeton, between forty and fifty Waldeckers were killed, wounded, or taken at Springfield, by an equal number of the same New-Jersey militia, which but a month before, suffered the British to overrun their country [329] without opposition. This enterprise was conducted by colonel Spencer, whose gallantry, on the occasion, was rewarded with the command of a regiment.

1777

During the winter movements, which have been just related, the soldiers of both armies underwent great hardships, but the Americans suffered by far the greater. Many of them were without shoes, though marching over frozen ground, which so gashed their naked feet, that each step was marked with blood. There was scarcely a tent in their whole army. The city of Philadelphia had been twice laid under contribution, to provide them with blankets. Officers had been appointed, to examine every house, and, after leaving a scanty covering for the family to bring off the rest, for the use of the troops in the field; but notwithstanding these exertions, the quantity procured was far short of decency, much less of comfort.

The officers and soldiers of the American army were about this time inoculated in their cantonment at Morristown. As very few of them had ever had the small pox, the inoculation was nearly universal. The disorder had previously spread among them in the natural way, and proved mortal to many: but after inoculation was introduced though whole regiments were inoculated, in a day, there was little or no mortality from the small pox, and the disorder was so slight, that from the beginning to the end of it, there was not a single day in which they could not, and if called upon, would not have turned out and fought the British. To induce the inhabitants to accommodate officers and soldiers in their houses, while under the small pox, they and their families were inoculated gratis by the military surgeons. Thus in a short time, the whole army

and the inhabitants in and near Morristown were subjected to the small pox, and with very little inconvenience to either.

Three months, which followed the actions of Trenton and Princeton, passed away without any important military enterprise on either side. Major general Putnam was directed to take post at Princeton, and cover the country in the vicinity. He had only a few hundred troops, though he was no more than eighteen miles distant from [330] the strong garrison of the British at Brunswick.

At one period he had fewer men for duty than he had miles of 1777 frontier to guard. The situation of general Washington at Morristown was not more eligible. His force was trifling, when compared with that of the British, but the enemy, and his own countrymen, believed the contrary. Their deception was cherished, and artfully continued by the specious parade of a considerable army. The American officers took their station in positions of difficult access, and kept up a constant communication with each other. This secured them from insult and surprise. While they covered the country, they harassed the foraging parties of the British, and often attacked them with success. Of a variety of these, the two following are selected as most worthy of notice.

General Dickenson, with four hundred Jersey militia, and fifty of Jan. 20 the Pennsylvania riflemen, crossed Millstone-river, near Somerset courthouse, and attacked a large foraging party of the British, with so much spirit that they abandoned their convoy, and fled. Nine of them were taken prisoners. Forty waggons, and upwards of one hundred horses, with a considerable booty, fell into the hands of the general. While the British were loading their waggons, a single man began to fire on them from the woods. He was soon joined by more of his neighbors, who could not patiently see their propertys carried away. After the foragers had been annoyed for some time by these unseen marksmen, they fancied on the appearance of general Dickenson, that they were attacked by a superior force, and began a precipitate flight.

In about a month after the affair of Somerset courthouse, colonel. Feb. 18 Nelson, of Brunswick, with a detachment of 150 militiamen, surprised and captured at Lawrence's Neck, a major, and fifty-nine privates, of the refugees, who were in British pay.

Throughout the campaign of 1776, an uncommon degree of sickness raged in the American army. Husbandmen, transferred at once from the conveniences of domestic life, to the hardships of a field encampment, could not accommodate themselves to the sudden change.

The southern troops, sickened from the [331] want of salt 1777 provisions. Linen shirts were too generally worn, in contact with the skin. The salutary influence of flannel, in preventing the diseases of camps, was either unknown or disregarded. The discipline of the army was too feeble to enforce those regulations which experience has proved to be indispensably necessary, for preserving the health of large bodies of men collected together. Cleanliness was also too much neglected. On the 8th of August the whole American army before New-York, consisted of 17,225 men, but of that number only 10,514 were fit for duty. These numerous sick suffered much, from the want of necessaries. Hurry and

confusion added much to their distresses. There was besides a real want of the requisites for their relief.

A proper hospital establishment was beyond the abilities of Congress, especially as the previous arrangements were not entered upon till the campaign had begun. Many, perhaps some thousands in the American army, were swept off in a few months by sickness. The country every where presented the melancholy sight of soldiers suffering poverty and disease, without the aid of medicine or attendance. Those who survived gave such accounts of the sufferings of the sick, as greatly discouraged the recruiting service. A rage for plundering, under the pretence of taking tory property, infected many of the common soldiery, and even some of the officers. The army had been formed on such principles, in some of the states, that commissions were, in several instances, bestowed on persons who had no pretensions to the character of gentlemen. Several of the officers were chosen by their own men, and they often preferred those from whom they expected the greatest indulgences. In other cases, the choice of the men was in favour of those who had consented to throw their pay into a joint stock with the privates, from which officers and men drew equal shares.

The army, consisting mostly of new recruits and unexperienced officers, and being only engaged for a twelve month, was very deficient in that mechanism and discipline which time and experience bestow on veteran troops. General Washington was unremitting in his [332] representations to Congress, favouring such alterations as promised permanency, order and discipline, in the army, but his judicious opinions on these subjects were slowly adopted. The sentiments of liberty, which then generally prevailed, made some distinguished members of Congress so distrustful of the future power and probable designs of a permanent domestic army, that they had well nigh sacrificed their country to their jealousies.

The unbounded freedom of the savage who roams the woods must be restrained when he becomes a citizen of orderly government, and from the necessity of the case must be much more so, when he submits to be a soldier. The individuals composing the army of America, could not at once pass over from the full enjoyment of civil liberty to the discipline of a camp, nor could the leading men in Congress for some time be persuaded, to adopt energetic establishments. "God forbid, would such say, that the citizen should be so far lost in the soldiers of our army, that they should give over longing for the enjoyments of domestic happiness. Let frequent furloughs be granted, rather than the endearments of wives and children should cease to allure the individuals of our army from camps to farms." The amiableness of this principle, veiled the error of the sentiment. The minds of the civil leaders in the councils of America were daily occupied in contemplating the rights of human nature, and investigating arguments on the principles of general liberty, to justify their own opposition to Great-Britain. Warmed with these ideas, they trusted too much to the virtue of their countrymen, and were backward to enforce that subordination and order in their army, which, though it intrenches on civil liberty, produces effects in the military line unequalled by the effusions of patriotism, or the exertions of undisciplined valor.

The experience of two campaigns evinced the folly of trusting the defence of the country to militia, or to levies raised only for a few months, and had induced a resolution for recruiting an army for the war. The good effects of this measure will appear in the sequel.

The campaign of 1776 did not end, till it had been [333] protracted into the first month of the year 1777.

The British had counted on the complete and speedy reduction of their late colonies, but they found the work more difficult of execution, than was supposed. They wholly failed in their designs on the southern states. In Canada they recovered what, in the preceding year, they had lost—drove the Americans out of their borders, and destroyed their fleet on the lakes, but they failed in making their intended impression on the northwestern frontier of the states. They obtained possession of Rhode-Island, but the acquisition was of little service—perhaps was of detriment. For near three years several thousand men stationed thereon for its security, were lost to every purpose of active cooperation with the royal forces in the field, and the possession of it secured no equivalent advantages. The British completely succeeded against the city of New-York, and the adjacent country, but when they pursued their victories into New-Jersey, and subdivided their army, the recoiling Americans soon recovered the greatest part of what they had lost.

Sir William Howe, after having nearly reached Philadelphia, was confined to limits so narrow, that the fee simple of all he commanded would not reimburse the expence incurred by its conquest.

The war, on the part of the Americans, was but barely begun. Hitherto they had engaged with temporary forces, for a redress of grievances, but towards the close of this year they made arrangements for raising a permanent army to contend with Great-Britain, for the sovereignty of the country. To have thus far stood their ground, with their new levies, was a matter of great importance, because of them, delay was victory, and not to be conquered was to conquer.

CHAPTER XIII

Of Independence, State Constitutions, And The Confederation.

[334]

In former ages it was common for a part of a community to migrate, and erect themselves into an independent society. Since the earth has been more fully peopled, and especially since the principles of Union have been better understood, a different policy has prevailed. A fondness for planting colonies has, for three preceding centuries, given full scope to a disposition for emigration, and at the same time the emigrants have been retained in a connexion with their Parent State. By these means Europeans have made the riches both of the east and west, subservient to their avarice and ambition. Though they occupy the smallest portion of the four quarters of the globe, they have contrived to subject the other three to their influence or command.

1777

The circumstances under which New-England was planted, would a few centuries ago have entitled them from their first settlement, to the privileges of independence. They were virtually exiled from their native country, by being denied the rights of men—they set out on their own expence, and after purchasing the consent of the native proprietors, improved an uncultivated country, to which, in the eye of reason and philosophy, the king of England had no title.

If it is lawful for individuals to relinquish their native soil, and pursue their own happiness in other regions and under other political associations, the settlers of New-England were always so far independent, as to owe no obedience to their Parent State, but such as resulted from their voluntary assent. The slavish doctrine of the divine right of kings, and the corruptions of christianity, by undervaluing heathen titles, favoured an opposite system. What for several centuries after the christian era would have been called the institution of a new government, was by modern refinement denominated only an extension of the old, in the form of a dependent colony.

Though the prevailing ecclesiastical and political creeds [335] tended to degrade the condition of the settlers in New-England, yet there was always a party there which believed in their natural right to independence. They recurred to first principles, and argued, that as they received from government nothing more than a charter, founded on ideal claims of sovereignty, they owed it no other obedience than what was derived from express, or implied compact. It was not till the present century had more than half elapsed, that it occurred to any number of the colonists, that they had an interest in being detached from Great-Britain. Their attention was first turned to this subject, by the British claim of taxation. This opened a melancholy prospect, boundless in extent, and endless in duration. The Boston port act, and the other acts, passed in 1774, and 1775, which have been already the subject of comment, progressively weakened the attachment of the colonists to the birth place of their forefathers. The commencement of hostilities on the 19th of April, 1775, exhibited the Parent State in an odious point of view, and

1777

abated the original dread of separating from it. But nevertheless at that time, and for a twelve month after, a majority of the colonists wished for no more than to be re-established as subjects in their antient rights. Had independence been their object even at the commencement of hostilities, they would have rescinded these associations, which have been already mentioned and imported more largely than ever. Common sense revolts at the idea, that colonists unfurnished with military stores, and wanting manufactures of every kind, should at the time of their intending a serious struggle for independence, by a voluntary agreement, deprive themselves of the obvious means of procuring such foreign supplies as their circumstances might make necessary. Instead of pursuing a line of conduct, which might have been dictated by a wish for independence, they continued their exports for nearly a year after they ceased to import. This not only lessened the debts they owed to Great-Britain, but furnished additional means for carrying on the war against themselves.

To aim at independence, and at the same time to transfer their resources to their enemies, could not have been [336] the policy of an enlightened people. It was not till some time in 1776, that the colonists began to take other ground, and contend that it was for their interest to be forever separated from Great-Britain. In favour of this opinion it was said, that in case of their continuing subjects, the Mother country, though she redressed their present grievances, might at pleasure repeat similar oppressions. That she ought not to be trusted, having twice resumed the exercise of taxation, after it had been apparently relinquished. The favourers of separation also urged, that Great-Britain was jealous of their increasing numbers, and rising greatness—that she would not exercise government for their benefit, but for her own. That the only permanent security for American happiness, was to deny her the power of interfering with their government or commerce. To effect this purpose they were of opinion, that it was necessary to cut the knot, which connected the two countries, by a public renunciation of all political connections between them.

The Americans about this time began to be influenced by new views. The military arrangements of the preceding year—their unexpected union, and prevailing enthusiasm, expanded the minds of their leaders, and elevated the sentiments of the great body of their people. Decisive measures which would have been lately reprobated, now met with approbation.

The favourers of subordination under the former constitution urged the advantages of a supreme head, to control the disputes of interfering colonies, and also the benefits which flowed from union. That independence was untried ground, and should not be entered upon, but in the last extremity.

They flattered themselves that Great-Britain was so fully convinced of the determined spirit of America, that if the present controversy was compromised, she would not at any future period, resume an injurious exercise of her supremacy. They were therefore for proceeding no farther than to defend themselves in the character of subjects, trusting that ere long the present hostile measures would be relinquished, and the harmony [337] of the two countries reestablished. The favourers of this system were embarrassed, and all their arguments weakened, by the perseverance of Great-Britain in her schemes of

coercion. A probable hope of a speedy repeal of a few acts of parliament, would have greatly increased the number of those who were advocates for reconciliation. But the certainty of intelligence to the contrary gave additional force to the arguments of the opposite party. Though new weight was daily thrown into the scale, in which the advantages of independence were weighed, yet it did not preponderate till about that time in 1776, when intelligence reached the colonists of the act of parliament passed in December 1775, for throwing them out of British protection, and of hiring foreign troops to assist in effecting their conquest. Respecting the first it was said, "that protection and allegiance were reciprocal, and that the refusal of the first was a legal ground of justification for withholding the last." They considered themselves to be thereby discharged from their allegiance, and that to declare themselves independent, was no more than to announce to the world the real political state, in which Great-Britain had placed them. This act proved that the colonists might constitutionally declare themselves independent, but the hiring of foreign troops to make war upon them, demonstrated the necessity of their doing it immediately. They reasoned that if Great-Britain called in the aid of strangers to crush them, they must seek similar relief for their own preservation. But they well knew this could not be expected, while they were in arms against their acknowledged sovereign. They had therefore only a choice of difficulties, and must either seek foreign aid as independent states, or continue in the awkward and hazardous situation of subjects, carrying on war from their own resources both against their king, and such mercenaries as he chose to employ for their subjugation. Necessity not choice forced them on the decision. Submission without obtaining a redress of their grievances was advocated by none who possessed the public confidence.

Some of the popular leaders may have [338] secretly wished for independence from the beginning of the controversy, but their number was small and their sentiments were not generally known.

1777

While the public mind was balancing on this eventful subject, several writers placed the advantages of independence in various points of view. Among these Thomas Paine in a pamphlet, under the signature of Common Sense, held the most distinguished rank. The style, manner, and language of this performance were calculated to interest the passions, and to rouse all the active powers of human nature. With the view of operating on the sentiments of a religious people, scripture was pressed into his service, and the powers, and even the name of a king was rendered odious in the eyes of the numerous colonists who had read and studied the history of the Jews, as recorded in the Old Testament. The folly of that people in revolting from a government, instituted by Heaven itself, and the oppressions to which they were subjected in consequence of their lusting after kings to rule over them, afforded an excellent handle for prepossessing the colonists in favour of republican institutions, and prejudicing them against kingly government. Hereditary succession was turned into ridicule. The absurdity of subjecting a great continent to a small island on the other side of the globe, was represented in such striking language, as to interest the honor and pride of the colonists in renouncing the government of Great-Britain. The necessity, the advantages, and practicability of independence, were forcibly demonstrated. Nothing could be better timed than this performance. It was addressed to freemen, who had just received convincing proof, that Great-Britain had thrown them out of her protection, had engaged foreign mercenaries to make war upon them,

and seriously designed to compel their unconditional submission to her unlimited power. It found the colonists most thoroughly alarmed for their liberties, and disposed to do and suffer any thing that promised their establishment. In union with the feelings and sentiments of the people, it produced surprising effects.

Many thousands were convinced, and were led to approve [339] 1777 and long for a separation from the Mother Country. Though that measure, a few months before, was not only foreign from their wishes, but the object of their abhorrence, the current suddenly became so strong in its favour, that it bore down all opposition. The multitude was hurried down the stream, but some worthy men could not easily reconcile themselves to the idea of an eternal separation from a country, to which they had been long bound by the most endearing ties. They saw the sword drawn, but could not tell when it would be sheathed. They feared that the dispersed individuals of the several colonies would not be brought to coalesce under an efficient government, and that after much anarchy some future Caesar would grasp their liberties, and confirm himself in a throne of despotism. They doubted the perseverance of their countrymen in effecting their independence, and were also apprehensive that in case of success, their future condition would be less happy than their past. Some respectable individuals whose principles were pure, but whose souls were not of that firm texture which revolutions require, shrunk back from the bold measures proposed by their more adventurous countrymen. To submit without an appeal to Heaven, though secretly wished for by some, was not the avowed sentiment of any. But to persevere in petitioning and resisting was the system of some misguided honest men. The favourers of this opinion were generally wanting in that decision which grasps at great objects, and influenced by that timid policy, which does its work by halves. Most of them dreaded the power of Britain. A few, on the score of interest or an expectancy of favours from royal government, refused to concur with the general voice. Some of the natives of the Parent State who, having lately settled in the colonies, had not yet exchanged European for American ideas, together with a few others, conscientiously opposed the measures of Congress: but the great bulk of the people, and especially of the spirited and independent part of the community, came with surprising unanimity into the project of independence.

[340]

The eagerness for independence resulted more from feeling than 1776 reasoning. The advantages of an unfettered trade, the prospect of honours and emoluments in administering a new government, were of themselves insufficient motives for adopting this bold measure. But what was wanting from considerations of this kind, was made up by the perseverance of Great-Britain, in her schemes of coercion and conquest. The determined resolution of the Mother Country to subdue the colonists, together with the plans she adopted for accomplishing that purpose, and their equally determined resolution to appeal to Heaven rather than submit, made a declaration of independence as necessary in 1776, as was the non-importation agreement of 1774, or the assumption of arms in 1775. The last naturally resulted from the first. The revolution was not forced on the people by ambitious leaders grasping at supreme power, but every measure of it was forced on Congress, by the necessity of the case, and the voice of the people. The change of the public mind of America respecting connexion with Great-Britain, is without a parallel. In the

short space of two years, nearly three millions of people passed over from the love and duty of loyal subjects, to the hatred and resentment of enemies.

The motion for declaring the colonies free and independent, was first made in Congress, by Richard Henry Lee of Virginia. He was warranted in making this motion by the particular instructions of his immediate constituents, and also by the general voice of the people of all the states. When the time for taking the subject under consideration arrived, much knowledge, ingenuity and eloquence were displayed on both sides of the question. The debates were continued for some time, and with great animation. In these John Adams, and John Dickinson, took leading and opposite parts. The former began one of his speeches, by an invocation of the god of eloquence, to assist him in defending the claims, and in enforcing the duty of his countrymen. He strongly urged the immediate dissolution of all political connexion of the colonies with Great-Britain, from the voice of the [341] people,

June 7

from the necessity of the measure in order to obtain foreign assistance, from a regard to consistency, and from the prospects of glory and happiness, which opened beyond the war, to a free and independent people. Mr. Dickinson replied to this speech. He began by observing that the member from Massachusetts (Mr. Adams) had introduced his defence of the declaration of independence by invoking an heathen god, but that he should begin his objections to it, by solemnly invoking the Governor of the Universe, so to influence the minds of the members of Congress, that if the proposed measure was for the benefit of America, nothing which he should say against it, might make the least impression. He then urged that the present time was improper for the declaration of independence, that the war might be conducted with equal vigor without it, that it would divide the Americans, and unite the people of Great-Britain against them. He then proposed that some assurance should be obtained of assistance from a foreign power, before they renounced their connexion with Great-Britain, and that the declaration of independence should be the condition to be offered for this assistance. He likewise stated the disputes that existed between several of the colonies, and proposed that some measures for the settlement of them should be determined upon, before they lost sight of that tribunal, which had hitherto been the umpire of all their differences.

1776

After a full discussion, the measure of declaring the colonies free and independent was approved, by nearly an unanimous vote. The anniversary of the day on which this great event took place, has ever since been consecrated by the Americans to religious gratitude, and social pleasures. It is considered by them as the birth day of their freedom.

The act of the united colonies for separating themselves from the government of Great-Britain, and declaring their independence, was expressed in the following words:

When, in the course of human events, it becomes necessary for one people to dissolve the political bands [342] which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle

1776

them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness—That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its power in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great-Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws, the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their [343] operation till his assent should be obtained; and when so suspended he has utterly neglected to attend to them.

1776

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

He has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining in the mean-time exposed to all the danger of invasion from without, and convulsions within.

He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

[344]

For quartering large bodies of armed troops among us:

1776

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states:

For cutting off our trade with all parts of the world:

For imposing taxes on us without our consent:

For depriving us, in many cases, of the benefits of trial by jury:

For transporting us beyond seas to be tried for pretended offences:

For abolishing the free system of English laws in a neighbouring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies:

For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments:

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation and tyranny, already begun with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes and conditions.

In every stage of these oppressions we have petitioned [345] for 1776 redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attention to our British brethren. We have warned them from time to time of attempts made by their legislature, to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them, by the ties of our common kindred, to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace, friends.

We, therefore, the representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name, and by authority of the good people of these colonies, solemnly publish and declare, that these United Colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown; and that all political connection between them and the state of Great-Britain is and ought to be totally dissolved; and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honour.

John Hancock, President

New-Hampshire, Josiah Bartlett, William Whipple, Matthew Thornton. *Massachusetts-Bay*, Samuel Adams, John Adams, Robert-Treat Paine, Elbridge [346] Gerry. *Rhode-Island, &c.* Stephen Hopkins, William Ellery. *Connecticut*, Roger Sherman, Samuel Huntington, William Williams, Oliver Wolcott. *New-York*, William Floyd, Philip Livingston, Francis Lewis, Lewis Morris. *New-Jersey*, Richard Stockton, John Witherspoon, Francis Hopkinson, John Hart, Abraham Clark. *Pennsylvania*, Robert Morris, Benjamin Rush, Benjamin Franklin, John Morton, George Clymer, James Smith, George Taylor, James Wilson, George Ross. *Delaware*, Caesar Rodney, George Read. *Maryland*, Samuel Chase, William Paca, Thomas Stone, Charles Carroll, of Carrollton. *Virginia*, George Wythe, Richard Henry-Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, jun. Francis Lightfoot Lee, Carter Braxton. *North-Carolina*, William Hooper, Joseph Hewes, John Penn. *South-Carolina*, Edward Rutledge, Thomas Heyward, jun. Thomas Lynch, jun. Arthur Middleton. *Georgia*, Button Gwinnett, Lyman Hall, George Walton.

From the promulgation of this declaration, every thing assumed a new form. The Americans no longer appeared in the character of subjects in arms against their sovereign, but as an independent people, repelling the attacks of an invading foe. The propositions and supplications for reconciliation were done away. The dispute was brought to a single point, whether the late British colonies should be conquered provinces, or free and independent states.

The declaration of independence was read publicly in all the states, and was welcomed with many demonstrations of joy. The people were encouraged by it to bear up under the calamities of war, and viewed the evils they suffered, only as the thorn that ever accompanies the rose. The army received it with particular satisfaction. As far as it had validity, so far it secured them from suffering as rebels, and held out to their view an object, the attainment of which would be an adequate recompense for the [347] toils and dangers of war. They were animated by 1776 the consideration that they were no longer to risque their lives for the trifling purpose of procuring a repeal of a few oppressive acts of parliament, but for a new organization of government, that would forever put it out of the power of Great-Britain to oppress them. The flattering prospects of an extensive commerce, freed from British restrictions, and the honours and emoluments of office in independent states now began to glitter before the eyes of the colonists, and reconciled them to the difficulties of their situation. What was supposed in Great-Britain to be their primary object, had only a secondary influence. While they were charged with aiming at independence from the impulse of avarice and ambition, they were ardently wishing for a reconciliation. But, after they had been compelled to adopt that measure, these powerful principles of human actions opposed its retraction, and stimulated to its support. That separation which the colonists at first dreaded as an evil, they soon gloried in as a national blessing. While the rulers of Great-Britain urged their people to a vigorous prosecution of the American war, on the idea that the colonists were aiming at independence, they imposed on them a necessity of adopting that very measure, and actually effected its accomplishment. By repeatedly charging the Americans with aiming at the erection of a new government, and by proceeding on that idea to subdue them, predictions which were originally false, eventually became true. When the declaration of independence reached Great-Britain the

partisans of ministry triumphed in their sagacity. “The measure, said they, we have long foreseen, is now come to pass.” They inverted the natural order of things. Without reflecting that their own policy had forced a revolution contrary to the original design of the colonists, the declaration of independence was held out to the people of Great-Britain as a justification of those previous violences, which were its efficient cause.

The act of Congress for dis severing the colonies from their Parent State, was the subject of many animadversions.

[348]

The colonists were said to have been precipitate in adopting a measure, from which there was no honourable ground of retreating. They replied that for eleven years they had been incessantly petitioning the throne for a redress of their grievances. Since the year 1765, a continental Congress had at three sundry times stated their claims, and prayed for their constitutional rights. That each assembly of the thirteen colonies had also, in its separate capacity, concurred in the same measure. That from the perseverance of Great-Britain in her schemes for their coercion, they had no alternative, but a mean submission, or a vigorous resistance; and that as she was about to invade their coasts with a large body of mercenaries, they were compelled to declare themselves independent, that they might be put into an immediate capacity for soliciting foreign aid.

1776

The virulence of those who had been in opposition to the claims of the colonists, was increased by their bold act in breaking off all subordination to the Parent State. “Great-Britain, said they, has founded colonies at great expence—has incurred a load of debt by wars on their account—has protected their commerce, and raised them to all the consequence they possess, and now in the insolence of adult years, rather than pay their proportion of the common expences of government, they ungratefully renounce all connexion with the nurse of their youth, and the protectress of their riper years.” The Americans acknowledged that much was due to Great-Britain, for the protection which her navy procured to the coasts, and the commerce of the colonies, but contended that much was paid by the latter, in consequence of the restrictions imposed on their commerce by the former. “The charge of ingratitude would have been just,” said they, “had allegiance been renounced while protection was given, but when the navy, which formerly secured the commerce and seaport towns of America, began to distress the former, and to burn the latter, the previous obligations to obey or be grateful, were no longer in force.”

That the colonists paid nothing, and would not pay to the support of government, was confidently asserted, and [349] no credit was given for the sums indirectly levied upon them, in consequence of their being confined to the consumption of British manufactures. By such illfounded observations were the people of Great-Britain inflamed against their fellow subjects in America. The latter were represented as an ungrateful people, refusing to bear any part of the expences of a protecting government, or to pay their proportion of a heavy debt, said to be incurred on their account. Many of the inhabitants of Great-Britain deceived in matters of fact, considered their American brethren as deserving the severity of

1776

military coercion. So strongly were the two countries rivetted together, that if the whole truth had been known to the people of both, their separation would have been scarcely possible. Any feasible plan by which subjection to Great-Britain could have been reconciled with American safety, would at any time, previous to 1776, have met the approbation of the colonists. But while the lust of power and of gain, blinded the rulers of Great-Britain, mistated facts and uncandid representations brought over their people to second the infatuation. A few honest men properly authorised, might have devised measures of compromise, which under the influence of truth, humility and moderation, would have prevented a dismemberment of the empire; but these virtues ceased to influence, and falsehood, haughtiness and blind zeal usurped their places. Had Great-Britain, even after the declaration of independence, adopted the magnanimous resolution of declaring her colonies free and independent states, interest would have prompted them to form such a connexion as would have secured to the Mother Country the advantages of their commerce, without the expence or trouble of their governments. But misguided politics continued the fatal system of coercion and conquest. Several on both sides of the Atlantic, have called the declaration of independence, “a bold, and accidentally, a lucky speculation,” but subsequent events proved, that it was a wise measure. It is acknowledged, that it detached some timid friends from supporting the Americans in their opposition to Great-Britain, but it increased the [350] vigour and union of those, who 1776 possessed more fortitude and perseverance. Without it, the colonists would have had no object adequate to the dangers to which they exposed themselves, in continuing to contend with Great-Britain. If the interference of France was necessary to give success to the resistance of the Americans, the declaration of independence was also necessary, for the French expressly founded the propriety of their treaty with Congress on the circumstance, “that they found the United States in possession of independence.”

All political connexion between Great-Britain and her colonies being dissolved, the institution of new forms of government became unavoidable. The necessity of this was so urgent that Congress, before the declaration of independence, had recommended to the 1776
respective assemblies and conventions of the United States, to May 15
adopt such governments as should, in their opinion, best conduce to the happiness and safety of their constituents. During more than twelve months the colonists had been held together by the force of antient habits, and by laws under the simple stile of recommendations. The impropriety of proceeding in courts of justice by the authority of a sovereign, against whom the colonies were in arms, was self-evident. The impossibility of governing, for any length of time, three millions of people, by the ties of honour, without the authority of law, was equally apparent. The rejection of British sovereignty therefore drew after it the necessity of fixing on some other principle of government. The genius of the Americans, their republican habits and sentiments, naturally led them to substitute the majesty of the people, in lieu of discarded royalty. The kingly office was dropped, but in most of the subordinate departments of government, antient forms and names were retained. Such a portion of power had at all times been exercised by the people and their representatives, that the change of sovereignty was hardly perceptible, and the revolution took place without violence or

convulsion. Popular elections elevated private citizens to the same offices, which formerly had been conferred by royal appointment.

The people felt an uninterrupted continuation of the blessings [351] of law and government under old names, though derived from a new sovereignty, and were scarcely sensible of any change in their political constitution. The checks and balances which restrained the popular assemblies under the royal government, were partly dropped, and partly retained, by substituting something of the same kind. The temper of the people would not permit that any one man, however exalted by office, or distinguished by abilities, should have a negative on the declared sense of a majority of their representatives, but the experience of all ages had taught them the danger of lodging all power in one body of men. A second branch of legislature, consisting of a few select persons, under the name of senate, or council, was therefore constituted in eleven of the thirteen states, and their concurrence made necessary to give the validity of law to the acts of a more numerous branch of popular representatives. New-York and Massachusetts went one step farther. The former constituted a council of revision, consisting of the governor and the heads of judicial departments, on whose objecting to any proposed law, a reconsideration became necessary, and unless it was confirmed by two thirds of both houses, it could have no operation. A similar power was given to the governor of Massachusetts. Georgia and Pennsylvania were the only states whose legislature consisted of only one branch. Though many in these states, and a majority in all the others, saw and acknowledged the propriety of a compounded legislature, yet the mode of creating two branches out of a homogeneous mass of people, was a matter of difficulty. No distinction of ranks existed in the colonies, and none were entitled to any rights, but such as were common to all. Some possessed more wealth than others, but riches and ability were not always associated. Ten of the eleven states, whose legislatures consisted of two branches, ordained that the members of both should be elected by the people. This rather made two co-ordinate houses of representatives than a check on a single one, by the moderation of a select few. Maryland adopted a singular plan for constituting an independent senate.

By her constitution the members of that body [352] were elected for five years, while the members of the house of delegates held their seats only for one. The number of senators was only fifteen, and they were all elected indiscriminately from the inhabitants of any part of the state, excepting that nine of them were to be resident on the west, and six on the east side of the Chesapeak Bay. They were elected not immediately by the people, but by electors, two from each county, appointed by the inhabitants for that sole purpose. By these regulations the senate of Maryland consisted of men of influence, integrity and abilities, and such as were a real and beneficial check on the hasty proceedings of a more numerous branch of popular representatives. The laws of that state were well digested, and its interest steadily pursued with a peculiar unity of system; while elsewhere it too often happened in the fluctuation of public assemblies; and where the legislative department was not sufficiently checked, that passion and party predominated over principle and public good.

Pennsylvania instead of a legislative council or senate, adopted the expedient of publishing bills after the second reading, for the information of the inhabitants. This had its advantages and disadvantages. It prevented the precipitate adoption of new

regulations, and gave an opportunity of ascertaining the sense of the people on those laws by which they were to be bound; but it carried the spirit of discussion into every corner, and disturbed the peace and harmony of neighbourhoods. By making the business of government the duty of every man, it drew off the attention of many from the steady pursuit of their respective businesses.

The state of Pennsylvania also adopted another institution peculiar to itself, under the denomination of a council of censors. These were to be chosen once every seven years, and were authorised to enquire whether the constitution had been preserved—whether the legislative and executive branch of government, had performed their duty, or assumed to themselves, or exercised other or greater powers, than those to which they were constitutionally entitled.

To enquire whether the public taxes had [353] been justly laid and collected, and in what manner the public monies had been disposed of, and whether the laws had been duly executed. However excellent this institution may appear in theory, it is doubtful whether in practice it will answer any valuable end. It most certainly opens a door for discord, and furnishes abundant matter for periodical altercation. Either from the disposition of its inhabitants, its form of government, or some other cause, the people of Pennsylvania have constantly been in a state of fermentation. The end of one public controversy, has been the beginning of another. From the collision of parties, the minds of the citizens were sharpened, and their active powers improved, but internal harmony has been unknown. They who were out of place, so narrowly watched those who were in, that nothing injurious to the public could be easily effected, but from the fluctuation of power, and the total want of permanent system, nothing great or lasting could with safety be undertaken, or prosecuted to effect. Under all these disadvantages, the state flourished, and from the industry and ingenuity of its inhabitants acquired an unrivalled ascendancy in arts and manufactures. This must in a great measure be ascribed to the influence of habits, of order and industry, that had long prevailed.

1776

The Americans agreed in appointing a supreme executive head to each state, with the title either of governor or president. They also agreed in deriving the whole powers of government, either mediately or immediately from the people. In the eastern states, and in New York, their governors were elected by the inhabitants, in their respective towns or counties, and in the other states by the legislatures: but in no case was the smallest title of power exercised from hereditary right. New-York was the only state which invested its governor with executive authority without a council. Such was the extreme jealousy of power which pervaded the American states, that they did not think proper to trust the man of their choice with the power of executing their own determinations, without obliging him in many cases to take the advice of such counsellors as they thought proper to nominate. [354] The disadvantages of this institution far outweighed its advantages. Had the governors succeeded by hereditary right, a council would have been often necessary to supply the real want of abilities, but when an individual had been selected by the people as the fittest person for discharging the duties of this high department, to fetter him with a council was either to lessen his capacity of doing good, or to furnish him with a skreen for doing evil. It destroyed the secrecy, vigor and dispatch, which the executive power ought to possess, and by making governmental acts the acts of a body, diminished individual

responsibility. In some states it greatly enhanced the expences of government, and in all retarded its operations, without any equivalent advantages.

New-York in another particular, displayed political sagacity superior to her neighbors. This was in her council of appointment, consisting of one senator from each of her four great election districts, authorised to designate proper persons for filling vacancies in the executive departments of government. Large bodies are far from being the most proper depositaries of the power of appointing to offices. The assiduous attention of candidates is too apt to bias the voice of individuals in popular assemblies. Besides in such appointments, the responsibility for the conduct of the officer, is in a great measure annihilated. The concurrence of a select few on the nomination of one, seems a more eligible mode for securing a proper choice, than appointments made either by one, or by a numerous body. In the former case there would be danger of favoritism, in the latter that modest unassuming merit would be overlooked, in favour of the forward and obsequious.

A rotation of public officers made a part of most of the American constitutions. Frequent elections were required by all, but several still farther, and deprived the electors of the power of continuing the same office in the same hands, after a specified length of time. Young politicians suddenly called from the ordinary walks of life, to make laws and institute forms of government, turned their attention to the histories of ancient republics [355] and the writings of speculative men on the subject of government.

This led them into many errors and occasioned them to adopt sundry opinions, unsuitable to the state of society in America, and contrary to the genius of real republicanism.

1776

The principle of rotation was carried so far, that in some of the states, public officers in several departments scarcely knew their official duty, till they were obliged to retire and give place to others, as ignorant as they had been on their first appointment. If offices had been instituted for the benefit of the holders, the policy of diffusing these benefits would have been proper, but instituted as they were for the convenience of the public, the end was marred by such frequent changes. By confining the objects of choice, it diminished the privileges of electors, and frequently deprived them of the liberty of choosing the man who, from previous experience, was of all men the most suitable. The favourers of this system of rotation contended for it, as likely to prevent a perpetuity of office and power in the same individual or family, and as a security against hereditary honours. To this it was replied, that free, fair and frequent elections were the most natural and proper securities, for the liberties of the people. It produced a more general diffusion of political knowledge, but made more smatterers than adepts in the science of government.

As a farther security for the continuance of republican principles in the American constitutions, they agreed in prohibiting all hereditary honours and distinction of ranks.

It was one of the peculiarities of these new forms of government, that all religious establishments were abolished. Some retained a constitutional distinction between

Christians and others, with respect to eligibility to office, but the idea of supporting one denomination at the expence of others, or of raising any one sect of protestants to a legal pre-eminence, was universally reprobated. The alliance between church and state was completely broken, and each was left to support itself, independent of the other.

The far famed social compact between the people and their rulers, did not apply to the United States. The [356] sovereignty was in the people. In their sovereign capacity by their representatives, they agreed on forms of government for their own security, and deputed certain individuals as their agents to serve them in public stations agreeably to constitutions, which they prescribed for their conduct.

1776

The world has not hitherto exhibited so fair an opportunity for promoting social happiness. It is hoped for the honor of human nature, that the result will prove the fallacy of those theories, which suppose that mankind are incapable of self government. The ancients, not knowing the doctrine of representation, were apt in their public meetings to run into confusion, but in America this mode of taking the sense of the people, is so well understood, and so completely reduced to system, that its most populous states are often peaceably convened in an assembly of deputies, not too large for orderly deliberation, and yet representing the whole in equal proportions. These popular branches of legislature are miniature pictures of the community, and from the mode of their election are likely to be influenced by the same interests and feelings with the people whom they represent. As a farther security for their fidelity, they are bound by every law they make for their constituents. The assemblage of these circumstances gives as great a security that laws will be made, and government administered for the good of the people, as can be expected from the imperfection of human institutions.

In this short view of the formation and establishment of the American constitutions, we behold our species in a new situation. In no age before, and in no other country, did man ever possess an election of the kind of government, under which he would choose to live. The constituent parts of the antient free governments were thrown together by accident. The freedom of modern European governments was, for the most part, obtained by the concessions, or liberality of monarchs, or military leaders. In America alone, reason and liberty concurred in the formation of constitutions. It is true, from the infancy of political knowledge in the United States, there were [357] many defects in their forms of government. But in one thing they were all perfect. They left the people in the power of altering and amending them, whenever they pleased. In this happy peculiarity they placed the science of politics on a footing with the other sciences, by opening it to improvements from experience, and the discoveries of future ages. By means of this power of amending American constitutions, the friends of mankind have fondly hoped that oppression will one day be no more, and that political evil will at least be prevented or restrained with as much certainty, by a proper combination or separation of power, as natural evil is lessened or prevented by the application of the knowledge or ingenuity of man to domestic purposes. No part of the history of antient or modern Europe, can furnish a single fact that militates against this opinion, since in none of its

1776

governments have the principles of equal representation and checks been applied, for the preservation of freedom. On these two pivots are suspended the liberties of most of the states. Where they are wanting, there can be no security for liberty, where they exist they render any farther security unnecessary.

The rejection of British sovereignty not only involved a necessity of erecting independent constitutions, but of cementing the whole United States by some common bond of union. The act of independence did not hold out to the world thirteen sovereign states, but a common sovereignty of the whole in their united capacity. It therefore became necessary to run the line of distinction, between the local legislatures, and the assembly of the states in Congress. A committee was appointed for digesting articles of confederation between the states or united colonies, as they were then called, at the time the propriety of declaring independence was under debate, and some weeks previously to the adoption of that measure, but the plan was not for sixteen months after so far digested, as to be ready for communication to the states. Nor was it finally ratified by the accession of all the states, till nearly three years more had elapsed.

In discussing its articles, many difficult questions occurred. One was to ascertain the ratio of [358] contributions from each state.

1776

Two principles presented themselves, numbers of people, and the value of lands. The last was preferred as being the truest barometer of the wealth of nations, but from an apprehended impracticability of carrying it into effect, it was soon relinquished, and recurrence had to the former. That the states should be represented in proportion to their importance, was contended for by those who had extensive territory, but they who were confined to small dimensions, replied, that the states confederated as individuals, in a state of nature, and should therefore have equal votes. From fear of weakening their exertions against the common enemy, the large states for the present yielded the point, and consented that each state should have an equal suffrage.

It was not easy to define the power of the state legislatures, so as to prevent a clashing between their jurisdiction, and that of the general government. On mature deliberation it was thought proper, that the former should be abridged of the power of forming any other confederation or alliance—of laying on any imposts or duties that might interfere with treaties made by Congress—or keeping up any vessels of war, or granting letters of marque or reprisal. The powers of Congress were also defined. Of these the principle were as follows: To have the sole and exclusive right of determining on peace and war—of sending and receiving ambassadors—of entering into treaties and alliances,—of granting letters of marque and reprisal in times of peace.—To be the last resort on appeal, in all disputes between two or more states—to have the sole and exclusive right of regulating the alloy and value of coin, of fixing the standard of weights and measures—regulating the trade and managing all affairs with the Indians—establishing and regulating post offices—to borrow money or emit bills on the credit of the United States—to build and equip a navy—to agree upon the number of land forces, and to make requisitions from each state for its quota of men, in proportion to the number of its white inhabitants.

No coercive power was given to the general government, nor was it invested with any legislative power over [359] individuals,

1776

but only over states in their corporate capacity. As at the time the articles of confederation were proposed for ratification, the Americans had little or no regular commercial intercourse with foreign nations, a power to regulate trade or to raise a revenue from it, though both were essential to the welfare of the union, made no part of the federal system. To remedy this and all other defects, a door was left open for introducing farther provisions, suited to future circumstances.

The articles of confederation were proposed at a time when the citizens of America were young in the science of politics, and when a commanding sense of duty, enforced by the pressure of a common danger, precluded the necessity of a power of compulsion. The enthusiasm of the day gave such credit and currency to paper emissions, as made the raising of supplies an easy matter. The system of federal government was therefore more calculated for what men then were, under these circumstances, than for the languid years of peace, when selfishness usurped the place of public spirit, and when credit no longer assisted, in providing for the exigencies of government.

The experience of a few years after the termination of the war, proved, as will appear in its proper place, that a radical change of the whole system was necessary, to the good government of the United States.

[9.]Ramsay to Belknap, March 11, 1795, in Brunhouse, pp. 139–140.

[10.]See Lester H. Cohen, “Creating a Useable Future: The Revolutionary Historians and the National Past,” in Jack P. Greene, ed., *The American Revolution: Its Character and Limits* (New York, 1987), pp. 309–330.

[11.]David Ramsay, *The History of the American Revolution* (hereafter *HAR*), I, p. 26.

[12.]*HAR*, I, pp. 31, 27.

[13.]*HAR*, I, pp. 334–337, 27–33.

[14.]*HAR*, I, pp. 29–33. Even the colonists’ readings, though few in number, “generally favoured the cause of liberty.” They included *Cato’s Letters*, the *Independent Whig*, and, in New England, histories of the Puritans, which “kept alive the remembrance of the sufferings of their forefathers, and inspired a warm attachment, both to the civil and the religious rights of human nature.” Ibid., p. 30. Ramsay, who wrote of the powerful unifying force exerted by New England histories, was no doubt influenced by them in his own writings.

[15.]*HAR*, I, p. 350.

[16.]The major sources are Bernard Bailyn, *The Ideological Origins of the American Revolution* (Cambridge, Mass., 1967) and *The Origins of American Politics* (New York, 1971); Gordon S. Wood, *The Creation of the American Republic, 1776–1787* (Chapel Hill, N.C., 1969); and J.G.A. Pocock, *The Machiavellian Moment: Florentine Political Thought and the Atlantic Republican Tradition* (Princeton, N.J., 1975). Three excellent historiographical essays are Robert Shalhope, “Toward a Republican Synthesis: The Emergence of an Understanding of Republicanism in American Historiography,” *William and Mary Quarterly*, 3d Series, 29 (1972): 49–80, and “Republicanism and Early American Historiography,” *ibid.*, 39 (1982): 334–356; and Linda K. Kerber, “The Republican Ideology of the Revolutionary Generation,” *American Quarterly*, 37 (1985): 474–495. I have discussed the impact of republicanism on one historian in “Mercy Otis Warren: The Politics of Language and the Aesthetics of Self,” *American Quarterly*, 35 (1983): 481–498.

[17.]In fact, Ramsay publicly opposed slavery and branded the slave trade an “infamous traffic.” [See Ramsay to Rush, August 22, 1783, September 9, 1783,

January 31, 1785, December 14, 1785, April 12, 1786, in Brunhouse, pp. 76, 77, 86–87, 94, 99.] According to Winthrop Jordan, moreover, Ramsay was the only Southerner who, upon receipt of a copy of Thomas Jefferson’s *Notes on the State of Virginia*, wrote that he thought Jefferson had “depressed the negroes too low.” Ramsay was as strong a proponent of the Lockean principle that environment shapes human nature as one could find in eighteenth-century America. He believed that “all mankind [is] originally the same & only diversified by accidental circumstances.” [Ramsay to Jefferson, May 3, 1786, in Brunhouse, p. 101. Jordan, *White Over Black: American Attitudes Toward the Negro, 1550–1812* (Chapel Hill, N.C., 1968), p. 456.] While Ramsay’s attitudes toward slavery are beyond the scope of this essay, it is useful to note that his failure to condemn slavery more vehemently in his *History* was integral to his strategy of diminishing the importance of the forces that could tear the nation apart. For a fine discussion of Ramsay and slavery, see Arthur H. Shaffer, “Between Two Worlds: David Ramsay and the Politics of Slavery,” *Journal of Southern History*, 50 (1984): 175–196.

[18.] See Ramsay to Jefferson, April 7, 1787, in Brunhouse, p. 110; “An Oration” for July 4, 1794, *Ibid.*, p. 195.

[19.] Ramsay to Drayton, September 1, 1779; to Rush, July 18, 1779; to Rush, July 11, 1783; to Eliot, August 6, 1785; to Rush, August 6, 1786; in Brunhouse, pp. 64, 62, 75, 90, 105.

[20.] Ramsay to Eliot, August 6, 1785, in Brunhouse, pp. 90–91.

[21.] Ramsay to Eliot, April 7, 1810, in Brunhouse, p. 166.

[22.] Ramsay to John Coakley Lettsom, October 29, 1808, in Brunhouse, p. 163. This analogy raises the issue of “truth” in historical writing, which I have addressed in “Creating a Useable Future,” and *The Revolutionary Histories*, particularly chapters 6 and 8.

[23.] *The History of the Revolution of South-Carolina* was, thanks to Jefferson’s brokering, translated into French. The fascinating story of Jefferson’s efforts is contained in several letters: Ramsay to Jefferson, June 15, 1785; Ramsay to Jefferson, July 13, 1785; Ramsay to Jefferson, August 8, 1785; Jefferson to Ramsay, August 31, 1785; Jefferson to Ramsay, October 12, 1785; Ramsay to Jefferson, December 10, 1785; Jefferson to Ramsay, January 26, 1786; Jefferson to Ramsay, January 27, 1786; Ramsay to Jefferson, May 3, 1786; Jefferson to Ramsay, July 10, 1786; Ramsay to Jefferson, November 8, 1786; Jefferson to Ramsay, August 4, 1786; Jefferson to Ramsay, May 7, 1788; Ramsay to Jefferson, October 8, 1788, in Brunhouse, pp. 88–94, 97, 101, 104, 107, 112–113, 121, 123. *The History of the American Revolution* was translated into Dutch and German, and *The Life of George Washington* was translated into French and Spanish.

[24.] Rush quoted in Robert Y. Hayne, “Biographical Memoir of David Ramsay, M.D.,” *Analectic Magazine*, 6 (1815): 206. I have relied on Brunhouse, pp. 12–48 for biographical material.

[25.] Ramsay was married three times: first, in February 1775, to Sabina Ellis, who died in June 1776; then in March 1783 to Frances Witherspoon—daughter of John Witherspoon, president of the College of New Jersey (Princeton)—who died while delivering their child December 9, 1784; and finally in January 1787 to Martha Laurens—daughter of Henry Laurens, one of the giants of South Carolina politics and commerce; this marriage lasted some twenty-five years.

[26.] Ramsay's loss to Smith was almost certainly related to his anti-slavery sentiments. See Shaffer, "Between Two Worlds"; George C. Rogers, Jr., *Evolution of a Federalist: William Loughton Smith of Charleston (1758–1812)* (Columbia, S.C., 1962), especially pp. 162–171.

[27.] Ramsay to Jefferson, June 15, 1785, in Brunhouse, p. 88. Ramsay, along with other prominent Charlestonians, was arrested by the British on May 12, 1780, upon the capitulation of the city. On August 27 he was exiled to St. Augustine; a year later he was released.

[28.] Ramsay to Rush, February 11, 1786 and Ramsay to Jefferson, April 7, 1787, in Brunhouse, pp. 98, 110.

[29.] David Ramsay, *The History of South-Carolina*, II, pp. 238–240, 83–84.

[30.] "An Oration on the Advantages of American Independence . . . ," in Brunhouse, pp. 184–185.

[31.] Ramsay was referred to as the "Tacitus" of America by J. Kingston, in *The New American Biographic Dictionary* (Baltimore, 1810), and as America's "Polybius" in *Niles' Weekly Register*, 11 (October 5, 1816), both quoted in Brunhouse, p. 220; Ramsay to Gordon, January 18, 1786, in Brunhouse, p. 96.

[32.] Ramsay to Rush, May 3, 1786, in Brunhouse, pp. 101–102. He added: "For some months past I have spent from five to 8 hours every day at this work. The drudery is nearly done. I have got my facts & I shall put them together in Carolina."

[33.] Ramsay to Rush, April 13, 1786, September 26, 1786, May 1, 1787, and August 18, 1787, in Brunhouse, pp. 99–100, 105–106, 112, 113–114; Ramsay to Boudinot, April 13, 1786, to Morris, May 12, 1786, to Thomson, November 4, 1786, to Adams, September 20, 1787, in Brunhouse, pp. 100, 102, 107, 114. Thomson's lengthy letter responding to Ramsay's manuscript has been reprinted by Paul H. Smith, *Quarterly Journal of the Library of Congress*, 28 (1971): 158–172.

[34.] Ramsay to Ashbel Green, October 4, 1791, in Brunhouse, p. 130. Aitken had a very good reputation, and he attempted to explain his procedures to the irate author. See Brunhouse's index for several references to Aitken; Isaiah Thomas, *The History of Printing in America* (1810), rev. ed., by Marcus A. McCorison (New York, 1970).~

~~~~~

[35.] Ramsay to Eliot, October 19, 1789, April 13, 1792, April 7, 1810, and April 12, 1793, in Brunhouse, pp. 126, 131, 166, 135.

[36.]Orrin Grant Libby, "Ramsay as a Plagiarist," *American Historical Review* 7 (1901–02): 697–703. Libby also demonstrated that William Gordon had plagiarized from the same source in "A Critical Examination of William Gordon's History of the American Revolution," American Historical Association, *Annual Report* (1899), I: 367–388. Brunhouse has pointed out that two other historians followed Libby's lead: Josephine Fitts, "David Ramsay . . ." (Unpub. M.A. thesis, Columbia University, 1936); and Elmer D. Johnson, "David Ramsay: Historian or Plagiarist?" *South Carolina Historical Magazine*, 57 (1956).

[37.]Burke's role on the *Annual Register* is still, apparently, a matter of controversy. See Thomas W. Copeland, "Burke and Dodsley's Annual Register," *PMLA*, 54 (1939): 223–245; Bertram D. Sarason, "Edmund Burke and the Two Annual Registers," *PMLA*, 68 (1953): 496–508.

[38.]Libby adduced eight examples of plagiarism in Ramsay's *The History of the American Revolution*. Fitts added ten more, Brunhouse six. Ironically, Libby searched only the *Annual Register*, whereas Ramsay himself mentioned that the *Remembrancer*, another English periodical, also was available to him. See Ramsay to Rush, May 3, 1786, in Brunhouse, p. 102. Brunhouse lists the examples of plagiarism at p. 219.

[39.]Libby, "Ramsay as a Plagiarist," p. 703.

JOHN BARRETT.

Whitehall, September 1, 1775.

The House of Representatives of the Province of *Nova- Scotia*, in *North-America*, having unanimously agreed to a loyal and dutiful address, petition, and memorial, to the King's most excellent Majesty, the Lords spiritual and temporal, and the Commons of *Great Britain*, in Parliament assembled, containing declarations of their obedience and submission to the authority of the Parliament of *Great Britain*, as the supreme legislature of that Province, and of all the *British* Dominions, and of their readiness, as an indispensable duty, to submit to the payment of such taxes, to be raised upon a permanent plan, and at the disposal of Parliament, as shall be their due proportion of the expenses of the Empire; and *William Nesbitt, Esq.*, Speaker of the said House of Representatives, having transmitted a transcript of the said loyal and dutiful address, petition, and memorial, to the Earl of *Dartmouth*, one of His Majesty's principal Secretaries of State, it was this day presented to His Majesty, and most graciously received.

EXTRACT OF A LETTER FROM IRELAND TO AN ACQUAINTANCE IN NEW-YORK, DATED SEPTEMBER 1, 1775.

Though most of the people here wish well to the cause in which you are engaged, and would rejoice to find you continue firm and steadfast, yet it is the prevailing opinion, especially among the friends to Government, (so called,) that you will be at last frightened into submission to ministerial measures. They are raising recruits throughout this Kingdom. The men are told they are only going to *Edinburgh* to learn military discipline, and are then to return. The common people are industriously kept from the knowledge of publick affairs. They know nothing but what the great people please to let them. Newspapers, since the Stamp Act, are so high, the poor and middling people cannot purchase them, nor even an almanack; not one of which is to be found within sixty miles, except among the great folks; however, so few are sold, that it is thought there will be no more printed, unless the act is repealed, which is expected next session.

It is most grievous to bear the innumerable burdens they have imposed upon the people here. It is intended to send several Bishops to *America*, (one at least to every city,) with salaries of four hundred Pounds sterling each, to be paid by the people where they are stationed. It is expected that *New-York* will be the first to submit to any terms that shall be offered; and great pains have been taken to spread a general belief that the people in all the Colonies are mere cowards, ready to run at the sight of an army. The newspapers that are most circulated are filled with such stuff,

but not a word of any thing spirited on your part, so that our people are altogether ignorant of the true state of affairs with you.

Dear countrymen and fellow-sufferers, who have been so happy as to have your lot in a land of liberty, though now persecuted and your rights invaded, suffer not your most precious inheritance, your liberty and property, your noble Constitution, to be torn from you. You are contending for what is of more value than life; fear not to risk your lives freely in defence of it. Keep your presses free, that the people may know all that concerns them and all that is doing against them. By every means in your power keep corruption from influencing any of your offices of publick trust; you cannot possibly be too much guarded against this terrible evil, which has almost undone us here. Let not arbitrary power and despotism have any footing among you. Many in this Country, who groan under it, would be glad to give their utmost assistance, and hope to be over with you before the contest is ended.

It is my opinion that if you continue firm, you will, without doubt, succeed in your glorious struggle; justice will give strength to your arms, and weaken those of your enemies. God himself is on your side, and will cause them to fall before you. Meanwhile, let me caution you against the least appearance of submission. You can hardly conceive the ill effects of every thing that may feed the hopes of your enemies; even base complaisance in this case is criminal, for like drowning men they are ready to catch at straws, and, if possible, interpret every thing you say or do in favour of their own designs, whereby they are encouraged to continue their efforts to subdue you. It behooves you, therefore, to be resolute, plain, and absolute, in your refusal of every proposal that implies giving up one tittle of your rights and liberties, or might bring them into the least danger, and resist every attempt against them with all your might. The least slackness or compliance on your part will embolden them to proceed in their endeavours to enforce their laws, to tax and enslave you. May God guide and protect you. Amen.

I am a sincere friend to the natural rights and liberty of mankind, and yours, &c. M. W.

P. S. It is reported that *Charles Stuart* is preparing to make an attempt to obtain the Crown of *Scotland*. I wait for further intelligence.

EXTRACT OF A LETTER FROM A GENTLEMAN IN VIRGINIA TO HIS FRIEND IN EDINBURGH, SCOTLAND, DATED MIDDLESEX, SEPTEMBER 1, 1775.

DEAR SIR: I embrace this favourable opportunity of writing you by a gentleman who intends to reside in *Scot-*

land with his lady and family. As to the present state of *Virginia*, I refer you to them. Tears stand in my eyes when I think or write of this once happy, thrice happy land of liberty.

All is anarchy and confusion. A brave people struggling in opposition to the acts of the *British* Parliament. We are all in arms, exercising and training old and young to the use of the gun. No person goes abroad without his sword, or gun, or pistols. The sound of war echoes from north to south. Every plain is full of armed men, who all wear a hunting shirt, on the left breast of which are sewed, in very legible letters, "*Liberty or Death.*" May *God* put a speedy and happy end to this grand and important contest between the mother and her children. The Colonies do not wish to be independent; they only deny the right of taxation in the Parliament. They would freely grant the King whatever he pleases to request of their own Assemblies, provided the Parliament has no hand in the disposing of it.

This dispute has put an end to all trade and commerce. The Country is on the brink of destruction. The rising glory of *America* is totally eclipsed, and, unless some prudent means be fallen on to bring about a reconciliation, I tremble for the consequences. The troubles of the year 1745 were but like a flea-bite to the present commotions. Never was there heard of such an unanimity as prevails through this extensive Empire in the glorious cause of liberty. All ranks and conditions of men have laid aside all sorts of extravagance in living and dressing, vieing with one another who shall wear most of their own manufactory. You would hardly believe the quantity of cotton cloth that is annually manufactured here could be made. I do assure you no women in any part of the world can be more industrious than those in *Virginia*. They labour under one great disadvantage; which is, their being entirely ignorant of the ways of making of linen, which they will severely feel next year, this warm climate requiring more of that article than any other.

WILLIAM TENNENT TO THE COUNCIL OF SAFETY FOR SOUTH-CAROLINA.

Long Cane, September 1, 1775.

This comes by Captain *George Reid's* wagon from the *Long Canes*, where I am at present. I parted from Mr. *Drayton* on Monday morning; he steered his course to *Augusta*, and thence designed for the camp at *Amelia*. I thought it necessary to visit the settlements on this side of *Saluda*. Met a large congregation yesterday, and found the people divided in their sentiments. Spoke at least two hours to them, to good effect. The prevailing party here is for *American* measures, by the agency of some of our worthy members; but they need confirmation. I have therefore appointed three meetings, at which I expect to see the greater number of the disaffected. I shall then cross over into *Fletchall's* Regiment once more, to be at an election appointed at *Ford's*, on *Enoree*, where we expect great opposition, if not violence, from *Cunningham's* party. *Brown* will bring them to blood if he can, but I still hope it may be prevented. I consider myself as running great risks, but think it my duty.

Our visit has given their party a great shock, divided their friends, and strengthened our interest much. One of their chiefs confessed to me, at *Little River*, that he brought up the thanks of the Governour to Mr. *Cunningham*, for what he had done and is doing. The Governour's intrigue here is as evident as the light of the sun. The evidences of their design, by the *Indians*, is no doubt clear to the Council, from the papers sent down already.

The inhabitants here are in great terrour, as far as they have heard of their danger, and that because they have no ammunition. The leaders have frequently dropped in company that they intend to form a camp. I am sure they will find a smaller number ready to befriend them than they imagine. But their dependance is upon the savages to join their army, and that the rest of the inhabitants will be forced to join them, to save their families from a massacre. I am taking proper measures, in this District, to prevent the horrible conspiracy. Three volunteer companies are formed; one under Major *Terry*, who now seems animated in the cause; another under Captain *Pickins*; a third under Captain *James McCall*. More of the like kind is going on

as fast as may be. The great difficulty is the want of ammunition. They evidently have a design upon *Fort Charlotte*, and our friends cannot collect to defend it, unless they are supplied; I have therefore promised them a supply. If you, therefore, gentlemen, think it proper, it will be of the greatest utility to send up one hundred or one hundred and fifty pounds weight of powder, and some lead, by the bearer, *Samuel Reid*, who will effectually secrete it until delivered safe into the hands of the volunteer Companies, to be subject to the order of the Council in case it is not used for the defence of the Colony. It will be effectually secured, and a small delay may be greatly dangerous. The same measure will be necessary on the other side of *Broad River*.

I could wish that *Virginia* might be alarmed and ready, and that a categorical answer might be demanded of the *Cherokees* before the time of danger. The *Creeks* are in some danger from one *Thompson*, an emissary, now among them. I shall visit *Fort Charlotte* before I return, and hope to let you hear more particularly on these subjects next week.

PHILADELPHIA COUNTY COMMITTEE.

Philadelphia County, September 1, 1775.

In Committee, *Resolved*, That it be recommended to the Township Committees and the Captains of the different Companies, and they are hereby enjoined to make returns to this Committee of the Associators, Non-Associators, &c., in their respective Districts, agreeable to the directions of the Committee of Safety, on Friday, the 22d instant; and that the Colonels of each Battalion in this County do, at the same time, return the names of the Officers of their respective Battalions, with their ranks and seniority in Battalion.

The Committee adjourned to Friday, the 22d instant, to meet at the house of *Jacob Neaff*, at ten o'clock in the forenoon.

NEW-YORK COMMITTEE.

The Committee met Friday, September 1, 1775. Present: *Henry Remsen*, Chairman, and thirty-five Members.

The Deposition of *George Van Schamp*, relative to Sergeant *Graham's* conduct in *Boston*, received and read.

The Memorial of *Stephen Skinner*, Esq., received and read, praying leave to land some Trunks and Bedding, the property of Miss *Johnson*, Miss *Kemble*, and Mrs. *Lee*.

Ordered, That leave be given accordingly, and that Mr. *O. Templeton* and Mr. *John Broome* be a Sub-Committee to examine the same.

Ordered, That the Chairman be requested to write a letter of thanks to the different Committees in *New-Jersey* and *Orangetown*, for their polite behaviour to Captain *Dobbs*.

New-York Committee Chamber, September 1, 1775.

Whereas this Committee, by their Resolution of the 1st of May last, and the Continental Congress, by their Resolve of the 27th of said month, ordered, that no Provisions should be exported to *Quebeck*, *Nova-Scotia*, *Georgia*, *Newfoundland*, or any part of the fishing coast or fishing islands to the eastward of *Nantucket*: And whereas it appears to this Committee, by the Depositions of *Charles De Kay*, master, and *Thomas Milbroy*, mate of the Sloop *Sally*, whereof *John Christian Drewidts* and *Moses Delis Dernier* are owners, that they, the said *John Christian Drewidts* and *Moses Delis Dernier*, did load the said sloop with Provisions; and the said *Moses Delis Dernier* did proceed with her, so loaded, to *Nova-Scotia*, and there disposed of the same, in violation of the Resolve of the said Continental Congress: And whereas it further appears, by the Deposition of Captain *Jenking*, late master of the Sloop *Elizabeth*, whereof *Thomas Ludlow* was owner, that the said *Thomas Ludlow* did load the said sloop in the Port of *New-York*, with Provisions; and with her so loaded, did proceed to the Island of *Newfoundland*, and there disposed of the same, in violation of the aforesaid Resolve:

*Resolved*, 1st, That the Depositions of the said *Charles De Kay*, *Thomas Milbroy*, and *Richard Jenking*, be published in the newspapers in this City.

*Resolved.* 2d. That the said *John Christian Dreuvidts*, *Moses Delis Dernier*, *Charles De Kay*, and *Thomas Ludlow*, have knowingly violated the beforementioned Resolve of the Continental Congress, and the General Association entered into by the inhabitants of this City and County; and that the said *John Christian Dreuvidts*, *Moses Delis Dernier*, *Charles De Kay*, and *Thomas Ludlow*, have severally acted inimically to, and have been guilty of a high infringement of a Resolve of the associated *American Colonies*.

By order of the Committee:

HENRY REMSEN, *Dep'y Chairman*.

City of *New-York*, ss.

*Charles De Kay*, of the City of *New-York*, Mariner, and commander of the Sloop *Sally*, now lying in the Port of *New-York*, being duly sworn, makes oath, that on or about the beginning of *June* last, he sailed from the said Port of *New-York*, on board of the said sloop, as master and commander thereof, with a cargo consisting of flour, rye meal, bread, pork, *Indian* corn, rum, and some boards, to the river called *Pettiquit Jack*, in *Nova-Scotia*, where *Mr. Moses Delis Dernier*, supercargo and part owner of the said sloop and cargo, disposed of a small part of the said cargo, to wit: of some of the flour and some of the bread; that from thence he proceeded with the remainder of the said cargo on board of the said sloop, to the Township of *Shippody*, in the Province of *Nova-Scotia* aforesaid, and there discharged some part of the said cargo, by the direction of the said *Moses Delis Dernier*; that from the Township of *Shippody* he proceeded with the said sloop and the residue of the said cargo to the Town of *Cumberland*, in the Province aforesaid, where the said sloop was discharged of her said cargo, and the same was disposed of in the manner following, to wit: part to *Mr. John Avary*, of *Windsor*, then at *Cumberland* aforesaid, who loaded or put the part so purchased by him on board of a schooner, to go to *Windsor* aforesaid, part consisting of flour, bread, iron, and steel, amounting to about the sum of two hundred and ninety odd Pounds sterling in value, to *Mr. Thomas Clough*, of the Town of *Boston*, (which he told the deponent he intended to carry or convey to *Windsor* aforesaid, or *Machias*, in order therewith to purchase a cargo for the *West-Indies*, which the deponent believed to be true,) and the rest in small parcels to the inhabitants of the said Town of *Cumberland*; that that part of the said cargo sold to the said *Thomas Clough*, as aforesaid, was sold for the same price that the said *John Avary* purchased at; that the deponent had no knowledge or expectation, or belief, at the time of the sale of part of the said cargo to the said *Thomas Clough*, that he intended to convey any part thereof so purchased by him to any other place than *Windsor* or *Machias* aforesaid, for the purposes aforesaid; and that he, the deponent, verily believes, and is well assured, that the said *Thomas Clough* did not convey any part of the said cargo, so purchased by him as aforesaid, to the Town of *Boston*: and this deponent further saith, that the said sloop's cargo being discharged and disposed of as aforesaid, he proceeded from *Cumberland* aforesaid, on board of the said sloop, in ballast, to this City, where he arrived about the 23d instant; and this deponent further saith, that besides the sloop's cargo beforementioned, he had an adventure belonging to him, the deponent, on board, of two hundred and fifty weight of hams, and one hundred and fifty gallons of rum, which were disposed of at *Cumberland* aforesaid, in small parcels, to the inhabitants; and further the deponent saith, that before he left *New-York*, in the said voyage, he, the deponent, was informed by *Moses Delis Dernier*, one of the owners of the said vessel, that she was bound for the Bay of *Fundy*; and the said *Moses* told him, that he would have applied to the Committee, to have got leave to have gone there, but that he was afraid that the port would have been shut; and further the deponent saith not.

CHARLES DE KAY.

Sworn the 31st August, 1775, before me.

WHITEHEAD HICKS, *Mayor*.

City of *New-York*, ss.

*Thomas Millroy*, of the *Isle-of-Man*, Mariner, and mate of the Sloop *Sally*, now lying in the Port of *New-York*, being duly sworn, maketh oath, that on or about the beginning of *June* last, he sailed from the said Port of *New-*

*York*, on board the said sloop, as mate thereof, with a cargo consisting of flour, rye meal, bread, pork, *Indian* corn, rum, and some boards, bound for the *West-Indies*, as he was informed by the master of the said sloop. When they had got out at sea about eighteen hours' sail, Captain *Charles De Kay* told the deponent they were bound for the Bay of *Fundy*. At their arrival in the Bay of *Fundy*, at a place called *Pettiquit Jack*, where our supercargo, *Mr. Moses Delis Dernier*, sold some of the cargo; from thence we went to the Township of *Shippody* River, and there we discharged part of the cargo, by the directions of said *Moses Delis Dernier*; from thence we went to *Cumberland*, in the Province aforesaid, and there we discharged the whole of the cargo we had left, by the order of our supercargo; and then took in ballast, and filled our casks with water, and sailed from thence to *New-York*, where we arrived the 25th of *August*, 1775, at *Sandy-Hook*, or near the *Narrows*, where the Captain left the sloop and went up to *New-York*. Before he left the sloop he desired me, if any person inquired where they came from, should say from *St. Eustatia*; and also desired me to give the people a caution; which I accordingly did.

THOMAS MILLROY.

Sworn this 31st day of *August*, 1775, before me,

WILLIAM WADDELL, *Alderman*.

I, *Richard Jenking*, sailed from *New-York* on the 28th of *May* last, as master of the Sloop *Elizabeth*, belonging to *Mr. Thomas Ludlow*, laden with provisions, to wit: bread, flour, pork, *Indian* corn, and a small parcel of iron; that the said *Thomas Ludlow* went with me, as owner and supercargo, and took with him four negroes, three of which I understood were his own. We came to an anchor that day within *Sandy-Hook* light-house; next day about noon got under way, and put to sea. I took the log-book and marked it towards *Bermuda*; and that he then told me not to be surprised, that he intended to go to *Newfoundland*. I found myself obliged to follow his orders, and shaped a course for *Cape Race*. The 14th of *June*, arrived at the harbour of *Trespas*, in *Newfoundland*, and there landed the cargo, which he sold to *Jackson & Hallet*, merchants, of *Topsham*, for sixteen and sixpence sterling, round, as he informed me. I differed with him there, for deceiving me, and would have left him, could I have got a passage home. He took a passage in a small vessel belonging to *Mr. Jackson*, for *Quebeck*, and gave me my sailing orders to follow him, which I did: he arrived at *Quebeck* some days before me. At my arrival, he ordered me to haul the vessel close into the Town in the mud. In a few days he informed me that he was going to take on board cattle for the *West-Indies*. I demanded my discharge, and told him I would not proceed any further with him. He insisted I should; on which high words arose between us. I still persisted in my resolution to leave him. In a few days he provided another master, and discharged me. I procured a passage to *Saybrook*, in the Sloop *Betsey*, *Norman Morrison*, master, and arrived at *Saybrook* the 20th instant; from thence I proceeded here, and arrived the 27th.

RICHARD JENKING.

Sworn the 30th August, 1775, before me,

WHITEHEAD HICKS, *Mayor*.

DAVID BURGER TO NEW-YORK CONGRESS.

New-York, September 1, 1775.

GENTLEMEN: I take this opportunity, from the regard that I have for the cause of *American* freedom, to acquaint you that there is a set of judicious people that live on *Staten-Island*, who, for the sake of a little gain, would sell their and the Country's privileges, as appears by their selling to the Troops, which they have done last *Tuesday*, such as hogs, sheep, geese, ducks, and fowls, to go on board the ship that lies now in the *North River*, to go to *Boston*, and are determined to continue thus in letting them have such stock as they want, as far as they are able to supply them, and will spare no pains to provide for them. *Mr. Cubberly* is to let them have some stock. As he is not willing to bring them up himself, for fear of being discovered in so doing, so that they are to call for them, and he will let them have as far as he can spare. Last *Tuesday* they had the abovementioned stock from *John Van Pelt*, *Cornelius Martin*, *Benjamin Martin*, *John Keteltas*, *Jacob Barregar*, and *Mary Barregar*. The

## FROM THOMAS JEFFERSON TO GIOVANNI FABBRONI, 8 JUNE 1778

To Giovanni Fabbroni

SIR

Williamsburgh in Virginia June. 8. 1778

Your letter of Sep. 15. 1776 from Paris came safe to hand. We have not however had the pleasure of seeing Mr. De Crenis, the bearer of it in this country, as he joined the army in Pennsylvania as soon as he arrived. I should have taken particular pleasure in serving him on your recommendation. From the kind anxiety expressed in your letters as well as from other sources of information we discover that our enemies have filled Europe with Thrasonic accounts of victories they had never won and conquests they were fated never to make. While these accounts alarmed our friends in Europe they afforded us diversion. We have long been out of all fear for the event of the war.<sup>1</sup> I inclose you a list of the killed, wounded, and captives from the Commencement of hostilities at Lexington in April 1775, till November 1777. since which there has been no event of any consequence. This is the best history of the war which can be brought within the compass of a letter. I believe the account to be near the truth, tho' it is difficult to get at the numbers lost by an enemy with absolute precision. Many of the articles have been communicated to us from England as taken from the official returns made by their General. I wish it were in my power to send you as just an account of our [losses] but this cannot be done without an application to the war office which being in another country is at this time out of my reach. I think that upon the whole it has been about one half the number lost by them. In some instances more, but in others less. This difference is ascribed to our superiority in taking aim when we fire; every soldier in our army having been intimate with his gun from his infancy. If there could have been a doubt before as to the event of the war, it is now totally removed by the interposition of France; and the generous alliance she has entered into with us.

Tho' much of my time is employed in the councils of America I have yet a little leisure to indulge my fondness for philosophical studies. I could wish to correspond with you on subjects of that kind. It might not be unacceptable to you to be informed for instance of the true power of our climate as discoverable from the Thermometer, from the force and direction of the winds, the quantity of rain, the plants which grow without shelter in the winter &c. On the other hand we should be much pleased with cotemporary observations on the same particulars in your country, which will give us a comparative view of the two climates.<sup>2</sup> Farenheit's thermometer is the only one in use with us. I make my daily observations as early as possible in the morning and again about 4. o'clock in the afternoon, these generally showing the maxima of cold and heat in the course of 24 hours. I wish I could gratify your Botanical taste; but I am acquainted with nothing more than the first principles of that science, yet myself and my friends may furnish you with any Botanical subjects which this country affords, and are not to be had with you: and I shall take pleasure in procuring them when pointed out by you. The greatest difficulty will be the means of conveyance during the continuance of the war.

If there is a gratification which I envy any people in this world it is to your country its music. This is the favorite passion of my soul, and fortune has cast my lot in a country where it is in a state of deplorable barbarism. From the [line] of life in which we conjecture you to be, I have for some time lost the hope of seeing you here. Should the event prove so, I shall ask your assistance in procuring a substitute who may be a proficient in singing and on the harpsichord. I should be contented to receive such an one two or three years hence, when it is hoped he may come more safely, and find here a greater plenty of those useful things which commerce alone can furnish. The bounds of an American fortune will not admit the indulgence of a domestic band of musicians. Yet I have thought that a passion for music might be reconciled with that oeconomy which we are obliged to observe. I retain for instance among my domestic servants a gardener (Ortolano), weaver (Tessitore di lino e lan[a,]) a cabinet maker (Stipettaio) and a stonemason (scalpellino lavorante in piano) to which I would add a Vigneron. In a country where, like yours, music is cultivated and practised by every class of men I suppose there might be found persons of those trades who could perform on the French horn, clarinet or hautboy and bassoon, so that one might have a band of two French horns, two clarinets and hautboys and a bassoon, without enlarging their domest[ic] expences. A certainty of employment for a half dozen years, and at [the] end of that time to find them if they chose it a conveyance to their own country might induce [them] to come here on reasonable wages. Without meaning to give you trouble, perhaps it mig[ht] be practicable for you in your ordinary intercourse with your pe[ople] to find out such men disposed to come to America. Sobriety and good nature would be desirable parts of their characters. If you think such a plan practicable, and will be so kind<sup>3</sup> as to inform me what will be necessary to be done on my part, I will take care that it shall be done. The necessary expences, when informed of them, I can remit before they are wanting, to any port in France with which country alone we have safe correspondence.

I am Sir with much esteem your humble servt., T. J.<sup>4</sup>

### ENCLOSURE

Number of the Killed, Wounded, and Captives of the British Army in the Course of the American War.

Dft (DLC); heavily corrected; the more important excisions are given in the textual notes. Tr (MIU-C) of the recipient's copy, which was evidently intercepted and is now missing; endorsed: "Copy of a private Letter from Williamsburgh in Virginia dated June 8-1778. Sent by the way of Spain, to a foreign gentleman abroad." Tr is incomplete, omitting more than half the text. It includes, however, the table of British losses which was enclosed by TJ and which is not found with the draft. That table is therefore printed here from the transcript.

**YOUR LETTER OF SEP. 15 1776:** TJ corrected the year, apparently from 1777 to 1776, for Tr reads 1776; see Fabbroni's letter of that date. On the cover of Fabbroni's letter TJ made memoranda for his reply. These read as follows:

"state of killed & [. . .]

alliance

lies in Engld. diversion

musician harpsichd. singer. organ.

band. viz

|               |   |              |
|---------------|---|--------------|
| 2 horns &c    | } | Cab. makr.   |
| <clarinet> &c |   | Gardener.    |
| bassoon.      |   | Stone cutter |
|               |   | weaver       |
|               |   | vignerone    |

wines. Vendée

Thermometer &c

a gardener. Ortolano

a stone-cutter. Scalpellino lavorante in piano.

a cabinet-maker. Stipettaio.

weaver. Tessitore di lino e lana."

Intercepted with TJ's letter was a letter from his friend Charles (Carlo) Bellini to Fabbroni; an undated translation of it is also in MiU-C. It provides an illuminating account of Bellini's life in Virginia: he describes himself as "Secretary to the State of Virginia for foreign affairs [he was actually a translator, see notes to Bill Establishing a Clerkship of Foreign Correspondence, 18 May 1778], and Professor of Modern Languages in this University [College of William and Mary]." The substance of his letter is repeated in one he afterward addressed to Mazzei, 12 Aug. 1778, printed in two Florentine journals later that year and reprinted in English by A. Pace, WMQ, 3d ser., iv (1947), 350–5.

1. Deleted in draft: "since the battle of Bunker's hill, which proved to us experimentally that the want of discipline might be supplied by native courage and a cordial tho' governable animation in the cause for which we are contending. Our enemies indeed obtained the feild on that day by superiority of numbers, but their loss was five times greater than ours."

2. Text of transcript of the intercepted letter (except for complimentary close and signature) ends at this point. The British high command was not interested in TJ's musical plans.

3. Deleted in draft: "as to write me a line, with advice what money may be necessary to remit, I will take care to do it for their transportation hither; I would remit it according to your advice to any port of France, with which country only we have safe correspondence. I shall always be glad to receive your letters and to do any friendly offices which you or your friends may require hence."

4. Supplied from transcript. Draft is unsigned.

# **EXHIBIT "22"**

is very considerable, the states have in their own hands, to the absolute exclusion of Congress.

The power of the sword, say the minority of Pennsylvania, is in the hands of Congress. My friends and countrymen, it is not so, for THE POWERS OF THE SWORD ARE IN THE HANDS OF THE YEOMANRY OF AMERICA FROM SIXTEEN TO SIXTY. The militia of these free commonwealths, entitled and accustomed to their arms, when compared with any possible army, must be *tremendous and irresistible*. Who are these militia? *are they not ourselves*. Is it feared, then, that we shall turn our arms *each man against his own bosom*. Congress have no power to disarm the militia. Their swords, and every other terrible implement of the soldier, are *the birth-right of an American*. What clause in the state or federal constitutions hath given away that important right. It is said, Congress can order the militia of Georgia to New-Hampshire! The gentlemen might have gone further, and said, they might order the militia of Maryland TO MARCH OVER THE SURFACE OF THE CHESAPEAK. The latter would be obeyed as soon as the former. These extravagancies operate against all power. The legislature of Pennsylvania may constitutionally order their citizens to pay in taxes one half, or even *the whole, value* of their estates, by the very clause which vests them with the power of providing for the real and evident exigences of the state government. Further, the power of the sword, even so far as it is placed in the hands of Congress, is subject to *the control* of the state legislatures, for they name one branch of the federal government (the Senate) without whom no military officers can be appointed, no monies granted, no armies raised, no navies provided. The state governments also have *the authority* of training the militia, and *appointing all the officers*. The constitution, instead of providing a standing (or permanent) army, takes care that *it shall not be standing, shall not continue*, for it declares it shall find itself *absolutely unprovided* at the end of every two years. If the people see the least reason to apprehend a breach in the constitution by the grant of money for more than two years, they can elect new

# THE *POSSE COMITATUS* AND THE OFFICE OF SHERIFF: ARMED CITIZENS SUMMONED TO THE AID OF LAW ENFORCEMENT

DAVID B. KOPEL\*

*Posse comitatus is the legal power of sheriffs and other officials to summon armed citizens to aid in keeping the peace. The posse comitatus can be traced back at least as far as the reign of Alfred the Great in ninth-century England. The institution thrives today in the United States; a study of Colorado finds many county sheriffs have active posses. Like the law of the posse comitatus, the law of the office of sheriff has been remarkably stable for over a millennium. This Article presents the history and law of the posse comitatus and the office of sheriff from their earliest days to the present. This Article also describes how the past and present of the posse comitatus can be used in interpretation of the Second Amendment.*

IV. POSSE COMITATUS:

    THE RIGHT—AND DUTY—TO KEEP AND BEAR ARMS ..... 823

CONCLUSION ..... 828

APPENDIX ..... 830

INTRODUCTION

Most people know that in the American frontier West, sheriffs sometimes summoned “the posse” to assist in keeping the peace. The sheriff’s *posse comitatus* authority to call forth armed citizens to aid law enforcement is deeply rooted in the Anglo-American legal system, originating no later than the ninth century. The *posse comitatus* power thrives in the twenty-first century United States. Sheriffs today use their *posse comitatus* power frequently, sometimes daily. This Article describes the historical roots, the modern uses, and the Second Amendment implications of *posse comitatus*.

The *posse comitatus* power does not belong exclusively to sheriffs, but the power was originally created for them, and they remain its most frequent users. Accordingly, Part I of this Article describes the origins and history of the office of sheriff. This Part explains how the nature of the Anglo-Saxon office provided the foundation for the American sheriff’s role as a constitutional officer who is elected directly by the people and enjoys great independence in the performance of his duties. While police chiefs are appointed to their place within (and not at the top of) the chain of command of a city government, sheriffs are autonomous.

Part II explicates the law and history of the *posse comitatus* from Anglo-Saxon times to the present. The *posse comitatus* law of the twenty-first century United States is essentially the same as the *posse comitatus* law of England during the ninth century. The sheriff in carrying out his peacekeeping duty may summon to his aid the able-bodied adults of the

county. He has complete discretion about whom to summon and how the persons summoned shall be armed.

Part III provides a case study of the *posse comitatus* in modern Colorado. Posses play numerous roles in Colorado. They have thwarted the escapes of criminals, including serial killer Ted Bundy. They also function as a citizen volunteer corps on a regular, structured basis; they assist sheriffs during county fairs, weather emergencies, and hostage situations, among many other duties. The most highly trained posse in Colorado is the Colorado Mounted Rangers, which provides armed assistance to many sheriffs' offices and police departments as needed.

Finally, Part IV considers the relationship between the *posse comitatus* and the Second Amendment. The Second Amendment aims to foster a "well-regulated militia," and, in furtherance of this purpose, the right of the people to keep and bear arms is safeguarded. The *posse comitatus* and the militia are not identical, but they overlap and are intertwined to such a degree that the disarmament of one would inevitably destroy the other. The Second Amendment's protection of the arms rights of citizens has the necessary effect of ensuring that there can be an effective *posse comitatus*. Accordingly, sheriffs and other officials who have the authority to summon the *posse comitatus* are intended third-party beneficiaries of the individual right to keep and bear arms. Sheriffs thus have proper third party standing to defend and advocate for the Second Amendment rights of citizens in their jurisdictions.

Following this Article, a lengthy Appendix summarizes state statutes related to the *posse comitatus*; almost all states continue the longstanding legal tradition that armed citizens may be summoned to aid of law enforcement.

The founding father of the *posse comitatus* was the first true King of England: Alfred the Great, who ruled from A.D. 871–899. One reason he is the only English king called "the Great" is that he recognized that he could not fulfill his own duties solely through his own appointees. To keep "the King's peace," the government needed the active participation of the people. Routine suppression of violent crime and emergency community defense against riots, insurrections, and invasions all require that the armed people actively defend the authority of the government. This is a moral point of the Second Amendment and of its counterparts in state constitutions. This is the "active liberty" extolled by Justice Breyer.<sup>1</sup>

---

<sup>1</sup> STEPHEN BREYER, ACTIVE LIBERTY (2005) (defining "active liberty" to mean citizen participation in collective governance, as opposed to the "negative liberty" of an individual not being restrained by government).

Armed citizens, under the guidance of the leaders chosen by the citizens, can embody and effectuate law and order.

#### I. THE CONSTITUTIONAL OFFICE OF SHERIFF

This Part explains the history of the office of sheriff, from its Anglo-Saxon origins through its present role in the United States. Section A explores why the Anglo-Saxon model was so revered by the American Founders. Section B then describes the origins and features of the office of sheriff in Anglo-Saxon England. Section C shows the continuity and changes in the office in the three centuries following the Norman Conquest of 1066. The most important development was the demise of the custom of electing sheriffs. Section D describes the long, slow decline of the office of sheriff in England from the seventeenth century to the present. Finally, Section E shows how the office of sheriff has thrived in America, from colonial days to the present. On both sides of the Atlantic, the sheriff was legally autonomous, but in America, the practical autonomy, responsibility, influence, and power of the sheriff were much greater. In addition, the custom of electing sheriffs was restored in America after centuries of disuse. Popular elections became an explicit requirement of most state constitutions.

#### A. ANGLO-SAXON LIBERTIES

To the American Founders, England before the Norman Conquest of 1066 was a land of liberty.<sup>2</sup> The American Revolution began because of violations of “the rights of Englishmen” (including the right to bear arms) as those rights existed in the late eighteenth century.<sup>3</sup> However, as with many revolutions, the ambitions for reform grew as the war continued.<sup>4</sup>

The importance of the people’s right to bear arms was clear from the start of the Revolution. The war began on April 19, 1775, when Americans used their firearms to fight British soldiers who confiscated firearms and

<sup>2</sup> See, e.g., Letter from John Adams to Abigail Adams (Aug. 14, 1776), in 2 ADAMS FAMILY CORRESPONDENCE 96 (L.H. Butterfield ed., 1963); MERRILL D. PETERSON, THOMAS JEFFERSON AND THE NEW NATION 57 (1970).

<sup>3</sup> David B. Kopel, *How the British Gun Control Program Precipitated the American Revolution*, 6 CHARLESTON L. REV. 283, 291–92 (2012); William F. Swindler, “Rights of Englishmen” *Since 1776: Some Anglo-American Notes*, 124 U. PA. L. REV. 1083, 1089–91 (1976).

<sup>4</sup> GORDON S. WOOD, THE RADICALISM OF THE AMERICAN REVOLUTION (1992) (while the Revolution began because of specific grievances related to the British government’s violations of the traditional rights of Englishmen, its length and ultimate success led many Americans to aim to create a new political system, rather than simply an improved version of the British one).

gunpowder by conducting house-to-house searches in Lexington and Concord.<sup>5</sup> The Americans chased and harried the Redcoats back to Boston, besieged them there, and fought several battles.<sup>6</sup> On March 17, 1776, the British departed Boston by ship.<sup>7</sup>

The revolutionaries valued Anglo-Saxon traditions. After the Declaration of Independence was announced, the Continental Congress had to decide on the public symbols of the new nation, so on July 6, 1776, a committee discussed the design of the Great Seal of the United States. Thomas Jefferson urged that the reverse of the seal depict “Hengist and Horsa, the Saxon Chiefs, from whom We claim the Honour of being descended and whose Political Principles and Form of Government We have assumed.”<sup>8</sup> Hengist and Horsa were the first Anglo-Saxon rulers in England, from the fifth century A.D.<sup>9</sup>

The American Revolutionaries and their European intellectual ancestors believed that societies of liberty had existed in ancient times, and that one purpose of political activity was to recover that lost liberty—especially to ensure that the government ruled under The Law, and not above it.<sup>10</sup>

The eighteenth century Americans who (like many Englishmen of the time) viewed Anglo-Saxon England as a historical model of freedom were part of a longstanding tradition of idealizing the ancient free Germanic tribes, who seemed so different from the despotic Roman Empire and the European governments of the second millennium A.D. The idealization of Germanic liberty can be traced back as far as the first-century Roman historian Tacitus. He extolled the liberties and democracy of the German

<sup>5</sup> Kopel, *supra* note 3, at 291–92.

<sup>6</sup> *Id.* at 309–10.

<sup>7</sup> NATHANIEL PHILBRICK, *BUNKER HILL: A CITY, A SIEGE, A REVOLUTION* 285 (2013).

<sup>8</sup> Letter from John Adams to Abigail Adams, *supra* note 2, at 96.

<sup>9</sup> It is not clear whether Hengist and Horsa were historical figures, or legendary. Allegedly, they were brothers who founded the Anglo-Saxon kingdom of Kent, the first such kingdom in England. See BEDE, 1 *ECCLESIASTICAL HISTORY OF THE ENGLISH PEOPLE* ch. 15 (circa 731); GEOFFREY OF MONMOUTH, *THE HISTORY OF THE KINGS OF BRITAIN 155–66, 186–93* (Lewis Thorpe trans., Penguin 1966) (c. 1136).

<sup>10</sup> For example, in 1644, the Scottish Presbyterian Samuel Rutherford published *Lex, Rex, or the Law and the Prince*. The point of the title was that the law precedes the king, and so the monarch is bound to obey the law. The great Anglo-American ideal of “the rule of law” embodies Rutherford’s principle. The law, not the individual who heads the government, is the supreme ruler. Further, the true source of law is not the King’s will, but God’s will. Accordingly, king-made “law” which is inconsistent with God’s law of natural justice and goodness is merely a pretended law, not true law. SAMUEL RUTHERFORD, *LEX, REX, OR THE LAW AND THE PRINCE* 113–19, 125–39 (Sprinkle Pubs., 1982) (1644) (consisting of Questions XXIV, XXVI, and XXVII).

tribes, whom the Romans attempted to conquer but failed.<sup>11</sup> These German tribes later became the ancestors of the English (the Anglo-Saxons) and, to at least some degree, of the French.<sup>12</sup> The French author François Hotman's *Francogallia* lauded the ancient liberties of the era of Charlemagne (ruled A.D. 768–814), implicitly contrasting France's ancient, primitive freedom with the contemporary centralized despotism of the Bourbon kings.<sup>13</sup> In the Anglosphere, and especially in America, many believed that the liberties of the Anglo-Saxons had been destroyed by the Norman Conquest in 1066.<sup>14</sup>

---

<sup>11</sup> TACITUS, DE ORIGINE ET SITU GERMANORUM §§ 11–12 (c. A.D. 98). The book is commonly known as *Germania*. See CHRISTOPHER B. KREBS, A MOST DANGEROUS BOOK: TACITUS'S *GERMANIA* FROM THE ROMAN EMPIRE TO THE THIRD REICH 17 (2011). It was published during the reign of Trajan, one of the “five good emperors.” Trajan regarded himself as bound by the law, not above it. See Robert G. Natelson, *The Government as Fiduciary: A Practical Demonstration from the Reign of Trajan*, 35 U. RICH. L. REV. 191, 211 (2001).

*Germania* was lost during the Dark Ages and rediscovered in 1425. KREBS, *supra*, at 56. It remained influential for centuries afterward. For example, English opponents of the absolutist Stuart monarchs in the seventeenth century relied on Tacitus as part of their account of ancient Anglo-Saxon liberty. Ralph E. Giesey & J.H.M. Salmon, *Introduction to FRANÇOIS HOTMAN, FRANCOGALLIA* 120–21 (Ralph E. Giesey & J.H.M. Salmon eds., Cambridge Univ. Press, 2010) (1586). Montesquieu's 1748 *The Spirit of Laws* attributed the admirable features of the English system of government (such as a limited rather than absolute monarchy and an independent legislature) to the ancient Germanic liberty, as described by Tacitus. KREBS, *supra*, at 157–62.

<sup>12</sup> WILLIAM STUBBS, SELECT CHARTERS AND OTHER ILLUSTRATIONS OF ENGLISH CONSTITUTIONAL HISTORY 1–7 (H.W.C. Davis ed., 9th ed. 1913); KREBS, *supra* note 11, at 158–59.

<sup>13</sup> HOTMAN, *supra* note 11. The English radical Whig Algernon Sidney adopted and cited Hotman's argument. ALGERNON SIDNEY, DISCOURSES CONCERNING GOVERNMENT 237 (London, Booksellers of London and Westminster 1698). (Sidney was revered by the American founders; his *Discourses* synthesized and advanced a vast sweep of prior Western authors, from the Bible to his own time, which supported the legitimacy of armed resistance to tyranny); Giesey & Salmon, *supra* note 11, at 121–22. Thomas Jefferson credited Sidney as one of four key intellectual sources for the Declaration of Independence. Letter from Thomas Jefferson to Henry Lee (May 8, 1825), in THOMAS JEFFERSON, WRITINGS 1500, 1500–01 (Merrill D. Peterson ed., 1984).

The first English translations of *Francogallia* were published in the eighteenth century, with an introduction in which the prominent and influential Whig Robert Molesworth traced contemporary Whig principles to the ancient Franks and Saxons. Giesey & Salmon, *supra* note 11, at 123–25. A 1775 reprint was published and read by Englishmen who were sympathetic to the armed resistance of the Americans. Justin Champion, *Introduction to ROBERT MOLESWORTH, AN ACCOUNT OF DENMARK*, at ix, xxxii–xxxiii (Justin Champion ed., 2011).

<sup>14</sup> See, e.g., DAVID HUME, 1 HISTORY OF ENGLAND 160–85, 194–98, 208, 226–27 (Liberty Fund 1983) (1778); *id.* at 226–27 (“[I]t would be difficult to find in all history a revolution more destructive, or attended with a more complete subjection of the antient inhabitants.”); *id.* at 437 (the majority of Anglo-Saxons were reduced “to a state of real

The ideal of ancient Anglo-Saxon England became a powerful influence upon the new American nation, which was striving to create what Jefferson called “an Empire of liberty.”<sup>15</sup>

The American view of Anglo-Saxon England as a land of liberty has influenced American law; the view is one of the sources of the Confrontation Clause in the Bill of Rights.<sup>16</sup> Anglo-Saxon history would also help to shape the office of sheriff in the United States. To Jefferson, “the office of sheriff” was “the most important of all the executive officers of the county.”<sup>17</sup> As the United States in the nineteenth century grew from a thinly populated nation on the Atlantic seaboard into a nation stretching from ocean to ocean, there was a nearly constant process of forming new territories and states, both of them composed of counties. In creating the “most important” of all the county offices, the American people modeled the office on the best features of the Anglo-Saxon office of sheriff. The Americans also included what they considered to be improvements that had taken place in the centuries after the Norman Conquest.<sup>18</sup> As one historian would observe in 1930, “in America today . . . the sheriff retains many of his Anglo-Saxon and Norman characteristics.”<sup>19</sup> The same is true today: the fundamental structure of the American office of sheriff is as it was in the nineteenth century and is similar in many ways to its structure in the ninth century.

<sup>19</sup> CYRUS HARRELD KARRAKER, *THE SEVENTEENTH-CENTURY SHERIFF: A COMPARATIVE STUDY OF THE SHERIFF IN ENGLAND AND IN THE CHESAPEAKE COLONIES, 1607–1689*, at 159 (1930).

## B. THE ANGLO-SAXON SHERIFF

This Section describes the origins and early characteristics of the office of sheriff. The formalization of that office into what is essentially the same office in modern America was one consequence of King Alfred the Great's victories against Danish invaders. Therefore, this Section proceeds chronologically from ancient times until 1066, describing developments in the office of sheriff in the context of contemporary political events.

After Roman rule receded from England, Germanic tribes—specifically, the Angles and the Saxons<sup>20</sup>—repeatedly invaded Britain. The tribes settled in England, which became a heptarchy (seven distinct kingdoms).<sup>21</sup> The Anglo-Saxons needed an official who would directly enforce the king's laws and look out for the king's interests. Thus was born “the king's reeve”—a man of the shire directly appointed by the king, whose duty was to carry out the king's commands.<sup>22</sup>

In the English system of government, the second oldest title of office is “sheriff.”<sup>23</sup> The Anglo-Saxon word for what we today call a “county” was “shire.”<sup>24</sup> The word “sheriff” is a compound of “seyre” (meaning “shire”) and “reve” (meaning “bailiff” or “guardian”).<sup>25</sup> The sheriff is therefore the

---

<sup>20</sup> THE ANGLO-SAXON CHRONICLE 25–32 (James H. Ford ed., James Ingram trans., El Paso Norte Press 2005) (describing events of years A.D. 449–607); STUBBS, *supra* note 12, at 1.

<sup>21</sup> The seven kingdoms were Wessex, Mercia, Northumbria, East Anglia, Essex, Kent, and Sussex. The first four of these were usually the most powerful. These kingdoms later consolidated into larger states. HUME, *supra* note 14, at 23–54; STUBBS, *supra* note 12, at 10–11.

<sup>22</sup> The king also had great landowners, “ealdormen” (who outranked the reeves), but on a practical basis, the reeves did more of the day-to-day work. RICHARD ABELS, ALFRED THE GREAT 270–74 (1998).

<sup>23</sup> Thomas Garden Barnes, *Introduction* to MICHAEL DALTON, OFFICIUM VICECOMITUM: THE OFFICE AND AUTHORITIE OF SHERIFS iii (The Lawbook Exchange 2009) (1623) (“Older than the great officers of state, older than Parliament, older than the courts of law.”). The oldest title is “king.” WILLIAM ALFRED MORRIS, THE MEDIEVAL ENGLISH SHERIFF 1 (1927) (“With the single exception of kingship, no secular dignity now known to English-speaking people is older.”).

<sup>24</sup> Consistent with the original title of “shire-reeve,” the Colorado sheriffs who have filed suit against gun control laws enacted in 2013 (see Part III, *infra*) see themselves as protecting their counties against oppressive intrusions.

<sup>25</sup> WILLIAM HENRY WATSON, A PRACTICAL TREATISE ON THE OFFICE OF SHERIFF 1 (London, S. Sweet 1848); EDWARD COKE, 2 THE FIRST PART OF THE INSTITUTES OF THE LAWS OF ENGLAND; OR, A COMMENTARY UPON LITTLETON 168(a) (London 1823) (1628) (“‘Sherife.’ *Shireve* is a word compounded of two Saxon words, viz. *shire*, and *reve*. *Shire*, *satrapia*, or *comitatus*, commeth of the Saxon verbe *shiram*, i.e. *partiri*, for that the whole realme is parted and divided into shires; and *reve* is *praefectus*, or *praepositus*; so as *shireve* is the *reve* of the shire, *praefectus satrapiae*, *provinciae*, or *comitatûs*.”). *Coke upon Littleton* is the first volume of Coke's *Institutes of the Laws of England*. Prior to Blackstone,

guardian of the county. One can find some references to “sheriffs” in Anglo-Saxon texts preceding Alfred the Great.<sup>26</sup> Nevertheless, we can trace the regularization of the office of sheriff and its *posse comitatus* power, as well as the militia that was later recognized by the Second Amendment, to Alfred’s reign.

Of all English monarchs from post-Roman times to Queen Elizabeth II, only one is called “the Great.” He is Alfred. As a second son, Alfred was not expected to become king. Well-educated, multilingual, and deeply religious, he studied for a while in Rome.<sup>27</sup> He ascended to the throne during a war with the Danes in which his older brother was killed.<sup>28</sup> The English lived in near-constant fear of Danish invasion and pillage; they were frequently oppressed by the Danes who had conquered parts of England.<sup>29</sup>

In A.D. 878, as *The Anglo-Saxon Chronicle* (a historical work begun during Alfred’s time) explains, the Danes triumphed completely, and all the people of England were “subdued to their will;—ALL BUT ALFRED THE KING. He, with a little band, uneasily sought the woods and fastnesses of the moors.”<sup>30</sup> With nothing but a guerilla band hiding in the swamps, Alfred kept alive the principle of English sovereignty and led the English back from the brink of annihilation. The bookish man became one of the greatest military strategists of his century. Once, he disguised himself as a harper, and entered the Danish camp—entertaining the Danes with song and story, meeting with the Danish prince Guthrum in his tent—and acquiring military intelligence.<sup>31</sup> His growing army finally expelled the most recent Danish invaders.<sup>32</sup> The Danish settlements in England were brought under

---

*Institutes* was the foundational text for Anglo-American courts, lawyers, and law students. “Littleton” was Thomas Littleton’s *Treatise on Tenures*, first published in 1481 or 1482, although Coke’s commentaries go far beyond the subjects covered by Littleton.

<sup>26</sup> See EDWARD COKE, 1 THE SELECTED WRITINGS OF SIR EDWARD COKE 61 (Steve Sheppard ed., Liberty Fund 2003) (1602) (“[T]he learned know that Sheriffes were great officers and ministers of justice, as now they are, long before the Conquest . . . .”); *id.* at 302 (“[A]s far as the Reign of the often named King *Arthur* . . . the Offices of the Keepers or Senators of the Shires or Counties, *Custodes seu Praepositi Comitatus*, of later times called Shireves . . . .”); COKE, *supra* note 25, at 168(a).

<sup>27</sup> HUME, *supra* note 14, at 64.

<sup>28</sup> *Id.* at 63–64. Their father had died earlier.

<sup>29</sup> *Id.* at 57–59, 62–63.

<sup>30</sup> THE ANGLO-SAXON CHRONICLE, *supra* note 20, at 67 (discussing the events of A.D. 878). See also HUME, *supra* note 14, at 66–68 (explaining that for a while, Alfred disguised himself as a peasant and found refuge working as an assistant to a cowherd, then later assembled guerillas on two acres of firm ground in a bog in Somersetshire from whence he led raids for a year).

<sup>31</sup> HUME, *supra* note 14, at 68.

<sup>32</sup> *Id.* at 69.

his sovereignty and were no longer able to plunder the English at will. He was the first King of England.<sup>33</sup>

King Alfred recognized that another wave of Danish invasion was inevitable, so he began building England's capacity for self-defense. This capacity was founded on the idea that all the freemen were to be armed, trained, and ready to fight to defend their local and national communities. He created the English militia, which consisted of all armed people.<sup>34</sup> In the 1939 case *United States v. Miller*, the Supreme Court unanimously acknowledged the militia of the Second Amendment to be the institution founded by Alfred.<sup>35</sup>

Among Alfred's most important ideas was dividing the militia in each shire into two parts, only one of which would be required to serve at a given time.<sup>36</sup> The practical benefit was enormous. The men who were not serving in a particular campaign could work the farms, keep the economy functioning, and take care of the women and children. Meanwhile, the men who were actively serving in the militia were willing to go on longer campaigns because they did not feel compelled to return home as fast as possible in order to plant, cultivate, or harvest the crops.<sup>37</sup> When the Danes tried invading again, they were routed.<sup>38</sup>

During the American Revolution nearly a millennium later, the militia system would again be a foundation of victory. Soldiers in the Continental Army might be away from home for years, but the majority of American fighters came from the militia. Because they were not full-time soldiers, they could return home to take care of their farms and keep the American economy functioning.<sup>39</sup>

A second security reform of Alfred the Great was reformation of the office of sheriff.<sup>40</sup> After the period of Danish oppression, the English had

<sup>33</sup> *Id.* at 70. Alfred's grandfather, Egbert, was the first to style himself King of England, but Egbert never ruled the large inland kingdom of Mercia. *Id.*

<sup>34</sup> *Id.* at 70–72.

<sup>35</sup> *United States v. Miller*, 307 U.S. 174, 179 (1939) (“Blackstone’s Commentaries, Vol. 2, Ch. 13, p. 409 points out ‘that king Alfred first settled a national militia in this kingdom’ and traces the subsequent development and use of such forces.”).

<sup>36</sup> ABELS, *supra* note 22, at 196–98; HUME, *supra* note 14, at 70–71; THE ANGLO-SAXON CHRONICLE, *supra* note 20, at 71 (“A.D. 894 . . . The king had divided his army into two parts; so that they were always half at home, half out; besides the men that should maintain the towns.”). Alfred may have copied the example of the legendary female warrior kingdom of the Amazons, which divided its military in half. ABELS, *supra* note 22, at 197–98.

<sup>37</sup> See HUME, *supra* note 14, at 70–71.

<sup>38</sup> *Id.* at 71–74.

<sup>39</sup> NICHOLAS J. JOHNSON, DAVID B. KOPEL, GEORGE A. MOCSARY & MICHAEL P. O’SHEA, FIREARMS LAW AND THE SECOND AMENDMENT 164–67 (2012).

<sup>40</sup> HUME, *supra* note 14, at 78. Hume here cites “Ingulf p. 870.” This cite is to HISTORIA

devolved into lawlessness and robbery.<sup>41</sup> Alfred fixed England's county boundaries with greater precision and used the counties to organize national and community self-defense.<sup>42</sup> The sheriff was the pillar of this self-defense system and often the leader of the county militia.<sup>43</sup> As will be detailed in Part II, the sheriff exercised the authority to summon and command the armed body of the people not only in the militia, but also in several related forms: *posse comitatus*, "hue and cry," and "watch and ward."<sup>44</sup>

Thus, according to medieval historian Frank Barlow, "[i]t is not unlikely that every freeman had the duty, and right, to bear arms" in Anglo-Saxon times.<sup>45</sup> When carrying out the duty to bear arms, the freeman would most commonly be under the leadership of the sheriff. The Second Amendment also recognizes the individual right to keep and bear arms for all lawful purposes and the duty to bear arms when summoned to the defense of community, as in the militia or the *posse comitatus*; the legal implications will be explored in Part IV.<sup>46</sup>

As the county leader of the armed people, "the reeve became the guarantor of the survival of the group."<sup>47</sup> "[T]he people maintained law and order among themselves" because the central government of the king had no practical ability to do so.<sup>48</sup>

<sup>48</sup> *Id.* at 4.

A millennium later, Alfred the Great was still revered by Englishmen and Americans of all political persuasions.<sup>49</sup> He had brought peace and security to England, while, in the words of the English political philosopher David Hume, “[he] preserved the most sacred regard to the liberty of his people; and it is a memorable sentiment preserved in his will, that it was just the English should for ever remain as free as their own thoughts.”<sup>50</sup>

Government records from Anglo-Saxon England are hardly complete, but there are records of sheriffs present in all English counties by A.D. 992.<sup>51</sup> The duties of sheriffs were numerous:

[T]he original role of the sheriff was to act as the personal representative of the King in each county. Mediaeval government was not based on any concept of separation of powers and the duties of sheriffs were therefore both executive and judicial. They were responsible for commanding the local military [the militia] in cases of invasion or rebellion, they collected local taxes, investigated suspicious deaths, executed Royal Writs and generally maintained law and order. In their law enforcement role they could call upon the local freemen to form a posse comitatus to hunt for outlaws and, in their judicial role, they presided over the shire court, exercising both civil and criminal jurisdiction.<sup>52</sup>

The sheriff’s responsibilities included mobilizing the people to resist invasion or for other military purposes, as leaders of the county militias.<sup>53</sup> So when William the Conqueror invaded in 1066, “[h]is primary adversaries were King Harold’s Sheriffs.”<sup>54</sup> Sheriff Esgar defended London

<sup>52</sup> *Id.*

<sup>53</sup> MORRIS, *supra* note 23, at 27; see also ANGLO-SAXON CHRONICLE, *supra* note 20, at 147 (A.D. 1056, “Elnoth the Sheriff” slain during war against the Welsh king); BARLOW, *supra* note 45, at 173 (in Anglo-Saxon times, “[w]hereas the earl and the sheriffs would normally lead the troops on campaign, it would often fall to the bishop to see to the defence of his diocese, particularly at times when it was denuded of its best fighting men.”). See also ABELS, *supra* note 22, at 273 (ealdormen were responsible for levying men for the king’s army; sheriffs were responsible for the defense of the village-based fortifications). Sheriffs also occasionally summoned the militia (or “fyrd”). C. WARREN HOLLISTER, ANGLO-SAXON MILITARY INSTITUTIONS ON THE EVE OF THE NORMAN CONQUEST 68 (1962). However, by late Saxon times, earls were probably higher ranked as military leaders than sheriffs. *Id.* at 94–95.

<sup>54</sup> STRUCKHOFF, *supra* note 47, at 8.

against William's army.<sup>55</sup> At the Battle of Hastings, "King Harold's last battle was led by his sheriffs."<sup>56</sup>

Sheriffs tended to be from the lesser nobility.<sup>57</sup> A baron might be a great landholder with real property in several counties (and, later, as a Member of Parliament, a player on the national political stage). In contrast, the sheriff would usually be man of the shire. His interests and property were within a single county.<sup>58</sup> The sheriff needed to be man of independent means, because the national government provided him with no support, not even a salary. He was responsible for paying all the expenses of his office (e.g., the salaries of the undersheriff and the deputies), and he would keep whatever revenues he earned from his services (e.g., fees for serving writs).<sup>59</sup>

### C. THE SHERIFF'S OFFICE FROM THE NORMAN CONQUEST TO THE FOURTEENTH CENTURY

Although the office of sheriff in tenth century England has much in common with the office in twenty-first century America, there were some important changes in the centuries following the Norman Conquest of 1066. Two of these changes would later be incorporated by Americans: the elimination of the sheriff's judicial role<sup>60</sup> and the requirement that sheriffs take an oath and post a bond.<sup>61</sup> Another Norman innovation—making the sheriff's office appointive rather than elective—was eventually accepted in England.<sup>62</sup> But it would later be rejected in the United States.<sup>63</sup>

<sup>55</sup> MORRIS, *supra* note 23, at 27.

<sup>56</sup> STRUCKHOFF, *supra* note 47, at 8.

<sup>57</sup> See GREEN, *supra* note 42, at 15 (stating that on the eve of the Norman Conquest, sheriffs were "men of substance in their own shires, but their landed wealth was not on the same scale as that of the earls or the stallers . . .").

<sup>58</sup> The custom of local sheriffs did not always prevail. In the fourteenth century, several Sheriffs served successively in multiple counties. RICHARD GORSKI, *THE FOURTEENTH-CENTURY SHERIFF* 59, 159, 162–70 (2003). During the thirteenth century, the issue was often contested, with locally-oriented sheriffs gaining temporary ascendancy by the latter part of the century. J.R. Madicott, *Edward I and the Lessons of Baronial Reform: Local Government, 1258–80*, in 1 *THIRTEENTH CENTURY ENGLAND* 27 (P.R. Coss & S.D. Lloyd eds., 1986).

<sup>59</sup> Although for concision I usually refer to pre-modern sheriffs as "he," there were some female sheriffs, such as the Countess of Salisbury, who was Sheriff of Whiltshire during Henry III (reigned 1227–1272). J. H. BAKER, *AN INTRODUCTION TO ENGLISH LEGAL HISTORY* 530 n.4 (3d ed. 1990). Also, "Ann Countess of Pembroke . . . had the office of hereditary sheriff of Westmoreland, and exercised it in person." COKE, *supra* note 25, at 326(a) n.2.

<sup>63</sup> Discussed *infra* at Part I(E).

### I. Sheriffs' Courts

The most important step towards the end of the sheriffs' judicial function came with Magna Carta in 1215, although Magna Carta confirmed a trend that had been going on for a while.

The Norman Conquest had been disastrous for many of the English people, as they were subjugated to tyranny and poverty.<sup>64</sup> The problem was exacerbated by the conduct of King John (reigned 1199–1216).<sup>65</sup> According to David Hume's *The History of England*, "[t]he only happiness was, that arms were never yet ravished from the hands of the barons and people: The nation, by a great confederacy, might still vindicate its liberties."<sup>66</sup>

An armed revolt forced King John to agree to Magna Carta on June 12, 1215. Later monarchs were repeatedly compelled to declare that they too were bound by the Great Charter and would rule in accordance with it.<sup>67</sup> Magna Carta was created by the barons and contained great universal principles of ordered liberty, as well as items involving the narrower concerns of the barons of the time.

One broad principle of liberty contained in Magna Carta was the "law of the land" article, which is an ancestor of the U.S. Constitution's guarantees that no persons shall be deprived of life, liberty, or property without due process of law.<sup>68</sup> The Magna Carta of 1215 (although not its subsequent reissues by other monarchs) even included a provision authorizing the use of force against the king if he violated Magna Carta.<sup>69</sup>

One clause of Magna Carta required the discontinuance of the sheriffs' courts for holding pleas of the crown.<sup>70</sup> At the time, "pleas of the crown" was a legal term of art for certain cases involving issues where a royal interest was involved.<sup>71</sup> Efforts to restrict sheriffs' judicial role had been

<sup>64</sup> See HUME, *supra* note 14, at 437.

<sup>65</sup> *Id.* at 436–38.

<sup>66</sup> *Id.* at 437.

<sup>67</sup> WILLIAM SHARP MCKECHNIE, *MAGNA CARTA* 36–40, 139–59 (1914).

<sup>68</sup> U.S. CONST. amends. V, XIV:

No free man shall be seized or imprisoned, or stripped of his rights or possessions, or outlawed or exiled, or deprived of his standing in any other way, nor will we proceed with force against him, or send others to do so, except by the lawful judgement of his equals or by the law of the land.

<sup>69</sup> Magna Carta of 1215, *reprinted in* J.C. HOLT, *MAGNA CARTA* app. at 469–73 (2d ed. 1992) (quoting art. 61); David I. Caplan & Sue Wimmershoff-Caplan, *Magna Carta, in* 2 GUNS IN AMERICAN SOCIETY 371 (Gregg Lee Carter ed., 2d ed., 2007); David B. Kopel, *The Catholic Second Amendment*, 29 *HAMLIN L. REV.* 519, 540–41 (2006).

<sup>70</sup> Magna Carta of 1215 § 24, *supra* note 69, at 457 ("No sheriff, constable, coroners or other of our bailiffs may hold pleas of our Crown."); HUME, *supra* note 14, at 445.

<sup>71</sup> See MCKECHNIE, *supra* note 67, at 305–06.

going on for the last century.<sup>72</sup> The standard view of historians has been that the sheriffs and their courts were oppressive,<sup>73</sup> although a modern commentator suggests that the upper nobility's actions against the sheriffs' courts came about "not because of general dissatisfaction with their conduct, but because the earls and barons were displeased at the local feudal courts' loss of 'business' (from which they derived revenue) to the increasingly popular sheriffs' courts."<sup>74</sup>

Regardless, Magna Carta was a major step in sheriffs losing their judicial role. Magna Carta did not by its terms apply in Scotland, so sheriffs continued to preside over the sheriffs' courts there, and these courts are the heart of the Scottish judicial system today.<sup>75</sup> The Scottish sheriffs also had the same law enforcement powers and duties as their English counterparts, such as raising the hue and cry.<sup>76</sup> In the United States, sheriffs retain many traditional duties to the courts, such as providing court security and serving warrants, but they have no judicial role in presiding over courts or deciding cases.

## 2. Election of Sheriffs

In the United States, it is axiomatic that the sheriff is elected by the people.<sup>77</sup> The American principle is based on the Anglo-Saxon custom of electing sheriffs, although precisely how many sheriffs were elected in either Anglo-Saxon or Norman times is difficult to say.

There is some debate about whether sheriffs were elected or appointed during the Anglo-Saxon era. According to Blackstone, in Anglo-Saxon times, "sheriffs were elected: following still that old fundamental maxim of the Saxon constitution, that where any officer was entrusted with such

---

<sup>72</sup> See, e.g., STUBBS, *supra* note 12, at 121–22 (stating that Henry I (reigned 1100–1135) forbade sheriffs to hold sheriffs' courts more frequently than at customary times).

<sup>73</sup> See e.g., GREEN, *supra* note 42, at 17; MCKECHNIE, *supra* note 67, at 311.

<sup>74</sup> MCKECHNIE, *supra* note 67, at 311; Tamara Buckwold, *From Sherwood Forest to Saskatchewan: The Role of the Sheriff in a Redesignated Judgment Enforcement System*, 66 SASK. L. REV. 219, 227 n.40 (2003); Gullion, *supra* note 51, at 1156. It should be noted that at least some sheriffs had supported the Magna Carta movement. Once King John regained his political power, these sheriffs were promptly dismissed from office. MORRIS, *supra* note 23, at 161. "The spirit of the sheriff and his office permeated Magna Carta from start to finish and considered in this aspect alone it is the finest example we possess to prove the importance of the sheriff's role in the governance of medieval England." IRENE GLADWIN, *THE SHERIFF* 124 (1974). Five clauses in Magna Carta directly dealt with the operation of sheriffs' offices; another clause removed certain named sheriffs; and nineteen others involved administrative reforms which the sheriffs would help to effectuate. *Id.* at 123–24.

<sup>75</sup> Gullion, *supra* note 51, at 1157.

<sup>76</sup> WILLIAM C. DICKINSON, *THE SHERIFF COURT BOOK OF FIFE 1515–1522*, at xxxix (1928), *cited in* STRUCKHOFF, *supra* note 47, at 18. "Hue and cry" is discussed *infra* Part II.

<sup>77</sup> See *infra* text accompanying notes 136–146.

power, as if abused might tend to the oppression of the people, that power was delegated to him by the vote of the people themselves.”<sup>78</sup>

While the sheriffs of nineteenth century England were appointed and not elected, the author of an 1848 treatise on sheriff law explained that “[s]heriffs were formerly chosen by the inhabitants of their respective counties; in confirmation of which it was ordained by the statute of 28 Edw. 1, c. 8 and 13, that ‘the people should have the election of sheriffs in every shire, when the shrievalty is not of inheritance.’”<sup>79</sup> It was not surprising that Americans embraced the principle of election of sheriffs or that most states have constitutionalized this principle.<sup>80</sup> In the twentieth century, however, legal historians suggested that earlier writers had overstated the extent to which English sheriffs were elected.<sup>81</sup> Modern historians have shown that from the time of the Norman Conquest onward, most sheriffs

---

<sup>78</sup> 1 WILLIAM BLACKSTONE, COMMENTARIES \*409. See also HUME, *supra* note 14, at 163 (citing § 35 of the laws of Edward the Confessor). What Hume did not know is that the document known as “The Laws of Edward the Confessor” (*Leges Edwardi Confessoris*) is not original to the reign of Edward the Confessor (an Anglo-Saxon king who reigned 1042–66). Rather, the document likely dates to the early 1100s, after the Norman Conquest, and is regarded as a reasonably accurate description of English law at the time it was actually written. BRUCE R. O’BRIEN, *GOD’S PEACE AND KING’S PEACE: THE LAWS OF EDWARD THE CONFESSOR* 3–6 (1999). As for sheriffs, election was certainly not standard in the early twelfth century. It might be inferred that the document’s assertions about Anglo-Saxon sheriff elections reflected a popular understanding or national memory that was credible to the document’s twelfth century readers.

To make matters all the more complicated, the provision in *The Laws of Edward the Confessor* about the election of sheriffs was probably not in the original version. Rather, it may be an interpolation that was added as some later unknown date. At least that appears to be the conclusion of Benjamin Thorpe, whose 1840 compilation of Anglo-Saxon laws relegates to a footnote the material about sheriff elections. See *Leges Regis Edwardi Confessoris* in BENJAMIN THORPE, *ANCIENT LAWS AND INSTITUTES OF ENGLAND* 197 (London, 1840) (note to § 32 explains that Thorpe is using Lambard’s edition of *The Laws of Edward the Confessor* and that the language appears to be an interpolation; the sheriff language is part of a long paragraph which states in relevant part: “sicut et vicecomites provinciarum et comitatum eligi debent.” In English: “and also the sheriffs [vicecomites] of the provinces and counties ought to be elected.”).

<sup>79</sup> WATSON, *supra* note 25, at 9. The statutory citation is to the twenty-eighth year of the reign of King Edward I, which would have been 1300.

<sup>80</sup> See *infra* text accompanying notes 136–146.

<sup>81</sup> GORSKI, *supra* note 58, at 34–35; GREEN, *supra* note 42, at 13–14 (describing appointment of sheriffs in the century following the Norman Conquest); MORRIS, *supra* note 23, at 17.

were appointed. As far as we know, they were elected only in London<sup>82</sup> and in some southwestern counties.<sup>83</sup>

We may never have a full sense of how the office of sheriff functioned in Anglo-Saxon times. But we can be certain that when King Edward I and Parliament in 1300 promulgated the election statute (*Articuli supra Cartas*), the election of sheriffs was a change, rather than a “confirmation” of a then-current general practice.<sup>84</sup> Edward Coke, an enormously influential legal writer, described Edward I as having “restored to his people the ancient election of sheriffes . . . .”<sup>85</sup> But even after Edward I’s statute of 1300, we have only one record from the following decade for a sheriff election taking place.<sup>86</sup>

The next king, Edward II, was unpopular during his reign, and most historians have regarded him as mediocre or worse.<sup>87</sup> Among the problems was his very close relationship with his best friend, Piers Gaveston, whom much of the rest of the nobility believed unhinged Edward’s judgment.<sup>88</sup> There was also Edward’s propensity for seizing whatever property he

<sup>82</sup> HUME, *supra* note 14, at 278 (indicating that Henry I, upon his coronation in 1100, issued a charter to London granting the city the right to elect its own sheriff); *id.* at 453–54 (noting that, later, King John granted to London the “power to elect and remove its sheriffs at pleasure”).

<sup>83</sup> MORRIS, *supra* note 23, at 182–83 (noting that men of these counties paid a fee to the king for the privilege of electing the sheriff); WILLIAM STUBBS, 2 THE CONSTITUTIONAL HISTORY OF ENGLAND 217 (4th ed. 1896) (“[T]he freeholders of Cornwall and Devon had purchased the like privilege from John and Henry III.”).

<sup>84</sup> GORSKI, *supra* note 58, at 12, 34–37; JOHN M. KEMBLE, ANGLO-SAXON LAWS AND INSTITUTES 60 (London, Richard & John E. Taylor 1841) (explaining that during the Anglo-Saxon period, elective sheriffs were replaced by appointed ones as kings gained more power); STUBBS, *supra* note 83, at 217–18 (Section 8 of the *Articuli Super Cartas* provided for election of sheriffs, except in counties where the office is hereditary or held in fee); *cf.* GORSKI, *supra* note 58, at 51 (King’s rejection of 1361 petition from the people of Cumberland to elect their sheriff).

In 1258, the Provisions of Oxford required that sheriffs should live in their county, and should serve for only one year. STUBBS, *supra* note 83, at 216–17. The next year, it was provided that the king’s discretion on appointments would be limited; he would have to appoint one of four men nominated by the county court. *Id.* at 217.

<sup>85</sup> EDWARD COKE, 2 INSTITUTES OF THE LAWS OF ENGLAND 175 (The Lawbook Exchange 2002) (1628); *id.* at 558 (“Of ancient time,” sheriffs were “in every severall county chosen in full or open county by the freeholders of that county . . . .”). Coke served as Attorney General, Speaker of the House of Commons, and Chief Justice in the early seventeenth century. *Payton v. New York*, 445 U.S. 573, 594 n.36 (1980) (citing A. E. DICK HOWARD, THE ROAD FROM RUNNYMEDE 118–119 (1968)).

<sup>86</sup> MORRIS, *supra* note 23, at 184–85.

<sup>87</sup> *E.g.*, SEYMOUR PHILLIPS, EDWARD II 5 (2012) (“The general opinion of Edward II from his own day to the present has been that he was a failure.”); STUBBS, *supra* note 83, at 323–25.

<sup>88</sup> STUBBS, *supra* note 83, at 319–32. *See, e.g.* PHILLIPS, *supra* note 87, at 161–62.

wanted. These seizures were to support either his military adventures or the extravagant lifestyle that he and the Gaveston family led during the periods when the Gavestons had not been forced into temporary exile by Parliament.<sup>89</sup>

Rising tensions led an ad hoc assembly of barons to proclaim the Ordinances of 1311.<sup>90</sup> Like Magna Carta, the Ordinances of 1311 contained provisions regarding civil liberty (e.g., a provision against uncompensated seizure of property) and provisions relating to the barons' narrow self-interests. Item 17 demanded an end to the election of sheriffs. The varying political balance of power affected how much heed Edward II was willing to pay to the Ordinances of 1311, but he did eventually accede to the demand about sheriffs by promulgating the Sheriff's Act of 1315.<sup>91</sup> He thus gave statutory force to Item 17 of the Ordinances of 1311.<sup>92</sup>

Two other portions of the Ordinances, Items 10 and 39, perhaps provide some context for Item 17. Many of the Ordinances attempted to end the King's habit of helping himself to other people's property; the formal term for such monarchical theft was "prises." Item 10 of the Ordinances of 1311 stated, "[a]nd because it is to be feared that the people of the land will arise on account of the prises and divers oppressions inflicted before this time . . . ." Given the continuing role of sheriffs as military leaders,<sup>93</sup> and given their continuing role in leading bodies of

<sup>91</sup> "That the Sheriffs from henceforth shall be assigned by the Chancellor, Treasurer, Barons of the Exchequer, and by the Justices . . . ." Statute of Lincoln, 1315, 9 Edw. 2 stat. 2; WATSON, *supra* note 25, at 9 (noting that appointment is "on the morrow of All Souls"); see also 14 Edw. 3, ch. 7 1 STATUTES OF THE REALM 283 (1340) (sheriffs to be appointed by the Exchequer). The process for appointment was that on November 1 (All Souls Day), high government officials would meet at the Exchequer in London. They would choose three persons per county, and the king would from each list of three appoint a sheriff to a one-year term. KARRAKER, *supra* note 19, at 7. "The Exchequer was a court of audit meeting twice each year at Easter and Michaelmas in the treasury, to scrutinize the accounts presented by sheriffs and other financial agents. Its name was taken from the checked cloth on a table round which sat leading members of the royal household." GREEN, *supra* note 42, at 12. In Anglo-Saxon times, the king's revenue was kept in boxes or barrels in the king's bedroom. BARLOW, *supra* note 45, at 186.

<sup>92</sup> "In addition, we ordain that sheriffs be appointed henceforth by the chancellor, treasurer and the others of the council that are present . . . ." THE NEW ORDINANCES, 1311, *supra* note 90, at 530.

<sup>93</sup> See GORSKI, *supra* note 58, at 52 (explaining the fourteenth century role of sheriffs in the northern counties bordering Scotland as military leaders); MORRIS, *supra* note 23, at 58, 117, 151–53; MICHAEL POWICKE, MILITARY OBLIGATION IN MEDIEVAL ENGLAND 157 (1962) (in 1319, Sheriff of York ordered to lead a fifteen day expedition against the Scots); STUBBS,

armed men in the *posse comitatus* and other law enforcement activities (discussed *infra*), the possibility could arise that elected sheriffs would serve as the leaders of a discontented populace which might revolt against an oppressive, kleptocratic king.

Greater context for the abolition of sheriff elections comes from Item 39, which required that various officials, including sheriffs, “shall be sworn . . . to keep and hold all the ordinances made by the prelates, earls, and barons . . . without contravening any point of them.”<sup>94</sup> The motive for this clause appears to be that sheriffs (and some other officials) were not enforcing various decrees issued by the upper nobility. In situations where the great baron of a county issued a decree the electorate did not like, perhaps some elected sheriffs had been reluctant to enforce such decrees.

In 1338, King Edward III ordered that the counties elect their sheriffs, but this was abandoned in 1340, replaced by appointment by the Exchequer, the treasury office of the monarchy.<sup>95</sup> The “Good Parliament” of 1376 unsuccessfully demanded that sheriffs be elected.<sup>96</sup> Still, kings continued to

---

*supra* note 83, at 220 (noting that, militarily, the sheriff was “the proper leader” for “minor tenants-in-chief” and for “the body of freemen sworn under the assize of arms”; furthermore, the leading tenants of the king directly commanded their own vassals, but sometimes the sheriffs were put in charge of them, too); *id.* at 230, 288 (noting that sheriff was responsible for enforcing the Assize of Arms, which required all free men to own various arms and armor).

<sup>94</sup> THE NEW ORDINANCES, 1311, *supra* note 90, at 539. The barons were plainly not opposed to the principle of using armed force against a monarch. They had a long history of doing so, against Edward II and several of his predecessors. However, it would be understandable for the great barons and earls to try to ensure that only they would have the ability to make the decision to use force.

<sup>95</sup> STUBBS, *supra* note 83, at 281, 401–02.

<sup>96</sup> THE PARLIAMENT ROLLS OF MEDIEVAL ENGLAND 1275–1504, vol. 5, EDWARDS III 1351–1377, at 373 (item 186, no. CXXVIII in petitions from the commons):

[T]he sheriffs of the counties of the realm should be chosen in the same manner [“by election from the best men of said counties”] from year to year, and not appointed by bribery in the king’s court, as they used to do, for their own profit and by procurement of the maintainers of the region, to sustain their deceits and evils and their false quarrels, as they have commonly done before this time, in destruction of the people.

King Edward III brushed off the petition, responding “there is a bill which has been answered.” *Id.* Presumably he was referring to the legislation described above, providing for appointment of sheriffs in most counties. *See also* STUBBS, *supra* note 83, at 453–54. The “Good Parliament” was a widely supported effort to tame the massive corruption, military incompetence, and other abuses of the latter part of the reign of Edward III. *See* GEORGE HOLMES, THE GOOD PARLIAMENT (1975). To present the Parliament’s position to the King, the Parliament chose Sheriff Peter de la Mare; he is today regarded as the first Speaker of the House of Commons. *Id.* at 101–110, 134–38. Sheriff de la Mare was later imprisoned after Edward III regained his political footing and then pardoned after Edward III was close to death. *Id.* at 192.

need money, and for the right price, they would grant a locality the right of electing its own sheriff; by the eighteenth century, twenty-one cities or boroughs enjoyed the right of election.<sup>97</sup>

However the sheriff was chosen, he was supposed to be a defender of liberty. As historian William Morris puts it, “[i]n the time of Henry III,<sup>98</sup> he was still regarded by the king and council as their agent in the maintenance of popular liberties and private rights.”<sup>99</sup>

### 3. Sheriff’s Oath of Office and Bond

Item 39 of the Ordinances of 1311 had also said that sheriffs should take an oath of office. This had been a longstanding baronial demand.<sup>100</sup> The oath requirement became a well-established and uncontroversial part of the common law.<sup>101</sup> Thus, almost every American state constitution that provides for an office of sheriff requires that the sheriff take an oath, as must all other constitutional officers. In England, the sheriff’s oath was to the supreme ruler, the monarch; in the United States, the sheriff’s oath is also to the supreme ruler, the law itself—an oath to uphold the U.S. Constitution and the constitution of the sheriff’s state.<sup>102</sup>

In the sixteenth century, a statute mandated that before taking office, a sheriff must post a bond as a surety against any malfeasance for which he or his deputies might be found liable.<sup>103</sup> This requirement is still standard for American sheriffs, although the sheriff may now choose to instead purchase liability insurance.

#### D. THE ENGLISH OFFICE OF SHERIFF IN THE SEVENTEENTH CENTURY AND THEREAFTER

By the time that emigrants from Great Britain were establishing colonies in America, the duties and scope of the office of sheriff were well understood and noncontroversial. In legal treatises, the laws concerning sheriffs tended to be addressed in larger treatises on other subjects, such as criminal law. The treatise entirely devoted to sheriffs was Michael Dalton’s

<sup>101</sup> MORRIS, *supra* note 23, at 170–71 (discussing original oath from 1258); *see also* The Oath of the Sheriffs, 1 STATS. OF THE REALM 247 (Dawson’s of Pall Mall 1963) (1810).

<sup>102</sup> WATSON, *supra* note 25, at 17–21 (oath in nineteenth century). Previously, the oath was much more detailed. DALTON, *supra* note 23, at 4b–6a (reprinting seventeenth century oath in full).

<sup>103</sup> DALTON, *supra* note 23, at 3a (citing 2 & 3 Edw. 6, ch. 34).

*The Office and Authority of Sheriffs*.<sup>104</sup> Dalton was also the author of a very popular treatise on justices of the peace, which contained much content about sheriffs since both offices had similar powers and duties, such as summoning the *posse comitatus*.<sup>105</sup>

### *I. Autonomous and Indivisible*

By the seventeenth century, two other important principles of the office of sheriff had been established: the office is *autonomous* and the office is *indivisible*. An early twentieth century case from Alberta, Canada, explained autonomy in terms that were no different than what had been said by Dalton and other commentators from centuries before:

[T]he connection between the State and the sheriff after his appointment or election is of a very casual character. He is practically placed in the sole and undisturbed discharge of the duties of the shrievalty. He takes to his own use the emoluments of the office and out of them meets the expenditures of it. He employs under sheriffs or deputy sheriffs and bailiffs of his own selection. He assigns to them the work that they are to do, pays them their salaries and dismisses them at his pleasure. His office is in its management entirely free from outside dictatorship or control. He runs it as an institution for which he and he alone is responsible to those whose business passes through it. And so in those jurisdictions he is held liable for the misconduct of those whom he employs in his office.<sup>106</sup>

The monarch could choose the sheriff, but could in no way limit the office of sheriff: “neither can she [the queen] abridge the sheriff of any thing incident or belonging to his office, for the office is entire and indivisible.”<sup>107</sup>

The autonomy of sheriffs and of justices of the peace may have been one reason for slack enforcement of the arms control laws that were introduced in the Tudor period (1485–1603). In general, the Tudor monarchs were trying to keep handguns and crossbows out of the hands of everyone except the gentry.<sup>108</sup> A 1526 proclamation by King Henry VIII told the sheriffs and mayor of London to stop being “negligent, slack, or

Cummins*, 99 Tenn. 667, 42 S.W. 880, 882 (1897) (sheriff may not be deprived of exclusive supervision of the county jails).

<sup>108</sup> JOHNSON, KOPEL, MOCSARY & O’SHEA, *supra* note 39, at 82–85.

remiss” in enforcing the arms restrictions.<sup>109</sup> In 1537, the King expressed his “displeasure and indignation” about the unenforcement of arms bans.<sup>110</sup> In 1600, a proclamation of Queen Elizabeth I complained about the “slack execution” of the arms control laws, and “the common carrying and use of guns contrary to the said statutes” by “common and ordinary persons traveling by the highways to carry pistols and other kind of pieces,” and by “ruffians and other lewd and dissolute men.”<sup>111</sup>

Another innovation was that a sheriff may not practice as an attorney during his term of office.<sup>112</sup> Given the sheriff’s intimate involvement with the judicial system, the prohibition is a sensible prevention of conflicts of interest. The prohibition was carried forward into America<sup>113</sup> and today is often expressly stated in state statutes.<sup>114</sup>

## 2. Modern Role in the United Kingdom

The office of justice of the peace had been formally created in the fourteenth century, with roots from the previous century.<sup>115</sup> By the time Michael Dalton was writing in the early seventeenth century, the justices of the peace were supplanting the sheriffs as having the greatest practical role in keeping the peace. Other traditional sheriff duties, such as serving and enforcing writs, including by executing judgments, remained primarily the responsibility of sheriffs.<sup>116</sup>

Sheriffs in the seventeenth century continued to have a military role: “The sheriff was often appointed one of the commissioners of musters”<sup>117</sup>—the periodic assemblies of the militia to ensure that every militiaman had provided himself with appropriate equipment. Likewise, the sheriff sometimes received assistance from the “trained bands,”<sup>118</sup> militia units that

<sup>116</sup> Barnes, *supra* note 23, at iv (describing sheriffs’ other duties as services to the common law courts, including maintaining the jail; collection of crown revenues; ministerial services to various local government bodies, such as commissions; and keeping a limited “court” which heard replevin cases and which supervised elections to Parliament).

<sup>117</sup> KARRAKER, *supra* note 19, at 22.

<sup>118</sup> *Id.*

engaged in extra practice to maintain high proficiency. During the English Civil War (1642–1651), both sides attempted to order sheriffs “to rally the counties to their support as though the military command were still theirs, *ex officio*.”<sup>119</sup>

Everyone may have agreed the office of sheriff is indivisible, but in a constitutional system based on shared understandings, and lacking an authoritative text which supersedes all else, things that were once plainly illegal may become accepted innovations. So in England, the sheriffs were over the centuries stripped of all responsibilities.<sup>120</sup> Today the English office of sheriff is barely even ceremonial, consisting of holding an annual dinner for local judges and other important persons.<sup>121</sup>

#### E. THE SHERIFF IN AMERICA

Colonial Americans took the office of sheriff as they had inherited it from England, with one important exception: they restored the right of electing sheriffs, a task that was completed in the nineteenth century. While the office of sheriff was waning in England, the office became increasingly important in America.

Magna Carta applied in the American colonies, so sheriffs never served as judges.<sup>122</sup> In the colonies, the sheriffs used all the traditional powers of the office to the fullest. American sheriffs were more active than their English counterparts at finding criminals and delivering them to court, taking “an active law enforcement role.”<sup>123</sup>

By all indications, the formal seventeenth century American understanding of the office was mostly the same as the English. A study of Maryland and Virginia in the seventeenth century “proves the similarities in the office of sheriff in England and in her colonies to have been decidedly more numerous than the differences.”<sup>124</sup> Michael Dalton’s English treatise

---

<sup>119</sup> *Id.* at 22–23. See generally DALTON, *supra* note 23, at 13a (“[W]hen any of the kings enemies shall come into the land, the Sherife in defence of the realme, may commaund all the people of his countie to attend him; and he and they are to attend the king and defend the land.”); *id.* at 136b (“Also the Sherife may take Posse Comitatus, in defence of the realme, when any of the kings enemies shall invade the land &c.”). But in practice, the military role of sheriffs had declined to an auxiliary role, beginning in the latter thirteenth century, under Henry III. MORRIS, *supra* note 23, at 167, 234–38.

<sup>120</sup> Barnes, *supra* note 23, at iii; Gullion, *supra* note 51, at 1156.

<sup>121</sup> Barnes, *supra* note 23, at iii (explaining that sheriffs are almost entirely ceremonial, but professional undersheriffs oversee the execution of judicial writs); Gullion, *supra* note 51, at 1156.

<sup>122</sup> BARNES, *supra* note 105, at 30–31.

<sup>123</sup> Gullion, *supra* note 51, at 1157.

<sup>124</sup> KARRAKER, *supra* note 19, at 151.

*Office of the Sheriffs* is known to have been used as a guide in Maryland.<sup>125</sup> Dalton's *Country Justice* treatise (about the justice of the peace, and also containing much information about sheriffs and their posse powers) was also influential in America.<sup>126</sup> Virginian George Webb's 1736 treatise on sheriffs and other local officials was conventional in its treatment of sheriffs, the *posse comitatus*, and so on, relying on mainstream English sources such as Dalton.<sup>127</sup>

However, while the office looked the same on paper on both sides of the Atlantic, there were very significant practical differences, all of which had the effect of elevating the sheriff in America. To begin with, the American colonial sheriff was even more independent of central authority. In the American colonies, sheriffs were formally appointed by the crown, as they were in England and Scotland.<sup>128</sup> The royal governor typically made appointments taking into account the advice of the county justices.<sup>129</sup> The governor rarely questioned the county's nominees of individuals to become sheriff.<sup>130</sup>

Although nominally appointed by the royal governor, the American sheriff "was more of a county than a colonial official . . ." <sup>131</sup> Unlike the English counties, the American counties were self-governing.<sup>132</sup> "[A]s a member of the ruling group in the county, the sheriff shared its independence."<sup>133</sup>

The colonial sheriff enjoyed "little of the social functions and prestige of the English official, but economic and political forces more than compensated for this loss . . . restoring to him some of the importance his ancestor early had in England as conservator of the peace . . ." In sum, "[t]he office was taking on new strength in the colonies while continuing to decline in England."<sup>134</sup>

An important American innovation was that the sheriff either had a salary or could only charge fees (e.g., for executing a civil judgment) that were fixed by law. This reform recognized the problem of some of the

<sup>134</sup> *Id.* at 158–59.

unsalaried English sheriffs who had used their office for personal enrichment.<sup>135</sup>

The return of the long-lost practice of electing sheriffs began in 1652,<sup>136</sup> when the Royal Governor of Virginia told each county to choose its own sheriffs. The commissioners of Northampton County asked the people of the county to elect the sheriff. William Waters became the first sheriff elected in America.<sup>137</sup> It was not surprising that the reestablishment of popular election of sheriffs came from a county government; other than the New England town meetings, the first democratic governments in the American colonies were county governments.<sup>138</sup> New England already had the tradition of electing constables—low-level officers responsible for suppression of minor crimes; this was in contrast to the English custom of constables being appointed by the justices of the peace.<sup>139</sup>

The restoration of direct election of sheriffs “encouraged them to adopt an active role, whilst the fact that they were officials of county government helped to give them the opportunity to do so.”<sup>140</sup> Election “meant that sheriffs were amongst the first public officials to be elected in any newly settled area and were therefore able to develop their role with little opposition from competing organisations or officials.”<sup>141</sup> Americans came to understand the election of the sheriff as a right of the people.<sup>142</sup> The 1802 Ohio Constitution was the first state constitution to formally specify that sheriffs must be elected.<sup>143</sup> Today, the large majority of American state constitutions require that sheriffs be elected by the people of the county.<sup>144</sup>

Developments in the United States confirmed the importance and independence of sheriffs, whose power came directly from the people. The classic American treatise on sheriff law, written in 1884 by William L. Murfee, observed,

the sheriff is, in each of the United States, a constitutional officer, recognized *eo nomine* as part of the machinery of the state government, and therefore, although it is competent for legislatures to add to his powers or exact from him the performance of additional duties, it is, upon well established legal principles, beyond their powers to circumscribe his common-law functions or to transfer them to other officers.<sup>145</sup>

Today, American sheriffs are elected in all states except Alaska (which has no counties), Hawaii, Rhode Island, and Connecticut (where the office of sheriff was abolished in 2000).<sup>146</sup>

## II. THE *POSSE COMITATUS* FOR THE KEEPER OF THE PEACE

The traditional American view is that the legislature may add new duties or powers to the office of sheriff, but may not remove any of the sheriff's inherent common law powers or duties.<sup>147</sup> An example of a new duty, not traceable to the common law, is that by Colorado statute, the sheriff is the chief fire warden in his or her county.<sup>148</sup>

In America, the most important traditional responsibility of the sheriff has been keeping the peace. This is the third item of what Edward Coke described as the “three-fold custody” of the sheriff. First, the sheriff has custody of justice, because no suit begins without a sheriff serving process,

<sup>147</sup> MURFEE, *supra* note 145, at 22.

<sup>148</sup> COLO. REV. STAT. § 30-10-512 (2013).

and because sheriffs are responsible for returning jurors to hear a trial. Second, the sheriff has custody of the law, since the sheriff executes the decisions in civil and criminal cases.<sup>149</sup> And third, the sheriff has custody of the commonwealth, for “he is [principal Conservator of the Peace], within the countie, which is the life of the common wealth . . . .”<sup>150</sup>

This Article is principally concerned with the sheriff’s duty of keeping the peace. For various aspects of that duty, the sheriff has traditionally had the authority to summon assistance from armed citizens. Formally, there are four separate prongs to this common law authority, although in practice they can easily overlap. The first prong stems from the English sheriff’s specific duty of keeping “watch and ward,” to guard towns, which was given statutory expression during the reign of King Richard I (1189–1199).<sup>151</sup> This is the power to arrange watches and patrols, and to require townsfolk to take turns on guard duty.<sup>152</sup> “Ward” was the daytime activity, and “watch” the nighttime activity.<sup>153</sup> Closely related to “watch and ward” was “hue and cry,” the second traditional power. Under English law originating long before the Norman Conquest of 1066, all able-bodied men were obliged to join in the *hutesium et clamor* (hue and cry) to pursue fleeing criminals. Pursuing citizens were allowed to use deadly force if

---

<sup>149</sup> COKE, *supra* note 25, at 168(a) (BOOK 3, CH.1, § 248) (noting that the sheriff is custodian of “*vitae republicae*; he is *principalis conservator pacis*, within the countie, which is the life of common wealth, *vita republicae pax*.”).

<sup>150</sup> *Id.* Other commentators took the same view. See, e.g., GEORGE ATKINSON, A PRACTICAL TREATISE ON SHERIFF LAW 424 (London, William Crofts 1839); DALTON, *supra* note 23, at 12b–13a; DALTON, *supra* note 105, at 3; ISAAC GOODWIN, NEW ENGLAND SHERIFF 13 (Worcester, Dorr & Howland 1830) (“He is the principal conservator of the peace for his jurisdiction, and has power to call to his aid the *posse comitatus* or physical force of the county.”); CHARLES W. HARTSHORN, NEW ENGLAND SHERIFF 13 (Worcester, Warren Lazell 1844) (same quotation); WILLIAM HAWKINS, 2 A TREATISE OF THE PLEAS OF THE CROWN 33 (2nd ed., London, Nutt & Gosling 1724) (ch. 8 § 4); WEBB, *supra* note 113, at 292 (noting that the sheriff was “Chief Conservator of the Peace of his County, almost 300 Years before Justices of Peace were instituted”). The role of the sheriff as keeper of “the king’s peace”—and of “the sheriff’s peace”—was well established in Anglo-Saxon and Norman times. MORRIS, *supra* note 23, at 149, 196.

<sup>151</sup> DALTON, *supra* note 23, at 6a–6b (sheriff’s oath included supervising the watch and ward, by reference to his oath specifically to uphold the Statute of Winchester); MORRIS, *supra* note 23, at 150, 228–29, 278. The Statute of Winchester was enacted by Edward I. It required all free men to possess arms on a sliding scale based on their wealth: the wealthier the individual, the more extensive the required arms and armor. Statute of Winchester, 1285, 13 Edw. 1, stat. 2.

See also GOODWIN, *supra* note 150, at 234–35 (noting that justices of the peace may order constables to organize the watch and ward).

<sup>153</sup> ELIZABETH C. BARTELS, VOLUNTEER POLICE IN THE UNITED STATES 2 (2014).

necessary to prevent escape.<sup>154</sup> The third power of the sheriffs, to summon the *posse comitatus*, is described in the remainder of Part II. The fourth power is to summon the militia. The use of this military force is supposed to be rare and only for situations that the *posse comitatus* is incapable of resolving.

#### A. *POSSE COMITATUS* IN ENGLAND

Richard Abels, a modern historian of the Anglo-Saxon period, reports that “[t]he reeves of the late ninth and the early tenth century also led posses in pursuit of thieves . . . .”<sup>155</sup> The Latin phrase which was applied to this popular use of armed force for keeping the peace is *posse comitatus*, literally “[t]he power or force of the county.”<sup>156</sup> Historian Richard Kemble wrote that from the early days of the heptarchy and throughout the Anglo-Saxon period, the sheriff was “leader of the constitutional force, the *posse*

---

<sup>154</sup> For details about the hue and cry, see Statute of Winchester, 1285, 13 Edw. I, stat. 2, chs. 4–6 (formalizing hue and cry system; requiring all men aged fifteen to sixty to possess arms and armor according to their wealth; lowest category, having less than “Twenty Marks in Goods,” must have swords, knives, bows, and other small arms); 4 WILLIAM BLACKSTONE, COMMENTARIES \*293–94 (describing hue and cry system as still in effect); EDWARD COKE, THE THIRD PART OF THE INSTITUTES OF THE LAWS OF ENGLAND; CONCERNING HIGH TREASON, AND OTHER PLEAS OF THE CROWN AND CRIMINAL CAUSES 116–18 (William S. Hein & Co. 2008 (1628)); COKE, *supra* note 85, at 171–73 (ch. 9); DALTON, *supra* note 23, at 6a–6b (noting that the sheriff’s oath included the hue and cry, by reference to his oath specifically to uphold the Statute of Winchester); *id.* at 14a (all men must “be ready at the commandement of the sherife (& at the cry of the countrey) to pursue and arrest all felons”); LAMBARDE, *supra* note 152, at 185, 233 (Book I, ch. 22), 341 (Book II, ch. 4); MORRIS, *supra* note 23, at 221–22, 227; FREDERICK POLLOCK & FREDERIC W. MAITLAND, 2 THE HISTORY OF ENGLISH LAW BEFORE THE TIME OF EDWARD I 576–81 (Liberty Fund 2010) (1895); PULTON, *supra* note 152, at 152b § 1 (“That all men generally shall be readie at the commandement and summons of the Sherifes, and at the crie of the Countrey to pursue and arrest felons when neede shall be.”); STUBBS, *supra* note 83, at 123 (Statute of Winchester “carries us back to the earliest institutions of the race; it revises and refines the action of the hundred, hue and cry, watch and ward, the fyrd and the assize of arms.” It “shows the permanence and adaptability of ancient popular law.” The statute is “the culminating point” of Edward I’s “legislative activity,” being of “great constructive power”); WEBB, *supra* note 113, at 294 (“If a Felony is committed, the Sheriff may raise Hue and Cry, without other Warrant, to pursue and apprehend the Felon; and if he resists, or will not surrender himself, so that he cannot otherwise be taken, he may be kill’d by any Officer, or his Assistants.”).

<sup>155</sup> ABELS, *supra* note 22, at 274; see also MORRIS, *supra* note 23, at 18 (stating that records show the Reeve of London led Londoners in pursuit of thieves during the reign of King Aethelstan in the early tenth century).

<sup>156</sup> BLACK’S LAW DICTIONARY 1046 (5th ed. 1979) (“The power or force of the county. The entire population of the county above the age of fifteen, which a sheriff may summon to his assistance, in certain cases, as to aid him in keeping the peace, in pursuing and arresting felons, etc. *Williams v. State*, 253 Ark. 973, 490 S.W.2d 117, 121.”); see also BLACK’S LAW DICTIONARY 1281 (9th ed. 2009) (“A group of citizens who are called together to help the sheriff keep the peace or conduct rescue operations. — Often shortened to *posse*.”).

*comitatus* or *levée en masse* of the free men.”<sup>157</sup> Kemble used this fact in support of his argument that in the early Anglo-Saxon period:

The *graviones*, *geréfan*, or *shire-reeves* (by whatever name they may then have been called), were the essentially the people’s officers; whether they were hereditary or not, these offices depended upon the popular will; and in a vast majority of cases, it is obvious that they must have been immediately dependent upon it,—that is to say, elective, and not hereditary.<sup>158</sup>

So it may well be that Alfred the Great did not invent the *posse comitatus*; it may also be that King Alfred’s better organization of the shires, the shire-reeves, and the shire-based militias may have helped make the *posse comitatus* more effective.

William Henry Watson’s 1848 treatise on the English sheriff explained that the *posse comitatus* power of the nineteenth century was formally the same as it had been in the ninth century.

He may, and is bound, *ex officio*, to pursue and take all traitors, murderers, felons, and rioters; he hath also the custody and safe-keeping of the county gaol; he is to defend the same against rioters, and for this purpose, as well as for taking rioters and others breaking the peace, and also for attending the queen to the war when enemies come; he may command all the people of his county to attend him, which is called the *posse comitatus*, or power of the county, and this summons every person above fifteen years old, and under the degree of a peer, is bound to attend upon warning, under pain of fine and imprisonment.<sup>159</sup>

*Posse comitatus* was available whenever the sheriff needed a citizen armed force to enforce the law.<sup>160</sup> The sheriff could use *posse comitatus* to suppress riots and also to enforce civil process—if and only if there was resistance to the civil process.<sup>161</sup> Examples for use of *posse comitatus* in

<sup>161</sup> RICHARD CROMPTON, L’OFFICE ET AUCTHORITE DE IUSTICES DE PEACE 123 (2014) (1584) (print-on-demand reprint of 1584 edition; *posse comitatus* is in section on “Vicountes,” a Norman French term for “Sheriff”; the page numbers of this edition disappear after 74, but the table of contents lists “posse comitatus” as 123); DALTON, *supra* note 23, at 13a–15b, 136a–137a; WILLIAM HAWKINS, 1 A TREATISE OF THE PLEAS OF THE CROWN 156, 158–61 (2nd ed., London, Nutt & Gosling 1724); *id.* at 159 (noting also that even without the direction of a sheriff, “private Persons may arm themselves in order to suppress a Riot; from whence it seems clearly to follow, that they may make use of Arms in the suppressing of it . . .”); LAMBARDE, *supra* note 152, at 233 (riot suppression); PULTON *supra* note 152, at 29a (in case of a riot, “the Justices of peace, the Shirife or undershirife shall come with the power of the Countie, if neede be, to arrest them”); JOHN STEPHEN, SUMMARY OF THE

cases of resistance of civil process included a Precept of Restitution,<sup>162</sup> and Writs of Execution, Replevin, Estrepement, Capias, “or other Writ.”<sup>163</sup> The *posse comitatus* could be used to “to apprehend Felons, &c. Or disturbers of the peace.”<sup>164</sup> In other words, the posse could be used for the arrest of all types of criminals. This included the power to arrest even “a great Lord.”<sup>165</sup>

By the eighteenth century, the government of Great Britain was moving towards reduced use of the *posse comitatus* and sheriffs, notwithstanding protests from political writers who argued that the sheriffs and the *posse comitatus* were the law enforcement system that complied with England’s unwritten constitutional tradition.<sup>166</sup> The *posse comitatus* was still used in the early nineteenth century,<sup>167</sup> but, by the late nineteenth century, it, like many other formal powers of the sheriff, had fallen into disuse in England.<sup>168</sup> America was different.

<sup>167</sup> 2 RADZINOWICZ, *supra* note 166, at 221 n.89 (citing 1816 use of posse to guard the Gas Light Company). The last known use of the *posse comitatus* in England was in 1830 by the Sheriff of Oxfordshire to suppress riots. GLADWIN, *supra* note 74, at 375. During World War I and World War II, the power of sheriffs to raise the *posse comitatus* in case of invasion was reaffirmed. *Id.* But there being no invasion during either war, the power was apparently not exercised. *Id.*

<sup>168</sup> In 1885, the legal historian Frederic Maitland wrote: “Now the whole history of English Justice and Police might be brought under this rubric, *The Decline and Fall of*

## B. *POSSE COMITATUS* IN COLONIAL AMERICA AND THE REVOLUTION

The sheriff's role as conservator of the peace—with the authority to summon the *posse comitatus*, raise the hue and cry, and administer watch and ward—was straightforwardly recognized in the American colonies.<sup>169</sup> But the changes in the posse began to reflect—and intensify—the ways in which the Americans were reshaping their English legal heritage towards greater self-government and liberty.

Gautham Rao's article *The Federal Posse Comitatus Doctrine* explains: “In its migration to America, however, colonists transformed the *posse comitatus* from an instrument of royal prerogative to an institution of local self-governance.”<sup>170</sup> The posse “functioned through, rather than upon, the local popular will.”<sup>171</sup> In other words, the Americans brought the posse back to its traditional Anglo-Saxon role, shaking off six centuries of how the Norman Conquest and succeeding monarchs had partially undemocratized the posse and the sheriff.

According to Rao, “[t]he colonists’ control of the *posse comitatus*—of the legal means of coercion—all but precipitated the American Revolution.”<sup>172</sup> The policies of the government in London had so alienated the Americans that they were no longer willing to enforce what London wanted. The Prime Minister, Lord North, recognized the problem: the posse had switched sides; rather than providing the manpower to enforce Parliament's will, the posse was now actively resisting that will: “[O]ur regulations here are of no import, if you have nobody in that country to give

---

*Sheriff.*” FREDERIC WILLIAM MAITLAND, *JUSTICE AND POLICE* 69 (London, MacMillan & Co. 1885). Maitland traced the beginning of the decline to “the Norman reigns.” *Id.* So “there are many things which according to law books he might do, but which he never does. He might call out the power of the county (*posse comitatus*) to apprehend a criminal with hue and cry, but justices of the peace and police constables have long rendered needless this rusty machinery.” *Id.* at 70.

<sup>169</sup> CHAPIN, *supra* note 135, at 31; KARRAKER, *supra* note 19, at 147 (Virginia); JOHN MILTON NILES, *THE CONNECTICUT CIVIL OFFICER* 188–89, 214 (Hartford, Huntington & Hopkins 1823); *cf.* BARTELS, *supra* note 153, at 2 (night watches created in Boston in 1636 and New York City in 1686). In Delaware, the role is affirmed in the state constitution. “Sheriffs shall be conservators of the peace within the counties respectively in which they reside.” DEL. CONST. art. XV, § 1; *see also* sources in note 144 *supra* (describing constitutional office of sheriff).

<sup>170</sup> Gautham Rao, *The Federal Posse Comitatus Doctrine: Slavery, Compulsion, and Statecraft in Mid-Nineteenth-Century America*, 26 *LAW & HIST. REV.* 1, 10 (2008); *see also* PAULINE MAIER, *FROM RESISTANCE TO REVOLUTION* 16–20 (1991) (noting, *inter alia*, use of *posse comitatus* to prevent impressment of Americans into the British navy).

<sup>171</sup> Rao, *supra* note 170, at 10.

<sup>172</sup> *Id.*

them force.”<sup>173</sup> The problem was exacerbated by the fact that most sheriffs leaned Whig (towards citizen rights) rather than Tory (towards the authority of the monarch).<sup>174</sup>

So at the advice of Lord North and his party, the British government attempted to resort to military coercion of the Americans, and, starting in the fall of 1774, a gun control program designed to disarm them. Forcible disarmament with house-to-house searches by the British redcoats was attempted at Lexington and Concord on the morning of April 19, 1775. The Americans resisted with their personal arms, and the Revolutionary War began.<sup>175</sup>

### C. AFTER INDEPENDENCE

In the Early Republic, the *posse comitatus* was an accepted and uncontroversial institution; the federal government only rarely used its *posse comitatus* powers.

One of the first legal treatises of the new United States of America was produced by James Wilson, the preeminent lawyer of his day, soon to be appointed to the Supreme Court by President Washington.<sup>176</sup> Quite conventionally, Wilson described *posse comitatus* as “the high power of ordering to [the sheriff’s] assistance the whole strength of the county over which he presides” in order “to suppress . . . unlawful force and resistance.”<sup>177</sup>

Joel Barlow’s essay *Advice to the Privileged Orders* argued that if the state represented the people as a whole, not just one class, society would be more stable.<sup>178</sup> Barlow noted that in Europe, an armed populace would be regarded “as a mark of an uncivilized people, extremely dangerous to a well

<sup>178</sup> JOEL BARLOW, *ADVICE TO THE PRIVILEGED ORDERS IN THE SEVERAL STATES OF EUROPE* (Cornell University Press, 1956) (1792). Barlow was a leading diplomat and writer during the 1780s and 1790s. He was one of the “Connecticut wits,” a group of writers centered around Yale. *Joel Barlow: A Biographical Note*, in *id.* at ix. He challenged the typical European belief that Europeans were more civilized than Americans.

ordered society.”<sup>179</sup> But unlike the European rabble, which had no experience with self-government, Americans were their own sovereigns, and self-government brought out the best in man’s character. Thus, the American people could be trusted with guns: “It is *because the people are civilized, that they are with safety armed.*”<sup>180</sup> Barlow praised the “very important” “discoveries” which “had been made in modern nations, especially in England, and carried into successful practice, for the security of citizens against an undue exercise of the governing power; and some that were equally original for the regular assistance of the governing power against the turbulence of citizens.”<sup>181</sup> These were the *posse comitatus*, habeas corpus, the jury, and the rule that “parliament holds the purse.”<sup>182</sup>

When the proposed Constitution was put before the American people, one of the objections of Anti-Federalists was that the new federal government did not have an enumerated *posse comitatus* power, but did have an enumerated militia power. The Anti-Federalists argued that therefore the federal government would use the militia (that is, military force) to carry out its powers on a routine basis.<sup>183</sup> In Federalist Number 29, Alexander Hamilton responded that the federal government did have *posse comitatus* power, by virtue of the Necessary and Proper Clause.<sup>184</sup>

<sup>182</sup> *Id.* at 325 n.24.

<sup>183</sup> *Letter from the Federal Farmer III* (Oct. 10, 1787), *reprinted in* 2 THE COMPLETE ANTI-FEDERALIST 234–45 (Herbert J. Storing ed., 1981); Brutus, *Essay IV*, *reprinted in id.* at 382–87 (claiming that the power to use the militia for law enforcement “is a novel one, in free governments—these have depended for the execution of the laws on the Posse Comitatus, and never raised an idea, that the people would refuse to aid the civil magistrate in executing those laws they themselves had made”).

<sup>184</sup> THE FEDERALIST No. 29 (Alexander Hamilton):

In order to cast an odium upon the power of calling forth the militia to execute the laws of the Union, it has been remarked that there is nowhere any provision in the proposed Constitution for calling out the POSSE COMITATUS, to assist the magistrate in the execution of his duty, whence it has been inferred, that military force was intended to be his only auxiliary . . . . The same persons who tell us in one breath, that the powers of the federal government will be despotic and unlimited, inform us in the next, that it has not authority sufficient even to call out the POSSE COMITATUS. The latter, fortunately, is as much short of the truth as the former exceeds it. It would be as absurd to doubt, that a right to pass all laws *necessary* and *proper* to execute its declared powers, would include that of requiring the assistance of the citizens to the officers who may be intrusted with the execution of those laws, as it would be to believe, that a right to enact laws necessary and proper for the imposition and collection of taxes would involve that of varying the rules of descent and of the

After ratification of the Constitution, Hamilton's necessary and proper view of the federal *posse comitatus* power was uncontroversial. In addition, the federal government has all the normal powers of local government in areas, such as territories, where the federal government has the authority to exercise local government.<sup>185</sup> Thus, during the Jefferson administration, Secretary of State James Madison sent a written order that a French official "call for the assistance of the good citizens of the district, as the *posse comitatus*" to enforce the terms of the Louisiana Purchase.<sup>186</sup> In an 1833 treatise on American constitutional law, Supreme Court Justice Joseph Story explained that while the *posse comitatus* would suffice for maintaining law and order in most situations, there were some circumstances in which either a militia or a standing army would be necessary.<sup>187</sup>

For local law enforcement, *posse comitatus* in the decades before 1850 thrived as a well-developed and popular institution. Edward Livingston extolled the posse because "the same ties of property, of family, of love of country and of liberty" which make possemen "effective instruments for the suppression of disorder" also make them "unfit . . . to promote any scheme of usurpation. The people can apprehend no danger to their liberties from

---

alienation of landed property, or of abolishing the trial by jury in cases relating to it. It being therefore evident that the supposition of a want of power to require the aid of the POSSE COMITATUS is entirely destitute of color, it will follow, that the conclusion which has been drawn from it, in its application to the authority of the federal government over the militia, is as uncandid as it is illogical. What reason could there be to infer, that force was intended to be the sole instrument of authority, merely because there is a power to make use of it when necessary?

*Id.*

<sup>185</sup> See U.S. CONST., art. IV § 3, cl. 2; *Block v. Hirsh*, 256 U.S. 135, 156 (1921); *Shively v. Bowlby*, 152 U.S. 1 (1894); *Am. Ins. Co. v. 356 Bales of Cotton*, 26 U.S. 511, 542 (1828).

<sup>186</sup> Madison's instruction was quoted in a Supreme Court case a few years later. *Livingston v. Dorgenois*, 11 U.S. 577, 578–79 (1813).

<sup>187</sup> JOSEPH STORY, 3 COMMENTARIES ON THE CONSTITUTION 81–82 (Boston, Hilliard, Gray, & Co. 1833) (§ 1196):

In ordinary cases, indeed, the resistance to the laws may be put down by the *posse comitatus*, or the assistance of the common magistracy . . . . The general power of the government to pass all laws necessary and proper to execute its declared powers, would doubtless authorize laws to call forth the *posse comitatus*, and employ the common magistracy, in cases, where such measures would suit the emergency. But if the militia could not be called in aid, it would be absolutely indispensable to the common safety to keep up a strong regular force in time of peace.

See also *Luther v. Borden*, 48 U.S. 1, 76 (1849) (Woodbury, J., dissenting) ("The State courts, with the aid of the militia, as in Shays's rebellion and the Western insurrection, could, for aught which appears, by help of the *posse comitatus*, or at least by that militia, have in this case dispersed all opposition.").

such a force . . . .”<sup>188</sup> Citizens served in the posse readily and with pride.<sup>189</sup> It was used for a wide variety of local enforcement, ranging from stopping illegal fishing up to riots.<sup>190</sup> Like jury service, posse service was a mandatory duty of a citizen, one that should be performed with pride as part of free citizen’s rights and duties in a self-governing republic.<sup>191</sup>

In the early decades of the republic, before slavery became a major conflict, federal use of *posse comitatus* in the states was rare and sporadic. The Judiciary Act of 1789 gave U.S. Marshals authority to summon the *posse comitatus*.<sup>192</sup>

Hurtin*, 10 Johns. 85, 88 (N.Y. Sup. Ct. 1813) (holding that sheriff can order a person to perform a posse task, and can then leave the person’s presence; persons in posse service have the same civil immunities as the sheriff); STEPHEN, *supra* note 161, at 29.

<sup>192</sup> 1 Stat. 73, 87 (1789) (creating, in § 27, office of U.S. Marshal in each federal judicial district, who “shall have power to command all necessary assistance in the execution of his duty”).

A modern scholar, Wesley Campbell, uses ratification history to argue against the Supreme Court decisions such as *Printz v. United States*, which forbid federal commandeering of state officials.<sup>193</sup> Campbell infers from the ratification history not only a federal *posse comitatus* power, but also a federal power to commandeer county sheriffs to lead the *posse comitatus* in federal service.<sup>194</sup> This is problematic because of the nature of the posse. The posse is an ad hoc organization. It has no organization until it enters into the service of whoever lawfully summoned it. As in England, the American common law recognized that many officials, not just the sheriffs, had the authority to summon a posse. These officials were a “Judge of Record, Sheriff, Coroner,<sup>195</sup> Constable, or other Officer to whose Office belongs the Conservation of the Peace . . . .”<sup>196</sup> The Appendix to this Article sets forth the modern state *posse comitatus* statutes; they follow the common law in providing that a variety of state or local officials, not just sheriffs, may summon a *posse comitatus*.

If a coroner summons the posse on Tuesday, then he is the posse commander that day. If a judge summons the posse on Friday, then she is the posse commander for that day. Accordingly, the power of a federal officer to summon a posse for his own use does not necessarily imply that the federal officer also has the power to summon any of the state officials—such as sheriffs, judges, and coroners—who also has posse-summoning power.

It is useful to contrast the posse with the state militia. There are a variety of possible posse commanders, depending on the exigencies of law enforcement need. There is no process for compulsory training of persons who might be summoned to posse service. In contrast, the state militia is a regular body. It is subject to periodic training and to musters (where militia members show that they possess the requisite arms for militia duty).<sup>197</sup>

<sup>194</sup> *Id.* at 1139–44.

<sup>195</sup> The Office of Coroner in England was created in 1194. Articles of the Eyre, 1 Stats. of the Realm 233 (art. 20). The office was originally much broader than today, when forensic autopsies are the office’s only routine law enforcement role. Coroners presided at some judicial hearings and had arrest powers. *See, e.g.*, WEBB, *supra* note 113, at 97–104.

<sup>196</sup> WEBB, *supra* note 113, at 253.

<sup>197</sup> *See, e.g.*, District of Columbia v. Heller, 554 U.S. 570, 650 n.12 (Stevens, J., dissenting) (quoting an Act for Establishing a Militia, 1785 Del. Laws § 7) (“And be it enacted, That every person between the ages of eighteen and fifty . . . shall at his own expense, provide himself . . . with a musket or firelock, with a bayonet, a cartouch box to contain twenty three cartridges, a priming wire, a brush and six flints, all in good order, on or before the first day of April next, under the penalty of forty shillings, and shall keep the same by him at all times, ready and fit for service, under the penalty of two shillings and six

Unlike the posse, the militia is led by a regular set of officers.<sup>198</sup> The man who is the militia captain on Monday will still be the militia captain on Friday. The U.S. Constitution expressly grants Congress the power to summon the state militias, including their state officers, into federal service.<sup>199</sup> When the Constitution means to grant to the federal government the extraordinary power of commandeering state officers, the Constitution says so expressly.

Early practice shows that the federal *posse comitatus* power was not exercised as a power to commandeer state officers. The Judiciary Act of 1789 authorized federal marshals to summon posses. There appears to be no evidence indicating that from 1789 to the present, the federal posse power has ever been used by a federal marshal, or anyone else, to commandeer a state official in his official capacity (e.g., a sheriff or a state judge) into serving as posse commander in federal service.

In *Prigg v. Pennsylvania*, the Supreme Court ruled that the 1793 federal Fugitive Slave Act was constitutional. Even though Article I had not given Congress an enumerated power over fugitive slaves, the fugitive slave provisions in Article IV created an implied power, according to the Court.<sup>200</sup> At the same time, state and local officials had absolutely no obligation to assist in the recapture of fugitives, according to the *Prigg* Court.<sup>201</sup>

#### D. POSSE COMITATUS AND THE CIVIL WAR

##### 1. Before the War

Everything changed with the congressional enactment of the Compromise of 1850. In exchange for admission of California to the Union as a free state, northern legislators accepted a massive new federal Fugitive Slave Act.<sup>202</sup> This time, the Act explicitly declared that citizens were required to serve when summoned in a federal *posse comitatus* hunting for

---

pence for each neglect or default thereof on every muster day”).

<sup>198</sup> See, e.g., S.D. CONST. art. 15, § 4.

<sup>199</sup> U.S. CONST. art. I, § 8, cl. 15–16: “To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions”; “[t]o provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress . . . .”

fugitive slaves.<sup>203</sup> The federal *posse comitatus* had been transformed, as Rao puts it, “from emergency to routine . . . from sporadic to ubiquitous.”<sup>204</sup> The *posse comitatus* provisions of the Fugitive Slave Act of 1850 forced the North to become complicit in enforcing slavery, and thus to become part of the slave system.<sup>205</sup> To many northerners, forced service to recapture slaves felt little different from slavery itself.<sup>206</sup> The *posse comitatus* was supposed to be the people of the county participating in self-government by enforcing their own laws. Now, federal *posse comitatus* had been perverted into a weapon that transformed free citizens into the minions of distant slave owners.

Making things even worse, the federal government began using federal soldiers on slave hunts and claimed that these men were merely acting as *posse comitatus*.<sup>207</sup> To call the federal standing army a “*posse comitatus*” was as Orwellian as calling the federal army “the Massachusetts State Militia.” The posse and the militia were supposed to be the institutions that minimized the need for domestic use of a standing army. The posse was not supposed to be used as a legal fiction to justify use of the military for ordinary law enforcement in a state that was not under martial law.

An 1854 poem by Walt Whitman, “A Boston Ballad,” denounced the sight of federal troops—“the Federal foot and dragoons”—marching through Boston to transport a fugitive slave.<sup>208</sup> King George’s despotic principles had triumphed: “You have got your revenge, old buster! The crown is come to its own, and more than its own.”<sup>209</sup>

The innovative use of *posse comitatus* to enforce the Fugitive Slave Act brought slavery home to the North. Indifference to slavery as a far-away institution was no longer possible. According to the abolitionists, there were now only two choices for a free northern man: one option was to himself become a servant of the slave power in the federal *posse comitatus*. The only other choice was to put slavery everywhere in America on the

road to destruction.<sup>210</sup> All sides agreed that Abraham Lincoln’s plan to block any expansion of slavery into federal territories would eventually lead to the economic collapse of slavery in all the slave states.<sup>211</sup> Ascendant in Congress, the South had nationalized the issue of slavery, and thereby radicalized much of the North. The locally controlled *posse comitatus* of ordered liberty had helped bring about the American Revolution. The federally controlled *posse comitatus* of slavery would help cause the Civil War.

## 2. After the War

Victorious after four years of the bloodiest war in American history, the Radical Republicans and their political allies embarked upon a Reconstruction plan to demolish the slave power root and branch.<sup>212</sup> The Thirteenth Amendment and the abolition of *de jure* slavery was just the first step.

*Prigg v. Pennsylvania* had found an implicit pro-slavery federal power in the Fugitive Slave Clause of the Constitution.<sup>213</sup> So Congress looked to the other clauses of Article IV and found the guarantee that “[t]he Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.”<sup>214</sup> To the most ardent reconstructionists, this was enough to imply a congressional power to enact civil rights legislation—especially in conjunction with the enforcement power granted by Section Two of the Thirteenth Amendment.<sup>215</sup> Such legislation was enacted,<sup>216</sup> but Congress decided to put it on a more solid constitutional footing by proposing the Fourteenth Amendment for ratification, Section One of which provided that “[n]o State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States . . . .”<sup>217</sup> Section Five gave Congress the power to enforce the Amendment by appropriate legislation.<sup>218</sup>

Likewise, federal slavery powers were later used for civil rights ends: the Civil Rights Act of 1866, the Enforcement Acts of 1870 and 1871, and

<sup>218</sup> *Id.*

2015] *SHERIFFS AND THEIR POSSE COMITATUS* 801

the Ku Klux Klan Act of 1871 all gave federal marshals authority to summon the *posse comitatus*.<sup>219</sup> Anti-slavery Senator Lyman Trumbull noted that the *posse comitatus* provision of the 1866 Civil Rights Act was “copied from the late fugitive slave act, adopted in 1850 . . . .”<sup>220</sup> But in the South in 1872 as in the North in 1852, there was resistance to serving in a federal *posse comitatus* for routine enforcement of federal laws which many local people did not accept.<sup>221</sup> Again, the federal military was sometimes used as *posse comitatus*, under the pretext that the men were merely acting as citizens, rather than as soldiers.<sup>222</sup> Finally in 1878, Congress passed the Posse Comitatus Act to forbid use of the army in law enforcement, except when expressly authorized by Congress.<sup>223</sup>

Today, the modern version of the civil rights statute provides that United States Magistrate Judges may appoint persons to serve warrants and process:

[These] persons so appointed shall have authority to summon and call to their aid the bystanders or *posse comitatus* of the proper county, or such portion of the land or naval forces of the United States, or of the militia, as may be necessary to the performance of the duty with which they are charged . . . .<sup>224</sup>

The statutory authority of federal judges to raise the *posse comitatus*, as described above, is consistent with the American common law understanding of who may invoke the power.<sup>225</sup> As U.S. Attorney General Edward Bates wrote, “[t]he right of the courts to call out the whole power of the county to enforce their judgments, is as old as the common law . . . .”<sup>226</sup>

E. *POSSE COMITATUS* IN LATE NINETEENTH CENTURY AMERICA TO  
THE PRESENT

With the federal *posse comitatus* crisis of 1850–1878 finally resolved, the *posse comitatus* returned to its traditional American role, with the power of the county to be used in support of popularly-supported laws.<sup>227</sup>

This is the period about which most people today have their greatest familiarity with the *posse comitatus*—of the western sheriff summoning the posse to pursue an escaped outlaw or to confront a violent gang. Frank Richard Prassel’s *The Western Peace Officer* is the leading study of the office of sheriff in the western United States during the late nineteenth and early twentieth centuries. As Prassel observes, the original legal structure of the office of sheriff in the western territories and states is nearly identical to the modern structure of the office.<sup>228</sup>

The *posse comitatus* power continued to be a core, essential power of the county sheriff.<sup>229</sup> To this day, in almost every American state, the sheriff’s common law *posse comitatus* power<sup>230</sup> is given expression by a statute on the subject.<sup>231</sup> As noted above, the power to raise the hue and cry

---

<sup>227</sup> The federal *posse comitatus* power never went away. The Supreme Court in 1890 and 1895 affirmed the responsibility of every U.S. citizen to assist the federal government when needed in the *posse comitatus*. *Cunningham v. Neagle*, 135 U.S. 1, 65 (1890) (“marshals of the United States, with a *posse comitatus* properly armed and equipped . . .”); *In re Quarles*, 158 U.S. 532, 535 (1895) :

It is the duty and the right, not only of every peace officer of the United States, but of every citizen, to assist in prosecuting, and in securing the punishment of, any breach of the peace of the United States. It is the right, as well as the duty, of every citizen, when called upon by the proper officer, to act as part of the *posse comitatus* in upholding the laws of his country.

*Cf.* *Wright v. United States*, 158 U.S. 232, 239 (1895) (enforcing federal statute protecting federal officers, including *posse comitatus*, on Indian lands when in performance of their official duties, or after they have performed such duties). The actual use of the federal *posse comitatus* had returned to its pre-1850 norm of being rare and uncontroversial.

<sup>228</sup> “Virtually no significant changes have occurred in the American system of county law enforcement during the past century. Most sheriffs and constables operate under the same basic laws and customs as existed at the creation of their posts.” FRANK RICHARD PRASSEL, *THE WESTERN PEACE OFFICER* 119 (1972).

<sup>229</sup> MURFEE, *supra* note 145, at 21 (“For a thousand years the sheriff has been the principal conservator of the peace in his county, with full power to command, whenever necessary, the power of the county.”).

<sup>230</sup> “He is also required, in his capacity as conservator of the peace, to suppress riots, mobs, and insurrections, and, in the discharge of his duty, to employ the whole power of the county, including any military force that may be necessary and available for that purpose.” MURFEE, *supra* note 145, at 629; *see also* WEBB, *supra* note 113, at 252–53, 293–94.

<sup>231</sup> For example, in Colorado,

It is the duty of the sheriffs, undersheriffs, and deputies to keep and preserve the peace in their respective counties, and to quiet and suppress all affrays, riots, and unlawful

is closely related to the *posse comitatus* power. American sheriffs continued to have the power of hue and cry.<sup>232</sup>

One of the longstanding rules of the English law of sheriffs was that the sheriff is civilly liable for the acts performed by his undersheriff, his deputies, or anyone else in his service. This principle applies to the *posse comitatus*.<sup>233</sup> Concomitantly, persons serving in the sheriff's posse have the same legal immunities as does the sheriff herself.<sup>234</sup> Once workman's compensation was established, it was straightforwardly applied so that a person who is injured while serving in the posse is entitled to workman's compensation just as are full-time deputies.<sup>235</sup>

The *posse comitatus* is familiar enough to the Supreme Court that it figured in part of the questioning during oral argument in *Plyer v. Doe* in

---

assemblies and insurrections. For that purpose, and for the service of process in civil or criminal cases, and in apprehending or securing any person for felony or breach of the peace, they, and every coroner, may call to their aid such person of their county as they may deem necessary.

COLO. REV. STAT. § 30-10-516. A list of all state *posse comitatus* statutes is contained in the Appendix to this Article.

<sup>232</sup> For example, the first statutes of the Colorado Territory, created in 1861, stated:

When any felonious offense shall be committed, public notice thereof shall be immediately given in all public places near where the same was committed, and fresh pursuit shall forthwith be made after every person guilty thereof by sheriffs, coroners, constables, and all other persons who shall be by any of them commanded or summoned for that purpose.

1861 Colo. Sess. Laws 326; *see also* KARRAKER *supra* note 19, at 147–48 (explaining that colonial Virginia sheriffs could raise hue and cry, but “[i]t was probably little resorted to in Virginia because of the wide scattering of the population.”); *cf.* NILES, *supra* note 169, at 188–89 (constables' hue and cry).

The New Mexico Territory specifically authorized the sheriff to cross county lines in order to perform an arrest and to take the *posse comitatus* with him for that purpose. N.M. STAT. § 15-40-14 (West 1953) (referencing historical law of 1868–69).

<sup>233</sup> Scott v. Vandiver, 476 F.2d 238, 242–43 (4th Cir. 1973). Conversely, when persons with no connection to a sheriff's office falsely call themselves “*posse comitatus*,” the sheriff has no liability for the acts of these unauthorized imposters. *See* Canlis v. San Joaquin Sheriff's Posse Comitatus, 641 F.2d 711, 717 (9th Cir. 1981). A particularly pernicious set of fraudsters was a private extremist organization of tax evaders in the latter twentieth century which wrongly called itself “*Posse Comitatus*.” *See generally* JAMES CORCORAN, BITTER HARVEST: GORDON KAHL AND THE POSSE COMITATUS (1990) (describing the history of Kahl and his misguided followers).

<sup>234</sup> Filarsky v. Delia, 132 S. Ct. 1657, 1665 (2012) (citing numerous precedents and MURFEE, *supra* note 145); State v. Parker, 199 S.W.2d 338, 339–40 (Mo. 1947); Monterey Cnty. v. Rader, 248 P. 912, 914 (Cal. 1926); Robinson v. State, 18 S.E. 1018, 1019 (Ga. 1893).

<sup>235</sup> CAL. LAB. CODE § 3366 (2011); COLO. REV. STAT. § 8-40-202 (2013); Eaton v. Bernalillo Cnty., 128 P.2d 738 (N.M. 1942); Monterey Cnty., 248 P. at 916; Annotation, *One Temporarily Impressed into Public Service in Emergency, as Within Workmen's Compensation Act*, 142 A.L.R. 657 (1943).

1982.<sup>236</sup> The case involved whether illegal aliens were entitled to attend American public schools; one hypothetical raised by a Justice involved the judicial authority to summon *posse comitatus*.<sup>237</sup> More recently, the 2012 Supreme Court case *Filarsky v. Delia* featured a mini-treatise on *posse comitatus*, recapitulating some of the leading precedents on the subject.<sup>238</sup>

#### F. WHO IS SUBJECT TO *POSSE COMITATUS* DUTY?

*Posse comitatus* is like the jury: it is a law enforcement duty of the citizen, and a person who fails to perform either duty may be criminally punished.<sup>239</sup> This principle is not in desuetude, but has been affirmed by state court cases from the late twentieth century.<sup>240</sup> The posse duty inheres in the inhabitants of the county; that is, the Sheriff of Hinsdale County can command posse service only from the inhabitants of Hinsdale County.<sup>241</sup>

Exemptions of able-bodied males from posse duty are rare.<sup>242</sup> One 1848 English treatise<sup>243</sup> said that nobles did not have to serve in the *posse*

---

<sup>236</sup> 457 U.S. 202 (1982).

<sup>237</sup> Q. What about a *posse comitatus*, where a judge is theoretically, he may have difficulty doing it, but he is entitled to call upon bystanders to enforce an order of a court. Wouldn't the people escorting these people to the border be much like a *posse comitatus*? They are not officially endowed with status, but they are helping to enforce a federal statute?

Quoted in E. Barrett Prettyman, Jr., *The Supreme Court's Use of Hypothetical Questions at Oral Argument*, 33 CATH. U. REV. 555, 585–86 (1984). The correct answer to the question, by the way, is “no.” If you are not summoned by a government officer, then you are not acting as *posse comitatus*. *Posse comitatus* is a status, which confers, *inter alia*, the same civil immunities as enjoyed by other law enforcement officers, as well the same liabilities for supervisors for an agent's misconduct. See *supra* text accompanying note 233.

<sup>238</sup> *Filarsky*, 132 S.Ct. at 1664. As the Court explained, Sheriffs executing a warrant were empowered by the common law to enlist the aid of the able-bodied men of the community in doing so (citing 1 WILLIAM BLACKSTONE, COMMENTARIES \*343); while serving as part of this “*posse comitatus*,” a private individual had the same authority as the sheriff and was protected to the same extent. See, e.g., *Robinson*, 18 S.E. at 1019.

<sup>239</sup> *Sutton v. Allison*, 47 N.C. 339 (1855); *Houser v. Hampton*, 29 N.C. 333 (1847); MURFEE, *supra* note 145, at 78 (citing *Coyles v. Hurtin*, 10 Johns. 85 (N.Y. Sup. Ct. 1813)).

<sup>240</sup> *State v. Floyd*, 584 A.2d 1157, 1159 (Conn. 1991); *Williams v. State*, 490 S.W.2d 117, 119 (Ark. 1973).

<sup>241</sup> *State ex rel. Att'y Gen. v. McLain*, 50 N.E. 907, 908 (Ohio 1898) (“[H]e may command the inhabitants of the county to assist him.”). *But see* OKLA. STAT. ANN. tit. 22, § 94 (West 2003) (under extraordinary circumstances, governor must summon posses of other counties to assist in a county where county's *posse comitatus* cannot solve the problem); MORRIS *supra* note 23, at 227 n. 178 (noting one thirteenth century example of the king ordering a sheriff to summon men from two counties, if necessary).

<sup>242</sup> LAMBARDE, *supra* note 152, at 233 (Book I, ch. 22) (ministers, the infirm or decrepit); PULTON, *supra* note 152, at 29a (“which be not of the Clergie”); STEPHEN, *supra* note 161, at 46 (citing Blackstone, “except women, clergymen, persons, decrepit and infants under the age of fifteen”); WEBB, *supra* note 113, at 252 (“But Clergy-men, and sick, lame, or

*comitatus*, but many other prominent English commentators have viewed posse duty as encompassing everyone regardless of rank.<sup>244</sup> As with militia service, persons who are not able-bodied are exempt; some but not all commentators state that clergymen are exempt.<sup>245</sup>

Unlike with militia service, there is not necessarily an upper age limit for *posse comitatus*. In the view of some commentators, if you are sixty-five years old and able-bodied, you may be exempt from the militia, but not from *posse comitatus*.<sup>246</sup> James Wilson stated in 1790 that “[n]o man above fifteen and under seventy years of age, ecclesiastical or temporal, is exempted from this service.”<sup>247</sup> The traditional lower age limit for *posse comitatus* duty was fifteen years old, which was six years below the age of majority in England and the United States.<sup>248</sup> One might argue that changing views about the legal responsibilities of minors might militate for eighteen years as the limit in the United States today.

Women were traditionally exempt.<sup>249</sup> Arguably, the exemption has continuing legal validity by analogy to women still being exempt from

---

impotent Persons are excepted.”).

<sup>243</sup> WATSON, *supra* note 25, at 2.

<sup>244</sup> COKE, *supra* note 85, at 193 (ch. 17) (“no man ecclesiasticall or temporall is exempted from this service”); DALTON, *supra* note 105, at 313; HAWKINS, *supra* note 150, at ch. 28 § 201 (“all Persons whatsoever, and even noblemen, and all others of what condition or degree soever they may be, except women, clergymen, persons decrepit, and infants under the age of fifteen years”); *see also* DALTON, *supra* note 23, at 136b (similar list to Pulton, except “villaines” omitted); LAMBARDE, *supra* note 152, at 233 (Book I, ch. 22) (“all manner of Gentlemen, Yeomen . . .”); PULTON, *supra* note 152, at 29a (“Al Lords and other liege people of the Realme, as KNIGHTS, Esquires, gentlemen, yeomen, laborers, servants, apprentices, villaines [serfs], and all other of the age of 15 years or above.”) (citing 13 Henry IV, ch. 7).

<sup>245</sup> LAMBARDE, *supra* note 152, at 233 (Book I, ch. 22) (ministers, the infirm or decrepit); PULTON, *supra* note 152, at 29a (“which be not of the Clergie”); STEPHEN, *supra* note 161, at 46 (“except women, clergymen, persons decrepit and infants under fifteen”); WEBB, *supra* note 113, at 252 (“But Clergy-men, and sick, lame, or impotent Persons are excepted.”).

<sup>246</sup> KARRAKER, *supra* note 19, at 176–77 (reprinting an April 29, 1643, warrant for summoning the *posse comitatus*, applying to persons above the age of sixteen years and “under the age of three score years and able to travel, with such arms or weapons as they have or can provide”); M’KINNEY, *supra* note 190, at 260 (requiring all men above the age of fifteen years, “not aged or decrepid”); WEBB, *supra* note 113, at 252 (“all Males Persons therein, whether Freeman, or Servants, above the Age of 15 Years, and able to travel”) (citing LAMBARDE, *supra* note 152, at 309). *But see* COKE, *supra* note 85, at 193 (ch. 17) (“being above 15 and under 70”).

<sup>247</sup> WILSON, *supra* note 177, at 1017. *Cf.* STEPHEN, *supra* note 161, at 46 (citing ages fifteen and over, with no upper age limit).

<sup>248</sup> *South v. Maryland ex rel. Pottle*, 59 U.S. 396, 402 (1855); POTTER, *supra* note 190, at 243.

<sup>249</sup> *See e.g.*, PULTON, *supra* note 152, at 29a.

conscription into the U.S. military<sup>250</sup> and into the statutory militia of the United States.<sup>251</sup> On the other hand, the *Virginia Military Institute* case forbids women being excluded from state military service and training unless the exclusion has an “exceedingly persuasive justification.”<sup>252</sup> Moreover, posse members will be assisting state or federal law enforcement officers, and these days, many such officers are female. Given that women are universally recognized as capable of serving as sworn law enforcement officers, it seems difficult to argue that any inherent characteristics of women in general disable them from being able to participate in a posse. At the least, the authority of a twenty-first century American sheriff to choose to accept female volunteers in the *posse comitatus* seems incontestable. As for the number of persons which a sheriff or other authorized official may summon, the decision is entirely up to that officer.<sup>253</sup>

#### G. ARMS OF THE *POSSE COMITATUS*

Because the sheriff must keep the peace, it is axiomatic that he “may lawfully beare armour or weapons.”<sup>254</sup> Because the sheriff and his officers may lawfully bear armour or weapons, so may his *posse comitatus*.<sup>255</sup> Thus, persons summoned to the *posse comitatus* “may take with them such Weapons as shall be necessary to enable them effectually to do it . . . .”<sup>256</sup> The posse member must bring not only arms, but also whatever other instruments, such as automobiles, are necessary for service, as Justice

---

<sup>250</sup> See generally *Rostker v. Goldberg*, 453 U.S. 57 (1981) (upholding men-only draft registration as not violating the Equal Protection standards of the Fifth Amendment’s Due Process Clause).

<sup>251</sup> 10 U.S.C §§ 310–311 (2012).

<sup>252</sup> *United States v. Virginia*, 518 U.S. 515, 524 (1996) (citing *Mississippi Univ. for Women v. Hogan*, 458 U.S. 718, 724 (1982)).

<sup>253</sup> DALTON, *supra* note 23, at 136a–136b; LAMBARDE, *supra* note 152, at 233 (Book I, ch. 22) (“And it resteth in the discretion of the Justices [of the Peace] and Shirife or Undershirife how many, or, how fewe, they will have assist them . . . .”); PULTON, *supra* note 152, at 29a (“[S]aid Justices [of the Peace] and Shirife may take so many to assist them as they thinke good to arrest the offenders, and to cary them to the Gaole.”); WEBB, *supra* note 113, at 252 (“of such a Number in his Discretion shall appear necessary”). Dalton noted a case in which a sheriff’s bailiff in order to execute a replevy “tooke with him three hundred men armed (*modo guerino*) with Brigandines, Jacks, and Gunness, and it was holden lawfull.” DALTON, *supra* note 23, at 136b; DALTON, *supra* note 105, at 314. The case was cited by many subsequent commentators.

<sup>254</sup> Statute of Winchester, 1285, 13 Edw. 1, stat. 2; *Patton v. State*, 86 S.W.2d 774 (Tex. Crim. App. 1935); DALTON, *supra* note 105, at 31; see also WEBB, *supra* note 113, at 294 (“In the Execution of his Office he may arm himself, and his Assistants, with Arms offensive and defensive . . . .”).

<sup>255</sup> DALTON, *supra* note 23, at 14b.

<sup>256</sup> *Id.* at 136b; HAWKINS, *supra* note 150, at 161; see also CROMPTON, *supra* note 161, at 62.

Benjamin Cardozo explained in 1928.<sup>257</sup> However, the person who is summoning the posse has “discretion” as to “how many, or few, they have to attend them in their business, and in what form they shall be armed, weaponed, or otherwise furnished for it.”<sup>258</sup>

As will be detailed below, Colorado sheriffs’ policies for posse armament vary depending on the circumstances and the exigencies of the situation. Usually, Colorado posses are used in situations where advance planning and training are possible. Sometimes, the sheriff prefers that they not be armed, as when providing gate security at a county fair. Other sheriffs might allow posse members in such a situation to carry a handgun if the person has a concealed handgun carry permit; the posse member would simply carry whatever handgun he or she usually carries for lawful protection. At other times, posses are deployed in higher-risk environments. These trained members may be called upon, for example, to assist in the service of high-risk warrants, or in a hostage siege. For such posse members, the sheriffs’ policies may be prescriptive about particular arms to be carried. Finally, there are situations in which the citizens of a county may need to provide assistance on an ad hoc basis in an emergency, such as the manhunts for the escaped serial killer Ted Bundy or for the murderers of the Hinsdale County Sheriff.<sup>259</sup> Then, the citizens simply bring whatever arms they happen to own.

As a general policy, it is often best when posse members have the same types of firearms as those carried by a full-time certified sheriff’s deputy. Having similar arms means that in an emergency, the firearms, magazines, and ammunition are interchangeable. For example, if a deputy runs out of ammunition, a posse member can quickly provide a fresh magazine that will fit the deputy’s gun.

Broadly speaking, compatibility with American law enforcement firearms would mean the following:

- For handguns, a full-size (not compact or subcompact)<sup>260</sup> semiautomatic pistol in the calibers of 9mm, .40, or .45, made by a reputable manufacturer

---

<sup>257</sup> “A person, who, after having been lawfully commanded to aid an officer in arresting any person, or in re-taking any person who has escaped from legal custody, or in executing any legal process, willfully neglects or refuses to aid such officer is guilty of a misdemeanor.” *Babington v. Yellow Taxi Corp.*, 164 N.E. 726, 727 (N.Y. 1928) (citing Penal Law (Consol. Laws, c. 40) § 1848.).

<sup>258</sup> *DALTON*, *supra* note 23, at 136b; *DALTON*, *supra* note 105, at 101, 313.

<sup>259</sup> *See infra* Parts III.A.1 and III.A.2.

<sup>260</sup> For modern semiautomatic handguns, typical barrel lengths are about three inches up to five or six inches. Some grips can accommodate all four fingers, while some can only fit three fingers. The longer barrels and a full-hand grip would characterize a full-size handgun. A three-inch barrel for a three-finger grip would be a subcompact. The dividing lines between full, compact, and subcompact do not have formal definitions.

such as Smith & Wesson, Glock, or Ruger. Some sheriffs' offices may use a standardized .40 caliber only.

- The magazines for such firearms generally hold up to twenty or twenty-one rounds in 9mm, up to sixteen rounds in .40, and up to thirteen in .45 caliber. A sheriff's office may or may not allow the use of extenders to add one to three rounds of ammunition capacity.
- A person should carry at least two spare magazines.<sup>261</sup> For rifles, an AR-15 platform semiautomatic rifle in .223 or .308 caliber.
- For the rifle, a magazine of twenty or thirty rounds, although a few allow the choice of ten.
- For shotguns, a pump-action shotgun, most commonly the Remington 8700, at least two spare magazines of the same size.<sup>262</sup>

The above are not the firearms of tactical officers such as "SWAT" or "emergency services." These special teams often use machine guns, stun grenades, and the like. Rather, the aforesaid arms such as the 9mm handgun or the AR-15 rifle are the typical firearms of an ordinary deputy on road patrol, ready to face a wide variety of possible situations.

### III. COLORADO SHERIFFS AND THEIR POSSES

This Part describes the use of *posse comitatus* in modern Colorado. Most of the materials presented are based on interrogatory and document production discovery responses from sheriffs' offices in the case of *Colorado Outfitters Association et al. v. Hickenlooper*.<sup>263</sup> In that case, fifty-five of Colorado's sixty-two elected county sheriffs, as well as other plaintiffs, have filed a federal civil rights lawsuit against two gun bills passed by the Colorado legislature in March 2013. The plaintiffs contend

---

<sup>261</sup> Nationally, 100% of sheriffs' offices authorize sworn personnel to use a semiautomatic handgun as the primary duty sidearm; 22% allow the choice to use a revolver instead. For a backup weapon, the semiautomatic pistol is authorized by eighty percent, and the revolver by 52%. ANDREA M. BURCH, BUREAU OF JUSTICE STATISTICS, U.S. DEP'T OF JUSTICE, NO. NCJ 238558, SHERIFFS' OFFICES, 2007—STATISTICAL TABLES, 13 (2012) (Table 28).

<sup>262</sup> The above is based on the author's experience based on representing law enforcement and law enforcement training organizations in numerous cases, including as amici in *District of Columbia v. Heller* and *McDonald v. Chicago*, and on the author's participation as an instructor at the annual meetings of the International Law Enforcement Educators and Trainers Association (ILEETA). Information about modern American law enforcement choices for firearms can be found at the ILEETA website, <http://www.ileeta.org>, the website of the International Association of Law Enforcement Firearms Instructors, <http://www.ielefia.com>, the websites of the many state associations of law enforcement firearms instructors, and the products page of the law enforcement news website PoliceOne.com, <http://www.policeone.com/police-products/firearms/>.

<sup>263</sup> See text accompanying notes 284–318.

that the bills violate the Second Amendment, the Fourteenth Amendment, and the Americans with Disabilities Act.<sup>264</sup> I am the attorney for the fifty-five sheriff plaintiffs and for one retired police officer.<sup>265</sup>

This Part first provides the definitions and legal standards for various types of peace officers in Colorado. Section A then details some modern uses of the *posse comitatus* in Colorado during crime emergencies. The remainder of Part III describes a relatively new development in the *posse comitatus*: sheriffs using a posse of trained volunteers on a regular basis. Section B briefly describes volunteer posse use for routine non-crime situations, such as providing security at a parade or fair. Section C summarizes how Colorado sheriffs use their trained posses for violent crime control. Finally, Section D describes a civic organization called the Colorado Mounted Rangers, whose members train to high standards, and who make themselves available as *posse comitatus* to the twenty-eight law enforcement agencies with whom they have memoranda of understanding. Sheriffs and other chief law enforcement officers call out the Colorado Mounted Rangers during fire emergencies and in many other situations.

Let us begin by describing some terms for persons who serve Colorado in law enforcement. Most states have analogous statutes or rules. A “certified” or “sworn” officer is a person who has completed a certain number of hours of training pursuant to the statewide standards for Peace Officer Standards and Training (POST). The training may be provided by law enforcement offices themselves, by community colleges, or by some other institution. A person who has completed the course of instruction and passed a test thereon is eligible to be hired as a full-time certified peace officer. A person who completes a shorter course of training is eligible to be a “reserve” officer. Reserve officers typically serve as volunteers for a local law enforcement agency and are called to duty as necessary. Reserve officers are “peace officers” for all legal purposes in Colorado.<sup>266</sup>

---

<sup>264</sup> Plaintiff’s Trial Brief at Civil Action No. 13-CV-1300-MSK-MJW, *Colorado Outfitters Ass’n. v. Hickenlooper*, (D. Colo. Mar. 14, 2014), available at <http://coloradoguncase.org/Colorado-Outfitters-plaintiffs-pretrial-brief.pdf>, archived at <http://perma.cc/7U7E-HBT7>.

<sup>265</sup> The major filings in the case are available at <http://www.ColoradoGunCase.org>. A nine day trial in the case concluded on April 9, 2013, and District Judge Marcia S. Krieger ruled against the plaintiffs on June 26, 2014. In November 2012, the District Court had ruled that the “political subdivision doctrine” precludes standing for the sheriffs in their official capacities. The court allowed eleven sheriffs who will be retiring in January 2015 to join the suit in their individual capacities as American citizens. The case is presently on appeal to the Tenth Circuit, including on the sheriff standing issues.

<sup>266</sup> COLO. REV. STAT. §§ 24-31-301, 24-31-305 (2013). The minimum number of required hours for full Peace Officer Standards and Training certification in Colorado is 540; however, all the programs include many more hours than that. For the reserves, a minimum

By the practices of all Colorado sheriffs' offices, every full-time deputy who is engaged in dealing with the general public (e.g., road patrol, detective work, undercover) will be a POST-certified officer who has passed a 1,500-hour course. These full-time employees may sometimes be supplemented by volunteer reserve officers. By Colorado statute (and by common law), sheriffs have the authority to hire and fire whomever they like, and to summon posses.<sup>267</sup> Unlike in a municipal police department, sheriffs' deputies are not part of the civil service and do not engage in collective bargaining.

Based on available manpower, sometime sheriffs hire "noncertified" full-time deputies for more limited roles. The most common such role is being a jail deputy ("detention deputy").<sup>268</sup> Other duties include providing security at courts and for the transport of prisoners, and in special situations, such as guarding a trial witness or a victim who has received death threats.

Not all jail deputies carry firearms, while deputies in these other roles typically do. Any deputy (whether certified or noncertified) who carries a firearm must periodically "qualify" with the firearm. That is, the deputy must pass a firearms shooting proficiency test. All offices require qualification before first using a gun; some offices require requalification annually and others require it several times a year. The particular form of the shooting qualification test and the required score are determined by the sheriff or by a deputy to whom he or she delegates the standard-setting. Some offices provide noncertified deputies with firearms; some offices allow or require deputies to provide their own firearms. Some offices have rules that allow noncertified deputies to carry guns depending on the deputy's experience or other factors.

At least seventeen county sheriffs' offices have organized posses, composed of citizen volunteers.<sup>269</sup> Some posse members are certified reserve peace officers, but most are not. All posse members are trained by

---

of 253 hours of training is required. Telephone conversation with Sarah J. Bouma, Operations Assistant, Independence Institute, and Lori Jencks, Administrative Assistant for Colorado POST (June 11, 2014).

<sup>267</sup> COLO. REV. STAT. §§ 16-2.5-103(2), 30-10-506 (2013).

<sup>268</sup> *See, e.g.*, Pl.'s Resp. to Def.'s Interrog. No. 4 (James L. Beicker, Sheriff of Fremont County).

<sup>269</sup> Counties with posses include Adams, Alamosa, Baca, Custer, Grand, Hinsdale, Larimer, Lincoln, Logan, Mesa, Montezuma, Montrose, Morgan, Prowers, Rio Blanco, Teller, and Weld. *See* Section A, *infra*. Of these, the most populous are Adams County (460,000), Larimer County (310,000), Weld County (264,000), and Mesa County (148,000). These four counties comprise over one-fifth of the Colorado population. *State & County Quick Facts, Colorado*, U.S. CENSUS BUREAU (Mar. 27, 2014), <http://quickfacts.census.gov/qfd/states/08000.html>, archived at <http://perma.cc/B7XJ-Q8J9>.

the sheriff's office and are required to follow regulations promulgated by the sheriff. Posses perform a wide range of duties based on the determination of the sheriff. For posse members who are allowed to carry firearms, they are almost always required to pass the same firearms qualification as full-time deputies, and they have usually been given firearms training by the sheriff's office.

The organized and trained posse is an important development in the story of the *posse comitatus*. A sheriff's *posse comitatus* authority, from Anglo-Saxon England to the modern United States, includes the authority to summon all able-bodied men. In modern Colorado, sheriffs have used only volunteers for their posses. Further, while there have sometimes been emergencies when a brand new posse is assembled (e.g., the incidents in Pitkin County, Hinsdale County, and Rio Blanco County<sup>270</sup>), the more common practice is that the posse volunteers are a particular group of individuals who have volunteered and undergone training and now assist the sheriff's office in a wide variety of ways. The need for assistance is sometimes known in advance (e.g., gate security at the county fair), or it may arise suddenly (e.g., a hostage situation or a wildfire). Regardless, the possemen and possewomen who assist in such situations are people who have previously come forward to volunteer for long-term service in the posse and who have received training appropriate for their duties.

Universally, the only rifle or handgun ammunition allowed is jacketed hollowpoint cartridges. The copper jacket surrounding a lead bullet reduces lead fouling in the firearm, and thereby reduces the risk of misfeeds or malfunctions. Hollowpoint bullets are designed to open up when they impact the target. This substantially reduces the risk that the bullet might overpenetrate (exit the target) and thereby endanger an innocent bystander. Because hollowpoints do not exit the target, all their kinetic energy is expended in the target. This significantly increase the possibility of delivering a "fight-stopping hit" that makes the target unable to inflict injury on whomever is being threatened.<sup>271</sup>

As will be described below, in addition to the posses organized by a particular sheriff's office, there is a statewide civic organization called the Colorado Mounted Rangers. The Rangers are ordinary citizens who train themselves to very high standards (in accordance with the POST curriculum). They have memoranda of understanding to provide aid to local law enforcement agencies upon request; that aid may include

---

<sup>270</sup> See *infra* text accompanying notes 272–86.

<sup>271</sup> Joshua F. Berry, *Hollow Point Bullets: How History Has Hijacked Their Use in Combat and Why It Is Time to Reexamine the 1899 Hague Declaration Concerning Expanding Bullets*, 206 MIL. L. REV. 88, 137–42 (2010).

everything from crowd management at a parade to backcountry search and rescue. Many but not all of the Rangers are armed. They carry the same handguns and rifles as described in the preceding paragraphs.

Finally, there are sometimes situations in which the sheriffs need to call upon the armed assistance of whatever armed citizens may be available in an emergency. Such situations range from manhunts to securing a burglarized building to deterring looting after a natural disaster. Specific details of all the above situations are described in the next Section.

#### A. POSSE COMITATUS IN CRIME EMERGENCIES

##### 1. Pitkin Sheriff's Office

Ted Bundy was perhaps the most notorious serial killer in American history. Before his execution in 1989, he confessed to thirty murders, which were often accompanied by rape and torture of the victims.<sup>272</sup> On June 6, 1977, Bundy jumped out a courthouse window during a break in a preliminary hearing at a state court in Aspen, Colorado.<sup>273</sup> A posse was immediately assembled. As one author observed, “[t]he men who tracked Ted Bundy looked like something out of a Charles Russell or Frederick Remington painting, garbed in Stetsons, deer-skin vests, jeans, cowboy boots, and carrying sidearms. They could have been possemen of a century earlier, looking for Billy the Kid or the James boys.”<sup>274</sup> Some “[p]ossemen in high-country rigs and on horseback started up the mountain roads around Aspen that afternoon . . . .”<sup>275</sup> Other “deputies and volunteers made a house-by-house search” through Aspen.<sup>276</sup> By June 10, the FBI had joined the manhunt. The number of other searchers (certified law enforcement plus the posse) had declined from 150 to 70, given the feeling that Bundy was by then long gone from Pitkin County.<sup>277</sup>

Bundy, in the meantime, had broken into a mountain cabin in Castle Creek (just south of Aspen), and stolen some clothing and provisions.<sup>278</sup> His effort to head south to get to U.S. Highway 50 was cut off by the snowpack that remained in the high mountains even in the late spring. On June 10, he headed back to the Castle Creek cabin, but saw that the posse

---

<sup>272</sup> This is the one incident in Part III for which the information was not produced as a result of sheriff responses to discovery in the Colorado sheriffs’ case. The Pitkin County Sheriff is one of seven elected Colorado sheriffs who did not file suit as a plaintiff.

<sup>275</sup> LARSEN, *supra* note 273, at 182.

<sup>276</sup> RULE, *supra* note 274, at 219.

<sup>277</sup> *Id.* at 220.

<sup>278</sup> *Id.* at 221.

was already there.<sup>279</sup> He snuck away, hungry and exhausted, suffering from the broken ankle that had resulted from his jump out of the courthouse window.<sup>280</sup> After a night in the cold wilderness, Bundy found a Cadillac with the keys in the ignition. By 2 A.M. on June 13, he was driving down Colorado Highway 82 on his way to Interstate 70, and from there, to a completed escape.<sup>281</sup> But he was so exhausted he drove poorly, weaving around the road. Some deputies on road patrol stopped the apparently drunk driver and immediately recognized that they had just apprehended Ted Bundy.<sup>282</sup>

A return to the Castle Creek cabin with its food and shelter would have restored some of Bundy's energy, perhaps sufficiently so that he would have been able to drive the stolen car without attracting attention to himself. Had he made good on the final step of his escape, more young women would very likely have been the next victims of the serial killer. Bundy escaped again on December 30, 1977, and he was not recaptured until February 12, 1978, in Pensacola, Florida. In the interim, he had murdered three women. Thus, the posse's success in thwarting his June 1977 escape very likely saved innocent lives.

## 2. Hinsdale Sheriff's Office

Hinsdale County is the most remote county in the lower forty-eight states and "contains some of the most rugged mountains in Colorado."<sup>283</sup> As detailed *infra*, the Hinsdale County Sheriff's Office has a regular posse with trained volunteers. But on one occasion, a much larger posse was needed. Hinsdale Sheriff Ron Bruce described the events in that county of November 1994 in a series of answers to interrogatories.<sup>284</sup>

In 1994, Hinsdale Sheriff Roger Coursey was short-staffed. In fact, he was the office's only law enforcement officer. Not long before, there had been much upheaval in the Sheriff's Office, with the former sheriff and undersheriff having been indicted by the U.S. Attorney for illegal electronic surveillance. The Board of County Commissioners appointed Deputy Roger Coursey Sheriff in August 1994. He was elected to a four-year term that November.

<sup>283</sup> John Duer Irving & Howard Bancroft, *Geology and Ore Deposits near Lake City, Colo.*, U.S. GEOLOGICAL SURVEY BULLETIN 478, at 10 (D.C.: G.P.O. 1911).

<sup>284</sup> All information in Subsection 2 is taken from Pl.'s Resp. to Def.'s Interrog. (Ron Bruce, Sheriff of Hinsdale County).

Sheriff Coursey reached out for the best help he could find in the most thinly populated county in Colorado. Ray Blaum was a retired Air Force Lieutenant Colonel and was willing to serve. Mr. Blaum was appointed Undersheriff and became a salaried employee of the Hinsdale County Sheriff's Office. Mr. Blaum was not POST-certified. For a duty sidearm, Mr. Blaum used a Beretta semiautomatic pistol, which he already personally owned.

At about 5:35 A.M. on the morning of November 18, 1994, the Sheriff's Office received a phone call from the Mineral County Sheriff's Office: there had been an attempt to break into a bank in Creede. The bank manager had observed a light colored pick-up truck with a camper shell fleeing north on Highway 149, towards Lake City, the only incorporated municipality in Hinsdale County. Sheriff Coursey and Undersheriff Blaum got into their respective patrol cars and drove to Highway 149. The robbers' vehicle was stopped shortly before 5:50 A.M. near Highway 149, in the driveway of the Alferd Packer Massacre Site.

Sheriff Coursey and Undersheriff Blaum took positions outside the robbers' vehicle. They ordered the suspects (one male and one female) to exit the vehicle. The male suspect fired one shot with a .44 revolver, killing Sheriff Coursey nearly instantly. As the vehicle fled, Undersheriff Blaum emptied the thirteen rounds of his Beretta semiautomatic towards the vehicle. Apparently he had loaded the Beretta with a short stack. Instead of having the full capacity of seventeen rounds in the magazine, plus one in the firing chamber, the gun had only twelve rounds in the magazine plus one in the chamber.

In a report immediately thereafter, Undersheriff Blaum described his shots as having "no apparent effect." In fact, all thirteen shots hit the truck. Most of the shots were absorbed by the camper shell, protecting the suspects inside the cab. But at least one shot hit a tire. The truck was abandoned within a couple miles of the scene of the crime.

The trail of the suspects' footprints in the snow, leading away from the truck, ran out after four and one-half miles when it intersected a dirt road. Bloodhounds attempted to follow the scent, but never succeeded. During the manhunt for two suspects, over one hundred local citizens were sworn in to assist the approximately two hundred law enforcement officers in conducting the search. Regarding the latter, Gunnison County Sheriff Rick Murdie and Gunnison Chief of Police Stu Ferguson were a significant help.

During this time, almost everyone in Lake City was carrying one kind of gun or another and usually more than one. Several hundred buildings and the surrounding land mass was searched without any report of a single shot being fired. There is no information on the firearms and magazines since they ran the gamut of nearly everything available at the time.

After the manhunt had gone on for a month, on December 17, 1994, the suspects were both found dead not far from their abandoned truck. They had killed themselves not long after the crime, when they failed their attempt to climb the treacherously steep mountain. Their bodies were concealed underneath the low branches of a tree. Given the location of the bodies, the suspects had likely seen that the manhunt was in progress. Undersheriff Blaum's shot to the tire had ended the suspects' multistate crime spree, which had begun in Provo, Utah, on June 21. The murderer, Mark Allen Vredenburg, had been a career criminal; his accomplice, Ruth Slater, an extreme alcoholic and abuser of prescription drugs. Vredenburg had used the revolver to kill Ruth Slater and then himself.<sup>285</sup>

The large citizens' posse aided in preventing the murderers from escaping. Given that there were two people at large who were apparently ready to kill, it would have been foolish for individuals to go out on a manhunt alone or even in pairs. The searchers had to operate in groups, so the armed citizen volunteers significantly increased the number of groups that could be in the field.

We will never know exactly how the killers perceived their tactical situation at the end, but it is reasonable to infer that the presence of so many groups of armed searchers in the field made it clear to the killers that there was no possibility of sneaking out through any accessible path, and no possibility of shooting their way past so many armed people. Accordingly, the killers determined that their only possibility of escape was to climb a very steep mountain under difficult winter conditions. When this proved impossible, the killers committed suicide.

### 3. Rio Blanco Sheriff's Office

Sheriff Si Woodruff recounted Rio Blanco County's experience with posse use.<sup>286</sup> On September 8, 2003, two men in a stolen car fled on foot from a traffic stop. The Sheriff deputized two individuals to assist the nighttime manhunt, allowing the deputies to get some rest. The posse members were previously known to the Sheriff's Office as very experienced

---

<sup>285</sup> Newspaper articles about the events include: Michael Booth, *Sheriff's Killers Left Note*, DENVER POST, Dec. 23, 1994, at 1B; Charlie Brennan, *Pair Sought in Slaying of Sheriff*, ROCKY MOUNTAIN NEWS, Nov. 19, 1994, at 6A; *Colorado Sheriff Killed in Pursuit*, FRESNO BEE, Nov. 20, 1994; Fawn Germer, *Grisly Discovery Lifts Burden*, ROCKY MOUNTAIN NEWS, Dec. 19, 1994, at 5A; Greg Lopez, *The New Sheriff*, ROCKY MOUNTAIN NEWS, Dec. 11, 1994, at 16A; *Mountain Avenges Sheriff*, NEW ORLEANS TIMES PICAYUNE, Dec. 20, 1994; Marilyn Robinson et al., *Sheriff's Killers Hunted*, DENVER POST, Nov. 19, 1994, at 1A; Tracy Seipel, *Dogs Sniffed out Suspects*, DENVER POST, Dec. 19, 1994, at 1A.

<sup>286</sup> All information in Subsection 3 is taken from Pl.'s Resp. to Def.'s Interrog. No. 3 (Si Woodruff, Sheriff of Rio Blanco County).

pistol and rifle shooters. They had had Glock .40 handguns, AR-15 rifles, shotguns, and perhaps other arms. They joined the Sheriff's Office in an Office vehicle, assisting with patrol of the highway and operating the thermal vision camera. Both suspects were apprehended with no shots fired.

#### 4. Jackson Sheriff's Office

Sheriff Scott Fischer reported that an armed posse was used after a jailbreak in September of 2003 or 2004, where the inmate fled to the town limits of Walden.<sup>287</sup>

#### 5. Larimer Sheriff's Office

Erik Nilsson, presently an employee of the Sheriff's Office, recalled being deputized for *posse comitatus* service following the July 31, 1976, Big Thompson River flood.<sup>288</sup> At the time, Mr. Nilsson was a civilian member of the Larimer County Mountain Rescue Team. On August 4, 1976, he was transported by helicopter to the small town of Drake, which is located in a canyon. He acted as a visible law enforcement presence to maintain order and deter looting, and carried a loaded firearm.

In late June and early July 2012, during the High Park fire, Sheriff Justin Smith was prepared to use *posse comitatus* to provide armed security in evacuated areas, because the Colorado National Guard had to demobilize before the fire was fully contained. However, the weather changed quickly and the fire was contained before armed citizens were necessary.

During the September 2013 floods and aftermath, Sheriff Smith exercised *posse comitatus* authority on three occasions. On September 14, he deputized members of the Glenhaven Volunteer Fire Department to provide protection to the firefighters or the citizens of that community. On September 18, he deputized fire department personnel present in the Storm Mountain community above Drake. Later that day, he deputized a citizen who was assisting a Colorado State Trooper (who was a trapped resident of the neighborhood).

The *posse comitatus* deputizations were used because of concerns about the risk of looting and other disorder. The *posse comitatus* members had full authority to carry firearms in the performance of those duties as they saw necessary.

---

<sup>287</sup> Pl.'s Resp. to Def.'s Interrog. (Scott Fisher, Sheriff of Jackson County).

<sup>288</sup> All information in Subsection 5 is taken from Pl.'s Resp. to Def.'s Interrog. (Justin Smith, Sheriff of Larimer County).

### 6. Morgan Sheriff's Office

Sheriff Jim Crone recalled that when he was a deputy:

I was involved in a specific incident in March of 1985 where I was in pursuit of a stolen vehicle from Texas. The vehicle left the roadway and went cross-county into Adams County, and we were unable to pursue due to having no four-wheel drive vehicles. A local rancher offered himself and his pickup so he and I could follow the vehicle's tracks through the snow (in the middle of a blizzard at night). Locating the pickup, the rancher pursued it back into Morgan County.

We went across country for several minutes and went back into Adams County. After the stolen pickup rammed us and I fired a shot into the front of the pickup, it stopped shortly thereafter. I gave the rancher my shotgun and had him cover me while I arrested both occupants of the pickup. The rancher fired no shots but stood armed, in view of the suspects, as my backup. I made the arrests alone in a remote area in which road signs were covered with snow and my radio could not reach out to the other cars looking for us.<sup>289</sup>

While citizen assistance in chases of suspects is rare, Sheriff Crone also noted the more common scenarios in which armed citizens,

usually local farmers or ranchers, back us [sheriffs] up when involved with a combative suspect, a felony stop, or a crime in progress. In these instances, the citizens had told us they had ready access to a firearm (inside the house, vehicle, or on their person), if so needed.

When searching a private residence or a business where a burglar alarm has gone off, I have had instances where an armed home/business/property owner has accompanied me while armed with a handgun, when I had no backup close at hand.

So when Sheriff Crone is the only law enforcement officer at crime scenes and has to clear a building, not knowing whether he will encounter violent criminals waiting to ambush him, he has been backed up by citizens armed with their personal handguns.

### B. POSSE COMITATUS IN LOW-RISK SITUATIONS

The posse of the Weld County Sheriff's Office is divided into various classes, depending on whether the posse member is a POST-certified Reserve officer, and on whether the posse member can provide his or her own horse.<sup>290</sup>

The large majority of posse members who are not POST-certified do not carry firearms while on duty, although there is a "Special Deputy"

---

<sup>289</sup> All information in Subsection 6 is taken from Pl.'s Resp. to Def.'s Interrog. No. 3 (Jim Crone, Sheriff of Morgan County).

<sup>290</sup> Pl.'s Resp. to Def.'s Interrog. No. 3 (John Cooke, Sheriff of Weld County).

program to allow a few of them to do so.<sup>291</sup> The situations in which the unarmed posse members assist the sheriff's office include:

The Greeley Independence Stampede, The Farm Show, The County Fair, and The Cattle Baron's Ball. Other miscellaneous events they assist with include United Way events, Pheasants Forever, sporting events, UNC Graduation, Rocky Mountain Senior Games, community celebrations, assisting other agencies when needed, Ducks Unlimited, election security, school events, Law Enforcement and Military memorial ceremonies, National Drug Take Back day, children's safety events, and Santa Cops.<sup>292</sup>

These events are typical of the event security provided by posse members throughout Colorado.

### C. TRAINED *POSSE COMITATUS* IN FORCIBLE LAW ENFORCEMENT SITUATIONS

Below are descriptions of how some sheriffs' offices have used or considered using armed posses on a regular basis.

#### 1. Alamosa County Sheriff's Office

Posse members assist the day-to-day operation of the Alamosa County Sheriff's Office.<sup>293</sup> After training provided by the office and after passing a qualification test, posse members are required to carry firearms. Posse members provide their own firearms.

#### 2. Baca County Sheriff's Office

The posse is typically comprised of twelve-to-twenty volunteer members, and, at the time of answering the interrogatories, had fifteen members.<sup>294</sup>

The Baca County Sheriff's Posse's primary purpose is to support the Baca County Sheriff's Office during large public events, natural disasters, and incidents where the Baca County Sheriff's Office alone may be unable to provide the level of security or safety the public requires. The Baca County Posse most frequently assists in yearly road closures for winter storms requiring manned road closures and during road closures due to large-scale fires. During these events, their goal is to keep the public out of the area and provide scene security . . . . Posse members are required to be armed, and they provide their own firearms.

---

<sup>292</sup> Pl.'s Resp. to Def.'s Interrog. No. 3 (John Cooke, Sheriff of Weld County).

<sup>293</sup> All information in Subsection 1 is taken from Pl.'s Resp. to Def.'s Interrog. No. 4 (Dave Stong, Sheriff of Alamosa County).

<sup>294</sup> All information in Subsection 2 is taken from Pl.'s Resp. to Def.'s Interrog. No. 3 (Dave Campbell, Sheriff of Baca County).

### 3. Custer County Sheriff's Office

The Custer County Sheriff's Office posse was established April 2, 2003. "The posse assists with parades, traffic control, crowd control, road closures, searches, inmate transfers and detention detail."<sup>295</sup> It has also assisted with searches for escaped inmates, fugitives, or missing persons; with watching inmates; in searches and in the service of search warrants; in a hostage situation; in drug surveillance of a house; and in guarding the home of a teacher who had received death threats. There is a limit of forty members, and currently twenty-five are certified to carry handguns, while sixteen are additionally certified to carry shotguns. Posse members receive firearms training from the Custer County Sheriff's Office; they are not required to be POST-certified.

### 4. Delta County Sheriff's Office

"After the 9-11 terrorist attacks [the Delta County Sheriff's Office] considered deputizing non certified personnel to provide security for infrastructure in our county, mines, railroad, dams, etc." This was not acted upon.<sup>296</sup>

### 5. Douglas County Sheriff's Office

As of 1975, the office had a posse and a special deputies program.<sup>297</sup> Members would provide backup on a call when needed (especially at night); assist with search and rescue (notably, on horseback in the mountains); or provide security at events. They provided their own firearms, vehicles, horses, and so on. The most common firearms were .38 or .357 revolvers. The programs were dissolved during the administration of Sheriff Zotos (1983–2002).

### 6. Elbert County Sheriff's Office

The posse was removed by the previous Sheriff of Elbert County and has been restored by the current Sheriff.<sup>298</sup> Posse members serve as a force multiplier for the Office.<sup>299</sup> For example, they have guarded the scenes of the small plane crashes.<sup>300</sup> At present, the posse has been trained and

<sup>300</sup> *Id.* at 102:6–16.

qualified in the Office's use of force practices for everything except firearms. The Sheriff expects to issue new policies providing for the training, qualification, and use of firearms by the posse.<sup>301</sup>

#### *7. Hinsdale County Sheriff's Office*

Currently, the Hinsdale County Sheriff's Office receives armed volunteer services from six men who are not POST-certified. Two of them are retired Air Force Colonels.<sup>302</sup> The volunteers get the same in-house training as do the sworn office staff. All of the Hinsdale County Sheriff's Office volunteers are encouraged to carry a firearm when in the field; they are required to have completed a concealed handgun permit class and qualification. Some Hinsdale volunteers have been issued patrol carbines with either a thirty or sixty round magazine; sometimes "they have provided their own carbine with the same capacity magazines." The Office trains "with standard capacity magazines for our carbines and select-fire firearms, up to and including sixty-round magazines." "Most [non-sworn staff] also personally own such firearms, including select-fire firearms (BATFE licensed)."

#### *8. Kiowa County Sheriff's Office*

The Kiowa County Sheriff's posse is used for search and rescue, traffic control, and to man road closure sites.<sup>303</sup>

#### *9. Lincoln County Sheriff's Office*

The Lincoln County Sheriff started a posse in 2007 for events, evidence searches, and missing person searches.<sup>304</sup> There are currently twenty members. The posse has also been deployed for gate security at the annual Lincoln County Fair. Posse members are authorized for ride-alongs with certified deputies. Posse members are allowed, but not required, to carry a handgun (of the same types authorized for sworn deputies) if the posse member has been through concealed carry training. Additional training for them is available through a simulator.

<sup>301</sup> *Id.* at 97:8–101:22

<sup>302</sup> All information in Subsection 7 is taken from Pl.'s Resp. to Def.'s Interrog. No. 4 (Ron Bruce, Sheriff of Hinsdale County).

<sup>303</sup> Pl.'s Resp. to Def.'s Interrog. No. 3 (Forest Frazee, Sheriff of Kiowa County).

<sup>304</sup> All information in Subsection 9 is taken from Pl.'s Resp. to Def.'s Interrog. No. 3 (Tom Nestor, Sheriff of Lincoln County).

*10. Logan County Sheriff's Office*

Created in approximately 1960, the Logan County Sheriff's posse currently has fifteen members.<sup>305</sup> The posse's duties are to perform "security for local sports activities, county fair, occasional medical security on an inmate, or any other duties assigned to them by the sheriff. They are required to go through firearms training and qualify quarterly." The current captain is a certified peace officer who is not an employee of the county.

*11. Montezuma County Sheriff's Office*

Created in 1968, the Montezuma Sheriff's posse currently has twenty-nine members and assists the office with law enforcement and search and rescue missions.<sup>306</sup> They also provide security for community events, guard crime scenes, and have also assisted with court security and the transportation of inmates. Posse members may carry a firearm as permitted or required by the sheriff. Each posse member must complete a mandatory basic firearms training course and a qualification test. They furnish their own firearms in accordance with office standards.<sup>307</sup>

*12. Morgan County Sheriff's Office*

At present, the posse has one member, who does not carry a firearm. He assists deputies directing traffic at accident scenes, handcuffing a suspect when ordered by a deputy, and so on. The Sheriff is in the early stages of creating a new policy which would enlarge the posse and would allow posse members to carry arms.<sup>308</sup>

*13. Prowers County Sheriff's Office*

The posse has fifteen members, four of whom are certified reserve peace officers, and eleven of whom are noncertified members.<sup>309</sup> Posse members may be issued a Glock .40 handgun.<sup>310</sup>

**D. THE COLORADO MOUNTED RANGERS**

Some armed citizens have long-running close relationships with the sheriffs to provide aid. One such group is the Colorado Mounted Rangers

<sup>307</sup> Pl.'s Resp. to Def.'s Interrog. No. 3 (Dennis Spruell, Sheriff of Montezuma County).

<sup>308</sup> Pl.'s Resp. to Def.'s Interrog. No. 4 (Jim Crone, Sheriff of Morgan County).

<sup>309</sup> Pl.'s Resp. to Def.'s Interrog. No. 4 (Jim Faull, Sheriff of Prowers County).

<sup>310</sup> *Id.*

(also known as the Colorado Rangers).<sup>311</sup> The Colorado Mounted Rangers were founded in 1861 and for many decades were the only statewide law enforcement organization.<sup>312</sup> They were recently recognized by state statute.<sup>313</sup>

The Colorado Mounted Rangers provide approximately 50,000 hours of community service during a typical year. This amounts to a contribution of over \$2 million of law enforcement resources, at no cost to the taxpayer. They are an unpaid, volunteer organization.<sup>314</sup> The Colorado Mounted Rangers currently have Memoranda of Understanding to provide support to numerous law enforcement agencies in Colorado.<sup>315</sup>

One of the important posse roles of the Colorado Mounted Rangers is aiding law enforcement officers during forest wildfires. For example, in the summer of 2013, the Colorado Mounted Rangers provided forest roadblock support for the Douglas and Jefferson County Sheriffs' Offices during the Lime Gulch Fire.<sup>316</sup> Likewise, in Fremont County, the Rangers have been used during four wildfires in the last decade to close roads and maintain roadblocks.<sup>317</sup>

<sup>316</sup> Pl.'s Resp. to Def.'s Interrog. No. 6 (David Weaver, Sheriff of Douglas County).

<sup>317</sup> Fremont County Sheriff James L. Beicker stated:

Since January 1, 2004 I have requested the assistance of the Colorado Mounted Rangers "J Troop." The majority of these individuals are not POST certified peace officers, but my understanding is that a few members of their organization are.

I have used their assistance on four wildfires in my county: Duckett Fire/ Park Fire/ Wetmore Fire/ Royal Gorge Fire. On these incidents they were assigned to road closures, manning road blocks for evacuated areas.

They were allowed, but not required to carry firearms for this duty. I have no documented evidence of who did carry or did not carry during these events.

The Fremont County Sheriff's Office has also utilized the J Troop Rangers for some

The Rangers go deep into Colorado's twenty-four million acres of forest for fires, for search and rescue, and for other law enforcement tasks, where they are at risk of bear, mountain lion, and coyote attacks, and other extremely dangerous conditions. Often, the Rangers are beyond any radio communication; their patrol rifle is their only protection.

The Rangers' firearm training is a modified version of the Colorado State Patrol Academy course. Many of the Colorado Mounted Rangers, and especially the female Rangers, carry the Glock 17 or Springfield Armory XD 9mm pistols.<sup>318</sup> As in most sheriffs' offices, the AR-15 type carbine with several magazines of thirty rounds is the standard patrol rifle for the Colorado Mounted Rangers.

#### IV. *POSSE COMITATUS*: THE RIGHT—AND DUTY—TO KEEP AND BEAR ARMS

*Posse comitatus* is expressly part of the Constitution of Puerto Rico,<sup>319</sup> and understanding the *posse comitatus* aids in understanding the constitutions of the fifty states and of the federal government. To most Americans of the nineteenth century, the Second Amendment had been easy to understand: a right of everyone to possess and carry arms, including firearms.<sup>320</sup> The protection of that right ensured that there would be an

---

annual community events . . . .

Pl.'s Resp. to Def.'s Interrog. No. 6 (James L. Beicker, Sheriff of Fremont County).

<sup>318</sup> The Glock and Springfield 9mm handguns are very controllable for persons with smaller bodies. Most female Rangers strongly prefer these handguns. They have less recoil than larger-caliber handguns, and are thus easier for them to shoot accurately. Because the 9mm cartridge is less powerful than larger calibers, greater magazine capacity is particularly important. The Glock 17 has a standard seventeen-round magazine, while Springfields have standard magazines of sixteen or more rounds.

Many certified law enforcement officers, including certified deputies, also carry the Glock 17 9mm pistol. Commonality of arms among full-time law enforcement officers and posse volunteers makes everyone safer, allowing interchangeability of magazines in a critical incident. Transcript of Record at 861–64, *Colo. Outfitters Ass'n v. Hickenlooper*, No. 13-CV-1300-MSK-MJW (D. Colo. argued Apr. 3, 2014); Plaintiff's Response Brief to Defendant's Motion to Dismiss at 33–34, *Cooke v. Hickenlooper* (D. Colo. filed Aug. 22, 2013).

<sup>319</sup> CONST. P.R. art. IV, § 4 (explaining that governor may “call out the militia and summon the posse comitatus in order to prevent or suppress rebellion, invasion or any serious disturbance of the public peace”); *see also* HAWAIIAN ORGANIC ACT OF 1900, § 67 (Among the powers of the Territorial Governor are that “whenever it becomes necessary he may call upon the commanders of the military and naval forces of the United States in the Territory of Hawaii, or summon the posse comitatus, or call out the militia of the Territory to prevent or suppress lawless violence, invasion, insurrection, or rebellion in said Territory . . .”). 31 STAT. 153 (1900), 48 U. S. C. § 532 (1940).

<sup>320</sup> *See* David B. Kopel, *The Second Amendment in the Nineteenth Century*, 1998 BYU L. REV. 1359.

armed people from whom a well-regulated militia could be drawn when necessary.<sup>321</sup> The Supreme Court's decision in *District of Columbia v. Heller*<sup>322</sup> accurately followed that understanding.

However, for several decades in the latter twentieth century, and a few years in the early twenty-first century, there was confusion about the meaning of the Second Amendment. Various theories were invented for the purpose of negating the individual right. A 1905 decision by the Kansas Supreme Court interpreted the right to arms in the Kansas State Constitution Bill of Rights as merely affirming the state government's own power over the militia.<sup>323</sup> In dicta, the Kansas court said that the Second Amendment meant the same thing.<sup>324</sup> This was the beginning of the "states' right" theory of the Second Amendment.<sup>325</sup> In 1968, the New Jersey Supreme Court announced that the Second Amendment was a "collective right."<sup>326</sup> The right belonged to all the people collectively, but could never be asserted by any individual.

In 1989, Dennis Henigan, an attorney for Handgun Control, Inc., invented the "narrow individual right" theory of the Second Amendment.<sup>327</sup> Historian Saul Cornell later elaborated on the theory.<sup>328</sup> Under the "narrow individual right," the Second Amendment is an individual right, but solely for the purpose of militia service. If a person is not the militia, the person has no right to arms.

The *Heller* Court unanimously rejected the "states' right" and "collective right" theories which had been dominant in the lower federal courts in the latter part of the twentieth century. The Court split five-to-four between the standard model of the Second Amendment (the Scalia majority) and the Henigan–Cornell narrow individual right (the Stevens dissent).<sup>329</sup> The *Heller* Court correctly viewed the Second Amendment in

<sup>329</sup> *District of Columbia v. Heller*, 554 U.S. 570 (2008); *id.* at 636 (Stevens, J.,

the context of Anglo-American common law and of American state constitutions. As *Heller* recognized, keeping and bearing arms is a right (as protected by the Second Amendment, and its state and common law analogues), and it can be a duty (as in Congress's powers in Article I, Section 8, cl. 15–16 to call forth the militia, and to provide for militia training and armament, and in the militia powers of state governments).<sup>330</sup>

The story of the *posse comitatus* in this Article provides additional perspective on the dual nature of the right/duty to keep and bear arms. Arguments about the duty side of original meaning of the body of the Constitution and its Amendments have focused exclusively on arms bearing in the militia. This is incomplete. As detailed in Part II, the Constitution also gave the new federal government *posse comitatus* power.

Historically, the *posse comitatus* is broader than the militia in membership. When the state carries out its duties of training the militia, the militia is an organized body. The *posse comitatus*, however, is often ad hoc. The sheriff or other proper official can call out the posse when needed and compel service of the posse, but there is no legal theory, or historical practice, for a government official to require unwilling persons to undergo posse training. Of course, since the sheriff has complete discretion about who may join the posse, a sheriff can require that volunteers undergo training, and that is what all Colorado sheriffs with regular posses do.

A common phrase in early state constitutions was that the people had the right to arms “for the defence of themselves and the state.”<sup>331</sup> Later in the nineteenth century, the phrasing changed, but the principles remained the same. For example, in Missouri and Colorado: “[T]o keep and bear arms in defense of his home, person and property, or in aid of the civil power when thereto legally summoned . . . .”<sup>332</sup> Modern commentators have sometimes broken the phrases into a dichotomy: “themselves” means personal self-defense, and “the state” means militia service.<sup>333</sup> It is true that

---

dissenting) (“a right that can be enforced by individuals”).

<sup>330</sup> *Heller*, 554 U.S. at 596, 600 n.17 (2008).

<sup>331</sup> E.g. PA. CONST. art. XIII (1776).

<sup>332</sup> COLO. CONST. art II, § 13.

<sup>333</sup> But see Nathan Kozuskanich, *Defending Themselves: The Original Understanding of the Right to Bear Arms*, 38 RUTGERS L.J. 1041 (2007) (arguing that “themselves” and “the State” both refer exclusively to militia service). For a pro/con discussion, see David B. Kopel & Clayton E. Cramer, *The Keystone of the Second Amendment: The Quakers, the Pennsylvania Constitution, and the Flawed Scholarship of Nathan Kozuskanich*, 19 WIDENER L.J. 277 (2010); Nathan Kozuskanich, *History or Ideology? A Response to David B. Kopel and Clayton E. Cramer*, 19 WIDENER L.J. 321 (2010) (reply article); David B. Kopel & Clayton E. Cramer, *Credentials Are No Substitute for Accuracy: Nathan Kozuskanich, Stephen Halbrook, and the Role of the Historian*, 19 WIDENER L.J. 343 (2010) (sur-reply).

the phrase includes self-defense and the militia, but it is inaccurate to divide the phrase into two totally separate categories. The duty to keep and bear arms was not solely for the militia. It was also for all the other common law practices by which armed citizens aided in the protection of their communities: hue and cry, watch and ward, and, especially, *posse comitatus*. When individuals are helping local law enforcement search for an escaped serial killer, or for the people who just murdered the sheriff, or who just perpetrated some other violent felony, they are certainly helping to defend the state. But they are also defending themselves. Apprehending murderers, robbers, and rapists who have harmed a third party is one way that the individual protects himself from surprise attack by these criminals. Moreover, the reason for the creation of the state in the first place was the protection of the rights and personal security of individuals. In the American theory of government, the state has no autonomous existence prior to the individuals; the state is an artificial entity created by the people, and the state's purpose is to serve as the agent of the people in safeguarding their lives, liberty, and property. Thus, the "defense of the state" is really a form of self-defense. When you aid the state in keeping the peace, you are protecting yourself. Inseparable from the "defense of the state" (in state constitutions) or "the security of a free state" (in the Second Amendment) is preventing tyranny. Tyranny could come from a hostile foreign invader, and the people must be armed so that they can resist such an invasion, just as Alfred the Great's militia was armed for that same purpose.

Alternatively, tyranny could come from within. As James Madison wrote in *The Federalist No. 46*, armed resistance by the state militias is the emergency, last resort against central government tyranny, although tyranny might at present appear very unlikely.<sup>334</sup> Senator and later Vice President Hubert Humphrey, the avatar of post-World War II American liberalism, agreed.<sup>335</sup>

The widespread armament of the people is itself a deterrent to any attempt to impose tyranny. As John Mitchell Kemble observed in his legal history of Anglo-Saxon England, "[t]he strength of the popular power was felt in a negative, not positive, action upon the governing body; the people

---

<sup>334</sup> THE FEDERALIST NO. 46 (James Madison).

<sup>335</sup> "Certainly one of the chief guarantees of freedom under any government, no matter how popular and respected, is the right of citizens to keep and bear arms . . . . [T]he right of citizens to bear arms is just one more guarantee against arbitrary government, one more safeguard against a tyranny which now appears remote in America, but which historically has proved to be always possible." Hubert H. Humphrey, *Know Your Lawmakers*, GUNS, Feb. 1960, at 4 (letter by then-Senator Humphrey to the magazine in response to a question about his views on the Second Amendment).

were by far the strongest armed force, and the conviction of this, even if not worthier motives, kept the ruling body from enacting oppressive laws.”<sup>336</sup>

Like the state constitutions, the Second Amendment intertwines the purposes of personal defense and defense of civil order in a republic. As explained in *Heller*, “[t]he phrase ‘security of a free State’ meant ‘security of a free polity,’ not security of each of the several States . . . .”<sup>337</sup> That is why the Second Amendment applies in the District of Columbia and other federal areas and not just in the fifty states. The principle is that *all* of the polities in the United States are supposed to be secure in their freedom. Secure freedom includes a polity’s ability to repel invasion or suppress insurrection.<sup>338</sup> Secure freedom includes sheriffs’ ability to call on law-abiding armed citizens to “suppress all affrays, riots, and unlawful assemblies and insurrections.”<sup>339</sup>

The Second Amendment right to keep and bear arms is an individual right belonging to all Americans for all lawful purposes, like the First Amendment freedom of speech and other fundamental rights.<sup>340</sup> Thus, individual citizens have standing to raise Second Amendment claims.<sup>341</sup>

In addition, the Second Amendment formally announces an intended third-party beneficiary: the state militias. Before *Heller*, some lower courts misread the Second Amendment and thought that the individual Second Amendment right exists *only* when it is in direct service of state militias.<sup>342</sup> *Heller* corrects this error and affirms the traditional American understanding that the Second Amendment right to keep and bear arms is for all law-abiding citizens, *and* that an intended beneficiary of that right is the state militia system. Article I of the Constitution makes it clear that the militias exist for the benefit of both the states and the federal government, and are subject to the overlapping control of both.<sup>343</sup> Thus the Second Amendment is partly a structural right enacted for the benefit of state and local governments. Accordingly, state militia officers, including governors,

<sup>341</sup> On this point, the nine Justices in *Heller* were unanimous. *See Heller*, 554 U.S. at 592 (The provisions of the Second Amendment “guarantee the individual right to possess and carry weapons in case of confrontation”); *id.* at 636 (Stevens, J., dissenting) (“Surely it protects a right that can be enforced by individuals.”).

<sup>342</sup> *See, e.g.*, cases cited in *Heller*, *supra* note 337, at 638 n.2 (Stevens, J., dissenting).

<sup>343</sup> U.S. CONST. art. I, § 8, cl. 15–16.

should have standing to raise Second Amendment claims regarding laws or actions that interfere with the militia of their state.<sup>344</sup>

Besides the militia, there is another beneficiary of the Second Amendment and its state analogues: the *posse comitatus*. Creating the conditions for a well-regulated, functional militia also has the obvious and inescapable benefit of ensuring a strong and vigorous *posse comitatus*. A well-armed population fosters both. The original meaning of the Constitution was that the militia *and* the posse could be used to assist the federal government. The militia and the posse are complementary institutions, each of them requiring that the people as a whole be armed. The U.S. Constitution follows the model set down by Alfred the Great: the security of a free state requires that the entire people be armed, so that they may defend themselves and the state, in the militia, in the *posse comitatus*, and in whatever other capacity (e.g., hue and cry) the government needs the aid of the armed people.

The power to employ the *posse comitatus* was originally a power that belonged only to sheriffs.<sup>345</sup> Today, they remain the most frequent users of that power. Accordingly, sheriffs should be recognized as having standing under the Second Amendment and its state analogues to challenge laws or practices that interfere with the *posse comitatus*.

#### CONCLUSION

Historian Frank Richard Prassel observes: “An unwritten but basic tenet of democracy places enforcement of the law within the domain of ordinary citizens.”<sup>346</sup> This was true, he writes, in early England, when “the task of upholding order fell to the over-all community.”<sup>347</sup> Later, sophisticated law enforcement agencies were created, “but under principles of common law any man still possesses wide authority to protect himself, his family, and to some extent the general peace of the land.”<sup>348</sup> This is one application of a fundamental principle of American law: “the people, not the government, possess the sovereignty.”<sup>349</sup>

---

<sup>344</sup> In *Perpich v. Department of Defense*, 496 U.S. 334, 338 (1990), the Court recognized that a state governor had standing to sue over federal interference with his state’s National Guard. However, the governor in that case did not assert Second Amendment claims, and the issue (federal deployment, without gubernatorial consent or declaration of a national emergency, of the Minnesota National Guard into Honduras for training exercises) did not involve any interference with anyone’s possession of arms. *Id.*

<sup>348</sup> *Id.*

<sup>349</sup> *Mandel v. Mitchell*, 325 F. Supp. 620, 629 (E.D.N.Y. 1971), *overruled by* Kleindienst

A modern historian of sheriffs urges that their contemporary role should be recognized as one of “tribune of the people” who champions their rights.<sup>350</sup> This description is consistent with the most admirable aspects of the role of sheriffs, from Anglo-Saxon times to the present. The people elect a sheriff to be the guardian to their county: to lead the people in keeping the peace, in maintaining civil order, and in defending themselves against threats to their lives and liberties.

The *posse comitatus* has always been a vital part of this system. It was important well over a thousand years ago, and it remains important today. Whether in manhunts for escaped murderers or in augmenting the daily operations of a sheriff’s office, the *posse comitatus* is one example of how in the American system of government, elected officials and armed citizens work together successfully to keep the peace.

| ARIZ. REV.<br>STAT. ANN.<br>§ 13-3801<br>(2010) | Peace Officer                      | A. Public offenses may be prevented by intervention of peace officers as follows:<br>1. By requiring security to keep the peace.<br>2. Forming a police detail in cities and towns and requiring their attendance in exposed places.<br>3. Suppressing riots.<br>B. When peace officers are authorized to act in preventing public offenses, other persons, who, by their command, act in their aid, are justified in so doing.                                                                                                                                                                                            |
| ARIZ. REV.<br>STAT. ANN.<br>§ 13-3802<br>(2010) | Sheriff or Other<br>Public Officer | A. When a sheriff or other public officer authorized to execute process finds, or has reason to believe that resistance will be made to execution of the process, such officer may command as many inhabitants of the county as the officer deems proper to assist in overcoming such resistance.<br>B. The officer shall certify to the court from which the process issued the names of those persons resisting, and they may be proceeded against for contempt of court.                                                                                                                                                |
| ARIZ. REV.<br>STAT. ANN.<br>§ 13-2403<br>(2010) | Peace Officer                      | A. A person commits refusing to aid a peace officer if, upon a reasonable command by a person reasonably known to be a peace officer, such person knowingly refuses or fails to aid such peace officer in:<br>1. Effectuating or securing an arrest; or<br>2. Preventing the commission by another of any offense.<br>B. A person who complies with this section by aiding a peace officer shall not be held liable to any person for damages resulting therefrom, provided such person acted reasonably under the circumstances known to him at the time.<br>C. Refusing to aid a peace officer is a class 1 misdemeanor. |

2015] *SHERIFFS AND THEIR POSSE COMITATUS* 833

CAL. GOV'T Chief of Police His lawful orders shall be promptly executed by  
 CODE § 41602 deputies, police officers, and watchmen in the city.  
 (West 2012) Every citizen shall also lend his aid when required  
 for the arrest of offenders and maintenance of public  
 order.

CAL. PENAL Persons making arrest may summon assistance.  
 CODE § 839 Any person making an arrest may orally summon as  
 (West 2008) many persons as he deems necessary to aid him  
 therein.

COLORADO

COLO. REV. Sheriff (1) Fees collected by sheriffs shall be as follows:  
 STAT. § 30-1- (o) For serving writ with aid of posse comitatus  
 104 (2013) with actual expenses necessarily incurred in  
 executing said writ, in counties of every class, actual  
 expenses, but not more than sixty dollars; for  
 serving same without aid in counties of every class,  
 actual expenses, but not more than four dollars . . . .

Colo. R. Civ. *WRIT OF ASSISTANCE—PETITION FOR*  
 P. Form 24 COMES NOW the Plaintiff, above-named, by and  
 through its attorneys of record, and moves this  
 Honorable Court issue a Writ of Assistance to the  
 Sheriff of the County of \_\_\_\_\_, State of Colorado,  
 enabling the Sheriff to call to his aid the powers of  
 his County, in accordance with Rule 104(h), in order  
 that the Sheriff may execute the Writ of Replevin  
 heretofore entered in the premises . . . .

Colo. R. Civ. (i) Sheriff May Break Building; When. If the  
 P. 104 property or any part thereof is in a building or  
 & enclosure, the sheriff shall demand its delivery,  
 CO ST CTY announcing his identity, purpose, and the authority  
 CT RCP Rule under which he acts. If it is not voluntarily  
 404 delivered, he shall cause the building or enclosure to  
 be broken open in such manner as he reasonably  
 believes will cause the least damage to the building  
 or enclosure, and take the property into his  
 possession. He may call upon the power of the  
 county to aid and protect him . . . .

GEORGIA

GA. CODE  
ANN.  
§ 16-3-22(a)  
(West 2003)

Any person who renders assistance reasonably and in good faith to any law enforcement officer who is being hindered in the performance of his official duties or whose life is being endangered by the conduct of any other person or persons while performing his official duties shall be immune to the same extent as the law enforcement officer from any criminal liability that might otherwise be incurred or imposed as a result of rendering assistance to the law enforcement officer.

HAWAII

HAW. REV.  
STAT. ANN.  
§ 710-1011  
(LexisNexis  
2007)

Law  
Enforcement  
Officer

(1) A person commits the offense of refusing to aid a law enforcement officer when, upon a reasonable command by a person known to him to be a law enforcement officer, he intentionally refuses or fails to aid such law enforcement officer, in:

- (a) Effectuating or securing an arrest; or
- (b) Preventing the commission by another of any offense.

(2) Refusing to aid a law enforcement officer is a petty misdemeanor.

(3) A person who complies with this section by aiding a law enforcement officer shall not be held liable to any person for damages resulting therefrom, provided he acted reasonably under the circumstances known to him at the time.

| ME. REV.<br>STAT. tit. 30-<br>A, § 402<br>(2011) | Law<br>Enforcement<br>Officer | 1. Officer may require aid. Any law enforcement officer may require suitable aid in the execution of official duties in criminal and traffic infraction cases for the following reasons:<br>A. For the preservation of the peace; or<br>B. For apprehending or securing any person for the breach of the peace or in case of the escape or rescue of persons arrested on civil process.<br>2. Violation and penalty. Any person required to aid a law enforcement officer under this section who neglects or refuses to do so commits a civil violation for which a forfeiture of not less than \$3 nor more than \$50 to be paid to the county may be adjudged. |

MINNESOTA

MINN. STAT. Sheriff The sheriff shall keep and preserve the peace of the  
ANN. county, for which purpose the sheriff may require  
§ 387.03 the aid of such persons or power of the county as the  
(West 1997) sheriff deems necessary . . . .

MINN. STAT. The sheriff is authorized to effect repossession of  
ANN. the property according to law, including, but not  
§ 491A.01 limited to: (1) entry upon the premises for the  
Subd. 5 purposes of demanding the property and  
(West 2014) ascertaining whether the property is present and  
taking possession of it; and (2) causing the building  
or enclosure where the property is located to be  
broken open and the property taken out of the  
building and if necessary to that end, the sheriff may  
call the power of the county to the sheriff's aid . . . .

MISSISSIPPI

MISS. CODE Sheriff If the sheriff finds that resistance will be made  
ANN. against the execution of any process, he shall  
§ 19-25-39 forthwith go in his proper person, taking the power  
(2012) of the county if necessary, and execute the same.  
He shall certify to the court the names of the persons  
making resistance, their aiders, assistants, favorers,  
and procurers.

MISSOURI

MO. ANN. Officer In all cases where, by the common law or a statute  
STAT. of this state, any officer is authorized to execute any  
§ 105.210 process, he may call to his aid all male inhabitants  
(West 1997) above the age of twenty-one years in the county in  
which the officer is authorized to act.

MO. ANN. In the execution of such writs of attachment and  
STAT. precept, or either of them, the sheriff or other person  
§ 532.600 to whom they shall be directed may call to his aid  
(West 1953) the power of the county, as is provided by law in the  
execution of writs and process by any officer.

[Vol. 104

NEW YORK

N.Y.  
JUDICIARY  
LAW § 400  
(West 2005)

Sheriff

If a sheriff, to whom a mandate is directed and delivered, finds, or has reason to apprehend, that resistance will be made to the execution thereof, he may command all persons in his county, or as many as he thinks proper, and with such arms as he directs, to assist him in overcoming the resistance and, if necessary, in arresting and confining the resisters, their aiders and abettors, to be dealt with according to law.

NORTH CAROLINA

N.C. GEN.  
STAT. ANN.  
§ 1-415  
(West 2013)

Sheriff & Law  
Enforcement  
Officer

The sheriff shall execute the order by arresting the defendant and keeping him in custody until discharged by law. The sheriff may call the power of the county to his aid in the execution of the arrest.

NORTH DAKOTA

N.D. CENT.  
CODE  
§ 29-06-03  
(2006)

Officer

Any officer making an arrest may summon as many persons orally as the officer deems necessary to aid the officer therein.

OHIO

OHIO REV.  
CODE ANN.  
§ 311.07(A)  
(West 2005)

Sheriff

In the execution of official duties of the sheriff, the sheriff may call to the sheriff's aid such persons or power of the county as is necessary.

OHIO REV.  
CODE ANN.  
§ 2921.23(B)  
(West 2014)

. . . [F]ailure to aid a law enforcement officer [is] a minor misdemeanor.

**OKLAHOMA**

OKLA. STAT.  
ANN. tit. 19,  
§ 516(A)  
(West 2000)

Sheriff, Under-  
sheriffs and  
Deputies

It shall be the duty of the sheriff, under-sheriffs and deputies to keep and preserve the peace of their respective counties, and to quiet and suppress all affrays, riots and unlawful assemblies and insurrections, for which purpose and for the service of process in civil and criminal cases, and in apprehending or securing any person for felony or breach of the peace, they and every constable may call to their aid such person or persons of their county as they may deem necessary.

OKLA. STAT.  
ANN.  
tit. 22, § 94  
(West 2003)

If it appears to the Governor that the power of the county is not sufficient to enable the sheriff to execute process delivered to him, or to suppress riots and to preserve the peace, he must, on the application of the sheriff, or the judge, of any court of record of such county, order such a force from any other county or counties as is necessary, and all persons so ordered or summoned by the Governor or acting Governor, are required to attend and act; and any such persons who, without lawful cause, refuse or neglect to obey the command, are guilty of a misdemeanor.

**OREGON**

OR. REV.  
STAT.  
§ 206.050(1)  
(2013)

Police Officer

When an officer finds, or has reason to apprehend, that resistance will be made to the execution or service of any process, order or paper delivered to the officer for execution or service, and authorized by law, the officer may command as many adult inhabitants of the county of the officer as the officer may think proper and necessary to assist the officer in overcoming the resistance, and if necessary, in seizing, arresting and confining the resisters and their aiders and abettors, to be punished according to law.

PENNSYLVANIA

42 PA. CONS. Sheriff &  
STAT. ANN. Mayors<sup>352</sup>  
§ 21115(a)  
(West 1982)

For the services performed in the capacity as a conservator of the peace or police officer in suppressing riots, mobs or insurrections, and when discharging any duty requiring the summoning of a posse, comitatus or special deputy sheriffs, the sheriff shall receive per diem compensation at the rate of \$50 in a county for eight hours service, together with the mileage and necessary expenses, including subsistence for the sheriff and those under him, all to be paid by the county.

RHODE ISLAND

R.I. GEN.  
LAWS  
§ 11-47-43  
(2002)

The provisions of § 11-47-42 [prohibiting the carrying of certain weapons], . . . so far as they relate to the possession or carrying of any billy, apply to sheriffs, constables, police, or other officers or guards whose duties require them to arrest or to keep and guard prisoners or property, nor to any person summoned by those officers to aid them in the discharge of their duties while actually engaged in their duties.

SOUTH CAROLINA

S.C. CODE Sheriff, Deputy,  
ANN. Constable, or  
§ 15-17-90 Other Officer  
(1977)

The sheriff or constable shall execute the order by arresting the defendant and keeping him in custody until discharged by law and may call the power of the county to his aid in the execution of the arrest, as in case of process.

---

<sup>352</sup> “The power to summon a *posse comitatus* is ‘the power which is devolved upon a sheriff to suppress riots . . . ,’ which, in turn, was conferred by Third Class City Code upon the mayor.” *Jenkins Sportswear v. City of Pittston*, 22 Pa. D. & C.2d 566, 575 (Pa. Com. Pl. 1961).

WISCONSIN

WIS. STAT.  
ANN.  
§ 59.28(1)  
(West 2013)

Sheriff,  
Undersheriff &  
Deputies

Sheriffs and their undersheriffs and deputies shall keep and preserve the peace in their respective counties and quiet and suppress all affrays, riots, unlawful assemblies and insurrections; for which purpose, and for the service of processes in civil or criminal cases and in the apprehending or securing any person for felony or breach of the peace they and every coroner and constable may call to their aid such persons or power of their county as they consider necessary.

WYOMING

WYO. STAT.  
ANN.  
§ 18-3-606  
(2013)

Sheriff &  
Deputies

Each county sheriff and deputy shall preserve the peace in the respective counties and suppress all affrays, riots, unlawful assemblies and insurrections. Each sheriff or deputy sheriff may call upon any person to assist in performing these duties or for the service of process in civil and criminal cases or for the apprehension or securing of any person for felony or breach of peace.

**DECLARATION OF THOMAS B.  
MARVELL IN SUPPORT OF  
PLAINTIFFS' MOTION FOR  
PRELIMINARY INJUNCTION  
(Part 1 of 2)**

Complaint Filed: July 1, 2019  
Amended Complaint Filed: July 30, 2019

Date: Monday, November 18, 2019  
Time: 9:00 a.m.  
Courtroom: Dept. 5B

1           4. Attached hereto as **Exhibit 1** is a true and correct copy of my  
2 Curriculum Vitae. It describes my education, employment background, career  
3 experience, and publications.  
4

5                           **Minimum Age Laws and Crime-Reduction Impacts**

6           5. Based on my education, work experience, research background,  
7 publications, and review of the research of others, in my opinion, there is no evidence  
8 that gun laws banning the purchase or possession of firearms based on age  
9 restrictions have the intended effect of reducing gun homicides and suicides; I have  
10 found no discernable crime-reduction impact.  
11  
12

13           6. I have conducted an extensive literature review, and have summarized  
14 the results of my research of pertinent publications. I know of no other pertinent  
15 publications but would consider them upon presentation. All such publications,  
16 except for those by Gary Kleck, use a time-series-cross-section (TSCS) design or  
17 methodology, with data over many years and covering all states. I specialize in that  
18 methodology, having published more than 25 studies using it.  
19  
20

21           7. This methodology is the most common statistical procedure for  
22 determining whether a law affects crime. It controls for overall differences in crime  
23 levels between states (state effects) and for overall differences between years (year  
24 effects). When studying the impact of a law, the researcher typically constructs a  
25 “dummy variable,” which is “0” when the state does not have the law and “1” when  
26 the law is in effect. The TSCS methodology in effect compares trends in states with  
27  
28

1 the law and states without the law (or with laws passed in earlier or later years). The  
2 law is deemed to have an effect if the regression coefficient on the dummy is  
3 statistically significant (*i.e.*, the law is found to have an impact after controlling for  
4 state and year effects and other control variables). It is negative when the law  
5 reduces crime and positive when it increases crime. The term “statistical  
6 significance,” as used in these studies, means that there is less than a five (5) percent  
7 chance that the law has no impact given the size of the regression coefficient on the  
8 dummy variable. As a practical matter, lack of significance is usually accompanied  
9 by a negligible coefficient on the dummy variable.  
10  
11  
12

13 Determining significance using the TSCS methodology is greatly affected by  
14 autocorrelation, which here involves the correlation between current-year crime and  
15 crime in the prior and earlier years. Unless proper corrections are made for  
16 autocorrelation, the regression often produces significant results, even though the  
17 results in fact are not significant.  
18  
19

20 8. The impact of increasing minimum age to purchase a firearm from 18 to  
21 21 is difficult to determine because very few states have made such a change.  
22 However, based on my and others’ research on age-based firearm restrictions and  
23 their effects, I have no reason to believe that increasing the minimum age to purchase  
24 firearms from 18 to 21 has any more effect than other minimum age requirements  
25 currently in place.  
26  
27  
28

1           9.     Kleck, Gary. 2019. “*Regulating guns among young adults*,” *American*  
2 *Journal of Criminal Justice*, <https://doi.org/10.1007/s12103-019-09476-6>. The  
3  
4 publication reports the results of two studies of the impact of gun control measures on  
5 violent crimes. The first study assessed the impact of state bans on concealed carry  
6 permits among persons age 18 to 20 on rates of violent crime (homicide, robbery, and  
7 aggravated assault) committed by persons in that age group. The results indicate that  
8 states limiting concealed carry permits to those 21 and older did not have less violent  
9 crime in that age group than states granting permits to those 19 and older. The  
10 second study evaluated a Federal 1968 law prohibiting gun dealers from selling  
11 handguns to persons under 21. The analysis tested whether the share of arrests for  
12 three violent crimes (homicide, robbery, aggravated assault) trended downward or  
13 upward, after the law went into effect. Results indicated that the federal law had no  
14 impact on the 18-to-20-year old share of arrests for violent crime. Attached hereto as  
15  
16 **Exhibit 2** is a true and correct copy of Kleck (2019) (see specifically, pages 0006-7,  
17 12, 16-17).

21           10.    Kleck, Gary, Thomislav Kavandzic, and Jon Bellows. 2016. “Does Gun  
22 Control Reduce Violent Crime?” *Criminal Justice Review*, 41:488-513. In a  
23 cross-section study of 1,078 cities the authors found no significant reduction in total  
24 homicides, gun-homicides, non-gun homicides, robberies or assaults associated with  
25 laws limiting gun sales to, or gun possession by, minors. Attached hereto as  
26  
27

1 **Exhibit 3** is a true and correct copy of Kleck et al (2016) (see specifically, pages 23-  
2 24, 36-37, 39, 42).

3  
4 11. Gius, Mark. 2015. “The impact of minimum age and child access  
5 prevention laws on firearms related youth suicides and unintentional deaths,” *Social*  
6 *Science Journal*, 52: 168-175. The study evaluated, among other things, state  
7 minimum age laws and the association, if any, with firearms-related youth suicide  
8 and unintentional deaths. The study found that state minimum age laws do not have a  
9 significant impact on gun suicides or unintentional deaths for those under 20 years  
10 old. Gius (2015) found a significant impact for the 1994 federal minimum age law,  
11 but this is a spurious finding due to a statistical mistake. The federal law applied to  
12 every state, so the federal law dummy variable captured the impact of everything that  
13 affected suicides in 1994 and that were not controlled by other variables.  
14 Technically, the federal law dummy is the fixed effect year dummy for 1994, and the  
15 1994 fixed effect dummy drops out of the regression results. If the federal law  
16 dummy had been entered into the equation after the year fixed effects, the regression  
17 program would have dropped it. Another way of putting it is that there is no  
18 comparison group of states – states exempt from the federal law – meaning that the  
19 TSCS results are meaningless. Attached hereto as **Exhibit 4** is a true and correct copy  
20 of Guis (2015) (see specifically, pages 50-51, 54-56).

21  
22  
23  
24  
25  
26 12. Rodríguez-Andrésa, Antonio, and Katherine Hempstead. 2011. “Gun  
27 control and suicide: impact of state firearm regulations in the United States,”  
28

1 1995-2004. *Health Policy*, 101: 95-103. The article studied the impact of state laws  
2 banning handgun purchases on male suicide rates for age groups, 15-24, 25-44,  
3 45-64, and 65 and over. The article found no significant impact except that the laws  
4 are associated with a significant reduction in suicides for males, ages 25-44. The  
5 latter finding, however, is not credible for several reasons. First, only one state (New  
6 York) enacted a new minimum age law during the period of the study (1995-2004),  
7 far from enough to produce useful results. Second, the study uses only ten years of  
8 data, which is unusual and in my experience leads to erratic results. Third, there is no  
9 correction for autocorrelation, so the significance levels are overstated. Attached  
10 hereto as **Exhibit 5** is a true and correct copy of Rodríguez, et al. (2011) (see  
11 specifically, pages 59, 63-66).

12  
13  
14  
15  
16 13. Rosengart, M., P. Cummings, A. Nathens, P. Heagerty, R. Maier, and  
17 F. Riveria. 2005. “An evaluation of state firearms regulations and homicide and  
18 suicide death rates,” *Injury Prevention*, 11: 77-83. This study evaluated laws banning  
19 the purchase or possession of handguns by persons under the age of 21. The study  
20 found that such laws produced no significant reduction of a variety of measures of  
21 gun and non-gun homicides and suicides, but the findings are based on only a few  
22 law changes. This research, in effect, evaluated what happens when states move from  
23 under-18 laws to under-21 laws, which is comparable to California. Attached hereto  
24 as **Exhibit 6** is a true and correct copy of Rosengart, et al. (2005) (see specifically,  
25 pages 69, 71-75).  
26  
27  
28

1           14. Webster, Daniel, Jon S. Vernick, April M. Zeoli, and Jennifer A.  
2 Manganello. 2004. “Association between youth-focused firearm laws and youth  
3 suicides,” *Journal of the American Medical Association*, 292:592-602. The study  
4 estimates the impact of laws establishing minimum age requirements for the purchase  
5 or possession of firearms on suicides by those 14-17 years and 18-20 years. The  
6 study found no significant impact, except a significant decline in suicides in the 18-20  
7 age group following an increase in the legal purchase age from 18 to 21. This  
8 finding, in my opinion, is highly unlikely to be correct. The study itself identifies  
9 several reasons to doubt the validity of the finding, including the fact that the finding  
10 is based on only 3 states making the change, 2 of which adopted the change in the  
11 final 2 years of the study. The finding is barely significant (at the .04 level, just  
12 below the .05 level that indicates significance). Most important, the authors attempt  
13 to address autocorrelation through the “cluster” method, which causes the  
14 significance levels to drastically increase with such a small number of law changes.  
15 Attached hereto as **Exhibit 7** is a true and correct copy of Webster, et al. (2004) (see  
16 specifically, pages 77-79, 81-83).

17  
18  
19  
20  
21  
22           15. Marvell, Thomas B. 2001. “The impact of banning juvenile gun  
23 possession,” *Journal of Law and Economics*. 44:691-714. I posited theories were  
24 that juvenile gun bans either increase or decrease homicides. If the bans reduce  
25 juvenile gun access, they would probably reduce the use of guns by juveniles in  
26 crimes. If the bans lead others to believe that juveniles are more vulnerable targets,  
27  
28

1 the result is likely to be more crime, especially violent crimes against juveniles. My  
2 research, however, found that state laws banning juvenile handgun possession (under  
3 the age of 18) had no significant effect on reducing gun homicides and suicides.  
4 Attached hereto as **Exhibit 8** is a true and correct copy of Marvell (2001).  
5

6         16. Kleck, Gary, and E. Brit Patterson. 1993. “The impact of gun control  
7 and gun ownership levels on violence rates,” *Journal of Quantitative Criminology*.  
8 9:249-287. In a cross-section state-level study, the authors found no significant  
9 relationship between gun or non-gun homicide and state restrictions on handgun  
10 purchases by minors. Attached hereto as **Exhibit 9** is a true and correct copy of  
11 Kleck, et al. (1993).  
12  
13

14         17. Rand Corporation recently published a lengthy review of the research on  
15 the impact of gun laws. <sup>1</sup> It found “inconclusive” evidence that minimum age laws  
16 have a crime-reducing impact. It did find “limited” evidence that laws barring  
17 purchase by 18-20 year olds reduced suicide, based on the findings by Webster, et al.  
18 (2004), described above. However, it failed to note that the Webster, et al. (2004)  
19 calculation of significance levels is erroneous (see above). Attached hereto as  
20 **Exhibit 10** is a true and correct copy of relevant excerpts from Morral, et al. 2018.  
21  
22  
23  
24

## Mass Shootings

1  
2  
3 18. Mass shootings are an important and timely topic, but the shootings are  
4 not common enough, in my opinion, to obtain useful research results concerning  
5 whether they are affected by age limits. My opinion is supported by the following  
6 article authored by M. Luca, L. Deepak, and C. Poliquin, 2019. “The Impact of Mass  
7 Shootings on Gun Policy,” Working Paper 16-126. Harvard Business School,  
8 Cambridge, Massachusetts. In that article, Luca, et al. (2019) also opine that mass  
9 shootings are not frequent enough to estimate the effects of gun policy on gun deaths.  
10  
11 (*Id.* at 22.) Attached hereto as **Exhibit 11** is a true and correct copy of Luca, et al.  
12 (2019).  
13

14  
15 19. As described in Luca, et al. (2019), roughly 30,000 annual gun deaths  
16 occur in the United States, with fewer than 100 occurring in connection with mass  
17 shootings. (*Id.* at 5.) For clarity, I’m using the same definition of “mass shooting” as  
18 used in Luca, et al. (2019), which also closely matches the one used by the Federal  
19 Bureau of Investigation. (*Ibid.*) “Mass shootings” means an incident in which four  
20 or more people, other than the perpetrator(s), are unlawfully killed with a firearm in a  
21 single, continuous incident that is not related to gangs, drugs, or other criminal  
22 activity. (*Ibid.*)  
23  
24  
25  
26  
27  
28

1 I declare under penalty of perjury that the foregoing is true and correct.

2 Executed within the United States on September 30, 2019.

## Regulating Guns among Young Adults

Gary Kleck<sup>1</sup>

### Abstract

This paper reports the results of two studies of the impact of gun control measures on violent criminal behavior among persons age 18 to 20. The first study assessed the impact of state bans on gun carrying among persons age 18 to 20 on rates of violent crime committed by persons in that age group. The research used a state-level cross-sectional weighted least squares analysis of murder, robbery, and aggravated assault rates in 2000, controlling for possible confounding variables. The results indicate no significant effect of these carry bans on any of the three violent crime rates. The second study was a longitudinal analysis performed to evaluate the impact of a single previously unstudied element of the federal Gun Control Act of 1968 – its ban on the purchase of handguns by persons aged 18 to 20. The analysis tested whether the share of arrests for three violent crime types trended downward, or less strongly upward, after the law went into effect, controlling for trends in the share of the population in this age group. Results indicate that there was no impact of this ban on the 18-to-20 year-old share of arrests for homicide, robbery, or aggravated assault.

**Keywords** Gun control · Young adults · Violent crime · Gun Control Act of 1968

### Introduction

This paper performs two tests of the general hypothesis that gun control measures specific to young adults reduce violent crime within that group. This focus is especially important because criminal violence in America is at its highest in the young adult ages. For example, national arrest data for 2017 indicate that the single ages with the highest rates of arrest for murder were 18, 19, and 20 years old (U.S. FBI, 2019, Table 38). Society therefore has an especially strong interest in reducing violence among young

adults, and it would seem reasonable to focus violence-prevention efforts especially heavily on this group.

There are also good reasons to believe that gun control measures would be especially likely to be effective if they focused on young adults. First, precisely because violent criminal behavior is more common within this group, any one instance of denying a gun to such a person is more likely to prevent a violent crime with a gun. Second, young adults are more likely to use firearms when they commit violence crimes (Department of the Treasury and Department of Justice, 1999, pp. 7, 9). Consistent with this fact, there is some macro-level evidence that gun prevalence increases homicide rates among persons age 18 to 24 (Parker et al., 2011, p. 510), even though the technically strongest evidence does not show a net positive effect of gun prevalence on the *overall* (all-ages) homicide rate (Kovandzic, Schaffer, & Kleck, 2013). (Parker et al., however, failed to model the possible two-way relationship between gun prevalence and homicide, so the positive association they observed may reflect the effect of homicide on gun prevalence, rather than the reverse - Kovandzic et al., 2013). Third, it seems likely that, compared to older offenders, younger criminals are less likely to have acquired the personal contacts and knowledge that would enable them to evade restrictions on guns. Further, their higher rate of involvement in violence may make it especially easy to detect any crime-reducing effects of gun controls in this group. In contrast, among children and older people, there is little violent crime to be prevented, so even a large percentage decrease might be too small in absolute terms to be reliably detected.

There is little variation across jurisdictions in the regulation of firearms among persons *under* the age of 18. They have been categorically forbidden from purchasing firearms of any kind from licensed gun dealers under federal law since the Gun Control Act of 1968 (GCA) (18 USC Section 922(b)(1)), and are ineligible everywhere except in Vermont to get the state carry permits that are required in most states to lawfully carry a concealed firearm off of the possessor's property (Giffords Law Center, 2019). This lack of variation makes it difficult to detect any effects of gun control measures applying to those under age 18. In contrast, the strictness of gun control laws pertaining to young adults age 18–20 has shown considerably more variation, both over time and across states. People in this age group can legally carry guns in public places in some states but not in others. This variation provides opportunities for researchers to estimate the effect of gun regulations on violence within this specific high-violence subpopulation.

The research reported here therefore focuses specifically on controls applying to this age group. In particular, it is aimed at two kinds of gun control measures: (1) state laws that forbid concealed carrying of firearms among 18–20 year-olds, and (2) a federal ban on the purchase of handguns by persons age 18–20, enacted as part of the 1968 GCA. We evaluate the first measure using a state-level cross-sectional design, and evaluate the second measure using a national-level longitudinal design.

### **Study 1 – The Effect of State Bans on Concealed Gun Carrying by Persons Age 18–20**

Each of the 50 states has different regulations on the carrying of concealed weapons, and in particular the states differ regarding the minimum age at which persons become eligible to lawfully carry concealed weapons. Variation was especially high prior to the

Supreme Court's 2008 *Heller* and 2010 *McDonald* decisions, and subsequent court decisions interpreting them, which had the effect of striking down state laws that categorically forbade all concealed carrying. Prior to 2000, seven states forbade concealed carrying of firearms altogether, for all ages (see the Appendix for a listing of states and supporting statutory citations) a number of courts banned nearly all gun carrying among civilians. One state (Vermont) set 16 as the minimum age to carry concealed guns in public places, 14 states required a minimum age of 18, another 21 states set 21 as the minimum age, and one state (Oklahoma) set the minimum age at 23.

The states also differ in how they implement age restrictions. Some require permits for concealed carrying, and specify a minimum age to get the permit, while others require no permit but nevertheless specify a minimum age for carrying. Still others do not specify an explicit age minimum, but rather grant discretion to authorities such as county sheriffs to assess the degree to which a prospective carrier is a "suitable person." As of 1999, 29 states forbade the carrying of concealed weapons by 18-to-20 year olds (including those that banned carrying by persons of any age) while the remaining 21 allowed it, either because (1) people this age could get a carry permit, or (2) the state neither required a carry permit nor stated a minimum age to carry (Appendix).

### Study 1 Methods

Our strategy for testing for an effect of state carry laws on violent crime takes advantage of the age-related element of these laws. The provisions concerning minimum age either prohibit or allow carrying specifically among 18-to-20 year olds, so if they affect the frequency of violent crime, they should do so primarily by affecting violent crime rates among 18-to-20 year olds. There are no available data that directly measure the violent criminal behavior of Americans of specific age groups, but an approximation can be derived from data on persons *arrested* for crimes. Arrest data by age available from the Uniform Crime Reporting (UCR) program of the Federal Bureau of Investigation (FBI) are specific enough to establish national totals of arrests of 18-to-20 year olds. We analyzed three specific violent crimes that are the only crime types committed in significant numbers with firearms: (1) murder and nonnegligent manslaughter (hereafter denoted "homicide" for brevity's sake), (2) robbery, and (3) aggravated assault. About 73% of homicides, 41% of robberies, and 28% of aggravated assaults in 2017 were committed with firearms (U. S. Federal Bureau of Investigation, 2019).

We therefore estimated state rates of violent crime among 18-to-20 year olds by multiplying state crime rates concerning offenses by all ages by the fraction of persons arrested for a given crime type who were 18-to-20 years old. For example, we estimated the Alabama homicide rate among 18-to-20 year olds by multiplying the Alabama homicide rate in 2000 (7.4 homicides per 100,000 population) by the fraction of homicide arrests that 18-to-20 year olds accounted for in Alabama in 2000–2002 (0.1916), which yields an estimated homicide rate of 1.42 homicides committed by 18-to-20 year-olds per 100,000 resident population of all ages. Three years of arrest data, covering 2000–2002, were used to estimate the fraction of crimes committed by persons 18 to 20 because in smaller states there are too few arrests in any 1 year for any one type of violent crime (especially homicide) to provide a stable estimate of the 18-to-20 year old share of arrests.

In the following regression analyses, three types of age-specific violent crime rates were analyzed: (1) the rate of homicide committed by 18-to-20 year-olds, (2) the rate of robbery committed by 18-to-20 year-olds, and (3) the rate of aggravated assault committed by 18-to-20 year-olds. The analysis focused on the year 2000 rather than more recent years because there was far more variation in the strictness of state controls on carrying firearms than in later years. In more recent times there has been little meaningful variation in the strictness of carry laws. For example, in 1999 there were seven states that completely banned carrying guns in public (see Appendix), but by 2010, there were none (Gifford Law Center, 2019). State controls over gun carrying became lenient in all but a handful of states. By 2018, at least 30 states had adopted lenient shall-issue carry laws, which make it easy for noncriminal adults to get carry permits, while another 12 states had eliminated the requirement for a permit to carry concealed firearms altogether (Gifford Law Center, 2019). One might speculate that results pertaining to 2000 do not apply to more recent years. Certainly, the *levels* of the variables in our models, and which states have which laws, changes over time, but we are not aware of any evidence that the causal *effects* of gun laws have changed since 2000.

The present study focused on 2000 rather than any intercensal year (e.g., 2001–2009) because the Census provides, for years when the decennial Census is conducted, data on a wealth of crime-related variables that should be statistically controlled in order to isolate the effect of carry law provisions. A list of these other variables appears in Table 1, and the sources of data for the analysis are reported in the Appendix.

States were coded according to their carry laws as of 1999, rather than 2000, to make sure that they pertained to a time point prior to 2000–2002, the period to which the crime rates pertained. This makes it less likely that any relationship found between carry law provisions and crime rates is due to an effect of crime rates on the enactment or amending of carry law provisions, and more likely that the relationship reflects an effect of the carry law provisions on crime rates.

The statistical procedure used to estimate the relationship between carry law age provisions and crime rates was weighted least squares (WLS) regression. This procedure gives differing weights to each of the states, such that states with larger populations are given greater weight. This has the effect of reducing heteroscedasticity. The weight used in these analyses was the square root of the state's resident population in 2000.

Only 48 of the 50 states could be included in the analysis because FBI arrest data by age were not available for all of the years from 2000 to 2002 for Florida or Wisconsin (they were missing for 2000 for Wisconsin and for all 3 years for Florida). It should be noted that it is not essential for present purposes that all arrests be reported to the FBI, since we make no use of the absolute frequency of arrests. Rather, it is only necessary that the 18-to-20 year old share of those arrests reported to the FBI be approximately the same as the 18-to-20 year old share of *all* arrests for a given type of violent crime, whether reported to the FBI or not.

### Study 1 Findings

Table 2 displays the WLS estimates. Each column of numbers shows the estimated coefficients of a regression equation pertaining to one of the three dependent variables, and each row pertains to a particular independent variable that might affect these outcome variables. Each cell of the table shows three numbers. The topmost number is the WLS

\* Means and standard deviations are based on weighted data, and cover the 48 nonmissing states used in the regression analyses – that is, they exclude Florida and Wisconsin

coefficient. The middle number is the ratio of the coefficient over its standard error, sometimes called a t-ratio, used to test whether the regression coefficient is significantly different from zero. The bottom number is the one-tailed statistical significance of the coefficient. A significance under .05 (5%) is generally considered to be statistically significant, i.e. not likely to be the product of random chance. Thus, if the bottom number in a given cell is lower than .05, it means that the associated independent variable shown in the row heading has a statistically significant association with the dependent or outcome variable shown in the column heading. Our primary interest is in the estimates shown in the first row of the table, those pertaining to the association of the 1999 state carry laws' provisions regarding minimum age for concealed carrying with crime rates among 18–20 year olds on the estimated rate of violent crime among 18–20 year-olds. Note that CARRY1820 reflects whether persons age 18 to 20 are *allowed* to legally carry guns, so a positive coefficient for this variable means that violent crime rates are higher where these young adults may legally carry firearms.

**Table 2** Weighted least-squares estimates – the effect of state bans on gun carrying by 18-to-20 year-olds on rates of violence crime by that age group

All variables shown in Table 1 that do not appear in Table 2 were found to have no significant ( $p < .20$ ) association with any of the three violent crime rates studied and were therefore omitted from the crime rate models

Each regression equation also controlled for additional variables that affect crime rates and that might also be associated with carry law age provisions. Every equation controlled for the share of the state population that was in the 18–20 age range, regardless of whether this variable was significantly related to the dependent variable, because it was thought to be self-evident that the number of people in this age range would affect the number of crimes committed by persons in this age range. It turned out to make no difference to the key results whether or not this variable was included in the equations. The rest of the control variables were included in the equation only if they showed a significant relationship with the dependent variable. A generous standard of significance, 20%, was used in deciding whether to retain variables in the equation, to reduce the chances that a potentially important control variable was omitted. A much larger set of potential control variables were tested but found to have no significant association (even at a generous 20% level of significance) with any of the crime rates. All the variables shown in Table 1 that do not appear in Table 2 fall into this category.

Collinearity among the independent variables was not a problem – all tolerances were over 0.7 in all equations.

The estimates shown in the first row (labeled CARRY1820) of the first three columns of Table 2 estimate the effect of allowing 18–20 year olds to legally carry concealed weapons. The estimates indicate that this policy is not significantly related to rates of any of the three violent crimes that are often committed with guns (homicide, robbery, aggravated assault) among persons age 18 to 20. Indeed, the associations were negative for two of the three violent crime types, indicating that, other things being equal, states allowing 18–20 year old carry have less homicide and aggravated assault among 18–20 year olds than states forbidding it, though not to a statistically significant degree. The homicide finding is consistent with the results of a recent study of the effect of state gun laws on homicide rates, which found no significant effect of a requirement that people be at least 21 years old to legally possess a firearm (Siegel, Pahn, Xuan, Fleegler, & Hemenway, 2019).

### Study 1 Discussion and Conclusions

The analysis of state crime and arrest data indicates that provisions in state law prevailing in 1999 that allowed lawful concealed carrying of weapons among 18–20 year olds did not increase rates of murder, robbery, or aggravated assault within that age group. One partial explanation may be that states granting carry permits to persons under age 21 do so only for persons without criminal convictions or other predictors of violent crime, so legal carrying increased only among persons unlikely to commit violent crimes – even within a relatively high-violence age segment of the population. Another explanation, consistent with research on the frequency and prevalence of defensive gun use (Kleck, 2001a, b), is that the deterrent and defensive effects of gun carrying and defensive use among crime victims and prospective victims had crime-reducing effects that counterbalanced any crime-increasing effects of young adults carrying concealed guns. Alternatively, these restrictions may have failed to even achieve their proximate goal of reducing gun carrying in the target age group, because young adults carried guns illegally. In any case, the evidence indicates that allowing lawful concealed carrying of weapons among 18–20 year olds appears to have no net effect on rates of murder, robbery, or aggravated assault committed by people in this age group.

This finding fits well with complementary research done by Thomas Marvell (2001). Although he did not analyze age-specific crime rates as is done in the present paper, his fixed-effects panel analysis of state crime rates in the period 1968–1999 indicated that neither state laws banning juvenile gun possession nor a 1994 federal ban had any measurable net effect on violent crime rates (for all ages), including rates of homicide, robbery, and aggravated assault. This combination of studies suggests that banning juvenile gun possession or carrying does not, on net, reduce violent crime, and, conversely, that allowing lawful gun carrying does not, on net, increase violent crime.

### Study 2 – The Effect of the 1968 Federal Ban on Handgun Purchases by Persons Age 18–20

The Gun Control Act of 1968 (hereafter GCA) was a major piece of federal gun control legislation that had many elements, one of which imposed a new restriction specifically

applying to persons age 18 to 20. It provided that, while such persons could, like persons age 21 or over, lawfully purchase *long guns* (rifles and shotguns) from licensed gun dealers, those 18–20 were legally forbidden from buying handguns. Prior to this law, many states imposed age-based restrictions. We are not aware of any compilations of gun laws detailed enough to indicate how many states allowed handgun purchases by persons age 18–20 before 1968, but we do know that as of 2018, only 17 states and the District of Columbia required a minimum age of 21 to purchase handguns (Giffords Law Center, 2019). That is, as far as 2018 state law is concerned, people age 18 to 20 can lawfully buy handguns in 33 states. We assume that many states also allowed handgun purchases by 18–20 year-olds before 1968. Further, until 1968 no federal law prohibited handgun purchases by 18-to-20 year olds. Thus, the GCA introduced a new restriction on handgun buying by young adults.

The intent of the GCA was to reduce gun violence, partly by helping to restrict access to firearms among some subsets of the population. The introduction of this new restriction, applying specifically to 18-to-20 year olds, should directly affect only this age group, and should therefore have its largest effect on violent crime committed by persons age 18 to 20.

## Study 2 Methods

The logic of the following analysis is simple. If the new handgun purchase restrictions of the GCA applying to 18-to-20 year olds was effective, the fraction of arrests for violent crimes that 18-to-20 year olds accounted for should have declined after the GCA went into effect late in 1968, since only this age group was newly subject to the age-based handgun purchase ban. Therefore, we analyzed arrest data for the United States for each year from 1963 (5 years before the GCA went into effect) to 1973 (5 years after the GCA), for trends in three measures: (1) the percent of arrests for murders and nonnegligent manslaughters (hereafter “homicides”) that 18-to-20 year olds accounted for, (2) the percent of arrests for robbery that 18-to-20 year olds accounted for, and (3) the percent of arrests for aggravated assault that 18-to-20 year olds accounted for. As with Study 1, these three offense types were studied because they are the only types of violent crime that involve handguns to any significant degree. Arrest data do not allow analysts to determine if the crime for which the person was arrested involved a gun, or more specifically a handgun, so it is not possible to directly measure trends in age patterns of persons committing, or arrested for, crimes in which handguns were used.

It should be emphasized that, unlike in Study 1, we did not analyze estimated per capita rates of crime by 18-to-20 year-olds in Study 2. Instead, we analyzed the estimated *share* of violent crimes (regardless of their number) committed by this subpopulation. This strategy strengthens our ability to isolate the effect of changes in age-specific gun control measures by reducing the need to control for numerous possible confounders. The alternative of analyzing per capita rates of violent crime in this age group would be afflicted by a far more severe need to control for possible confounding variables, since virtually any variable that could affect violent criminal behavior in the population as a whole could also affect violent criminal behavior among those age 18-to-20. Isolating the impact of the GCA’s new ban would require controlling for all the other variables having causal effects among people of all ages. In

contrast, only factors specific to persons 18–20 are likely to affect the *percent* of crimes committed by those age 18–20.

Violent crime (and arrests for violent crime) increased after 1968 but by itself this says nothing definitive about the impact of the GCA as a whole or of its new restrictions concerning 18-to-20 year olds, since violence increased in all age groups, and had already been increasing well before the GCA went into effect. Thus, we need to introduce a feature into the research design that takes account of preexisting trends in violent crime, and thus in arrests for violent crime. We do this by measuring the average trend in the 18-to-20 year old share of arrests in the years immediately *before* the GCA went into effect in late 1968 (i.e., in 1963–1968) and comparing this with the average trend in the years immediately *after* the GCA (i.e., 1969–1973), excluding 1968 because part of it was before the GCA went into effect and part was after. If the relevant provisions of the GCA were effective, the post-1968 trends should be either downward or at least be less steeply upward than they had been before the GCA. Thus, the preexisting upward trend in the 18-to-20 year old share of violent crime arrests should have at least slowed, and possibly even reversed itself after 1968.

One other methodological feature was also essential to the analysis. The 18-to-20 year old share of arrests could change even if the GCA's relevant provisions had no effects, merely because the 18-to-20 year old share of the *population* changed. More specifically, the previously increasing 18-to-20 year old share of *arrests* could slow in its rate of increase if the previously increasing 18-to-20 year old share of the *population* slowed in its rate of increase. This is not a mere hypothetical – this is precisely what happened around 1968. Figure 1 shows that the 18-to-20 year-old share of the population (represented by the height of the line) was sharply increasing up until 1968, but then decreased in 1968 and thereafter increased much more slowly than it had before 1968. This means that if an analyst did not control for trends in the 18-to-

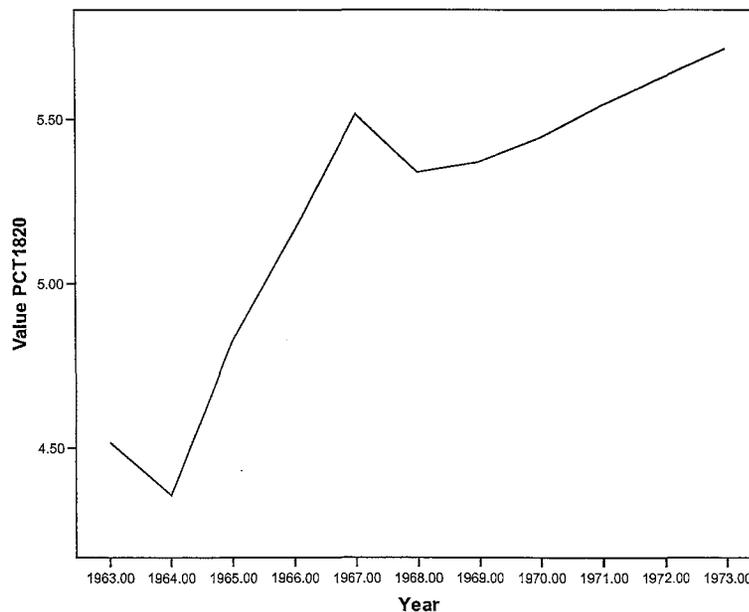

Fig. 1 Trends in the percent of the U. S. population that was age 18 to 20, 1963–1973

20 year old share of the population, the effect of this shift in the age structure of the population would be confused with the effect of the GCA.

We therefore performed a linear regression analysis for each of our arrest outcome measures, in which the dependent variable was the 18-to-20 year old share of arrests for a given type of violent crime (murder, robbery, or aggravated assault), the year was the main independent variable, and the 18-to-20 year old share of the population was a control variable. The analysis was performed twice for each violent crime type, once for the years 1963–1968 (pre-GCA years) and once for the years 1969–1973 (post-GCA years). The coefficient for the YEAR variable represents the average annual change in the 18-to-20 year old share of arrests over the time period studied. If it is positive, it means that the 18-to-20 year old share of arrests for the target violent crime was increasing during that period, and if it is negative, it indicates that the share was decreasing. The larger the coefficient, the stronger the trend was. Thus, if the GCA was effective, the coefficient for YEAR in the post-GCA period should be either a smaller positive number than the same coefficient for the pre-GCA period (indicating a weakening of the pre-GCA upward trend), or the post-GCA coefficient might even be negative, indicating that the trend had reversed itself from an upward trend to a downward trend.

### Study 2 Findings on the Impact of the GCA

Table 3 displays the key results from the regression analyses, showing the YEAR coefficients for the pre-GCA period and the post-GCA period, for each of the three arrest outcome measures. The upper panel (Panel A) shows the potentially misleading results obtained when there are no controls for the 18-to-20 year old share of the population, and the lower panel (Panel B) shows the corresponding results when a control for this variable was introduced.

**Table 3** Changes in the trend in the 18-to-20 year old share of violent crime arrests, from the 1963–1967 (pre-GCA) period to the 1969–1973 (post-GCA) period

| Panel A. No control for percent of the population age 18–20 |                      |           |                                       |

| Aggravated Assault                                          | .580                 | –.020     | –0.600                                |
| Panel B. Percent of the population age 18–20 controlled     |                      |           |                                       |
| Dependent variable                                          | Coefficient for year |           | Change from 1963 to 1968 to 1969–1973 |
| 18-to-20 year-old share of arrests for ...                  | 1963–1968            | 1969–1973 |                                       |
| Murder                                                      | .410                 | 3.417     | +3.007                                |
| Robbery                                                     | .840                 | 2.651     | +1.811                                |
| Aggravated Assault                                          | .525                 | 1.649     | +1.124                                |

The Panel A results initially indicated that trends in the 18-to-20 year old share of violent crime arrests moved in a desirable direction after 1968 – the previous upward trend prevailing prior to 1968 leveled off or even declined slightly after 1968. The Panel B results, however, indicate that this change in trends was at least partly due to the changing trends in the 18-to-20 year old share of the population documented in Fig. 1. Once that factor was statistically controlled, the positive coefficients for the YEAR variable for the pre-GCA period, which indicated an upward trend in the 18-to-20 year old share of violent crime arrests before 1968, became an even *larger* positive coefficient in the post-GCA period, indicating that the upward trend in the 18-to-20 year old share of violent crime arrests became even stronger after 1968, despite the new federal ban on handgun purchases by persons age 18 to 20. That is, once one takes account of trends in the percent of the population age 18 to 20, it becomes apparent that upward trend in the share of arrests claimed by 18-to-20 year olds became stronger after 1968.

## Study 2 Discussion and Conclusions

The federal ban on 18-to-20 year olds purchasing handguns from licensed dealers introduced in 1969 does not appear to have reduced the 18-to-20 year old share of violent crime. It is this specific age group whose violent behavior should have been most influenced if the purchase ban was effective, so the ban was apparently ineffective in reducing criminal violence. These results specific to young adults comport with research on the impact of the GCA on violent crime in the population as a whole. Magaddino and Medoff (1984) found no significant effect of the GCA on the U.S. homicide rate as a whole, i.e. for all ages. Zimring (1975) did not test the effect of the GCA on national crime rates, but did find that it failed to achieve the intermediate goals of reducing interstate movement of guns (pp. 181, 191) or decreasing the share of violent crimes committed with handguns (p. 172).

The focus on national-level data leaves open the possibility that the handgun purchase ban reduced young adult involvement in violence in some parts of the country, but not others. Since our results indicated no net effect for the nation as a whole, however, violence-reducing effects in some places could exist only if banning handgun purchases had violence-*increasing* effects in other places.

The apparent lack of impact of the handgun purchase ban on young adult involvement in violent crime does not mean that other elements of the GCA could not have had any beneficial effects. Nevertheless, the evidence indicates that the law as a whole apparently did not have any net effect on the homicide rate and did not reduce the share of the nation's violent crimes committed with guns (Magaddino and Medoff 1984; Zimring 1975).

Why did the new ban on handgun buying not reduce violent crime among the young adults who should have been affected? One obvious explanation would be that they bought handguns from other sources besides licensed dealers, such as friends or relatives. They could have acquired handguns illegally, e.g., by stealing them or by using persons age 21 or older to act as “straw purchasers” on their behalf (Wright & Rossi, 1986). Youth could also gain possession of handguns by borrowing their parents' firearms, with or without their knowledge. It is even possible that the ban *did* reduce handgun acquisition in this group, but that this did not reduce the youths'

involvement in violent crime. Criminally inclined young adults could substitute long guns like shotguns or rifles, or weapons other than firearms, to use in crimes, or commit offenses without using weapons of any kind - unsurprising possibilities given that most rapes, aggravated assaults, and robberies are in fact committed without firearms (U.S. Federal Bureau of Investigation, 2019, Table 19; U.S. Bureau of Justice Statistics., 2010, Table 66).

### Overall Conclusions and Policy Implications

Neither study reported herein found any violent crime-reducing effects of gun control measures aimed specifically at young adults, notwithstanding the strong a priori reasons to expect that such effects would be strongest and easiest to detect within this population. These findings reduce any optimism one might have about the benefits of gun control restrictions directly specifically at young adults. Recent reviews of research on the impact of gun control laws as a whole likewise indicate that, with few exceptions, existing gun laws have no detectable net reducing effect on violent crime (Kleck, Kovandzic, & Bellows, 2016; Rand Corporation, 2018). For example, Rand searched for evidence bearing on the effects of 14 types of gun policies (excluding Stand-Your-Ground laws, which are not gun policies) with reference to eight violent crime outcomes, and found evidence bearing on 26 of the possible effects of policies on crime. Among these 26, the authors failed to find either “strong” or “moderate” support for a violence-reducing effect of any gun policy on any violent crime outcome, with a single exception – moderate support for the effect of prohibitions associated with mental illness. (The review also found moderate support for background checks on *firearms* homicides, but only “limited” support for an effect on *total* homicides - p. 304). For all the other possible effects, the authors rated the evidence as “inconclusive.”

Particularly relevant to the present report, the Rand authors found no strong or moderate support for an impact of age restrictions on purchasing or possessing guns - evidence regarding effects on homicide was rated as “inconclusive.” Similarly, Kleck et al. (2016) failed to find even weak support for violence-reducing effects of bans on possession or purchase of guns by minors. Thus, in this research context, the present report’s null findings concerning restrictions on purchase or carrying of guns among persons age 18 to 20 are unsurprising.

This does not mean that no gun control measures can reduce violent crime. Even the generally unresponsive Rand review found some evidence that background checks and prohibitions associated with mental illness may reduce homicide. Likewise, Kleck et al. (2016, p. 508) found strong support for an effect of gun owner licensing (whose central element is background checks) on homicide, and weaker support for an assault-reducing effect of prohibition of gun possession by mentally ill persons. Further, there could be gun regulations that have never been implemented, or implemented but not evaluated, that might prove effective. Nevertheless, the full body of empirical evidence accumulated so far largely indicates that most gun control policies heretofore implemented, whether directed at young adults or the population as a whole, do not have any measurable net effect on violent crime.

## Abstract

Do gun control laws reduce violence? To answer this question, a city-level cross-sectional analysis was performed on data pertaining to every U.S. city with a population of at least 25,000 in 1990 ( $n = 1,078$ ), assessing the impact of 19 major types of gun control laws, and controlling for gun ownership levels and numerous other possible confounders. Models were estimated using instrumental variables (IVs) regression to address endogeneity of gun levels due to reverse causality. Results indicate that gun control laws generally show no evidence of effects on crime rates, possibly because gun levels do not have a net positive effect on violence rates. Although a minority of laws seem to show effects, they are as likely to imply violence-increasing effects as violence-decreasing effects. There were, however, a few noteworthy exceptions: requiring a license to possess a gun and bans on purchases of guns by alcoholics appear to reduce rates of both homicide and robbery. Weaker evidence suggests that bans on gun purchases by criminals and on possession by mentally ill persons may reduce assault rates, and that bans on gun purchase by criminals may also reduce robbery rates.

## Keywords

gun control, violence, gun ownership

The United States has higher rates of violent crime, both fatal and nonfatal, than all but a handful of the industrialized nations of the world (Killias, van Kesteren, & Rindlisbacher, 2001). Many of these crimes are committed by offenders armed with guns. In 2014, 67.9% of homicides, 40.3% of robberies, and 22.5% of aggravated assaults known to police were committed by criminals with guns (U.S. Federal Bureau of Investigation [FBI], 2015). The United States also has a higher rate of private gun ownership than any other industrialized nation (Killias et al., 2001). This combination of facts has led many to conclude that America's high rate of gun ownership must be at least partially responsible for the nation's high rates of violence, or at least its high rate of homicide. This in turn has led many to conclude that stricter gun laws can reduce violent crime, especially the homicide rate (e.g., Cook & Ludwig, 2000).

## Theory

Why should gun levels influence rates of crime or violence? And if gun levels do have effects, how might gun control laws decrease crime rates? If a gun is available to a prospective aggressor, it can encourage attacks, especially by weaker attackers on stronger or more numerous victims, and can facilitate attacks from a distance or attacks by persons too squeamish to attack with messier weapons like knives or too timid to attack at close quarters. Similarly, guns may enable some people to attempt robberies they could not complete unarmed (Cook, 1976; Kleck, 1997, pp. 215–240; Newton & Zimring, 1969). The sight of a gun also might trigger attacks by angered persons, due to the learned association between guns and violence. On the other hand, research on real-world crime incidents indicates that aggressor possession of guns is generally associated with a *lower* likelihood of attack and injury to the victim (Kleck & McElrath, 1991). Once an injury is inflicted, however, it is more likely to result in death if a gun was used, due to the weapon's greater lethality (Block, 1977; Kleck & McElrath, 1991; Newton & Zimring, 1969). Part of the higher fatality rates of gun attacks, however, is probably due to greater deadliness of intent among attackers using guns, rather than just the deadliness of the weapon itself (Cook, 1982, pp. 247–248; Wright, Rossi, & Daly, 1983, pp. 189–212).

Gun control laws, in turn, are intended to reduce crime and violence rates by restricting the availability of firearms among persons believed to be at higher risk of committing acts of violence. Although some laws hypothetically might do this by reducing gun levels in the general population, neither the federal government nor any state has ever banned the ownership of guns or even any large subset of guns, such as handguns. Further, prior research indicates that existing laws have no measurable effect on overall gun ownership levels in the population as a whole (Kleck & Patterson, 1993). Instead, gun laws are intended to block acquisition, possession, and criminal use of guns by members of high-risk subsets of the population, such as convicted criminals, mentally ill persons, alcoholics, or drug addicts.

Further, some gun laws are designed to reduce violence in ways that do not require reducing gun ownership in any subset of the population. For example, some controls aim to reduce unlicensed carrying of concealed guns through public spaces, reducing gun possession in situations likely to erupt in violence. Other controls try to deter criminal use of firearms by imposing enhanced (add-on) penalties for gun use in crimes, above and beyond the baseline penalties provided for the underlying crimes.

On the other hand, critics argue that gun control laws could increase crime, by disarming prospective victims, reducing their ability to effectively defend themselves, and possibly reducing any deterrent effect that victim gun possession might have on offenders (Kovandzic & Marvell, 2003; Lott & Mustard, 1997; Moody & Marvell, 2005). This could happen even with laws narrowly aimed at disarming subsets of the population at high risk of offending, since such groups are also at high risk of victimization (Kleck, 1997, Chapter 5; Tark & Kleck, 2004). For example, few mentally ill people commit violent acts, but they are at higher risk of victimization (Friedman, 2006), so banning sales of guns to this group could reduce defensive and deterrent effects of their gun ownership more than it reduced its violence-elevating effects. If this happened, the net effect on violence rates could be positive.

The purpose of the present study is to provide a methodologically sound evaluation of the impact of gun control laws on violent crime rates.

## Prior Research on the Impact of Gun Control Laws on Crime

There are many macro-level studies of the impact of gun control laws on violent crime rates. Most report no significant negative association between violent crime rates and the gun control law under

study (see reviews by National Research Council, 2004; Hahn et al., 2005; Kleck, 2013), though a few (e.g., Koper & Roth, 2001; Loftin, McDowall, Wiersema, & Cottey, 1991) find evidence of crime-reducing effects of some gun control laws. Regardless of their findings, all these studies can be criticized on methodological grounds. The central problems have been (1) the failure of analysts to properly account for other factors that affect violence (omitted variable bias), (2) studying heterogeneous states rather than more homogenous cities or counties, (3) a failure to control for gun ownership levels, (4) a failure to take account of local gun ordinances, (5) the use of unreliable secondary sources of information on gun laws, (6) the use of uninformative “gun control strictness” indexes that lump together heterogeneous mixtures of gun laws, and (7) the opposite problem of studying a single arbitrarily chosen instance of a given type of gun control, which precludes generalization of findings and risks confusing the effects of a gun law with the effects of other crime-control measures likely to accompany it.

One research design commonly used to assess the impact of gun control laws on violence rates has been the interrupted time-series design (ITSD). In the typical ITSD study, monthly violence rates for a single jurisdiction are analyzed to see if there is a significant downward shift in violent crime rates around the time a new gun law went into effect. The ITSD design requires that the researcher convincingly rule out changes in other crime-related factors (other than the legal change under study) as alternative explanations for observed shifts in crime trends (Campbell & Stanley, 1963). This problem is especially acute in time-series studies of gun laws due to the fact that state legislatures are almost continuously making large numbers of changes in the criminal law, often for the express purpose of reducing crime. For example, over the period 1973–1992, the Florida legislature passed an annual average of 381 general bills (this total excludes resolutions), including an average of 2.45 gun control bills per year (Etten, 2002). Almost every enactment of a new gun law is accompanied by dozens or hundreds of other changes in criminal law passed during the same legislative session, making it virtually impossible to separate the effects of one new law from those of others, enacted at the same time, and also intended to reduce crime. Since the ITSD approach is univariate, it cannot explicitly rule out any specific changes that might account for observed shifts in violent crime rates.

### *Panel/Multiple Time-Series Designs*

After 1997, ITSDs of individual laws in single jurisdictions were largely replaced by panel designs in which violent crime rates in large numbers of areas with and without the law under study were tracked over time. For example, at least two dozen panel studies have assessed the impact of “right to carry” (RTC) laws, using a county-level panel data set first compiled by Lott and Mustard (1997). They are a highly overlapping set of analyses of the same fatally flawed body of data (see Kovandzic, Marvell, & Vieraitis, 2005, pp. 294–302, for a summary; the review by Moody & Marvell, 2008).<sup>1</sup> The results of both the original Lott–Mustard study and two dozen reanalyses of their data set are all essentially uninterpretable because they are, regardless of methodological variations, based on analyses of a meaningless set of county-level “crime rates.” Better empirical evidence on the impact of these laws was provided by researchers who gathered their own crime data rather than merely reanalyzing the flawed Lott–Mustard county data set. The best evidence was produced by Kovandzic, Marvell, and Vieraitis (2005), whose panel data set pertained to 189 large cities (covering the period 1980–2000) using city-level crime data that did not have the problems associated with the attempt to aggregate crime counts of multiple local jurisdictions to create county violent crime rates. They found that RTC laws have no measurable effect on violent crime rates. Kovandzic and Marvell (2003) likewise found no impact of RTC laws on violence levels when using more complete county-level crime data for Florida counties and a more refined measure of the laws’ “treatment” effects—the number of valid concealed carry permits in each county in each year.

Panel studies (also referred to as multiple time-series studies) were a substantial improvement over ITSD studies because they exploit evidence concerning numerous instances of new gun laws in multiple jurisdictions, but they also suffer, albeit it to a lesser degree, from potential bias due to omitted variables. The omitted variable bias problem occurs here because analysts fail to or are unable to control for more than a few genuinely crime-related, time-varying factors (including other gun laws) that affect violence rates.

It is important to note that the issue here is the lack of needed controls for time-varying factors likely to influence violent crime rates (such as the passage of other gun laws), because the typical panel study uses a “fixed effects model” that is based *solely* on the cross-temporal relationship between the gun law under study and violence rates. Panel studies typically include dummy variables that represent each year and each state, in an attempt to indirectly control for the effects of variables that differ across years and states, but that are not explicitly measured—these are called “fixed effects” variables. There is a common misperception among some scholars that the inclusion of these fixed effects variables minimizes the need to explicitly control for potential confounding time-varying factors. Although fixed effects help in creating *ceteris paribus* conditions by capturing all unobserved, time-invariant factors that affect violent crime rates and are correlated with the policy variable under study, they can still produce inaccurate estimates of the effect of the policy variable if other omitted variables are correlated with *changes* in the policy variable (Wooldridge, 2000).

How consequential can omitted variable bias be in panel studies with respect to conclusions about the effect of gun laws on violence rates? A recent state panel study of 13 gun laws enacted between 1977 and 2000 by Moody and Marvell (2006) found that researchers analyzing any of the laws in isolation would have got their conclusions wrong for 5 of the 13 laws (see their table 7).

Pioneers in the use of panel data for crime policy studies, Moody and Marvell conclude that “policy analysts must be careful to properly identify the coefficients in any policy analysis equation and to avoid omitted variable bias due to omitting other relevant laws which can lead to spurious results” (p. 14). Lott and Mustard (1997, p. 38) controlled for just two other types of gun laws in their assessment of “shall issue” carry laws, whereas Ludwig and Cook (2000) controlled for none in their evaluation of the federal Brady law. In contrast, Kleck and Patterson (1993, pp. 259–260) controlled for up to 19 types of gun laws in their cross-sectional (CX) analysis of gun laws.

Given the importance of controlling for potential confounding time-varying factors, why have researchers chosen to include so few in their violence models? The answer is quite simple—the data simply do not exist or would be difficult to collect. For example, the U.S. Census Bureau and other federal/state government agencies only compute intercensal estimates for a handful of potential crime-related variables (e.g., poverty), and even those estimates are only available for larger areas such as states.

The problem with using larger aggregates such as states as a unit of analysis in a study of gun laws is that states are more heterogeneous than cities and counties, which aggravates the problem of aggregation bias. For example, a state as a whole might be high on both gun ownership and violence rates, even though the parts of the state that have high gun ownership have low violence rates. Unwary analysts who used state-level data might only find that states with more guns had more violence, failing to realize the specific places with higher gun ownership were not the places with higher violence rates.

Further, the use of state-level data can lead to mismeasurement of the strictness of gun controls to which residents of a given city are subject, as it precludes taking into account local gun control laws, the most restrictive in the nation. Thus, cities or counties are better units of analysis for a study of gun laws, both because they are more homogenous and because they allow analysts to control for both local and state gun controls. Unfortunately, if one wanted to do any kind of longitudinal research, such as a panel study, and needed to gather data describing cities or counties in the years

between censuses (e.g., 1994, 1995, etc.), one would find that intercensal data on crime-related variables for cities or counties are virtually nonexistent.

### CX Designs

CX designs compare legal jurisdictions, such as states, with each other to see if those with a gun law have lower levels of violence, other things being equal, than those lacking the law. CX designs are often judged by scholars to be weaker than panel designs because it is inherently harder for researchers to establish *ceteris paribus* conditions with a CX design. If, for example, there are factors unobserved by the researcher that affect violent crime rates and are likely to be correlated with the gun law under study, then one is likely to get a biased estimate of the causal effect of the gun law on crime. The solution is for the analyst to control as many potentially confounding factors as possible before attributing crime reduction effects to gun regulation. Of course, it is not possible to literally hold all else equal because there is no way to know exactly which variables might generate spurious associations or suppress or distort genuine causal effects. Thus, the most sensible procedure is to control for as many relevant factors as available data allow. Unlike ITSD or panel studies, however, CX studies can take advantage of the very large volume of data that is available in census years for cities, counties, or states on possible determinants of violent crime rates.

Likewise, in CX studies, it is easier for researchers to control for other types of gun laws by using, for example, the Bureau of Alcohol, Tobacco, and Firearms (BATF) report on state and local firearm ordinances. Controlling for the presence or absence of other preexisting gun laws is especially important for CX studies because it is likely that places whose residents favor one type of gun control are likely to favor others as well. Thus, failing to control for existing gun laws could lead to ordinary least squares (OLS) estimates for gun laws under study being biased in the negative direction (i.e., implying more of a crime-reducing effect) due to the omission of other gun laws and lead one to conclude that certain gun laws are effective when it is actually other gun laws that reduce violence.

Panel designs are generally preferred to CX designs for purposes of establishing *ceteris paribus* conditions, but unfortunately panel approaches are simply not feasible in some situations, and this happens to be one of them. This is because (1) it is essential to control for gun ownership levels to avoid biasing gun control law coefficients in a negative direction, but (2) there are no known valid indicators of cross-temporal variation in gun levels, making it impossible to control for gun levels in any kind of cross-temporal analysis (Kleck, 2004). The spurious association problem derives from the simple political fact that larger numbers of gun-owning voters in high gun ownership areas make it politically more risky for legislators to vote in favor of additional gun control measures. Thus, although higher gun ownership might contribute to higher violence rates, it also reduces the likelihood that a given area will have any given gun control law. If gun ownership increases violence but reduces the strictness of gun control, it will generate a spurious negative association between gun laws and violence rates, giving an erroneous impression that weaker gun laws caused higher violence rates, when in fact it was the higher gun levels that caused the higher violence rates. Consequently, any analysis of gun law impact that fails to control for gun ownership levels will yield misleading results.

It is, however, currently impossible to control for changes over time in gun levels because there are *no* valid measures of such changes. Even proxy measures that are excellent indicators of cross-area variation in gun levels, such as the percentage of suicides that are committed with guns (PSG), show no validity for measuring changes over time (Kleck, 2004, pp. 19–25). Although a few scholars have claimed that their validity checks indicated validity of PSG for use in panel studies (Cook & Ludwig, 2003; Duggan, 2001, p. 1093; Moody & Marvell, 2005), in fact the associations they observed between PSG and direct survey measures of gun ownership (used as criterion measures)

were almost entirely attributable to cross-area covariation (Kovandzic, Schaffer, & Kleck, 2013). As we demonstrate later, there is virtually *no* correlation over time between PSG and direct survey measures of gun prevalence.

We believe CX data can also be used to approximate *ceteris paribus* conditions, given the immense amount of macro-level data available to researchers for census years. In fact, one might argue that in the context of policy studies of violent crime that CX data might actually be preferred to panel data sets as few macro-level determinants of violent crime are measured at regular intervals between census years, making it difficult for panel researchers to rule out omitted variables bias. In the next section, we discuss the inability to control for perhaps the most important time-varying factor related to the passage of gun laws, gun ownership levels.

### *The Need to Control for Gun Ownership Levels*

Low or declining gun ownership may be part of what makes it politically feasible to pass new restrictions on guns, but declines in gun levels could also independently reduce violence rates, even if gun laws had no effect of their own on either gun levels or crime. Likewise, in CX analyses, the strictness of gun controls is likely to be negatively correlated with gun ownership levels for the aforementioned political reasons. In our sample of over a thousand U.S. cities, a principle components factor of gun laws was correlated  $-.52$  with our measure of gun ownership—that is, where gun ownership was higher in the general population, gun control was weaker. One of the main arguments for gun control is that gun levels, at least within some high-risk subsets of the population, affect at least some kinds of violent crime. If this were not true, it would be harder to argue that laws restricting guns could affect violence rates. On the other hand, if gun levels do affect crime, and also affect whether gun controls are implemented, then gun ownership levels are an important confounding factor, which must be controlled to avoid spurious negative associations between gun law variables and violence rates. It should be stressed that virtually all gun control laws in the United States are not designed to have their effects by reducing the level of gun ownership in the general population. Confirming this, past research indicates that gun laws in fact do not affect gun ownership levels in the general population (Kleck & Patterson, 1993). Rather, gun control laws are intended to reduce violence either by reducing gun levels within small high-risk subsets of the population or by other means that do not entail reducing gun levels within any part of the population, such as discouraging the unlicensed carrying of guns in public places or their use in crimes. Thus, gun laws do not have their effects on violence by reducing gun levels in the general public; indeed, it is unlikely that it would be politically feasible in America to pass any gun control measures that were likely to significantly reduce gun ownership among the noncriminal majority.

Consequently, general gun levels do not mediate the relationship between gun laws and violence rates. Therefore, we do not include gun ownership levels in our models for the purpose of testing for their indirect effects of gun laws on violence via their effects on general gun ownership levels. The measure of gun levels that we use, the PSG, is a measure of gun prevalence in the general population and has been validated against estimates drawn from surveys of the general population. Instead, we control for general gun levels because the gun ownership level of the general population is a confounding factor that may affect violence rates but is also likely to influence the degree of gun control strictness in a given jurisdiction, thereby generating a spurious negative association between gun laws and violence rates.

An evaluation of the validity of 21 previously used proxies for gun levels shows that although some are valid for purposes of CX comparisons, none show even minimal evidence of validity as a cross-temporal proxies for gun ownership. The CX correlation between the PSG and General Social Survey measures of household gun prevalence at the state-level was  $.92$ , whereas the correlation was  $.95$  with similar CX survey estimates for nations. On the other hand, when evaluated for the United

States across years, the correlations for this proxy were exactly .00 with the survey-measured prevalence of handgun ownership, and actually *negative* with survey-based measures of ownership of all guns (Kleck, 2004).

Some authors have nevertheless insisted that PSG is valid for intertemporal purposes, based on the fact that PSG is correlated with General Social Surveys (GSS) gun prevalence estimates in their panel analyses (Cook & Ludwig, 2000; Moody & Marvell, 2005). What these authors all failed to note was that this correlation is driven entirely by the CX correlation between PSG and the GSS gun measures. The cross-temporal correlations are negligible (Kovandzic et al., 2013). Thus, these tests actually indicated that PSG has *no* validity for measuring changes in gun levels.

The exact same problems afflict the effort of Duggan (2001) to establish that the rate of subscriptions to *Guns & Ammo* magazine (GAR) is a valid proxy for changes in gun levels. As shown in Kovandzic, Schaffer, and Kleck (2013), the association he documented between state-level survey estimates of household gun prevalence and GAR was entirely attributable to CX covariation. Across years, there is no significant correlation between GAR and the survey-based criterion measure ( $R^2 = .002$ ).

Because there are no known valid cross-temporal proxies for gun ownership available, it is, at present, impossible to control for gun levels using *any* kind of longitudinal design, including the otherwise preferable panel design. In the absence of valid time-series proxies for gun levels, researchers who want to isolate the effect of gun laws from the effects of gun ownership levels presently have no choice but to rely on CX data. For this and other reasons already discussed above, we use a CX approach in this article.

## Method

Our study assesses the impact of gun control laws on violent crime rates using CX data from all U.S. cities with a 1990 population of 25,000 or more ( $n = 1,078$ ). These cities accounted for roughly three quarters of the violent crime in the United States in 1990 (U.S. FBI, 1991, pp. 150–151). We use data for 1990 rather than 2000 or 2010 because the city-level suicide data needed to measure the proxy for gun levels were no longer publicly available and there are no feasible and valid alternative measures of gun levels (Kleck, 2004). We are not aware of any evidence that the effects of gun laws of the type that were present in 1990 would have different effects in other time periods, and it has been empirically demonstrated that the effect of gun prevalence on violence has not changed over time (Kovandzic et al., 2013, pp. 528–539). We cannot, of course, say anything about types of gun control that did not exist circa 1990, but note that newer measures have generally been weak controls, due to the unfavorable political climate for passing stronger controls in recent years, and that research has generally found no impact on crime rates for these measures, such as child access protection laws and one-gun-a-month laws (Kleck, 2013, pp. 1405–1406, 1409–1410).

We use a double-log model in which both dependent and independent variables (except for gun law dummy variables) are expressed in their natural logs.<sup>2</sup> Because the dependent variables are logged, the coefficients for the gun law dummy variables can be interpreted as elasticities. The coefficient, when multiplied by 100, is the percentage difference in rates of violent crime in cities with a particular gun law versus those without the law, holding all other factors fixed. Thus, a coefficient of  $-.16$  for a particular type of gun law in a robbery analysis means that cities with the gun law in effect have 16% lower robbery rates than cities without the law. Heteroscedasticity was detected using the Pagan–Hall (Pagan & Hall, 1983) statistic and was handled by using the Huber–White robust estimator of standard errors, which is valid in the presence of heteroscedasticity of unknown form (Wooldridge, 2006).

### *Violent Crime Rate Variables*

The dependent variables are the rates per 100,000 population of total homicide, gun homicide, nongun homicide, total robbery, and total aggravated assaults.<sup>3,4</sup> Data on the total number of homicides, robberies, and aggravated assaults for each city were taken from the FBI Uniform Crime Reports (UCR) for 1989 to 1991 (U.S. Federal Bureau of Identification 1990–1992). Gun and nongun homicide data were taken from the FBI Supplementary Homicide Reports (SHR) computer data set (Fox, 2001; see Note 4). To estimate the number of gun homicides for each city in each year, we multiplied the total number of homicides in the published UCR reports for that year by the ratio of the number of SHR-recorded gun homicides to the total number of SHR-recorded homicides for the corresponding year. Nongun homicides were estimated using the same procedure.

Following convention for CX studies, violence rates were averaged over 3 years, 1989–1991, to reduce the influence of random year-to-year aberrations. For cities missing crime count data for a given year, we estimated missing values by computing the average crime rate for that year in cities in the same census region and same population group (e.g., 25,000–99,999), among cities with valid crime data.

### *Gun Law Variables*

Cities were coded for the presence of 19 major forms of gun control restrictions that were in existence as of 1989 at either the state or city level. Descriptions of the laws, variable names, means, and standard deviations are provided in Table 1. Gun law coding for most laws was based on *State Laws and Published Ordinances—Firearms—1989*, an authoritative and comprehensive verbatim collection of state statutes and local ordinances compiled by the U.S. BATF (1989).

The coding for most gun laws was 1 if the law was present at either the state or city level, regardless of whether the law applied to all types of guns or, as was often the case, only to handguns, and 0 if it was absent. Most of the gun laws fall into one of the six categories: (1) bans on gun possession by members of “high-risk” groups such as criminals and minors, (2) restrictions on sale/transfer/purchase of guns to or by members of these groups, (3) restrictions on the carrying of guns in public places, (4) laws requiring the licensing of gun owners or registration of guns in order for a gun to be legally owned or possessed, (5) restrictions or bans on special gun types such as handguns, and (6) laws requiring a state or local license to be in the business of selling guns, in addition to the license required by the federal government.<sup>5</sup> Gun laws that were too minor or technical to be likely to have any detectable effect on violence rates were not coded, nor were laws that were either universal (or nearly so) across states (e.g., federal laws or bans on machinegun possession) or that were unique to a single jurisdiction. In either of the latter two situations, there was too little variation across cities to reliably detect effects of the laws. The complete gun law coding protocol may be obtained from the senior author.

These state and local laws do not merely duplicate or overlap similar controls at the federal law. The scope of state controls is often considerably broader than seemingly similar federal controls. For example, a state ban on acquisition or possession of guns by convicted criminal may apply to certain misdemeanants as well as felons, whereas the federal ban generally applies only to felons. Likewise, some state restrictions on juvenile acquisition or possession of long guns apply to 18- to 20-year-olds as well as those under 18, while federal law prohibits acquisition only by those under 18. Further, state and local capacity to effectively administer their controls is often considerably greater than that of the federal government. Even after the Brady Act was passed in 1994 (after our study period), background checks in connection with the federal Brady law could not make any significant use of records concerning mental illness—in 2005, over 4.9 million people applied to buy a gun from a federally licensed dealer, 66,705 were rejected via an FBI records check, but only one half of 1% of

**Table 1.** Variables Used in the Analysis and Descriptive Statistics.<sup>a</sup>

| Variables                                                                       | Mean    | SD      | Source <sup>b</sup> |
|---------------------------------------------------------------------------------|---------|---------|---------------------|
| Crime rates (1989–1991 average, rates per 100,000 residents)                    |         |         |                     |
| CRMUR, total homicides                                                          | 8.02    | 10.30   | A                   |

<sup>a</sup>Unless otherwise noted, each variable refers to a city, as of 1990. In variable descriptions, “county” indicates variable refers to county in which city is located. <sup>b</sup>A = U.S. Federal Bureau of Investigation (1990–1992).

these FBI rejections were for reasons of mental illness. In contrast, some states like Illinois have registries of all persons admitted to psychiatric hospitals in the state, while local enforcement agencies have access to local mental health sources. Consequently, much higher shares of the rejections by state and local agencies were for reasons of mental illness (Bordua, Lizotte, & Kleck, 1979; U.S. Bureau of Justice Statistics, 2006, pp. 2, 5). Likewise, the requirements for state and local dealer licenses are stricter than those imposed by the federal government for issuance of its license. For example, although many states and localities required a criminal background check to become a licensed gun dealer, the federal government, as of 1989, did not do so (U.S. BATF, 1989).

### *Gun Ownership Levels*

Gun levels were measured using the PSG, which research has shown to be the best proxy to use in CX research (Kleck, 2004). This measure has a near-perfect correlation with direct survey measures of household gun prevalence, that is, the percentage of households with one or more guns, so we interpret our measure of gun levels as a measure of household gun prevalence. Vital statistics data for 1987–1993 do not identify locations of deaths for cities with populations smaller than 100,000, so it was not possible to compute city-level measures of PSG for most of our cities. Therefore, we used PSG for the *county* in which the city was located as a proxy for city-level gun availability. Some of the smaller counties had few suicides per year, so misclassification of a few suicides as homicides or accidents in small counties could produce substantial measurement error in a single year's count. Therefore, PSG was computed using data covering the 7-year period from 1987 to 1993, bracketing the census year of 1990. Data were derived from special Part III Mortality Detail File computer tapes (not the general public use tapes) made available to the senior author by the National Center for Health Statistics (U.S. National Center for Health Statistics, 1997). Unfortunately, data access restrictions adopted later by the Centers for Disease Control and Prevention made it virtually impossible to acquire similar data for the years bracketing 2000 or 2010.

### *Control Variables*

In addition to the gun levels measure and gun law dummies, we included 11 city-level control variables that prior macro-level crime research have shown to be reliable predictors of crime. Decisions as to which control variables were included in the violent crime models were based on a review of previous macro-level studies linking violent crime to structural characteristics of macro-level units like cities and states. Most of these control variables account for the causal effects emphasized by motivational, opportunity, and compositional theories of criminal behavior (see Kovandzic, Vieraitis, & Yeisley, 1998; Sampson, 1986; Vieraitis, 2000; the studies reviewed therein). Thus for each gun control law, we control for 18 other gun laws and 11 of the most important structural covariates of violent crime as determined by theory and prior research. Although it is impossible to know for sure if any important time-invariant confounding factors have been omitted, we suggest by holding constant 29 potential relevant factors that we can satisfactorily test the gun law efficacy hypothesis. Table 1 lists and provides a brief description of each control variable along with their means, standard deviations, and data sources.

Fortunately, correlations between the gun law variables and the control variables were generally weak in almost all cases. Of the 209 bivariate correlations between the gun law variables and control variables (19 Gun Laws  $\times$  11 Control Variables), none exceeded .5, and only one reached .4. Thus, there was no serious collinearity between gun law variables and control variables. This was confirmed by examination of condition indices and variance-decomposition proportions (Belsley, Kuh, & Welsh, 1980).

## Analytic Procedures

As discussed above, it is important to control for gun levels to isolate the effect of gun laws, but this introduces a complication in estimation of the models. There is a strong theoretical basis, and a large body of empirical support, for the belief that higher violence rates drive up gun ownership levels, as more people acquire guns for self-protection (Bice & Hemley, 2002; Bordua, 1986; Clotfelter, 1981; Kleck, 1979, 1984; Kleck & Kovandzic, 2009; Kleck & Patterson, 1993; Kovandzic, Schaffer, & Kleck, 2012, 2013; McDowall, 1986; Rosenfeld, Baumer, & Messner, 2007; Southwick, 1997). Cities with higher violence rates, therefore, may tend to have higher gun ownership levels, even if gun availability reduced or had no effect on violence rates. When explanatory variables such as gun ownership are endogenous (affected by other variables in the analysis), the OLS estimator is biased and inconsistent (Wooldridge, 2000).

The most common estimation procedure used to address potential endogeneity bias, and the procedure used here, is IVs regression. The key challenge in using IV methods is finding a source of identifying variation: here, variables that are correlated with gun ownership (instrument relevance), that are exogenous with respect to violent crime (i.e., not affected by violent crime—“instrument validity”), and that a priori reasoning and evidence suggest should be excluded from the violent crime equations, that is, do not directly affect violent crime. In the terminology of IV estimation, the instruments used for gun levels are “excluded instruments,” and the control variables are “included instruments.” If appropriate IVs can be found for gun levels, the method of IVs will produce consistent estimates of the effect of gun levels on violent crime (Wooldridge, 2000).

The excluded IVs used in this article to instrument gun levels are the percentage of the 1992 Presidential vote for the Republican candidate (PCTREP92) and the 1990 county rate of Vietnam-era veterans per 100,000 population (VIETNAM). Both excluded IVs are theoretically important determinants of gun ownership that are plausibly otherwise unrelated to levels of violence. VIETNAM serves as a measure of military training or service, while PCTREP92 serves as a measure of political conservatism. Prior research suggests both variables are significant predictors of gun ownership (Cook & Ludwig, 1997, p. 35; Kleck, 1997, pp. 70–72; Lizotte & Bordua, 1980). In contrast to past research, we carried out extensive specification testing to demonstrate that our excluded IVs VIETNAM and PCTREP92 are relevant and valid.

## Tests of the Relevance and Validity of the Instruments

We test for instrument relevance using a heteroscedasticity-robust  $F$ -test of the joint significance of the excluded instruments VIETNAM and PCTREP92 in an OLS estimation of the first-stage equation of gun levels (PSG), and we also examine the significance of VIETNAM and PCTREP92 separately using conventional  $t$ -statistics. Research by Bound, Jaeger, and Baker (1995) and Staiger and Stock (1997) indicates that an  $F$ -test is useful for examining the explanatory power of the excluded IVs, and that  $F$ -statistics below 10 indicate weak instruments (Staiger & Stock, 1997, p. 557). The results of the  $F$ -test for VIETNAM and PCTREP92 are reported at the bottom of column 2 in Table 2. The second column in Table 2 also reports the estimated coefficients of the excluded IVs and the remaining exogenous regressors in the first-stage equation of gun levels. The first-stage  $F$ -statistic reported in column 2 is 38.9, well above the Staiger–Stock rule-of-thumb value of 10. Both of the excluded instruments are correlated with gun levels in the expected directions and at the 0.1% significance level: cities in counties with a greater proportion of Vietnam veterans and persons voting for the Republican candidate in the 1992 Presidential election have higher gun ownership levels. We conclude that our excluded instruments in this estimation are relevant and not “weak.”

The second requirement for excluded IVs is that they be uncorrelated with the error process in the violent crime equations. Because the violence equations are overidentified, we are able to assess the

**Table 2.** The Estimated Impact of Gun Availability and Gun Laws on City-Level Violence Rates: Instrumental Variables Estimates, Gun Ownership Treated as Endogenous.

| Predictor Variables | IV Estimation: Dependent Variables: Natural Log of the Violent Crime Rate per 100,000 Persons |                |                |                 |                |

Note. Standard errors are computed using Huber–White robust estimate of variance. Robust t-statistics in parentheses. Excluded instruments are VIETNAM and PCTREP92. \*Significant at 5%. \*\*Significant at 1%.

validity of the excluded instruments with an overidentification test.<sup>6</sup> Although several such tests exist, we use the *J*-statistic of Hansen (1982) because it is robust in the presence of heteroscedasticity.<sup>7</sup> Hansen's *J*-statistic tests the null hypothesis that the excluded instruments and/or control variables (i.e., included instruments) are exogenous (Baum, Schaffer, & Stillman, 2003). For our IVs to be valid, we should fail to reject the null hypothesis. This test is especially valuable because it fails to have power only if *all* excluded IVs are invalid, that is, are not exogenous. As long as even one of our excluded instruments is valid, the *J*-test is effective in detecting the invalidity of the instruments.<sup>8</sup>

The results of the *J*-test for each violent crime model are reported at the bottom of Table 2. The *J*-statistics are all both small and statistically insignificant. We therefore cannot reject the null that VIETNAM and PCTREP92 and the control variables are exogenous. Thus, the evidence suggests that both of our excluded IVs are exogenous and are correctly excluded from the violent crime equations. To summarize, VIETNAM and PCTREP92 easily pass the relevance (*F*-test) and validity requirements (*J*-test) for instruments.

It might be argued that gun control laws should also be treated as endogenous because the passage of laws intended to reduce violent crime is affected by violent crime. That is, coefficients on the gun law variables might be biased upwards due to another form of endogeneity bias—simultaneity bias attributable to higher violent crime rates leading to passage of gun laws. We consider this to be unlikely, for several reasons. First, most major gun laws in effect in 1989 were originally enacted decades earlier (compare Newton & Zimring, 1969, appendix G with U.S. Bureau of Justice Statistics, 1996), so their enactment could not have been influenced by violent crime rates in 1989–1991, or indeed in any recent years. Second, prior research directly testing for an impact of violent crime rates on gun control strictness has found no effect (Bruce & Wilcox, 1998).

The probable source of the belief that crime affects passage of gun laws is the fact that highly publicized individual acts of violence, such as mass shootings, sometimes trigger the enactment of new gun control laws. Strictly speaking, the effect of news coverage of crime is irrelevant to whether *crime rates* affect the enactment of gun laws unless one assumes a significant correlation between crime rates and *news coverage* of crime. Past research, however, indicates that there is virtually no correlation between crime and the amount of news coverage of crime (Dorfman & Schiraldi, 2001; Garofalo, 1981; Marsh, 1989). In sum, crime news affects passage of gun laws, but crime rates do not.

Finally, there is little reason to believe that higher violent crime rates increase public support for gun control, since survey research shows that public support for gun control is not affected by higher crime rates in the area where a person resides, prior victimization, or fear of crime but instead derives from more stable cultural determinants not directly related to crime (Kleck, 1996; Kleck & Kovandzic, 2009). If higher crime rates do not increase the likelihood that people support more gun laws, there is little reason to expect that higher crime rates, in the past or the present, would increase the level of gun control strictness (Kleck, 1997; Wright et al., 1983). In sum, there is no sound basis for regarding gun control laws as endogenous or influenced by violent crime rates.

## Results

### *Effects of Gun Ownership Levels on Crime*

Estimates of the impact of gun ownership levels (as proxied by PSG) on crime can be found in Table 2, in the first row of each column referring to a crime. For example, the coefficient on PSG in the total homicide equation using IV methods is  $-.57$  and it is not statistically significant at the 5% level. The basic finding in Table 2 is that when gun levels are treated as endogenous and instrumented with VIETNAM and PCTREP92, gun levels show no net significant positive (violence-

increasing) effect on homicide, robbery, or aggravated assault rates. As discussed in Kovandzic et al. 2013, this IVs strategy would probably overstate a violence-elevating effects of gun levels on violent crime, if there were any. Yet, it still produces estimates suggesting net negative (albeit not significant) or null effects. Thus, our findings of a null or negative impact of guns on homicide are strengthened because the potential bias in estimation is likely to be positive, which would work against our interpretation. The implication is that our coefficient estimate is an upper bound on the estimated effect of gun levels on violence rates.

One problem with using city-level data is that cities in the same state may share unobservable characteristics that could lead to intrastate correlation of errors. In such a situation, standard errors are underestimated, leading to inflated  $t$ -ratios on PSG and the gun law variables. Therefore, we reestimated the regressions in Table 3 using robust standard errors corrected for clustering by state (which allow for arbitrary within-state correlation), and the  $t$ -ratios for PSG and the gun law variables became much smaller. Nevertheless, when we reestimated regressions analogous to those in Table 2 using the two-step efficient generalized method of moments (GMM) estimator instead of the IV estimator, we obtained results similar to those reported in Table 2. The benefit of the GMM estimator relative to the traditional IV estimator is that it produces parameter estimates that are both consistent and efficient in the presence of heteroscedasticity of unknown form, whereas the IV estimator is consistent but inefficient (Wooldridge, 2000). The coefficients obtained for PSG using the GMM estimator were as follows ( $t$ -ratios in parentheses):  $-.56$  (1.16) for total homicide,  $.42$  (0.79) for gun homicide,  $-.14$  (0.33) for nongun homicide,  $-.91$  ( $-1.68$ ) for robbery, and  $.54$  (1.09) for assault. Thus, the results once again indicate no significant positive (violence-elevating) effect of gun ownership on crime rates.

To summarize, we have strong evidence that higher gun levels do not cause more crime. One implication of these findings is that general gun ownership could not mediate the effect of gun control laws on crime. Consequently, if gun laws were passed that were intended to reduce violent crime by reducing general gun ownership levels, they would be likely to fail because even if they did succeed in reducing general gun levels, this would not lead to a reduction in violent crime. Gun ownership levels among criminals, however, may have violence-increasing effects that are canceled out by violence-decreasing effects of gun ownership among noncriminals. Thus, our results do not allow us to rule out the possibility of violence-increasing effects of criminal gun possession.

### *Effects of Gun Control Laws on Gun Ownership Levels*

We then estimate a model testing the effects on gun laws on gun ownership levels, as measured by PSG. Results of the first-stage estimation for this PSG model are presented in column 2 of Table 2. In all, 7 of the 19 gun laws showed an apparent negative effect on gun ownership levels, while 4 others showed an apparent positive effect. This mix of signs on the coefficients suggest the operation of random chance in generating the estimates, in the absence of any compelling reasons to expect some gun laws to increase gun ownership and others to reduce it. Significant negative estimates should in any case be viewed with caution, as they may reflect negative effects of gun levels on the passage of gun control laws, due to the fact that larger numbers of gun-owning voters discourage legislators from supporting new gun controls.

### *Effects of Gun Control Laws on Violence Rates*

The estimates displayed in Table 2 also indicate that most gun control measures appear to have no significant negative direct effect on total (gun plus nongun) violence rates—total homicide, total robbery, and total aggravated assault. Indeed, if the statistical results are taken at face value, some laws appear to increase violence rates. Of the 57 possible effects examined (19 laws, paired with

each of 3 violent crime types), results for 2 effects were strongly supportive of gun control effectiveness, whereas 5 others were at least weakly supportive. There were 20 gun law coefficients significant at the .05 level (counting total homicide results, but not counting those for gun homicide and nongun homicide). Given that we had a sample size exceeding a thousand, it is not surprising that many associations were statistically significant, as even weak associations can be statistically significant when analyzing so large a macro-level sample. The 8 negative coefficients, however, were outnumbered by 12 positive ones. There is no clear pattern of these “effects” by either type of

gun control or type of violent crime affected. Thus, while it is possible that some gun laws really do increase violent crime while others reduce it, some of these significant coefficients may reflect nothing more than random chance operating with a large number (57) of hypothesis tests, each of them based on a large sample.

There was nevertheless solid support for two beneficial effects of gun control laws on violent crime. First, we found that state laws forbidding the purchase of guns by, or sale of guns to, alcoholics or persons under the influence (ALCBUY) reduced homicide. This is a relatively strong finding because the law not only showed significant negative effects on total (gun plus nongun) homicide but also showed a significant negative effect on gun homicide and a weaker effect on nongun homicide.

Second, the results provide relatively strong evidence that laws requiring a license to possess a gun in the home (LICENSE) reduce homicide. This impact may reflect the consequences of more extensive state-level background checks conducted in connection with licensing. Like the results for laws restricting gun sales to alcoholics, these results showed a strongly supportive pattern of results by gun involvement—a significant negative effect on gun homicide, combined with no significant effect on nongun homicide.

Only weaker evidence is available for gun law effects on robbery and assault, since flaws in available data made it impossible to reliably compare gun law effects on gun violence with their effects on nongun violence (e.g., gun robbery vs. nongun robbery). These weaker findings suggest that robbery may be reduced via state bans on purchases of guns by convicted criminals (CRIMBUY), bans on gun purchases by alcoholics (ALCBUY), and requiring a license to possess a gun (LICENSE). Confidence is increased in the results concerning the latter two laws because our evidence indicated these laws also may reduce gun ownership (some portion of which is ownership by criminals) and appear to reduce homicide, suggesting some capacity to deny guns to criminals.

Two types of gun control laws appear to reduce aggravated assault, though again the findings should be viewed as tentative, for the same reasons stated with connection with findings bearing on robbery. First, state or local bans on the purchase of guns by criminals (CRIMBUY) may reduce aggravated assaults. Second, the results suggest that bans on possession of guns by mentally ill persons may reduce aggravated assault. This latter interpretation, however, is questionable in light of the finding of a significant *positive* association between bans on *purchase* of guns by mentally ill persons and aggravated assault. There is no obvious explanation why banning gun purchases by mentally ill persons would increase assaults, while banning gun *possession* by such people would decrease them.

### *Using a More Limited Set of Gun Laws*

Because we could not know in advance which of the 19 gun law measures affected violent crime, we initially specified all 19 gun control variables to be included in each violent crime equation. As discussed above, close examination of collinearity diagnostics did not reveal a harmful degree of collinearity among the gun law variables. Nevertheless, there is *some* collinearity among the gun law variables that could inflate standard errors somewhat and thereby bias hypothesis tests in favor of the null (no effect) hypothesis. Therefore, each violent crime equation was reestimated so as to test the effects of just nine stronger gun laws thought to be especially likely to show effects on crime—bans on the possession of guns by criminals and minors (CRIMPOS, MINORPOS), bans on sale/transfer of guns to criminals and minors (CRIMBUY, MINORBUY), laws requiring a permit and/or license to purchase a gun (BYPERMIT, BYAPLIC), laws requiring a license to possess a gun in a home (LICENSE), laws controlling the concealed carrying of loaded handguns in public places (CARYHIDN), and bans on the sale of “Saturday Night Specials” (SNSBAN). We obtained results virtually identical to those obtained using the full set of 19 gun law variables except that the

coefficient for CRIMBUY was no longer significant and negative in the assault equation. Gun levels still showed no positive effect on violence rates (estimates are available from the senior author).

### *Using Lagged Violent Crime as a Proxy Variable for Omitted Historical Variables*

As noted above, it is impossible to control for literally all potential confounding factors, even though CX data are widely available for a rich variety of variables for census years. Despite our best attempts to control for the most likely confounding factors, we cannot rule out the possibility that the gun law variables are correlated with one or more omitted variables that affect violent crime rates. One way to address potential bias due to omitted historical variables in the context of CX data is to control for the value of the dependent variable from a previous time period. As Wooldridge (2000) notes

using a lagged dependent variable in a CX equation increases the data requirements, but it also provides a simple way to account for historical factors that cause current differences in the dependent variable that are difficult to account for in other ways.” (p. 289)

If, for example, cities with historically high violent crime rates were also more likely to have stricter gun laws, we would fail to get an unbiased estimator of the causal effect of gun laws on violent crime rates. Therefore, we reestimated the violence equations in Table 2 but also included the natural log of the violent crime rate for 1980 as an additional independent variable in an attempt to control for city unobservables that affect violent crime and may be correlated with the gun law variables. By including the violent crime rate for 1980 in the violence equations, we are examining whether cities with similar previous violent crime rates in 1980 and 1990 values for the socio-demographic control variables had lower violent crime rates in 1990 due to the presence of any of the 19 gun laws studied here. To conserve space, the results of these analyses are not shown but are available upon request from the senior author. Not surprisingly, the homicide, robbery, and assault rates for 1990 were strongly related to the past violent crime rate. With respect to the gun law variables, the results were almost identical to those reported in Table 2. The only exception pertained to the robbery equation—the coefficient for the gun law banning the sale of handguns (HGBYBAN) was positive but no longer statistically significant. Thus, the evidence does not support the suspicion that estimates for the gun law variables were biased upwards due to the omission of historical factors responsible for differences in violent crime rates across cities in 1990.

### *OLS Estimates With Gun Ownership Treated as Exogenous*

Although prior research indicates that OLS estimates of the effect of gun ownership levels on homicide rates are likely to be biased, the possibility that these biases are small or negligible cannot be ruled out. If this were indeed the case, then gun ownership could be treated as an exogenous regressor, and estimation by OLS would be preferred to IV because it is the more efficient (lower variance) estimator. The standard approach to this question is to conduct a test of the endogeneity of gun ownership. Such a test relies implicitly on a comparison of an estimation in which gun ownership is treated as exogenous and one in which it is treated as endogenous. For the test to have any meaning, it is therefore essential that the OLS estimation be contrasted with a well-specified IV estimation, that is, one that uses instruments for gun ownership that are both relevant and valid. Testing for the endogeneity of gun ownership by comparing OLS to a misspecified IV estimation cannot provide evidence that OLS is acceptable. Having shown that our instruments satisfy the requirements of both validity and reliability, we turn to the issue of whether gun ownership (again proxied by PSG) is endogenous.

We tested for the endogeneity of gun ownership using the *C*-test, which detects the impact of adding a restriction, in this case assuming that violence rates have zero immediate effect on gun ownership (thus treating gun levels as exogenous; Baum et al., 2003). The impact should be small if both equations (with and without the restriction) are valid. On the other hand, if there is a large change in the estimates of parameters, it suggests that the equation with the extra restriction (assuming gun ownership to be exogenous) is wrong.

The results of the *C*-test for the endogeneity of PSG are presented in the bottom half of Table 3. The *C*-statistic suggests gun ownership may be endogenous in the total homicide and robbery equations, although it is only significant at the .10 level. Additionally, the results indicate that although gun ownership may also be endogenous to gun homicide and assault, the *C*-statistic in these equations is not significant at conventional significance levels. In light of the mixed *C*-test results, we reestimated the violence rate equations presented in Table 3 but treated gun ownership as exogenous to rates of violence and estimated models with OLS. These results are shown in Table 3.

The OLS estimates indicate that gun ownership has a positive association with total homicide that is barely significant at the 5% (one-tailed) level ( $t = 1.77$ ) but is still not significantly related to robbery or assault rates. Thus, we have consistent findings regarding robbery and assault—gun ownership has no significant positive effect. But we have mildly contradictory findings regarding the impact of gun ownership on the homicide rate. The IV results, which are appropriate if homicide rates affect gun acquisition, indicate that gun ownership has no significant net effect on homicide rates, while the OLS results, which are appropriate only if homicide rates have no effect on gun acquisition, indicate a marginally significant positive effect of gun ownership on homicide rates.

We doubt that gun ownership can be treated as exogenous, given the prior evidence of individual-level survey studies indicating that violent crime rates affect gun ownership. These studies are critical for breaking the deadlock concerning causal order because they are not subject to the same uncertainties concerning exogeneity and model identification that may afflict the numerous aggregate-level studies that have found an effect of violent crime rates on gun ownership. The survey studies relate the gun ownership of individual persons or households to the violent crime rates of the areas in which the individuals reside (Kleck & Kovandzic, 2009). Because it is highly unlikely that the gun ownership of any one person or household could materially affect the violent crime rates of an entire city or county, it is reasonable to conclude that the violent crime/gun ownership relationship in such studies is unidirectional, and that estimates of the effect of crime rates on gun ownership are not distorted by two-way causation.

These studies find that violent crime rates of surrounding areas increase, directly or indirectly, the likelihood that a person or household owns a gun (Kleck & Kovandzic, 2009; Lizotte, Bordua, & White, 1981, p. 501; Smith & Uchida, 1988). Therefore, we think it is advisable, in macro-level studies, to treat gun ownership as endogenous, based on strong and consistent evidence that violent crime rates affect levels of gun ownership, especially handgun ownership. Thus, on the basis of prior information, the IV estimates of models assuming gun levels to be endogenous should be regarded as more reliable than OLS estimates that require the strong assumption that violent crime rates have no effect on gun levels.

When gun levels were treated as exogenous (Table 3), nine effects of gun laws on violence rates substantially changed (i.e., coefficients changed from significant to nonsignificant, or the reverse). Five changes were in a direction favorable to the hypothesis that gun control either reduces violent crime or has no effect: the previously significant positive (counterproductive) effects of bans on gun possession among alcoholics (ALCPOS) became nonsignificant, while four previously nonsignificant negative effects became significant (BYAPLIC → HOMICIDE, BYAPLIC → ROBBERY, DRUGPOS → ASSAULT, ALCBUY → ASSAULT). The remaining four changes were unfavorable to the gun control efficacy hypothesis: the previously significant negative effect of gun owner

licensing became nonsignificant, while three previously nonsignificant positive (counterproductive) effects became significant.

For the rest of the potential effects, resolution of the exogeneity issue turned out not to materially affect the results of primary interest, the impact of gun laws on violence rates—the OLS results were qualitatively identical to those obtained using IV methods. On net, results were no more supportive of gun control than those obtained when gun ownership was treated as endogenous. Considering the OLS estimates as a whole, the 10 significant negative associations were counterbalanced by 14 significant positive coefficients. This pattern suggests, as did the IV results, that if one interprets these associations as causal effects, gun control laws are more likely to increase violent crime than to decrease it. We also estimated models with gun ownership omitted altogether, and results for gun law variables were essentially identical to those produced when gun ownership was included, but as an exogenous variable.

Given the inevitable uncertainties of even the most careful nonexperimental research, it cannot be stated with certainty that gun ownership levels have no effect on violent crime rates. If they do not, gun ownership is not a confounder that needs to be controlled to isolate the effects of gun laws, but one of the most important underlying premises of gun control is undercut. On the other hand, if the level of gun ownership does affect violence rates, then it is a confounder that must be controlled if estimates of gun control effects are to be given much credence. Our results are therefore stronger than those of past research because we could rule out the possibility of a spurious negative association between gun laws and violent crime rates attributable to the negative association of gun control strictness with gun ownership levels.

## Discussion and Conclusion

For the most part, the evidence fails to support the hypothesis that gun control laws reduce violent crime. The absence of any apparent impact may be partly because most laws do not disarm significant numbers of violence-prone persons in the first place. It is also possible that gun laws have both violence-reducing and violence-increasing effects, the latter due to disarming of prospective victims. Opposite-sign effects may counterbalance each other, yielding no net effect.

There were nevertheless some findings that point to possible gun law effects on violent crime rates, both desirable and undesirable (summarized in Table 4). Of 57 possible effects of a type of gun law on a type of violent crime, 20 were significantly different from zero—8 negative, 12 positive. Some of these findings may be the product of chance, operating in combination with the very large number of tests for effects that were performed, though this would probably produce no more than around three coefficients significant at the 5% level ( $.05 \times 57 = 3$ ). Taken at face value as causal effects, these findings indicate that gun control laws are at least as likely to increase violent crime as to decrease it, though on net gun control laws as a whole do not affect violent crime rates.

Along with the two strong findings (the effect of bans on purchase by alcoholics and the impact of requiring a gun license on homicide rates) and five moderate-to-weak findings supportive of gun control efficacy, Table 4 also shows 12 possible *positive* effects of gun laws on violent crime rates. Unlike our tests of violence-reducing effects of gun laws on homicide, no sharp tests of violence-increasing effects are possible because reduction of gun levels among prospective victims could increase either crime committed with guns or crime committed without guns. Thus, findings pointing to violence-elevating effects are necessarily weaker than findings pointing to violence-reducing effects on homicide. If interpreted as causal effects, the positive associations would indicate violence-increasing effects of gun control measures, perhaps due to potential victims (many within high-risk prohibited groups) being disarmed, making crime less risky for offenders. Among the more intriguing apparent counterproductive effects was that of laws restricting the concealed carrying of

**Table 4.** Summary of Effects of Gun Control Laws on Crime Rates.

| Type of Gun Control Law                                               | Types of Violent Crime Affected |
|-----------------------------------------------------------------------|---------------------------------|
| Violence-reducing effects                                             |                                 |

guns on homicide. To the extent that these laws reduce gun carrying by prospective victims more than by offenders, the laws could increase violent crime by reducing any deterrent effects generated by victim gun carrying. The strongest prior research on this question, however, indicates that replacing restrictive carry laws with more lenient “shall issue” licensing has no net impact on violent crime rates (Kovandzic et al., 2005). Further, laws reducing the carrying of guns outside the home should have their strongest influence on crimes typically committed in nonresidential locations, such as robberies, but our results indicated no effect on the robbery rate.

It is possible that still other laws, implemented since 1989 or not yet implemented, might have effects not produced by the older laws. Perhaps gun control strictness has not yet reached some unknown threshold level, below which no measurable crime reductions can be achieved. The laws enacted since 1989, however, are generally weaker than those passed earlier. The single possible exception is the federal Brady Act, but preliminary evaluation indicates that this law, at least in the first few years after its passage, was ineffective (Ludwig & Cook, 2000). In any case, this sort of speculation is nonfalsifiable, as one could continue to entertain it no matter how strict controls became in the future, and no matter how negative the results of research continued to be. It is also possible that some laws have effects, but they are too small to be statistically detectable using our models and data, even with a sample size exceeding a thousand.

The main policy implication of this research is that the past performance of existing gun laws does not justify much optimism that new gun laws will reduce violent crime. Support for even the least promising strategy can be sustained by ultimately nonfalsifiable speculations about what might be achieved by the next, heretofore untried, variant of the strategy, but this is not a very practical way to set priorities for the allocation of limited resources for reducing social problems. This does not imply that we should not explore new variants of gun control, but it does imply that such efforts have

less a priori potential for measurable impact on crime rates than alternatives such as well-evaluated programs to reduce poverty or rehabilitate criminals (Walker, 2011).

On a more positive note, the minority of gun control measures that show evidence of effectiveness share an important element in common—background checks on persons attempting to acquire firearms. Both licenses authorizing gun possession and permits for purchasing guns are implemented using background checks to screen out persons in prohibited categories, such as criminals, alcoholics, and mentally ill persons. Likewise, bans on gun purchases by criminals or alcoholics are little more than hollow recommendations if not backed up by a system for identifying whether persons fall into these prohibited categories. Currently, persons attempting to acquire guns from licensed gun dealers are required to pass a background check under federal law, but those trying to get guns from private (nondealer) sources are not required to do so, under either federal law or the laws of most states. Consequently, some reduction in violent crime could be produced by a federal law requiring background checks on all persons seeking to obtain a firearm, regardless of the source.

### **Declaration of Conflicting Interests**

The author(s) declared no potential conflicts of interest with respect to the research, authorship, and/or publication of this article.

### **Funding**

The author(s) received no financial support for the research, authorship, and/or publication of this article.

### **Notes**

1. Although Lott and Mustard (1997) represented their key data as county rates of crimes known to the police, their data in fact reflected only crimes within subsets of local police jurisdictions within each county that reported crime to state UCR agencies—subsets of jurisdictions that frequently changed from year to year. Their “crime rates” for a given county changed in this data set merely because different sets of areas contributed crime statistics in 1 year compared to the previous year, rather than because rates of crime (or even crimes known to police) changed (Maltz & Targonski, 2002; see also Martin and Legault, 2005, regarding similar problems in state-level crime data analyzed by Lott and Mustard). It is exactly as if a different set of counties were included in each wave of the panel. Lott and Mustard did nothing to correct this critical problem, nor did critics who reanalyzed their unmodified data set.
2. A few low population cities reported zero homicides for the 1989–1991 study period. Because the logarithm of zero is undefined, 1 was added to the average annual number of total, gun, and nongun homicides before we computed the rates and then took the natural logs of those rates. The procedure was applied to all cities, not just those with zero homicides, to maintain relative homicide levels.
3. We did not study the effects of gun ownership and gun laws on rape rates. Because less than 3% of rapes involve offenders armed with guns (U.S. Bureau of Justice Statistics, 2006), it is unlikely that gun ownership or gun laws could exert a detectable effect on the rape rate.
4. It would have been desirable to separately assess rates of all types of violent crime with and without guns, to provide sharper tests of the hypotheses that gun levels and gun laws affect violence rates. Unfortunately, close examination of UCR data on gun versus nongun varieties of robbery and aggravated assault revealed that the data often covered less than 12 months of the year, were often coded incorrectly (e.g., *all* robberies were coded as gun robberies), or there were implausibly large or small numbers of crimes reported as involving guns. Consequently, we could reliably distinguish gun and nongun crimes only for homicide, by using SHR data.
5. For the gun carrying law variable (CARYHIDN), 1 indicated that gun carrying was either completely unlawful or required a license that was rarely issued, and 0 indicated that either the city was located in a

nondiscretionary “shall-issue” state where authorities were required to issue carry permits to applicants meeting certain objective criteria, or no license was required at all to carry guns.

6. That is, the number of excluded instruments exceeds the number of endogenous regressors.
7. The *J*-statistic for the instrumental variable estimator is numerically equivalent to Sargan’s (1958) NR2 overidentification statistic.
8. Where the test will lack power is if all the instruments fail the requirement of exogeneity and, in addition, they all imply the same bias in the estimate of gun levels.

## The impact of minimum age and child access prevention laws on firearm-related youth suicides and unintentional deaths

Mark Gius\*

Department of Economics, Quinnipiac University, Hamden, CT 06518, USA

Minimum age handgun laws

Child access prevention laws

Suicides

Unintentional deaths

### ABSTRACT

The aim of the present study is to quantify the association between child access prevention (CAP) and minimum age laws and state-level youth firearm-related suicide and unintentional death rates. This paper differs from prior research in several ways. First, this is one of the few studies to focus exclusively on youth death rates. Second, this study looks at those laws with the most impact on youth suicides and unintentional deaths. Finally, this study uses one of the largest and most recent data sets of any study on this topic. In order to estimate the determinants of youth firearm deaths, a fixed effects regression model, controlling for both state-level and year-specific effects, is used. Results indicate that state-level minimum age laws have no significant effects on either youth suicides or unintentional deaths and that state-level CAP laws have no significant effects on unintentional deaths. States with CAP laws, however, have lower rates of youth suicide, and, after the enactment of the Federal minimum age requirement, both youth suicide and unintentional death rates fell. Given the mixed results regarding state-level juvenile firearm laws, national restrictions on juvenile handgun possession may be more effective in reducing both youth suicides and unintentional deaths than state-level regulations.

### 1. Introduction

In 1981, the firearm-related suicide rate for youths (ages 0–19) was 1.69 per 100,000 persons; in 2010, it was 0.9 per 100,000 persons, a decline of over 47%. Even more dramatic was the decline in firearm related unintentional deaths (ages 0–19) over the same time period. In 1981, the firearm-related unintentional death rate was 0.84 per 100,000 persons; in 2010, it was 0.16 per 100,000 persons, a decrease of over 80%. Although a variety of factors, including more prevalent use of gun locks and gun safes and better counseling services, may explain some of the decline in firearm-related deaths among youths, it is possible that

stricter gun control laws may be at least partly responsible for these dramatic declines in youth death rates.

Two gun control laws that primarily deal with children are child access prevention (CAP) laws and minimum age laws. CAP laws impose criminal liabilities on adults who allow children to have unsupervised access to firearms. One of the primary reasons for implementing CAP laws is to compel parents or guardians to supervise children's access to firearms under the belief that it prevents potentially dangerous situations that may arise when children have unsupervised access to guns.

Although there is no federal CAP law, many states have enacted such laws. According to the Law Center to Prevent Gun Violence, as of 2010, 16 states have enacted some type of CAP law. These laws, however, vary widely. Some impose a criminal liability when an adult does not secure a weapon. Others only prohibit an adult from providing a firearm to a

\* Tel.: +1 203 582 8576; +1 203 582 8664.

E-mail addresses: [Mark.gius@quinnipiac.edu](mailto:Mark.gius@quinnipiac.edu), [gius@sbcglobal.net](mailto:gius@sbcglobal.net)

child. Many of these laws also have varying definitions of what a minor is. In some states, adults only have to secure firearms from children who are at most 14 years of age; for others, the age at which supervision is required is as high as 18. Some states require secured access for all types of firearms; other states only require it for handguns. Finally, most states have exceptions for hunting, sport shooting, and other legitimate purposes. [Table 1](#) presents the status of CAP laws at the state level for the period 1981–2010.

In addition to CAP laws, many states also have laws requiring minimum ages to possess firearms, especially handguns. In some states, the minimum age for possession is as old as 21. Some states also have minimum age requirements for possession of long guns (rifles and shotguns); the federal government has no long gun possession minimum age requirement. There are, of course, exceptions to these laws, including hunting, target practice, and other legitimate activities. [Table 2](#) presents the status of minimum age laws at the state level for the period 1981–2010. In addition to these state regulations, federal law prohibits possession of handguns by any person under the age of 18.

There has been much prior research on the effects of gun control or gun availability on unintentional deaths ([Lott & Whitley, 2001](#); [Leenaars & Lester, 1997](#); [Lester, 1993](#); [Lester & Murrell, 1981](#)) and on suicides ([Gius, 2011](#); [Conner & Zhong, 2003](#); [Marvell, 2001](#); [Ludwig & Cook, 2000](#); [Cummings, Koepsell, Grossman, Savarino, & Thompson, 1997](#); [Carrington & Moyer, 1994](#); [Kellerman et al., 1992](#); [Yang & Lester, 1991](#); [Lester, 1988](#); [Sommers, 1984](#); [Lester & Murrell, 1982](#)). The results of these prior studies are mixed. Some find stricter gun control laws or lower levels of gun availability reduce firearm-related unintentional death rates and suicide rates ([Conner & Zhong, 2003](#); [Marvell, 2001](#); [Ludwig & Cook, 2000](#); [Cummings et al., 1997](#); [Leenaars & Lester, 1997](#); [Carrington & Moyer, 1994](#); [Lester, 1993](#); [Kellerman et al., 1992](#); [Yang & Lester, 1991](#); [Lester, 1988](#); [Sommers, 1984](#); [Lester & Murrell, 1982](#); [Lester & Murrell, 1981](#)). Other studies find either no significant relationship or an ambiguous relationship between these death rates and gun availability or gun control ([Gius, 2011](#); [Duggan, 2003](#); [Lott & Whitley, 2001](#); [Marvell, 2001](#)). When prior studies did find relationships between guns and unintentional deaths and suicides, the relationships tended to be weak and were typically overshadowed by the effects of socioeconomic factors. In addition, some studies find stricter gun control laws actually increase non-firearm related suicides. Finally, many studies look at overall suicide and unintentional death rates, instead of just youth death rates, and most do not focus on the gun control laws that would have the most significant impact on youth deaths. The present study attempts to fill that void.

The aim of the present study is to quantify the association between CAP and minimum age laws and state-level youth firearm-related suicide and unintentional death rates. This paper differs from prior research in several ways. First, it is one of the few studies focusing exclusively on youth (0–19 years of age) death rates. Most studies look at overall death rates. Second, this study looks at those laws with the most impact on youth suicides and unintentional deaths: CAP laws and minimum age laws. Third, this study uses a much larger data set than prior studies, containing

30 years of data for all 50 states. Using fixed effects regressions and controlling for both state-level and year-specific effects, the results of the present study suggest that state-level minimum age laws have no significant effect on either youth suicides or unintentional deaths. States with CAP laws, however, have lower youth suicide rates, but these laws have no significant effect on unintentional deaths. Finally, after the Federal government imposed minimum age requirements for handgun possession, both youth suicide rates and unintentional death rates fell. Although state laws appear mixed in their effects on youth deaths by firearms, Federal minimum age requirement laws appear to be effective in reducing both suicides and unintentional firearm related deaths among youths.

## 2. Literature review

As noted earlier, a number of studies examine the issue of gun control and its relationship to unintentional deaths and suicides. Some studies look at the effects of gun control laws or gun availability on overall suicide rates ([Gius, 2011](#); [Duggan, 2003](#); [Conner & Zhong, 2003](#); [Yang & Lester, 1991](#); [Lester, 1988](#); [Sommers, 1984](#); [Lester & Murrell, 1982](#)). Other studies look at the effects of gun control laws on overall unintentional firearm deaths ([Leenaars & Lester, 1997](#); [Lester, 1993](#); [Lester & Murrell, 1981](#)). Finally, a limited number of studies look at the effects of gun control laws on youth suicides and unintentional deaths, which is the topic of the present study ([Lott & Whitley, 2001](#); [Marvell, 2001](#)).

[Lott and Whitley \(2001\)](#) examine the effects of safe-storage laws on juvenile firearm-related suicides and unintentional deaths. The authors look at CAP laws and laws requiring some type of gun lock to be used to secure a firearm. State-level data for the period 1977–1996 is used. According to the authors, by 1996, fifteen states had adopted safe-storage laws. The authors use a fixed effects tobit model that includes as explanatory variables a safe-storage dummy variable, non-firearm unintentional death rates, adult firearm unintentional death rates, and various control variables. [Lott and Whitley](#) find that safe-storage laws had no significant effects on youth firearm-related unintentional deaths or suicides.

[Marvell \(2001\)](#) looks at the effects of the Federal Crime Control and Law Enforcement Act of 1994 on homicides and suicides. This act banned the possession of handguns by persons under 18 years of age. The author looks at the effects of this law on both juvenile and overall homicide (1979–1998) and suicide (1976–1999) rates. Using state-level data, [Marvell](#) finds that Federal and state laws on underage possession of handguns have no statistically-significant effects on youth suicide rates.

As noted earlier, the present study differs from this prior research in several ways. First, this is one of the few studies focusing exclusively on youth death rates. Second, this study looks at those gun control laws with the most impact on firearm related youth suicides and unintentional deaths. Third, this study uses a large and recent data set. The empirical technique in the present study is discussed in the next section.

### 3. Empirical technique

In order to determine if CAP laws and minimum age laws are related to firearm-related youth suicides and unintentional deaths, a fixed effects model that controls for both state-level and year-specific effects is used. This type of model is similar to that used in other articles on this topic (Gius, 2011; Lott & Whitley, 2001; Marvell, 2001).

The following gun control measures are examined in the present study: CAP laws, state minimum age possession laws, and Federal minimum age possession laws. Each of these gun control measures is expressed as a dummy variable that equals one if the state or Federal government has the law in question and zero otherwise. Although dummy variables are not precise measures of gun control laws, it is reasonable to assume that if a state has any type of CAP law, for example, guns are more restricted in that state than in a state with no such law. In addition, most prior research on gun control laws have employed this methodology (Gius, 2014; Rubin & Dezhbakhsh, 2003; Dezhbakhsh & Rubin, 1998; Lott & Mustard, 1997; Kleck & Patterson, 1993).

Regarding Federal gun control measures, the Federal Crime Control and Law Enforcement Act of 1994 banned possession of handguns for persons under 18 years of age; hence, the Federal minimum age dummy variable equals one for those years post-1994 and zero otherwise. Finally, all three variables deal only with handguns and handgun possession. Restrictions on long gun possession and minimum age requirement for handgun purchases are not considered in the present study.

Regarding other factors that may affect the suicide and unintentional death rate, variables that proxy for potentially depressing events that may serve as possible catalysts for suicide are also included in the model. Guidance is obtained from several studies investigating risk factors associated with suicide and suicidal behavior (Nock et al., 2008; Bridge, Goldstein, & Brent, 2006; Mann, 2002). Given this prior research, it is reasonable to assume that traumatic life events such as divorce, prolonged unemployment, and excessive alcohol consumption may trigger suicidal tendencies.

Given the above, the following equation is estimated in the present study:

$$Y_{i,t} = \alpha_0 + \alpha_1 \text{CAP}_{i,t} + \alpha_2 \text{State minimum}_{i,t} + \alpha_3 \text{Federal minimum}_{i,t} + \alpha_4 \text{Control variables}_{i,t} + \alpha_5 \text{State fixed effects}_t + \alpha_6 \text{Year fixed effects}_t + \varepsilon_{i,t}$$

where  $Y$  denotes either the firearm-related youth suicide rate (ages 0–19) or the firearm-related youth unintentional death rate, State Minimum equals one if the state has a minimum age requirement for handgun possession and zero otherwise; Federal Minimum equals one if the Federal minimum age requirement for handgun possession is in effect (post 1994), and CAP equals one if the state has a CAP law. Control variables include the following: percentage of population that is white; percentage of population that is black; population density; percentage of population with a four-year college degree; per capita median income; annual unemployment rate; percentage of population under the age of 18; per capita alcohol consumption; and divorce rate per 100,000 residents. These control

variables are based upon their use in prior research (Gius, 2014; Pellegrini & Rodriguez-Monguio, 2013; Moody & Marvell, 2009; Moody, 2001; Olson & Maltz, 2001; Bartley & Cohen, 1998; Lott & Mustard, 1997; Yang & Lester, 1991; Lester, 1988; Sommers, 1984).

As noted earlier, a two way fixed effects model, controlling for both state-level and year-specific effects, is used to estimate the determinants of firearm-related youth suicide rates and unintentional death rates. All observations are weighted using state-level population, and standard errors are corrected using a clustering method. A Hausman Test is used to determine if fixed effects or random effects are more appropriate. Results of this test suggest that fixed effects are better suited for estimating the model in the present study. In addition, the Breusch–Pagan Test is used to determine if heteroscedasticity is present in the model, and the Ramsey Reset Test is employed to test the specification of the model. The results of the tests indicate no heteroscedasticity and the models were properly specified.

### 4. Data and results

All data are state-level and were collected for the years 1981–2010. State-level socioeconomic data are obtained from the *Statistical Abstract of the United States* and other relevant Census Bureau documents. State-level data on youth (ages 0–19) firearm-related suicides and unintentional deaths are obtained from the National Center for Injury Prevention and Control, the Centers for Disease Control (CDC). The WISQARS system is used to obtain the necessary data from the CDC website. One issue with the CDC data, however, is that for the years 1999–2010, state-level unintentional deaths are only reported when the number of deaths was greater than ten. Hence, there are many missing observations in the state-level unintentional death data. Any observation with missing data are excluded from the sample. The latest year for which CDC data is available was 2010. The sample size for the suicide regression is 1500. The sample size for the unintentional death regression is 813. Descriptive statistics are presented on Table 3.

Regarding information on state-level CAP laws and minimum age laws, data on these laws are obtained from Marvell (2001), the Brady Center website, the Law Center to Prevent Gun Violence website, and Ludwig and Cook (2003). If a state had any minimum age requirement at all for handgun possession, the state minimum age variable was denoted with a one. If the above references contradict one another, the original state law is examined in order to determine whether it has a CAP law or minimum age law.

Regression results are presented in Tables 4 and 5. The results for gun-related suicides suggest that state-level minimum age laws have no statistically significant effects on firearm related youth suicides. However, states with CAP laws have lower youth suicide rates, and the youth suicide

rate fell after the imposition of the Federal minimum age law.

For the unintentional death regression, state-level minimum age laws and CAP laws have no statistically-significant effects on firearm related youth unintentional deaths. However, youth unintentional death rates fell after the enactment of the Federal minimum age law. Hence, the Federal minimum age law is more effective in reducing both firearm related youth suicides and youth unintentional deaths than similar state-level regulations. These results contradict earlier studies on this topic (Lott & Whitley, 2001; Marvell, 2001). However, other studies that do not focus solely on youths find evidence that restricting access to or reducing the availability of guns reduces suicides and unintentional deaths.

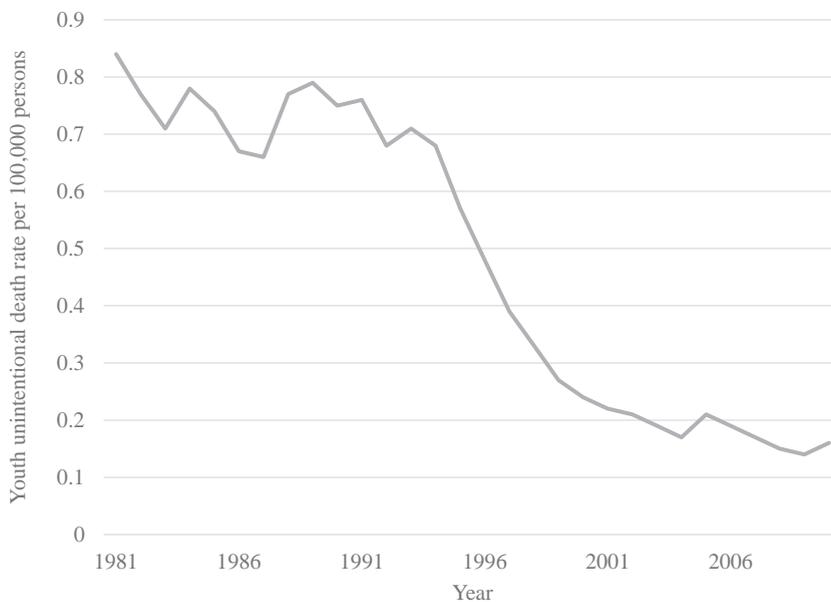

Regarding the significance of the other explanatory variables, states with higher college education rates and divorce rates have higher suicide rates, while states with higher incomes and percentages of population less than 18 have lower suicide rates. For unintentional deaths, states with higher incomes, college education rates, and percentages of population less than 18 have higher unintentional death rates, while states with higher unemployment rates have lower unintentional death rates. These results are consistent with the findings of prior research in this area.

## 5. Discussion and concluding remarks

Youth suicide and unintentional death rates have declined dramatically since the early 1980s. As can be ascertained from Charts 1 and 2, the most significant declines came after 1994, the year when the Federal minimum age law took effect. The results of the present study further suggest that, after the Federal law was enacted, youth suicide rates dropped by 1.2 per 100,000 persons, holding all other factors constant. This is a very significant decline, especially given that the average youth suicide rate for the entire period in question (1981–2010) was 1.49 per 100,000 persons. The decline in the youth unintentional death rate was equally dramatic; according to the results of the present study, the unintentional death rate fell by 0.47 per 100,000 persons out of an average death rate for the entire period of 0.67 per 100,000 persons. Clearly, not all declines in suicides and unintentional deaths can be explained by the enactment of the Federal minimum age requirement. Other factors that were coincidental to the law's passage may have also contributed to this decrease in youth suicide and unintentional death rates. For example, it must be noted that a wide variety of other gun control measures were enacted at the Federal level at approximately the same time as the minimum age requirement for handguns. Hence, the result found in this study regarding the Federal minimum age law may also be due to the contributory effects of other gun control restrictions that went into effect in the same year as the minimum age law. It is also important to note that the laws considered in this study deal only with handgun possession and not the purchase of handguns and that the enforcement of handgun possession laws is problematic, especially if the possession occurs within the juvenile's own home.

**Chart 1.** Crude youth suicide rate (source: CDC).

**Chart 2.** Crude youth unintentional death rate (source: CDC).

Several important public policy implications can be gleaned from the results presented herein. First, CAP laws and minimum age laws sometimes work. States with CAP laws have significantly lower youth suicide rates, and Federal minimum age requirements reduce both suicides and unintentional deaths. Second, these laws only affect juveniles. Therefore, for those concerned about potential Second Amendment issues, these laws only restrict access to firearms for people who have not yet reached adulthood; the restrictions are limited in scope. Finally, although there are, of course, many other factors that affect youth suicide rates and unintentional death rates, CAP laws and minimum age laws are two factors that are within the control of state and Federal legislators. Instituting

such laws uniformly across states and at the Federal level would be a low cost way to reduce youth death rates quite substantially.

State regulations  
Panel data

### ABSTRACT

**Objective:** To empirically assess the impact of firearm regulation on male suicides.

**Method:** A negative binomial regression model was applied by using a panel of state level data for the years 1995–2004. The model was used to identify the association between several firearm regulations and male suicide rates.

**Results:** Our empirical analysis suggest that firearms regulations which function to reduce overall gun availability have a significant deterrent effect on male suicide, while regulations that seek to prohibit high risk individuals from owning firearms have a lesser effect.

**Conclusions:** Restricting access to lethal means has been identified as an effective approach to suicide prevention, and firearms regulations are one way to reduce gun availability. The analysis suggests that gun control measures such as permit and licensing requirements have a negative effect on suicide rates among males. Since there is considerable heterogeneity among states with regard to gun control, these results suggest that there are opportunities for many states to reduce suicide by expanding their firearms regulations.

## 1. Introduction

### 1.1. Firearms and suicide

Suicide is a major cause of preventable death. In 2006, more than 32,000 suicides occurred in the United States, as compared with approximately 18,000 homicides. In the United States, suicide was the 8th leading cause of death for males, and the 19th leading cause of death for females in 2006. For every suicide, there were more than ten hospitalizations for non-fatal attempts. In 2006, on average 46 Americans committed suicide with a firearm every day, accounting for approximately 50 percent of all suicides [1].

Prevention of suicide is an important part of the American public health agenda, and the goal of many programmatic activities undertaken by the Centers for Disease Control and Prevention (CDC) and other national and state agencies. In an attempt to combat this problem, spending by state mental health agencies (SMHAs) in the U.S. totalled \$ 30.7 billion dollars in 2006 [2]. In recent years, restricting access to firearms and other lethal means has been increasingly recognized as one of the most effective strategies for suicide prevention (for an excellent review of this literature see, for example [3]), and is one of the key elements of suicide prevention in countries such as England [4], and Denmark [5].

There is a considerable body of empirical work that has documented a positive relationship between access to firearms and suicide (e.g. [6,7]). In fact, much of the decline in suicide in the United States over the past decades has been linked to the reduced prevalence of firearms (see for example [7–9]). Although the respective roles of

self-selection and availability in explaining the relationship between guns and suicide have not been completely resolved, the implication in either case is that reducing access to firearms should reduce suicide [10]. Restricting access to firearms has been recommended as a suicide prevention strategy by national and international organizations such as the CDC and the WHO. Gun control policies can serve to reduce overall gun availability by creating barriers to firearm ownership. Additionally, firearms policies can also prevent individuals who are at a relatively higher risk of suicide from purchasing firearms.

## 1.2. Gun control

Gun control is a highly contentious issue in the American political debate. Guns are common in the United States—40 percent of Americans reported having a gun in their home in 2009 (see [11]). Calls for increased regulation are based on the belief that restrictions will reduce gun violence. Regulation is opposed by those who claim infringement on the constitutional right to bear arms, and/or argue that firearm ownership deters crime. In the academic literature, the efficacy of gun control in reducing violence has received considerable attention, although little consensus has emerged from the empirical work (e.g. [9,12–14]).

The current era of gun control in the United States originated with the Brady Handgun Violence Prevention Act (1993)<sup>2</sup>, more commonly known, as the Brady Bill. The Brady Bill established a federal requirement for a waiting period of up to five days before the transfer of a handgun to a purchaser. During this period, a background check is performed, which is intended to prohibit individuals with criminal backgrounds from purchasing firearms. The transfer of the handgun is completed whether or not the background check is finalized within the five-day period. The federal waiting period was phased out in 1998 with the development of the National Instant Criminal Background Check System (NICS), administered by the Federal Bureau of Investigation (FBI). Over time, many states have passed laws which matched or surpassed the federal minimums.

There are many different types of state firearm regulations. Some seek to establish general oversight over individuals owning firearms, and mainly consist of permit, registration, and/or license requirements, and bans on the purchase of firearms by minors. These laws also facilitate the tracing of firearms used in crimes to original purchasers. Other state laws seek to prevent gun trafficking and the use of firearms in crimes. These consist of bans on the sale of certain types of firearms, and restrictions on the number of firearms that can be sold to individuals. Restrictions on carrying concealed weapons serve a similar purpose. A number of laws are designed to prevent firearm ownership by individuals considered disproportionately likely to commit gun crimes. These laws include prohibitions on gun ownership by those with criminal histories, such as conviction for a felony, misdemeanor, or domestic violence offence, as well as those with a history

of mental illness, and alcohol or drug problem, and minors. The requirement of a “cooling off” period of some specified period before the purchase can be completed is a measure designed to reduce the consequences of impulsive firearm purchases.

There is considerable variation in the comprehensiveness of firearm regulation across U.S. states. Some states have almost no firearm regulation of their own. Forty-four states have a provision in their state constitutions similar to the Second Amendment of the Bill of Rights (the exceptions are California, Iowa, Maryland, Minnesota, New Jersey, and New York). Firearm license holders are subject to the firearm laws of the state in which they are carrying and not the laws of the state in which the permit was issued. Reciprocity between states may exist for certain licenses such as concealed carry permits. These are recognized on a state-by-state basis.

Some firearms regulations are more relevant to suicide prevention than others. Restrictions banning the purchase of guns by convicted felons, or laws banning the sale of “Saturday Night Specials”, for example, have little obvious applicability to suicide. Yet other categories of restriction are potentially more salient, particularly those that reduce overall firearm availability. Permit requirements create barriers to gun ownership and may also serve to prevent impulsive purchases. The prohibition of purchases by minors serves a similar function. Some of the “prohibited persons” categories, such as those related to mental illness, a drug or alcohol problem, or history of domestic violence problems may theoretically be relevant to suicide prevention.<sup>3</sup> Mental illness is the single most important risk factor for suicide, and substance abuse and domestic violence are also risk factors. However, while the criteria for “prohibited persons” categories vary by state, they are generally based on fairly serious incidents, such as hospitalization against one’s will or conviction records. Such bans are likely to identify only a fraction of the population with mental health, substance abuse, or domestic violence problems.

At the state level, the comprehensiveness of gun control laws tends to be correlated with firearm prevalence. The causality most likely runs in both directions, since restrictive gun control regimes reduce gun ownership, yet these laws are more likely to be passed in states where overall gun ownership rates are low and the population of gun rights advocates is relatively small. In general, Western and more rural states have fewer gun control restrictions and higher rates of gun ownership as compared with more urbanized states in the Northeast. These states also have significantly higher rates of suicide, particularly firearm suicide.

It should be noted that gun control is only one of the factors that affect gun ownership. Aside from geographical patterns related to urbanization, popularity of hunting, and so forth, there are also trends in gun ownership at the

<sup>2</sup> The Gun Control Act (1968) was the first firearm act in the USA.

<sup>3</sup> In some states, the alcohol regulation means that sale of firearms are prohibited to people who are intoxicated at the time they are trying to buy them, while in other states it refers to people with a documented alcohol problem. Indeed, in some states it covers both situations.

national level. Widespread anxiety can lead to an increase in firearm purchases, as was the case shortly after September 11th, 2001. Similarly, economic trends can potentially affect the propensity toward gun ownership—although the direction of the effect is not certain. Concern about crime associated with rising unemployment may result in increased gun ownership, while unemployment itself may make guns less affordable to more people. The recent recession does not seem to be associated with an increase in gun purchases, as the proportion of households reporting a gun between October 2007 and 2008 was unchanged (see [11]).

## 2. Gun control and suicide: empirical evidence

Much of the empirical evidence on gun control comes from the United States [15] and might not be applicable to other countries [16]. One excellent review of gun control in the United States, framed within the context of historical and rational choice theory, covers attempts to curb firearm violence in that country and the success of such measures, yet has relatively little treatment of the relationship between gun control and suicide [17].

In an important early study of gun ownership and suicide, Kellerman et al. [18] found that individuals who commit suicide in their own homes were disproportionately likely to own a gun. In general, the literature on gun control and suicide has found a negative relationship between firearm restrictions and suicide. However, most of these studies lack a strong design and are essentially pre- and post-comparisons [16]. Lambert and Silva [19] perform a literature review of studies in the United States and Canada and conclude that available information generally supports the notion that gun control reduces suicide rates, particularly among males. A recently published analysis suggests that states where background checks are conducted locally have lower rates of firearm suicide and homicide [20].

Several other studies find no empirical evidence in favor of a relationship between firearms regulations and suicide. However, one study has a weak design, while the other does not capture the most relevant types of firearms regulations. Price et al. [21] use cross-sectional state data for 1999 to perform a simple partial correlation analysis between several types of gun control laws and suicide rates. Their results suggest that gun control laws were not significantly related to suicide in 1999, even after controlling for firearm prevalence. Rosengart et al. [22] conduct a study of the relation between firearm regulations and homicides and suicides using state panel data over 1979–1998. They fail to uncover a statistically robust link between suicide rates and firearm regulations. However, most of the regulations they examined—such as bans on carrying concealed weapons, “junk gun” bans, and quantity sales restrictions—are not particularly relevant to suicide.

Several studies in other countries where regulatory change restricted general access to firearms have found evidence of an effect on suicide. Cheung and Dewa [23] examine the relationship between suicide and the implementation of new restrictions on firearms (Bill C-17), using time series data from Canada. They concluded that there was a relationship between means used by young peo-

ple and the imposition of the restrictions. In the case of New Zealand, Beautrais et al. [24] find that after the introduction of legislation restricting ownership and access to firearms, firearm suicides significantly decreased, particularly among the young. Ozanne-Smith et al. [25] similarly conclude that the implementation of a strong reform in New Zealand lowered firearms deaths, particularly suicides. An evaluation of the 1996 National Firearms Agreement (NFA) in Australia documents a decline in firearm suicides after the implementation of the agreement [26]. However, these findings may be confounded with an overall decline in gun ownership that preceded the NFA. Additionally, there was some evidence of increased suicides by hanging.

In Europe, there are a few studies examining the efficacy of firearm regulation in reducing firearm suicides and homicides. For example, in Austria, Kapusta et al. [27] provide evidence that the introduction of restrictive firearm legislation reduced both firearm suicide and homicide. Also, a number of studies in the UK [28,29] have shown that changes in firearm legislation have led to fewer firearm suicides. Another analysis of Austria found that firearm regulations enacted in 1997 had a statistically significant effect on suicide rates [30]. A very recent study in Switzerland, finds a positive association between firearm ownership and firearm suicides at the local level [31].

Much of the empirical literature is based on simple correlations or time series analysis. Most of these models cannot account for correlations that arise between suicide deaths and firearm availability due to exogenous factors. Furthermore, there are many factors affecting suicidal behavior and gun ownership which are not observable. A panel data approach is more compelling in this context, as it is possible to control for unobserved heterogeneity across states. Similarly, time varying factors that affect all states in the same way can be controlled by using fixed specific effects. Additionally, there are many socioeconomic factors that might influence suicide deaths, and can be included in a panel data model.

## 3. Empirical model and data

### 3.1. Empirical model

The basic model that motivates the empirical analysis is that firearm availability affects suicide rates, and that gun control affects firearm availability (see for a discussion of the mechanisms by which firearms might affect death rates [9]). Our hypothesis is that regulations such as permit requirements, which create overall barriers to gun ownership, are the most important way type of gun control from the standpoint of suicide prevention. While it is possible that “prohibited persons” categories can affect the likelihood that certain persons at above average risk of suicide will obtain firearms, the ways in which these categories are defined in most cases will result in the prohibition of a relatively small proportion of people at risk. Firearms regulations designed to prevent gun trafficking or other criminal activity involving guns are not expected to influence suicide rates.

There are several potential complications to this simple model. The first is that of state variation in attitudes towards guns is likely to affect both firearm prevalence and the comprehensiveness of gun control regulation. Additionally, views toward gun ownership evolve over time. Finally, there is the problem of the measurement error of gun ownership.

The basic model can be expressed with two equations:

$$S = \alpha + \beta G + \mu \tag{1}$$

$$G = \delta - \Delta R + \Phi \tag{2}$$

where  $S$  is suicide,  $G$  is firearm prevalence, and  $R$  is firearms regulation. The reduced form is:

$$S = \alpha + \beta\delta - \beta\Delta R + \beta\Phi + \mu \tag{3}$$

The potential endogeneity of firearm prevalence with respect to gun control is reflected in the identifying equation,

$$R = \omega + \eta G + \varphi \tag{4}$$

However,  $G$  is not measured annually. For our main specification we estimate the reduced form Eq. (3), thereby assuming that  $\eta$  is zero. In an alternative specification, we proxy for  $G$  by using the number of hunting licenses per capita, a statistic which is collected annually for all states.

The dependent variable,  $S_{ijt}$ , is the number of suicides for age group  $i = 15-24, 25-44, 45-64,$  and  $65+$ ; in state  $j = 1, \dots, 50$  during the year  $t = 1995, \dots, 2004$ . The independent variables included in the model were based on previous studies of suicide. In particular, the variables selected were: education, income, alcohol consumption, the proportion of the population over age 65, and the proportion of non-Hispanic white population. Each model also includes the relevant population size as a right hand side control variable to normalize by exposure. The specification includes state fixed effects that account for potential unobserved heterogeneity across states. The fixed effects model is appropriate in this case given the almost complete population coverage by the sample and it is likely that the omitted variables captured by the  $\alpha_i$  are correlated with some of the included covariates [32]. We also account for the time effect over the years by including time dummies.

The expected value of the number of suicides, conditional on the independent variables is assumed to follow a negative binomial distribution with expected value

$$E \left[ \frac{S_{it}}{X_{it}} \right] = \mu_{it} = \exp(x'_{it}\beta) \tag{5}$$

and variance function

$$\text{Var}[\mu_{it}] = \mu_{it} + \alpha(\mu_{it}^2) \tag{6}$$

The negative binomial distribution was assumed since the dependent variable is a count and over-dispersed relative to the Poisson distribution which assumes that the mean is equal to the variance. The negative binomial distribution accounts for extra Poisson dispersion through the quadratic term in the variance function [33].

We face several identification challenges. The first is that gun control regulations by state tend to change slowly,

so there tends to be relatively little within-state year–year change. Further, once states adopt particular gun control regulations, they never remove them. For these reasons, it is not possible to analyze leads and lags, which would be a desirable robustness check. To maximize variation, we have created several indices of categories of gun control regulations, which are additive measures of individual measures. The total sample contains 500 state-year observations. The sample period (1995–2004) was chosen because data on gun control regulations by state are not available before 1995, in part because there are relatively few state regulations. Since nearly ninety percent of firearm suicides are committed by males [1], we have excluded females from the analysis. The analysis was conducted using STATA v.10 statistical software.

### 3.2. Data

#### 3.2.1. Dependent variable

Data on the number of suicides in states over the period 1995–2004 come from the Centers for Disease Control and Prevention (CDC). Deaths included in the study are those categorized as suicides according to the International Classification of Diseases (ICD). In 1999, there was a change in the classification system from ICD–9 to ICD–10. This change in ICD version did not influence suicide classification. For 1995–98, suicide deaths were coded as E950–E959. Starting in 1999 and later, suicide deaths were coded as X60–X84, Y87.0, and U03.

Table 1 displays the average age adjusted male suicide rates<sup>4</sup> across US states for the years 1995–2004.<sup>5</sup> As Table 1 shows reported suicide rates in the US vary considerably across states. The annual average male suicide rate for the whole country during the study period was 21.05 per 100,000. As can be seen, suicide rates vary considerably across states. The suicide rate in Nevada (34.2), for example, is nearly thrice that in New York (11.3). Also it can be seen from the standard deviations that the suicide rate varied substantially over time in each state.

#### 3.2.2. Independent variables

3.2.2.1. *Socio-economic variables.* Data on state personal income (*income*) were obtained from the Bureau of Economic Analysis and deflated by the consumer price index (CPI) extracted from the Bureau of Labor Statistics (BLS). Unemployment rates (*unemployment*) also come from the BLS. Data on per capita ethanol consumption of beer (*beer*), an estimate for the amount of pure ethanol consumption per capita, was extracted from the NIIA Surveillance Reports. Alcohol consumption and economic conditions have been linked to suicide in a number of population level studies (e.g. [34,35]). The percentage of people over 65 (*psh65*) years of age and the proportion of the population which is non-

<sup>4</sup> For making comparisons across states and over time, the usual practice is to use age adjusted suicide rates that standardize the rates across the age distribution of the population of interest.

<sup>5</sup> We do not show average suicide rates over 1995–2004 because of the relative position of the states is basically unchanged during the study period.

**Table 1**  
Average age-adjusted male suicide rates (per 100,000 pop), by state, 1995–2004.

| State          | Average | Std. Dev. |
|----------------|---------|-----------|
| Alabama        | 21.13   | 1.46      |
| Alaska         | 31.45   | 4.05      |
| Arizona        | 26.37   | 1.52      |
| Arkansas       | 22.95   | 0.97      |
| California     | 16.79   | 1.85      |
| Colorado       | 26.30   | 2.37      |
| Connecticut    | 13.59   | 1.40      |
| Delaware       | 18.75   | 2.29      |
| Florida        | 21.64   | 1.28      |

Note: The District of Columbia is excluded, since it had essentially banned the possession of handguns during the study years.

Hispanic white (*white*) were obtained from the US Census Bureau.

**3.2.2.2. Firearms regulations.** In order to maximize variation across states and over time in the measure of gun control, we created three additive indices that reflect different categories of firearms regulations. The first index—arguably is the most important in terms of suicide prevention—measures general prohibitions. It is the sum of two indicator variables reflecting the presence

or absence of permit requirements and prohibitions on firearm purchases by minors. This index thus varies between 0 and 2.

The second index measures prohibitions based on behavioral problems, some of which have been identified as risk factors for suicide. This index is the sum of five indicators variables reflecting the presence or absence of bans on persons with mental health, alcohol, or drug problems, as well as prohibitions on those with prior convictions for misdemeanors and for domestic violence offenses.

Our third and last index captures four types of prohibitions related to the potential purchaser’s criminal history. We include this variable primarily as a robustness check, since the prohibitions captured are least likely to affect suicide. The index, varying between 0 and 4, is the sum of indicator variables measuring the presence of prohibitions against “aliens”,<sup>6</sup> convicted felons, fugitives from justice, and those who committed serious offenses as juveniles. Data on state gun regulations was obtained from the Bureau of Justice Statistics.<sup>7</sup>

**3.2.2.3. Gun ownership.** Given the relationship between firearm regulations and firearm prevalence, as well as that between firearm prevalence and suicide, it is necessary to control for gun ownership. One concern is the accuracy of data on firearm availability. Gun ownership at the household level is measured every several years by the CDC’s Behavioral Risk Factor Surveillance System, but there is no annual data at the state level, and the available data only dates back to 2001. The most commonly used proxies for gun ownership are the proportion of homicides and the proportion of suicides committed with firearms (e.g. [36–42]). These variables are combined to create a measure called Cook’s index. However, given that the dependent variable for this analysis is the total number of suicides, it was felt that this proxy was inappropriate. As an alternative, the number of hunting licenses per capita from the Fish and Wild Life Service<sup>8</sup> was used as a control for gun ownership<sup>9</sup>. Hunting licenses per capita and firearm suicides as a proportion of suicides (i.e. Cook’s Index) were highly correlated ( $r = 0.74$ ,  $p$ -value  $< .05$ ).

Table 2 reports summary statistics for the variables used in regressions.

#### 4. Results

The regression results for the negative binomial regression model of suicides are presented in Table 3. In all regression models, the state and year fixed effects are statistically significant. Table 3 shows the incidence rate ratios (henceforth, IRR). The IRR are obtained by exponentiation of the regression coefficients, that is,  $\exp(\beta)$ . The expression  $100 * (\exp(\beta) - 1)$  is the percentage change in the

<sup>6</sup> In some states, this prohibition refers to undocumented immigrants, while in others to individuals who have “forsaken their allegiance to the United States”.

<sup>7</sup> <http://www.ojp.usdoj.gov/bjs/>.

<sup>8</sup> Available at [www.fws.gov](http://www.fws.gov).

<sup>9</sup> The model was also estimated using the firearm suicide proxy, and results were very similar. We do not report them here for brevity.

**Table 2**  
Summary statistics (N = 500).

| Variables                                    | Mean   | Std. Dev. | Min   | Max   |

Sources: See text.

incidence or risk of suicide mortality for each unit increase in the independent variable.

The first two models show the effects of fixed state and year effects (Model 1), and the fixed effects in addition to a set of socio-demographic variables—namely education, income, alcohol consumption, the proportion of the population over age 65, and the proportion of the population which is non-Hispanic white (Model 2). Model 3 introduces the index of general prohibitions—namely gun control regulations which affect the largest number of people and which create general barriers to entry. We find the general prohibition index to be statistically significant, both individually and when we include our proxy for gun prevalence, (hunting licenses per capita), which enters insignificantly (Model 4).

The next model includes the second index of gun control measures, which aims to capture firearm restrictions based on behavioral issues such as a history of mental health or alcohol/drug problems. While significant, the IRR is 0.9946, as compared with the IRR from Model 3 which was 0.9440, and the coefficient in Model 4 is only significant at the 10 percent level. The addition of the gun ownership measure (Model 5) does not affect the results. Model 6 includes our last index, which captures gun control measures that are hypothesized to be unlikely to affect suicide. This model

is included primarily as a robustness check. As expected, this variable does not enter with a statistically significant coefficient.

Table 4 shows the effects of the specific firearm restrictions on suicide for particular age groups. Separate models were estimated for males aged 15–24, 25–44, 45–64, and 65 years of age and older. In all models, we control for gun prevalence by including the number of hunting licenses per capita. We find that gun control measures do not affect all age groups identically. For instance, a ban on firearm purchases by minors affects suicides particularly among younger males, while restrictions on permits and waiting period requirements have a more deterrent effect on for older males. Unexpectedly, permit requirements appear to have a positive effect on suicide rates among younger males. Among the behavior-related restrictions, prohibitions related to mental health problems are only significant for males aged 25–44 years, and prohibitions related to alcohol problems are only significant for males aged 65 years or older. The drug and misdemeanor conviction bans do not enter significantly for any of the age groups, and the prohibition linked to a history of domestic violence only affects suicides among those aged 45–64 years. None of the criminal prohibitions enter significantly for specific age groups, and are therefore omitted.

**Table 3**

Results of negative binomial regressions with additive indices of firearm restrictions. Regressions for all males, 1995–2004 (N = 500). Dependent variable is the number of male suicides, exposure variable is the male population.

## 5. Discussion

Restricting access to lethal means is an important element in suicide prevention. While means restriction activities are not solely focused on firearms, in the United States, firearms are the most significant suicide mechanism, as they are used in more than half of suicides. At the individual and population levels, a number of means restriction activities have been developed to prevent suicides by reducing access to lethal means. Individual activities involve counseling to high-risk individuals about dangers posed by a firearm in their homes. When such activities occur, they are usually directed at individuals who have been identified as being at risk of self-injury, perhaps as a result of a non-fatal suicide attempt. However from a population perspective, gun control remains one of the only avenues to restrict access to firearms.

Our study suggests that general barriers to firearm access created through state regulation can have a significant effect on male suicide rates in the United States. Permit requirements and bans on sales to minors were the most effective of the regulations analyzed. These findings have important implications for U.S. gun control policy, which remains exceptionally heterogeneous across states. While all states except Wyoming have banned sales of handguns to minors, twelve states still allow the sale of long guns to minors. Furthermore, only twelve states currently require purchase permits for firearms.

The political aspect of the gun control debate in the United States has made increased regulation of firearms very difficult in many states, due to the strong advocacy of the gun rights lobby, and the opposition to any restriction on gun ownership by many gun owners. Many of the more controversial aspects of firearms regulations battles concern provisions intended to reduce crime, such as bans on “straw purchases”, or limits on the number of guns individuals can purchase in a year. The relationship between firearm prevalence and suicide, while well known in the public health community, rarely if ever enters into the national or state debates over gun control provisions. In very recent years, guns rights groups have made significant gains, most notably in the Supreme Court decision regarding handgun bans in the District of Columbia (*District of Columbia v. Heller*, 2008). These trends do not bode particularly well for increased regulation of gun ownership in U.S. states. However, while gun control remains a controversial issue both at the state and federal level in the U.S., this analysis of male suicide suggests that there are clear public health benefits to restricting access to firearms through regulation.

**Objective:** To determine if any of five different state gun laws were associated with firearm mortality: (1) "shall issue" laws permitting an individual to carry a concealed weapon unless restricted by another statute; (2) a minimum age of 21 years for handgun purchase; (3) a minimum age of 21 years for private handgun possession; (4) one gun a month laws which restrict handgun purchase frequency; and (5) junk gun laws which ban the sale of certain cheaply constructed handguns.

**Design:** A cross sectional time series study of firearm mortality from 1979 to 1998.

**Setting:** All 50 states and the District of Columbia.

**Subjects:** All residents of the United States.

**Main outcome measures:** Firearm homicides, all homicides, firearm suicides, and all suicides.

**Results:** When a "shall issue" law was present, the rate of firearm homicides was greater, RR 1.11 (95% confidence interval 0.99 to 1.24), than when the law was not present, as was the rate of all homicides, RR 1.08 (95% CI 0.98 to 1.17), although this was not statistically significant. No law was associated with a statistically significant decrease in the rates of firearm homicides or total homicides. No law was associated with a statistically significant change in firearm suicide rates.

**Conclusion:** A "shall issue" law that eliminates most restrictions on carrying a concealed weapon may be associated with increased firearm homicide rates. No law was associated with a statistically significant reduction in firearm homicide or suicide rates.

During 2001 there were approximately 81 firearm fatalities each day in the United States<sup>1,2</sup> Over the decade 1991–2000, 215 822 homicides occurred, of which 147 281 (68%) were committed with a firearm, and 305 384 suicides occurred, of which 179 244 (59%) were committed with a firearm.<sup>3</sup>

Legislators have passed many state level statutes regulating ownership or access to handguns with the anticipated goal of curtailing deaths related to firearms.<sup>1–4</sup> Many laws have not been studied, and little is known about the association of these state laws with firearm deaths. For other laws, uncertainty persists regarding the presence and direction of the association with firearm mortality.<sup>5,6</sup> Studies of "shall issue" laws that permit an individual to carry a concealed weapon unless restricted by another statute have reported decreased, unchanged, and increased homicide rates with law implementation.<sup>5,6</sup> An evaluation of Maryland's junk gun law, banning cheaply constructed handguns, reported both increased and decreased firearm homicide rates after law enactment, although the association and its magnitude depended upon the manner by which the effect of the law was modeled.<sup>7</sup> Recently a study of minimum age restrictions for the purchase and possession of firearms reported that neither law appeared to reduce overall rates of suicide among youth.<sup>8</sup> Because of the lack of evidence and continued controversy, we studied the association between five different state gun laws and four outcomes: firearm homicides, all homicides, firearm suicides, and all suicides. The laws studied were: (1) "shall issue" laws permitting an individual to carry a concealed handgun unless that person is restricted to do so by another statute; (2) laws restricting the minimum age for purchase of a handgun to 21 years; (3) laws restricting the minimum age for private possession of a handgun to 21 years; (4) one gun a month laws which restrict handgun purchase frequency to one in a 30 day period; and (5) junk gun laws which ban the sale of certain

cheaply constructed handguns. We used a longitudinal analysis to estimate the adjusted rate of each mortality outcome after each law went into effect, compared with what would have been anticipated without that law. We used cross sectional time series data for all 50 states and the District of Columbia in the US with data regarding mortality, laws, and other variables for each year from 1979–98.

## MATERIALS AND METHODS

### Outcome data

Our main outcome measures were firearm related and total homicide, and firearm related and total suicide death rates per 100 000 person years. Total mortality rates were included in the analysis to evaluate whether any association between the law and firearm mortality rates persisted in the respective total death rate. State and year specific deaths and population data were available from the National Center for Health Statistics' compressed mortality files for the period 1979–98.<sup>3</sup> Data were categorized by sex, race (white, black, or other), and age (less than 1 years, 1–4, 5–9, 10–14, 15–19, 20–24, 25–34, 35–44, 45–54, 55–64, 65–74, 75–84, and older than 85 years). Violent deaths were categorized using the International Classification of Disease, Ninth Revision (ICD-9) external cause of death codes as follows: homicides (E960–969), suicides (E950–959), homicides by firearm (E965.0–965.4), and suicides by firearm (E955.0–955.4).<sup>9</sup>

### Legislation data

Information about the presence of each law was obtained by reviewing the criminal statutes and codes of each state for the period 1979 through 1998. Enactment dates for each law were ascertained by reviewing the sessions of each statute for each state. From 1979–98, 23 states adopted "shall issue"

**Abbreviations:** ICD-9, International Classification of Diseases, Ninth Revision.

laws permitting an individual to carry a concealed weapon unless restricted by another statute, seven states adopted and two states repealed a law restricting the minimum age for the private purchase of a handgun to 21 years, five states adopted laws restricting the minimum age for the private possession of a handgun to 21 years, two states adopted laws restricting the number of guns purchased to one in a thirty day period, and one state adopted a law banning the manufacture and sale of junk guns (table 1).

This information was compared with the state legislation data published by the Bureau of Justice Statistics and the Open Society Institute to confirm the laws of each state.<sup>14</sup> Within each state, the time period affected by each law was considered to start with the first calendar year in which each law was in effect for at least six months. This assumes that the law's effect occurs during the first complete year after it is implemented and that this effect is constant over time.

**Statistical methods**

Mortality rate ratios (RRs) were estimated using Poisson regression to compare time periods during which a law was in effect with time periods without a law within each state; hence, 50 indicator variables were included to represent each

state and the District of Columbia.<sup>10</sup> To control for national trends over time in firearm mortality rates, all states and the District of Columbia were included in the analysis, and 19 indicator variables were used to represent each calendar year. This approach attempted to control for the influences of unmodeled factors that were common across states and were associated with trends in homicide or suicide. We also controlled for state level and individual level changes in the following factors that may have influenced rates of crime and violence: proportion of the population living in metropolitan areas, proportion of the population living below the official poverty line, proportion unemployed, and age, sex, and race distribution.<sup>11-13</sup> Each of the state level variables was measured annually except proportion living in metropolitan areas, which were statistics from the decennial census and were interpolated for intercensal years. In addition, all laws were modeled simultaneously in the regression analysis for each outcome. We used a robust (sandwich) estimator of variance, which accounts for overdispersion and for clustering of events within a state.<sup>14 15</sup>

Because temporal trends in mortality rates varied by state, we included interaction terms between each state and time (year as a continuous variable) to account for this variation, thereby modeling temporal trends in mortality rates specific to each state. In addition, because the effect of a law may vary by state, interaction terms between the categorical variables state and law were included, and state specific RRs were calculated. Each law was modeled with state interactions, while the remaining laws were included as binary covariates. Variation in state specific RRs was evaluated with both tests of homogeneity and I<sup>2</sup>.<sup>16-19</sup> This latter statistic ranges from 0-100% and estimates the percentage of total variation in RR estimates that is due to heterogeneity between states. Because of the heterogeneity in RRs, we summarized rate ratio estimates across states using the random effects method of DerSimonian and Laird.<sup>17</sup> The random effects summary allows for the possibility that each law may have a different effect in each state and this additional variation between states is accounted for in the confidence interval. All rate ratios were adjusted for temporal trends and for all potential confounding variables.

The minimum age laws restricted the purchase or possession of a handgun to people over 20 years of age. To evaluate whether the association of these laws with each outcome may vary with a particular age group, we introduced interaction terms between age and each of these two laws. Initially we introduced interaction terms between age (younger than 20 years, 20 years or older) and all other model terms. We chose this definition for this new dichotomous age covariate as it was compatible with the categories of age stratification provided by the available database. The model with the lowest Akaike information criteria statistic included terms for the interaction of both state and year with age.<sup>15</sup> We then introduced a term for the interaction of age and the two laws and estimated separate RRs for each age group.

**Regression to the mean**

There was temporal variation in state specific firearm mortality rates. If a state were to have a period of unusually high firearm mortality rates as part of this expected variation, lawmakers might have been stimulated to pass laws regulating handguns. Hence, any observed beneficial response of legislation may represent the natural tendency for mortality rates to regress to their mean rates.<sup>20</sup> Similarly, a law may be observed to have an adverse effect if mortality rates were particularly low before its implementation. To evaluate whether regression to the mean might explain all or part of any statistically significant association of any law with

**Table 1** Year of statute implementation, United States, 1979-98

| State                                          | Year            |

firearm mortality, we compared the firearm mortality rate in the two year period before that law went into effect with previous years in the same state, adjusted as in all our analyses.

All data used were publicly available without identifiers, and thus the study was considered exempt from institutional review board review.

**RESULTS**

**Temporal trends in mortality**

During the 20 years of the study, there were 442 702 homicide deaths, of which 289 719 (65%) were firearm related, and 596 704 suicides, of which 352 196 (59%) were firearm related (figs 1 and 2). Firearm homicide rates peaked at 7.1 per 100 000 person years in 1993, while total homicide rates peaked at 10.5 in 1980 and again at 10.4 in 1991. Firearm suicide rates peaked twice at 7.6 per 100 000 person years, once in 1986 and again in 1990; total suicide rates peaked at 12.9 in 1986. Mortality rates differed substantially between states; to display this we plotted the median mortality rate among the states with the interquartile range (figs 1 and 2).

**Homicide rate ratios**

There was little evidence of variation in state rate ratios with a minimum age of 21 years for private purchase law or a one gun a month law; p values for heterogeneity were not less than 0.38 and the I<sup>2</sup> values did not exceed 7% (fig 3, table 2).

For the minimum age of 21 years for possession law, the I<sup>2</sup> reached 39%. For “shall issue” laws the p values for tests of heterogeneity in rate ratios were statistically significant (p<0.001) and the I<sup>2</sup> values were 86% and 85%. The observed homicide rate after passage of a “shall issue” law was lower in the period without the law (table 2). However, after adjusting for potential confounding and temporal trends in homicide rates, when a “shall issue” law was present, the rate of firearm homicides was greater than when it was not present, RR 1.11 (95% CI 0.99 to 1.24), as was the rate for all homicides, RR 1.07 (95% CI 0.98 to 1.17), although neither was statistically significant (table 2). Summarized across all states, no law was associated with a statistically significant decrease in the rates of firearm homicides or total homicides.

We found little evidence that regression to the mean might explain this association of a “shall issue” law and increased firearm homicide, as the firearm homicide rate in the two

years before implementation of the shall issue law was nearly the same as in earlier years, RR 1.01 (95% CI 0.94 to 1.09).

**Homicide rate ratios by age subgroups**

The RRs for laws restricting the minimum age to 21 years for private purchase or possession varied little by age group; p values for a test that RRs varied by age group (younger than 20 years, 20 years or older), were all equal to or greater than 0.10 (table 3).

In all subgroups the RR estimates had 95% confidence intervals that included 1.

**Suicide rate ratios**

There was little evidence that state rate ratios varied with each law, except for the minimum age of 21 years for possession: p = 0.02 and I<sup>2</sup> reached 64% (fig 4, table 4).

No law was associated with a statistically significant change in firearm suicide rates (table 4). A law that banned the sale of junk guns was associated with a decrease in total suicide rates, RR 0.86 (95% CI 0.77 to 0.96).

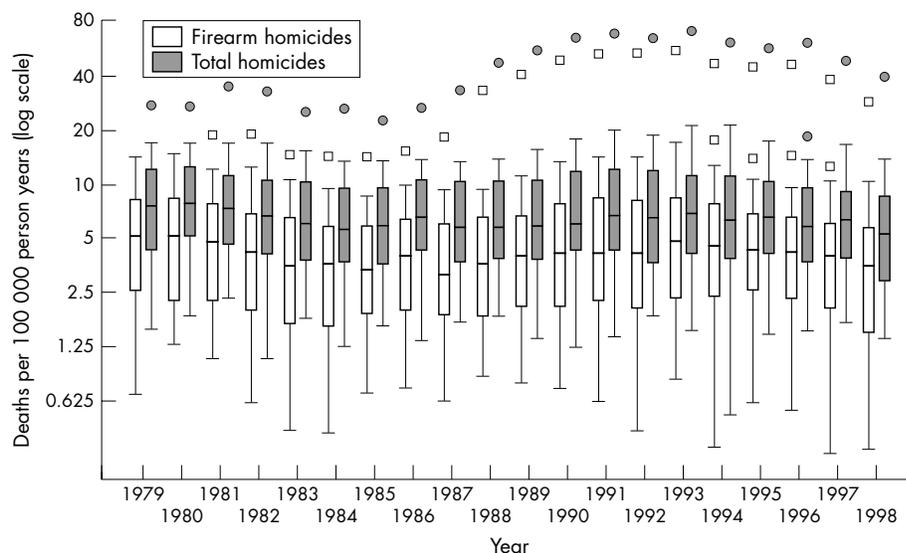

**Suicide rate ratios by subgroups**

The RRs for laws restricting the minimum age to 21 years for private purchase or possession varied little by age group; p values for a test that RRs varied by age group (younger than 20 years, 20 years or older), were all equal to or greater than 0.20 (table 3).

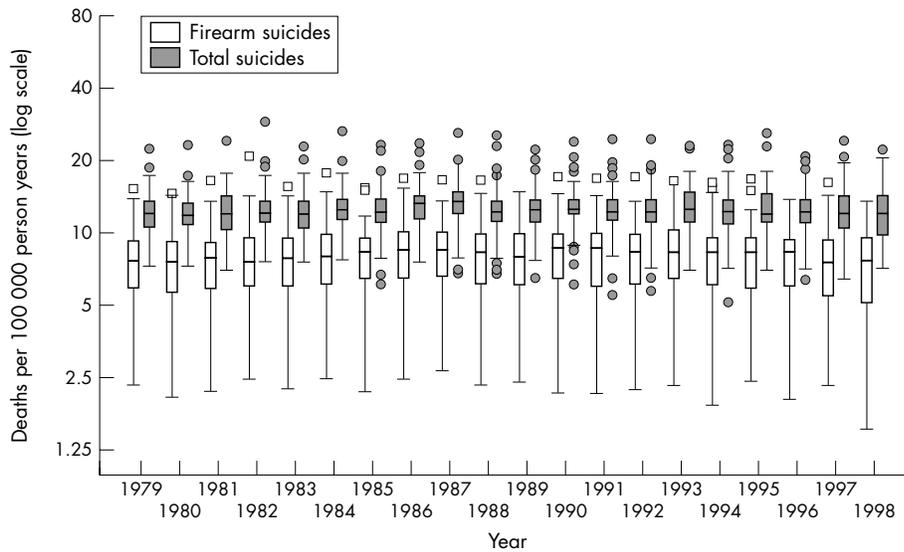

**DISCUSSION**

From 1979 to 1998 many states passed laws regulating handguns. Our analyses suggest that a “shall issue” law that eliminates most restrictions on carrying a concealed weapon does not confer a reduction in firearm homicide and may be associated with increased mortality rates. No law was associated with a statistically significant decrease in firearm homicide or suicide rates.

Due to the observational and ecological nature of this study, bias due to confounding may persist because of an inability to account for all risk factors that might distort the observed associations.<sup>21 22</sup> However, the “shall issue” law was passed in many states, which are diverse in nature and represent all regions of the United States. In addition, the analysis was state specific, based upon a comparison within each state before and after each law took effect. Information

**Figure 1** Trends in firearm and total homicide rates, United States, 1979–98. Each box and whisker represents the range of state mortality rates for that year. Horizontal line indicates the median; box denotes the 25–75th percentile (interquartile range (IQR)); whiskers indicate outer limits and extend to the last value before 1.5 × IQR past the 25th and 75th percentile; squares and circles indicate states exceeding outer limits.

**Figure 2** Trends in firearm and total suicide rates, United States, 1979-98. Each box and whisker represents the range of state mortality rates for that year. Horizontal line indicates the median; box denotes the 25-75th percentile (IQR); whiskers indicate outer limits and extend to the last value before  $1.5 \times$  IQR past the 25th and 75th percentile; squares and circles indicate states exceeding outer limits.

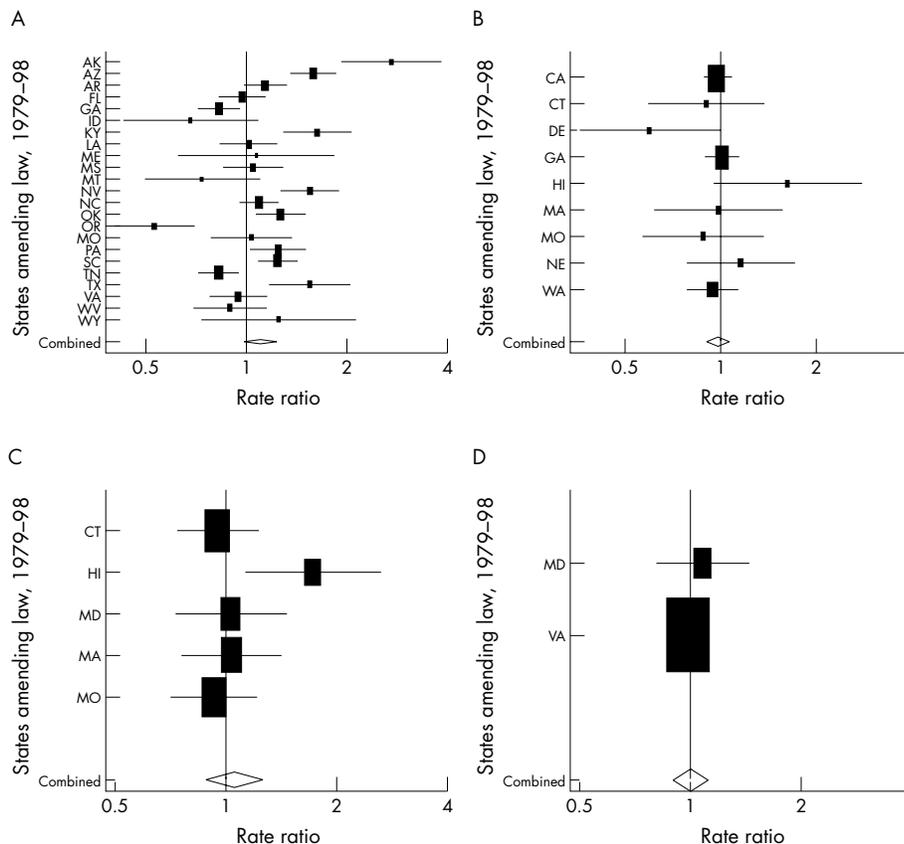

from other states was only used to control for any national trend in mortality.

The increased firearm homicide rate observed after implementation of a “shall issue” law permitting nearly unrestricted carrying of concealed weapons was based upon an analysis of 23 states. Regression to the mean does not explain our observations, as the homicide rate in the two years preceding the law differed little from the rate in previous years within the same state.

Our results are in contrast to those of Lott and Mustard, who reported a 7.65% reduction in homicide rates associated

with “shall issue” laws.<sup>5</sup> This difference may stem from the additional 13 states that implemented a “shall issue” law during the period of our study. We have used dates of enactment similar to those of Lott and Mustard and of Ayres and Donohue.<sup>5,6</sup> Even if we employ the coding scheme of Vernick, which identified different implementation dates for five states, we obtain a similar increase in firearm homicide with passage of a “shall issue” law, RR 1.10 (95% CI 0.98 to 1.23).<sup>23</sup>

Hence, differing statistical methods appear to account for most of the discrepancy. Lott and Mustard used weighted

**Figure 3** State mortality rate ratio: firearm homicide, United States, 1979-98. (A) “Shall issue” law; (B) minimum age of 21 years for private purchase; (C) minimum age of 21 years for private possession; (D) one gun a month law. States enacting the law during the study period are represented on the ordinate. Boxes indicate state rate ratio. Box size is proportional to the inverse variance of each state rate ratio. Lines indicate 95% confidence interval. Diamond indicates random effects summary estimate of mortality rate ratio.

least squares linear regression to evaluate the association between the natural logarithm of homicide rates and passage of the law. Their regression aggregated all states, thereby assuming a similar impact of the law for each state in which it was implemented. However, the heterogeneity in state specific RRs after implementation of the law was substantial; the RRs for firearm homicide ranged from 0.53 to 2.71 (test of homogeneity,  $p < 0.001$ ), and 86% of this variation was due to heterogeneity beyond what was expected by chance. Donohue and Ayers reported similar state variation in the association between "shall issue" laws and homicide rates. They emphasized that the aggregated estimate was more heavily influenced by earlier adopting jurisdictions, as they contributed more post-passage years to the analysis.<sup>6</sup> In their disaggregated analysis of Lott's data, 16 of the 23 states implementing a "shall issue" law observed an increase in murder, similar to the 15 noted in our study, and the population weighted fixed effects summary estimate was associated with a non-significant 0.6% increase in homicides.

We tried to account for this variation in state rate ratios by including state specific interactions and calculating state specific RRs. We also modeled time specific to each state by allowing temporal trends in homicide rates to vary between states through the inclusion of interactions terms between

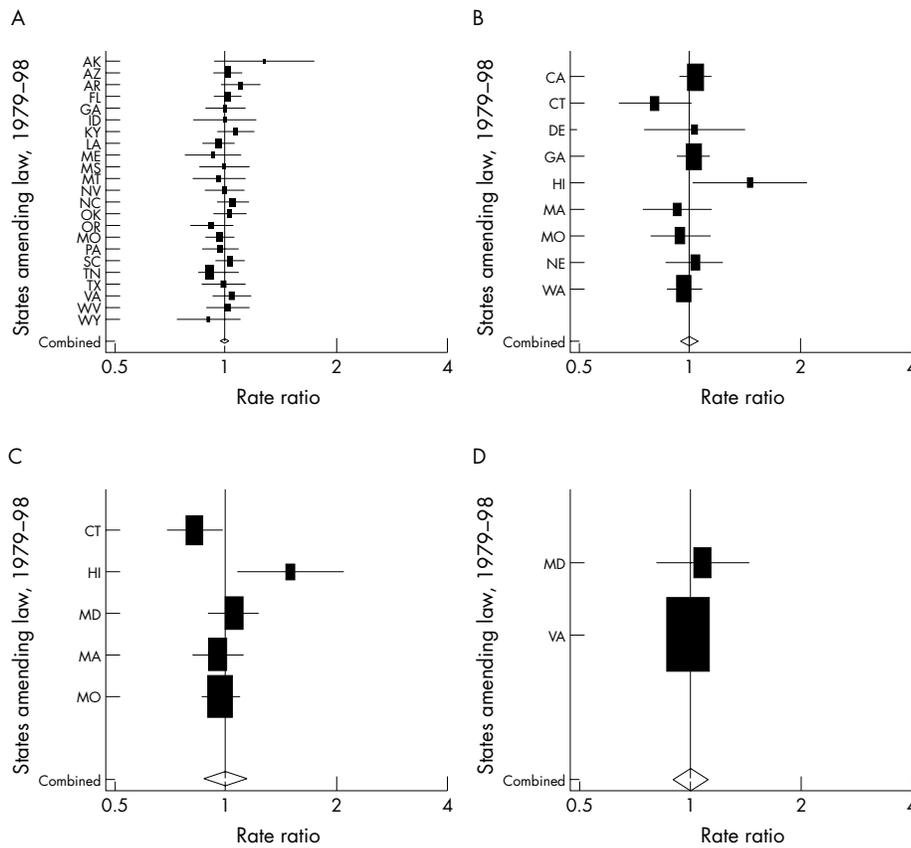

state and year. Finally, we used a random effects summary estimator to calculate a final law summary estimate, which gives more weight to smaller states compared with a fixed effects summary. Nevertheless, although the confidence intervals for the random effects summary rate ratios were appreciably greater than those from a fixed effects summary estimate, the rate ratios for random and fixed effects never differed by more than 0.01. If we assume a constant impact of the law across all adopting states and combine the states by removing the state-law interaction term and assume that temporal trends in mortality were the same for every state by removing the state-year interactions from our regression model, yet still employ a Poisson regression model with robust variance estimator and control for all the same demographic and socioeconomic covariates, we produce estimates similar to those of Lott and Mustard for firearm homicide, RR 0.95 (95% CI 0.91 to 1.00) and total homicide, RR 0.97 (95% CI 0.94 to 1.01). We believe these estimates are inaccurate because they fail to account for the variation in risk ratios across states and the variation between states in homicide rates over time.

No law was associated with a significant reduction in either firearm homicide or suicide rates. Similar to the recent study of Webster *et al*, we did not find significant evidence

Lines indicate 95% confidence interval. Diamond indicates random effects summary estimate of mortality rate ratio.

that laws restricting the minimum age for purchase or possession reduced either firearm suicide or homicide rates in youths, although our estimated rate ratios were all less than 1.<sup>8</sup> These minimum age for purchase or possession laws, however, were amended in only nine and five states, respectively, for which only three and one state had at least five years of post-amendment data. This, in combination with the increase, albeit non-significant, in total suicides for either

law, raises suspicion as to the validity of these observations. Alternatively, our results may stem from our assumption that the effect of each law was immediate and constant. A study of Maryland's ban on "Saturday Night Specials" noted that estimates of the law effect on firearm homicide rates depended upon assumptions made about the timing of the law's effect; assuming a delayed and gradual effect of the law best accounted for the variability in the data.<sup>7</sup>

 ¶Regression derived rate ratio of mortality rate with the law to mortality rate without the law, adjusted for all confounders.  
 NA, not applicable because there was only one state with this law.

**Key points**

- There is disagreement regarding the effects of some laws regulating handguns on firearm mortality rates.
- This ecological study observed considerable variation between states in the association of some laws regulating handguns with firearm homicide and suicide rates.
- A “shall issue” law that permits the carrying of a handgun in an unrestricted fashion may be associated with an increase in firearm homicide rates.
- Little evidence was observed that any of the laws evaluated were associated with a significant reduction in either firearm homicide or firearm suicide rates.

The junk gun statute, which was enacted in only one state, was associated with a statistically significant 14% reduction in all suicide deaths. However, the reduction in firearm suicide deaths associated with this law was only 8%. It does not seem plausible to us that this law would reduce suicide deaths by means other than a gun, and therefore we suspect that the association between this policy and all suicides is not likely to be causal.

Our analysis was restricted to states that had passed any of the laws under study. Had smaller jurisdictions within these states passed similar laws before statewide implementation, then our analysis might underestimate any effect. Similarly, if any city or town passed these laws without statewide implementation or if passage of these laws affected gun accessibility in surrounding states without the law, then our analysis might also underestimate any effect. Finally, if any city or smaller ordinance passed the law after state enactment, we might be simultaneously measuring the effects of these local statutes.

# Association Between Youth-Focused Firearm Laws and Youth Suicides

Daniel W. Webster, ScD, MPH

April M. Zeoli, MPH

Jennifer A. Manganello, PhD, MPH

**S**UICIDE IS THE THIRD LEADING cause of death among youth aged 10 to 19 years in the United States, accounting for 1883 deaths in 2001.<sup>1</sup> Firearms were used in approximately half of suicides within this age group in 2001; however, as recently as 1994, 7 of every 10 suicides among teenagers involved firearms.<sup>1</sup>

Firearms are one of the most lethal methods of self-harm.<sup>2</sup> Case-control studies using community and clinical samples have consistently found that the presence of firearms in the home substantially increased the risk of adolescent suicide.<sup>3-7</sup> In addition, a recent state-level study, using the ratio of firearm suicides to total suicides as a proxy for the prevalence of gun ownership, found that suicide rates among teenagers and adults are significantly higher in states with higher rates of gun ownership.<sup>8</sup>

Several firearm policies are intended to limit the access that underage youth have to firearms. Since 1968, federal law has required licensed firearms dealers to prohibit handgun sales to purchasers younger than 21 years. In 1994, a federal law established 18 years as the minimum legal age for possessing or purchasing handguns, including sales by gun owners who are not licensed dealers. Many states have also adopted laws establishing a minimum legal age for being able to purchase or possess a firearm. Another type

**Context** Firearms are used in approximately half of all youth suicides. Many state and federal laws include age-specific restrictions on the purchase, possession, or storage of firearms; however, the association between these laws and suicides among youth has not been carefully examined.

**Objective** To evaluate the association between youth-focused firearm laws and suicides among youth.

**Design, Setting, and Participants** Quasi-experimental design with annual state-level data on suicide rates among US youth aged 14 through 20 years, for the period 1976-2001. Negative binomial regression models were used to estimate the association between state and federal youth-focused firearm laws mandating a minimum age for the purchase or possession of handguns and state child access prevention (CAP) laws requiring safe storage of firearms on suicide rates among youth.

**Main Outcome Measures** Association between youth-focused state and federal firearm laws and rates of firearm, nonfirearm, and total suicides among US youth aged 14 to 17 and 18 through 20 years.

**Results** There were 63954 suicides among youth aged 14 through 20 years during the 1976-2001 study period, 39655 (62%) of which were committed with firearms. Minimum purchase-age and possession-age laws were not associated with statistically significant reductions in suicide rates among youth aged 14 through 20 years. State CAP laws were associated with an 8.3% decrease (rate ratio [RR], 0.92; 95% confidence interval [CI], 0.86-0.98) in suicide rates among 14- to 17-year-olds. The annual rate of suicide in this age group in states with CAP laws was 5.97 per 100000 population rather than the projected 6.51. This association was also statistically significant for firearm suicides (RR, 0.89; 95% CI, 0.83-0.96) but not for nonfirearm suicides (RR, 1.00; 95% CI, 0.91-1.10). CAP laws were also associated with a significant reduction in suicides among youth aged 18 through 20 years (RR, 0.89; 95% CI, 0.85-0.93); however, the association was similar for firearm suicides (RR, 0.87; 95% CI, 0.82-0.92) and nonfirearm suicides (RR, 0.91; 95% CI, 0.85-0.98).

**Conclusions** There is evidence that CAP laws are associated with a modest reduction in suicide rates among youth aged 14 to 17 years. As currently implemented, minimum age restrictions for the purchase and possession of firearms do not appear to reduce overall rates of suicide among youth.

JAMA. 2004;292:594-601

www.jama.com

of law intended to keep firearms from youth are gun safe storage laws, often referred to as child access prevention (CAP) laws. As of 2001, 18 states had some form of CAP law that makes it a crime to store firearms in a manner that allows them to be easily accessed by children and adolescents. Most require gun owners to lock up their guns.

There has been little empirical research on the association between these youth-focused laws and rates of suicide among youth. Marvel<sup>9</sup> examined laws banning the possession of firearms by juveniles and found no evidence that these laws reduced youth suicides. However, in that study the outcome examined was suicides among youth aged 15 to 19 years, over half of which involve suicides among 18- and 19-year-olds, an age group not covered by most of the laws. We are not aware of any other study that has examined the association between minimum age restrictions for firearm purchases and firearm suicides among youth. In a study of the association between the first 12 CAP laws and mortality among youth through 1994, Cummings et al<sup>10</sup> reported that state CAP laws were associated with a 19% decline in suicides among youth aged 10 to 14 years. This estimate was not emphasized by the authors, presumably because the upper bound of the 95% confidence interval for the rate ratio was 1.01. Lott and Whitley<sup>11</sup> reported no statistically significant association between CAP laws and suicides among children younger than 15 years or among youth aged 15 to 19 years. However, their use of Tobit regression to estimate the laws' effects is vulnerable to bias when data are highly skewed and heteroskedastic, as is the case for state-level data on youth suicides.<sup>12</sup>

The study herein seeks to address the gap in research on the effects of firearm laws specifically designed to reduce the access that children and youth have to firearms. We examine the association between these laws and suicides among youth aged 14 through 20 years, an age group at much greater risk of firearm suicide than the younger groups examined in prior research.

## METHODS

### Study Design

To estimate the association between youth-focused firearm policies and suicide, we used a quasi-experimental design and regression analyses (described below) to contrast changes in

rates of suicide among youth in states that adopted laws to restrict youth access to firearms with rate changes in states that did not make such changes in their laws, while controlling for potential confounders. State-level data sets were constructed that included the number of suicides among youth within each state for the years 1976 through 2001 for the 2 age groups potentially affected by the laws. Youth aged 14 to 17 years were the target group for laws establishing 18 years or younger as a minimum age for handgun purchase or possession, and for most CAP laws. Youth aged 18 through 20 years were legally affected by laws that increased the minimum age for handgun purchase or possession from 18 to 21 years.

### Outcome Variables

The outcome variables were the number of total, firearm, and nonfirearm suicides in each age group targeted by the laws. Death certificate data from the National Center for Health Statistics were used to identify suicide as a cause of death (*International Classification of Diseases, Ninth Revision* external cause of death codes E950-E959<sup>13</sup> and *International Classification of Diseases, 10th Revision* codes X60-X84, Y87.0, and U03<sup>14</sup>).

### Firearm Laws

We conducted legal research and consulted existing compilations of state laws<sup>15</sup> to obtain information about the youth-focused firearm laws of interest: minimum purchase age, minimum possession age, and CAP laws. When states had minimum-age cutoffs for purchase or possession of handguns that were different from those for purchase or possession of long guns, we used the cutoffs for handguns. We also collected information about other firearm laws, such as handgun licensing requirements (also known as permit-to-purchase laws), which might affect our outcomes of interest. For each law, we then determined the date it took effect, and whether there had been any changes to the law itself during the study period.

Dummy variables were created, set equal to 1 when the law was in effect for the whole year and equal to 0 when no law was in effect. For laws that were in effect for only part of a specific year, we set the law variable equal to 1 in a state-year if the law was in place for at least half of the year and equal to 0 otherwise. For the few laws that affected one part of our age groups (eg, age 17 years as the minimum age for firearm purchase), we set the law variable equal to 1 if the law applied to the majority of youth committing suicide in the age group and equal to 0 otherwise. The federal law establishing a minimum legal age for handgun purchase and possession was assumed to affect only states that, prior to the federal law, either had no minimum-age law of this type or had a law that established a minimum legal age younger than 18 years.

### Statistical Analysis

To derive estimates of the association between the laws and youth suicide, we used negative binomial regression models and generalized estimating equations to estimate regression parameters. Negative binomial regression is appropriate for estimating models for count data that are overdispersed (ie, the variance is greater than the mean),<sup>16</sup> as is the case with state-level youth suicide data. Likelihood ratio tests rejected the null hypothesis that the distributions were Poisson. Generalized estimating equations take into account that the data are correlated, in this case by state and year, and make appropriate adjustments to standard errors for accurate hypothesis testing.<sup>17</sup> Correlation matrices of model residuals were examined to identify any clear pattern of autocorrelation; however, no pattern was evident. Therefore, the models were specified with unstructured autocorrelation, as is recommended for studies of this type,<sup>18</sup> using the PROC GEN program in SAS version 8.2 (SAS Institute Inc, Cary, NC). Each model included the natural logarithm of the population as an offset variable with the coefficient constrained to equal 1. Model coefficients

## YOUTH-FOCUSED FIREARM LAWS AND YOUTH SUICIDES

were converted to rate ratios (RRs) so that effects could be expressed in terms of percentage changes in suicide rates. We used 2-tailed tests of significance and  $\alpha \leq .05$  for rejecting the null hypothesis of no effect.

When statistically significant associations were identified, we assessed whether an association not attributable to change in the covariates could be attributable to differential prelaw trends in states that passed the law vs those that did not pass the law. This was assessed by estimating the effects for a set of dummy variables representing each of the 5 years just prior to the passage of the law and each of the first 5 years the law was in place. We assessed the plausibility that significant changes in suicide rates for an age group were caused by the law by examining whether statistically significant associations were specific to suicides using firearms and were not associated with changes in suicide rates among young persons aged 22 to 24 years, a group not legally affected by the laws. We also estimated a model that included only those states that had enacted their laws prior to 1996, providing at least 6 years of follow-up data. Model fit was assessed by comparing deviance statistics with their asymptotic  $\chi^2$  distribution<sup>19</sup> and the Akaike information criterion statistic.<sup>20</sup>

#### Other Explanatory Variables

In addition to the firearm law variables, the models included indicator variables for each state, suicides for a within-state comparison group (individuals aged 22 to 24 years), per capita beer consumption, percentage of the population living in rural areas, real income per capita, unemployment rates, percentage of the adult population with a bachelors degree, percentage of the population of black race, the ratio of adult firearm suicides to total suicides as a proxy for the prevalence of gun ownership, and percentage of the population affiliated with specific religious denominations. The dummy variables for each state control for baseline differences in youth suicide levels across the 50 states

(the District of Columbia was not included in our study). Because the state firearm policies of interest target a particular age group, we used within-state suicide rates among young persons aged 22 to 24 years who were not targeted by the law to control for difficult-to-measure social factors (eg, social norms regarding suicide) that influence suicide rates among young persons in a particular state and year. We used year dummy variables to control for national trends in suicides among youth but also estimated alternative models with linear trend parameters when such patterns were clearly evident.

Data on state population of youth aged 14 through 20 years<sup>21-23</sup> and the percentage of residents living in rural areas were obtained from the US Census.<sup>24</sup> Annual per capita beer consumption data based on beer sales were obtained from the Alcohol Epidemiologic Data System of the National Institute of Alcoholism and Alcohol Abuse.<sup>25</sup> Data on personal income, unemployment, educational attainment, and religious affiliation were provided by Markowitz et al,<sup>26</sup> who obtained the data from government and private sources.<sup>27-29</sup>

## RESULTS

### Youth-Focused Firearm Laws

As of 2001, federal law and the laws of 46 states have mandated a minimum age for the purchase of a handgun, with the age ranging from 14 to 21 years. Of these, 21 states enacted or changed their law during the study period. Federal law and the laws of 39 states mandated a minimum possession age, ranging from 15 to 21 years, with 29 states enacting or changing their law during the study period. Nearly all of these changes established 18 years as the minimum age for firearm possession. Only 3 states increased their minimum legal age for handgun possession to 21 years during the study period. Eighteen states had CAP laws as of 2001. The maximum age of youth covered by these CAP laws ranged from 13 to 17 years (TABLE 1). Only 3 states adopted permit-to-purchase firearms licensing systems during the study period.

Most law changes restricting the access of youth to firearms went into effect between 1990 and 1995. The federal law establishing 18 years as the minimum age for handgun purchase and possession went into effect in 1994. After Florida implemented the nation's first CAP law in late 1989, 14 more states followed suit before the end of 1995.

### Suicide Trends Among Youth

There were 63954 suicides among youth aged 14 through 20 years during the 1976-2001 study period, 39655 (62%) of which were committed with firearms. Firearm suicide rates among youth aged 14 to 17 years increased steadily from 2.6 (per 100000 population) in 1976 to 5.7 in 1994, and then declined rapidly to 2.5 in 2001 (FIGURE). There were less-dramatic changes in firearm suicide rates among youth aged 18 through 20 years, except for a steep decrease from 9.6 in 1994 to 5.9 in 2001. There were no noteworthy trends in rates of nonfirearm suicides within the 2 age groups.

### Association Between Firearm Laws and Suicides Among Youth Aged 14 to 17 Years

Our regression models for suicides among youth aged 14 to 17 years reveal no statistically significant association between suicide rates and laws setting minimum ages for firearm purchase or possession enacted at the state or federal level (TABLE 2). State CAP laws were associated with an 8.3% reduction in suicide rates (RR, 0.92; 95% confidence interval [CI], 0.86-0.98). In states with CAP laws, the annual suicide rate for youth aged 14 to 17 years was 5.97 per 100000 during the period in which these laws were in effect. Our model estimates that in the absence of these laws the expected rate would have been 6.51.

The reduction associated with CAP laws was observed for firearm suicides, which decreased an estimated 10.8% in response to the introduction of CAP laws (RR, 0.89; 95% CI, 0.83-0.96). There was no statistically significant association between CAP

## YOUTH-FOCUSED FIREARM LAWS AND YOUTH SUICIDES

**Figure.** Youth Suicide Rates by Method and Age Group, United States, 1976-2001

laws and nonfirearm suicides among youth aged 14 to 17 years (RR, 1.00; 95% CI, 0.91-1.10). Estimates of the association between CAP laws and suicides among 14- to 17-year-olds were dependent on how national suicide trends were modeled. The estimates from the primary model noted above included separate linear-trend parameters for the 1976-1994 period of increasing suicide rates and for the 1995-2001 period of a downturn in rates. The trend parameters in this model were highly significant and, based on Akaike information criterion statistics, this model fit the data better than did a model that included year indicator variables. Models that assumed no overall pattern in youth suicide trends but that controlled for year-to-year fluctuations nationally with year indicator variables found no statistically significant association between CAP laws and suicide rates in the group aged 14 to 17 years. CAP law estimates did not vary substantially by whether violators could be charged with felony crimes or by the maximum age of youth targeted by the laws (data not shown).

The models used to estimate differences in suicide rates among youth aged 14 to 17 years in each of the 5 years before and after the adoption of a CAP law revealed no pattern of unmodeled dif-

ferences between states with and those without CAP laws just prior to the adoption of these laws. When we examined the relationship between the length of time a CAP law was in place and the effects of the laws, there was also no clear pattern in successive post-law year effects on total suicide rates, but the association between CAP laws and firearm suicide rates for this group was most pronounced for the first year the law was in effect (RR, 0.89; 95% CI, 0.77-1.02).

There was no statistically significant association between permit-to-purchase licensing laws and suicide rates among youth aged 14 to 17 years (RR, 1.06; 95% CI, 0.92-1.23). Association between the laws and suicide rates among youth aged 14 to 17 years were not substantially altered when the suicide rate among 22- to 24-year-olds and other covariates were removed from the model.

#### Association Between Firearm Laws and Suicides Among Youth Aged 18 Through 20 Years

The model for total suicides among youth aged 18 through 20 years estimated that state laws that increased the legal age for handgun possession to 21 years during the study period were associated with a 12.9% increase in sui-

cide rates (RR, 1.13; 95% CI, 1.01-1.27) (Table 2). This effect was not statistically significant, however, either for firearm suicides (RR, 1.14; 95% CI, 0.98-1.34) or nonfirearm suicides (RR, 1.07; 95% CI, 0.90-1.27). State laws raising the minimum legal purchase age to 21 years were associated with a 9.0% decline in rates of firearm suicides among youth aged 18 through 20 years (RR, 0.91; 95% CI, 0.83-1.00); however, there was no statistically significant association for overall suicide rates (RR, 0.97; 95% CI, 0.91-1.05).

State CAP laws were associated with an 11.1% decline in suicide rates among youth aged 18 through 20 years (RR, 0.89; 95% CI, 0.85-0.93). In this group, suicide reductions associated with CAP laws were similar for firearm suicides (-12.9%; RR, 0.87; 95% CI, 0.82-0.92) and nonfirearm suicides (-8.8%; RR, 0.91; 95% CI, 0.85-0.98). The 3 permit-to-purchase licensing laws were associated with a 17.7% increase in suicide rates (RR, 1.18; 95% CI, 1.04-1.34).

#### COMMENT

After steadily increasing between 1976 and 1994, rates of firearm suicides among youth have decreased sharply. Although many laws enacted during the early 1990s were intended to decrease access to firearms by children and youth, this study found no evidence that minimum-age restrictions for firearm purchase and possession have reduced suicide rates among the age groups targeted by the laws.

Our models estimate that 3 state laws that increased the minimum legal age for handgun possession to 21 years were associated with a 12.9% increase in total suicide risks among youth ages 18 through 20 years. There are several reasons, however, to doubt the validity of this estimate, including: (1) firearm and nonfirearm suicide rates were affected equally; (2) there was no increase in suicides among 14- to 17-year-olds associated with minimum possession age laws; (3) it is based on only 3 states, 2 of which adopted the change in the final 2 years of the study; and (4) the ab-

## YOUTH-FOCUSED FIREARM LAWS AND YOUTH SUICIDES

sence of a theory for how an intervention designed to reduced access to means of suicide could lead to a substantial increase in suicide rates. Similarly, our findings for permit-to-purchase licensing laws should be regarded with skepticism since they are based on just 3 changes in state law occurring during the study period, none

of which involved a very restrictive licensing scheme.

We did find convincing evidence that the 18 CAP laws adopted during the study period led to an 8.3% reduction in suicide rates among youth aged 14 to 17 years. As would be expected if these reductions were attributable to reduced access to firearms, the reduc-

tions were specific to suicides committed with firearms and to the age group principally targeted by CAP laws. We found no association between CAP laws and suicide rates among young persons aged 22 to 24 years. Our estimate of the association between CAP laws and firearm suicides (-10.8%; 95% CI, -18.4% to -3.7%) among youth aged 14

## YOUTH-FOCUSED FIREARM LAWS AND YOUTH SUICIDES

to 17 years is consistent with, though smaller in magnitude than, the estimate of Cummings et al<sup>10</sup> of the association between CAP laws and firearm suicides among adolescents younger than 15 years (-19.0%; 95% CI, -34.0% to +1.0%). CAP laws were also associated with statistically significant declines in suicide rates among those in the group aged 18 through 20 years. However, the statistically significant negative association between CAP laws and rates of suicide using means other than firearms casts doubt on any causal connection between the laws and lower suicide rates in this group of older youth.

Some may question whether the reductions in youth suicides that were associated with CAP laws in this study might be spurious, since many in the group aged 14 to 17 years were older than the maximum age required for safe firearm storage. However, many older youth have younger siblings, relatives, or friends that may prompt their parents to comply with CAP law requirements. In addition, CAP laws may encourage gun owners with children young enough to be covered by the law to adopt safe storage practices that endure even after their children are beyond the age required for safe firearms storage under the law. Finally, gun owners simply may not respond to very specific aspects of a CAP law in order to be in compliance. Instead, CAP laws may increase awareness and change social norms to encourage gun owners to secure firearms from underage youth. These interpretations are consistent with our finding that the ages covered by the CAP law were unrelated to the association between CAP laws and suicides among youth.

There are several reasons that CAP laws might be more effective than minimum-age restrictions for firearm purchases and possession in reducing suicides among youth. First, a large majority of youth who commit or attempt suicide with a firearm use guns owned by their parents or relatives.<sup>30,31</sup> Second, the adopted restrictions on minimum purchase age did not affect the handgun sales practices re-

quired of licensed firearm dealers. Since 1968, federal law has prohibited licensed dealers from selling handguns to individuals younger than 21 years. In addition, there is little evidence that laws governing sales by those who are not dealers are vigorously enforced in most states<sup>32</sup> (Frattaroli 5, unpublished doctoral dissertation, 1999; on file with the authors).

Thus, it is important to recognize that our study is not a test of the relationship between firearm availability and risk of suicide among youth. Our results for minimum purchase-age and possession-age laws suggest that these laws have not substantially reduced the availability of firearms to youth at risk for suicide. Therefore, our results are not necessarily inconsistent with prior research, such as findings from Wintemute et al<sup>33</sup> that adult handgun purchasers were at higher risk for suicide, even 6 years after purchase. If a youth's risk of suicide were greatest several years after he or she had acquired a firearm, we may have underestimated the full effect of these laws. But when we limited the analysis to state laws enacted through 1995—providing at least 6 years of follow-up data for the remaining 45 states—we still identified no significant effects for these laws.

As with prior studies of CAP laws, we were unable to directly measure whether these laws resulted in actual changes in firearm storage practices. Nevertheless, our weapon-specific estimates of the effects of CAP laws suggest that these laws did limit the access that youth have to firearms.

This study does not examine the full range of potential effects of CAP laws. Lott and Whitley<sup>11</sup> report that CAP laws were associated with increases in rapes (9%) and robberies (10%), presumably because firearms kept in locked storage are potentially less available for self-defense. Their findings are questionable because the vast majority of these crimes take place outside the home<sup>34</sup> and firearms are very rarely used for self-defense.<sup>35</sup>

Our study also does not consider the potential role that laws restricting the

access of youth to firearms might have in reducing unintentional shootings or homicides. Two prior studies of the association between CAP laws and deaths among children younger than 15 years from unintentional shootings, with similar methods but over different time periods, produced similar estimates of aggregate effect (-23% and -17%).<sup>10,36</sup> However, one of these studies<sup>36</sup> found that the aggregate benefits were largely driven by a single state law (Florida). Marvel<sup>9</sup> found no evidence that laws prohibiting possession of firearms by juveniles were associated with youth being killed by guns or with their use of guns to commit homicide.

The reductions in suicides associated with CAP laws are relatively modest in terms of percentage change. However, because the laws target an important risk factor, a high-risk group, and a leading cause of death, the public health significance of the laws is meaningful. Assuming that the observed association is causal, we estimate that the 18 CAP laws implemented prior to 2002 have prevented 333 suicides among youth aged 14 to 17 years from the time that Florida implemented the nation's first CAP law (October 1989) through 2001. In 2001 alone, we estimate that there were 35 fewer suicides among this group in the 18 states with CAP laws than would have been expected without the laws. These benefits have been obtained with very modest levels of publicity and enforcement. Increased efforts to encourage compliance with CAP laws have the potential to enhance their effectiveness in preventing deaths and injuries resulting from unsupervised access of youth to firearms.

Further research is needed to ascertain what factors have contributed to the recent decline in firearm suicides among youth in the United States. The timing of the decline is coincident with the adoption of several laws designed to reduce youth access to firearms, yet the only evidence we found that these laws are responsible for reductions in suicides among youth was a modest reduction associated with CAP laws. The

passage of many youth-focused firearm restrictions during the early 1990s may have been associated with broader changes in those social norms that involve allowing youth access to firearms—norms that affect states both with and without recent changes to their firearm laws. If the passage of laws restricting youth access to firearms influenced norms and practices both within and outside the states that adopted the laws, our estimates would

understate the effect of these laws on suicide rates among youth.

**Author Contributions:** Dr Webster, as principal investigator of this study, had full access to all of the data in the study and takes responsibility for the integrity of the data and the accuracy of the data analyses.

**Study concept and design; drafting of the manuscript; obtained funding:** Webster, Vernick.

**Acquisition of data; critical revision of the manuscript for important intellectual content; administrative, technical, or material support:** Vernick, Manganello, Zeoli.

**Analysis and interpretation of data:** Webster, Vernick, Manganello, Zeoli.

**Statistical analysis; study supervision:** Webster.

**Funding/Support:** This study was funded by grant R49/CCR318627-04 from the Centers for Disease Control and Prevention, National Center for Injury Prevention and Control to the Johns Hopkins Center for the Prevention of Youth Violence.

**Role of the Sponsor:** The Centers for Disease Control and Prevention had no role in the design and conduct of the study; in the collection, analysis, or interpretation of the data; in the preparation of the data; or in the preparation, review, or approval of the manuscript.

## THE IMPACT OF BANNING JUVENILE GUN POSSESSION

THOMAS B. MARVELL  
*Justec Research*

### ABSTRACT

A 1994 federal law bans possession of handguns by persons under 18 years of age. Also in 1994, 11 states passed their own juvenile gun possession bans. Eighteen states had previously passed bans, 15 of them between 1975 and 1993. These laws were intended to reduce homicides, but arguments can be made that they have no effect on or that they even increase the homicide rate. This paper estimates the laws' impacts on various crime measures, primarily juvenile gun homicide victimizations and suicide, using a fixed-effects research design with state-level data for at least 19 years. The analysis compares impacts on gun versus nongun homicides and gun versus nongun suicides. Even with many different crime measures and regression specifications, there is scant evidence that the laws have the intended effect of reducing gun homicides.

### I. INTRODUCTION

**G**UNS are the second leading cause of death in the United States among youths ages 10–24, and the firearm death rate for U.S. minors is 12 times the average for other industrialized countries.<sup>1</sup> Gun murders of and by juveniles roughly doubled between 1985 and 1992, while the number of nongun murders remained stable.<sup>2</sup> Consequently, governments have attempted to get guns out of the hands of juveniles. The federal government and probably all states have long prohibited gun sales to minors.<sup>3</sup> Later laws, the subject of this study, go further and prohibit possession of guns by juveniles (aimed at, presumably, guns that were originally purchased by adults). States passed such laws with increasing frequency in the 1980s and early 1990s, and Title XI of the Federal Crime Control and Law Enforcement Act of 1994 made the ban effective nationwide on September 13, 1994.

Table 1 lists 34 state laws that ban juvenile gun possession, along with their effective dates (the laws only apply to violations on or after the

NOTE.—Sixteen states do not have bans. Ten are Brady Act states (Alabama, Louisiana, Maine, Montana, New Hampshire, New Mexico, Ohio, Pennsylvania, Texas, and Wyoming), and six are non-Brady Act states (Connecticut, Hawaii, Iowa, Maryland, Massachusetts, and Missouri).

<sup>a</sup> States with laws effective 1974–93.

<sup>b</sup> Brady Act states. (Federal waiting periods and background checks apply in 1994 because these states did not have preexisting laws.)

<sup>c</sup> A pre-1970 Nevada law applied to persons under 14.

effective dates). This information was obtained through research into state statutory compilations and session laws, and it was checked against two other surveys.<sup>4</sup>

<sup>4</sup> Gwen A. Holden, *et al.*, *Compilation of State Firearm Codes that Affect Juveniles* (1994); Bureau of Alcohol, Tobacco and Firearms, *Firearms State Laws and Published Ordinances* (20th ed. 1994) (hereafter referred to as ATF).

The federal law, as well as the typical state law, makes it a misdemeanor for a person under 18 (21 in two states) to possess a handgun, with several exceptions, such as hunting or target shooting with the permission of a parent. Many state laws also ban possession of rifles and other deadly weapons by juveniles. As of 1994, five state bans applied only to persons younger than 15 or 16 (Table 1). These are not counted as juvenile gun ban laws for the purpose of this study because children that young seldom commit homicide.<sup>5</sup> Among the states that did not enact juvenile gun possession bans, Massachusetts and New York have strict general gun possession laws,<sup>6</sup> and lawmakers there might have believed that special laws for juveniles were unnecessary. The federal law also makes it illegal for a person to provide a minor with a handgun. Most states have similar laws, some enacted with the possession ban and some before the ban.

The issue addressed in this article is whether the juvenile gun possession bans have the effect of reducing gun homicides, especially of juveniles. The assumption behind the laws is that the bans reduce the number of juveniles who have guns and, thus, the number who use guns.<sup>7</sup> The impact on crime might be limited because existing laws prohibited juveniles from purchasing guns, carrying concealed handguns, and possessing guns if they have been convicted of a felony.<sup>8</sup> Thus, the question is whether crime rates are affected by a change from a situation where juveniles can possess guns, but cannot legally purchase or conceal them, to a situation where they can possess guns only with adult monitoring. Perhaps the major practical impact is creating disincentives to keeping guns at home. The laws might add an additional incentive for juveniles not to carry concealed weapons or purchase weapons since it adds a second charge when prosecuted, a charge that can be prosecuted in federal court.

An initial consideration is whether the bans increase the expected cost to juveniles for possessing guns, which largely determines whether the ban can have any effect.<sup>9</sup> The costs include confiscation of the weapon, informal sanctions applied by such persons as relatives, juvenile officers, and prose-

<sup>5</sup> See Terry Allen & Glen Buckner, A Graphical Approach to Analyzing Relationships between Offenders and Victims Using *Supplementary Homicide Reports*, 1 *Homicide Stud.* 129 (1997); and Michael D. Maltz, Visualizing Homicide: A Research Note, 14 *J. Quantitative Criminology* 397 (1998).

<sup>6</sup> ATF, *supra* note 4.

<sup>7</sup> There apparently is no statement that this is the actual intent of juvenile gun bans. The legislative history of the federal ban consists of justifications for federal action under the Commerce Clause of the U.S. Constitution; that is, guns and drug markets are interrelated and cross state lines. See Steven Rosenberg, Just Another Kid with a Gun? *United States v. Michael R.*: Reviewing the Youth Handgun Safety Act under the *United States v. Lopez* Commerce Clause Analysis, 28 *Golden Gate Univ. L. Rev.* 51 (1998).

<sup>8</sup> ATF, *supra* note 4.

<sup>9</sup> See Philip J. Cook & James A. Leitzel, "Perversity, Futility, Jeopardy": An Economic Analysis of the Attack on Gun Control, 59 *Law & Contemp. Probs.* 91 (1996).

cutors, and conviction and sentencing by courts. These costs are more likely to occur with greater efforts to uncover and report juveniles' gun possession. Information on all these topics is lacking, so it is impossible at this point to hypothesize whether the laws have much impact.

Assuming that possession actually entails a cost, there are many mechanisms by which the bans might affect the actual use of guns and, thus, crime rates. The most obvious is that juveniles who do not possess guns are less likely to carry guns and thus less likely to use them during crimes or altercations. If they do not possess guns, juveniles are less likely to retrieve them in the middle of a dispute or to use them later in retaliation. The bans can disrupt gun markets among juveniles because the law increases the costs of carrying gun inventories.

On the other hand, the gun bans might increase crime against young persons because criminals might consider them less risky targets.<sup>10</sup> A criminal contemplating robbery or assault probably takes into consideration the likelihood that potential victims are armed and likely to defend themselves. If the potential victim appears to be under 18 years old, after a ban goes into effect, an aggressor might believe that armed resistance is less likely because of the juvenile gun possession ban. As discussed earlier, the possession bans do not make it any more illegal to carry a concealed handgun, but, again, the juvenile is less likely to have a handgun available if possession is less likely. The ban also can make aggression more likely because the aggressor is less concerned that the victim will retaliate by retrieving a gun.

An additional indicator of the impact of the juvenile gun possession bans is whether they reduce gun suicide by juveniles. There is a close relationship over time between the percentages of juvenile suicides and homicides by gun.<sup>11</sup> One would expect that the choice of whether to use a gun in suicide depends largely on whether a gun is readily available. Although possession is only one of several factors suggesting availability, if the laws reduce possession, they should reduce gun suicides.

Preliminary indications of the likely impact can be seen in trends for gun homicide victimization for persons 15–19 years old, which is a group likely to be affected by the ban if it has an impact. Figure 1 plots the trends for the percentage of homicide victims who were killed by guns (since the number of nongun homicides changed little over time, the lines in Figure 1 also approximate trends in the number of gun homicides). This percentage rose from about 65 percent in the first half of the 1980s to 86 percent in 1992, leveled off for 2 years, and then declined modestly. The leveling off occurred when more and more states were enacting juvenile gun possession

<sup>10</sup> For example, John R. Lott, Jr., & David B. Mustard, *Crime, Deterrence, and Right-to-Carry Concealed Handguns*, 26 *J. Legal Stud.* 1 (1997).

## JUVENILE GUN POSSESSION

695

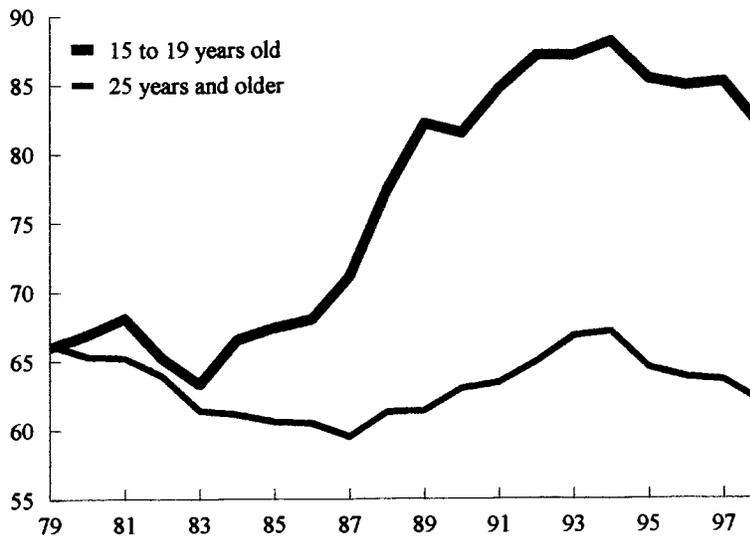

FIGURE 1.—Percent of homicides with guns

bans, and the decline occurred right after the substantial lawmaking activity in 1994, when most states first became covered by the ban (Table 1). At first glance, the trends suggest that the laws have the desired effect of reducing gun homicides. However, this impression disappears when one looks at trends in adult crimes; the post-1994 drop in percentage of homicides with guns occurred here as well. The initial impression from Figure 1 that the laws reduce gun homicide is probably only a reflection of general trends in homicides.<sup>12</sup>

The purpose of this paper is to explore this relationship with more elaborate data and analysis than are illustrated in Figure 1. The next section describes the methodology, which is a state-level multiple time-series regression that

<sup>12</sup> Commentators have given many reasons for the decline in murder and other crimes in the 1990s. I argue that it is due to the incapacitation impact of rising prison populations and the slackening of the crack era. Thomas B. Marvell & Carlisle E. Moody, *The Impact of Out-of-State Prison Population on State Homicide Rates: Displacement and Free-Rider Effects*, 36 *Criminology* 513 (1998); Thomas B. Marvell & Carlisle E. Moody, *Female and Male Homicide Victimization Rates: Comparing Trends and Regressors*, 37 *Criminology* 879 (1999). Other suggested causes include the legalization of abortion in the 1970s (John J. Donohue III & Steven D. Levitt, *The Impact of Legalized Abortion on Crime*, 116 *Q. J. Econ.* 379 (2001)) and better police practices (Malcolm Gladwell, *The Tipping Point: How Little Things Can Make a Big Difference* (2000)).

compares the impacts of the laws on different homicide categories. The third section describes the variables, and the fourth gives the results, which are that there is no evidence that the juvenile gun possession bans, taken as a whole, reduce gun homicides or total homicides.

## II. METHODOLOGY

The multiple time-series regression has become a common tool to estimate the impact of legal changes, and the methods are continually improving.<sup>13</sup> The regressions here encompass 45–50 states and 18–29 years, depending on the dependent variable, using the standard fixed-effects procedure. The regressions are weighted by population when the dependent variable is homicide and by lesser amounts (varying from population to the .3 power to population to the .7 power) for other crimes as determined by the Bruesch-Pagan test.<sup>14</sup> Weighting is necessary because crime rates vary over time more in small states, and weights are greater in homicide equations because homicides are less frequent events; so the discrepancy between variation in small and large states is especially large. The data start in 1970 because several control variables lack data for earlier years. The last year with available data is 1998 or 1999, depending on the series. The analysis, therefore, includes at least 4 full years of experience under each law. The main dependent variables are homicide victimizations for various age groups, and I use a sizeable number of other crime measures for robustness checks. The gun possession bans are represented by dummy variables.

The basic procedure is strengthened by comparing the estimated impacts of the laws on crimes that one would expect to be affected the most by the laws to the impacts on crimes less likely to be affected. The analysis, for example, compares the coefficients on the law dummies when gun homicides are the dependent variable with coefficients with nongun homicides. This helps control for missing variables that are not otherwise controlled for by the elaborate control mechanism possible with the multiple time-series design, as discussed below. The comparison is done with the *STEST* option in the *SYSLIN* procedure in SAS,<sup>15</sup> which tests whether differences between co-

<sup>13</sup> For example, Lott & Mustard, *supra* note 10; Thomas B. Marvell & Carlisle E. Moody, *Determinate Sentencing and Abolishing Parole: The Long-Term Impacts on Prisons and Crime*, 34 *Criminology* 107 (1996).

<sup>14</sup> William H. Greene, *Econometric Analysis* 394–95 (2d ed. 1993).

<sup>15</sup> SAS Institute, *SAS/ETS User's Guide*, Version 6 (2d ed. 1993). Using the multiple time-series procedure with dummy variables to evaluate the impact of laws or other impacts is the same as the difference-on-difference procedure (Jeffrey M. Wooldridge, *Introductory Economics: A Modern Approach* (2000)), but it has the benefit that one can set dummies at the effective date of each law that went into effect during the period when data are available, as opposed to setting a uniform date for all laws. Also, using an *F*-test to compare coefficients is an improvement on the difference-on-difference-on-difference procedure, whereby the impact of the law change on a crime type that is expected to be affected by the law is compared with the impact on a crime having no expected impact (for example, Ludwig, *supra* note 3). The

efficients on an independent variable used in separate regressions are statistically significant.

### III. DEPENDENT VARIABLES<sup>16</sup>

Most dependent variables are gun homicide victimization rates for various age groups and homicide offending rates by juveniles. When juveniles commit homicide, the victims are overwhelmingly persons of the same age or slightly older,<sup>17</sup> so measures of gun homicide victimization are for persons in their late teens and early twenties. Alternate specifications use measures of juvenile homicide offending and general crime rate variables. All crimes are expressed as rates, divided by 100,000 persons in the age group in question. The numerous variables are best described in outline form.

#### A. *Victimization (Homicide and Suicide)*

1. The primary victimization data are from the Centers for Disease Control and Prevention Internet site, where state-level mortality data are available for 1979–98. In addition, earlier total homicide and gun homicide data were obtained from published mortality tables.<sup>18</sup> The four types of data, and the years available, are the following:
  - a. Gun and nongun homicide victims, ages 15–19 (1979–98).
  - b. Gun and nongun homicide victims, ages 15–24 (1979–98).
  - c. Gun and nongun homicide victims of all ages (1968–98).
  - d. Gun and nongun suicide victims, ages 15–19 (1979–98).
2. Additional juvenile victimization data, compiled by James A. Fox in January 2001, were obtained from the Bureau of Justice Statistics (BJS) Internet site. Data are not used for five states for which observations are missing for more than 2 years (Florida, Iowa, Kansas, Maine, and Montana):
  - a. Homicide victims, ages 14–17 (1976–99).
  - b. Homicide victims, ages 14–24 (1976–99).

---

separate regressions mean that the two types of crime are allowed to have their own coefficients on the control variables, and again we need not set law dummies at the same year.

<sup>16</sup> The data set and basic programs used here are available from the author at [marvell@cox.net](mailto:marvell@cox.net) or at <http://www.mmarvell.com/justec.html>.

<sup>17</sup> Allen & Buckner, *supra* note 5; Maltz, *supra* note 5.

<sup>18</sup> Data are from National Center for Health Statistics, Vital Statistics of the United States 1978 (1982), and earlier versions. All the homicide data exclude legal homicides (executions and police killings).

*B. Offending and Reported Crime*

Homicide arrests for the following two categories were also prepared by James A. Fox and placed on the BJS Internet site:

1. Homicide offending ages 14–17 (1976–99).
2. Homicide offending ages 14–24 (1976–99).

Finally, we use the seven Uniform Crime Report (UCR) categories (homicide, rape, robbery, assault, burglary, larceny, and auto theft) with data from 1968–99.

*C. Issues Pertaining to Homicide and Suicide Data*

Small states often have no juvenile homicides in any given year. Because this theoretically creates problems with regression analysis, I have dropped states from a given analysis if the dependent variable is zero for more than 2 years. The states that were dropped, which number up to 16, are listed in the tables along with the regression results. In the parallel SYSLIN regressions, the state is dropped when data are missing for either dependent variable. For the remaining zero values (that is, one or two such zeros in a state), the number of homicides is set at .1 before logging (or for the Fox data sets, the homicide rate is set at .1). Coefficients on aggregate law variables change little when all states are included (because the regressions are weighted by population), but coefficients for individual state law dummies are erratic in states with many zero homicide years.

The juvenile homicide offending rates, because they are based on arrests, are probably overstated in relation to victimization rates and offending rates for older age groups because juveniles are less likely to escape arrest.<sup>19</sup>

We have no measure of gun homicides committed by juveniles, although that is the immediate target of the law, because data at the state level are very incomplete and erratic. As a practical matter, however, the measure of total juvenile homicide offending serves nearly the same purpose because the variation in homicide rates is largely due to variations in gun homicide rates.<sup>20</sup> Also, for policy purposes, victimization is more important than offending because the overriding purpose of the laws is to reduce harm, and any impact on offending is simply the means to achieve that purpose.

## IV. INDEPENDENT VARIABLES

A. *Juvenile Gun Bans*

The key independent variables, of course, are those representing laws that ban juvenile gun possession, as listed in Table 1. After the year the law went into effect, the law variable is one. During that year, it is a decimal representing the portion of the year the law was in effect. The states are divided into three groups (Table 1): (1) 15 states that passed laws in 1975–93, (2) 11 states that passed laws in 1994, and (3) 21 states without laws by 1994 (the remaining three states had laws before 1970).<sup>21</sup> Again, laws banning possession only for those under 15 or 16 are ignored. In the second group, the state laws went into effect only a few months before the federal law, so that dummy variables cannot separate their impact from that of the federal law. The main difference between the second and third groups is that the latter is affected only by the federal law, typically enforced only in the federal courts, whereas in the second group enforcement is possible in both state and federal courts. These 11 states received a double dose of law, although largely redundant (state authorities can enforce the federal law, and it is unlikely that federal prosecutors indict many juveniles for gun possession).

Homicides in the second and third groups of states, where dummy variables begin in 1994, are also subject to the changes made by other federal laws that year. The most important are waiting periods and background checks for firearm purchases, required under the Brady Act, beginning February 28, 1994. The act is applicable to the majority of states that did not already require waiting periods.<sup>22</sup> These states are indicated in Table 1, and dummies representing the Brady Act for these states are included in later regressions. Also, the Crime Control and Law Enforcement Act of 1994 contains several major crime-reduction programs such as truth in sentencing, enhanced penalties for drug offenses and using firearms in crimes, and funds for hiring new police and advancing community policing. These nationwide events are controlled for by entering year effects and by comparing gun and nongun crime regressions.

B. *Other Independent Variables*

Additional independent variables are those typically used in other state-level studies of crime.<sup>23</sup> These studies explain the theoretical importance of

<sup>21</sup> The fact that most law dummies are for the same year suggests that clustering effects might bias the *t*-ratios. To test for these, I used the ACOV option in SAS PROC REG, with the TEST statement for the law dummies. The resulting significance levels for the law dummies are very close to those for the original *t*-ratios.

<sup>22</sup> ATF, *supra* note 4.

<sup>23</sup> See Thomas B. Marvell & Carlisle E. Moody, The Lethal Effects of Three-Strikes Laws, 30 J. Legal Stud. 89 (2001).

the variables and describe the sources of data. Age structure variables are census data for the percent population of persons ages 15–17, 18–24, 25–29, and 30–34, the ages with highest arrest rates. Economic variables are the unemployment rate, the number employed, real welfare payments, real personal income, and the poverty rate. Economic downturns might increase violent crime by increasing strain or might reduce it by reducing interaction among potential aggressors and victims. Prison population is the number of prisoners sentenced to more than 1 year, and it is the average of the current and prior year-end figures. All these variables are per capita and logged.

In addition, I make full use of the unique ability of the multiple time-series design to control for missing variables—variables that are not known or that lack adequate data. State dummies control for such factors that cause crime rates to differ generally from one state to another. Year dummies control for missing variables that cause crime rates to rise or fall nationwide in a year. Separate linear trend variables for each state control for factors that cause trends in the state to differ from nationwide trends. Without them, coefficients on the law dummies are likely to be dominated by such trend differences, as opposed to any changes that took place at the time the law went into effect. Finally, lagged dependent variables reduce autocorrelation and further mitigate missing-variable bias. Two lags are entered when the dependent variables are UCR crimes and total gun and nongun victimization because data start before 1970. The remaining regressions have one lagged dependent variable and lose 1 year of data.

## V. RESULTS

The most important regressions are in Tables 2, 3, and 4, where dependent variables are homicide victimization rates for persons 15–19 years old, persons 15–24 years old, and all persons, respectively. For each table, there are two regressions, one with gun and one with nongun homicides. The coefficients for the early state laws are very small and not significant throughout except for the negative estimate for nongun total homicides (Table 4). On the one hand, the coefficients on the 1994 state law dummies are positive in the three gun homicide regressions, but only significant to the .10 level. On the other hand, the elasticities of up to .17 are fairly sizeable, and their decline as the age bracket expands is consistent with the suggestion that the 1994 state laws increase juvenile homicide. The 1994 state law dummy has no noticeable impact on nongun homicides. Finally, all coefficients on the “federal law only” dummies are negative, but significant to the .05 level only for gun homicides of all ages (Table 4), which is due solely to New York, a topic discussed later. As might be expected, in a separate analysis in which the 1994 state law variable and the federal law variable are combined into one variable, it is everywhere far from significant. The same result also occurs when the three law variables are combined into a single variable.

## JUVENILE GUN POSSESSION

| For differences between equations: |              |          |                 |          |
| Early state laws                   |              |          | .98 (.32)       |          |
| 1994 state laws                    |              |          | 1.05 (.31)      |          |
| Federal law only                   |              |          | .90 (.34)       |          |
| All three types                    |              |          | .74 (.53)       |          |

NOTE.—These two regressions encompass 37 states over 19 years, 1980–98 (after losing a year because of the lagged dependent variable). Thirteen small states are not included because they had at least 3 years with zeros for one of the dependent variables (Alaska, Delaware, Hawaii, Idaho, Maine, Montana, Nebraska, New Hampshire, North Dakota, Rhode Island, South Dakota, Vermont, and Wyoming). Not shown are year dummies, state dummies, and individual state linear trend variables. The first three variables listed are dummies representing laws banning juvenile gun possession. Except for dummies and trends, the variables are per capita and logged. The first *F*-statistics are for the significance of the three law types taken as a group. The remaining *F*-statistics are for comparing coefficients on the individual law types, determining whether differences between the two equations and the net effect of the three are statistically significant. Numbers in parentheses are probabilities.

A key feature of these tables is the *F*-test to determine whether differences between each law dummy coefficients in gun and nongun homicide regressions are significant. The laws are designed to reduce gun use, and, if that were the only theory involved, one would not expect to see a reduction in nongun homicides. In fact, the laws might even increase nongun homicides because the reduced availability of guns might lead juveniles to substitute other means of killing. Thus, if the laws have their intended effects, one would expect the coefficients on the law dummies to be significantly lower in the gun homicide regressions. However, if the opposing theory—the one that holds that bans increase juvenile homicides because the victims are more vulnerable—dominates, both gun and nongun homicides should increase. The

NOTE.—See note to Table 2. The regressions encompass 46 states over 19 years, 1980–98. Four small states are excluded (New Hampshire, North Dakota, Vermont, and Wyoming).

increase might be greater for nongun homicides, because if the attacker no longer fears the victim has a gun, he or she is less likely to rely on the quickest and most lethal means of attack.

In practice, both hypotheses receive little support. Nowhere in Tables 2–4 is there evidence that the laws cause gun homicides to decline more than nongun homicides. The hypothesis that the laws increase homicides receives only very slight support: the difference for early state laws in Table 4 is significant to the .10 level. With the large number of comparisons and *F*-tests, however, one such result is to be expected by chance. Finally, an important result is that coefficients on the three law variables as a group are not significantly different between the gun and nongun variables (last rows in Tables 2–4).

By aggregating the laws into three groups in Tables 2–4, I am assuming that the coefficients on the dummies are the same for each law in a group. Similar assumptions are common in time-series cross-sectional analyses of legal changes, but they are unrealistic. One would expect that impacts vary

NOTE.—See note to Table 2. The regressions encompass all 50 states for 29 years, 1970–98.

between states because of differences in the precise terms of the laws, enforcement efforts, other contemporaneous changes in criminal law and operations, and preexisting conditions. To address this problem, each law is given a separate dummy variable, which is zero except in the postlaw period in the particular state. Dummies were not entered for three states that had laws before 1970. Because we only have data for juvenile homicides beginning in 1979, regressions with these variables do not include dummies for three early laws. Also, as indicated in Tables 2–4, several small states were deleted because they had more than 2 years with no homicides.

As expected, the coefficients vary greatly (Table 5). The coefficients for New York stand out; they are negative, large, and highly significant because of the extreme decline in homicide rates there since the early 1990s. Most coefficients are positive, however, and a few are large. One cannot attribute these, or any other individual coefficient in Table 5, specifically to the juvenile gun possession bans because the coefficients might be affected by other contemporaneous changes that are not captured by control variables, although the multiple time-series design permits numerous controls. Assuming that

| Federal only                   | -.005 | .067  | .088  | 1.280 | .033  | .591  |

NOTE.—See note to Table 2. These three regressions are the essentially the same as the regressions in the “Gun Homicide” columns in Tables 2–4, except that there are separate law dummies for each state. The Minnesota, Nebraska, and New Jersey laws are not included in the first two regressions because the laws went into effect before or during 1980, when the data in the regressions start. The remaining blank spaces occur because states are deleted if they have 3 or more years with no murders. The *t*-ratio for the means is based on the standard error of the means, which is a conservative estimate.

the other changes are largely random, the overall impact of each law type can be estimated by taking the means of the coefficients.<sup>24</sup> As seen at the end of Table 5, these estimates are generally consistent with those in Tables 2–4, although the evidence is a little stronger that the 1994 state laws are associated with more gun homicides.<sup>25</sup>

Table 6 gives the results of the analysis of suicides of persons ages 15–19 years, presenting only the results concerning the law variables. In regressions similar to those in Table 2, the law dummies are never significant and there is no evidence of a difference between gun and nongun suicide. It is likely, however, that any impact of the laws is dampened in Table 6 because the suicide measure includes persons 18 and 19 years old, who are not covered by the gun possession ban, and unlike with the gun homicide measures, one would expect an exact correspondence between age and impact of the law.

Next, in Tables 7–9, the basic homicide regressions are replicated with seven additional homicide measures, again using dummies for the three types of laws. Only the law coefficients are shown. The results are consistent with the gun homicide regressions in Tables 2–4; the 1994 state laws have positive coefficients, while the federal law has negative coefficients, significant in two regressions. Coefficients on the federal law are greatly affected by New

<sup>24</sup> There is no uniformly accepted way to calculate the standard error of means of coefficients. The procedure used in Table 6 is that recommended in M. Hashem Pesaran & Ron Smith, Estimating Long-Run Relationships from Dynamic Heterogeneous Panels, 68 *J. Econometrics* 79 (1995). Another procedure is to calculate the standard deviation of the mean by dividing the mean standard deviation by the square root of the number of law dummies involved (see Badi H. Baltagi & James M. Griffin, Pooled Estimators vs. Their Heterogeneous Counterparts in the Context of Dynamic Demand for Gasoline, 77 *J. Econometrics* 303 (1997)), which usually produces larger *t*-ratios. Baltagi & Griffin, *supra*, and Pesaran & Smith, *supra*, address coefficient heterogeneity by conducting separate regressions for each unit. That is not feasible here because the time series are too short and, more importantly, because separate regressions are likely to be misspecified because they lack year effects.

<sup>25</sup> One reason for the slight differences between the means in Table 5 and the law coefficients in Tables 2–4 is that the latter are based on regressions weighted by population, whereas the means in Table 5 treat each coefficient equally and thus emphasize smaller states. Thus, excluding New York has little impact on the mean for the federal law only states in Table 5.

NOTE.—This table gives coefficients on the three law variables from regressions that are the same as in Table 2 except for the dependent variables.

York, and when it is dropped from the analysis, there is no evidence that the federal law reduces homicide.

Table 9 also analyzes UCR crimes other than homicides. If the laws actually reduce gun possession, they might reduce these crimes because some juveniles might be reluctant to commit them without the protection of firearms. If the laws embolden criminals to commit crimes because they believe that victims who appear to be juveniles are less likely to be armed, then one would expect these other crimes to increase after the bans. The increases would probably be greater for violent crimes, where the offender comes into contact with the victim. All these possible impacts, however, are likely to be muted because the bans do not apply to adults, who comprise the majority of victims and offenders, and there are no useable data disaggregated by age. In any event, there is no sign that the bans affect nonhomicides (Table 9). In particular, the *F*-statistics for the three law types are far from significant.

The regressions discussed thus far were also estimated with a wide variety of variable specifications. Results change little when law variables are lagged 1 year or converted into distributed lags (a linear trend until the fourth lag). The same is true when the regression is conducted in differences, when the continuous variables are not per capita, and when they are not logged. Coefficients on the 1994 state law variable are usually a little larger and more likely to be significant when the law variable is lagged, but they are less likely to be significant when variables are differenced or not logged.

As stated earlier, interpretation of the 1994 laws is uncertain because many other nationwide changes were made that year. The regression design mitigates this problem by entering year dummies and state trends and by com-

NOTE.—This table gives coefficients on the three law variables from regressions that are the same as in Table 2 except for the dependent variables.

paring coefficients in gun and nongun homicides. Still, the best estimates are probably for the pre-1994 laws, which were passed before the spate of federal law activity. There is virtually no evidence that the pre-1994 laws have an impact.

Another way to control for at least some of the other changes occurring around 1994 is to add dummy variables for specific laws. I added three categories to the regressions in Tables 2–4. The first is background checks for handgun purchases, which under the Brady Act were first applied after February 1994 in 33 states that did not already have background checks (indicated in Table 1).<sup>26</sup> The second is that 24 states have three-strikes laws (usually enhanced penalties for third violent felonies).<sup>27</sup> The third is that 25 states have shall-issue laws (which facilitate concealed handgun permits).<sup>28</sup> These additions had very little impact on the results reported above.<sup>29</sup>

<sup>26</sup> Jens Ludwig & Philip J. Cook, Homicide and Suicide Rates Associated with Implementation of the Brady Handgun Violence Prevention Act, 284 JAMA 585 (2000).

<sup>27</sup> See Marvell & Moody, *supra* note 23.

<sup>28</sup> See Lott & Mustard, *supra* note 10. The dates for these laws are as follows: Alaska, August 30, 1994; Arizona, July 17, 1994; Arkansas, July 8, 1995; Florida, October 1, 1987; Georgia, August 25, 1989; Idaho, July 1, 1990; Kentucky, October 1, 1996; Louisiana, April 19, 1996; Maine, August 7, 1980; Mississippi, July 1, 1990; Montana, October 1, 1991; Nevada, October 1, 1995; New Hampshire, August 1, 1994; North Carolina, December 1, 1995; Oklahoma, September 1, 1995; Oregon, January 1, 1990; Pennsylvania, June 18, 1989, and October 19, 1995; South Carolina, August 23, 1996; Tennessee, July 1, 1994; Texas, August 28, 1995; Utah, May 1, 1995; Virginia, July 1, 1983, and July 1, 1995; West Virginia, July 1, 1988; Wyoming, October 1, 1994.

<sup>29</sup> Analysis of the results for these three law variables is outside the scope of this paper. A rough summary is that the shall-issue laws have little discernable impact except for reducing rape. The three-strikes laws are strongly associated with increases in almost all measures of homicide (the major exceptions are nongun homicides of persons ages 15–19 and 15–24). The likely reasons for this result are discussed in Marvell & Moody, *supra* note 23. The Brady Act is also strongly associated with more homicides (except victimizations of persons ages 15–19 and 15–24), as well as with robbery, burglary, and auto thefts. A possible reason is that criminals believe that citizens are more vulnerable. However, this finding suffers from the

| Adjusted <i>R</i> <sup>2</sup> | .83         |          | .86         |          |

NOTE.—This table gives coefficients on the three law variables from regressions that are the same as in Table 2 except for the dependent variables.

The next analysis is another comparison of coefficients, with young person and adult victimizations as dependent variables. If the juvenile handgun bans act to increase homicides because criminals have less cause to fear that victims are armed, then the impact should fall only on persons whom the attacker believes to be juveniles (it is possible, however, that offenders might refrain from attacking adults if there are juveniles present whom the offender believes might be armed). Although the bans apply to persons under 18, the attacker often does not know the victim's age and might believe older persons are similarly without gun protection. In any event, I use victimizations of persons ages 14–17, 15–19, and 15–24. Likewise, it is difficult to determine which age group is not affected, and the variables used are persons older than 19 and persons older than 24. These various combinations lead to five comparisons, and there is no indication of a difference between the age groups for any of the three law types.

It is possible that the apparent lack of crime-reduction impact of the law is due to simultaneity—that is, state legislatures pass juvenile bans in response to rising juvenile homicide, such that this positive relationship counteracts a negative impact of the laws. This possibility is suggested by Figure 1 and Table 1. Most laws in the “early state law” category were enacted in the late 1980s and early 1990s, just when juvenile gun homicide was increasing. Although these crimes peaked in about 1992, the 1994 federal and state laws might be in response to the trends in the prior decade. This issue is addressed in two ways. First, any such simultaneity would be mitigated (but not eliminated) by lagging the law dummy variables, because the legislatures are not

fact that the categorization of states as Brady Act states and non-Brady Act states by Ludwig & Cook, *supra* note 26, has little to do with the extent of gun control exercised before and after the Brady Act. Several Brady Act states (subjected to the law) already had strong gun control laws, while the federal government classified several states as non-Brady Act states on the basis of laws passed just before the Brady Act went into effect. In all, because of this problem and because of the positive coefficients on the Brady Act variable, I question the results in Ludwig & Cook, *supra* note 26.

NOTE.—This table gives coefficients on the three law variables from regressions that are the same as in Table 2 except for the dependent variables. Two dependent-variable lags are used.

influenced by crime rates in the next year. As discussed earlier, lagging the dummy has little impact on the results.

Another way to explore possible simultaneity is the Granger test.<sup>30</sup> Using a probit procedure, with the variables listed in Table 2 plus the state effects, the law dummies are regressed on crime lagged 2 years, as well as the law dummies lagged 2 years. If rising crime caused the laws to be enacted, the coefficients on the crime variables would be significant and positive.<sup>31</sup> The analysis showed that there is no evidence of this for any of the three law categories and for any of the numerous crime measures. Most coefficients on lagged crime (the regressions use lags of 1 and 2 years) are negative, and none is positive and significant.

## VI. CONCLUSION

Juvenile handgun bans have little or no impact on a wide variety of crime measures. This finding renders the analysis more difficult than if an impact were found. Most published evaluations of laws do find an impact one way or another, and they typically only present a regression with significant results, with perhaps a few supporting analyses. Such a procedure, however, is not valid to show the absence of an impact because still other specifications might uncover an apparent impact. Also, the lack of significant results does not mean absence of impact, just that it is less likely. One can never claim to have covered all possibilities, but this paper attempts to mitigate these by using numerous crime measures as well as several configurations of the law variables and of the continuous variables. The multiple time-series design using coefficient comparisons, moreover, provides far more controls than other procedures.

One can posit theories that the juvenile gun bans either increase or decrease homicides. If the bans reduce juvenile gun access, they would probably reduce the use of guns by juveniles in crimes. If the bans lead others to believe that juveniles are more vulnerable targets, the result is likely to be more crime, especially violent crimes involving juveniles. The finding that the laws have little or no impact could mean that both types of theories are without merit or that they cancel each other out. The former appears more likely. It is not likely that theories cancel each other in a similar way for so many different

<sup>30</sup> Clive W. J. Granger, *Investigating Causal Relations by Econometric Models and Cross-Spectral Methods*, 37 *Econometrica* 424 (1969).

<sup>31</sup> The rationale for the Granger test is that there is no simultaneity between the dependent variable and lagged independent variable, so long as the lagged dependent variable is entered to control for possible serial correlation between the lagged independent variable and dependent variable through the lagged dependent variable. It is possible for the Granger test to miss causation if it occurs only in the current year, since the current year independent variable is not entered (because the causal direction in the current year is undetermined). This is very unlikely here because the legislature in one year is unlikely to react only to crime in that year and not consider crime in the prior year.

crime measures, and the lack of impact on juvenile suicide rates suggests that the laws do not reduce gun access.

The results are almost uniform with respect to the pre-1994 state laws banning juvenile gun possession: they have no discernible crime-reduction impact, and there is only very slight evidence of an increase, mainly with respect to total gun homicides (Table 5). The results for the 1994 law variables are more uncertain because the results might be influenced by substantial federal efforts commenced that year to regulate guns and reduce crime generally. Where the 1994 laws seem to have an impact, the suggestion is almost always that crime increases; thus, there is no evidence that these bans had their intended effect. There is some slight support for the theory that the bans increase homicides because juveniles appear more vulnerable. With aggregate law variables, this effect appears mainly for state 1994 laws and it is usually counterbalanced by negative results for the federal 1994 law. The strongest indication occurs when the law variable is disaggregated, but these results are affected by large positive coefficients in a few small states. Finally, there is no discernable difference between the impact of the laws on murders by juveniles and those by adults; if the laws encouraged crime, the impact would only apply to the former.

## The Impact of Gun Control and Gun Ownership Levels on Violence Rates

Gary Kleck<sup>1</sup> and E. Britt Patterson<sup>2</sup>

---

What effects do gun control restrictions and gun prevalence have on rates of violence and crime? Data were gathered for all 170 U.S. cities with a 1980 population of at least 100,000. The cities were coded for the presence of 19 major categories of firearms restriction, including both state- and city-level restrictions. Multiple indirect indicators of gun prevalence levels were measured and models of city violence rates were estimated using two-stage least-squares methods. The models covered all major categories of intentional violence and crime which frequently involve guns: homicide, suicide, fatal gun accidents, robbery, and aggravated assaults, as well as rape. Findings indicate that (1) gun prevalence levels generally have no net positive effect on total violence rates, (2) homicide, gun assault, and rape rates increase gun prevalence, (3) gun control restrictions have no net effect on gun prevalence levels, and (4) most gun control restrictions generally have no net effect on violence rates. There were, however, some possible exceptions to this last conclusion—of 108 assessments of effects of different gun laws on different types of violence, 7 indicated good support, and another 11 partial support, for the hypothesis of gun control efficacy.

---

**KEY WORDS:** gun control; violence.

### 1. INTRODUCTION

Crime is widely viewed by the public as one of the most important problems facing our society, and violent crime is regarded as the most serious and fearful kind of crime. While violence is often regarded as an intractable problem difficult to reduce through deliberate governmental effort, many have argued that it, nonetheless, may be reduced through the regulation of weapons, especially firearms.

The rationale for gun control, of course, includes the assumption that the availability of guns has a significant net positive effect on violence rates. This assumption has not yet been consistently supported by a credible body of evidence, partly because evidence from better studies has largely been negative or mixed regarding the assumption and partly because so much of the evidence is too weak to be credible one way or the other (see overviews by Wright *et al.*, 1983, pp. 129–137; Kleck and McElrath, 1991). There are a number of possible effects which gun availability could have on violence rates. If a gun is available, it could encourage attacks, especially by weaker attackers on stronger victims, and could facilitate attacks from a distance or attacks by persons too squeamish to attack with messier weapons such as knives or too timid to attack at close quarters. Similarly, guns may enable some people to attempt robberies they could not complete unarmed (Newton and Zimring, 1969; Cook, 1976). The sight of a gun might “trigger” attacks by angered persons, due to the learned association between guns and violence (Berkowitz and LePage, 1967). On the other hand, research also indicates that the presence of guns usually inhibits the expression of aggression, reducing the likelihood of attack (Kleck and McElrath, 1991; Kleck and DeLone 1993). There is support for the claim that once an injury is inflicted, it is more likely to result in death if a gun was used, due to the weapon’s greater lethality (Newton and Zimring, 1969; Block, 1977; Kleck and McElrath, 1991), although part of the higher fatality rates of gun attacks is probably due to greater seriousness of intent on the part of those using guns, rather than just the weapon itself (Wright *et al.*, 1983). Regarding suicide, some authors argue that guns provide a uniquely quick, easy, and sure means of self-destruction which reduces the chances of successful outside intervention (Newton and Zimring, 1969). On the other hand, many highly lethal and otherwise satisfactory means for committing suicide are even more widely available than guns, and can easily be substituted where guns are not available.

Prior studies of the aggregate relationship between gun availability and violence rates have used a variety of measures, none entirely satisfactory (Cook, 1982, pp. 264–272). These studies have failed to generate consistent evidence of a net positive effect of gun availability on violent crime rates (Kleck, 1984a, 1991, Chap. 5). The present study measures gun levels through the use of multiple indirect indicators, for two purposes: (1) to assess the impact of gun availability on violence rates and (2) to assess the effects of gun laws on violence rates, including both direct effects and indirect effects operating through the impact of gun control on gun availability. The study addresses every major form of gun control and every major form of violence involving firearms, including not only the violent crimes of homicide, robbery, assault and rape, but also suicides and fatal gun accidents.

## 2. METHODS OF PRIOR RESEARCH

Two general strategies have been used to assess the impact of gun control laws on violence rates: interrupted time series designs and cross-sectional designs. In the typical time series design, monthly violence rates for a single jurisdiction are analyzed with ARIMA or regression time series methods to see if there is a significant downward shift in crime around the time a new gun law goes into effect. Cross-sectional designs compare legal jurisdictions, usually states, with each other to see if those having a given type of gun law have lower levels of violence than those lacking the law.

Studies of gun control's impact on violence have been characterized by a variety of methodological flaws. The first is the failure to control adequately for other determinants of violence rates besides gun control laws, before attributing crime reduction effects to gun regulation. This is at least as much of a problem for time series studies as for cross-sectional ones. Careful modeling of preintervention trends in violence is required in time series studies, rather than simple before-and-after comparisons, because the time when an intervention is most likely to be implemented is at, or shortly after, the time when the target problem peaks, i.e., when it is most likely to stimulate attempts to combat it. Thus, one would expect to find decreases in the problem after an intervention even if the intervention were ineffective, due to this simple timing issue—the problem was peaking and thus was going to decline at the time of intervention anyway, even if nothing was done about it. Unfortunately, if this reasoning applies to the intervention being evaluated, it also applies to other “interventions” as well. Other efforts, public or private, collective or individual, to reduce the target problem would also be most likely to start (or peak) at about the same time. Time series modelers attempting to isolate the impact of gun laws necessarily assume that the evaluated intervention was the only new element in the causal structure generating trends in violence rates. This is, at best, a convenient simplification; at worst, an implausible one.

Cross-sectional designs can take advantage of considerable data in census years for cities, metropolitan areas, or states on extraneous determinants of crime rates, while time series data on most such variables, except at the national level, are nonexistent. Consequently, time series designs usually do not explicitly control for any other important determinants of crime which might show changes coincident with changes in gun laws. Thus, they do not allow the analyst to rule out explicitly any alternative explanations of violence decreases. Instead they, at best, make do with comparisons to “control” jurisdictions which, it is assumed, would show crime trends similar to those in the intervention jurisdiction, were it not for the impact of the gun law changes. This was the strategy followed by Pierce and Bowers (1981). Other time series studies use trends in

*nongun* violence rates within the impact jurisdiction as internal controls, relying on the implicit, and implausible, assumption that gun and nongun rates would follow similar trends were it not for changes in gun regulation (e.g., Loftin and McDowall, 1981, 1984). Evidence from the present study (Table III) indicates that gun violence and nongun violence rates are driven by different sets of exogenous variables (apart from gun laws and gun prevalence), suggesting that they are likely to show divergent trends even in the absence of new gun laws.

Cross-sectional studies of a large number of jurisdictions offer clear advantages over longitudinal designs if one wants to identify which specific features of gun regulation are likely to generally produce violence reductions. The former tests the average effect of many specific instances of a form of regulation, while the latter tests only the effects of a single new gun law in a single jurisdiction, allowing little generalizability. With the former design it is possible to separate the effects of different types of gun controls which are sometimes lumped together in a single new law, while this is impossible in the latter.

Further, it is impossible to state for certain, *a priori*, *when* the effect of a new law should become evident, rendering the gun law efficacy hypothesis difficult to falsify with a time series design. For example, some analysts have assumed that any impact should begin at the law's "effective date," while others assert that effects can begin earlier, due to an "announcement effect" (Pierce and Bowers, 1981). Loftin and his colleagues (1991) even concluded that local handgun bans reduced homicide in the District of Columbia, even though the declines in both gun homicides and total homicides began *2 years* before the law went into effect! One could just as easily argue that effects would only become evident after a lag of indeterminate length. In contrast, with a cross-sectional design the corresponding question is *where* the law would have its effects, and there is little doubt that the effects should be most pronounced in the jurisdiction which implemented the regulation.

The principal weakness of cross-sectional studies is one shared by time series studies—the difficulty of meeting the *ceteris paribus* condition by correctly specifying a model of how crime rates are generated. It should, however, be noted that the cross-sectional design does *not* require, as Wright *et al.* (1983, p. 285) assert, that "the investigator have a fairly complete understanding of how the particular crime rates are generated." This is an impossible standard to meet and fortunately, an unnecessary one. Instead, unbiased estimates of the impact of a gun control measure can be obtained if one includes in the model only those extraneous variables which affect crime rates *and* which also have nontrivial correlations with the gun control measures. It turns out that none of the known

causes of variation in violence rates are strongly correlated with gun laws, making this a less crucial empirical issue than it seemed.

With only two exceptions (Geisel *et al.*, 1969; Cook, 1979), prior cross-sectional studies have exclusively used states as their unit of analysis. This exacerbates the problem of aggregation bias. States are larger units than cities and, also, more heterogeneous with regard to levels of violence and variables affecting violence rates. Consequently, the best level of aggregation to use would be the lowest and most homogeneous one at which gun law is made—the city level.

Another problem with state-level analyses is that they cannot incorporate measures of local gun controls. Only one prior study has measured gun regulation at both the state level and the city level (Geisel *et al.*, 1969), yet the most restrictive gun laws in the nation are at the local level. Many, even most, of the residents of a given state might be subject to very strong gun laws, at the city level, yet be subject to little or no state regulation. Consequently, studies failing to measure local ordinances seriously mismeasure the degree of gun control to which much of the population is subject.

For some gun laws, one presumed reason for any effects on violence they may have is that they reduce levels of gun prevalence or availability, which in turn affects violence rates. Indeed, regardless of the way the laws were designed to work, almost any restriction on guns could in practice discourage gun ownership, by reinforcing public perceptions of guns as dangerous objects. Conversely, most gun laws could hypothetically reduce violence in ways other than by reducing gun ownership, e.g., by making carrying or criminal use more risky or reducing the immediate availability of guns in violence-prone situations. Only three of the studies published to date explicitly measured gun prevalence or availability (see column 5 in Table I). Thus it was usually impossible to tell whether observed effects were produced through reductions in gun ownership or through some other causal mechanism. Further, if high gun prevalence makes it harder to pass gun laws, and also contributes to higher violence rates, failing to control for gun prevalence could result in a spurious negative association between gun laws and violence rates.

None of the three gun law studies which measured gun levels treated the gun–violence relationship as a simultaneous reciprocal one. This is problematic because there is both individual-level and aggregate-level evidence that violence rates can motivate gun acquisition and increase aggregate gun ownership levels (Lizotte and Bordua, 1980; Lizotte *et al.*, 1981; Kleck, 1984a; McDowall, 1986; Smith and Uchida, 1988). If the relationship were a simultaneous reciprocal one, failing to model it properly would result in biased and inconsistent estimates of the gun coefficient, and

<sup>a</sup>Summary: 4 yes, 8 mixed, 17 no. "Gun control effective?" means "Did gun laws appear to reduce significantly total (gun plus nongun) rates of violence or crime?" Weakness codes: x, problem existed; blank, no problem; —, problem is irrelevant; (x), partial presence of problem or problem inadequately dealt with. Weaknesses: (1) included no, or very few, control variables; (2) state level of analysis used, rather than city; (3) no measure of local gun control laws; (4) no measure of gun ownership included; (5) only one source of information on gun control laws used; (6) lumped heterogeneous mixture of gun laws together, without separate measures of impact of different types of gun laws; (7) studied just one specific law; little generalizability.

<sup>b</sup>These four studies are not independent since they are all evaluations of the same law (the Massachusetts Bartley-Fox law) in the same time period, using the same general methods. They contributed three of the eight studies classified as "mixed." Their findings are classified this way because, taken as a whole, they indicate that the law had no effect on homicide, may have reduced robbery (two studies indicated this, one did not), and reduced gun assaults by a moderate amount, while increasing nongun assaults by a larger amount.

the positive effects of violence on gun levels would be confused with the possible positive effects of gun levels on violence rates.

Finally, close examination of the various surveys and compilations of gun laws reveals significant differences between sources, indicating in many instances that at least one source was in error. Consequently, studies using a single source of information are especially vulnerable to error in measurement of the key variables. This was true of all prior studies of multiple laws.

### 3. RESULTS OF PRIOR RESEARCH

The Table I summary of prior research on gun law effects indicates that most of the 29 studies found no impact of gun laws on total violence rates. [Throughout this paper, the term “total violence rate” refers to rates of gun violence plus nongun violence in a given violence category. For example, the term could refer to total homicide (gun homicide plus nongun homicide) or to total robbery (gun robbery plus nongun robbery), and so on. It does not refer to homicide plus robbery plus assault and so on.] Of the 12 studies yielding favorable or mixed results, 3 were time series evaluations of the same law, the Bartley–Fox carrying law. Of these three, the Pierce and Bowers (1981) study found a drop in violence which *preceded* the law’s effective date, casting doubt on the authors’ favorable assessment of the law. Further, a fourth study of this same law concluded that evidence regarding the law’s impact was inconsistent and that the optimistic conclusions of previous researchers were premature (Hay and McCleary, 1979). The middle columns in Table I indicate that most of the rest of the studies offering at least mixed support for gun control efficacy are seriously flawed. Taking prior research as a whole, it would be fair to say at this point that a consistent, credible case for gun control efficacy in reducing violence has not yet been made.<sup>3</sup> [For reviews of research on the impact of gun

<sup>3</sup>Assessments of the studies’ implications regarding gun control efficacy are based on their empirical findings, not necessarily on their authors’ conclusions. As an example of conclusions diverging from data, Geisel *et al.* (1969) concluded that increased gun control severity would save lives, based on analyses using an index which lumped together all forms of gun control. Construction of this index involved a weighting scheme which, contrary to the author’s claims, biased results in favor of finding a stronger correlation with violence rates (see p. 659). Even so, the results of analyses using the index did not generally support the author’s conclusions. Of the seven violence rates studied, only two showed a significant negative association with the index: gun suicides (but not total suicides, indicating nothing more than a substitution effect) and accidental death by firearm (p. 663). Further, buried in the last page of their Appendix was a one-paragraph summary of the results of their more appropriate analysis (which even the authors described as “more refined”), using separate dummy variables for each type of gun control: “We could obtain no significant or even meaningful results” (p. 676).

prevalence on crime, suicide, and gun accident rates, see Kleck (1991, pp. 187–188, 214–214, 248–250, 265, 303–304).]

#### 4. METHODS OF THE PRESENT STUDY

The present study is a city-level cross-sectional study. Data were gathered on all 170 U.S. cities which had a population of 100,000 or larger in 1980, i.e., all large cities. Cities were chosen as the unit of analysis because they are the smallest, most homogeneous unit or area to which gun laws apply, and analyses which use larger units necessarily must ignore laws passed by smaller constituent areas. A majority of the reported violent crimes in the United States occurred in these 170 cities [U.S. Federal Bureau of Investigation (FBI), 1981, p. 173]. Smaller cities could not be included because person-level vital statistics mortality data do not identify locations of deaths for cities with populations smaller than 100,000 [U.S. National Center for Health Statistics, (NCHS), 1983, p. 8]. These data were needed to obtain city counts of gun homicides and gun suicides, data which were essential both as components in dependent variables and as indirect indicators of gun prevalence.

The dependent variables are the rates per 100,000 resident population of homicide, suicide, aggravated assault, robbery, rape, and fatal gun accidents. For all but the last two of these, we had data allowing separate analyses of rates of violence with guns, without guns, and with gun and nongun events combined.

The violence rates were averaged over 3 years, 1979 to 1981, thus bracketing the Census year of 1980 for which data on most of the control variables were available. Some of the smaller cities had fewer than a half-dozen homicides or suicides per year; thus, misclassification of just one or two homicides or suicides as other kinds of deaths could substantially alter a single year's official count. Therefore, 3 years were covered, to minimize the potential measurement error produced by misclassification and to minimize the instability due to year-to-year fluctuations.

The dependent variables were expressed as natural logs. The transformation produced more normal distributions on the violence rate variables. (Without exception, skewness and kurtosis statistics moved closer to zero after the transformation.) It also helped to stabilize the variance of the residuals, reducing heteroscedasticity.

Models of violence rates were estimated using two-stage least-squares procedures because a simultaneous reciprocal relationship was specified between violence rates and gun prevalence levels, based on the assumption that higher violent crime rates could motivate gun acquisition, in addition to gun prevalence increasing violence rates. No effect of suicide and fatal

gun accident rates on gun acquisition was expected, so models of these violence rates were specified as recursive and estimated using ordinary least-squares methods. Figure 1 illustrates the general form of the models estimated. This is the general causal structure assumed for all models estimated, except that we assumed there was no effect of suicide and gun accidents on gun prevalence. There was a total of 14 models (one for each type of violence rate listed in Table II), and each model consisted of two equations, one for the violence rate and one for the gun prevalence level.

The initial choice of possible control variables to include in the models was based on a review of previous city-level and metro area-level studies. An effort was made to include all predictors which had frequently and consistently been found to significantly predict the violence rates examined here. Most of the violence predictors besides the gun law dummies and gun prevalence indicators were measures of the relative sizes of population groups which have especially high or low violence rates, or were measures of social integration, isolation, or transience, or measured the prevalence of statuses which can give rise to violence, such as divorce, alcoholism, and unemployment. Theoretical rationales for including these variables, and relevant empirical evidence, can be found in numerous sources (e.g., Byrne, 1986; Sampson, 1986; Land *et al.*, 1990, and studies reviewed therein). Exogenous variables which remained in the final models were those whose coefficients in the violence rate equations were significant at the 0.10 level in preliminary screening using OLS.

It is important to stress at this point that the exact combination of control variables included in each model was not critical with respect to the gun control results. Gun law coefficient estimates were not sensitive to the choice of control variables to include because correlations between the gun law variables and the control variables were almost all weak. Of 290 bivariate correlations between gun law variables and control variables, none exceeded 0.4, and only 7 even reached 0.3. Multicollinearity involving the gun law variables was generally minor. In the final violence rate equations, variance inflation factors (VIF) for each of the 19 gun law variables were under 10, and all but two were under 4. [Kennedy (1985, p. 153) suggests that a VIF over 10 indicates harmful collinearity.] Thus, regardless of which theoretical perspectives might be used to inform the specification of control variables, the key coefficient estimates were not

substantially affected by specification decisions concerning which control variables to include in the models.

A few of the control variables are sufficiently uncommon to require comment. Like nearly all aggregate analyses of violence, the present study uses ratio variables, with city population being the denominator in many variables, both exogenous and endogeneous. Some critics have argued that the presence of common components in ratio variables can lead to biased or artifactual associations. Firebaugh and Gibbs (1985, p. 715) recommended that if one seeks unbiased coefficient estimates in a regression model containing both endogeneous and exogenous variables with a common component (commonly population size) in the denominator, one should also include one divided by the common component as another predictor. Thus we have included, in all models, one divided by resident population (in 100,000's) as a predictor.

Computing aggregate crime variables as per capita rates is conventionally done to control for the size of the population at risk of either committing crimes or being victimized in crime. Standard city resident population figures, however, are not completely adequate for this purpose because they do not count nonresident persons at risk, including daily commuters and visitors such as tourists and business travelers. We roughly controlled for the omission of commuters by including as a separate predictor the city population as a fraction of the surrounding metropolitan area, on the assumption that cities located in much larger metro areas are likely to have more commuters, in which case resident population would be a more serious underestimate of the population at risk [see Gibbs and Erickson (1976) for a fuller rationale]. We controlled for the contribution of short-term visitors by including as a separate predictor a "visitors index": the per capita total receipts for hotels, motels, and other lodging places, for the metropolitan area in which a city is located, in 1977. This is an especially important control for cities with large numbers of tourists relative to resident population, such as Las Vegas, Orlando (Disney World), and Miami.

#### **4.1. Measurement of Gun Laws**

Table II lists all of the variables which are included in later tables, as well as control variables which were evaluated but found to be unrelated to violence rates, along with the sources of the data. The following four sources were used for gun law coding, in descending order of importance: U.S. Bureau of Alcohol, Tobacco, and Firearms (BATF) (1980), Jones and Ray (1980), Blöse and Cook (1980), and Ronhovde and Sugars (1982). Multiple sources were used wherever possible because each source provided

some information the others did not, and each served as a reliability check on the others. When sources conflicted, state statute books were consulted.

Both state laws and city ordinances were coded. Nineteen major categories of existing gun laws which could affect violence rates were included in the analysis. The philosophy guiding coding of the gun law variables was to code them so that each variable would measure the presence or absence of a given form of regulation, regardless of what other elements might have accompanied it in a given law, and regardless of what governmental level imposed the restriction. Thus a gun law variable was coded 1 if the form of regulation applied in 1980 to a given city, either due to a city ordinance or because the city was located in a state with such a law, whether the law applied to all types of guns or, as was usually the case, only to handguns; the city was coded 0 otherwise. A single law therefore might result in a city being coded 1 on two or three different gun control variables.

The gun law variables were constructed in such a way that any city subject to a gun license law was also subject to purchase permit requirements, since existing license laws all include as a component a requirement that a license be presented in order to buy guns from licensed dealers, in addition to requiring a license for home possession of guns. On the other hand, a city could be subject to a purchase permit requirement without requiring a license for home possession of firearms.

The gun registration variable was coded 1 if gun sales were recorded in such a way that a governmental agency received a record of a specific gun being sold to a specific person or if all persons currently possessing a gun were required to record their ownership of each gun with an agency.

The codings for most gun law variables were simply 1 for the regulation being present at either the state or the local level and 0 if they were absent. However, for the gun carrying law variables (CARYHIDN, CARYOPEN), 1 indicated that gun carrying (concealed or open, respectively) was either completely unlawful or required a license which was hard to get and rarely issued, while 0 indicated that the city was located in a so-called "shall issue" state—carry permits are fairly easy to get because they must be granted to applicants unless they have certain specified disqualifying attributes (Blackman, 1985).

#### **4.2. Measurement of Gun Prevalence**

We measured gun prevalence using a principal-components factor based on multiple indirect indicators. For cities, Cook (1979) used a simple index consisting of the average of two indicators: the percentage of suicides committed with guns and the percentage of nonfelony homicides com-

mitted with guns. He showed this measure to be highly correlated with survey measures of urban household gun prevalence, aggregated over eight regions, indicating validity for purposes of cross-sectional analyses. Earlier researchers had used similar indirect measures (Brearley, 1932, p. 71; Seitz, 1972; Curtis, 1974, p. 110; Brill, 1977, p. 20).

We improved on these measures by using as many as five indicators of city gun prevalence levels: (1) percentage of suicides committed with guns, 1979–1982; (2) percentage of nonfelony homicides committed with guns, 1979–1982; (3) percentage of aggravated assaults known to the police committed with guns, 1979–1980; (4) percentage of robberies known to the police committed with guns, 1979–1980; and (5) percentage of the dollar value of all stolen property reported to the police which was due to firearms thefts, 1979–1981. We also evaluated three other indicators: the fatal gun accident rate, the rate of National Rifle Association members, and the rate of contributors to the Second Amendment Foundation, another gun owners' group. However, in a factor analysis these did not load with the other indicators. A simple explanation would be that the latter group of indicators reflects mainly gun prevalence among noncriminals, while the first five measures reflect mainly gun prevalence among criminals.

In each model, when the dependent variable could have an artifactual association with one of the gun prevalence indicators, that indicator was deleted. Thus, for example, the percentage of homicides involving guns was omitted from the homicide model, the gun percentage of assaults was omitted from the assault model, etc.

All these indicators but the suicide item relate on their face to criminal gun possession. Therefore, we interpret the gun index as an indirect measure of gun prevalence among criminals. For conceptual and theoretical purposes, and at the individual level of empirical analysis, it is important to maintain the distinction between criminal and noncriminal gun possession. However, at the city level it is doubtful whether the two can be distinguished, as we suspect they are highly correlated. One simple reason would be the high rate of illegal gun transfers (Wright and Rossi, 1986)—cities with high noncriminal gun ownership will also have high criminal gun ownership because criminals steal guns from noncriminals. Therefore, as a practical matter, our indicators probably necessarily serve as indicators of noncriminal gun prevalence, as well as gun prevalence among criminals.

### 4.3. Validation of the Gun Prevalence Measure

Following Cook (1979), we assessed the validity of our gun indicators by measuring their associations with survey-based measures of gun

prevalence. We combined the results of three national surveys, the General Social Surveys for 1980, 1982 and 1984, to compute reported gun prevalence figures for the nine major U.S. census regions, among persons living in places of 100,000 or larger population. Comparable measures were computed for each of our gun indicator variables by weighting each city measure by the city's population and calculating a weighted average for our cities in each of the nine regions.

All but one of the indirect indicators was strongly correlated across regions with the regional survey measures of gun prevalence, and the indicators were highly correlated among themselves. The only indicator about which there was some doubt is one of the two used by Cook (1979)—the percentage of homicides committed with guns. It was correlated only 0.38 with the survey-based percentage of households reporting a gun, over the nine regions, which was not significantly different from zero. The other indicators showed the following significant correlations with the percentage of households reporting a gun: 0.69 for percentage of aggravated assaults committed with a gun, 0.83 for percentage of robberies committed with a gun, 0.86 for percentage of suicides committed with guns, and 0.90 for the percentage of the value of reported stolen property attributable to guns. This last measure, not previously used in gun research, appeared to be the best single indicator of gun prevalence. These same results were confirmed using survey-based measures of respondent (as opposed to household) gun prevalence and both household and respondent prevalence of handguns. An important finding of this validity test was that all of the indicators were more strongly associated with survey measures of handgun prevalence than with gun prevalence in general. Thus our indicators may reflect handgun prevalence more strongly than longgun prevalence. This is probably advantageous, since handguns are the predominant gun type involved in crime (U.S. Bureau of Justice Statistics, 1987).

#### **4.4. Reciprocal Effects**

Levels of violence might influence how much gun control a city has, as well as the reverse. If violence levels and the presence of gun laws had a simultaneous reciprocal relationship, a nonrecursive model would be called for, using an appropriate estimation procedure. However, gun laws were not passed frequently enough for violence levels in 1979–1981 to influence the passage of any significant number of gun laws during the same period [see Jones and Ray (1980, Appendix III) regarding the pace of gun law changes]. Rather, the level of gun control strictness in 1979–1981 was almost entirely a cumulative product of legislative activity before 1979. Further, there is no evidence that actual or measured violence

rates have any impact on legislative decisions regarding gun controls. Nevertheless, the relationship was treated as a simultaneous one in supplementary estimations, and recursive models were specified.

We always treated the relationships between gun prevalence and violent crime rate as simultaneous reciprocal ones, expecting that while gun levels may affect crime levels, crime may also simultaneously stimulate gun acquisitions (Kleck, 1984a). We used the rate of subscriptions to gun-related magazines and the state hunting license rate as measures of recreational interest in firearms. They served as instruments which should have a direct effect on gun prevalence but not on violence or crime rates, allowing identification of the model. [For a good introduction to identification problems, see Maddala (1988, pp. 293–304).]

This study improves on previous work in the following ways: (1) we modeled the two-way relationship between gun levels and violence levels, (2) we measured gun prevalence, and used multiple, validated indicators of gun prevalence levels, instead of just one or two, (3) we used extensive controls for possible sources of spuriousness, (4) we used cities as the unit of analysis, a smaller, more homogeneous unit than states, (5) we took account of both city and state gun laws, (6) we used four different sources for measuring gun laws, (7) we assessed 19 different types of gun laws instead of just 1 or 2, (8) we assessed whether the effectiveness of gun laws depends on the level of enforcement of weapons laws, and (9) we used a large sample of 170 cases, rather than the 50 or fewer common in prior studies.

## 5. INFERENCE LOGIC

The conditions under which one could tentatively conclude that gun laws reduce violence are as follows: If gun laws are effective, they should have (1) a significant negative association with the *gun* violence rate (e.g., the rate of homicides committed with guns), (2) a significant negative association with the *total* violence rate [e.g., the total homicide (gun homicide plus nongun homicide) rate], and, preferably, (3) a weaker association with the *nongun* violence rate (e.g., the rate of homicides not committed with guns) than with the gun violence rate.

If 1 is true, but not 2, it would generally indicate that gun laws merely shift people from guns to nongun weapons, with no net reduction in deaths or crimes. If 2 is true, but 1 is not, it suggests that gun laws are merely associated with some omitted variables which have an effect on total violence rates but that gun laws themselves have no effect, since they should have their effects by, at minimum, reducing rates of violence committed with guns. Interpretation is ambiguous if 1 and 2 are true, but 3 is

not (i.e., gun laws are as strongly negatively associated with nongun rates as with gun rates). This would suggest that either (a) the gun control variable is simply a correlate of some omitted variable which affects the violence rate, since there is no strong a priori reason why gun controls should reduce the rate of violent acts without guns, or (b) the gun control does reduce acts of violence with guns but is also a correlate of some factor which reduces violent acts without guns as well. Interpretation is also ambiguous if 1 is true, 2 is not true, *and* the gun control was not significantly associated with the nongun violence rate. As noted, the first two circumstances would ordinarily suggest substitution of nongun means for guns, with no net effect on total violence. However, the fact that the gun law did not show any evidence of increasing the nongun violence rate would seem to contradict this interpretation, making a clear interpretation impossible.

Note that this logic is irrelevant to the analyses of rape and fatal gun accidents since there were no data available to separately measure gun and nongun rates of rape, and the inferential logic is irrelevant to gun accidents. For these two, interpretations had to be based entirely on findings concerning the total rape and fatal gun accident rates.

## 6. FINDINGS

Table III reports two-stage least-squares (2SLS) parameter estimates of the effects of gun laws, gun prevalence, and control variables on rates of total (gun plus nongun) violence, gun violence, and nongun violence. To clarify interpretation of Table III, consider A, pertaining to homicide rates. It reports estimates for three homicide models, with each pair of columns referring to a two-equation model of a given type of homicide. For example, the columns 2 and 3 present estimates of a two-equation model, column 2 pertaining to the total (gun plus nongun) homicide equation and column 3 pertaining to the gun prevalence equation.

Now consider estimates pertaining to a particular predictor variable. The row of numbers for BYPERMIT is estimates of coefficients reflecting the effects of laws requiring gun purchase permits on: (column 2) the total homicide rate, (column 3) gun prevalence in the total homicide model, (column 4) the rate of homicides committed with guns, (column 5) gun prevalence in the gun homicide model, (column 6) the rate of homicides not committed with guns, and (column 7) gun prevalence in the nongun homicide model, respectively. These estimates indicate that this type of gun control appears to have a significant negative effect on the total homicide rate, no significant negative effect on the gun homicide rate, and a significant negative effect on the nongun homicide rate. The interpreta-

tion of this pattern of results is that the law is ineffective in reducing homicide, since it did not have a significant negative association with the rate of gun homicide.

### 6.1. Effects of Gun Prevalence Levels on Violence Rates

Estimates of the impact of gun prevalence on violence rates can be found in Table III in the penultimate row of each column referring to a violence rate. For example, the 2SLS coefficient estimating the impact of gun prevalence on the total murder rate is a nonsignificant  $-0.283$  (column 2 in A).

Gun prevalence had an apparent significant positive effect on total rates of suicide, but not on any of the other five types of violence. The apparent effect of gun prevalence on suicide rates, however, is not entirely stable, being evident only when the suicide models were estimated with OLS. Some would argue that high suicide rates could discourage gun acquisition among people living in households with a person they believed to be suicide-prone. If this were true, then gun prevalence should be treated as endogeneous in the suicide models, just as in the other models (though for different reasons). When gun prevalence was treated as endogeneous, and the model was estimated with 2SLS, the results indicated no significant impact of gun prevalence on suicide. We tentatively conclude that gun prevalence rates *may* increase total suicide rates but have no effect on total rates of homicide, robbery, aggravated assault, rape, or fatal gun accidents.

### 6.2. Effects of Violence Rates on Gun Prevalence Levels

Coefficients estimating these effects can be found in the Gun Prevalence columns in Table III, in the rows near the bottom of each panel labeled with the names of the various violence rates. For example, in column 3 in A, the LNMR coefficient is a significant  $0.487$ , indicating that the total homicide rate appears to have a positive impact on gun prevalence.

Homicide (gun, nongun, and total), gun assault, and rape rates all had significant positive coefficients in the gun prevalence equations. This supports the hypothesis that some violence rates encourage the acquisition of firearms for self-defense, accounting at least partially for bivariate positive associations observed between gun prevalence levels and violence levels. That rape in particular should have this effect is consistent with survey evidence that women's gun ownership, while lower than men's, is disproportionately likely to be motivated by self-defense concerns and with county-level findings that female gun ownership rates are more responsive to violence rates than men's ownership rates are (Bordua and Lizotte,

1979, p. 172). More generally, the results support the simple idea that rates of more serious violent crimes are more likely to increase gun acquisition.

### 6.3. Effects of Gun Controls on Gun Prevalence Levels

The effects of 19 types of gun regulations on gun prevalence levels are summarized in Table IVA. The effect of each gun restriction on gun prevalence was estimated multiple times, once in each of six violence rate models. Because the exact set of gun prevalence indicators used varied from one model to the next, it therefore was possible for estimated effects of gun controls on gun prevalence levels to vary somewhat from one violence rate model to the next. None of the gun controls appeared to have any impact on gun prevalence. Each law's effect on gun prevalence was initially estimated six times, but only bans on gun possession by criminals and mentally ill persons showed significant effects in even half of the initial tests.

**Table IV.** Summary of Effects of Gun Prevalence and Gun Controls on Violence Rates

|           | (A) Significant negative impact of gun controls on gun prevalence? <sup>a</sup> |                     |           |      |                  |           |

<sup>a</sup>Where more than one interpretation appears in a cell, it means that interpretations became more supportive of the gun control efficacy hypothesis when different specifications were used. (1) The first (and usually the only) interpretation pertains to models containing all 19 gun laws and no provision for interactions; (2) the second one pertains to results when using a reduced set of four gun control variables; (3) the third one pertains to results when multiplicative terms testing for interactions between gun laws and enforcement levels were specified (see text). Unsupportive results which remained unsupportive (No) under the latter two alternative specifications are not shown, to simplify the table.

<sup>b</sup>An effect of gun prevalence on total suicide rates was evident only when the model was estimated with OLS. When gun prevalence was treated as endogenous and the model was estimated with 2SLS, results did not indicate an impact of gun prevalence.

We checked to see if gun control effects on gun prevalence would become evident if we used a reduced set of four of the stronger gun laws (listed in a later section). The results for just one type of gun control changed (indicated by Yes appearing after one slash in a given cell in Table IVA)—gun owner licensing appears to reduce gun prevalence in five of the six violence models. However, since this apparent effect is evident only when there are no controls for other gun laws, this result may reflect the cumulative, albeit apparently slight, effects of other, correlated, gun laws as well as the effects of licensing itself. Therefore, interpretation of this result must remain ambiguous.

We also checked for interactions between gun laws and police enforcement effort by adding to each gun prevalence equation a multiplicative term for each gun control variable, consisting of the gun control variable multiplied times the weapons arrest rate. Of 108 tests for interactions, only 2 suggested an effect of gun controls on gun prevalence which was contingent upon enforcement effort, where no impact of the controls had been evident in the additive analysis. These are denoted by Yes appearing after two slashes in any of the cells in Table IVA (see CRIMINAL in the Suicide model and REGISTER in the Robbery model). Given the large number of tests, we believe that these two deviant results could be the product of chance. Thus, our evidence generally fails to support the hypothesis that the impact of gun controls on gun levels depends on the level of police enforcement.

#### **6.4. Effects of Gun Control Laws on Violence Rates**

Table III contains detailed results on this issue, which are summarized in Table IV. The findings indicate that most gun restrictions appear to exert no significant negative effect on total violence rates, though some gun controls do seem to be effective. Of 102 possible effects tested, 7 were consistently supportive of, and 11 others were at least partially consistent with, a hypothesis of gun control effectiveness, albeit using fairly generous evaluative criteria. As described below, each gun law's effect on a given form of violence was estimated under three conditions: (1) with all gun law variables specified in the models but with no measure of enforcement effort included, (2) with all gun control variables specified in the models and with interactions of gun laws and enforcement effort included, and (3) with a reduced set of four especially strong gun control variables included in the models. In the subsequent discussion, each law is assessed based on the most supportive of the three sets of results, i.e., the results most supportive of a violence-reducing impact of the law. Thus, the gun control efficacy hypothesis was given 18 chances at confirmation for any one form of gun

control, with hypothesis tests in three sets of circumstances, in each of six violence rate models. (There were, however, no tests of the impact of carry laws, add-on penalties for committing a crime with a gun, or right-to-bear-arms provisions on suicide or gun accident rates, as these regulations were considered irrelevant to suicides or accidents. For example, nearly all gun suicides are committed in a private location and thus are unlikely to be affected by carry laws.)

*6.4.1. Results with All 19 Gun Control Variables Included,  
No Enforcement Interactions*

Because we could not know in advance which gun control measures affected violence rates, we initially specified all 19 gun control variables in each violence rate equation (with the exceptions described in the previous paragraph). As noted previously, collinearity among these variables was generally slight, so this was not a serious statistical problem. We first present interpretations based on these specifications, followed by discussion of any results which were modified when a reduced set of gun laws were used or when interactions with enforcement levels were specified.

Requiring permits to buy guns (BYPERMIT) may reduce rates of suicide. Bans on possession of guns by convicted criminals (CRIMINAL) may reduce rates of aggravated assault and robbery. Bans on possession of guns by mentally ill persons (MENTAL) appear to reduce homicide and may reduce suicide. Requiring a state or local license to be a gun dealer (DEALER) appears to reduce rates of robbery and may reduce aggravated assaults and suicides. Laws that provide mandatory penalties for unlawful gun carrying (MANDPEN) may reduce robbery. Laws providing discretionary additional penalties for committing crimes with a gun (ADDONDIS) may reduce murder and robbery. Finally, local bans on the purchase of handguns appear to reduce robbery rates.

*6.4.2. Results Using a Reduced Set of Gun Law Variables*

While the problem is mild, there is some collinearity among the gun law variables which could inflate standard errors somewhat and thereby bias hypothesis tests in favor of the null hypothesis. Therefore the violence rate models were reestimated with just four gun law variables thought to be especially likely to show effects, since they were fairly strong measures—licenses, purchase permits, handgun possession bans, and bans on sale of “Saturday Night Specials.” When this was done, four of the previous results were altered so as to strengthen, to varying degrees, support for the hypothesis of gun control efficacy. (Two results changed mildly from No to Maybe, while two changed substantially from No to Yes.) With the reduced set of gun law variables, estimates indicated that owner licensing

appears to reduce homicides and may reduce total suicides. Purchase permits may reduce homicides (there was still, however, a stronger negative association of permits with nongun homicide than with gun homicide). These estimations also indicated that handgun bans appear (somewhat implausibly, given how rarely rapists use guns) to reduce rapes, but not any other forms of violence. The rest of the gun law assessments were unaffected. Gun prevalence still showed no positive effect on any of the violence rates except the gun suicide and total suicide rates, the same as with models including the full set of gun laws. (Results are summarized in Table IV; estimates are not reported here but are available from the senior author.)

#### *6.4.3. Interactions with Enforcement Level*

It could be argued that gun laws are not always given a fair chance to work because in many places they are not adequately enforced. We tested this idea by forming multiplicative interaction terms between each gun law variable and a measure of police enforcement effort, the number of weapons arrests per 100 sworn police officers (WEAPARTS), and adding these terms into our models of violence rates. The resulting estimates generally confirmed the previous results. The coefficients for the interaction terms were rarely negative and significant, indicating that the effects of gun laws apparently were not dependent on the level of police enforcement effort, at least not based on the measure of effort used and not within the range of enforcement effort currently exerted in large U.S. cities. Of 102 possible interaction effects tested, only 5 suggested possible gun law effectiveness contingent upon the level of law enforcement effort: (1) laws providing discretionary add-on penalties for committing crimes with a gun appear to reduce the total homicide rate when accompanied by sufficient enforcement effort, (2) the same appears to be true for rape, (3) owner licensing may have such a contingent effect on homicide (4) handgun bans appear to have a contingent effect on the rape rate, and (5) handgun bans may have such an effect on the suicide rate. Given the large number of tests for interaction effects, however, five “significant” results might be little more than a product of chance. (Interaction test results are summarized in Table IV; estimates are available from the senior author.)

### **6.5. Gun Control as a Single Endogenous Variable**

As noted before, we consider it unlikely that there is a simultaneous reciprocal relationship between gun laws and violence rates. Nevertheless, we estimated models of violence rates which assumed that such a relationship was possible. To do this, a Gun Law Index (GLI) was created

from all 19 gun control variables, using principal components analysis. This variable was treated as endogenous, in a model which assumed that simultaneous relationships existed among the GLI, the violence rate, and gun prevalence. Two instrumental variables were assumed to affect directly the GLI but not violence rates or gun ownership: LIBERAL, the percentage of a city's voters who voted for George McGovern in the 1972 presidential election (a measure of political liberalism), and NRA, the city's rate of membership in the National Rifle Association.

Estimates of the GLI coefficient are reported near the bottom of each violence rate column in Table III. Note that these are estimates from separate models which did *not* include the individual gun control variables and, thus, are not a part of the models to which the rest of the coefficients in Table III correspond. These estimates indicate that the overall level of gun control in a city does not appear to exert a significant negative effect on any of the six violence rates. The only hint of a possible exception was with suicide. Although the GLI was not related to the total suicide rate, its coefficient was negative and marginally significant ( $0.05 \leq P < 0.10$ ) in the gun suicide equation and nonsignificant in the nongun suicide equation. Thus, treating gun control as a single endogenous variable did not strengthen support for the gun control efficacy hypothesis.

## 7. DISCUSSION

These results generally support the view that (1) existing gun control laws do not reduce gun prevalence in U.S. cities, (2) gun prevalence does not have any measurable net positive effect on violence rates except for a possible effect on suicide rates, and (3) most gun control laws do not reduce violence rates, though a few may do so.

For many gun regulations, such as carry controls or add-on penalties, it is not surprising that they do not reduce gun ownership, since they were not intended to do so. Still other gun controls may operate to restrict ownership only among "high-risk" groups such as criminals or alcoholics. However, results indicated that most gun controls fail to reduce gun use in acts of violence, undercutting the idea that controls reduce gun prevalence even in criminally involved subsets of the population. One simple explanation for this failure would be the huge size of the U.S. gun stock. With over 200 million guns in private hands, it is hard to keep guns away from anyone who strongly desires one.

Few of the tests unambiguously supported the gun law efficacy hypothesis. However, it increases confidence in some of these few supportive findings to know that they correspond closely with similar results in past research. (1) The present study found partial support for the claim

that laws establishing additional penalties for committing felonies with a gun may reduce total robbery rates, and prior research by McPheters *et al.* (1984) indicated the same thing. (2) Bans on gun possession by mentally ill persons may reduce suicide, consistent with the findings of Sommers (1984). (3) Mixed evidence suggested that handgun bans *may* reduce suicide, though this weak result reflected such controls in only two cities (New York City and Washington, DC). This is consistent with results of Loftin *et al.* (1991). (4) Finally, a previous study indicated that a mandatory penalty carry law, the Bartley–Fox law, appeared to reduce robbery (Deutsch and Alt, 1977), and the present research also indicates that such laws may reduce robbery.

As actually administered, “mandatory penalty” carry laws do not impose penalties in a truly mandatory fashion but, rather, merely in a relatively less discretionary one (Beha, 1977). Rather than mandatory penalties being viewed as essential, a more plausible interpretation of these results is that the mandatory penalty provision serves as an indicator of strong support among court actors for relatively severe punishment of unlicensed gun carrying. Where such laws exist, prosecutors may devote more resources to prosecuting illegal weapons carriers, and may be more likely to seek stiff penalties, even though they could evade the mandatory provisions if they chose to do so.

One type of gun law which clearly appeared to have some beneficial effect was a somewhat surprising one. Laws requiring a state or local license to be a firearms dealer were negatively related to aggravated assault, robbery, and suicide rates, with the results being strong (i.e., a Yes conclusion) for robbery. Because dealers everywhere in the United States are required to have a federal gun dealer license, additional state or local licensing requirements might seem trivial. However, if these requirements are more stringent or require high licensing fees, they can reduce the number of retail gun outlets and possibly reduce casual acquisition of guns among persons not sufficiently motivated or persistent to seek out less convenient stores or nonretail sources (Blose and Cook, 1980, p. 20). Although results summarized in Table IVA do not support the idea that this law reduces aggregate gun prevalence levels, it may affect a subset of weakly motivated buyers.

### 7.1. Gun Prevalence Effects

Why do gun prevalence levels have no apparent net positive effect on violence rates, with the possible exception of suicide? The absence of any net effects of gun levels could be due to counterbalancing effects of opposite sign, with criminal ownership increasing the rates and noncriminal

ownership decreasing them, due to deterrent effects of ownership among prospective victims (Kleck, 1988). If this were so, it might still be useful to reduce gun levels among criminals if measures used to accomplish this did not also reduce gun levels among noncriminals by an equal or greater amount.

Ordinary least-squares results indicated that gun prevalence may influence the choice of method in suicides and also the overall frequency of suicide. Gun prevalence was positively associated with both total suicide rates and gun suicide rates and negatively (though nonsignificantly) related to the nongun suicide rate.

No impact of gun prevalence on fatal gun accident rates was detected. Given the random component in accident causation and the rarity of fatal gun accidents (one or two a year in most cities), the absence of a relationship is perhaps not that surprising. It may also be that many cities with a higher gun prevalence, especially smaller cities and those in the South and West, have gun owners more thoroughly socialized from childhood into safe handling of guns, as opposed to getting guns as adults, without training.

The present results confirm those of the two best previous studies of city gun ownership and robbery rates, which also found no evidence of a net impact of gun ownership levels on the total robbery rate (Cook, 1979; McDowall, 1986). The present findings indicate that gun ownership levels increase (albeit nonsignificantly) gun robbery and decrease nongun robbery, suggesting that where guns are not available, robbers substitute other weapons, with no net effect on total robbery rates. Gun ownership levels also may have no net effect on total robbery because they may have a mixture of both positive and negative effects. On the one hand, guns make it possible for larger numbers of people to rob, including those too timid to rob without a gun, and expand the number of targets a given robber can successfully tackle. On the other hand, guns also enable robbers to rob more lucrative targets, increasing the average "take" per robbery and allowing them to gain a given amount of income with fewer robberies (Cook, 1976; Wright *et al.*, 1983). Also, gun ownership by prospective victims, especially retail store owners, may deter some robbers (Wright and Rossi, 1986, pp. 141–159; Kleck, 1988). The findings are consistent with an interpretation that these effects of opposite sign cancel each other out, with no net effect on the total robbery rate.

In assaultive crimes such as homicide and aggravated assault, gun availability also seems to have a mixture of positive and negative effects. In an individual-level analysis of violent incidents, Kleck and McElrath (1991) found that an aggressor's possession or use of a gun appears to reduce the probability of a physical attack (as opposed to a mere threat) on the victim

and appears to reduce the probability that the attack will result in a physical injury, while increasing the probability that an injury will be fatal. Further, possession of guns by prospective victims may exert a modest deterrent effect on would-be aggressors (Wright and Rossi, 1986; Kleck, 1988). The present aggregate level findings are consistent with a claim that the negative, violence-reducing effects of gun ownership may roughly cancel out the violence-increasing effects, consistent with the findings of previous time series research indicating no net effect, positive or negative, of gun ownership levels on the homicide rate (Kleck, 1984a).

## 7.2. Gun Law Effects

Why do most of 19 different major varieties of gun control laws appear to have no impact, with a few exceptions, on the types of violence which frequently involve guns? Many explanations are suggested by both our own results and those of prior research. First, some gun laws are intended to have their effects by reducing gun ownership levels, so some gun laws may fail because they do not achieve their proximate goal of reducing gun ownership (Table IVA). However, our results also generally indicate that gun prevalence levels do not have a net positive effect on violence rates (top row, Table IVB). Consequently, gun laws may fail simply because, even if they did reduce gun prevalence, this would not produce a reduction in violence rates.

On the other hand, the rationale for some gun regulations does not rely on an assumption that gun ownership levels affect violence. For example, carrying laws are intended to make guns less immediately available in public places rather than to reduce overall gun ownership levels; the rationale for such laws assumes only that the immediate availability of guns in public places is relevant to some violence rates, especially robbery. Likewise, add-on penalties are intended to discourage criminals from choosing guns to use in their crimes. It is also possible that gun laws have only a short-term effect on violence rates when they are passed and that the effect then fades. Most of the laws we have evaluated were implemented well in the past, so we cannot assess this idea.

Most gun laws regulate only handguns, or regulate handguns more stringently than the more numerous longguns such as rifles and shotguns (Kleck, 1991, Chap. 8). This permits the substitution of relatively unregulated longguns for the more heavily regulated handguns. While longguns are larger than handguns, and thus not so easily concealed or conveniently carried on the person, such a limitation is rarely relevant for suicides and is also irrelevant for many violent crimes, because either (1) the crime is committed in or near a private place, in a way which

does not require carrying or concealment of the gun, or (2) the crime was committed after some advance planning, in a way which would require only short-term carrying or which could involve use of a longgun whose barrel and stock had previously been cut down to render it concealable. Longguns are generally more lethal than handguns. Thus, while restrictions on handgun availability could cause some violent persons to go without guns of any kind, they may also have the undesirable effect of encouraging others to substitute more lethal longguns. The implication for the homicide rate would be that these effects would cancel out or, worse, produce a net increase in homicides (Kleck, 1984b).

No matter how severe current measures are, it is always possible that stronger measures are needed. However, even fairly strong measures such as banning sales of "Saturday Night Specials" and de facto bans on handgun possession appear generally to exert no negative effect on violence rates. Nevertheless, the findings reported herein cannot inform us about the effectiveness of gun control measures not yet tried.

It has been argued that many gun laws fail because they are local and that guns from more lenient jurisdictions "leak" into the stricter jurisdictions. Thus, federal measures regulating acquisition of guns might work (Newton and Zimring, 1969). Research on existing federal regulations has failed to generate consistent evidence of their effectiveness (Zimring, 1975; Magaddino and Medoff, 1984), but these controls were very weak, loophole-ridden measures. Some of the few measures found in this study to be effective were controls which are not vulnerable to this "leakage" problem. "Leakage" is an issue relevant mainly to regulations aimed at the acquisition of guns, rather than their use. In contrast, laws forbidding possession of handguns, regulating the carrying of guns, or providing for add-on penalties for using guns in crimes are not affected by interjurisdictional leakage because the legal risks of possessing or carrying a gun or using it in a crime in a given jurisdiction are the same regardless of whether bordering areas have similar measures.

It cannot be argued that the effects of gun ownership and gun control could not be detected due to a lack of meaningful variation in these variables. It is clear from the standard deviations for the gun prevalence indicators and the means for the gun law dummies in Table II that levels of both gun prevalence and gun control strictness vary enormously across U.S. cities. Direct survey measures of gun prevalence in very large cities indicate that the fraction of households reporting a gun varies from extremely low levels, such as 6% in New York City and Washington, DC (lower than in many Western European nations), to high levels, such as 61% in Houston (unpublished tabulations from specially geocoded General Social Surveys for 1973–1989).

Three limitations of this study should be noted. First, we had no measures of how strictly permit and license laws are administered, e.g., how narrowly authorities interpret rules defining which applicants are qualified, as distinct from how much effort is put into apprehending and punishing violators. Second, analysts always need to be skeptical about restrictions used to achieve identifiability in structural equation models. The key identification restrictions needed to model the assumed reciprocal relationship between gun prevalence and violence rates were the exclusion of gun magazine subscription rates and hunting license rates from the violence equations. Interest in hunting and other gun-related sports was assumed to affect gun prevalence rates but to not directly affect violence rates. One might argue that such interests may reflect, or even generate, proviolent attitudes, but Eskridge (1986) and Bordua (1986) have found county hunting license rates to have small to moderate *negative* associations with violence rates. Finally, it is possible that we have failed to control for some confounding variable which suppresses a guns–violence or gun law–violence association, though we do not know what that variable might be.

## 8. CONCLUSIONS

While the results are generally negative for the violence control effectiveness of gun control, the significance of the few supportive results should not be overlooked. There do appear to be some gun controls which work, all of them relatively moderate, popular, and inexpensive. Thus, there is support for a gun control policy organized around gun owner licensing or purchase permits (or some other form of gun buyer screening), stricter local dealer licensing, bans on possession of guns by criminals and mentally ill people, stronger controls over illegal carrying, and possibly discretionary add-on penalties for committing felonies with a gun. On the other hand, popular favorites such as waiting periods and gun registration do not appear to affect violence rates.

## ACKNOWLEDGMENTS

The authors wish to thank the Inter-University Consortium for Political and Social Research for making available three datasets utilized in this research (ICPSR, 1983, 1984a, b). Neither the collectors of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here. The staff of the Florida State University Computing Center provided computer advice and data entry services, while Paul Hanna of the College of Social Sciences helped in acquiring many

datasets. We are also grateful to the National Technical Information Service for supplying the 1979–1982 Mortality Detail File datasets, to the National Rifle Association, and Mary Rose, for supplying unpublished city NRA membership figures, to the Federal Bureau of Identification for furnishing unpublished weapons arrest data for cities, and to William G. Kleck of the Audit Bureau of Circulations for providing county-level gun magazine subscription counts. Finally, the senior author would like to thank his research assistants, who helped gather some of the data, including Byron Johnson, Tracy Griffith, Susan Sayles, Wesley Johnson, and Miriam DeLone. The first version of this paper was presented at the annual meetings of the American Society of Criminology, Reno, Nevada, November 10, 1989.

## Preface

---

Effective gun policies in the United States must balance the constitutional right to bear arms and public interest in gun ownership with concerns about public health and safety. However, current efforts to craft legislation related to guns are hampered by a paucity of reliable information about the effects of such policies. To help address this problem, the RAND Corporation launched the Gun Policy in America initiative. Throughout RAND's 70-year history, in multiple projects, in many policy arenas, and on topics that are sensitive and controversial, researchers have conducted analyses, built tools, and developed resources to help policymakers and the public make effective decisions. The primary goal of the Gun Policy in America project is to create resources where policymakers and the general public can access unbiased information that facilitates the development of fair and effective firearm policies.

This report is one of several research products stemming from the initiative. The research described here synthesizes the available scientific evidence on the effects of 13 types of firearm policies on a range of outcomes related to gun ownership. In addition, this report includes essays on several topics that frequently arise in discussions of gun policy.

Other project components include a survey of policy experts that identifies where access to reliable data would be most useful in resolving policy debates, plus an online tool allowing users to explore how different combinations of gun policies are likely to affect a range of outcomes. In another line of effort, RAND conducted simulation studies to evaluate the strengths and weaknesses of different approaches to modeling the effects of gun policies on outcomes, the results of which will be used to develop new estimates of the effects of state firearm policies. Finally, the project includes the development of a longitudinal database of state firearm laws as a resource for other researchers and the public.

The Gun Policy in America initiative did not attempt to evaluate the merits of different values or principles that sometimes drive policy disagreements. Rather, our focus is strictly on the empirical effects of policies on the eight outcomes specified in this report. All of our resources are publicly available on the project website at [www.rand.org/gunpolicy](http://www.rand.org/gunpolicy).

vi The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

The work should be of interest to policymakers and other stakeholders considering decisions related to firearm policy. Furthermore, this report may be of interest to the research community and to the general public.

## **RAND Ventures**

The RAND Corporation is a research organization that develops solutions to public policy challenges to help make communities throughout the world safer and more secure, healthier and more prosperous. RAND is nonprofit, nonpartisan, and committed to the public interest.

RAND Ventures is a vehicle for investing in such policy solutions. Philanthropic contributions support our ability to take the long view, tackle tough and often-controversial topics, and share our findings in innovative and compelling ways. RAND's research findings and recommendations are based on data and evidence and therefore do not necessarily reflect the policy preferences or interests of its clients, donors, or supporters.

Funding for this venture was provided by gifts from RAND supporters and income from operations.

## Summary

---

The RAND Corporation's Gun Policy in America initiative is a unique attempt to systematically and transparently assess available scientific evidence on the real effects of gun laws and policies. Our goal is to create resources where policymakers and the general public can access unbiased information that informs and enables the development of fair and effective policies. Good gun policies in the United States require consideration of many factors, including the law and constitutional rights, the interests of various stakeholder groups, and information about the likely effects of different policies on a range of outcomes. This report seeks to provide the third factor—objective information about what the scientific literature examining gun policies can tell us about the likely effects of those policies.

This report synthesizes the available scientific evidence on the effects of various gun policies on firearm deaths, violent crime, the gun industry, participation in hunting and sport shooting, and other outcomes.<sup>1</sup> It builds and expands on earlier comprehensive reviews of scientific evidence on gun policy conducted more than a decade ago by the National Research Council (NRC) (see NRC, 2004) and the Community Preventive Services Task Force (see Hahn et al., 2005).

## Methodology

We used Royal Society of Medicine guidelines for conducting systematic reviews of a scientific literature (Khan et al., 2003). We focused on the empirical literature assessing the effects of 13 classes of firearm policies or of the prevalence of firearms on any of eight outcomes, which include both public health outcomes and outcomes of concern to many gun owners. We reviewed scientific reports that have been published since 2003, a date chosen to capture studies conducted since the last major systematic reviews of the science of gun policy were published by NRC (2004) and Hahn et al. (2005).

---

<sup>1</sup> Although not all guns are firearms, in this report, we follow conventional use in U.S. policy discussions and treat the terms *gun* and *firearm* as interchangeable.

xviii The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

The 13 classes of gun policies considered in this research are as follows:

1. background checks
2. bans on the sale of assault weapons and high-capacity magazines
3. stand-your-ground laws
4. prohibitions associated with mental illness
5. lost or stolen firearm reporting requirements
6. licensing and permitting requirements
7. firearm sales reporting and recording requirements
8. child-access prevention laws
9. surrender of firearms by prohibited possessors
10. minimum age requirements
11. concealed-carry laws
12. waiting periods
13. gun-free zones.

The eight outcomes considered in this research are

1. suicide
2. violent crime
3. unintentional injuries and deaths
4. mass shootings
5. officer-involved shootings
6. defensive gun use
7. hunting and recreation
8. gun industry.<sup>2</sup>

### **Policy Analyses, by Outcome**

Building on the earlier reviews (NRC, 2004; Hahn et al., 2005) and using standardized and explicit criteria for determining the strength of evidence that individual studies provide for the effects of gun policies, we produced research syntheses that describe the quality and findings of the best available scientific evidence. Each synthesis defines the class of policies being considered; presents and rates the available evidence; and describes what conclusions, if any, can be drawn about the policy's effects on outcomes.

In many cases, we were unable to identify any research that met our criteria for considering a study as providing minimally persuasive evidence for a policy's effects. Studies were excluded from this review if they offered only correlational evidence for a

---

<sup>2</sup> The terms in these lists describe broad categories of policies and outcomes that are defined and described in detail in the full report.

possible causal effect of the law, such as showing that states with a specific law had lower firearm suicides at a single point in time than states without the law. Correlations like these can occur for many reasons other than the effects of a single law, so this kind of evidence provides little information about the effects attributable to specific laws. We did not exclude studies on the basis of their findings, only on the basis of their methods for isolating causal effects. For studies that met our inclusion criteria, we summarize key findings and methodological weaknesses, when present, and provide our consensus judgment on the overall strength of the available scientific evidence. We did this by establishing the following relativistic scale describing the strength of available evidence:

1. *No studies.* This designation was made when no studies meeting our inclusion criteria evaluated the policy's effect on the outcome.
2. *Inconclusive evidence.* This designation was made when studies with comparable methodological rigor identified inconsistent evidence for the policy's effect on an outcome or when a single study found only uncertain or suggestive effects.
3. *Limited evidence.* This designation was made when at least one study meeting our inclusion criteria and not otherwise compromised by serious methodological problems reported a significant effect of the policy on the outcome, even if other studies meeting our inclusion criteria identified only uncertain or suggestive evidence for the effect of the policy.
4. *Moderate evidence.* This designation was made when two or more studies found significant effects in the same direction and contradictory evidence was not found in other studies with equivalent or strong methods.
5. *Supportive evidence.* This designation was made when (1) at least three studies found suggestive or significant effects in the same direction using at least two independent data sets or (2) the effect was observed in a rigorous experimental study.

These ratings are meant to describe the relative strengths of evidence available across gun policy research domains, not any rating of our absolute confidence in the reported effects. For instance, when we find *supportive* evidence for the conclusion that child-access prevention laws reduce self-inflicted injuries and deaths, we do not mean to suggest that it is comparable to the evidence available in more-developed fields of social science. That is, in comparison to the evidence that smoking causes cancer, the evidence base in gun policy research is very limited. Nevertheless, we believe that it may be valuable to the public and to policymakers to understand which laws currently have more or less persuasive evidence concerning the effects the laws are likely to produce.

Table S.1 summarizes our judgments for all policy and outcome pairings. Several outcomes show multiple judgments, and these correspond to different characterizations of the specific policy-outcome association. For instance, we identified limited evidence that background checks reduce *total suicides* and moderate evidence that they reduce *firearm suicides*.

| Prices of banned firearms in the short term |                   | ↑ L                                                             |                        |                                             |                                               |                                       |                                                    |                              |                                                |                          |            |                      |             |                 |                |

NOTE: I = inconclusive; L = limited; M = moderate; S = supportive. When we identified no studies meeting eligibility criteria, cells are blank. ↑ = the policy increases the outcome; ↓ = the policy decreases the outcome.

<sup>a</sup> We concluded that there is moderate evidence that dealer background checks decrease firearm homicides, and there is inconclusive evidence for the effect of private-seller background checks on firearm homicides.

Rather than concerning how strong a policy's effects are, our findings concern the strength of the available scientific evidence examining those effects. Thus, even when the available evidence is limited, the actual effect of the policy may be strong. Presumably, every policy has some effect on a range of outcomes, however small or unintended. Until researchers design studies that can detect these effects, available evidence is likely to remain inconclusive or limited. But this fact should not be confused with the conclusion that the policies themselves have limited effects. They may or may not have the effects they were designed to produce; available scientific research cannot yet answer that question. Moreover, even a policy with a small effect may nevertheless be beneficial to society or worth its costs. For instance, a policy that reduces firearm deaths by just a few percentage points could save more than 1,000 lives per year. This kind of "small" effect might be very difficult to detect with existing study methods but could represent an important contribution to public health and safety.

## Supplementary Essays

The 13 types of policies reviewed in this report and the scope of the systematic review for the research synthesis were selected a priori and represent the central focus of our research synthesis efforts. Nevertheless, in reviewing evidence on these policies, other important themes emerged that the research team believed provided useful context for the policies or that were frequently cited in gun policy debates. Thus, we also researched what rigorous studies reveal about

- the possible mechanisms by which laws may affect outcomes
- how taxes, access to health care, and media campaigns might affect gun violence
- the effectiveness of laws used to target domestic violence
- methodological challenges in defining and estimating the prevalence of mass shootings and defensive gun use
- how suicide, violence, and mass shootings were affected by Australia's implementation of the National Firearms Agreement.

## Conclusions and Recommendations

Of more than 100 combinations of policies and outcomes, we found that surprisingly few were the subject of methodologically rigorous investigation. Notably, research into four of our outcomes was essentially unavailable, with three of these four outcomes—defensive gun use, hunting and recreation, and the gun industry—representing issues of particular concern to gun owners or gun industry stakeholders. Here, we summarize the key conclusions and recommendations that can be drawn from the policy-outcome

xxiv The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

combinations with the strongest available evidence (conclusions 1 through 8). Thereafter, we draw conclusions and recommendations concerning how to improve evidence on the effects of gun policies (conclusions 9 through 13).

### **Conclusions and Recommendations Based on the Existing Evidence Base**

Our first set of conclusions and recommendations describes the policy-outcome combinations with the strongest available evidence as identified through our review of the existing literature, as well as recommendations for policy based on this evidence.

**Conclusion 1.** Available evidence supports the conclusion that child-access prevention laws, or safe storage laws, reduce self-inflicted fatal or nonfatal firearm injuries among youth. There is moderate evidence that these laws reduce firearm suicides among youth and limited evidence that the laws reduce total (i.e., firearm and non-firearm) suicides among youth.

**Conclusion 2.** Available evidence supports the conclusion that child-access prevention laws, or safe storage laws, reduce unintentional firearm injuries or unintentional firearm deaths among children. In addition, there is limited evidence that these laws may reduce unintentional firearm injuries among adults.

*Recommendation 1.* States without child-access prevention laws should consider adopting them as a strategy to reduce firearm suicides and unintentional firearm injuries and deaths. We note, however, that scientific research cannot, at present, address whether these laws might increase or decrease crime or rates of legal defensive gun use.

*Recommendation 2.* When considering adopting or refining child-access prevention laws, states should consider making child access to firearms a felony; there is some evidence that felony laws may have the greatest effects on unintentional firearm deaths.

**Conclusion 3.** There is moderate evidence that background checks reduce firearm suicides and firearm homicides, as well as limited evidence that these policies can reduce overall suicide and violent crime rates.

**Conclusion 4.** There is moderate evidence that stand-your-ground laws may increase state homicide rates and limited evidence that the laws increase firearm homicides in particular.

**Conclusion 5.** There is moderate evidence that laws prohibiting the purchase or possession of guns by individuals with some forms of mental illness reduce violent crime, and there is limited evidence that such laws reduce homicides in particular. There is also limited evidence these laws may reduce total suicides and firearm suicides.

*Recommendation 3.* States that currently do not require a background check investigating all types of mental health histories that lead to federal prohibi-

tions on firearm purchase or possession should consider implementing robust mental illness checks, which appear to reduce rates of gun violence. The most robust procedures involve sharing data on all prohibited possessors with the National Instant Criminal Background Check System.

**Conclusion 6.** There is limited evidence that before implementation of a ban on the sale of assault weapons and high-capacity magazines, there is an increase in the sales and prices of the products that the ban will prohibit.

**Conclusion 7.** There is limited evidence that a minimum age of 21 for purchasing firearms may reduce firearm suicides among youth.

**Conclusion 8.** No studies meeting our inclusion criteria have examined required reporting of lost or stolen firearms, required reporting and recording of firearm sales, or gun-free zones.

#### **Conclusions and Recommendations for Improving Gun Policy Research**

Based on our review of the existing literature on the effects of firearm policy changes, we offer the following conclusions and recommendations for improving the evidence base on the effects of gun laws.

**Conclusion 9.** The modest growth in knowledge about the effects of gun policy over the past dozen years reflects, in part, the reluctance of the U.S. government to sponsor work in this area at levels comparable to its investment in other areas of public safety and health, such as transportation safety.

*Recommendation 4.* To improve understanding of the real effects of gun policies, Congress should consider whether to lift current restrictions in appropriations legislation, and the administration should invest in firearm research portfolios at the Centers for Disease Control and Prevention, the National Institutes of Health, and the National Institute of Justice at levels comparable to its current investment in other threats to public safety and health.

*Recommendation 5.* Given current limitations in the availability of federal support for gun policy research, private foundations should take further steps to help fill this funding gap by supporting efforts to improve and expand data collection and research on gun policies.

**Conclusion 10.** Research examining the effects of gun policies on officer-involved shootings, defensive gun use, hunting and recreation, and the gun industry is virtually nonexistent.

*Recommendation 6.* To improve understanding of outcomes of critical concern to many in gun policy debates, the U.S. government and private research sponsors should support research examining the effects of gun laws on a wider

xxvi The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

set of outcomes, including crime, defensive gun use, hunting and sport shooting, officer-involved shootings, and the gun industry.

**Conclusion 11.** The lack of data on gun ownership and availability and on guns in legal and illegal markets severely limits the quality of existing research.

*Recommendation 7.* To make important advances in understanding the effects of gun laws, the Centers for Disease Control and Prevention or another federal agency should resume collecting voluntarily provided survey data on gun ownership and use.

*Recommendation 8.* To foster a more robust research program on gun policy, Congress should consider whether to eliminate the restrictions it has imposed on the use of gun trace data for research purposes.

**Conclusion 12.** Crime and victimization monitoring systems are incomplete and not yet fulfilling their promise of supporting high-quality gun policy research in the areas we investigated.

*Recommendation 9.* To improve the quality of evidence used to evaluate gun policies, the National Violent Death Reporting System should be expanded to include all states with rigorous quality control standards.

*Recommendation 10.* The Bureau of Justice Statistics should examine the cost and feasibility of expanding its existing programs to generate state-level crime data.

*Recommendation 11.* The Bureau of Justice Statistics should continue to pursue its efforts to generate state-level victimization estimates. The current goal of generating such estimates for 22 states is a reasonable compromise between cost and the public's need for more-detailed information. However, the bureau should continue to expand its development of model-based victimization rates for all states and for a wider set of victimization experiences (including, for instance, crimes involving firearm use by an assailant or victim).

**Conclusion 13.** The methodological quality of research on firearms can be significantly improved.

*Recommendation 12.* As part of the Gun Policy in America initiative, we have published a database containing a subset of state gun laws from 1979 to 2016 (Cherney, Morral, and Schell, 2018). We ask that others with expertise on

state gun laws help us improve the database by notifying us of its errors, proposing more-useful categorizations of laws, or submitting information on laws not yet incorporated into the database. With such help, we hope to make the database a resource beneficial to all analysts.

*Recommendation 13.* Researchers, reviewers, academics, and science reporters should expect new analyses of the effects of gun policies to improve on earlier studies by persuasively addressing the methodological limitations of earlier studies, including problems with statistical power, model overfitting, covariate selection, poorly calibrated standard errors, multiple testing, undisclosed state variation in law implementation, unjustified assumptions about the time course of each policy's effects, the use of spline and hybrid effect codings that do not reveal coherent causal effect estimates, and inadequate attention to threats of reciprocal causation and simultaneity bias.

In conclusion, with a few exceptions, there is a surprisingly limited base of rigorous scientific evidence concerning the effects of many commonly discussed gun policies. This does not mean that these policies are ineffective; they might well be quite effective. Instead, it reflects shortcomings in the contributions that scientific study can currently offer to policy debates in these areas. It also reflects, in part, the policies we chose to investigate, all of which have been implemented in some U.S. states and, therefore, have proven to be politically and legally feasible, at least in some states. This decision meant that none of the policies we examined would dramatically increase or decrease the stock of guns or gun ownership rates in ways that would produce more readily detectable effects on public safety, health, and industry outcomes. The United States has a large stock of privately owned guns in circulation—estimated in 2014 to be somewhere between 200 million and 300 million firearms (Cook and Goss, 2014). Laws designed to change who may buy new weapons, what weapons they may buy, or how gun sales occur will predictably have only a small effect on, for example, homicides or participation in sport shooting, which are affected much more by the existing stock of firearms. Although small effects are especially difficult to identify with the statistical methods common in this field, they may be important. Even a 1-percent reduction in homicides corresponds to more than 1,500 fewer deaths over a decade.

By highlighting where scientific evidence is accumulating, we hope to build consensus around a shared set of facts that have been established through a transparent, nonpartisan, and impartial review process. In so doing, we also mean to highlight areas where more and better information could make important contributions to establishing fair and effective gun policies.

## Acknowledgments

---

We wish to thank many staff and researchers inside and outside RAND who helped us to collect, interpret, and present the research discussed in this report. In particular, we wish to thank our quality assurance reviewers who provided expert and valuable guidance on how to improve earlier versions of this report or sections of it. These reviewers included James Anderson, Deborah Azrael, John Donohue, Susan Gates, Andy Hoehn, and Priscillia Hunt, as well as Jack Riley, whom we wish to especially thank for his encouragement and support of the idea that RAND could make important contributions to the gun policy discourse in the United States. The report also benefited from candid written reviews provided by two reviewers who wished to remain anonymous, one affiliated with a gun rights advocacy organization and one affiliated with a gun violence prevention advocacy organization. Within RAND, we wish to acknowledge the exceptional support we received from our research librarians, Roberta Shanman and Sachi Yagy; our publication editor, Allison Kerns; and members of RAND's Office of External Affairs, including Lee Floyd, Chandra Garber, Stephan Kistler, Heather McCracken, Lauren Skrabala, Mary Vaiana, and Chara Williams.

PART A

**Introduction and Methods**

---

## CHAPTER ONE

**Introduction**

---

Americans are deeply divided on gun policy (Parker et al., 2017). Many Americans cherish the traditions of hunting, sport shooting, and collecting guns and value the security and protection that guns can provide. Many regions rely on hunting as an important driver of the tourism economy (Nelson, 2001; BBC Research & Consulting, 2008; Hodur, Leistriz, and Wolfe, 2008), and the wider gun industry employs hundreds of thousands of Americans, including instructors; shooting range operators; hunting equipment suppliers; and manufacturers, distributors, and retailers of firearms and ammunition. At the same time, many Americans have suffered grievous injuries and lost friends and family members in incidents involving firearms.<sup>1</sup> More than 36,000 Americans die annually from deliberate and unintentional gun injuries, and two-thirds of these deaths are suicides (Centers for Disease Control and Prevention [CDC], 2017a). Another 90,000 Americans per year receive care in a hospital for a nonfatal gun injury (CDC, 2017c).

Few are satisfied with the levels of mortality and injury associated with firearms, but there is passionate disagreement about how policies could be shaped to create a better future. There is a quite limited base of science on which to build sound and effective gun policies. Instead, when the public or members of Congress consider proposals affecting gun policy, they encounter conflicting opinions and inconsistent evidence about the likely effects of new laws. Views on what is factual concerning gun policies, or what the facts imply for decisionmaking, frequently divide along political and partisan lines (Kahan, 2017).

Entrenched disagreements on gun policy are not surprising, given the number and variety of contested and contradictory studies, selective misuse of facts by some on all sides of the debate, and today's hyper-partisan political environment. Moving past such roadblocks will be impossible unless decisionmakers can draw on a common set of facts based on transparent, nonpartisan, and impartial research and analysis. Even when individuals disagree about the objectives of gun policies, empirical evidence can help determine the most likely benefits and harms associated with such policies.

---

<sup>1</sup> Although not all guns are firearms, in this report, we follow conventional use in U.S. policy discussions and treat the terms *gun* and *firearm* as interchangeable.

## Gun Policy in America

To help fill the gap in impartial research and analysis, the RAND Corporation launched the Gun Policy in America initiative, which is premised on the idea that the real effects of policies can be objectively determined and that establishing these facts will help lead to sound policies. Our goal is to create a resource where policymakers and the general public can access unbiased information that informs and enables the development of fair and effective firearm policies.

This report synthesizes the available scientific data on the effects of various firearm policies on firearm deaths, violent crime, the gun industry, participation in hunting and sport shooting, and other outcomes. It builds and expands on earlier comprehensive reviews of scientific evidence on gun policy conducted more than a decade ago by the National Research Council (2004) and the Community Preventive Services Task Force (see Hahn et al., 2005). This report is one of several research products stemming from RAND's Gun Policy in America initiative (see [www.rand.org/gunpolicy](http://www.rand.org/gunpolicy)).

In the Gun Policy in America initiative, we have made no attempt to evaluate the merits of different values and principles that sometimes drive policy disagreements. We also have not evaluated the legality of any candidate laws or how they may infringe on Second Amendment rights. Instead, our focus is strictly on the empirical effects of policies on the eight outcomes specified in this report. However, all of the policies we investigate have been implemented in multiple states, and many have withstood Supreme Court review; therefore, we have selected policies that have previously been found not to violate the Constitution.

Laws are not the only interventions that have been used to shape how guns are used in the United States, and research is available on the effectiveness of other approaches, such as public information campaigns, safety and training programs, policing interventions, and school and community programs. In this report, however, our focus is on what scientific studies tell us about the probable effects of certain laws.

## Research Focus

The primary focus of this report is our systematic review of 13 broad classes of gun policies that have been implemented in some states and the effects of those policies on eight outcomes. We selected the 13 classes from a larger set of more than 100 gun policies that have been advocated for; proposed; or passed into law by the federal government, states, or municipalities. Specifically, we restricted our attention to policies or laws that have already been implemented in some states so that researchers could examine the effects of each. In addition, we sought policies designed to have a direct effect on our selected outcomes. These policies, the presumed mechanisms whereby they produce intended (and possibly unintended) effects on our selected outcomes,

and the various ways that U.S. states have implemented them are discussed in detail in Chapters Three through Fifteen of this report. Although, in many cases, these policies have been implemented by local municipalities rather than states, we have not sought to review implementation at the local level.

The 13 classes of gun policies considered in this research are as follows:

1. background checks
2. bans on the sale of assault weapons and high-capacity magazines
3. stand-your-ground laws
4. prohibitions associated with mental illness
5. lost or stolen firearm reporting requirements
6. licensing and permitting requirements
7. firearm sales reporting and recording requirements
8. child-access prevention laws
9. surrender of firearms by prohibited possessors
10. minimum age requirements
11. concealed-carry laws
12. waiting periods
13. gun-free zones.

When deciding on the outcomes to examine in our research, we first included those related to public health and safety—suicide, violent crime, unintentional injuries and deaths, mass shootings, and officer-involved shootings. These are the outcomes most commonly examined in the research literature we were familiar with. However, we recognized that such outcomes omit many of the benefits of gun ownership that are attractive to gun owners and that may also be affected by laws designed to reduce the gun-related harms to public health and safety. Therefore, we also systematically searched the research literature for studies examining how gun laws affect defensive gun use, hunting and recreation, and the gun industry. Together, these eight outcomes cover many of the areas of concern frequently discussed in debates on gun policy. Here, we provide a short description of each outcome.

### **Suicide**

Official statistics on suicide in the United States are compiled by the CDC. Recent data, from 2015, indicate that 44,193 suicides occurred that year, for a rate of 13.75 per 100,000 people. Of these, 22,018 (49.8 percent) were firearm suicides (CDC, 2017a). Researchers have often examined the effects of laws on total suicides (i.e., suicide deaths by any means, including those involving a firearm), firearm suicides, nonfirearm suicides, and suicide attempts. From a societal perspective, the most important of these outcomes is total suicide; that is, the goal is to reduce the total number of suicide deaths, regardless of how one goes about attempting to die. In many cases, however, we would expect the effects of gun laws to be more easily observed in rates of firearm

suicides, not total suicides. The consensus among public health experts is that reducing firearm suicides in contexts where more-lethal means of attempting suicide are unavailable will result in reductions in the total suicide rate (see, for example, Office of the Surgeon General and National Alliance for Suicide Prevention, 2012; World Health Organization, 2014; for review, see Azrael and Miller, 2016). Nevertheless, it is also clear that some people prevented from attempting suicide with a firearm will substitute another lethal means and successfully end their lives. The rate at which this substitution occurs is not known. Thus, for laws that increase or decrease firearm suicides, the effects on total suicides are likely smaller and harder to detect. For this reason, we examine the effects of policies on both total suicides and firearm suicides.

Suicide rates in the United States have increased 25 percent since 1999 (Curtin, Warner, and Hedegaard, 2016).<sup>2</sup> There is some degree of misclassification of suicide deaths, with some suicides likely classified as unintentional deaths (Kapusta et al., 2011) or overdose deaths (Bohnert et al., 2013). The CDC provides limited nationwide data on suicides for all states. More-expansive data are contained in the National Violent Death Reporting System, also maintained by the CDC, but because that system currently releases information on just a subset of U.S. states, we cannot use this data set to characterize suicides nationally.

Data on suicide attempts generally derive from two sources: hospital admission records and self-reports. In hospital data, suicides are generally categorized as “self-harm” with unspecified intent; although there is a field to code cause of injury, this field is completed inconsistently across states (Coben et al., 2001). In 2014, there were 469,096 self-harm, nonfatal hospital admissions to emergency departments in the United States, 3,320 (less than 1 percent) of which were caused by a firearm (CDC, 2017c). This may be because between 83 and 91 percent of those who attempt suicide with a firearm die, which is a higher rate than some other methods of suicide, such as drowning (66–84 percent) or hanging (61–83 percent) (Azrael and Miller, 2016).

Emergency room data contain only self-harm incidents that resulted in an emergency room visit; as a complementary data source, national data based on self-reports reveal that, in 2015, 1.4 million adults aged 18 or older (0.6 percent) attempted suicide in the past year (Piscopo et al., 2016).

### Violent Crime

The Federal Bureau of Investigation (FBI) defines *violent crime* as including forcible rape, robbery, aggravated assault, and murder or nonnegligent manslaughter. The last category excludes deaths caused by suicide, negligence, or accident, as well as justifiable homicides (such as the killing of a felon by a peace officer in the line of duty) (FBI, 2016d).

<sup>2</sup> The 25-percent increase in suicides refers to the age-adjusted rate, although the crude rate and the absolute number of suicides have also increased.

One source of data on violent crime is the FBI's Uniform Crime Reporting program, which relies on voluntary reporting of crimes by city, university/college, county, state, tribal, and federal law enforcement agencies. Data from the program indicate that there were approximately 1.2 million violent crimes in the United States in 2015, including 764,449 aggravated assaults, 327,374 robberies, 124,047 rapes, and 15,696 instances of murder or nonnegligent manslaughter (FBI, 2016d). The overall violent crime rate was 372.6 per 100,000 people, with the highest rate for aggravated assault (237.8 per 100,000), followed by robbery (101.9 per 100,000), rape (38.6 per 100,000) and murder or nonnegligent manslaughter (4.9 per 100,000). Nationwide, firearms were used in 71.5 percent of all instances of murder or nonnegligent manslaughter, 40.8 percent of robberies, and 24.2 percent of aggravated assaults in 2015 (FBI, 2016d).

Death certificate data and emergency department admission data provide additional insights into the prevalence and consequences of violent crime. Based on mortality data, the CDC estimated that there were 17,793 homicides in the United States in 2015, for a rate of 5.54 per 100,000 people; of these, 12,979 (73 percent) were caused by a firearm (CDC, 2017a). Emergency department data show that in 2014 there were more than 1.5 million admissions to hospital emergency departments for assault; of these, 60,470 (3.8 percent) were firearm-related (CDC, 2017c).

### **Unintentional Injuries and Deaths**

Like suicide, official statistics on unintentional injuries and deaths in the United States are compiled by the CDC. The most recent data, from 2015, indicate that 146,571 fatal unintentional injuries occurred that year, for a rate of 46.50 per 100,000 people (CDC, 2017a). Of these, 489 (less than 1 percent) were caused by a firearm. Some of these fatal unintentional injuries were likely misclassified and were actually suicides or homicides. Nevertheless, the true number of unintentional firearm deaths may be substantially greater than reported in the CDC's vital data. For example, inconsistent classification of child firearm deaths by local coroners may result in 35–45 percent of all unintentional firearm deaths being classified instead as suicides or homicides (Everytown for Gun Safety Support Fund, 2014; Hemenway and Solnick, 2015a). We also include research examining nonfatal unintentional injuries. There were close to 29 million unintentional injury discharges from emergency rooms in 2014, of which 15,928 (less than 1 percent) were caused by a firearm. These reports omit injuries that did not result in an emergency room visit.

### **Mass Shootings**

Although only a small fraction of annual firearm deaths result from a mass shooting, these events attract enormous public, media, and social media attention in the country, and they frequently prompt discussions about legislative initiatives for how better to prevent gun violence. The U.S. government has never defined *mass shooting*, and there is no single universally accepted definition of the term. The FBI's definition of a *mass*

*murderer* requires at least four casualties, excluding the offender or offenders, in a single incident. Public law (the Investigative Assistance for Violent Crime Act of 2012; Pub. L. 112-265) defines a *mass killing* as a single incident in which three or more people were killed. Alternative definitions include two or more injured victims or four or more people injured or killed, including the shooter. Depending on which data source is referenced, and its definitions, there were seven, 65, 332, or 371 mass shootings in the United States in 2015 (see a discussion of these estimates in Chapter Twenty-Two).

### **Officer-Involved Shootings**

Police shootings of civilians have triggered fierce debates locally and nationally about when use of lethal force is appropriate and whether it is being used disproportionately against minorities. Although the FBI has tried to collect information on police shootings from around 17,000 local law enforcement agencies, recent efforts by news organizations (such as the *Washington Post* and the *Guardian*) have demonstrated that the FBI's data collection misses many such cases. Whereas the FBI's count typically comes to around 400 killings by police per year, the *Washington Post* documented news stories on 963 individuals shot and killed by law enforcement in 2016, a number that could omit any individuals shot and killed by police about whom no news story was written. The FBI has announced plans to begin a new data collection effort that will reportedly track all incidents in which law enforcement seriously injure or kill citizens (Kindy, 2015).

Because reliable data on police shootings are often available only for individual police departments, prior studies using such data typically present information at the city level. For example, using police reports and other administrative data, Klinger et al. (2016) looked at 230 use-of-force shootings by police officers involving 373 suspects in St. Louis between 2003 and 2012. Similarly, medical records of shooting victims contain information on whether the shooter was a member of the law enforcement community. Using data from New York City's medical examiner, Gill and Pasquale-Styles (2009) looked at law enforcement shootings resulting in a fatality there between 2003 and 2006. The data included 42 cases for the four-year period. Like suicide attempts and unintentional injuries and deaths, this data source misses incidents in which the officer did not injure the suspect or the suspect did not seek medical attention.

### **Defensive Gun Use**

Defensive gun use has typically been measured in the empirical literature using self-reports on surveys of gun owners, although some studies have used firearm deaths coded as justifiable homicides to investigate subsets of defensive gun use. Although there are some variations, *defensive gun use* has often been defined as incidents that involve (1) protection against humans (i.e., not animals); (2) gun use by civilians (not official use by military, police, or security personnel); (3) contact between persons (not, for instance, carrying a firearm to investigate a suspicious sound when no intruder is encountered); and (4) use of a gun, at least as a visual or verbal threat (not

incidents in which a gun may have simply been available for use). Definitions this broad would include defensive use of a gun by criminals during the commission of a crime, as well as use of a gun for personal defense by those who are prohibited by law from being in possession of a weapon (itself a crime). More-restrictive definitions specify that the defensive gun use be performed by the victim of certain crimes or by someone trying to protect the victim. These definitions may miss instances in which crimes were deterred or averted when a firearm was brandished.

Differences in the definitions of defensive gun use, and in the manner of collecting information about it, lead to wide differences in estimates of the annual incidence of defensive gun use. Low estimates (based on the experiences of crime victims) are a little more than 100,000 such incidents per year, and high estimates are 4.7 million per year (Cook and Ludwig, 1996, 1997, 1998; McDowall, Loftin, and Wiersema, 1998). This literature and the challenges of defining and measuring defensive gun use are reviewed in Chapter Twenty-Three.

### **Hunting and Recreation**

Federal statistics on hunters largely come from the National Survey of Fishing, Hunting, and Wildlife-Associated Recreation Survey, which is conducted every five years as a coordinated effort by the U.S. Fish and Wildlife Service and the U.S. Census Bureau. According to the most recent data, from 2011, approximately 13 million people used firearms for hunting, more than 50 percent of all hunters participated in target shooting, and 22 percent of hunters visited shooting ranges (U.S. Fish and Wildlife Service, U.S. Department of the Interior, and U.S. Department of Commerce, 2012). Estimates from the National Shooting Sports Foundation (NSSF) suggest that approximately 20 million individuals participate in target shooting annually (Southwick Associates, 2013). Data from the General Social Survey suggest that hunting has decreased significantly since 1977, when 31.6 percent of adults lived in households where they, their spouse, or both hunted. In 2014, households with a hunter was down to 15.4 percent (Smith and Son, 2015).

### **Gun Industry**

Estimates produced by the NSSF suggest that there are 141,000 jobs in the United States involving the manufacture, distribution, or retailing of ammunition, firearms, and hunting supplies and potentially another 150,000 jobs in supplier and ancillary industries connected with the firearm market (NSSF, 2017). According to the U.S. Census Bureau, in 2014, more than 90,000 people were employed in U.S. firms coded as being involved in just the manufacture of firearms, ammunition, or ordnance (North American Industry Classification System [NAICS] codes 332992, 332993, and 332994; U.S. Census Bureau, 2016). The manufacturing industry alone is estimated to generate \$16 billion in revenue annually (IBISWorld, 2016). In 2011, hunters spent \$3 billion on firearms and \$1.2 billion on ammunition (U.S. Fish and Wildlife Ser-

vice, U.S. Department of the Interior, and U.S. Department of Commerce, 2012). More than 9 million firearms were manufactured in the United States in 2014, nearly triple the number manufactured one decade prior. An additional 3.6 million firearms were imported in 2014, while just more than 420,900 firearms were exported from the United States (Bureau of Alcohol, Tobacco, Firearms and Explosives, 2016b).

As of the end of fiscal year 2015, 139,840 federal firearms licensees had active licenses to sell firearms in the United States. Just more than 46 percent of these licenses were held by dealers or pawnbrokers, 43 percent were held by collectors, about 9 percent were held by manufacturers of ammunition or firearms, and less than 1 percent were held by importers (Bureau of Alcohol, Tobacco, Firearms and Explosives, 2016b).

## Organization of This Report

The report is organized into five parts. Part A introduces the project scope and objectives in Chapter One and the methods used to conduct systematic reviews and syntheses of the literature in Chapter Two. In Part B, we present a research synthesis on each of the 13 state policies selected for review (Chapters Three through Fifteen). Each of these chapters defines the class of policies under review; presents and rates the available evidence; and describes what conclusions, if any, can be drawn about how each policy affects each outcome. Part B includes all of the research syntheses we selected a priori; however, in the course of developing these, several related themes frequently came up in the literature and in policy debates, and we believed that these themes warranted further discussion or review. Therefore, to augment and provide context for Part B's syntheses, Part C presents supplementary essays on what rigorous studies reveal about

- the possible mechanisms by which laws may affect outcomes (Chapters Sixteen and Seventeen on the effects of firearm prevalence on suicide and violent crime)
- how taxes, access to health care, and media campaigns might affect gun violence (Chapters Eighteen through Twenty)
- the effectiveness of laws used to target domestic violence (Chapter Twenty-One)
- methodological challenges in defining and estimating the prevalence of mass shootings and defensive gun use (Chapters Twenty-Two and Twenty-Three)
- how suicide, violent crime, and mass shootings were affected by Australia's implementation of the National Firearms Agreement (Chapter Twenty-Four).

In Part D, we draw general conclusions from the main policy analyses and offer recommendations for how to improve the state of evidence for the effects of state laws. Finally, in an appendix section, Appendix A describes common methodological shortcomings found in the existing scientific literature examining gun policy, and Appendix B describes the source data used to display study effect sizes and rate study methodologies.

## CHAPTER TWO

**Methods**

---

Our review of evidence concerning the effects of 13 policies on eight outcomes used Royal Society of Medicine (Khan et al., 2003) guidelines for conducting systematic reviews of a scientific literature. Those guidelines consist of a five-step protocol: framing questions for review, identifying relevant literature, assessing the quality of the literature, summarizing the evidence, and interpreting the findings. Our objective was to identify and assess the quality of evidence provided in research that estimated the causal effect of one of the selected gun policies (or the prevalence of firearm ownership) on any of our eight key outcomes.

Before undertaking the review, we knew that we would need to draw on primarily observational studies across a range of disciplines, including economics, psychology, public health, sociology, and criminology. The Royal Society of Medicine approach is suitable in this context because of its flexibility and applicability to social and policy interventions. Other approaches for systematic reviews (e.g., Institute of Medicine, 2011; Higgins and Green, 2011) are designed primarily for reviews specific to health care. We consulted guidelines from the Campbell Collaboration to ensure that our review criteria were based on relevant factors prescribed for reviews of social and policy interventions (e.g., determination of independent findings, statistical procedures; Campbell Collaboration, 2001). However, to more efficiently examine the range of outcomes and interventions we set out to review, and because of the wide range of methods researchers have used to examine these effects, we do not follow the Campbell Collaboration guidelines exactly, as detailed next.

**Selecting Policies**

RAND assembled a list of close to 100 distinct gun policies advocated by diverse organizations, including the White House and other U.S. government organizations, advocacy organizations focused on gun policy (such as the National Rifle Association and the Brady Campaign to Prevent Gun Violence), academic organizations focused on gun policy or gun policy research, and professional organizations that had made public recommendations related to gun policy (e.g., the International Association of Chiefs of

Police and the American Bar Association). Our objective was to evaluate state firearm laws because there is considerable variation that could be examined to understand the causal effects of such laws. Moreover, because the laws are applied statewide, observed effects may generalize to new jurisdictions better than the effects of local gun policies or programs that may be more tailored to the unique circumstances giving rise to them. We therefore eliminated policies that chiefly concerned local programs or interventions that are not mandated by state laws (e.g., gun buy-back programs or policing strategies that have been recommended on the basis of favorable research findings). For the same reason, we eliminated policies that either have never been passed into state laws or that have not yet had their intended effects (e.g., laws requiring new handguns to incorporate smart-gun technologies). We excluded policies that we concluded were likely to have only an indirect effect on any of the eight outcomes we were examining (e.g., policies concerning mental health coverage in group health insurance plans; the public availability of Bureau of Alcohol, Tobacco, Firearms and Explosives data on gun traces). We clustered some policy proposals that we regarded as sufficiently similar in concept to be included in the same general class of policies (e.g., policies of repealing the Safe Schools Act and the conceptually similar policy to prohibit gun-free zones).

This process resulted in 13 classes of firearm policies that we subsequently reviewed with multiple representatives of two advocacy organizations (one strongly aligned with enhanced gun regulation, and one strongly aligned with reduced gun regulation). The purpose of these consultations was to establish whether we had identified policies that are important, coherent, and relevant to current gun policy debates. This consultation resulted in substituting two of our original 13 classes of laws. As noted in Chapter One, the final set of policies, defined and explained in Chapters Three through Fifteen, is as follows:

1. background checks
2. bans on the sale of assault weapons and high-capacity magazines
3. stand-your-ground laws
4. prohibitions associated with mental illness
5. lost or stolen firearm reporting requirements
6. licensing and permitting requirements
7. firearm sales reporting and recording requirements
8. child-access prevention laws
9. surrender of firearms by prohibited possessors
10. minimum age requirements
11. concealed-carry laws
12. waiting periods
13. gun-free zones.

These classes of gun policies do not comprehensively account for all—or necessarily the most effective—laws or programs that have been implemented in the United States with the aim of reducing gun violence. For example, our set of policies does not include mandatory minimum sentencing guidelines for crimes with firearms. Further, by restricting our evaluation to state policies, we exclude local interventions (e.g., problem-oriented policing, focused deterrence strategies) that have been found to reduce overall crime in prior meta-analyses (Braga, Papachristos, and Hureau, 2014; Braga and Weisburd, 2012). However, we recognize the potential importance of these other interventions and believe a similar systematic review of their effects on outcomes relevant to the firearm policy debate merits future research.<sup>1</sup>

While Part B of this report evaluates the existing literature on the effects of these 13 classes of firearm policies, Part C includes essays describing scientific research on possible mechanisms by which laws may affect firearm-related outcomes, such as affecting the prevalence of gun ownership (see Chapters Sixteen and Seventeen).

## Selecting and Reviewing Studies

Our selection and review of the identified literature involved the following steps:

1. Article retrieval: Across all outcomes, we identified a common set of search terms to capture articles relevant to firearm prevalence or firearm policies. We then identified search terms unique for each outcome.
2. Title and abstract review: We conducted separate title and abstract reviews for each outcome using DistillerSR to code criteria used to determine whether the article appeared to meet minimum inclusion criteria (described later).
3. Full-text review: All studies retained after abstract review received full-text review and coding using DistillerSR. The purpose of this review was to identify studies that examined the effects of one or more of our policies on any of our outcomes and that employed methods designed to clarify the causal effects of the policy.
4. Synthesis of evidence: Once we identified the subset of quasi-experimental studies for each outcome and policy,<sup>2</sup> members of the multidisciplinary methodology team met to discuss each study's strengths and limitations. Then, the group discussed each set of studies available for a policy-outcome pair to make a determination about the level of evidence supporting the effect of the policy on each outcome.

---

<sup>1</sup> For a recent review of the evidence on criminal justice interventions to reduce criminal access to firearms, see Braga, 2017.

<sup>2</sup> We identified no experimental studies.

**Article Retrieval**

In spring 2016, we queried all databases listed in Table 2.1 for English-language studies. Because the National Research Council (NRC) (2004) and the Community Preventive Services Task Force (Hahn et al., 2005) published comprehensive and high-quality research reviews in 2004 and 2005, we limited our search primarily to research published during or after 2003 (assuming a lag from the time the NRC review was complete and the final report was published). We supplemented this search with a review of all studies reviewed by NRC (2004) and Hahn et al. (2005). Finally, to ensure inclusion of the most-seminal studies, including those that may have been missed by NRC or Hahn et al., we conducted additional searches in the Web of Science and Scopus

| LawReviews (LexisNexis)                     | A database of legal reviews.                                                                                                                                                                                                                                        |

databases for any study that had been cited in the literature 70 or more times, regardless of its publication date. Finally, after completing our search, several relevant studies were published in summer and fall 2016. When we became aware of these, we included them in our review.

We conducted separate searches for each of the eight outcomes. The search strings that were applied universally across all outcomes included the following:

- gun or guns or firearm\* or handgun\* or shotgun\* or rifle\* or longgun\* or machinegun\* or pistol\* OR automatic weapon OR assault weapon OR semi-automatic weapon OR automatic weapons OR assault weapons OR semi-automatic weapons  
AND
- ownership OR own OR owns OR availab\* OR access\* OR possess\* OR purchas\* OR restrict\* OR regulat\* OR distribut\* OR “weapon carrying” OR “weapon-carrying” OR legislation OR legislating OR legislative OR law OR laws OR legal\* OR policy OR policies OR “ban” OR “bans” OR “banned.”

In addition, we searched for the following outcome-specific search terms:

- suicide: (suicide\* OR self-harm\* OR self-injur\*);  
– the following were the only terms used for “firearms” for this search: gun or guns or firearm\* or handgun\* or shotgun\* or rifle\* or longgun\* or machinegun\* or pistol\*
- violent crime: homicide\* OR murder\* OR manslaughter OR “domestic violence” OR “spousal abuse” OR “elder abuse” OR “child abuse” OR “family violence” OR “child maltreatment” OR “spousal maltreatment” OR “elder maltreatment” OR “intimate relationship violence” OR “intimate partner violence” OR “dating violence” OR (violen\* AND [crime\* OR criminal\*]) OR rape OR rapes OR rapist\* OR “personal crime” OR “personal crimes” OR robbery OR assault\* OR stalk\* OR terroris\*
- unintentional injuries and deaths: accident\* OR unintentional
- mass shootings: “mass shooting” OR “mass shootings”
- officer-involved shootings: “law enforcement” OR police\* OR policing
- defensive gun use: self-defense OR “self defense” OR “personal defense” OR defens\* OR self-protect\* OR self protect\* OR DGU OR SDGU
- hunting and recreation: hunt OR hunting OR “sport shooting” OR “shooting sports” OR recreation\* (The terms “ammunition” and “bullets” were also included in the set containing the terms for “firearms.”)
- gun industry: industr\* OR manufactur\* OR produc\* OR distribut\* OR supply OR trade OR price\* OR export\* OR revenue\* OR sales OR employ\* OR profit\* OR cost OR costs OR costing OR “gun show” OR tax OR taxes OR taxing OR taxation OR payroll OR “federal firearms license.”

We used a three-stage study review process and standardized review criteria (described next) to identify all studies with evidence for policy effects meeting minimum evidence standards. When possible, we calculated and graphed standardized effect sizes for reported effects included in our research syntheses (Chapters Three through Fifteen).

In addition to the planned research syntheses analyzing the effects of the 13 policies outlined in Chapter One, we summarized evidence on other topics when members of the research team believed that a topic provided important supplemental evidence or explanatory information (see Chapters Sixteen through Twenty-Four). For instance, we identified a substantial literature examining the effects of firearm prevalence on rates of suicide (Chapter Sixteen) and homicide (Chapter Seventeen). This literature did not evaluate the effects of a specific policy but nevertheless examined a key mechanism by which policies might affect the outcomes. For these discussions, we occasionally augmented the search strategy described earlier, as detailed in the individual chapters.

#### **Title and Abstract Review**

At this stage, we screened studies to determine whether they met our inclusion criteria. In all cases, a study was included if it met the following: *any empirical study that demonstrated a relationship between a firearm-related public policy and the relevant outcome* OR *any empirical study that demonstrated a relationship between firearm ownership and access and a relevant outcome (including proxy measures for gun ownership).*

Studies were excluded if they were case studies, systematic reviews, dissertations, commentaries or conceptual discussions, descriptive studies, studies in which key variables were assumed rather than measured (e.g., a region was assumed to have higher rates of gun ownership), studies that did not concern one of the eight outcomes we selected, studies that did not concern one of the 13 policies we selected (or gun ownership), or studies that duplicated the analyses and results of other included studies.

#### **Full-Text Review**

Next, we used full-text review to ensure that the studies included thus far did not meet any of the exclusion criteria and to exclude studies with no credible claim to having identified a causal effect of policies. In addition to coding all studies on the policy and outcome they examined and on their research design, we coded the country or countries in which the policy effects were evaluated. Because of the United States' unique legal, policy, and gun ownership context, we excluded studies examining the effects of policies on foreign populations. However, in the special-topic discussions (Chapters Sixteen through Twenty-Four), we include analysis of some studies in foreign countries (such as an analysis of the Australian experience with gun regulation) and various foreign studies of the effects of gun prevalence on suicide.

Our research syntheses (Chapters Three through Fifteen) focus exclusively on studies that used research methods designed to identify causal effects among observed

associations between policies and outcomes. Specifically, we required, at a minimum, that studies include time-series data and use such data to establish that policies preceded their apparent effects (a requirement for a causal effect) and that studies include a control group or comparison group (to demonstrate that the purported causal effect was not found among those who were not exposed to the policy). Experimental designs provide the gold standard for establishing causal effects, but we identified none in our literature reviews. On a case-by-case basis, we examined studies that made a credible claim to causal inference on the basis of data that did not include a time series. In practice, these discussions determined that some studies using instrumental-variable approaches to isolating causal effects satisfied our minimum standards for inclusion.

We refer to the studies that met our inclusion criteria as *quasi-experimental*. We distinguish these from simple *cross-sectional* studies that may show an association between states with a given policy and some outcome but that have no strategy for ensuring that it is the policy that caused the observed differences across states. For instance, there could be some other factor associated with both state policy differences and outcome differences or there could be reverse causality (that is, differences in the outcome across states could have caused states to adopt different policies). In excluding cross-sectional studies from this review, we have adopted a more stringent standard of evidence for causal effects than has often been used in systematic reviews of gun policy.

Although excluding cross-sectional research eliminates a large number of studies on gun policy, longitudinal data are much better for estimating the causal effect of a policy. Specifically, empirical demonstration of causation generally requires three types of evidence (Mill, 1843):

- The cause and effect regularly co-occur (i.e., association).
- The cause occurs before the effect (i.e., precedence).
- Alternative explanations for the association have been ruled out (i.e., elimination of confounds).

Cross-sectional research is largely limited to demonstrating association. Longitudinal studies that include people or regions that are exposed to a policy and those that are not exposed have the potential to provide all three types of evidence. Such a design can demonstrate that the policy preceded the change in the outcome of interest, and it can rule out a wider range of potential confounds, including historical time trends and the time-invariant characteristics of the jurisdictions in which the policies were implemented (Wooldridge, 2002).

We also excluded studies that offered no insight into the causal effects of individual policies. For instance, we excluded studies that evaluated the effects of an aggregate state score describing the totality of each state's gun policies or studies of the aggregate effects of legislation that included multiple gun policies. In rare cases, we excluded from consideration studies that provided insufficient information about their methodologies to evaluate whether they used a credible approach to isolating a causal

effect of policies. In one case (Kalesan et al., 2016), we excluded a study that examined the effects of many of our selected policies on firearm deaths. We did so because of significant methodological problems that we concluded made the findings uninformative, as documented in Schell and Morral (2016). In cases in which authors updated prior published analyses, we generally chose the updated study. However, in one case (Cook and Ludwig, 2003), we present the results from the earlier analysis (Ludwig and Cook, 2000), which was inclusive of more years of data, provided more detail, and included multiple model specifications (although findings were qualitatively the same). The identified studies included individual-level studies (i.e., studies comparing outcomes among people over time) and ecological studies (i.e., studies comparing outcomes in regions over time).

Finally, we excluded studies published prior to 2003 on one policy-outcome pair—concealed-carry laws and violent crime. Our discussion of this topic (see Chapter Thirteen) reviews much of the earlier literature in this area, but we do not count the earlier work in our evidence ratings for several reasons. For starters, this area of gun policy has received the greatest research attention since 2003, and considerable advances have been made in understanding the effects of these laws. In addition, researchers have uncovered serious problems with data sets that were frequently used before 2003. Indeed, Hahn et al. (2005) dismissed all the earlier work that had been done with county-level data (which meant most of the work) on grounds that it was too flawed to rely on for evidence. We do not take that position but do agree with NRC (2004) and Hahn et al. (2005) that the primary conclusion that can be drawn from this earlier literature is that estimates of the effects of concealed-carry laws are highly sensitive to model specification choices, meaning no conclusive evidence can be drawn from the estimates. Because many of the authors engaged in the pre-2003 concealed-carry research continued to publish improved models on improved data sets, we restrict our evidence ratings to just this later work. We do not exclude pre-2003 studies of concealed-carry laws for outcomes other than violent crime, because there are much fewer later studies on which to base evidence ratings for these other outcomes.

Using these inclusion and exclusion criteria, we identified the studies providing the highest-quality evidence of a causal relationship between a policy and an outcome. In judging the quality of studies, we always explicitly considered common methodological shortcomings found in the existing gun policy scientific literature (see Appendix A), especially the following:

- *Models that may have too many estimated parameters for the number of available observations.* We consistently note whenever estimates were based on models with a ratio of less than ten observations per estimated parameter. When the ratio of observations to estimated parameters dropped below five to one and no supplemental evidence of model fit was provided (such as the use of cross-validation or evidence from an analysis of the relative fit of different model specifications), we discount the study's results and do not calculate effect sizes for its estimates.

- *Models making no adjustment to standard errors for the serial correlation regularly found in panel data frequently used in gun policy studies.* We consistently note when studies did not report having made any such adjustment. When a study noted a correction for only heteroscedasticity, we consider that to be evidence of some correction, although this does not generally fully correct bias in the standard errors due to clustering (Aneja, Donohue, and Zhang, 2014).
- *Models for which the dependent variable appears to violate model assumptions, such as linear models of dichotomous outcomes or linear models of rate outcomes (many of which are close to zero).* We consistently note when the data appeared to violate modeling assumptions.
- *Effects with large changes in direction and magnitude across primary model specifications.* We consistently note when a study presented evidence that model results were highly sensitive to different model specifications.
- *Models that identify the effect of policies with too few cases.* We consistently note when the effects of policies were identified on the experiences of a single state or a small number of states. These analyses generally provide less persuasive evidence that observed differences between treated and control cases result from the effects of the policy as opposed to other contemporaneous influences on the outcome.

In Appendix A, we describe other common shortcomings in the existing literature that we do not explicitly discuss in our research syntheses. For instance, in the main chapters of the report, we do not note when papers provided no goodness-of-fit tests or other statistical evidence to justify their covariate selections. Neither do we focus on interpretational difficulties and confusion frequently present in studies using spline or hybrid models to estimate the effects of policies, although we discuss this problem in detail in Appendix A. These problems are so common in this literature that consistently commenting on them as shortcomings would become repetitive and cumbersome.

### Synthesis of Evidence

Members of the research team summarized all available evidence from prioritized studies for each of the 13 policies on each of the eight outcomes. When at least one study met inclusion criteria, a multidisciplinary group of methodologists on the research team discussed each study to identify its strengths and weaknesses. The consensus judgments from these group discussions are summarized in the research syntheses. Then, the group discussed the set of available studies as a whole to make a determination about the level of evidence supporting the effect of the policy on each outcome.

When considering the evidence provided by each analysis in a study, we counted effects with  $p$ -values greater than 0.20 as providing *uncertain* evidence for the effect of a policy. We use this designation to avoid any suggestion that the failure to find a statistically significant effect means that the policy has no effect. We assume that every policy will have some effect, however small or unintended, so any failure to detect it is a shortcoming of the science, not the policy. When the identified effect has a  $p$ -value

less than 0.05, we refer to it as a *significant effect*. Finally, when the  $p$ -value is between 0.05 and 0.20, we refer to the effect as *suggestive*.

We include the suggestive category for several reasons. First, the literature we are reviewing is often underpowered. This means that the probability of rejecting the null hypothesis of no effect even when the policy has a true effect is often very low. As we argue in Appendix A, conducting analyses with low statistical power results in an uncomfortably high probability that effects found to be statistically significant at  $p < 0.05$  are in the wrong direction and all effects have exaggerated effect sizes (Gelman and Carlin, 2014). If we had restricted our assessment of evidence to just statistically significant effects, we might base our judgments on an unreliable and biased set of estimates while ignoring the cumulative evidence available in studies reporting nonsignificant results. While the selection of  $p < 0.20$  as the criterion for rating evidence as suggestive is arbitrary, this threshold corresponds to effects that are meaningfully more likely to be in the observed direction than in the opposite direction. For instance, if we assume that the policy has about as much chance of having a nonzero effect as having no effect, and the power of the test is 0.8, then  $p < 0.20$  suggests that there is only a 20-percent probability of incorrectly rejecting the null hypothesis of no effect. For tests that are more weakly powered, as is common in models we review, a  $p$ -value less than 0.20 will result in false rejection less than half the time so long as the power of the test is above 0.2 (see, for example, Colquhoun, 2014).

In the final step, we rated the overall strength of the evidence in support of each possible effect of the policy. We approached these evidence ratings with the knowledge that research in this area is modest. Compared with the study of the effects of smoking on cancer, for instance, the study of gun policy effects is in its infancy, so it cannot hope to have anything like the strength of evidence that has accrued in many other areas of social science. Nevertheless, we believed that it would be useful to distinguish the gun policy effects that have relatively stronger or weaker evidence, given the limited evidence base currently available. We did this by establishing the following relativistic scale describing the strength of available evidence:

1. *No studies*. This designation was made when no studies meeting our inclusion criteria evaluated the policy's effect on the outcome.
2. *Inconclusive evidence*. This designation was made when studies with comparable methodological rigor identified inconsistent evidence for the policy's effect on an outcome or when a single study found only uncertain or suggestive effects.
3. *Limited evidence*. This designation was made when at least one study meeting our inclusion criteria and not otherwise compromised by serious methodological problems reported a significant effect of the policy on the outcome, even if other studies meeting our inclusion criteria identified only uncertain or suggestive evidence for the effect of the policy.

4. *Moderate evidence.* This designation was made when two or more studies found significant effects in the same direction and contradictory evidence was not found in other studies with equivalent or strong methods.
5. *Supportive evidence.* This designation was made when (1) at least three studies found suggestive or significant effects in the same direction using at least two independent data sets or (2) the effect was observed in a rigorous experimental study. Our requirement that the effect be found in distinct data sets reflects the fact that many gun policy studies use identical or overlapping data sets (e.g., state homicide rates over several years). Chance associations in these data sets are likely to be identified by all who analyze them. Therefore, our supportive evidence category requires that the effect be confirmed in a separate data set.

These rating criteria provided a framework for our assessments of where the weight of evidence currently lies for each of the policies, but they did not eliminate subjectivity from the review process. In particular, the studies we reviewed spanned a wide range of methodological rigor. When we judged a study to be particularly weak, we discounted its evidence in comparison with stronger studies, which sometimes led us to apply lower evidence rating labels than had the study been stronger.

## Effects of the Inclusion and Exclusion Criteria on the Literature Reviewed

Table 2.2 presents the results of the literature search across all eight outcomes. The final column shows the number of studies meeting all inclusion criteria. No studies satisfying our inclusion criteria were found for two of the eight outcomes.

**Table 2.2**  
**Number of Studies Selected for Review at Each Stage of the Review Process**

| Outcome                           | Total Search Results | Included After Title and Abstract Review | Included After Full-Text Review |
|-----------------------------------|----------------------|------------------------------------------|---------------------------------|
| Suicide                           | 1,274                | 183                                      | 11                              |
| Violent crime                     | 2,656                | 373                                      | 47                              |
| Unintentional injuries and deaths | 531                  | 27                                       | 3                               |
| Mass shootings                    | 77                   | 11                                       | 8                               |
| Officer-involved shootings        | 187                  | 34                                       | 0                               |
| Defensive gun use                 | 1,435                | 115                                      | 1                               |

| Gun industry                      | 3,180                | 19                                       | 2                               |

## 26 The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

Of the studies that were published before 2003, all but Duwe, Kovandzic, and Moody (2002) were considered in the earlier reviews (Hahn et al., 2005; NRC, 2004). Table 2.3 lists the 63 studies meeting all inclusion criteria.

**Table 2.3**  
**Studies Meeting Inclusion Criteria**

| No. | Study                                    | No. | Study                                |

| 31  | La Valle (2010)                          | 63  | Zeoli and Webster (2010)             |
| 32  | La Valle (2013)                          |     |                                      |

In a few cases, some studies published updates to earlier works that expanded the time frame of the analysis, corrected errors, or applied more-advanced statistical methods to a nearly identical data set. In these cases, we do not treat both the earlier and later works as each contributing an equally valid estimate of the effects of a policy. Instead, we treat the latest version of the analysis as superseding the earlier versions, and we focus our reviews on the superseding analysis. In one case, we substituted an earlier study (Ludwig and Cook, 2000) for a later study (Cook and Ludwig, 2003). We did this because the earlier study included a longer data series, used a model with greater statistical power, and provided more-detailed results; in addition, the estimated effects of policies in the two papers were identical for the estimates of interest to us in this review. Table 2.4 lists the superseded studies and their superseding versions.

Table 2.5 describes the policies and outcomes evaluated by each study that was not superseded, and studies are indicated with their corresponding number in Table 2.3. These studies are discussed in detail in subsequent chapters.

| <b>Total</b>                                                    | <b>12</b>          | <b>37</b>                                                                         | <b>8</b>                          | <b>4</b>       | <b>0</b>                   | <b>1</b>          | <b>0</b>               | <b>2</b>     | <b>50</b> |

NOTE: Numbers refer to individual studies; see Table 2.3 to view which study corresponds to which number. Totals along the bottom row do not exactly match those in Table 2.2 because superseded studies are not counted in this table, and other studies were identified after the initial literature search.

## Effect Size Estimates

To compare the magnitude of effects across studies, we calculated and present incidence rate ratios (IRRs) for most of the estimates of policy effects that we considered in reaching our consensus ratings. In rare cases noted in the text, we were unable to calculate IRRs from the information provided in the report. Studies reporting the results from a negative binomial or Poisson regression model are directly reported in our report figures as IRRs with their associated confidence intervals (CIs). Given the low probability of most of our outcomes, odds ratios were interpreted and reported as IRRs with their associated CIs.

Many studies used fixed-effects ordinary linear regression models. In these cases, an average base rate (usually taken from the study's paper itself) of the outcome of interest was determined. We then used the base rate to transform the regression estimate,  $\beta$ , to an IRR using the following formula:

$$IRR = \frac{(\text{average base rate} + \beta)}{\text{average base rate}}$$

However, if the linear model used a logged dependent variable, we used the exponentiated estimate as its IRR. CIs for the IRRs derived from the linear regression models were transformed in a similar fashion.

When a study did not report a measure of variation, we performed back calculation from a test statistic to estimate the CIs. For Rudolph et al. (2015), we inferred approximate standard errors from the  $p$ -value associated with a permutation test presented to demonstrate the likely statistical significance of the reported finding. For Crifasi et al. (2015), we present the IRR and CI for a secondary specification that used a negative binomial model. For several other studies, we note that we could not extrapolate an IRR or its CIs from the data provided in the paper.

Models estimating linear or other trend effects for policies do not have a constant effect size over time. Even if we selected an arbitrary period over which to calculate an effect size, these papers do not provide sufficient information to estimate CIs for such effects. Therefore, we do not calculate or display IRR values that take into account trend effects or effects calculated as the combination of a trend and a step effect (*hybrid models*). Although we report the authors' interpretation of these effects, we do not count them as compelling evidence for the effects of a policy, for reasons discussed in Appendix A.

IRRs are calculated and graphed so that estimates of the effects of policies can be compared on a common metric. We do not use them to construct meta-analytic estimates of policy effects for two reasons. First, most studies we reviewed examining the effect of a policy on a particular outcome used nearly identical data sets, meaning the studies do not offer independent estimates of the effect. Second, there are usually only

30 The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

two or three studies available on which to estimate the effect of the policy, and these studies often differ considerably in their methodological rigor. These limitations in the existing literature led us to pursue a more qualitative evaluation of the conclusions that available studies can support.

## CHAPTER TWELVE

**Minimum Age Requirements**

---

Under federal law, licensed dealers cannot sell or deliver handguns to individuals under age 21 or long guns to those under age 18. Unlicensed individuals cannot sell, transfer, or deliver handguns to individuals under age 18. With some exceptions, federal law prohibits individuals under age 18 from possessing handguns, but it does not place age restrictions on the possession of long guns (18 U.S.C. 922).

Laws requiring a minimum age for purchase aim to make it more difficult for underage individuals to acquire a handgun through formal channels, while laws requiring a minimum age of possession are intended to make it more difficult or risky for an underage individual to carry firearms in public. Thus, although the mechanisms by which these laws influence youth access differ, both are designed to limit the availability of firearms to young people—and therefore reduce the gun violence and unintentional shootings they commit.

Firearm homicides and violent crimes disproportionately involve individuals under age 21, both as perpetrators and as victims. Indeed, in 2012, arrest rates for violent crimes peaked at age 18 (Office of Juvenile Justice and Delinquency Prevention, 2016). Of the 7,152 firearm homicides committed in 2014 for which the age of the offender was known, 47.2 percent were perpetrated by individuals aged 12–24 (Puzanchera, Chamberlin, and Kang, 2017), although this group represents only 17.7 percent of the general U.S. population (U.S. Census Bureau, 2017). By influencing the possession of guns among youth, minimum age laws could thus reduce rates of firearm crime perpetrated by juveniles. However, youth are similarly at high risk of victimization. Of all deaths among those aged 16–21, 16.5 percent are homicides, which is greater than the homicide rates for the next-highest risk ages (13.3 percent for those aged 22–27; 8.8 percent for those aged 28–33) (Centers for Disease Control and Prevention [CDC], 2017b). In theory, therefore, stricter age limits on purchasing or possessing a firearm could reduce the incidence of defensive gun use by youth and potentially increase perpetration of violence against younger populations if offenders believe that the likelihood of encountering armed resistance is lower (Marvell, 2001).

Conceptually, by restricting youth access, minimum age restrictions could also reduce rates of firearm suicide or unintentional shootings by the affected age group. Research suggests that the association between firearm availability and suicide is stron-

gest among adolescents and young adults (Birckmayer and Hemenway, 2001; Miller and Hemenway, 1999). In 2015, there were 3,111 suicide deaths among individuals aged 16–21, 43.6 percent of which involved a firearm (calculated using data from CDC, 2015). Evidence indicates that 50 percent to 60 percent of all firearm suicides by youth under age 21 involve a handgun, suggesting that minimum age laws that cover all firearms may have larger effects on suicide rates compared with laws focused on handguns alone (Johnson et al., 2010; Wright, Wintemute, and Claire, 2008; Shah et al., 2000; Grossman, Reay, and Baker, 1999).

The effects of laws requiring a minimum purchase age will depend largely on how youth acquire firearms. Much of the existing evidence on sources of guns to youth comes from surveys of juvenile offenders or high-risk adolescents and suggests that purchases from retailers are relatively rare among adolescents involved with criminal activity. Among juveniles who have been incarcerated or arrested, surveys have found that youth offenders acquire their firearms through similar sources as adult offenders, with more than 80 percent citing a friend, a family member, or the black market as the means by which they acquired their weapon (Webster et al., 2002; LaFree and Birbeck, 1998). This finding indicates that minimum age laws may be effective at limiting youth access through legitimate retail sources. An early study of firearms used by students in school-associated firearm deaths (both suicide and homicide) between 1992 and 1999 similarly found that only 9.6 percent of the firearms used in homicide events and none of the firearms used in suicide events were purchased legally (CDC, 2001). Still, in a 1996 national survey of male high school students, 50 percent of respondents reported that they would have little or no trouble obtaining a gun (Sheley and Wright, 1998). In a 1996 national study of students in grades 8 through 12, 21 percent of respondents reported having easy access to guns at home, and the types of firearms available were evenly distributed among handguns, rifles, and shotguns (Ruback, Shaffer, and Clark, 2011).

The effects of laws requiring a minimum age of possession will depend on the expected costs youth perceive to be associated with violating such laws, which will likely be influenced by state legal penalties and the level of enforcement efforts devoted to enforcing the prohibition (Marvell, 2001). Semi-structured interviews with incarcerated adolescent males in 1998 found fear of arrest and incarceration as the most commonly reported reasons for choosing not to acquire or carry a gun (Freed et al., 2001). Still, in 2015, 5.3 percent of high school students reported carrying a gun (Kann et al., 2016). Given the relative importance of the home and family members as a source of guns to juveniles, the most-significant effects of minimum age of possession policies may occur if they create a disincentive for older individuals to keep guns at home or to allow guns in the home to be easily accessed (Marvell, 2001).

Much of the conversation about minimum age restrictions revolves around handguns rather than long guns. This is because handguns are more frequently used than long guns in firearm suicides and violent crime, so, in theory, raising the minimum age

for such weapons could decrease violence without impacting lawful activities, such as hunting (Tritch, 2014). More-restrictive minimum age laws could plausibly impact the gun industry by reducing the size of the consumer population and decreasing the ownership and use of guns by youth for hunting or recreational purposes. Overall, hunting participation in the United States has declined dramatically over the past decades, and although data on youth recreational firearm use are limited (Vittes and Sorenson, 2005), estimates from 2006 showed 1.7 million youth hunters aged 6–15 (Families Afield, 2010). Further, the vast majority of adult hunters initiate hunting activities before age 20, and those who have not learned to hunt by age 20 have a very low likelihood of participating in hunting activities as an adult (Duda and Young, 1993). Should minimum age laws reduce initiation of firearm use for hunting or recreational purposes, there could be longer-term effects on these outcomes.

Data on suicides and self-inflicted nonfatal injury stratified by age are readily available; thus, analyses can directly test whether effects of minimum age laws on these outcomes are driven by the relevant age group affected by the policy. For outcomes of violent crime and non-self-inflicted injury, causal analyses could be improved with data that reported the age of the shooter. However, as most data sources report only the age of the victim,<sup>1</sup> none of the studies we identified that met our inclusion criteria for this policy used this type of data. Methodological approaches could also leverage state variation in the types of guns restricted under the minimum age laws for outcome data that have information on the type of firearm involved. For any analysis, estimates of causal effects would be strengthened with data showing how minimum age laws affected gun purchase or carrying behavior by youth of the affected age group. While some national surveys (e.g., the Youth Behavioral Risk Surveillance System, National Survey of Drug Use and Health, National Longitudinal Study of Adolescent to Adult Health) ask youth about gun ownership or carrying behaviors, their samples are often limited to high school students, focused on handguns, or available for a limited set of years.

## State Implementation of Minimum Age Requirements

States have adopted a range of minimum age requirements that are, in some cases, higher or lower than the federal minimums. For instance, nine states and the District of Columbia restrict all handgun sales to individuals aged 21 or older and long gun sales to individuals aged 18 or older. In effect, this raises the minimum age restrictions above those set by federal law in two ways: The age to purchase handguns through pri-

---

<sup>1</sup> Exceptions include the Federal Bureau of Investigation's Supplementary Homicide Reports, which contain age of victim and age of offender for murders when such information is known, and the National Violent Death Reporting System, which contains information on the age of the shooter for non-self-inflicted fatal injuries when such information is known for a subset of states.

vate sales is raised from 18 to 21, and a minimum age for private sales of long guns is set to 18.<sup>2</sup> Two states, Hawaii and Illinois, restrict sales for all firearms to those aged 21 or older.<sup>3</sup> This imposes more-restrictive age limits than federal law on all sales other than handgun sales by dealers. Other states set minimums below the federal limits. For instance, Vermont imposes a minimum age of 16 for all sales, and Maine imposes a minimum age of 18 for handgun sales and 16 for long gun sales.<sup>4</sup> In practice, these affect only long gun sales from nondealers, because minimum age requirements for all other sales would be governed by the more-restrictive federal laws.

As mentioned, federal law places no minimum on the age of possession of long guns (18 U.S.C. 922), but several states have imposed such minimums. For instance, 14 states restrict possession of long guns to those aged 18 or older,<sup>5</sup> and Illinois and the District of Columbia restrict long gun possession to those aged 21 or older.<sup>6</sup> The minimum age for possession of a long gun in Alaska, Minnesota, and New York is 16,<sup>7</sup> and it is 14 in Montana.<sup>8</sup>

## Effects on Suicide

### Research Synthesis Findings

In 2004, the National Research Council (NRC) identified four quasi-experimental studies of gun policy effects on suicide outcomes, none of which examined minimum age restrictions. Hahn et al. (2005) identified one cross-sectional study of the associa-

<sup>2</sup> California, Connecticut, Delaware, Iowa, Maryland, Massachusetts, New Jersey, Ohio, Rhode Island, and the District of Columbia. See Calif. Penal Code § 27505; Conn. Gen. Stat. Ann. §§ 29-34, 29-37a; Del. Code tit. 24 § 901, 903, tit. 11 § 1445; Iowa Code Ann. § 724.22; Md. Code Ann., Pub. Safety §§ 5-101, 5-134; Mass. Gen. Laws Ch. 140 §§ 121, 130; N.J. Stat. Ann. § 2C:39-10; Ohio Rev. Code Ann. § 2923.21; R.I. Gen. Laws §§ 11-47-30, 11-47-35; D.C. Code Ann. §§ 7-2507.07, 22-4507.

<sup>3</sup> Hawaii Rev. Stat. Ann. § 134-2; Ill. Comp. Stat. 65/3, 65/4. Although Hawaii's law is silent about sales, the state issues permits to acquire to those aged 21 or older, and permits are required for purchases. Illinois requires a firearm owner's identification card for transfer, and the card is issued only to those aged 21 or older. However, 720 Ill. Comp. Stat. 5/24-3.1 prohibits sales of handguns to those under age 18.

<sup>6</sup> Ill. Comp. Stat. Ann. 65/4 (regulates the firearm owners identification card); D.C. Code Ann. § 7-2502.03.

<sup>7</sup> Alaska Stat. § 11.61.220; Minn. Stat. § 97B.021 (but individuals aged 14 or 15 and with firearm safety certificates may possess long guns); N.Y. Penal Code § 265.05.

<sup>8</sup> Mont. Code Ann. § 45-8-344.

tion between minor age and suicide (Kleck and Patterson, 1993), a study that does not meet our inclusion criteria. Since then, three longitudinal studies provided evidence on the impact of minimum age requirements on suicide.

Using data from 1976 to 2001, Webster et al. (2004) examined the effect of state-level changes in minimum purchase and possession age laws on suicide rates among those aged 14–17 and 18–20. The authors used negative binomial regression models that employed generalized estimating equations and that included state fixed effects and other covariates. They found uncertain effects of the laws on suicide rates among those aged 14–17. However, states that increased the minimum purchase age to 21 saw a statistically significant decrease in firearm suicides among those aged 18–20, but the authors found uncertain effects of the laws on total or nonfirearm suicides. They found that the three states that increased the age of handgun possession to 21 experienced a statistically significant increase in total suicides among those aged 18–20, accounted for, in part, by a suggestive increase in firearm suicides in this group. The authors suggested that this result was weakly estimated, having been based on just three states, two of which implemented their laws in the final years of the study period, meaning there was little time over which to observe changes in state suicide rates attributable to the law. These limitations raise valid questions about whether the observed effects are attributable to raising the age of possession of handguns to 21 or to other factors affecting these states' suicide rates. Finally, the authors examined the effect of federal minimum age of possession and purchase of handguns among states that previously had lower minimum age laws compared with those for which the federal law did not raise the minimum ages. These analyses identified a suggestive increase in total suicides among those aged 14–17 from raising the federal minimum possession age but only uncertain effects for other outcomes associated with raising the minimum age to purchase handguns among this age group.

Gius (2015b) examined how both state-specific laws for minimum age for firearm possession and federal laws for minimum age for handgun possession implemented in 1994 affected suicides by those aged 19 or younger. This analysis controlled for several state-level sociodemographic characteristics and enactment of child-access prevention laws between 1981 and 2010. Its results suggest that state-level minimum age restrictions had uncertain effects on suicide. The weighted least-squares statistical model is not likely to produce reliable estimates for the nonlinear outcome of suicide rates, meaning the model's estimates and their standard errors may be unreliable (Freedman, 2006). The study's estimate for the federal minimum age law for handgun possession passed in 1994 did not meet our inclusion criteria, because, as specified in this model, there was no comparison group that did not get the identical intervention in 1994.

Rosengart et al. (2005) used a similar approach to model the effects of state laws between 1979 and 1998, when “seven states adopted and two states repealed a law restricting the minimum age for the *private purchase* of a handgun to 21 years, [and] five states adopted laws restricting the minimum age for the *private possession* of a hand-

gun to 21 years” (emphasis added). In these models controlling for state fixed effects, time trends, state-level variation in poverty and demographic factors, and two other firearm laws<sup>9</sup> (but not the federal 1994 law imposing a minimum age requirement for handgun possession), they found mostly uncertain effects of these laws on the firearm suicide rate. However, they did find suggestive effects consistent with minimum possession age laws increasing the total suicide rate among those under age 20, as well as minimum purchase age laws increasing total suicides among those aged 20 or older. These models had limited information to use in identifying causal effects of these laws because relatively few states changed one or both laws over the study period; in addition, every state but one that raised its minimum age for possession did so the same year it implemented a minimum purchase law, making the effects of these laws confounded. Moreover, the statistical model had an unfavorable ratio of covariates to observations (less than one to eight), meaning the model may have been overfit, resulting in estimates and confidence intervals (CIs) that are unreliable indicators of the true causal effects of the laws.

Figure 12.1 displays the incidence rate ratios (IRRs) and CIs associated with the minimum age requirements examined in these studies. We do not present estimates of the federal minimum possession age from Gius (2015b) because they do not meet our criteria for inclusion. Estimates of the federal minimum purchase age and minimum possession age laws from Webster et al. (2004) are included because, although details of the model are not specified, it appears to satisfy our inclusion criteria based on the authors’ following statement: “The federal law establishing a minimum legal age for handgun purchase and possession was assumed to affect only states that, prior to the federal law, either had no minimum-age law of this type or had a law that established a minimum legal age younger than 18 years.”

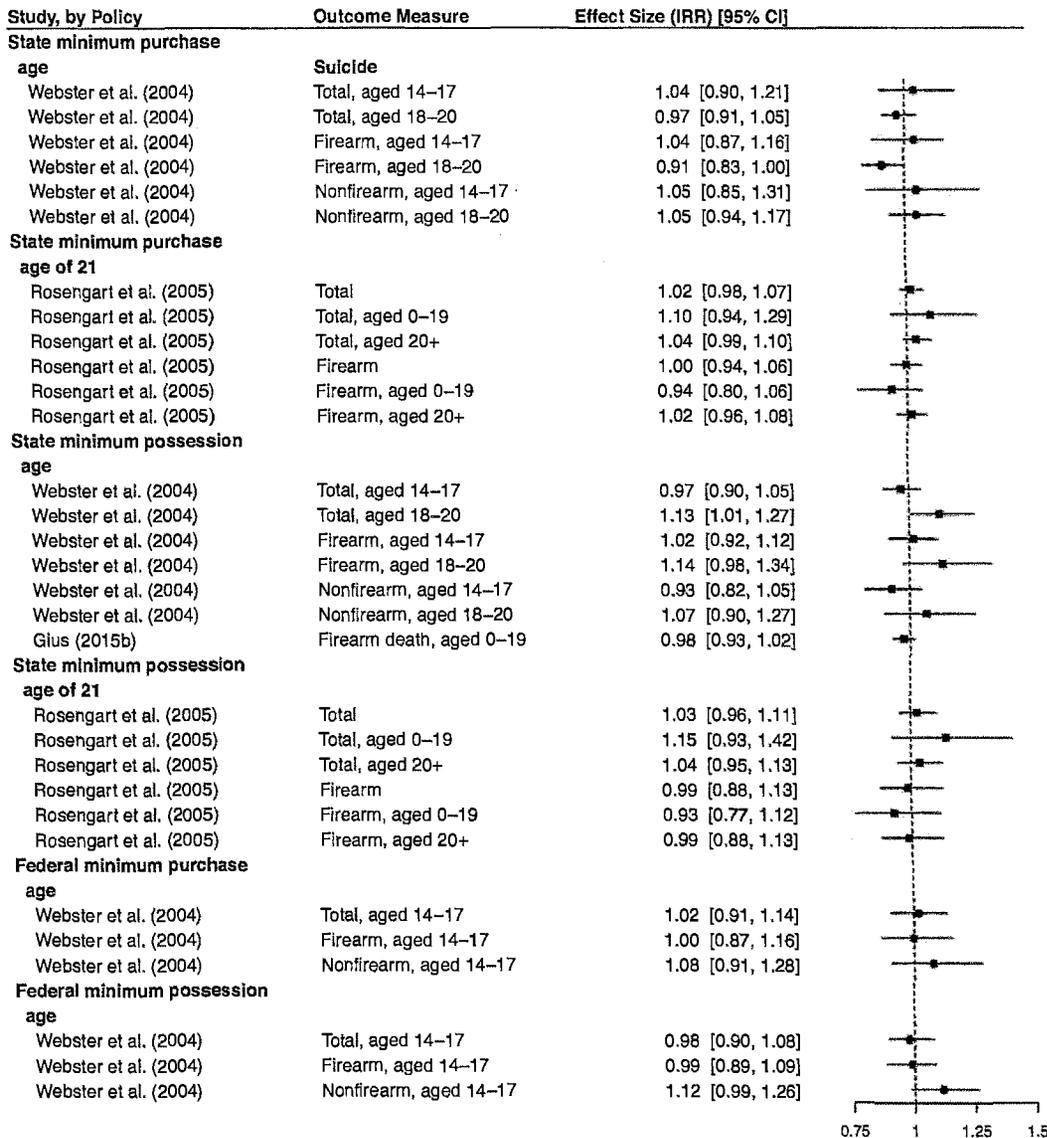

### Conclusions

We identified two qualifying studies that examined how suicide rates were affected by laws requiring a minimum purchase age and three that examined how they were affected by laws requiring a minimum possession age.

*Minimum age requirements for purchasing a firearm.* Webster et al. (2004) found uncertain effects for minimum purchase age laws (with restrictions from ages 16 to 21) on suicides among those aged 14–17 and those 18–20. They also found uncertain effects for firearm suicides among the younger age group but a significant effect consistent with these laws reducing firearm suicides among the older group. When re-estimating these effects only for states that set age 21 as the minimum for purchasing a firearm, the authors again found uncertain effects on total suicide rates for the older

<sup>9</sup> The other laws modeled simultaneously were “one-gun-a-month” laws; “shall-issue” laws, otherwise known as right-to-carry laws, which guarantee the right to a concealed-carry permit for all citizens who are not prohibited from possessing a firearm (see Chapter Thirteen); and “junk-gun” laws, which ban the sale of certain cheaply constructed handguns.

**Figure 12.1**  
**Incidence Rate Ratios Associated with the Effect of Minimum Age Requirements on Suicide**

NOTE: IRR values marked with blue squares indicate that methodological concerns are discussed in the text. Green circles indicate that we identified no significant methodological concerns. See Appendix B for details.

age group and a significant effect indicating such laws reduce firearm suicides among those aged 18–20. Using overlapping, but shorter, time-series data, Rosengart et al. (2005) found the effects of laws requiring a minimum age of 21 to purchase to have uncertain effects on suicides and firearm suicides for all age groups, except for a suggestive effect consistent with these laws increasing total suicides among adults aged 20 or older.

Based on these findings and an assessment of the relative strengths of these studies, we find *inconclusive evidence for how minimum age requirements for purchasing a firearm affect total suicides*. Studies of the effect of laws setting 21 as the minimum age of firearm purchase provide *limited evi-*

*dence that such laws may reduce firearm suicides among some people aged 20 or younger.*

**Minimum age requirements for possessing a firearm.** Webster et al. (2004) found uncertain effects of minimum possession age laws (with restrictions from ages 14 to 21) on suicides and firearm suicides among those aged 14–17. However, they found that these laws significantly increase suicide rates among those aged 18–20 and a suggestive effect consistent with increases in firearm suicide rates among this group. For laws requiring a minimum handgun possession age of 21, Rosengart et al. (2005) found uncertain effects on suicides overall and among those aged 20 or older, as well as a suggestive effect consistent with these laws increasing suicides among those under age 20. All effects of these laws on firearm suicides, however, were uncertain. Gius (2015b)

found only uncertain effects of state minimum age of possession laws on firearm suicides among those aged 19 or younger.

Based on these findings and an assessment of study strengths, we find *inconclusive evidence for how minimum age requirements for possessing a firearm affect suicides and firearm suicides.*

## Effects on Violent Crime

### Research Synthesis Findings

NRC (2004) did not review evidence on the effects of minimum age requirements, and Hahn et al. (2005) identified no research on this topic meeting our inclusion criteria. We identified two studies since 2003 that met our criteria. Rosengart et al. (2005) analyzed state-level data from 1979 to 1998 and examined the effects on violent crime of four types of state laws:

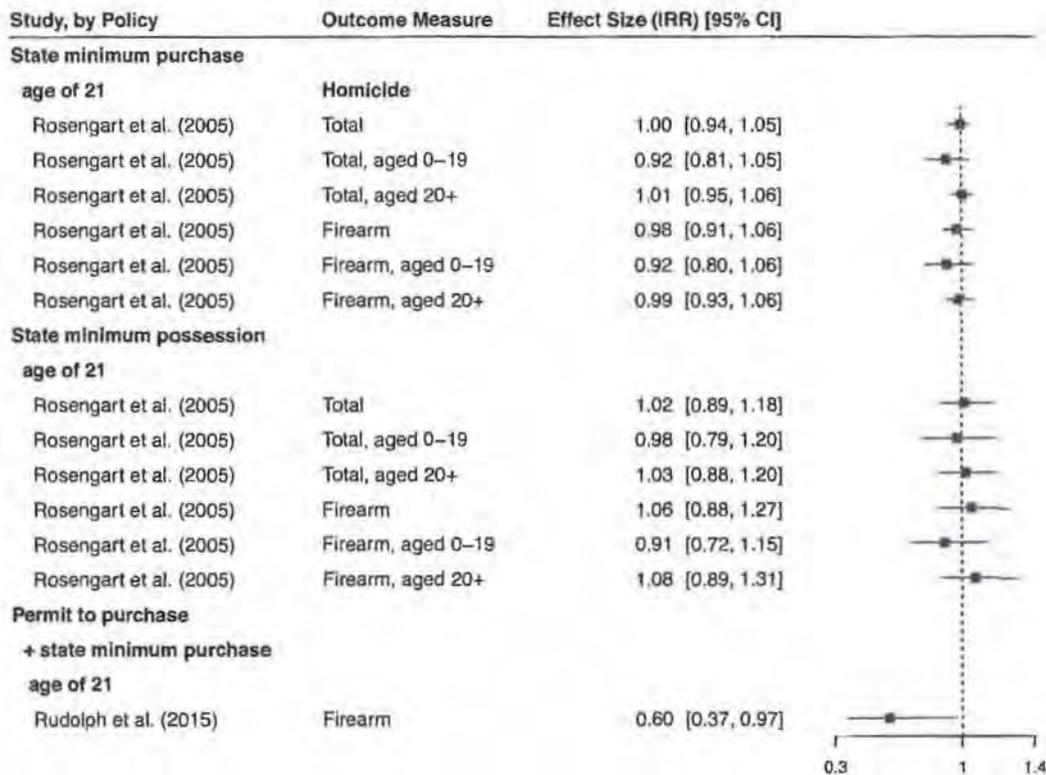

1. restricting handgun purchase to those aged 21 or older
2. restricting private handgun possession to those aged 21 or older
3. limiting the frequency of gun purchases to one gun per 30 days
4. prohibiting the sale of “junk” (cheaply constructed) guns.

The authors controlled for whether a state had a shall-issue (otherwise known as right-to-carry) provision; these results are described in more detail in Chapter Thirteen. The authors found uncertain effects of both types of minimum age laws on total homicide and firearm homicide rates. These models had limited information to use in identifying causal effects of these laws because relatively few states changed one or both laws over the study period; in addition, every state but one that raised its minimum age for possession did so the same year it implemented a minimum purchase age law, making the effects of these laws confounded. Moreover, the statistical model had an unfavorable ratio of covariates to observations (less than one to eight), meaning the model may have been overfit, resulting in estimates and CIs that are unreliable indicators of the true causal effects of the laws.

Rudolph et al. (2015) found a significant effect for a decrease in firearm homicides (and an uncertain effect for nonfirearm homicides) associated with the implementation of a law in Connecticut that established a requirement to have a permit to purchase a firearm and increased the minimum age of handgun purchase from age 18 to age 21. The firearm homicide rate after passage of both provisions was found to be 63 percent of what would have been expected without them. However, because the law included both policies simultaneously, the effect attributable specifically to the minimum age law cannot be identified. In addition, because only one state in the analysis experienced the law change, the effects of the law are not well identified. The observed reduction in firearm homicides could be due to the law or to other events occurring in Connecticut around the same time the law passed.

Figure 12.2 displays the IRRs and CIs associated with the minimum age requirements examined in these studies.

**Figure 12.2**  
**Incidence Rate Ratios Associated with the Effect of Minimum Age Requirements on Violent Crime**

NOTE: IRR values marked with blue squares indicate that methodological concerns are discussed in the text. See Appendix B for details.

**Conclusions**

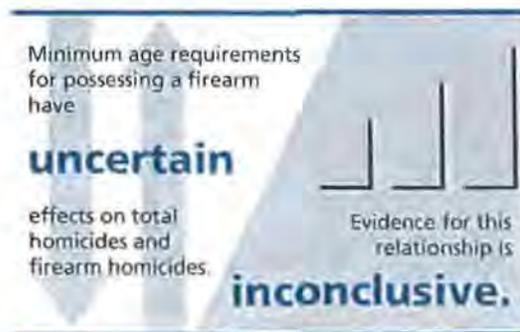

We identified two qualifying studies that examined the effect of minimum age requirements for purchasing or possessing a firearm on total or firearm homicide rates.

Minimum age requirements for purchasing a firearm have **uncertain** effects on total homicides and firearm homicides. Evidence for this relationship is **inconclusive.**

*Minimum age requirements for purchasing a firearm.* Rosengart et al. (2005) found uncertain effects of laws making 21 the minimum age to purchase handguns on homicide rates and firearm homicide rates among all age groups. Rudolph et al. (2015) reported a significant effect consistent with minimum age requirements reducing firearm homicide rates, but they could

not attribute this effect solely to a minimum purchase age policy because a permit-to-purchase provision was passed concurrently in the one state evaluated. On the basis of these results, and in consideration of the relative strengths of these studies, we find *inconclusive evidence for how minimum age requirements for purchasing a firearm affect total and firearm homicides.*

*Minimum age requirements for possessing a firearm.* Estimates by Rosengart et al. (2005) for the effect of laws making 21 the minimum age for possession of handguns on total and firearm homicides were uncertain for all age groups examined. Therefore, we find *inconclusive evidence for how minimum age requirements for possessing a firearm affect total and firearm homicides.*

## Effects on Unintentional Injuries and Deaths

### Research Synthesis Findings

Neither NRC (2004) nor Hahn et al. (2005) identified any research examining the effects of minimum age requirements on unintentional injuries and deaths. One longitudinal study since then examined this relationship. Using data from 1981 to 2010, Gius (2015b) examined the effect of the 1994 federal law establishing a minimum age for handgun possession, as well as other state-specific minimum age requirements for handguns. This model controlled for time and state fixed effects, state-level socio-demographic characteristics, and state-level child-access prevention laws. The authors found that state-level minimum age requirements had uncertain effects on unintentional deaths. The weighted least-squares statistical model used in this study may not have been appropriate for the rate outcome, with many values close to zero in state-year observations. The model's lower bound at zero may result in violations of its assumptions and can yield biased and incorrect parameter estimates and CIs.

Figure 12.3 displays the IRR and CI associated with the minimum age requirements examined in Gius (2015b). The analysis of the federal minimum age of possession law in this study did not meet our inclusion criteria, because, as specified in this model, it appeared that there was no comparison group that did not get the identical intervention in 1994. Therefore, this effect is not included in Figure 12.3.

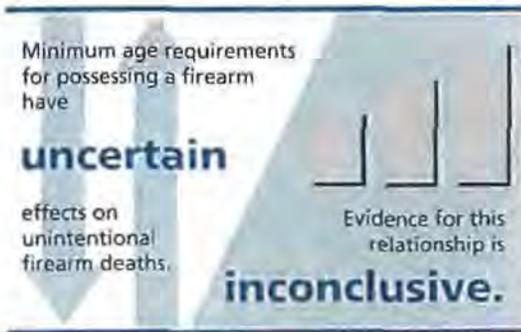

**Figure 12.3**  
**Incidence Rate Ratios Associated with the Effect of Minimum Age Requirements on Unintentional Injuries and Deaths**

| Study, by Policy                             | Outcome Measure                                    | Effect Size (IRR) [95% CI] |
|----------------------------------------------|----------------------------------------------------|----------------------------|
| State minimum possession age<br>Gius (2015b) | Unintentional injuries<br>Firearm death, aged 0–19 | 0.93 [0.84, 1.02]          |

NOTE: IRR values marked with blue squares indicate that methodological concerns are discussed in the text. See Appendix B for details.

**Conclusions**

We identified one qualifying study examining the effect of laws requiring either minimum age to purchase or minimum age to possess a firearm. Gius (2015b) found a suggestive effect consistent with minimum possession age laws decreasing unintentional firearm deaths among those aged 19 or younger. Therefore, we conclude that *there is inconclusive evidence that minimum age requirements for possessing a firearm may reduce unintentional firearm deaths among those aged 19 or younger.*

**Effects on Mass Shootings**

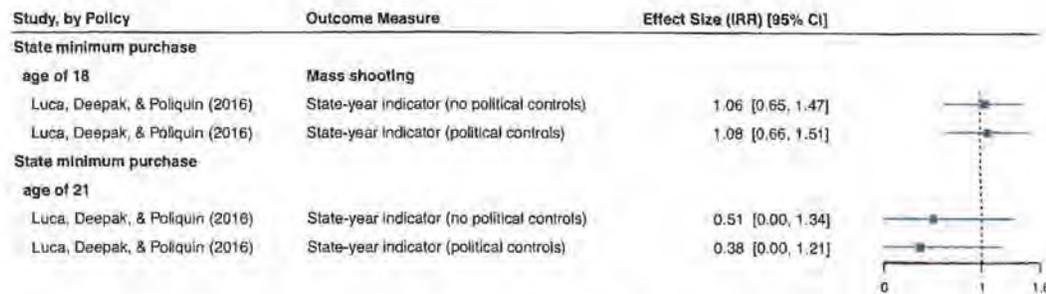

**Research Synthesis Findings**

NRC (2004) did not identify any research examining the effects of minimum age requirements on mass shootings. Hahn et al. (2005) identified one study, but it did not satisfy our inclusion criteria. Our own search yielded one study. Using a two-way fixed-effects linear probability model, Luca, Deepak, and Poliquin (2016) estimated the effects of minimum age requirements on a binary indicator for whether a mass shooting occurred in a given state-year. The authors included two measures of minimum age requirements: (1) an indicator variable for whether laws prevent vendors from selling handguns to those under age 18 or prevent those under age 18 from purchasing handguns and (2) an analogous indicator variable for laws that set the minimum age at 21. The authors' analysis covered 1989–2014 and included controls for time-invariant state characteristics, national trends, and a host of other state-level gun policies, as well as time-varying state-level demographic, socioeconomic, and political characteristics. They found uncertain effects of laws setting 18 as the minimum age of purchase on the probability of a mass shooting

event occurring, but they found a suggestive effect consistent with laws setting 21 as the minimum age of purchase reducing the likelihood of a mass shooting occurrence. However, it should be noted that assessing the effects of gun policies on mass shootings was not the primary focus of Luca, Deepak, and Poliquin (2016), and the authors intended the estimates to serve solely as a robustness check for their main specification (the effects of mass shootings on gun policy). Although the paper provided limited information to use in evaluating the reported statistical models (e.g., on how these policies were coded), it is clear that the analysis used a linear model to predict a dichotomous outcome. Therefore, model assumptions were violated, making model estimates and CIs unreliable.

Figure 12.4 displays the IRRs and CIs associated with the minimum age requirements examined in Luca, Deepak, and Poliquin (2016).

**Figure 12.4**  
**Incidence Rate Ratios Associated with the Effect of Minimum Age Requirements on Mass Shootings**

NOTE: IRR values marked with blue squares indicate that methodological concerns are discussed in the text. See Appendix B for details.

**Conclusions**

We identified one qualifying study examining how minimum age requirements for purchasing a firearm affect the incidence of mass shootings. Luca, Deepak, and Poliquin (2016) found that laws setting age 18 as the minimum age to purchase a firearm had uncertain effects on mass shooting incidence, but they found a suggestive effect consistent with such laws reducing the incidence of mass shootings when the minimum purchase age is 21. On the basis of this study, *we find inconclusive evidence for how minimum age requirements for purchasing a firearm affect mass shootings.*

158 The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

### **Outcomes Without Studies Examining the Effects of Minimum Age Requirements**

Neither NRC (2004) nor Hahn et al. (2005) identified any research examining the effects of minimum age requirements on the following outcomes, and we identified no such studies that met our inclusion criteria:

- officer-involved shootings
- defensive gun use
- hunting and recreation
- gun industry.

## CHAPTER TWENTY-TWO

**Mass Shootings**

---

In this chapter, we provide an overview of mass shootings, one of the eight outcomes examined in our research syntheses (Chapters Three through Fifteen). We first describe different approaches for defining a mass shooting and then discuss how using different definitions can influence estimates of mass shooting levels and trends. The information was collected from a targeted search of the literature separate from that described in Chapter Two of this report.

**What Is a Mass Shooting?**

In the 1980s, the Federal Bureau of Investigation (FBI) defined *mass murderer* as someone who “kills four or more people in a single incident (not including himself), typically in a single location” (Krouse and Richardson, 2015). However, the government has never defined *mass shooting* as a separate category, and there is not yet a universally accepted definition of the term. Thus, media outlets, academic researchers, and law enforcement agencies frequently use different definitions when discussing mass shootings, which can complicate our understanding of mass shooting trends and their relationship to gun policy. Table 22.1 provides examples of the variation in the criteria set by five of the most commonly referenced data sources on mass shootings in the United States.

Although there is no official standard for the casualty threshold that distinguishes a mass shooting from other violent crimes involving a firearm, a common approach in the literature is to adopt the FBI’s criteria for a mass murderer and set a casualty threshold of four fatalities by firearm, excluding the offender or offenders (Duwe, Kovandzic, and Moody, 2002; Krouse and Richardson, 2015; Gius, 2015c; Fox and Fridel, 2016). However, this categorization is not without controversy. It does not capture incidents in which fewer than four victims were killed but additional victims were injured, and it does not include multiple-victim homicides in which fewer than four fatalities resulted from gunshots but additional fatalities occurred by other means. Additionally, the FBI classification of mass murderer was established primarily with the aim of clarifying criminal profiling procedures, not for the purpose of data collection or statistical

**Table 22.1**  
**Variation in How Mass Shootings Are Defined and Counted**

| Source                                                                             | Casualty Threshold<br>(for injuries or deaths<br>by firearm)                                                                                                                                                                           | Location of<br>Incident | Motivation of<br>Shooter                                                               | Number of U.S.<br>Mass Shootings<br>in 2015 |

| Supplementary Homicide Reports (FBI) (see Puzzanchera, Chamberlin, and Kang, 2017) | The FBI's Supplementary Homicide Reports do not define <i>mass shooting</i> but do provide information on the number of victims, and the reports have been used by researchers in conjunction with news reports or other data sources. |                         |                                                                                        |                                             |

<sup>a</sup> Before January 2013, the casualty threshold for *Mother Jones* was four fatal injuries (excluding the shooter).

analysis (Ressler, Burgess, and Douglas, 1988). Thus, many have chosen alternative definitions of casualty thresholds for mass shootings. For instance, Lott and Landes (2000) adopted the definition of two or more injured victims, the Gun Violence Archive (undated) defined *mass shooting* as an incident in which four or more victims (excluding the shooter) are injured or killed, and Mass Shooting Tracker (undated) set a criterion of four or more people injured or killed (including the shooter).

Another definitional disagreement is whether to include multiple-victim shooting incidents that occur in connection with some other crime or domestic dispute. Because mass shootings that stem from domestic and gang violence are contextually distinct from high-fatality indiscriminate killings in public venues, some have argued that they should be treated separately. In their analyses of “mass public shootings,” Lott and Landes (2000) excluded any felony-related shooting, and Duwe, Kovandzic, and Moody (2002) excluded incidents where “both the victims and offender(s) were involved in unlawful activities, such as organized crime, gang activity, and drug deals” (p. 276). Similarly, Gius (2015c) restricted analysis to events that occurred in a relatively public area and in which victims appeared to have been selected randomly. However, others have claimed that this narrow definition ignores a substantial proportion

of gun-related violence from family- or felony-related murder (Fox and Levin, 2015). Data collection efforts by Mass Shooting Tracker and the Gun Violence Archive thus counted all incidents that met their designated casualty threshold as mass shootings, regardless of the circumstances that led to the event.

These definitions matter. Depending on which data source is referenced, there were seven, 65, 332, or 371 mass shootings in the United States in 2015 (see Table 22.1), and those are just some examples. More-restrictive definitions (e.g., *Mother Jones*) focus on the prevalence of higher-profile events motivated by mass murder, but they omit more-common incidents occurring in connection with domestic violence or criminal activity, which make up about 80 percent of mass shooting incidents with four or more fatally injured victims (Krouse and Richardson, 2015). Broader definitions (e.g., Mass Shooting Tracker) provide a more comprehensive depiction of the prevalence of gun violence, but they obscure the variety of circumstances in which these incidents take place and their associated policy implications. Furthermore, if the effects of a firearm policy are expected to affect only public mass shooting incidents, then analysis that includes domestic violence mass shootings in the outcome measure could obscure identification of significant effects that would be found in a more targeted analysis of public mass shootings alone. There is thus value in having multiple measurements of mass shootings—but only if their definitions are clearly and precisely explained and they are used by researchers in a manner appropriate to the analysis.

### Are Mass Shootings on the Rise?

In 2014, the FBI released a study showing that “active shooting incidents” had increased at an average annual rate of 16 percent between 2000 and 2013 (Blair and Schweit, 2014). In contrast to the varied definitions for mass shootings, there is an agreed-upon definition among government agencies for *active shooter*: “an individual actively engaged in killing or attempting to kill people in a confined and populated area; in most cases, active shooters use firearm(s) and there is no pattern or method to their selection of victims” (U.S. Department of Homeland Security, 2008, p. 2). Using a modified version of this definition to include incidents that had multiple offenders or occurred in confined spaces, Blair and Schweit (2014) found that active shootings had increased from only one incident in 2000 to 17 in 2013.

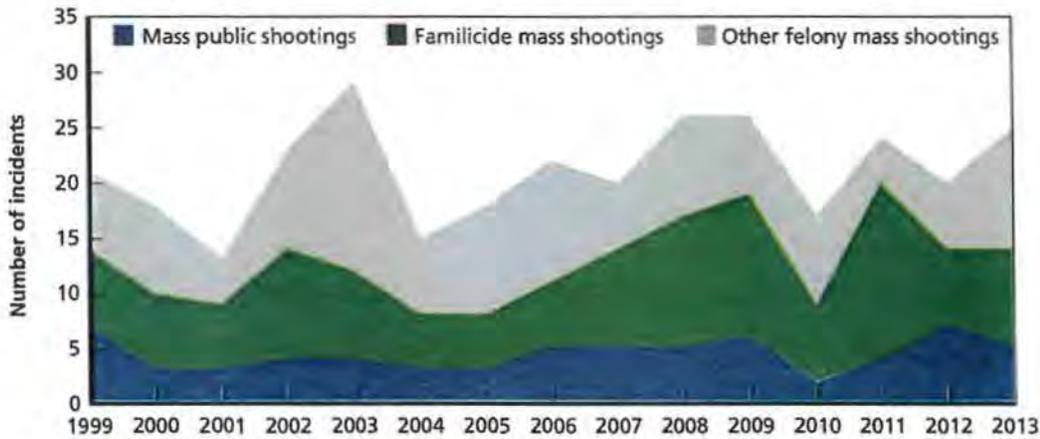

The FBI study (Blair and Schweit, 2014) highlighted several key issues in determining trends in mass shootings. First, the absence of a systematic definition of mass shootings can lead to misinterpretation of reported evidence. While the study explicitly stated, “This is not a study of mass killings or mass shootings” (p. 5), extensive media coverage cited the study as evidence of a sharp rise in mass shootings and mass shooting fatalities (Lott, 2015). However, the definition of an *active-shooter incident* is broader than any of the commonly used criteria for mass shootings (see Table 22.1) because it

does not set any casualty threshold. Of the 160 active-shooter incidents included in the FBI's analysis, 7 percent resulted in zero casualties, 20 percent resulted in zero fatalities, and 22 percent resulted in a single fatality (Lott, 2015). Setting a threshold of zero victims increases the potential for measurement error, because shooting incidents with no casualties are more difficult to identify from police records and are less likely to receive media coverage (Duwe, Kovandzic, and Moody, 2002). Additionally, because it should be relatively easier to identify more-recent shootings with few fatalities, a low casualty threshold will tend to systematically bias estimates of the number of shootings upward over time. For example, the Stanford Mass Shootings in America database, which relies solely on online media sources to identify mass shooting events, cautions its users, "Data in the [database] spans a time period that includes the transition from traditional media to digital media in reporting. Numbers of incidents per year should at least in part be assumed to reflect this collection methodology and not just changes in incident frequency." Thus, the more than threefold surge in mass shooting incidents from 2014 to 2015 shown in the Stanford data likely reflects increased online reporting and not necessarily a true increase in the rate of mass shootings.

Even when a more restrictive casualty threshold of four or more fatally injured victims (excluding the shooter) is imposed, empirical evidence on trends in these incidents varies depending on whether the motivation of the shooter is included as a criterion for considering an event a mass shooting. In their analysis of mass shooting trends from 1999 to 2013, Krouse and Richardson (2015) distinguished between mass shootings occurring in public locations that are indiscriminate in nature ("mass public shootings"), mass shootings in which the majority of victims are members of the offender's family and that are not attributable to other criminal activity ("familicide mass shootings"), and mass shootings that occur in connection to some other criminal activity ("other felony mass shootings"). Figures 22.1 and 22.2 show trends in these types of mass shooting incidents and fatalities, respectively, using the data provided in Krouse and Richardson (2015). Extending the data back to the 1970s, two studies found evidence of a slight increase in the frequency of mass public shootings over the past three decades (Cohen, Azrael, and Miller, 2014; Krouse and Richardson, 2015). However, using an expanded definition that includes domestic- or felony-related killings, there is little evidence to suggest that mass shooting incidents or fatalities have increased (Cohen, Azrael, and Miller, 2014; Krouse and Richardson, 2015; Fox and Fridel, 2016). Thus, different choices about how to define a mass shooting result in different findings for both the prevalence of these events at a given time and whether their frequency has changed over time.

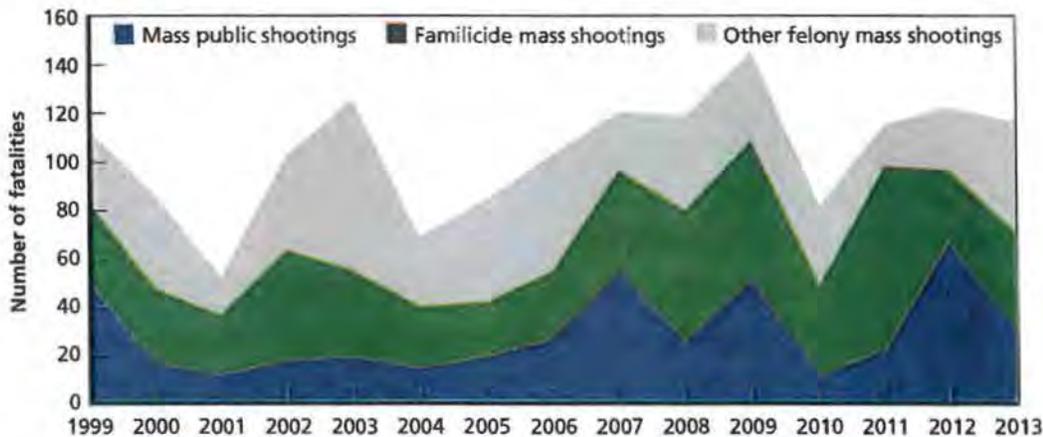

Definitional issues aside, the relative rarity of mass shooting events makes analysis of trends particularly difficult. Chance variability in the annual number of mass shooting incidents makes it challenging to discern a clear trend, and trend estimates will be sensitive to outliers and to the time frame chosen for analysis. For example, while Krouse and Richardson (2015) found evidence of an upward trend in mass public

RAND RR2088-22.2

shootings from 1999 to 2013, they noted that the increase was driven largely by 2012, which had an unusually high number of mass public shooting incidents. Additionally, Lott (2015) showed that the FBI study's estimate of a dramatic increase in active-shooter incidents was largely driven by the choice of 2000 as the starting date, because that year had an unusually low number of shooting incidents; extending the analysis to cover 1977 onward and adjusting the data to exclude events with fewer than two

270 The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

fatalities, Lott (2015) found a much smaller and statistically insignificant increase (less than 1 percent annually) in mass shooting fatalities over time.

## Conclusions

While different choices about how to define a mass shooting and the period over which to calculate mass shooting trends have resulted in disagreement about whether the frequency of mass shootings has risen, there is clear evidence that the media's use of the term *mass shooting* has increased significantly over recent decades (Roeder, 2016). Unfortunately, the ambiguity in how mass shootings are defined and counted may result in increased media coverage influencing public perception without better informing our understanding of the prevalence of mass shootings or their determinants, trends, social costs, or policy implications.

PART D

**Summary of Findings and Recommendations**

---

## CHAPTER TWENTY-FIVE

## Summary and Conclusions

---

Although large majorities of Americans agree on the merits of some gun policies, gun policy is divisive in the United States. In this report, we have attempted to provide a rigorous and balanced assessment of what current scientific knowledge can tell the public and policymakers about the true effects of many gun policies that are frequently discussed in state legislatures. The most recent of such comprehensive attempts, conducted more than a dozen years ago, found the research base too thin to draw any conclusions about the effects of gun laws. Specifically, a committee of the National Research Council (NRC) found that the evidence was so weak and contradictory that no causal associations between the laws it examined and crime or violence could be determined (NRC, 2004). Separately, the Community Preventive Services Task Force “found the evidence available from identified studies was insufficient to determine the effectiveness of any of the firearms laws reviewed singly or in combination” (Hahn et al., 2005).

We have thoroughly updated and expanded on the findings in NRC (2004) and Hahn et al. (2005) with studies published between 2003 and spring 2016. We systematically reviewed all empirical research that examined the effects of 13 types of state gun policies on eight outcomes, including outcomes related to public health and safety and outcomes of interest to sport shooters, hunters, and those who work in the gun industry. We restricted our analysis to only those studies using methods designed to identify plausibly causal effects of the policies. After reviewing many thousands of candidate studies, we identified just 63 meeting our inclusion criteria (described in Chapter Two), of which 54 were published since 2003.

There is a need for a factual basis on which to make policy. This does not mean basing decisions just on facts about which policies will reduce homicides or suicides the most; it means basing decisions on an accurate understanding of the trade-offs that policies entail. To make fair and effective gun policies, we need to know more about their implementation challenges, whom they affect most or least, what their unintended consequences might be, how they can be revised for better effect, what they cost society in general and gun owners in particular, and other issues central to the acceptability of any policy. These scientific questions about what is true and knowable do not supersede questions of individual rights or Second Amendment rights. Both should be central considerations in policymaking.

Facts have never dictated policy, but they can inform it. The relevance of research to inform gun policy has been tarnished by deeply held assumptions about “true” policy effects, measurement error associated with key variables (such as gun ownership), skepticism about research methods, and mistrust of researchers’ motives when they draw unwelcome conclusions or focus on just one aspect of what is a complex phenomenon affecting multiple stakeholders with diverse interests. We have attempted to address these concerns through the rigor and transparency of our methods and through our organizational commitment to nonpartisan, objective policy analysis. We hope, therefore, that all stakeholders in gun policy debates give our analysis of the available science a fair hearing and our recommendations careful consideration.

In this chapter, we summarize our judgments about the strength of evidence available for the effects of gun policies on outcomes of interest. We then outline our conclusions and recommendations, which are organized into two sections: What can we conclude about the effects of gun policies, and why don’t we know more?

### Summarizing the Strength of Evidence

We categorized all policy and outcome pairings as having supportive, moderate, limited, inconclusive, or no evidence. We never conclude that evidence suggests that a policy has no effect. Even when multiple studies fail to find a significant effect, it is not correct that this implies the policy has no effect. Instead, the effects may simply be too small to reliably detect, or the data available to assess the policy’s effects may not be sufficiently specific to the intended effects of the law. More generally, it seems reasonable to suspect that every policy has some effect on each outcome, however small or unintended. Therefore, the failure to detect a law’s effects reveals more about the weakness of the analytic methods than about the possibility that a policy truly has no effect.

We categorized evidence as *inconclusive* when studies with comparable methodological rigor identified inconsistent evidence for the policy’s effect on an outcome or when a single study found only uncertain or suggestive effects. We categorized evidence as *limited* when at least one study meeting our inclusion criteria and not otherwise compromised by serious methodological problems reported a significant effect of the policy on the outcome. Effects for which there is *moderate* evidence are those for which two or more studies found significant effects in the same direction and contradictory evidence was not found in other studies with equivalent or strong methods. Our finding of *supportive* evidence of an effect is limited to cases for which at least three studies found suggestive or significant effects in the same direction, and the effect was found in at least two data sets that were reasonably independent of each other (e.g., firearm suicides and hospital admissions for self-inflicted firearm injuries).

Our ratings, therefore, reflect the relative strength of evidence, not, for instance, whether the evidence is strong enough that we can be highly confident that observed effects would be generalizable to future implementations of a particular law. Rather, evidence for these effects is strong relative to evidence for other gun policy effects and not necessarily strong relative to the quality and quantity of evidence available in other fields of study. For instance, the evidence that cigarette smoking causes cancer is vastly stronger than the evidence concerning any gun policy's effect on any outcome.

Table 25.1 summarizes our judgments for all 13 classes of policies across the eight outcomes. Several outcomes show multiple judgments, and these correspond to different characterizations of the specific policy-outcome association. For instance, we identified limited evidence that background checks reduce *total suicides* and moderate evidence that they reduce *firearm suicides*. Looking down the columns, it is apparent that research into four outcomes is essentially unavailable. It is noteworthy that three of these four outcomes—defensive gun use, hunting and recreation, and the gun industry—are issues of particular concern to gun owners or gun industry stakeholders, including firearm manufacturers, firearm dealers, hunting outfitters, firing ranges, and others. That there is no empirical research examining these outcomes limits the ability for policymakers to use evidence to consider how laws are likely to affect different interests.

304 The Science of Gun Policy: A Critical Synthesis of Research Evidence on the Effects of U.S. Policies

NOTE: I = inconclusive; L = limited; M = moderate; S = supportive. When we identified no studies meeting eligibility criteria, cells are blank. ↑ = the policy increases the outcome; ↓ = the policy decreases the outcome.

<sup>a</sup> We concluded that there is moderate evidence that dealer background checks decrease firearm homicides, and there is inconclusive evidence for the effect of private-seller background checks on firearm homicides.

## What Can We Conclude About the Effects of Gun Policies?

Our first set of conclusions and recommendations describes the policy-outcome combinations with the strongest available evidence as identified through our review of the existing literature, as well as recommendations for policy based on this evidence.

**Conclusion 1.** Available evidence supports the conclusion that child-access prevention (CAP) laws, or safe storage laws, reduce self-inflicted fatal or nonfatal firearm injuries among youth. There is moderate evidence that these laws reduce firearm suicides among youth and limited evidence that the laws reduce total (i.e., firearm and nonfirearm) suicides among youth.

**Conclusion 2.** Available evidence supports the conclusion that CAP laws, or safe storage laws, reduce unintentional firearm injuries or unintentional firearm deaths among children. In addition, there is limited evidence that these laws may reduce unintentional firearm injuries among adults.

In the available literature examining CAP laws, self-inflicted injuries represent an ambiguous outcome because not all self-inflicted firearm injuries are the result of a suicide attempt. Some are unintentional injuries. But with case fatality rates for suicide attempts with a firearm at around 82.5 percent (Spicer and Miller, 2000), a substantial number of self-inflicted firearm injuries are likely the result of a suicide attempt. Furthermore, there is a clear pattern of CAP laws appearing to reduce a range of related firearm injuries to youth, ranging from unintentional injuries to suicides. That they also reduce the more ambiguous “self-inflicted injuries” fits squarely within that pattern and contributes to our confidence that the evidence currently supports a conclusion that CAP laws reduce these injuries and fatalities.

Across all of the 13 classes of policies that we studied, only CAP laws had any evidence that we classified as *supportive* for a particular conclusion. CAP laws differ from many of the other policies we considered in this report. Most of the others affect the acquisition of new firearms (e.g., background checks or waiting periods), or they are designed to affect a relatively small proportion of gun owners (e.g., prohibitions that target the mentally ill; firearm surrender laws, which have usually targeted domestic violence offenders). Thus, the other laws generally concern either the small proportion of guns that are newly acquired every year or a small proportion of the gun-owning population. CAP laws, in contrast, are designed to influence how all guns in a state are stored when children could be expected to encounter them. This likely represents a large proportion of all guns because one-third of all households in the country have children under age 18 (Vespa, Lewis, and Kreider, 2013), and many more have children as occasional visitors. With such large numbers of guns potentially affected, even imperfect compliance with CAP laws may have a greater chance than other types of laws of producing observable effects in population-level outcome statistics.

*Recommendation 1.* States without CAP laws should consider adopting them as a strategy to reduce firearm suicides and unintentional firearm injuries and deaths.

We note, however, that scientific research cannot, at present, address whether these laws might increase or decrease crime or rates of legal defensive gun use.

*Recommendation 2.* When considering adopting or refining CAP laws, states should consider making child access to firearms a felony; there is some evidence that felony laws may have the greatest effects on unintentional firearm deaths.

Gun industry and gun-owner organizations have promoted voluntary and educational programs to promote the safe storage of firearms. Our conclusions and recommendations should not be interpreted to suggest that only CAP laws can reduce firearm deaths. As we discussed in Chapter Twenty, scientific evaluations of education campaigns have found that they can produce behavior change in domains other than gun storage, but rigorous evidence that they have successfully promoted safe storage of firearms is limited. On the other hand, there is evidence that clinicians who counsel patients (mostly families with children) can effectively promote safe storage practices, particularly if storage devices (e.g., gun locks) are provided along with the counseling.

**Conclusion 3.** There is moderate evidence that background checks reduce firearm suicides and firearm homicides, as well as limited evidence that these policies can reduce overall suicide and violent crime rates.

Most available studies have examined the effects of dealer background checks or the combined effects of dealer and private-seller background checks when both are required by a state. Therefore, the evidence base for universal background checks compared with the dealer background checks required under federal law is quite limited. Logically, however, if there is moderate evidence that dealer background checks reduce firearm suicides and homicides, it seems likely that extending those same background checks to private sales of firearms could further reduce firearm suicides and homicides. We emphasize, though, that the available research on this question is limited and inconclusive.

**Conclusion 4.** There is moderate evidence that stand-your-ground laws may increase state homicide rates and limited evidence that the laws increase firearm homicides in particular.

**Conclusion 5.** There is moderate evidence that laws prohibiting the purchase or possession of guns by individuals with some forms of mental illness reduce violent crime, and there is limited evidence that such laws reduce homicides in particular. There is also limited evidence these laws may reduce total suicides and firearm suicides.

Federal law prohibits some people who have been adjudicated as mentally ill from purchasing or possessing firearms, but this prohibition is not uniformly enforced across the nation. States maintain mental health records, but many have been reluctant to share those records for use in the Federal Bureau of Investigation (FBI)'s National Instant Criminal Background Check System (NICS), the federal database used for background checks. Although most states have laws allowing for the voluntary shar-

ing of some mental health records with NICS, there is considerable variation in which classes of individuals prohibited under federal law are shared with NICS. Thus, by the end of 2016, there were large differences in the number of active mental health records in NICS across states; for example, Alaska, Montana, New Hampshire, Rhode Island, and Wyoming had contributed less than 500 records, whereas most other states had tens of thousands or hundreds of thousands of active mental health records in the database (Criminal Justice Information Services Division, 2016).

Our finding that there is limited evidence that some mental health–related background checks can reduce gun violence should be of interest to states that currently share only partial or limited mental health data with NICS and that do not have a comprehensive in-state database that is reliably used for background checks for firearm sales. It is likely that many individuals with mental health histories making them prohibited possessors under federal law can nevertheless purchase firearms in these states. Moreover, states that do check state databases but do not share information on all individuals with disqualifying mental health histories with NICS create opportunities for prohibited possessors to purchase firearms out of state. Establishing procedures to prevent these people from purchasing firearms appears to yield small but appreciable reductions in suicides, homicides, and other violent crimes after implementing mental health checks.

*Recommendation 3.* States that currently do not require a background check investigating all types of mental health histories that lead to federal prohibitions on firearm purchase or possession should consider implementing robust mental illness checks, which appear to reduce rates of gun violence. The most robust procedures involve sharing data on all prohibited possessors with NICS.

**Conclusion 6.** There is limited evidence that before implementation of a ban on the sale of assault weapons and high-capacity magazines, there is an increase in the sales and prices of the products that the ban will prohibit.

This finding is based on persuasive evidence from a single case, the implementation of the Violent Crime Control and Law Enforcement Act of 1994, which banned the sale of certain semiautomatic weapons designated in the law as assault weapons. Therefore, this finding may not generalize well to other instances of assault weapon bans. For instance, the 1994 law grandfathered banned weapons sold before the law's implementation date. This likely created a market for speculators who drove up sales and prices in the months preceding the ban (Koper, 2004).

**Conclusion 7.** There is limited evidence that a minimum age of 21 for purchasing firearms may reduce firearm suicides among youth.

**Conclusion 8.** No studies meeting our inclusion criteria have examined required reporting of lost or stolen firearms, required reporting and recording of firearm sales, or gun-free zones.

## Why Don't We Know More?

Based on our review of the existing literature on the effects of firearm policy changes, we offer the following conclusions and recommendations for improving the evidence base on the effects of gun laws.

**Conclusion 9.** The modest growth in knowledge about the effects of gun policy over the past dozen years reflects, in part, the reluctance of the U.S. government to sponsor work in this area at levels comparable to its investment in other areas of public safety and health, such as transportation safety.

Of the 54 studies meeting our inclusion criteria that have been published since 2003, just seven (13 percent) reported receiving any federal funding. Two studies listed funding from the National Science Foundation, and one study each listed funding from the National Institute of Justice; National Institute on Drug Abuse; National Institute on Alcohol Abuse and Alcoholism; National Heart, Lung, and Blood Institute; and the Centers for Disease Control and Prevention (CDC). Ten studies received some foundation support, with the Robert Wood Johnson Foundation and the Joyce Foundation each supporting four. Of studies since 2003 that met our inclusion criteria, the large majority (40 studies, or 74 percent) reported no sources of external support.

While most of the 54 studies focused on public safety or health outcomes (e.g., suicide and homicide), the number of high-quality quasi-experimental studies on which to base estimates of the effects of policies was surprisingly small compared with the literatures that evaluate the effects of many other policies, such as those designed to improve traffic safety, a problem that claims about as many lives each year as are lost in firearm suicides and homicides.

Federal funding for research on gun-related mortality is far below the levels for other sources of mortality in the United States. Stark and Shah (2017), for instance, found that federal gun violence research funding is just 1.6 percent the amount predicted based on federal funding for other leading causes of death. With this federal inattention comes a corresponding deficit in research: Stark and Shah (2017) also found that the volume of research publications on gun mortality was just 4.5 percent of what would be expected based on publication volume for other leading causes of mortality.

The federal government previously supported a more robust program of research examining firearm violence and policy. In the 1990s, the CDC was sponsoring millions of dollars of research on firearm violence, until researchers found that having a gun in the home was associated with an elevated risk of firearm homicide for members of the household. This finding was viewed by some as a one-sided attempt to manipulate the gun policy debate.

In an effort led by the National Rifle Association (Cagle and Martinez, 2004), a sufficient proportion of Congress was persuaded to adopt the Dickey Amendment in 1996, cutting \$2.6 million of funding from the CDC, an amount equal to what its injury prevention center had been spending on gun violence research. The Dickey

Amendment also introduced new language forbidding the CDC from advocating or promoting gun control. This language did not explicitly prohibit all research on gun violence or gun policy, but concern that any gun research could be viewed as advocacy has led the CDC to avoid supporting gun policy research lest it invite a budget adjustment like that in 1996 (Kellermann and Rivara, 2013).

Congress has included Dickey Amendment language in each CDC appropriations bill since 1996. Moreover, in 2012, similar language was added to an appropriations bill for the National Institutes of Health in the Consolidated Appropriations Act of 2012 (Pub. L. 112-74).

Research on firearm policy and violence prevention has since declined dramatically. According to a report by the advocacy organization Mayors Against Illegal Guns, by 2012, CDC funding of gun violence research had declined 96 percent since the mid-1990s, and academic publishing on gun violence fell 64 percent from 1998 to 2012 (Mayors Against Illegal Guns, 2013; Alcorn, 2016). Although comparable numbers of people die in car crashes and by firearm suicides and homicides, federal investment in traffic safety research funding is more than 270 times greater than in firearm violence research (Mayors Against Illegal Guns, 2013).

As suggested in a 2015 joint statement by Jay Dickey, the sponsor of the Dickey Amendment, and Mark Rosenberg, who ran the CDC's injury center when the amendment first passed, a gun violence research agenda should be developed with the dual goals of protecting citizens' and gun owners' rights and making our homes and communities safer:

Our nation does not have to choose between reducing gun-violence injuries and safeguarding gun ownership. Indeed, scientific research helped reduce the motor vehicle death rate in the United States and save hundreds of thousands of lives—all without getting rid of cars. For example, research led to the development of simple four-foot barricades dividing oncoming traffic that are preventing injuries and saving many lives. We can do the same with respect to firearm-related deaths, reducing their numbers while preserving the rights of gun owners. (Dickey and Rosenberg, 2015).

The science on which to base gun policy has advanced slowly since 2004, when the NRC panel concluded, "If policy makers are to have a solid empirical and research base for decisions about firearms and violence, the federal government needs to support a systematic program of data collection and research that specifically addresses that issue." Unfortunately, federal support for research that could help states and communities reduce firearm crime, violence, and suicide remains virtually nonexistent, and the state and federal surveys describing gun ownership and use, on which a better understanding of state policies could be built, have not lived up to the optimism expressed in NRC (2004) and Hahn et al. (2005). In some important respects, such federal support has deteriorated since then.

*Recommendation 4.* To improve understanding of the real effects of gun policies, Congress should consider whether to lift current restrictions in appropriations legislation, and the administration should invest in firearm research portfolios at the CDC, the National Institutes of Health, and the National Institute of Justice at levels comparable to its current investment in other threats to public safety and health.

*Recommendation 5.* Given current limitations in the availability of federal support for gun policy research, private foundations should take further steps to help fill this funding gap by supporting efforts to improve and expand data collection and research on gun policies.

**Conclusion 10.** Research examining the effects of gun policies on officer-involved shootings, defensive gun use, hunting and recreation, and the gun industry is virtually nonexistent.

The lack of rigorous studies examining the effects of gun policies on these outcomes is problematic because many stakeholders in gun policy debates are especially concerned about the effects laws could have on these matters. The desire to protect oneself, for instance, is self-reported as one of the primary reasons for gun ownership among 63 percent of all U.S. gun owners and among 76 percent of all U.S. handgun owners (Azrael et al., 2017), yet rigorous studies of the effects of laws on this outcome have rarely been conducted. As we discuss in Chapter Twenty-Three, on defensive gun use, the lack of research in this area stems, to some extent, from difficulties defining and measuring legal defensive gun use. In some—perhaps most—such cases, guns may contribute to an individual’s self-defense by deterring crimes that would otherwise occur. For this reason and others, it has proven difficult to estimate the frequency with which guns are used defensively.

Nevertheless, opportunities for understanding how policies affect defensive gun use exist and should be pursued. For instance, it may be possible to examine whether policies change the rate at which gun owners are the victims of crime or are injured during a crime. Similarly, FBI records of justifiable homicides, although imperfect as a proxy for defensive gun use, may nevertheless be useful for examining one aspect of a policy’s effects on defensive gun use, as demonstrated by Cheng and Hoekstra (2013). Given the strength of evidence of CAP laws on self-inflicted and unintentional injuries, studying the impact of these policies on defensive gun use can help inform the trade-offs between this outcome and the potential public safety benefits.

The dearth of research examining how policies affect the gun industry is a particularly significant shortcoming in the available scientific literature. Data from the U.S. Bureau of Labor Statistics (2017) suggest that more than 47,000 people in the United States are employed just in the manufacture of small arms and ammunition. The National Sports Shooting Foundation, a gun industry trade association, estimates

that an additional 250,000 may be employed in the distribution and sale of firearms and hunting supplies or in ancillary services, such as operating gun ranges or providing supplies or services to manufacturers and retailers (National Sports Shooting Foundation, 2017). The National Survey of Fishing, Hunting, and Wildlife-Associated Recreation Survey in 2011 found that more than 12 million people used firearms for hunting, with total expenditures on firearms exceeding \$3 billion and expenditures on ammunition exceeding \$1.2 billion (U.S. Fish and Wildlife Service, U.S. Department of the Interior, and U.S. Department of Commerce, 2012). In addition, more than 50 percent of all hunters participated in target shooting, and 22 percent of hunters visited shooting ranges (U.S. Fish and Wildlife Service, U.S. Department of the Interior, and U.S. Department of Commerce, 2012). As important as the concerns of this industry may be to the fate of proposed gun policies, there is, at present, little scientific evidence available to the public on this topic.

*Recommendation 6.* To improve understanding of outcomes of critical concern to many in gun policy debates, the U.S. government and private research sponsors should support research examining the effects of gun laws on a wider set of outcomes, including crime, defensive gun use, hunting and sport shooting, officer-involved shootings, and the gun industry.

**Conclusion 11.** The lack of data on gun ownership and availability and on guns in legal and illegal markets severely limits the quality of existing research.

There are no regularly collected data series that describe gun ownership or use at the state level since the CDC suspended its collection of this information on the Behavioral Risk Factor Surveillance System more than a decade ago. Most gun laws are designed to specify who can own guns or to change the ways that gun owners store and use their weapons. Therefore, gun ownership and use are the behaviors through which laws may affect such outcomes as suicide, homicide, hunting and recreation, and firearm sales. In the absence of reliable state-level information about gun ownership and use, researchers cannot assess the most-direct intended effects of policies—that is, the effects on gun ownership and use—which may otherwise be easier to detect than the downstream effects of such policies on comparatively rare outcomes, such as suicide and homicide. Is it the case that gun laws cannot have their intended effect because the stock of guns is so great in the United States that anyone who wants a gun can easily obtain one, whether or not they are prohibited? This is a question that cannot easily be answered with available data on gun ownership and use.

*Recommendation 7.* To make important advances in understanding the effects of gun laws, the CDC or another federal agency should resume collecting voluntarily provided survey data on gun ownership and use.

Additionally, the federal government no longer collects or shares with researchers data on illegal gun markets, which investigators could use to examine how policies change the availability of firearms. This is a problem that has also worsened since NRC (2004) identified it as a critical shortcoming for research on gun policy. Specifically, the Tiahrt Amendments (a series of provisions attached to Bureau of Alcohol, Tobacco, Firearms and Explosives appropriations bills since 2003) block researchers and others from studying gun trace data and gun purchaser data. When trace data were available to researchers prior to 2003, the information provided important insights into how criminals obtain their weapons (Kennedy, Piehl, and Braga, 1996; Bureau of Alcohol, Tobacco, and Firearms, 1997); whether states with more-restrictive gun laws create shortages of guns for those who may be prohibited from purchasing them (Weil and Knox, 1996; Cook and Braga, 2001); how guns move between states with less- and more-restrictive gun laws (Cook and Braga, 2001; Webster, Vernick, and Hepburn, 2001); the characteristics of gun sales likely to be associated with diversion to prohibited possessors (Pierce et al., 2003); and other valuable, actionable, policy-relevant information (for further discussion, see Braga et al., 2012).

Trace data and purchaser data have significant limitations that can make inferences about gun markets and crime difficult or uncertain. That is a caveat that applies to most data used in evaluating gun policies, but it should not be a reason for prohibiting access to trace data for research purposes.

*Recommendation 8.* To foster a more robust research program on gun policy, Congress should consider whether to eliminate the restrictions it has imposed on the use of gun trace data for research purposes.

**Conclusion 12.** Crime and victimization monitoring systems are incomplete and not yet fulfilling their promise of supporting high-quality gun policy research in the areas we investigated.

NRC (2004) and Hahn et al. (2005) each expressed optimism about new sources of data that had only recently begun and that could, in theory, be used to improve the study of gun policy. These included the National Violent Death Reporting System (NVDRS) and the National Incident-Based Reporting System (NIBRS).

The NVDRS was designed to provide unprecedented detail on the circumstances of violent deaths in participating states, such as information on the victim's life stresses, the relationship between the victim and the offender, and other crimes that were committed at the time of the suicide or homicide. Despite the richness of the information available through the NVDRS, not one of the quasi-experimental studies meeting the inclusion criteria for this report used NVDRS data. It could be that there have not been enough states participating in the NVDRS collection process for long enough to permit the use of strong causal models. State participation in the NVDRS is voluntary

and has been growing slowly but steadily. Currently, 42 states participate, but data are available from only 18, and not from some large states, such as California and Texas.

The NIBRS was designed to collect more-detailed information on incidents of crime in the United States than has been available through the FBI's Uniform Crime Reporting system. Whereas the FBI system collects summary or aggregate statistics on serious violent and property crimes reported to law enforcement agencies, NIBRS was designed to collect incident-level information about crimes reported to police. It officially launched in the mid-1980s, but by the time of the NRC review, only 16 percent of the U.S. population was served by a law enforcement agency that reported crime information to NIBRS (NRC, 2004, p. 33). Because the NIBRS program is voluntary and can be costly for law enforcement agencies to adopt, participation rates have not improved as rapidly as the NRC reviewers may have expected. By 2012, the proportion of U.S. residents served by a participating law enforcement agency had risen to just 30 percent (Bureau of Justice Statistics [BJS], 2017a). Perhaps for this reason, none of the studies meeting the inclusion criteria for this report used NIBRS data.

Although the current NIBRS data are of limited use for the kind of research we have reviewed, a new BJS initiative offers hope that this could soon change. The National Crime Statistics Exchange is an attempt to recruit and facilitate the participation of a representative sample of 400 law enforcement agencies to participate in NIBRS. With this sampling approach and data from the more than 6,000 agencies already participating, BJS expects to be able to begin generating reliable national crime trend information based on NIBRS data.

*Recommendation 9.* To improve the quality of evidence used to evaluate gun policies, the NVDRS should be expanded to include all states with rigorous quality control standards.

*Recommendation 10.* BJS should examine the cost and feasibility of expanding its existing programs to generate state-level crime data.

Another potentially valuable source of information on crimes is the National Crime Victimization Survey (NCVS), which collects detailed information on crime from a panel of U.S. residents selected to be representative of the nation. This survey provides critically important information about crimes that may never be reported to the police, as well as credible information on how victims and potential crime victims have been able to use guns defensively. But NCVS cannot readily be used to understand the effects of state gun laws on crime because it does not generate state-level estimates. Therefore, the studies meeting our eligibility criteria primarily used data from the Uniform Crime Reporting program (or its Supplemental Homicide Report) when examining crimes, meaning they worked with data that had few details about

individual crimes and, thus, could examine only the subset of crimes reported to law enforcement.

Recognizing the need for state-level victimization data, BJS has explored options for generating such estimates through NCVS (BJS, 2017b). BJS is conducting a pilot program that expands the survey panel with the intention of eventually generating reliable estimates for 22 states. In addition, the bureau has published model-based state estimates for some types of crime over three-year periods from 1999 to 2013 (Fay and Diallo, 2015).

*Recommendation 11.* BJS should continue to pursue its efforts to generate state-level victimization estimates. The current goal of generating such estimates for 22 states is a reasonable compromise between cost and the public's need for more-detailed information. However, the bureau should continue to expand its development of model-based victimization rates for all states and for a wider set of victimization experiences (including, for instance, crimes involving firearm use by an assailant or victim).

**Conclusion 13.** The methodological quality of research on firearms can be significantly improved.

Over the past several decades, studies have offered a great deal of information about how to use what data are available to generate reliable and credible estimates of the effects of gun policies on various outcomes, and the computing power that researchers need to implement the increasingly demanding modeling requirements has more than kept pace with the diffusion of knowledge about appropriate statistical methods. Nevertheless, the scientific literature we reviewed shows that many of the best recent studies suffer from important limitations that should be addressed in future research. These shortcomings concern the following:

- Interpreting effects generated in models that lack the statistical power to have any reasonable chance of detecting the likely effects of policies. This problem can result in a high likelihood that statistically significant effects are in the opposite direction of the true effects or that the statistically significant effects grossly exaggerate the magnitude of the true effects.
- Estimating too many parameters for the number of available observations. This problem can result in statistically significant effects that tell virtually nothing about the true generalizable effects of the policies.
- Poorly calibrated tests for whether the effects of policies are statistically significant. This problem can result in many discoveries of effects that reject the null hypothesis that the policy had no effect when, in fact, under proper inferential procedures, the discoveries would be consistent with the law having no effect (or a small effect in the opposite direction).

- Poorly justified selections of statistical models or covariates. This problem can result in estimates of a policy's effects that are in the wrong direction or that badly misconstrue the magnitude or statistical significance of their effects.
- Presenting the results of exploratory statistical modeling as though they reflect findings from a confirmatory analysis. When dozens of hypothesis tests are conducted, about 5 percent would be expected to achieve statistical significance at the  $p < 0.05$  level even if the law had no effect. Failure to acknowledge that findings are the result of exploratory analysis can lead to overconfident interpretations of effect estimates that may not reflect the true effects of a policy.
- Undisclosed categorization of which states had which laws and when they were implemented. Gun policy analysts need reliable and shared databases of state laws. Correct coding of state laws is challenging, and when researchers have disclosed their state law codings, those codings have often been found to contain errors that could affect results.
- Poorly justified models of the time course of a policy's effects. Statistical models of the effects of a policy impose assumptions about the period over which the effects of the policy will build. Often, the implicit assumption is that the full effect of the policy will be observed instantaneously in the first year after the date it is scheduled for implementation. At best, this can lead to underestimates of the effects of policies.
- The use of spline and hybrid models that do not estimate coherent causal effects.
- Inadequate attention to threats of reciprocal causation or simultaneity biases in effect estimation.

These are technical points of interest chiefly to researchers, so we relegate our detailed discussion of each point to Appendix A. However, our final recommendations are for other researchers interested in the analysis of the effects of gun policies.

*Recommendation 12.* As part of the Gun Policy in America initiative, we have published a database containing a subset of state gun laws from 1979 to 2016 (Cherney, Morral, and Schell, 2018). We ask that others with expertise on state gun laws help us improve the database by notifying us of its errors, proposing more-useful categorizations of laws, or submitting information on laws not yet incorporated into the database. With such help, we hope to make the database a resource beneficial to all analysts.

*Recommendation 13.* Researchers, reviewers, academics, and science reporters should expect new analyses of the effects of gun policies to improve on earlier studies by persuasively addressing the methodological limitations of earlier studies, including problems with statistical power, model overfitting, covariate selection, poorly calibrated standard errors, multiple testing, undisclosed state varia-

tion in law implementation, and unjustified assumptions about the time course of each policy's effects.

In conclusion, with a few exceptions, there is a surprisingly limited base of rigorous scientific evidence concerning the effects of many commonly discussed gun policies. This does not mean that these policies are ineffective; they might well be quite effective. Instead, it reflects shortcomings in the contributions that scientific study can currently offer to policy debates in these areas. It also reflects, in part, the policies we chose to investigate, all of which have been implemented in some U.S. states and, therefore, have proven to be politically and legally feasible, at least in some states. This decision meant that none of the policies we examined would dramatically increase or decrease the stock of guns or gun ownership rates in ways that would produce more readily detectable effects on public safety, health, and industry outcomes. The United States has a large stock of privately owned guns in circulation—estimated in 2014 to be somewhere between 200 million and 300 million firearms (Cook and Goss, 2014). Laws designed to change who may buy new weapons, what weapons they may buy, or how gun sales occur will predictably have only a small effect on, for example, homicides or participation in sport shooting, which are affected much more by the existing stock of firearms. Although small effects are especially difficult to identify with the statistical methods common in this field, they may be important. Even a 1-percent reduction in homicides corresponds to more than 1,500 fewer deaths over a decade.

By highlighting where scientific evidence is accumulating, we hope to build consensus around a shared set of facts that have been established through a transparent, nonpartisan, and impartial review process. In so doing, we also mean to highlight areas where more and better information could make important contributions to establishing fair and effective gun policies.

## APPENDIX A

## Methodological Challenges to Identifying the Effects of Gun Policies

---

A review by the National Research Council (NRC) (2004) highlighted important problems with the methods used in many studies examining the effects of gun policies. Since then, the literature has grown, often in a series of critiques and counter-critiques of the statistical methods used by different sets of researchers. Having carefully reviewed, discussed, and debated among our own project team the relative merits of different methods used in this literature, we offer here our assessment of the principal methodological challenges that future research on gun policy should seek to overcome.

### Power

Statistical models using variation in state policies to identify causal effects of gun policies sometimes face serious problems with statistical power, meaning that the models may have little chance to detect effects even when they exist, and any statistically significant effects the models detect are likely to have greatly exaggerated magnitudes and may often get the direction of the effect wrong. These serious problems are common when effects of interest are small relative to other sources of variation in the outcomes (Gelman and Carlin, 2014). This is likely the case for the effects of gun policies (like those we examined in this report) that might affect new purchases of firearms but not the much larger stock of firearms available for use or that might have a modest effect on a small number of firearm incidents.

Nevertheless, even small effects may be important. For example, a 3-percent reduction in firearm deaths corresponds to 1,000 fewer deaths per year nationally. But a 3-percent effect, or an incidence rate ratio (IRR) of 0.97, is small relative to the much larger variation in firearm death rates over time or across U.S. states. Many observations (for instance, years of data for each state) may be required before a model has sufficient power to detect such an effect. Moreover, power is diminished as large numbers of covariates are added to the model.

To illustrate, consider the preferred model reported by one set of researchers reviewed here. The reported effect for one policy was an IRR of 0.97 (confidence interval [CI]: 0.72, 1.15). We can infer from these statistics that such a model could detect

a realistically small 3-percent reduction in the outcome at the  $p < 0.05$  level of significance with a power of just 6 percent, well below the 80-percent level researchers typically seek when designing research.<sup>1</sup> Moreover, there is a nearly one in four chance that any statistically significant effect identified is in the wrong direction, and any statistically significant effect the model identifies will necessarily describe an effect size vastly greater than the true effect size. In the present example in which the true effect has an IRR of 0.97, the model would not identify a statistically significant effect any smaller in magnitude than an IRR of about 0.74. That is, the true 3-percent reduction would be found to be significant only if the model estimates it to actually be a 26-percent reduction in the outcome.

In other words, models like some that we find in the existing literature have almost no chance of detecting realistically small effects of firearm policies, and any significant effects the models do discover are likely to be grossly exaggerated in their magnitude and almost equally likely to be in the wrong direction as the right one. While this problem is by no means universally true in this literature, it is common enough that we present it as a general concern rather than citing by name the article from which we drew our example.

### Overfitting

The problem of poorly powered models is exacerbated when, as is common in this field, investigators include many covariates and fixed effects in their models of the effects of policies. Most guidance on reliable regression modeling emphasizes that models should have at least ten or 15 times as many observations as parameters being estimated (Cavanaugh, 1997; Draper and Smith, 1998; Good and Hardin, 2012). However, with fixed effects for each year in time-series data; fixed effects for each state; and a wide range of demographic, social, and economic covariates, models in this field frequently violate such recommendations, sometimes falling below even five observations per parameter (Schell and Morral, 2016). Such models are likely to be overfit, meaning, among other things, that their estimates are unreliable or unlikely to describe generalizable relationships between covariates of interest (such as policies) and the modeled outcomes.

Although problems with statistical power are common in this literature, they may not be inevitable. Models that do a good job explaining sources of variance across time or among states will have more statistical power than those that explain less of this variance. In a separate line of work, RAND's Gun Policy in America project has examined the performance (power, bias, and error rates) for many gun policy model specifications

<sup>1</sup> The inferences about power in this paragraph rely on power calculations and calculations of the probability of an error in the sign of the estimate and the magnitude of the estimate using methods described in Gelman and Carlin (2014). We assume that the standard error of the (unexponentiated) model estimate is  $(\log(\text{IRR}) - \log(\text{LB}))/1.96$ , where IRR is the reported effect size, and LB is the lower (or higher) bound of the 95-percent CI reported for the estimate.

using simulations for which the true effect of policies is known. This work demonstrates that many statistical models commonly used in gun policy research have quite poor performance in terms of type 1 error, power, and bias but that there are modeling approaches with comparatively good characteristics on these and other criteria.<sup>2</sup>

## Standard Errors

Most of the studies meeting our inclusion criteria identified the effects of policies by examining state-level changes in an outcome (such as homicides) over time. In many such models, there is a strong correlation within states among the error terms over time. Whether this clustering of error components mandates some adjustment to ensure that standard errors and even parameter estimates are unbiased has been a source of contention and confusion in the field. According to NRC (2004), cluster adjustments for fixed-effects models like many we reviewed in this report were unnecessary and produced misleadingly large CIs.

As Aneja, Donohue, and Zhang (2014) have argued, however, NRC did not properly consider how serial correlations in panel data can produce misleading standard errors when no adjustments are made for state-level clustering within the data. The authors provided compelling evidence that, without adjustment, standard errors are so severely underestimated that two-thirds or more of effects known to have no systematic association with the outcome variable appear to be statistically significant, a proportion far higher than the 5 percent expected for significance levels set at the  $p < 0.05$  level. They further showed that even a common cluster adjustment procedure does not fully correct the underestimation of standard errors. Although state-level cluster adjustment vastly improves upon unadjusted estimates, standard errors are still inflated, frequently leading to statistically significant null effects at rates between 10 percent and 15 percent where a properly calibrated standard error would produce such errors in only 5 percent of cases.

Longitudinal analyses of state firearm policies that take no steps to address clustering continue to be published, although there is good evidence that the kinds of serial correlation found in state panel data used in gun policy research can result in large biases in estimated standard errors (Aneja, Donohue, and Zhang, 2014). The significance of the effects that these studies report should be regarded with deep skepticism. Similarly, studies frequently use robust standard error corrections or weight the regression models by state or county populations, but neither approach is likely to satisfactorily account for bias resulting from serial correlation, and population weighting could make it worse (Aneja, Donohue, and Zhang, 2014; Durlauf, Navarro, and Rivers, 2016). Further challenges for estimating standard errors arise for studies that

---

<sup>2</sup> A report on this effort is forthcoming and will be available on the Gun Policy in America project website.

use difference-in-differences approaches in which policy effects are identified from only a small number of states (or jurisdictions), because inference based on clustered standard errors has been shown to severely over-reject in these cases (Conley and Taber, 2011; MacKinnon and Webb, 2017).

## Multiple Testing

Among studies examining the effects of firearm policies, it is common to present multiple model specifications, each with multiple effect estimates and sometimes run on multiple subsets of the population (e.g., deaths of those under age 19 or over age 55). In some cases, additional models may have been explored using alternative covariates or design characteristics. This type of exploratory modeling is valuable. It clarifies how robust findings are to different aspects of model specification, and it can detect associations or effects that are important but might otherwise have been overlooked.

In the context of such exploratory modeling, however, conventional interpretations of statistical significance erode. Whereas a significant effect at the  $p < 0.05$  level is designed to occur in only one of 20 tests where there is, in fact, no effect, a study that conducts 20 such tests stands a good chance of identifying at least one statistically significant effect, even when no true effects are present. Such accidental statistically significant effects could contribute to the confusing and sometimes contradictory findings reported in the literature.

There are procedures for adjusting levels of statistical significance in the presence of multiple hypotheses testing that could help to reduce erroneous findings (Shaffer, 1995), but these were rarely used in the studies we examined. Moreover, these procedures would not address all sources of questionable findings that can occur in exploratory analysis. Instead, we believe that studies of the effects of state policies should be explicitly treated as exploratory rather than as testing a specific hypothesis. Therefore, strong conclusions about the apparent effects of policies should almost never be made. Instead, effects should be regarded with suspicion until they have been confirmed through independent studies. Because results in this field tend to be sensitive to details of the model specification and covariates, we propose that anyone undertaking such confirmatory analyses preregister the details of their models and data before assembling an analytic data set. Such preregistration does not prevent investigators from making changes to the analytic plan that may become necessary once results become available, but departing from the preregistered plan should signal to the researchers that their analysis should be considered exploratory rather than confirmatory.

## Coding State Laws

Gun policy analysts need a reliable and shared database of state laws. There are many well-known problems associated with the coding of state laws. As noted by NRC (2004) and Hahn et al. (2005), there are frequently inconsistencies across studies in the specification of which states or jurisdictions have which laws and when they took effect. In some cases, researchers have used the year in which bills were passed into law as the year the law was implemented; in others, researchers have used the year the law was designed to take effect or the first full year after the law took effect. Although some researchers (e.g., Aneja, Donohue, and Zhang, 2014; Lott and Mustard, 1997; Rosengart et al., 2005; Vernick and Hepburn, 2003) have published or shared their coding of laws, which allows for debate and improvement of the coding schemes, such coding often is not transparent and cannot be reviewed for accuracy or to understand what assumptions about laws were made. More generally, public databases of gun laws over time are unavailable for many laws. Because of the cost and complexity of constructing such data sets, researchers interested in the effectiveness of gun laws have often favored weak, cross-sectional study designs or have collected proprietary data sets of laws that are not shared.

One important assumption that all such efforts necessarily must make concerns the features of different laws that make them sufficiently similar to be grouped together under a broad class of laws. For instance, as we described in Chapter Ten, on child-access prevention laws, states differ in whether penalties for violating the law result in criminal, misdemeanor, or civil penalties, and there is evidence (albeit inconclusive) that criminal penalties may have different and stronger effects than other approaches. Such variation in laws and their associated effects means that combining them within a particular class of laws, such as child-access prevention laws, may obscure important effects that some variants of the law have (Alcorn and Burris, 2016). On the other hand, distinguishing each variant of a law reduces the number of jurisdictions implementing any particular version of the law, which reduces the statistical power of most models used to identify the causal effects of the law. Therefore, specification of a homogenous set of laws could increase the average effect size, but it also can reduce the statistical power that models have to detect the larger effects. Rarely, however, have published analyses explicitly addressed this conflict or the choices and assumptions made to address it.

We believe that the science of gun policy will be substantially advanced with the public release of comprehensive state law time-series data, and we have made that one of the goals of the Gun Policy in America project. Specifically, we have assembled a state law database for 1979–2016 that codes our 13 broad classes of state gun policies and many subcategories (see Cherney, Morral, and Schell, 2018). As noted, this database is available for use and further improvement by the scientific community.

### Coding the Time Course of a Policy's Effects

Even with a reliable database of state laws, however, investigators of gun policy effects face a further complication in coding the time course over which gun laws exert their effects. Frequently, investigators assume that a policy's full effects occur in the year it is implemented or the first full year after the year of implementation. This coding implies that all of a policy's effect is observed shortly after its implementation, which may be reasonable for some types of policies. Others, however, might accumulate their effects over longer periods. For instance, laws that expand the class of prohibited possessors will primarily affect those members of the class who are seeking to buy new firearms but not those who already own firearms. Indeed, it may be many years before such a law affects firearm ownership of a sizable proportion of the population. The proper coding of this type of effect might involve additive or multiplicative effects over several years.

Similarly, the effects of some policies, such as child-access prevention laws, may not be fully realized until a large proportion of gun owners become aware of them, meaning that the time course of the effect may depend on media campaigns to raise awareness or high-profile prosecutions under the law. Unfortunately, however, unless investigators know when these effects occur, their effect estimates will underestimate the policy's true effects. For this reason, we believe that researchers modeling the effects of policies should carefully consider when effects are likely to appear and should make these assumptions and the corresponding model specifications explicit in their analyses.

### Spline and Hybrid Effect Coding

Several studies investigating the effects of concealed-carry policies (see Chapter Thirteen) and studies of Australia's 1996 National Firearms Agreement (see Chapter Twenty-Four) have used model specifications referred to as *spline* or *hybrid* models within this field. In most models investigating the causal effects of a policy on an outcome, the effect is assumed to produce a shift in the level of the outcome; for example, a policy may result in a lower homicide rate after implementation relative to before. The type of spline models used in this field differ from standard causal effect models because the policy is assumed to modify the trajectory of the outcome over time rather than the level or in addition to a change in the level. More specifically, these models assume that the states or counties that implement the policy will diverge from the national trend at a constant rate for an indefinite period.<sup>3</sup>

---

<sup>3</sup> Typically in gun policy models, a spline will be entered as a predictor in a regression equation that takes on values of zero before the policy was implemented (as well as in states that never implemented) and then takes on values that increase linearly in time for a given state once the policy is implemented in that state. For the models used in this field, these state-specific trends are estimated while controlling for national trends by including year

Although we discuss the reported results of these models, for practical and theoretical reasons, we do not present effect sizes from these spline models (or from spline and dummy hybrid models), even when the authors preferred those models. The practical reason is that the effect size is assumed to vary over time, so there is no single effect size to report. In fact, at a date sufficiently long after implementation, these models often assume that the states that implemented the policy will have extremely large or small effects on the outcome. In such cases, the effect size one presents is based entirely on a relatively arbitrary decision about the length of time over which to compute the effect. Moreover, even if we had arbitrarily selected a specific time interval over which to compute the effect, the research articles do not contain the information necessary to assess the CIs around those estimates.

Furthermore, two features of these spline models make them difficult to interpret as the causal effects of a gun policy. First, the spline coefficient is highly sensitive to the timing of any shifts in the outcome, and it responds to the timing in the opposite way as would standard methods for causal inference. A large increase in crime that does not occur until many years after a policy has been implemented will yield a large positive spline coefficient, suggesting that the policy is harmful. However, a similarly large increase in crime that occurs immediately after the policy is implemented will yield a negative spline coefficient, suggesting that the policy is beneficial even though it was followed immediately by an increase in crime.<sup>4</sup> Standard frameworks for inferring causality from observations (e.g., Mill, 1843) would suggest that an increase in crime immediately after the policy was implemented is the strongest evidence that the policy was harmful, and if a similar increase did not occur until years after implementation, it would constitute weaker evidence of a harmful effect of the policy. However, inferring causation from the spline coefficient leads to the opposite inferences, with an immediate increase in the outcome interpreted as the policy causing a decrease in the outcome but a delayed increase interpreted as evidence that the policy caused the outcome to increase. It is important to note that this interpretational challenge occurs in models that use only the spline to indicate the causal effect, as well as in hybrid models that use both a dummy variable and a spline (i.e., a step and a slope). (For more information, see the box on the next page.)

---

fixed effects in the same model. Thus, the splines are state trends that should be interpreted as deviations from the national trend.

<sup>4</sup> More technically, the spline predictor in the regression equation has a mean value that corresponds to a specific time after implementation. This spline's mean typically falls a few years after implementation, but precisely when it occurs depends on the number of states that implemented the law and how long the study follows the states. Any increase in crime that occurs before this mean spline creates a more negative spline coefficient. An increase in crime, no matter how large, that occurs at that mean has no effect on the spline coefficient. Any increase in crime that occurs after that mean results in a more positive spline coefficient, with progressively greater leverage over the coefficient occurring with greater time.

**The Interpretational Problem with Spline and Hybrid Models**

To illustrate the problem discussed here, consider a hypothetical state that would have shown a constant linear trend in crime (slope = 1) from 1980 to 2001 (see Table A.1). However, a policy went into effect in 1991 that raised the crime rate by 1 point in that year. If one fits a linear trend and standard spline effect to these data, it yields a spline coefficient of -0.04. If one fits a hybrid effect to these data, it yields a spline coefficient of -0.05 and a dummy effect of 0.36. Thus, although everyone who views this data series would conclude that it is inconsistent with the conclusion that the policy caused a decline in crime, the spline coefficient is negative in both models.

**Table A.1. Illustrative Data, with Spline and Dummy-Coded Effect Variables**

| Year | Crime Rate | Spline | Dummy |
|------|------------|--------|-------|
| 1980 | 10         | 0      | 0     |
| 1981 | 11         | 0      | 0     |
| 1982 | 12         | 0      | 0     |
| 1983 | 13         | 0      | 0     |
| 1984 | 14         | 0      | 0     |
| 1985 | 15         | 0      | 0     |
| 1986 | 16         | 0      | 0     |
| 1987 | 17         | 0      | 0     |
| 1988 | 18         | 0      | 0     |
| 1989 | 19         | 0      | 0     |
| 1990 | 20         | 0      | 0     |
| 1991 | 22         | 1      | 1     |
| 1992 | 22         | 2      | 1     |
| 1993 | 23         | 3      | 1     |
| 1994 | 24         | 4      | 1     |
| 1995 | 25         | 5      | 1     |
| 1996 | 26         | 6      | 1     |
| 1997 | 27         | 7      | 1     |
| 1998 | 28         | 8      | 1     |
| 1999 | 29         | 9      | 1     |
| 2000 | 30         | 10     | 1     |
| 2001 | 31         | 11     | 1     |

Stated more generally, the direction and size of the spline coefficient serves as an unbiased estimator of the causal effect if, and only if, the duration of the spline's slope corresponds to the actual period over which the policy's effects are increasing in magnitude. If the true effect phases in earlier than assumed by the chosen spline function, the spline coefficient will be biased away from the true direction of the causal effect, possibly even reversing the sign of the true effect. Thus, researchers should probably avoid using splines that assume that the effect of the policy increases linearly into perpetuity. Such an assumption makes it likely that the true effect of the policy is in the opposite direction of the spline coefficient.

The second challenge in the interpretation of the spline coefficient as a causal effect comes from the null hypothesis that is typically used when testing the spline coefficient. Specifically, the state-specific linear slope in the outcome with respect to time after the implementation of the policy is compared with the state-specific linear slope over the years prior to implementation. The null hypothesis in this case is that a given state's deviation from a national trend in the pre-policy period should be expected to continue in a linear manner, absent any intervention, indefinitely. Thus, the null hypothesis being tested is derived from a time trend that has been extrapolated, often many years into the future. This assumption has not been justified within this field, neither with a theory about an underlying data-generating mechanism for which the assumption is appropriate nor by showing that it is a good fit to the available data. In contrast, our analysis of U.S. crime data suggests that the data do not show the pattern predicted by this assumption.<sup>5</sup> Moreover, making an assumption of constant state-specific trends in crime can result in obvious research artifacts. Many types of data show regression to the mean, which describes a pattern of data generated by a random process in which an extreme observation is more likely to be followed by a less extreme observation than a more extreme observation. Failure to account for regression to the mean can result in spurious research conclusions. For example, if legislators pass gun legislation as a response to rising crime rates, any tendency for crime rates to return toward more-typical levels due to regression to the mean may be misinterpreted as evidence that the legislation lowered crime.

The risk of this type of error is much greater in spline models because the assumption used to generate the null hypothesis is that the data display regression away from the mean. Essentially, these models assume a process in which extreme observations are likely to be followed by observations that become progressively more extreme in the same direction—the opposite of regression to the mean. In contrast, in data showing regression to the mean, the null hypothesis that the trend before a given date equals

---

<sup>5</sup> Specifically, the assumption predicts that state trends that deviate from the national trend in a positive direction (increasing crime rates relative to the nation) will continue to get progressively higher over time, while those states that deviate negatively (decreasing crime rates relative to the nation) will continue to decrease indefinitely. This predicts a “fan” pattern in crime trends in which the divergence in crime rates across states perpetually increases over time. Actual crime data do not show any consistent divergence of trends across states.

the trend after the date is routinely rejected. That is, the null hypothesis that state-specific deviations from the national crime trend will continue to grow indefinitely can often be rejected in the states that implemented the policy of interest, as well as many of those that did not.<sup>6</sup> Rejecting this implausible null hypothesis is not evidence of a causal effect of any policy.

In spite of clear statistical problems with inferring causal effects of policy on crime data using these methods, some researchers advocate this approach. In our view, their arguments misinterpret conventional effects identified by a shift in the mean (e.g., dummy-coded effects) and spline effects based on changes in slope. For example, Lott, Moody, and Whitley (2016) stated,

The problems with using the dummy variable can be illustrated using results of 3 other papers. Santaella-Tenorio et al. [2016] reported the dummy model from Table 8b of the article by Ayres and Donohue [2003a]. Had they reported the other specification in Table 8b (or other tables) that showed the trends before and after implementation of the law (specifications that reject the assumptions behind the simple dummy approach), they would have shown the statistically significant downward trend in murder rates that indicated that the longer the right-to-carry laws were in effect, the greater the drop in murder rates was.

That is, the three papers interpret the spline coefficient as a “statistically significant downward trend in murder rates.” This is incorrect; the negative spline term indicates that the slope coefficient is of lower value after implementation than before, but it does not imply that rates are actually declining over time either in absolute terms or relative to the other states that did not implement *shall-issue* (or right-to-carry) laws (see Chapter Thirteen). It is quite possible to get a negative spline coefficient even if shall-issue laws cause a large and immediate spike in murder. Similarly, such a negative coefficient could occur even if the law has no effect on murder, because it is not reasonable to extrapolate a pre-implementation trend of increasing murder rates indefinitely into the future. Historically, state-specific increases in murder have been followed by later reversion to more-typical values, even without passage of shall-issue laws. Indeed, if the authors’ descriptions of the data as showing progressively larger drops in murder rates over time had been correct, there would have been a lower murder rate after implementation than before. That is, if their descriptions of the data were correct, there

<sup>6</sup> For example, imagine that the states that implemented a given policy had an aggregate firearm homicide rate of eight homicides per 100,000 population in the year leading up to implementation and nine homicides per 100,000 in the year prior to that. The null hypothesis based on extrapolating this trend is that the rate of homicides will be seven per 100,000 the year after implementation and will decline to exactly zero homicides within eight years in all of the states that implemented the policy. It is likely that the null hypothesis will be correctly rejected because the states do not actually have zero homicides after eight years, but it would also be rejected because it incorrectly assumed that preexisting trends would continue, unchanged and indefinitely. The null would be rejected for reasons that have nothing to do with any causal effect of firearm policy.

would have been a significant negative coefficient on the dummy variable that they dismissed as unimportant, but there may or may not have been a significant negative spline coefficient.

It is important to note that our critique of how spline models have been used in this field is not, in any way, a critique of the use of splines more generally. Splines are extremely general regression tools to allow variations in slopes across a predictor variable. It is entirely reasonable to assume, for example, that the effects of a policy on crime phase in over several years. In such a case, a simple dummy-coded effect may underestimate the true effect size, while using a spline that is designed for that particular phase-in period would not. In our view, using these types of splines to identify a causal effect of policy on some crime outcome would require the following three things:

1. The model would need to be constructed so that the researchers would not conclude that increases in crime immediately after policy implementation are evidence that the policy lowers crime. This is a typical feature of spline models, particularly when the change in slope is modeled as persisting for a long period. This problem can be limited by using splines whose slopes operate over a narrow time frame, which can be justified as the phase-in period of the policy's effect (e.g., as used in the preferred specifications in Donohue, 2004). Such splines are similar to dummy-coded variables but with a gradual transition between 0 and 1 rather than an abrupt transition. If the phase-in period is hypothesized to last more than a few years, it may be necessary to estimate a more complex function to avoid making the wrong causal inference.
2. The null hypothesis that is interpreted as no causal effect must be something that is reasonably true in the absence of the policy in question. The null should be a hypothesis that would not be routinely rejected if tested within states that never implemented the policy or if tested using randomized implementation dates. In practice, this usually requires a null hypothesis that does not extrapolate pre-policy crime trends indefinitely into the future. Instead, the null should be based on deviations from the pre-policy average crime level or on deviations from a state-specific trend that is identified by both pre-implementation and post-implementation crime rates (i.e., based on deviations from an interpolated rather than extrapolated trend).
3. When regression models contain multiple effects of the policy, such as hybrid models that contain a spline and a dummy variable, the various effects cannot be tested or interpreted independently. The effect size and statistical significance can be assessed only by integrating all of the ways in which the policy influences the outcome within the model. For example, researchers should not claim that a policy is associated with a reduction in crime based on a significant negative spline coefficient when the model includes another effect that simultaneously predicts increased crime following implementation of the policy. Despite the

significant negative spline, the model may still predict that the policy is associated with a subsequent increase in crime in all years represented in the data. Thus, while hybrid models can avoid some of the interpretational problems of spline models, any conclusions about the effect of the policy on crime must reflect all of the modeled effects relating the policy to the outcome within the model. Ideally, this analysis would test the effect at some point after the policy is hypothesized to be fully phased in but well within the period that states were typically followed in the data set. This requirement applies to the direction, size, and statistical significance of the joint effect.

Our view of the existing literature is that none of the available studies presents a spline or hybrid model that meets these three requirements for interpreting the effects. Some of the models in the literature meet some of these requirements, but none is readily interpreted as estimating a causal effect of gun policies. For this reason, we generally present the simple dummy-coded causal effect when it is provided by the authors, although we do discuss the authors' preferred specification in the text.

### **Simultaneity and Reciprocal Causation**

To obtain an unbiased estimate for the causal effect of firearm policy changes, the ideal research design would be akin to a randomized trial in which policies were randomly assigned across states and over time (Aneja, Donohue, and Zhang, 2014; Donohue, 2003). This type of experimental design is infeasible in the context of gun policies, so researchers have had to rely on quasi-experimental methods in which the implicit assumptions require that state adoption of a given firearm policy is unconfounded by omitted factors that influence both law passage and the outcome of interest (i.e., omitted variables bias) and that changes in firearm policy are not themselves driven by changes in the outcome of interest (i.e., simultaneity bias). These issues are not unique to the study of firearm policies and merit consideration across a broad range of program and policy evaluations.

Potential issues of simultaneity have been discussed primarily in the research on shall-issue laws and crime (for a discussion of shall-issue and other concealed-carry laws, see Chapter Thirteen). Specifically, many studies have noted the potential for reciprocal causation—that is, that state legislatures pass shall-issue laws as a response to high or rising rates of violent crime (Aneja, Donohue, and Zhang, 2014; Grambsch, 2008; Kovandzic, Marvell, and Vieraitis, 2005; Ayres and Donohue, 2003a; Donohue, 2003; Manning, 2003; Kovandzic and Marvell, 2003; Plassman and Whitley, 2003; Lott and Mustard, 1997). Indeed, Grossman and Lee (2008) found that the percentage change in the violent crime rate over the preceding five years had a statistically significant positive effect on the likelihood that states with may-issue laws switch to

shall-issue laws; Luca, Deepak, and Poliquin (2016) found that the occurrence of a public mass shooting significantly increased the number of firearm bills introduced within a state one year later. If such reciprocal causation exists, the estimated effects of firearm policies on crime rates from the difference-in-differences strategy employed by most of the qualifying studies we identified may be inconsistent and biased, although the direction of such bias is ambiguous. While some studies have tested for potential reciprocal causation and found little evidence of bias driven by differential pre-trends in law-enacting states (Rosengart et al., 2005; Plassman and Whitley 2003), other studies have found this to be an issue of concern for shall-issue laws (Aneja, Donohue, and Zhang, 2014; Grambsch, 2008; Donohue, 2003).

The presence of reciprocal causation complicates causal identification of the true effects of firearm policy changes and requires alternative approaches to those used most commonly in the literature we identified. Unfortunately, some of the existing methods for handling simultaneity problems may not be feasible or may face other limitations. For instance, Lott and Mustard (1997) and Gius (2015a) employ instrumental variables techniques, but the instruments chosen are questionable and neither study provides sufficient evidence to assess instrument validity (Manning, 2003). Synthetic control methods (Abadie, Diamond, and Hainmueller, 2010) have been used to construct a counterfactual “control state” that matches the pre-trend of the law-passing state (Crifasi et al., 2015; Rudolph et al., 2015), but these methods do not readily accommodate inferential statistics and provide estimated effects that are often identified from a policy change in only one state or one state-year, meaning the observed effect is confounded with many other changes in the state that might equally explain any observed differences between the state and its synthetic controls.

More research and methodological innovation is required to address simultaneity and reciprocal causation challenges to causal inference in this and other fields of research. In particular, it would be useful to understand better the factors leading to state or municipal decisions to pass different types of policies. Studies estimating the effects of laws should explore and report whether states that passed the laws differed systematically from those that did not, in terms of their recent gun use or violence trends. In some cases, explorations of the possible effects of reciprocal causation on effect estimates may provide useful insights.

APPENDIX B

## Source Data Used to Produce the Forest Plot Figures

---

To construct the figures in this report showing estimated effect sizes (i.e., the forest plots), we used results reported as the preferred models in each study. In some cases, these sources reported incidence rate ratios (IRRs) as the estimated effect of a law and provided confidence intervals (CIs). In such cases, we used these numbers as reported. In other cases, we calculated IRRs from effects estimated in the studies as regression coefficients, and we calculated CIs from standard errors, test statistics, or reported *p*-values. Discussion of these calculations is provided in Chapter Two. Table B.1 provides the source data used in this report to calculate IRRs and CIs as presented in each forest plot figure.
